1. A town in hollow Elis, described as Pausanias as situated upon the mountain road leading from Elis to Pheneus. (Pausanias vii. 32; Strabo, in a corrupt passage, assigns to it the same situation, and places it in the neighbourhood of Scyllium or Mt. Scollis (μενταφ το Πενετι και τι Πελληνα- τοι άνθρωποι, κα το Παγανις Παύ- θελην) Πώλιος περίκερκα, Strabh. viii. p. 355). Pausanias (i.c.) says that it was 80 stadia from Elis. (Diodorus viii. 17) gives 70 stadia as the distance, and Pliny (iv. 5. 6) 12 Roman miles. According to the previous description, Pylus should probably be identified with the ruins at Agripidikho-khori, situated on a commanding position in the angle formed by the junction of the Peneus and Ladon. This site is distant 7 geographical miles from Elis, which sufficiently agrees with the 80 stadia of Pausanias. Leake, however, places Pylus further S., at the ruins at Kalogri, mainly on the ground that they are not so far removed from the road between Elis and Olympia. But the fact of the ruins at Agripidikho-khori being at the junction of the Peneus and Ladon seems decisive in favour of that position; and we may suppose that the ruins of Pelecus are on the Baherras, the junction of the two rivers, and then took a bend to the right into the valley of the Ladon. (Leake, Northern Greece, vol. ii. p. 238, Peloponnesios, p. 219; Boibley, Recerches, gr. p. 123; Curtius, Peloponnesios, vol. ii. p. 39.) The Elean Pylus is said to have been built by the Pylon, son of Cleon of Megara, who founded the Messenian Pylus, and who, upon being expelled from the latter place by Peleus, settled at the Elean Pylus. (Paus. iv. 36. § 1, vi. 22. § 5.) Pylus was said to have been destroyed by Hercules, and to have been afterwards restored by the Eleans; but the story of its destruction by Hercules more properly belongs to the Messenian Pylus. Its inhabitants asserted that it was the town which Dindymus placed on the point of the Alpheus flowed through their territory (Αλπεα, δον' εβρα οι Πυλικε δια γης, /L. v. 345). On the position of the Homeric Pylus we shall speak presently; and we only observe here, that this claim was admitted by Pausanias (vi. 22, § 6), though its absurdity had been previously pointed out by Strabo (ibid.) as well as by the other Elean towns. Pylus is rarely mentioned in history. In n. c. 402 it was taken by the Spartans, in their invasion of the territory of Elis (Diod. xiv. 17); and in n. c. 366 it is mentioned as the place where the democratic exiles from Elis planted themselves in order to carry on a war against the latter city. (Xen. Hell. vi. 4. § 16.) Pausanias saw only the ruins of Pylus (vi. 22, § 5), and it would appear to have been deserted long previously.

2. A town in Triphylia, mentioned only by Strabo, and surmised to be the Ptolemais, 'Αποκασσία, or Arpoweeras. He describes it as situated 30 stadia from the Thrineus, and 60 stadia from the mountain Minthe and north of Lepeus (viii. p. 344). Upon the conquest of the Triphylia towns by the Eleans, Pylus was annexed to Lepeus (viii. p. 335; comp. pp. 339, 343, 344). Later observers that the village Tzorbeus, on the water's extremity of Mount Minthe, at the fork of two branches of the river of At Sidherous, was the place in every respect with Strabo's description of the town. (Peleoponnesios, p. 109.)

3. A town in Messenia, situated upon the promontory Coryphasium, which forms the northern termination of the bay of Navaroio. According to Thucydides it was distant 400 stadia from Sparta (Thuc. ii. 47. § 1) 100 stadia from Methone. It was one of the last places which held out against the Spartans in the second Messenian War, upon the conclusion of which the inhabitants emigrated to Cyllene, and thence, with the other Messenians, to Sicily. (Pass. iv. 18. § 1, iv. 23. § 1.) From that time its name never occurs in history till the seventh year of the Peloponnesian War, b. c. 424, when Demosthenes, the Athenian commander, erected a fort upon the promontory, which was then uninhabited and called by the Spartans Coryphasium (Κορυφάσιον), though it was known by the Athenians to be the site of the ancient Pylus. (Thuc. iv. 3.) The erection of this fort led to one of the most memorable events in the Peloponnesian War. Thucydides has given us a minute account of the topography of the district, which, though clear and consistent with itself, does not coincide, in all points, with the existing locality. Thucydides describes the harbour, of which the promontory Coryphasium formed the northern termination, as fronted and protected by the island Sphacteria, with two narrow entrances to the harbour,—the one at the northern end, opposite to Coryphasium, being only wide enough to admit two triremes abreast, and the other at the southern end wide enough for eight or nine triremes. The island was about 15 stadia in width, covered with wood, uninhabited and unfortified (Thuc. iv. 5). Pausanias also says that the island Sphacteria lies between the harbours of Pylus like Rheneia before the anchorage of Dokos (v. 36. § 6). It is almost certain that the fortress erected by the Athenians stood on the site of the ruins of a fortress of the middle ages, called Paled-Asterion which has been changed into Navarino by the habit of using the accusative case, εις το Αστεριαν, as if to the Asterion, is the name of the place. (Paus. iv. 359; Plat. Menon. p. 349; el Σφαγης, Xan. Hist. vi. 2. § 31; tse Sphageis, Plin. iv. 13. a. 25.) The following description will be rendered clearer by the
17 stadia, which Thucydides ascribes to Sphacteria, does not agree with the actual length of Sphagia, which is 25 stadia. Lastly Thucydides, speaking of the bay of Pylus, calls it "a harbour of con-

considerable magnitude" (μεγέθει ὑπὲρ ὁ στειρότερον); an expression which seems strange to be applied to the spacious Bay of Navarino, which was not only the largest harbour in Greece, but perfectly unlike the ordinary harbours of the Greeks, which were always closed artificially at the mouth by projecting mole when they were not sufficiently land-locked by nature.

In consequence of these difficulties Dr. Arnold raised the doubt whether the island now called Sphagia be really the same as the ancient Sphacteria, and whether the Bay of Navarino be the real harbour of Pylus. He started the hypothesis that the peninsula, on which the ruins of Old Navarino stand, is the ancient island of Sphacteria converted into a peninsula by an accumulation of sand at either side; and that the lagoon of Osmyn-Aga on its eastern side was the real harbour of Pylus, into which there was an opening on the north, at the port of Voudhó-Kíliá, capable of admitting two triremes abreast, and another at the south, where there is still a narrow opening, by which eight or nine triremes may have entered the lagoon from the
great harbour of Naosarino. Upon this hypothesis Col. Leake observes, that in itself it is perfectly admissible, inasmuch as there is scarcely a situation in Greece on the low coasts, near the mouths of rivers, where, by the operation of waters salt or fresh, or both united, some change has not taken place since the times of ancient history; and that in the instance here considered, there is no great difficulty in imagining that the lagoon may be an ancient harbour converted into a lagoon by an accumulation of sand which has separated it from the sea. But, among the many difficulties which beset this hypothesis, there are two which seem quite fatal to it; one of which has been stated by Mr. Grote and the other by Col. Leake. The former writer remarks that, if the peninsula of Old Naosarino was the real ancient Spahteria, it must have been a second island situated to the northward of Spahteria; and that, consequently, there must have been two islands close together and near the scene. This, as Mr. Grote observes, is quite inconsistent with the narrative of Thucydides, which presupposes that there was only one island—Spahteria, without any other near or adjoining to it. Thus the Athenian fleet under Euryomedon, on first arriving, was obliged to go back some distance to the island of Prote, because the island of Spahteria was full of Lacademonian hoplites (Thuc. iv. 13); whereas, if the hypothesis of Dr. Arnold were admitted, there would have been nothing to prevent them from landing on Spahteria itself. It is true that Xenophon (Helle. vi. 2. § 3) speaks of Σπαυεία in the plural, and that Pliny (iv. 12. 25) mentions "treia Spahteria," but two of them appear to have been mere rocks. The objection of Col. Leake is still more fatal to Dr. Arnold’s hypothesis. He calls attention to the fact that the French Commission observed that the walls of the castle of Old Naosarino stand in many parts on Hellenic foundations, and that in some places three courses of the ancient work remain, consisting of a kind of masonry which seems greatly to resemble that of Messene. Besides these remains of middle Hellenic antiquity, some foundations are traced of a more ancient limestone at the northern end of the peninsula, with a descent to the little harbour of Βοίδωτα-Κωίτις by means of steps cut in the rock. Remains of walls of early date are to be seen likewise towards the southern extremity of the hill, among which is a tumulus;—all tending to prove that the entire peninsula of Naosarino was occupied at a remote period of history by an ancient city. This peninsula could not, therefore, have been the ancient Spahteria, which never contained any ancient town. The only way of reconciling the account of Thucydides with the present state of the coast is to suppose, with Mr. Grote and Curtius, that a great change has taken place in the two passages which separate the island and since the time of Thucydides. The mainland to the south of Naosarino must have been much nearer than it is now to the southern portion of Spahteria, while the northern passage also must have been both narrower and clearer. (Leake, Morea, vol. i. p. 401. seq., Polomomenisca, p. 190, seq.; Arnold, Appendix to Thucy. ii. p. 406; Grote, Hist. of Greece, vol. ii. p. 427, seq.; Curtius, Polomemenisca, vol. ii. p. 173, seq.; Bödle, Richerrchere, p. 115; Expeditio Scientifizca de la Morée, vol. i. pl. vii.)

It is unnecessary to relate here the events which followed the erection of the Athenian fort at Yluss, and which terminated with the capture of the Spartans in the island of Spahteria, as they are given in every Greek history. The following extract from Col. Leake illustrates the description of Thucydides in the most satisfactory manner:—"The level and source of water in the middle where the Lacademonians encamped,—the summit at the water's edge on the north, and the landing places on the western side, to which the Heioi brought provisions,—are all perfectly recognisable. Of the fort, of loose and rude construction on the summit, it is not to be expected that any remains should now exist; but there are some ruins of a signal-tower of a later age on the same site. The summit is a pile of rough stones; the slopes gradually to the shore on every side, except to the harbour, where the cliffs are perpendicular, though here just above the water there is a small slope capable of admitting the passage of a body of men active in climbing among rocks and difficult places. By this pass it is probable the Messenians came upon the rear of the Lacademonians on the approach to the summit: the northern termination of the pass there is a passage through the cliffs which border the greater part of the eastern shore of the island, so that by this opening, and along the pass under the rocks to the northward of it, the Messenians had the means of passing unseen from the centre of the island to the rear of the Lacademonians. That this hill slopes gradually from its rocky peak to the shore on every side except towards the harbour, it does not admit of a landing at its foot, except in the calmest weather; nor is it easily assailed on any side by land, on account of the ruggedness of the summit, except by the means to which the Messenians resorted; so that the western end of the island, small church of the Panaghia. There are also two small creeks adjacent to each other, near the southern end of the eastern side of the island, opposite to Nédakastro: near these creeks there is a well. The principal source of water is towards the middle of the island, at an excavation in the rock 20 feet deep, which seems to be more natural than artificial. The bottom of the well, in which there is a circular peristomium of modern masonry, the excavation in the rock is irregular, slanting. In one or two places there are gran high bushes, and there are low shrubs in every part of it. It often happens, as it did in the stormy summer of the Peloponnesian war, that a fire occurring accidentally or of itself, first breaks out during the dryness of these: the northern hill exhibits at this moment met marks of a similar conflagration." (Morea, vol. i. p. 408, seq.)

The peninsula of Coryphasium is a precipi-
the eastern side or towards the lagoon; while on the western side or towards the open sea it slopes gradually, particularly on the SW, where Demosthenes succeeded in preventing the landing of Brasidas and the Lacedaemonians. The promontory is higher at the northern end. Below the ruined fortress at the mouth of the creek and the ancient castle of Leukis, \textit{Kílís} (Léukí-s-kóla), "the ox's belly," which gives name to the small circular port immediately below it, which has been already spoken of. This cavan is 60 feet long, 40 wide, and 40 high, having a roof like a Gothic arch. The entrance is triangular, 30 feet long and 12 high; at the top of the cavan there is an opening in the surface of the hill above. This cave was, according to the Peloponnesian tradition, the one into which the infant Hermes drove the cattle he had stolen from Apollo. It is mentioned in the Homeric hymn to Hermes as situated upon the sea-side (v. 341); but in Antoninus Liberalis (c. 23) it is expressly said to have been at Coryphasium. In Ovid (Met. ii. 684) Mercury is represented Phoebus, belonging to the time of un guarded cattle proceeding into the fields of Pyla. The bay of Vóidiki-Kílís is separated by a low semicircular ridge of sand from the large shallow lagoon of Oasmyn-Agsa. As neither Thucydides nor Pausanias says a word about this lagoon, which now forms so striking a feature in the topography of this district, we must conjecture, with Leake, that it is of recent formation. The peninsula must, in that case, have been surrounded with a sandy plain. As Pausanias describes it; and accordingly, if we suppose this to have been the site of the Homeric Pyla, the epithet ἡμιέσθης, which the poet constantly gives to it, would be perfectly applicable.

The Athenians did not surrender their fortress at Pyla to the Lacedaemonians in accordance with the treaty made in B. C. 491 (Thuc. vi. 35), but retained possession of it for fifteen years, and only lost it towards the close of the Peloponnesian War. (Diod. xii. 64.) On the restoration of the Messenians to their country by Epaminondas, Pyla immediately again came into the hands of the Messenians and Achaeans respecting the possession of this place. (Liv. xxvii. 30; Polyb. xvii. 35.) It was visited by Pausanias, who saw there a temple of Athena Coryphasium, the so-named house of Nestor, containing a picture of him, his tomb, and a cavern said to have been the stable of the oxen of Neleus and Nestor. He describes the latter as within the city; which must therefore have extended nearly to the northern end of the promontory, as this cave is evidently the one described above. (Paus. v. 36.) There are imperial coins of this city bearing the name of Pyla, belonging to the time of Conon. (Eckhel, vol. ii. p. 277.) It would appear from Leake that the restored city was also called Coryphasium, since he says that "at the time of the Achaean League there was a town of Coryphasium, as we learn from a coin, which shows that Coryphasium was a member of that confederacy." (Peloponnesiaca, p. 193.)

The modern name Asoróso, corrupted, as already said, into 
Naworóso, is probably due to the Avars, who settled there in the sixth century of the Christian era. The medieval castle was built by the widow of the Frankish chieftain William de la Roche. Her descendant sought a more convenient place for their residence, and erected on the southern side of the harbour the 
Nedkaróso or modern 
Neuróso. It commanded the southern end of the harbour, which became more and more important as the northern entrance became choked up. Containing, as it does, the best harbour in the Peloponnesus, Neuróso constantly appears in modern history. It was taken by the Turks in 1500. In 1665 it was wrested from them by the Venetian commander Morenini, and remained in the hands of the Venetians till 1715. In more recent times it is memorable by the great battle fought in its bay, on the 20th of October, 1827, between the Turkish fleet and the combined fleets of England, France, and Russia. (Curtius, Peloponnesiaca, vol. ii. p. 181.) It remains to speak of the site of the Homeric Pyla. According to a generally received tradition, Neleus, the son of Poseidon, migrated from Iolcos in Thessaly, and founded on the west coast of Peloponnesus a kingdom extending westward as far as that of the Atridæ, and northward as far as the Alpheus. Even if this be the case, however, much more incurred the indignation of Hercules for refusing to purify him after the murder of his son Iphitus. The hero took Pyla and killed Neleus, together with eleven of his twelve sons. But his surviving son Nestor upheld the fame of his house, and, after distinguishing himself by his exploits in youth and manhood, accompanied in his old age the chieftains in their expedition against Troy. Upon the invasion of Peloponnesus by the Dorians, three generations after Nestor, the Neleids quitted Pyla and removed to Athens, where they obtained the kingly power. The situation of this Pyla—the ἔδαφος ἱδρύετο, as it was called—was a subject of much dispute among the Grecian geographers and grammarians. Strabo (viii. p. 339) quotes a proverbial verse, in which three towns of this name were mentioned—

to τόδε ἔδαφος ἐκ τοῦ ἔδαφος τοῦ Πιλαοῦ ἐκ τοῦ ἔδαφος τοῦ Πυλαοῦ ἐκ τοῦ ἔδαφος τοῦ ἔδαφος—

of which the former half—

το τόδε ἔδαφος ἐκ τοῦ Πιλαοῦ—

was at least as old as the time of Aristophanes, when Pyla became famous by the capture of the Spartans at Psychaeus. (Aristoph. Σφακτ. 1039.) The claim of the Eelian Pyla to be the city of Nestor may be safely set on one side; and the choice lies between the towns in Triphylia and Messenia. The ancients usually decided in favour of the Messenian Pyla. This is the opinion of Pausanias (iv. 36), who unhappily places the city of Nestor on the promontory of Coryphasium, although, as we have already seen, he agrees with the people of Elis that Homer, in describing the Alpheus as flowing through the land of the Pylans (H. i. 545), had a view to the Elean city. (Paus. vi. 22.) It is however probable that the "land of the Pylans" was used by the poet to signify the whole kingdom of the Neleian Pyla, since he describes both Thryosses on the Alpheus and the cities on the Messenian gulf as the extreme or frontier places of Pyla. (Ὀροῦσας ἔδαφος... ἐκεῖ ἔδαφος ἡμιέσθης, H. i. 712; ἐκείνη Πιλαοῦ ἡμιέσθης, H. i. 158.)

In this sense these expressions were understood by Strabo (viii. pp. 337, 350). It is curious that Pausanias, who paid so much attention to Homeric antiquities, does not even allude to the existence of the Triphylian Pyla. Pindar calls Nestor "the Messenian old man." (Pindar. vi. 35.) Isocrates
PYLUS.

nomen Messenia as his birthplace (Plin., III. 72); and Pherecydes (ap. Schol. ad Iow. Od. xii. 289) and Eustathius (ad Od. iii. p. 1454) describes the Messenian Pylus as the city founded by Pelops. This was also the opinion of Diodorus (xv. 66), and of many others. In opposition to their views, Strabo, following the opinion of the Quenanderus, argues at great length that the Tripolyan Elia was the city of Nestor. (Strab. viii. pp. 339, seq., 348, seq.) He maintains that the description of the Alpheius flowing through the land of the Pylians (H. v. 543), which, as we have already seen, was the only argument which the Eleians could adduce for their claim, is applicable to the Tripolyan Pylus; whereas the post's mention of Nestor's exploits against the Eleians (H. xi. 670, seq.) is fatal to the supposition of the Messenian city being his residence. Nestor is described as making an incursion into the country of the Eleians, and retumning thence with a large quantity of cattle, which he loaded on carts in the little city of Nafsia. On the third day the Eleians, having collected their forces on the Alpheius, Nestor marched forth from Pylus, and at the end of the first day halted at the Minyasus (subsequently called the Anigrus), where he passed the night; starting from thence on the following morning, he arrived at the Alpheius at morning-break, where he urged them that not only was the Pylus they had taken place if Nestor had marched from so distant a city as the one at Coryphasium, while they might easily have happened if the Eleian city had been situated at the Tripolyan Pylus. Again he argues from the Odyssey that the Neleid Pylus could not have been on the sea-coast, since Telemachus, after he had disembarked at the temple of Poseidon, had proceeded to the town where he wished to have taken his messengers to fetch his companions (Od. iii. 423); and on his return from Sparta to Pylus, he desired Penestras to turn off to the sea-side, that he might immediately embark, as he wished not to be detained in the city by Nestor. (Od. x. 199, seq.) These arguments, as well as others, adduced by Strabo, have been opposed by P. O. B. ('Rev. x., p. 367, seq.), Thirwall ('Hist. of Greece, vol. i. p. 96), and several modern scholars; but Leake, Curtius, and others have adhered, with much greater probability, to the more common view of antiquity, that the Neleid Pylus was situated at Coryphasium. It has been shown that Pylus was formerly a town, that it is impossible to signify the Neleid kingdom, and not simply the city, as indeed Strabo himself had admitted when arguing against the claim of the Eleian Pylus. Moreover, even if it should be admitted that the account of Nestor's exploits against the Eleians agrees better with the claim of the Tripolyan Pylus, yet the narrative of the journeys of Telemachus is entirely opposed to this claim. Telemachus in going from Pylus to Sparta drove his horses thither, without changing them, in two days, stopping the first night at Phere (Od. iii. 485); and he returned from Sparta to Pylus in the same manner. (Od. xv. 182, seq.) Now the Messenian Pylus, Phere, and Sparta, lie in a direct line, the distance from Pylus to Phere being about 28 miles, by the nearest road, and from Phere to Sparta about 28 miles. On the other hand, the road from the Tripolyan Pylus to Sparta would have been by the valley of the Alpheius into that of the Eurotas; whereas Phere would have been out of the way, and the distance to it would have been much more than a day's journey. Besides which, the position of the Messenian Pylus, the rest striking upon the whole western coast of Peloponnesus, was far more likely to have attracted the Thessalian wanderers from Iolkos, the worshippers of the god Poseidon, than a site which was neither strong by nature nor near to the coast.

PYRASUS.

But although we may conclude that the Messenian Pylus was the city of Nestor, it may admit of doubt whether the city itself existed on the promontory Coryphasium from the earliest times. The Greeks rarely built a city in the earliest period immediately upon the coast, and still more rarely chose a site so badly supplied with water as Coryphasium, of which the Athenians experienced the inconvenience when they defended it in the Peloponnesian War. This seems much probability in the account of Strabo (viii. p. 359) that the ancient Messenian Pylus was situated at the foot of Mt. Aegaeus, and that upon its destruction some of its inhabitants settled at Coryphasium. If then we suppose the city of Nestor to have been at Coryphasium, then Strabo's most serious objections to the Messenian Pylus disappear. Strabo was justified in seeking for Nestor at Coryphasium, but not for Coryphasium to have been its port-town, the narrative of Telemachus' return becomes perfectly clear. Not wishing to lose time at the royal residence, he drives straight to the port and goes quietly on board. Hence, one of Strabo's most serious objections to the Messenian Pylus disappears. Strabo was justified in seeking for Nestor at Coryphasium, but not for Coryphasium to have been its port-town, the narrative of Telemachus' return becomes perfectly clear. Not wishing to lose time at the royal residence, he drives straight to the port and goes quietly on board. Hence, one of Strabo's most serious objections to the Messenian Pylus disappears. Strabo was justified in seeking for Nestor at Coryphasium, but not for Coryphasium to have been its port-town, the narrative of Telemachus' return becomes perfectly clear. Not wishing to lose time at the royal residence, he drives straight to the port and goes quietly on board. Hence, one of Strabo's most serious objections to the Messenian Pylus disappears.
PYRENAEI MONTES.

superseded by that of Demetrium, derived from the temple of Demeter, spoken of by Homer, and which Strabo describes as distant two stadia from Pyraeus. Demetrium is mentioned as a town of Phthisia by Scylax (p. 24, Hudson), Livy (xxviii. 6), Strabo (i. 24), and Poppaea Mora (Melis, ii. 5; Plin. iii. 5; &c.). Pyreneus Mons (Melis, ii. 5; Plin. iii. 5; &c.) is Pyreneus Saltau (Livy xxi. 38, &c.; Plin. iv. 19. &c.; Poppaea Jumna (Melis, ii. 1), and M. Pyreneus (Poppaea, Strab. iii. 160, &c.; Sil. Ital. ii. 417; Ausp. Ep. xx. 51), the lofty chain of mountains which divides Spain from Gaul. It was fabled to derive its name from the Greek word σκέπαρι, from a great conflagration which, through the neglect of some shepherds, destroyed its woods, and melted the ore of its mines, so that the brooks ran with molten silver. (Strab. iii. p. 147; Diod. v. 26; Arist. Mitr. Auec. 88; Sen. Q. N. 1.) Silinus Italicus (I. c.) derives its name from Pyrene, a daughter of the king of the Bebryces; but its true etymology is probably from the Celtic word Pyren or Pyryen, signifying a mountain. (Cf. Astr. Mem. de l’Acad. Nat. de Languedoc, ii. 2.) Herodotus seems to have had some obscure intelligence respecting the Pyrenes, as he mentions (ii. 33), a place called Pyrene, near which the Iberus had its source. Strabo (iii. pp. 157, 161) erroneously describes the chain as running from S. to N.; but its true direction, namely, from W. to E., is clearly shown by Pline (Nat. Hist. xxi. 34), and Marcian (Herod. p. 38). According to Diodorus (v. 35) it is 3000 stadia in length; according to Justin (xiv. i.) 600 Roman miles. After the Alps, and the mountains of Sarmatia, the Pyrenees were esteemed the highest mountains in Europe (Agathem. ii. 9, p. 47; Eustath. ad Dionys. 358; Diod. i. c.), whence they are sometimes described by the poets as covered with eternal snow. (Locran. iv. 84, seq.) On the side of Gaul they are steep, rugged, and bare; whilst on the Spanish side they descend gradually to the plain, are thickly wooded, and intersected with delicious valleys. (Strab. iii. p. 161.) Their western prolongation along the Mare Cantabrum, was called “Salton Vassuum,” which derived its name from the fact that these waters dwelt there. (Plin. iv. 20. &c.; seq.) This portion now bears the names of Sierra de Orozco, S. de Agana, and S. Sejos. Still farther W. was Mons Vinnius or Vindius (ObiStev. Espa, Ptol. vii. i. § 21; Flor. iv. 12), which formed the boundary between the Cantabri and Astures. The Pyrenees form several promontories, both in the Mediterranean sea and the Atlantic ocean. (Strab. ii. p. 190, iii. p. 160, iv. p. 176, &c.; Melis, ii. 5; Sill. Nat. ii. 417, &c.) They were rich in mines of gold, silver, lead, and iron (Strab. iii. p. 146; Plin. iv. 20.), and contained extensive forests, as well as the sources of the Garumna, the Iberus, and a number of smaller rivers. (Strab. l. c., and iv. p. 182.) Only three roads over them were known to the Romans; the most westerly, by Carasae (now Caro), not far from the coast of the Cantabrian sea, and which Strabo describes as the most frequented, and is still used, near the coast of the Mediterranean by Juncaria (now Janqua), and one which lay between these two, leading from Casaraugusta to Beneventum (now Barago). (Itin. Ant. pp. 390, 459, 455; Strab. iii. p. 160; Liv. xxi. 33, &c.) Respecting the present condition of the Pyrenees, the reader may consult Miñano, Diccionario, vii. p. 58, seq.; Huber, Skizzen aus Spanien, Güt. 1833; and Ford, Handbook of Spain, p. 579, seq. From the last authority, it will be perceived, that the character of the Gallic and Spanish sides has been somewhat reversed since the days of Strabo; and that, while “the face of the Pyrenean slope is full of summer-watering-places and sensual, the Spanish side is rude, savage, and Iberian, the lair of the smuggler and wild bird and beast.” [T. H. D.]

PYRENEIS PROMONTORIUM. [HISPANIA, Vol. i. p. 1083.]  
PYRETUS (Πηρέτος), called by the Scythians Pípopí, described by Herodotus (iv. 48) as a large river of Scythia, flowing in an easterly direction and falling into the Danube. The modern Pruth.  
PYRGI (Πύργιος: Eth. Pyrgenios: Santa Severa), a city on the coast of Etruria, situated between Alisium and Castrum Novum, and distant 34 miles from Rome (Itin. Ant. p. 390.) It was rather more than 6 miles (56 stadia) from Caere, of which it served as the port (Strab. v. p. 226), but it is probable that it was not originally designed for that purpose, but grew up in the first instance around the temple of Eileithyia, for which it continued to be celebrated at a much later period. (Strab. l. c.; Diod. xvi. 14.) The foundation of this temple is expressly ascribed to the Pelasgians, and the pure Greek form of the name tends to corroborate this statement. It is probable that both Pyrgi and the neighbouring Caere were originally Pelasgian settlements, and that this was the cause of the close connection between the two, which led to Pyrgi ultimately passing into the condition of a dependency on the more powerful city of the interior. Virgil calls it an ancient city (Pyrgi veteres, Aen. x. 184), and represents it as one of the Tuscan cities that sent assistance to Aeneas. But the only mention of Pyrgi in history during the period of Etruscan independence is in n. c. 384, when the treasures of its temple attracted the cupidité of Diniusius of Syracuse, who made a piratical descent upon the coast of Etruria, and, landing his troops near the city of Caere, sacked and plundered the temple, to which he is said to have carried off spoils to the value of 1000 talents. (Dioid. xvi. 14; Strab. v. p. 226; Arist. Oeon. ii. 21; Polyclen. v. 2.) The amount of the booty seems incredible, but the temple was certainly very wealthy: and it would seem that the people of Pyrgi had given some excuse for the aggression, by themselves taking an active part in the piracies carried on at this period by the Etruscan in general. Servius, indeed, represents it as bearing the chief part in those depredations; but this may probably be an exaggeration. (Serv. ad Aen. x. 184.)
PYRGUS. could never have been a large town, and appears under the Romans to have sunk into comparative insignificance. It is indeed noticed by Livy, together with Strabo, as one of the maritime colonies which in a.c. 191 contended in vain for exemption from military levies (Liv. xxxvi. 3); but we have no account of the time at which the colony was established there, nor does any subsequent mention of it occur in that capacity. Its name is mentioned by all the geographers among those that lived on the shore of the Euboean Gulf. But Strabo, mentioning it only a small town (ναυτικον), and Servius calls it in his time merely a fort (castellum), which would agree well with the character of the remains. (Strab. v. p. 225; Mal. ii. 4; Plin. iii. 5 a. 1; Ptol. iii. 1. § 4; Martial. xii. 2; Serv. ad Aen. l. c.) But in the time of Rutulius it had altogether sunk into decay, and its site was occupied only by a large village. (Rutil. ib. i. 223.) No subsequent mention of it is found until it reappears in the middle ages under the title of Santa Severa.

The itineraries vary much in the distances they assign between Pyrgi and the other stations on the coast; but they agree in placing it between Aulis and Castrum Novum: and this circumstance, connected with the distance of 50 stadia from Castrum Novum, given by Strabo, leaves no doubt that it is correctly identified with Sta Severa. (Strab. v. p. 226; Itin. Ant. pp. 290, 301; Itin. Marit. p. 498; Tab. Ptol.) The site of the fortress of that name is unquestionably that of an ancient city. The walls of the present castle, which is of mediæval date, are based on foundations of an ancient character, being constructed of polygonal blocks of stone of large size, neatly fitted together without cement, in the same manner as the walls of Cos and Samos. The line of these foundations, which are undoubtedly those of the walls of the ancient city, may be traced throughout the whole extent, enclosing a quadrangular space of about a half mile in circuit, abutting on the sea. Some remains of Roman walls of later date occur at the extremities on the sea-coast; but no remains have been found of the celebrated temple which was probably situated within the enclosure; nor are there any traces of the ancient port, which must have been wholly artificial, there being no natural inlet or harbour. (Canina, in the Ann. dell'Inst. Ant. 1850, pp. 329, 330; Canina in the Att. 1850, vol. ii. pp. 11—16.) The goddess to whom the temple dedicated was called by Strabo Eleisithea, but several other writers call her Leucosia (Arist. L. c.; Polyaen. L. c.), who was identified with the Maier Matuta of the Romans. There is no doubt that the same deity is meant by both appellations. (Gerhard, Gottheiten der Edosker, pp. 9, 23.)

[END)

PYRGUS or PYRGAL 1. (Πυργας, Her. Polyb.; Πυργας, Strab., Steph. B. s. v.; Eih. Πυργας), the most southerly town of Triphylia in Elis, on the mouth of the river Neda, upon the Messenian frontier (Strab. viii. p. 348), and hence described by Stephanus B. (s. v.) as a Messenian town. It was one of the settlements of the Myrsinosians (Geogr. iv. 148.) It opened its gates to Philip in the Social War. (Polyb. iv. 77, 80.) Leake places Pyrgi at some ancient remains upon the right bank of the Neda, not far from its mouth. (Morea, vol. i. p. 57, vol. ii. p. 207.)

2. A town in hollow Elis in a district named Perippa, which Polybius mentions in conjunction with Lasiom. (Polyb. v. 102; comp. Liv. xxvii. 32.)

PYRUS (Πυρς; Eih. Πυρς), a town of Caria, of uncertain site. (Steph. B. s. v.; Plin. v. 28. s. 29.)

PYRGERI, a people dwelling on the Hebrus in Thrace, mentioned by Pliny, iv. 11. a. 18. [THD]

PYRHRHA (Πυρρα; Eih. Πυρρας). 1. A town on the coast of the deep bay on the west of the island of Lesbos, which had so narrow an entrance that it was called the Euripus of Pyrrha. It was situated at a distance of 80 stadia from Mytilene, and was called Capitalis, but Strabo terms it only a small town (παραλιας), and Servius calls it in his time merely a fort (castellum), which would agree well with the character of the remains. (Strab. v. p. 225; Mal. ii. 4; Plin. iii. 5. s. 1; Ptol. iii. 1. § 4; Martial. xii. 2; Serv. ad Aen. l. c.) But in the time of Rutulius it had altogether sunk into decay, and its site was occupied only by a large village. (Rutil. ib. i. 223.) No subsequent mention of it is found until it reappears in the middle ages under the title of Santa Severa.

The itineraries vary much in the distances they assign between Pyrgi and the other stations on the coast; but they agree in placing it between Aulis and Castrum Novum: and this circumstance, connected with the distance of 50 stadia from Castrum Novum, given by Strabo, leaves no doubt that it is correctly identified with Sta Severa. (Strab. v. p. 226; Itin. Ant. pp. 290, 301; Itin. Marit. p. 498; Tab. Ptol.) The site of the fortress of that name is unquestionably that of an ancient city. The walls of the present castle, which is of mediæval date, are based on foundations of an ancient character, being constructed of polygonal blocks of stone of large size, neatly fitted together without cement, in the same manner as the walls of Cos and Samos. The line of these foundations, which are undoubtedly those of the walls of the ancient city, may be traced throughout the whole extent, enclosing a quadrangular space of about a half mile in circuit, abutting on the sea. Some remains of Roman walls of later date occur at the extremities on the sea-coast; but no remains have been found of the celebrated temple which was probably situated within the enclosure; nor are there any traces of the ancient port, which must have been wholly artificial, there being no natural inlet or harbour. (Canina, in the Ann. dell'Inst. Ant. 1850, pp. 329, 330; Canina in the Att. 1850, vol. ii. pp. 11—16.) The goddess to whom the temple dedicated was called by Strabo Eleisithea, but several other writers call her Leucosia (Arist. L. c.; Polyaen. L. c.), who was identified with the Maier Matuta of the Romans. There is no doubt that the same deity is meant by both appellations. (Gerhard, Gottheiten der Edosker, pp. 9, 23.)

[END]

PYRRHICUS (Πυρριχος), a town of Laconia, situated about the centre of the promontory named Cape Tawramum, and about 80 stadia from the river Scyrus. According to some it derived its name from Pyrrha, the son of Achilles, according to others from Pyrrhicus, one of the Curetes. Sienus was also said to have been brought up here. It contained temples of Artemis Astarte and of Apollo Amazæus,— the two surnames referring to the daughter of Petosiris and to a certain priest of Apollo, more than this place. There was also a well in the agora. The ruins of this town have been discovered by the French Commission near the village of Kámpos, where they found the wall of which Pausanias speaks, the torso of a female statue, the remains of baths, and several Roman ruins. Leake observes that the distance of 40 stadia from the Scyrus to Pyrrhicus must be measured, not from the mouth of the river, but as Boilays proposes, but from near its source. Augustus made Pyrrhicus one of the Eleuther- Lacoian towns (Paus. iii. 21. § 7, iii. 25. §§ 1—3; Boilays, Richerches, p. 88; Leake, Peloponnesia, p. 174; Curtius, Peloponnesos, vol. ii. p. 276.)

PYRRHICUS. [PYRRHICUS.

PYRRHUS (Πυρρος), a town of Perrhaëa in Thessaly, situated at the foot of Mount Olympus, and forming a Tripolis with the two neighbouring towns of Azorus and Dolichi. Pyrrhus derived his name from a temple of Apollo Pyrhus situated a one of the summits of Olympus, as we learn from...
PYTHO.

epigram of Xeniagoras, a Greek mathematician, who measured the height of Olympus from these parts (ap. Phot. Asimil. Poell. 15). Games were also celebrated here in honour of Apollo. (Steph. B. s. v. Πύθων) Pythium commanded an important pass across Mount Olympus. This pass and that of Tempe are the only two leading from Macedonia into the north coast of Greece. It was therefore a place of great strategic importance on the plain between Kokkiniopolis and Iassida, though no remains of the ancient town have been discovered there. (Liv. xiii. 53; Plut., Stephan. B. II. cc.; Ptol. iii. 13. § 42; Leake, Northern Greece, vol. iii. p. 341, seq.)

PYTHO. [DELPHI.]

PYTHOPOLIS. [MYTHEPOLIS.]

Ptyktes and Est. [EASTERS.]

PYKITES (Pykrites), a small river in the east of Pontus, emptying itself into the Euxine 60 stadia on the north-east of Pityusis. (Plin. vi. 4; Arrian, Perip. P. E. p. 6; Anonym. Perip. P. E. p. 15.) It is possibly the same as the Cissa mentioned by Ptolemy (v. 6. § 6), and is commonly identified with the modern Isik. [L. S.]

PYXUS. [BUXTUM.]

Q.

QUACERNI. [QUERCONI.]

QUADI (Kwadi), a great German tribe in the south-east of Bohemia, in Moravia and Hungary, between Mons Gabreta, the Hercynian and Sarmatian mountains, and the Danube. (Tac. Germ. 42, Ann. xii. 29, Hist. iii. 5, 21; Ptol. ii. 11. § 26; Plin. iv. 25.) They were surrounded on the north-west by the Marcomanni, with whom they were always closely connected, on the north by the Gothini and Ost, on the east by the Jazygges Marcani, and on the south by the Pannonians. It is not known when they came to occupy that country, but it seems probable that they arrived there about the same time when the Marcomanni established themselves in Bohemia. At the time when the Marcomannian King Maroboduus and his successor Constantine were engaged in the war they explored the protection of the Romans, the latter in A. D. 19 assigned to them and their companions in exile the districts between the rivers Marus and Cusus, and appointed Vannius, a Quadian, king of the territory. (Tac. Ann. lii. 63; Plin. iv. 25.) This new kingdom of the Quadi, after the expulsion of Vannius, was divided between his nephews Vangio and Sido, who, however, continued to keep up a good understanding with the Romans. (Tac. Ann. xii. 29, 30.) Tacitus (Germ. I. c.) says that down to his own time the Marcomanni and Quadi had been governed by kings of the house of Maroboduus, but that then foreigners ruled over them, though the power of these rulers depended on that of the Roman emperors. At this time the Quadi took an active part in the war of the Marcomanni against the Romans, and once nearly annihilated the whole army of M. Aurelius, which was saved only by a sudden tempest. (Dion Cass. lixi. 8.) Notwithstanding the peace then concluded with them, they still continued to harass the Romans by renewed acts of hostility, and the emperor Vespasian was obliged, for the protection of his own dominions, to erect several forts both in and around their kingdom, in consequence of which the people were nearly driven to abandon their country. (Dion Cass. lixi. 11, 18, 30.)

A.D. 180 the emperor Commodus renewed the peace with them (Dion Cass. lixxii. 2; Lamprid. Com. 3; Herodian, i. 6), but they still continued their inroads into the Roman empire (Eutrop. ix. 9; Vopisc. Aurel. 18; Amm. Marc. xvii. 12, xxix. 6). Towards the end of the fourth century the Quadi entirely disappear from history; they had probably migrated westwards with the Suevi; for Quadi are mentioned among the Suevi in Spain. (Hieron. Ep. 9.) According to Ammianus Marcellinus (xvii. 12) the Quadi resembled in many respects the Sarmatians, for they used long spears and a coat of mail consisting of linen covered with thin plates of horn; they had in war generally three swift horses for every man, to enable him to change them, and were the whole body armed. There is nothing in an open battle in the field. Ptolemy (I. c.) mentions a considerable number of towns in their country, such as Eobudarum, Meliodarum, Caridogis, Medolanum, &c.; the Celtic names of which suggest that those districts previous to the arrival of the Quadi had been inhabited by Celts, who were either subdued by them or had been amalgamated with them. The name Quadi itself seems to be connected with the Celtic word col, cold, or cold, that is, a wood or forest, an etymology which receives support from the fact that Strabo (vii. p. 290), the first ancient author that notices them, mentions them under the name of Ka`asos. Tacitus evidently regards them, but Lebrun (ed Tac. Germ. p. 154) is inclined to treat them as Sarmatians. (Comp. Wilheim, Germanie, p. 233, fol.)

QUADIANA. In the inscription on the arch of Susa, published by Maffei, there is a list of the Alpine peoples who were under the dominion of Cottius. The first name is the Sequii, and the last is the Quadianae. In Pliny (iii. 4) the Quadi of Tacitus (ed Tac. Germ. p. 154) is inclined to treat them as Sarmatians. (Comp. Wilheim, Germanie, p. 233, fol.)

QUADRIATES. In the inscription on the arch of Susa, published by Maffei, there is a list of the Alpine peoples who were under the dominion of Cottius. The first name is the Sequii, and the last is the Quadriates. In Pliny (iii. 4) the Quadi of Tacitus (ed Tac. Germ. p. 154) is inclined to treat them as Sarmatians. (Comp. Wilheim, Germanie, p. 233, fol.)

2. A fort in Upper Pannonia, on the road between Arrabona and Carnuntum, not far from the banks of the Danube. (It. Ant. p. 247.) Muchar (Noricum, p. 264) identifies it with a place between Oesar and Orosemor, now occupied by a large farm of Count Zita. [L. S.]

QUADRATAE, a village or station in Gallia Cisalpina, on the road from Augusta Taurinorum to Lepcis. The Itineraries place it 26 miles from the former city and 16 or 19 from Ripomagus (Itin. Ant. pp. 340, 356; Itin. Hier. p. 557); but the latter station is itself of uncertain site. Quadratae must have been situated between Chiusasso...
and Crescentium, near the confluence of the Dora Balsas with the Po; but the exact site has not been determined. Though the name is not mentioned by any of the geographers, it would seem to have been in the last ages of the Empire a place of some station or importance, as we learn from the Notitia that a body of troops (Sarmatae Gentiles) was permanently stationed there. (Notit. Dign. vol. ii. p. 191.) [E. H. B.]

QUADRIBURGUM. Ammianus Marcellinus (xviii. 2) mentions Quadraburgium among the fortresses on the Elbe which Julian repulsed; “Civitates occupates, nam septem, Castra Herulis, Quadraburium, Trissinae, Noveum, Bonna, Antuanacum et Bingia.” There is however some corruption in the passage (noots of Lindenburg). The place seems to be mentioned in order from north to south. D’Anville conjectures that Quadraburium is the same place as Burginatum [Burgomontis, Burgomontis, Usur, Gallia, p. 528.]. Other geographers conjecture solely from the resemblance of name that it may be Quaesturio, not far from Cleve, which appears to have been a Roman place, for Roman coins and inscriptions have been found there. [G. L.]

QUARIATES. [Quadiates.]

QUARERINI. A people in Istria, of uncertain site. (Plin. iii. 15. a. 33.)

QUARERINI. [Quarerini.]

QUARTENSIS LOCUS. A place mentioned in the Not. Imp. as under the command of the governor of Belicia Secunda: “Præfectus classis Sambricae in loco Quartensi sive Hornensi.” The place seems to be Quaerio on the Sambre, which keeps the ancient name; the word “Quare” is a distance of iv. from some principal place, it being usual for chief towns to reckon distances along the roads which led from them to the limits of their territory. This principal place to which Quartensi belonged was Bagacum (Barcin), and the distance from Quaerio to Buessus is four Gallic leagues. The great Roman road from Dussingium (Dusseld) to Buessus passed by Quaerio. “Quartensis” is the adjective of the form “Quartor” or “Quartus,” and Quarta occurs in an old record of the year 1125. “Altare de Quaerio supra Sambrem,” which is the church of Querio. [G. L.]

QUERQUERINI (Plin. iii. 3. a. 4: Querquerini, Lucan 834; p. 245. 2; Querquerini, Hist. Ital. i. 5. a. 47), a people in the NW. of Hispания Tarraconensium, a subdivision of the Gallaci Bra- cari.

QUERQUETULA (Eut. Querquetulana; Kop. kopetavlara, Dionysia), an ancient city of Latium, mentioned only by Pliny among the populi Albinus, or extraneous communities of Latium, and by Dionysius of Halicarnassus amongst the Latin cities which constituted the league against Rome. (Plin. iii. 5. a. 9; Dionys. v. 61.) Neither passage affords the slightest clue to its position, and the name is not elsewhere mentioned; indeed, it seems certain that the place was not in existence at a later period. It is undoubtedly erroneous to connect (as Gall has done) the name of the Eutropea (Eutropicus) with the name of the town. (Becket, Roxana, Eutropa, v. 1. p. 170); and we are absolutely in the dark as to its position. It has been placed by Gall and Nibby at a place called Corcolo, about 3 miles NE. of Gabii and the same distance from Hadrian’s villa near Twidd; but this is mere conjecture. (Gall, Top. of Rome, p. 339; Nibby, Diastorm, vol. ii. p. 688.) [B. H. B.]

RAABAH-MOAB.

QUINDA. [Amarakrua.]

QUINTANA or AD QUINTAES, a station on the Via Labicana or Latine, 15 miles from Rome, and at the foot of the hill occupied by the temple of Lucum, now La Colonna, from which it was not about a mile distant. (It. Ant. p. 304; Gell, Top. of Rome, p. 55.) Under the Roman Empire it became the site of a village or suburb of Lucum, the inhabitants of which assumed the name of Lariacini Quintenses. [L.]

QUINTIANA CASTRA, a fort in the east of Vindelicum, not far from the banks of the Danube, between Batava Castra and Aqustagnana Castra. Its garrison consisted of a troop of Rhetian horsemen. (It. Ant. p. 340; Notit. Imp., where it is called Quarta Castra; comp. Euseb. Prc. A. Sev., 15. 27.) Muchar (Noricum, p. 233) identifies its site with that of the modern village of Krapina near Osijec. [T. H. R.]

QUIZA (Koziha, also Bozichi, Potl. iv. b. 35), a place on the coast of Mauretania Caesariensium, called by Ptolemy a colony, and in the Antonine itinerary a municipium, but in Pliny designated as “Quia Xeniata prægerinorum oppidum.” It was situated between Fortus Magnus and Armenaia, at the distance of 40 stadia from either. It is the modern Glina near Osijec. (Potl. i. c.; J. Ant. p. 13; Plin. v. 2; Mela, i. 6.)

R.

RAAMAH. [Rehoba.]

RAAMSES (Pyeusen, LXX, Exod. i. 11, xii. 37; Numb. xxxiii. 3, 5), was, according to D’Anville (Mém sur l’Égypte, p. 72), identical with Hermopolis in the Delta; but according to other writers (Jablonsky, Opusc. ii. p. 136; Winer, Bibl. Rezskover., vol. ii. p. 351) the same as Hermopolis in the same division of Asia. (W. B. D.)

RABBATH-MOAB. [Philadelphia.]

RABBATH-MOAB, a town in the country of Moab, stated by Stephanus, who is followed by Rd- land, Rammer, Winer, and other moderns, to be identical with Ar of Moab, the classical Areopolis. This identification is almost certainly erroneous; and indeed it is very doubtful whether a Rabba in Moab is at all the same place as the Areopolis. mistaken notices of such a name in the Bible are identified with Rabbath-Ammon, except in Judges (xii. 25), where Aror is said to be “before Rab- bab,” which may possibly be Rabbath-Ammon, and certainly cannot, in the absence of other ancient evidence, be admitted to prove the existence of a Rabba in Moab. There is, however, some evidence that such a town may have existed in that country, in the modern site of Rabba, marked in Zimmermann’s map about halfway between Kerak (Kir of Moab) and the Moab (Arnon), and by his identified with Areopolis, which last, however, was certainly identical with Ar of Moab, and lay further north, on the south bank of the Arnon, and in the south of the valley of Moab (2 Chron. ii. 15, xii. 36.). [Areopolis.] Rabba is placed by Borkhardt 3 hours north of Kerak (Syria, p. 377), and is doubtless the site noticed in Abulfeda’s Tabula Syriaca as Rabbath and Moab (90). Irby and Mangin

* For those articles not found under Ra, Ra, Br, Sc, see Eba, Ebu, Issu, Eba, Sc.
passed it two hours north of Kerak. "The ruins," they say, "are situated on an eminence, and present nothing of interest, except two old ruined Roman temples and some tombs. The whole circuit of the town does not seem to have exceeded a mile, which is a small extent for a city that was the capital of Moab, and which bore such a high-sounding Greek name." (Journal, June 5, p. 457.) They must not be confused with the defunct mosque preserved in the last cited words, regarding the etymology of the name Areopolis, and its identity with Rabbiath. which are almost universal. [G. W.]

RAGAE. [RAGAR].

RAGANO or RAGINDA, a town in the south-east of Noricum, on the great road leading from Celeia to Pontobium, between the rivers Sarau and Dravu. (It. Ant. p. 139; II. Itiner. p. 561; Tab. Peut.) Muchar (Noricum, p. 240) looks for its site near Mount Studentis; but other geometers entertain different opinions, and nothing certain can be said. [L. S.]

RAGAU (Peryna, Isidor, Statimn. Parn. v. § 19), a town mentioned by Isidorus in the district of Parthis called Apadana, was destroyed at the same time as the Ragasia of Poleney (Peryna, vi. § 4). It is not clear whether there exist at present any remains of this town, but it must have been situated to Nishapur, between that town and Herat. [V.]

RAGIRAVA. [RAPAVA].

RAGIRAVA, Pari. 1. A city of the tribe of Benjamin, mentioned with Gibea and Beeroth (Josh. xviii. 25), and elsewhere with Bethel, as in or near Mount Ephraim. (Judges, iv. v.) From xix. 13 of Judges it would appear to have been not far north of Jerusalem, and lying near to Gibeah of Benjamin. Being a border city between the kingdoms of Israel and Judah, it was fortified by Baasha, king of Israel, "that he might not suffer any to go out or come in to Ass, king of Judah." (1 Kings, xv. 17, comp. xii. 27.) It is placed by Eusebius 6 miles north of Jerusalem, over against Bethel (Onomast. s. r.), and by S. Jerome 7 miles from Jerusalem near Gabaa, and was a small village in his day. (Comment. in Jos. cap. v., in Sophoc. cap. 6, in Jona. cap. 1.) The name is also given to the station of a public road, leading from Jepha to Jerusalem, about 2 hours north of Jerusalem, and half an hour west of Betha, the ancient Gibeah. Its situation is very commanding, and it retains a few scattered relics of its ancient importance. (Robinson, Bibb. Res. vol. ii. pp. 315, 316.)

2. See also RAMATHA and RAMOTHE. [G. W.]

RAMATH-LEHI, or simply LEHI (translated in LXX. 'Avalpes avyvdeoos), where Samson slew the Philistines with the jaw-bone of an ass. (Judges, xv. 14—19.) The name Ramileh appears so like an abbreviation of Ramath-Lehi, or a corruption of that name, that it may well be identified as the scene of this slaughter. And here probably was the Ramah in the Thamidite toponomy in which Eusebius and S. Jerome found the Ramathaim Sophim of Samuel, and the Arimatheae of the Evangelists, which they place near to Lydda in the plain. (S. Jerome, v. xii. 50; S. John, xxiii. 50; Aquila; Eusebius, Onomast. s. v. Armatha Sophim; v. xxiii. 50; S. John, xix. 38; Aquila; Eusebius, Onomast. s. v. Armatha Sophim; v. xxiii. 50; S. John, xix. 38, 454; Balaos; Eusebius, Onomast. s. v. Armatha Sophim; v. xxiii. 50; S. John, xix. 38.) Dr. Robinson, indeed, contests all these positions; but his arguments cannot prevail against the admitted facts, that a place called Ramathen or Ramathda did anciently exist in this region, somewhere not far distant from Lydda. (Bibb. Res. vol. iii. p. 40, and that no other place can be found answering to this description but Ramileh, which has been regarded from very early times as the place in question. The facts of Ramileh having been built by Simeon, son of the khalif Abd-el-Malik on the destruction of Lydda in the early part of the 8th century, and that the Arabic name signifies "the sand," will not seriously militate against the hypotheses with those who consider the great probability that the khalif would fix on an ancient, but perhaps neglected, site for his new town, and the common practice of the Arabs to modify the ancient names, to which they would attach no meaning, to similar sounds intelligible to them, and in this instance certainly not less appropriate than the ancient name; although the situation of the town "on a broad low swell in the sandy throat fertile plain," would satisfy the condition required by its presumed ancient designation. (Bibb. Res. vol. iii. p. 25.) It may be questioned whether the name was not retained, and still belongs to the district of Apheirema and Lydda, as taken from Samaritans and added to Judaea (1 Maccab. xi. 34; Josephus, Ant. 2. § 3, 4. § 9), derived its name from this or from one of the other Ramahs, in Benjamin. [G. W.]

RAMATHA (Peyahdd), the form in which Josephus represents the name of Samuel's native city, Ramathaim Sophim (XX. LXX. 'Avalpes avyvdeoos), of Mount Ephraim (1 Sam. i. 1), perhaps identical with Ramah, where was his ordinary residence (vii. 17, vii. 4, xix. 18—24, xxv. 1), but distinct from the Ramah above named. Ancient tradition has fixed this city at Nebey Sammeli, i. e. "The Prophet Samuel," a village situated on a very high and commanding hill, two hours to the NNW. of Jerusalem, where the place of his sepulture is shown. Eusebius and S. Jerome, however, found it in the western plain, near Lydda (Onomast. s. v. Armatha Sophim; see RAMATH-LEHI). Dr. Robinson has stated his objections to the identification of Ramathaim Sophim with Nebey Sammei, and has endeavored to fix the former much farther to the south, on the hill called Soba, a little to the south of Jaffa, on the road, about 3 hours from Jerusalem; while Mr. Wolcott has carried it far south as the vicinity of Hebron. (Robinson, Bibb. Res. vol. ii. pp. 139—144, 330—334, Bibb. Sacra, vol. i. pp. 44—52.) These objections are based on the hypothesis that the incidents attending Saul's union to the kingdom, narrated in the 1st book of Samuel, which, however, there is no evidence; and his difficulty would press almost with equal weight on Soba, as the direct route from Soba to Gibeah (Jaffa) would certainly not have conducted Saul by Rachel's sepulchre. Neither can the district of Mount Ephraim be extended so far south. Indeed, this last seems to be the strongest objection to the place of Samuel, and suggests a site farther north, perhaps Ram-illah, in the same parallel of latitude as the other Ramah and Bethel, which were certainly in Mount Ephraim. (Judges, iv. 5.) On the other hand, the name Ramah, signifying "a height," is so remarkably applicable to Nebey Sammei, which is evidently the name of an ancient place, not, as Dr. Robinson suggests, have been Minjah, that it would be difficult to find a position better suited to Ramathaim Sophim than that which tradition has assigned it. [MIZPAH]. [G. W.]

TY 2
RAMATHAIM-ZOPHIM. [RAMATHA.]

RAMACHACIA (Ῥαμαχάκηα, Arrian, A. M. vi. 81), a village of the Orcia, the first which was taken by Alexander in his march westwards from the Indus. There can be no certainty as to its exact position, but the conjecture of Vincent seems well grounded that it is either the Ram-nagan or the Ram-gwar of the Agis. (Vincent, "Voyage de l'Indus," vol. i. p. 185.)

[R.]

RAM, a place in Gallia Narbonensis, which the Italic "Ram" (Rom. "Ramum") is said to have been derived from. (Strabo, viii. 565; Pliny, v. 148.) R. of N. (from Eubrion and Brictum.) D'Anville says that there is a place called Rame on this road near the Duronc, on the same side as Eubrion and Brictum, and at a point where a torrent named Biesas joins the Duronc.

[G. L.]

RAMISTA or RISTISTA, a place in Upper Panonica on the road running along the river Sava to Siscia (It. Hieros, p. 561; Geogr. Rav. iv. 19; Tab. Pent.). Its site has not yet been ascertained with certainty.

[L. S.]

RAMOTH, identical in signification with Ram and Ramah, equivalent in Hebrew to "an eminence," and hence a generic name for towns situated on remarkable heights, as so many in Palestine were. Besides those above named (Ramah; Ramoth) was a Ramoth in the tribe of Asher, not far from Tyre; and another in Naphtali (Josh. xix. 39, 36) in the north, and a Ramath in the tribe of Simeon, appropriately called "Ramath of the South" (ver. 8), to which David sent a share of the spoils of Ziklag (I Sam. xxx. 27), and yet a Ramoth in Issachar, assigned to the Levites of the family of Gershon. (1 Chron. vi. 74.) More important than the foregoing was—

RAMOTH-GILEAD (Ῥαμωθος τῆς Γείλαδ), a city of the tribe of Gad, assigned as a city of refuge, first by Moses and subsequently by Joshua. (Deut. iv. 43; Josh. xx. 8, "Ramoth"). It was also a Levitical city of the family of Manasseh. (Josh. xxii. 33.) The Syrians took it from Ahab, who lost his life in seeking to recover it. (1 Kings. xxii.) Eusebius places it 15 miles west of Philadelphia (Onomast. a. e., where S. Jerome erroneously reads east; Roland, p. 968), in the Peraea, near the river Jabok. Its site is uncertain, and has not been recovered in modern research.

[R.]

RANILUM, a town in the interior of Thrace. (Tab. Pent.)

[R.]

RAPHANAEA (Ῥαφαναῖα), a maritime town of Syria, only once named by Josephus, who states that the Sabian river flowed between Aphanas and Raphanaea. (B. J. vii. 5. § 1.) [RAPHANAEA.]

RAPHA (Ῥαφᾶ), a maritime city in the extreme south of Palestine, between Gaza and Rhinocorura, a day's march from both, reckoned by Josephus, Polybios, and others, as the first city of Syria. (Joseph. B. J. iv. 11. § 5; Polyb. v. 80.) It was taken from the Egyptians by Alexander Jannaeus, and held by the Jews for some time. It was again captured and held by the Romans restored by Gabinius. (Ant. xiii. 13. § 3, 15. § 4, xiv. 5. § 3.) It is mentioned also by Strabo (xvi. 759) and in the Itinerary of Antoninus, between the above-named towns. Coins of Rapha still exist, and it was represented by its bishop in the council of Epheus, and in those of Constantinople, a. d. 556 and 555. (Biblioth. Hierol. p. 335; Origen, "Crisis." "Inscript. tom. xii. p. 792") It was in the neighbourhood of this city that a great battle was fought between Ptolemy Philopator and Antiochus the Great, in which the latter was routed with immense loss. (3 Macc. i. 51; Polyb. v. 80, 81; Hier. ad Deos. xi. 12.) Its site is still marked by the name Rapha, and two ancient granite columns is sa, with several prostrate fragments, the remains apparently of a temple of considerable magnitude. (Irby and Mangles' "Journal," October 8.) [G. W.]

RAPPIANA, a town on the river Marus in Moesia Superior, now Alexiantia. (It. Hieros, p. 568; [RAPPIAN]ED.]

RAPRAUA (Ῥάπραος, Marcian. Perp. ii. § 32, ed. Muller), a small place on the coast of Geisia, between the river Arabis and the Portus Miletus. It is probably the same as that called by Ptolemy Rapicriva (Ῥαπικρίβα, vi. 21. § 2). It may be doubted whether it can now, be recognised, unless under the name of the modern Rapraia (Ῥαπραία), a town of Attica.

[See Muller, ad Arrium. Indic. § 26.] [V.]

RARAPIA (Ῥάραπια, Lucan. iii. 426, where the reading varies between Scaccia, Scapria, Scarpia, and Sarpi) a town of Lucania, on the road from Oenotis to Ebora, and 93 miles N. of the former place; see Sarpi. (Comp. Florus. Expos. xxv. p. 509.) [T. H. D.]

RARASSA (Ῥάρασσα, or Ραράσσα, Ptol. vii. 5. § 50), a place which Ptolemy calls the metropolis of the Casperea in India infra Ganges. Its exact situation cannot be determined; but there can be no doubt that it was in Western India, not far from the Vindhya Mts. Lassen places it a little to the E.

[R.]

RASENA. [ETRURIA, pp. 855, 859.]

RATAE (It. Ant. pp. 477, 479: Père, Pol. iii. 2. § 20, where some read "Pâys"); a town of the Coritani in the interior of Britannia Romana, and on the road from London to Lincoln. It is called Ratexion in the Geogr. Rav. (v. 311), and Rams (337) identifies it with the Leicestershire place of that name. (R. H. D.)

RATA'NEUM (Plin. iii. 22. a. 16; "Pâiroid", Dion Cass. livi. 111), a town of Dalmatia, which was burnt by its inhabitants, when it was taken by Germanica in the reign of Augustus. (Dion Cass. i. c.)

RATRIA (Ῥατρια, Propor. proo. ad d. iv. 6 p. 290; "Ritranum" Moris., Pol. iii. 9. § 4, viii. 1. § 21); a town of Hieropolis (C. s. W.), identified by Hier. (l. 8; Ratiaris, Geogr. Rav. iv. 7), a considerable town in Moesia Superior on the Danube, and the head-quarters of a Roman legion; according to the Itinerary (p. 219), the Leg. xix. Gemina, according to the Not. Imp. (c. 30), the Leg. xvi. Gemina. It was also the station of a fleet on the Danube (Suidas). Indeed, the name has been preserved in that of the Pogus Ratiatisin, from which comes the modern name of Pagni de Reta. Gregory of Tours speaks of Ratiatum as "infra terminum Pictorum qui adject civitatis Namneticae." The district of Rete was taken from the "dicoce of Picti and attached to the "dicoce of Nasati in the time of the (R. H. D.)

RATIATUM. (Ῥατιατος, or "Ryriovos," a town of the Pecenoi (Ptol. ii. 7. § 6). Ptolemy mentions it before Limonum, and places it north of Limonum, and further west. Some editions of Ptolemy place Ratiatum in the territory of the Lemovices, but this is a mistake. In the records of a council held at Orissa in a. d. 511, the bishop of the Pictavi signs himself as "Ratiatii," under the name of the province in which is that of the Pogus Ratiatisin, from which comes the modern name of Pagni de Reta. Gregory of Tours speaks of Ratiatum as "infra terminum Pictorum qui adject civitatis Namneticae." The district of Rete was taken from the "dicoce of Picti and attached to the "dicoce of Nasati in the time of the (R. H. D.)
RATOMAGUS, which are near Macacacoal and on the Temo, a small river in the department of La Vendé. The Temo enters the sea near Bourgmont, opposite to the Ile Noirmoutier (D'Avrille, Notice, &c.; Ubert, Gallien, p. 393).

RATOMAGUS. [RATOMAGUS.]

RAUDII CAMPIL. [CAMPII RADDII]

RAVENNA (Ponora, Strab.; Póderro, Ptol. et al.; Eke. Ravennas -atis -ae Ravennae), one of the most important cities of Galilia Cipadana, situated a short distance from the sea, received, on the road from Ariminum to Caesarea Augustus (Ital. Ant. p. 126.) It was 33 miles N. of Ariminum. Though included within the limits of Cisalpine Gaul, according to the divisions established in the days of the Venetians, it is said that it had never been a Gallic city. Strabo tells us that it was a Thessalian colony, which probably meant that it was a Pelasgic settlement, and was connected with the traditions that ascribed to the Pelasgi the foundation of the neighbouring city of Sipna. [SPINA.] But they subsequently, according to the same Strabo, were domiciled at this city. (Appian. B. C. i. 89.) It was in order to maintain themselves against the growing power of the Etruscans, and thus became an Umbrian city, to which people they continued to belong till they passed under the Roman government. (Strab. v. p. 214, 217.) Pliny, on the other hand, calls it a Spéno city,—a strange statement, which we are wholly unable to explain. (Plin. iii. 15. a. 20.) It was an Umbrian settlement, and retained its national character, though surrounded by the Lingonian Gauls, until it received a Roman colony. No mention of the name is found in history till a late period of the Roman Republic, but it appears to have been then already a place of some consequence. In n. c. 93, during the civil war between Marius and Sulla, it was occupied by Metellus, the lieutenant of the latter, who made it the point of departure from whence he continued his operations. (Appian, B. C. i. 89.) Again it was one of the places which was frequently visited by Caesar during his command in Gaul, for the purpose of raising levies, and communicating with his friends at Rome. (Cic. ad Att. vii. 1. od Fam. i. 9. viii. 1.) and just before the outbreak of the Civil War it was there that he established his head-quarters; from whence he carried on negotiations with the senate, and from whence he ultimately set out on his march to Ariminum. (Id. ad Att. ii. 32; Cass. B. C. i. 5; Suet. Cass. 30; Appian, B. C. ii. 32.) Its name again figures repeatedly in the civil war between Antiochus, received a great number of Roman colonists (v. p. 217); but the date is not mentioned, and it certainly did not, like Ariminum, pass into the condition of a regular Colonia, numerous inscriptions being extant which give it the title of a Municipium. It is probable that the settlement alluded to by Strabo took place under Augustus, and it is certain that it was to that emperor that Ravenna was indebted for the importance which it subsequently enjoyed during the whole period of the Roman Empire. The situation of the city was very peculiar. It was surrounded on all sides by marshes, by rather lagoons, analogous to those which now surround the city of Venice, and was built, like that city, actually in the water, so that its houses and edifices were wholly constructed on piles, and it was intersected in all directions by canals, which were crossed either by bridges or ferries. The lagoons had a direct communication with the sea, so that the canals were scoured every day by the flux and reflux of the tides, and from this great distance to which Strabo attributes, no doubt with justice, the healthiness of the city, which must otherwise have been uninhabitable from malaria. (Strab. v. p. 213; Jornand. Gu. 29; Sidon. Apoll. Epist. i. 5; Procop. B. G. L. 1; Claudian, de VI. Cons. Hon. 495.) The old city had a small port at the mouth of the river, which was defended by a small fort, (Butler.) but it was completely abandoned, and the present port is near 3 miles distant from the old city, with which it was connected by a long causeway: a considerable town rapidly grew up around it, which came to be known by the name of PORTUS CLASSIS or simply CLASSIS; while between the two, but nearer to the city, there arose another suburb, Scarcely less extensive, which bore the name of Caesarea. (Jornand. L.c.; Sidon. Apoll. L.c.) Just B. G. ii. 29; Geogr. Rav. iv. 31.) In addition to these works Augustus constructed a canal, called from him the Fossa Augusti, by which the water of the Padus were carried in a deep artificial channel under the very walls of Ravenna and had their outlet at the port of Classis. (Plin. iii. 16. a. 20; Jornand. Gu. 29.) From this time Ravenna continued to be the permanent station of the Roman fleet which was destined to guard the Adriatic or Upper Sea, as Misenum was of that on the Lower (Tac. Ann. iv. 5, Hist. ii. 100, iii. 6, 40; Suet. Aug. 49; Veget. de R. Mil. v. 1; Not. Dign. ii. p. 116); and it rose rapidly into one of the most considerable cities of Italy. For the same reason it became an important military post, and was often selected by the emperors as their head-quarters, from which to watch or oppose the advance of their enemies into Italy. In A. D. 193 it was occupied by Severus in his march upon Rome against Didius Julianus (Spartian, Did. Jul. 6; Dion Cass. liv. 17.); in A. D. 208 it was there that Pupienus was engaged in assembling an army to oppose the advance of Maximin when he received the news of the death of that emperor before Aquileia. (Herodian, viii. 6. 7; Capit. Marci. 24. 25, Max. et Balb. 11. 12.) Its strong and secluded position also caused it to be selected as a frequent place of confinement for prisoners of distinction, such as the son of the German chieftain Arminius, and Marobod, chief of the Suevi. (Tac. Ann. i. 58, ii. 63; Suet. Tib. 20.) The same circumstances at a later period led to its selection by the feeble and timid Honorius as the place of his
residence; his example was followed by his successors; and from the year 404, when Honorius first established himself there, to the close of the Western Empire, Ravenna continued to be the permanent imperial residence and the place from whence all the laws and rescripts of the emperors were dated. (Jornand. Get. 29; Gibbon, c. 30.) Even before this period there are told that it was a very rich and populous city, as well as of great strength (Zosim. ii. 10); it was the capital of Picenum (as that name was then used) and the residence of the Consularis or governor of that province. (Orell. Isaeor. 3649; Böcking, ad Not. Deps. ii. pp. 359, 443.) But the establishment of the imperial court there naturally added grottoes was after it long siege compelled by famine to its inaccessible situation preserved it from the calamities which at this period laid waste so many cities of Italy. Yet Ravenna as a place of residence must always have had great disadvantages. Sidonius Apollinaris, who visited it late in the fifth century, complains especially of the want of fresh water, as well as of the mouldiness of the case, the swarms of unclean flies, and the croaking of frogs. (Sidon. Apoll. Ep. i. 5, 8.) Martial, at a much earlier period, also alludes to the scarcity of fresh water, which he jestingly asserts was so dear that a cistern was a more valuable property than a vineyard. (Martial, iii. 56, 57.)

After the fall of the Western Empire Ravenna continued to be the capital of the Gothic kings. Odocacer, who had taken refuge there after repeated defeats by Theodoric, held out for near three years, but was at length compelled to surrender. (Jornand. Get. 57; Cassiod. Chron. p. 649.) Theodoric himself established his residence there, and his example was followed by his successors, until, in 539, when it was taken by the Lombards, it received the title of the city to surrender the city to Belisarius. (Procop. B. G. ii. 28, 29.) It now became the residence of the governors who ruled a part of Italy in the name of the Byzantine emperors, with the title of exarchs, whence the whole of this province came to be known as the Exarchate of Ravenna. The Byzantine governors were in conflict with the frequent incursions of the Lombard kings, and were gradually stripped of a large portion of their dominions; but Ravenna itself defied their arms for more than two centuries. It was besieged by Lintprand about 750, and its important suburb of Classe totally destroyed (P. Dian. vi. 49); but it was not till the reign of his successor Astolphus that Ravenna itself fell into the hands of the Lombards. But the exact date, as well as the circumstances of its final conquest, are uncertain. (Gibbon, c. 49.)

The situation of Ravenna at the present day presents no resemblance to that described by ancient writers. Yet there is no doubt that the modern city occupies the same site with the ancient one, and that the port is of course due to natural causes. The accumulation of alluvial deposits, brought down by the rivers and driven back by the waves and tides, has gradually filled up the lagoons that surrounded and canals that intersected the city; and the modern Ravenna stands in a flat and fertile plain, at a distance of 4 miles from the sea, from which it is separated by a broad sandy tract, covered in great part with a beautiful forest of stone pines. Though Ravenna is one of the most interesting places in Italy for its mediæval and early Christian antiquities, it presents few remains of the Roman period, and those for the most part belong to the declining years of the Empire. A triumphal arch, known by the name of Porta Aurea, was destroyed in 1585: it stood near the modern gate called Porta Adriana. Several of the ancient basilicas date from the Roman period; as does also the sepulchral chapel containing the tomb of Gallus Flaccus, the sister of Honorius, and mother of Valentinian III. The position of the basilica of Theodoric still remains in its original state, and the mausoleum of that monarch, just without the walls, is a monument of remarkable character, though stripped of its external ornaments. An ancient basilica, still called S. Apollinare in Classe, about 3 miles from the southern gate of the city, preserves the memory of Its inscription of Ta canes; and the inscription of the site of that important suburb. It stood about a quarter of a mile from the south gate of the city, between the walls and the bridge now called Ponte Nave. This bridge crosses the name of the River and Montone, two small rivers which previously held separate courses to the sea, but were united into one and confined within an artificial channel by Clemens II. in 1736. The Romo, which is the southernmost of the two, is probably the same with the Beda of Pliny; indeed Chierusius says that it was in his time still called Beda. Hence the Montone must be identified with the Venetian of the same author. The Anemo, which he placed next in order, is clearly the same now called the Amone or Lamone, which flows under the walls of Fiumara. (Flaminius.)

The nature which produced these changes in the situation and environs of Ravenna was undoubtedly in operation from an early period. Already in the fifth century the original port constructed by Augustus was completely filled up, and occupied by orchards. (Jornand. Get. 29.) But Ravenna at that period had still a much frequented port, where the fleets of Belisarius and Narses could ride at anchor. The port of Classe itself is remarkably well adapted to the accommodation of rich and sumptuous vessels, which extends for many miles along the east coast both to the S. and N. of Ravenna. The existence of this remarkable strip of forest is attested as early as the fifth century, the name of Pinetis being already found in Jornandus, which makes us that Theodoric encamped there when he besieged Odocacer in Ravenna. (Jornand. 67.) But it is probable that it has extended its boundaries and shifted its position as the land has gradually gained upon the sea.

The territory of Ravenna was always fertile, except the sandy strip adjoining the sea, and produced abundance of all sorts of fruits. Several of the vines are remarked that the vines quickly decayed. (Strab. v. 214; Plin. xiv. 2. 4.) Its gardens also are noticed by Pliny as growing the finest asparagus, while the adjoining sea was noted for the excellence of its turbot. (Plin. iv. 26, 79, xiv. 4. 15.)

RAVIUS ("Passus, Proli. ii. 2. 4. 15") was a village of the waste of the Bovis, according to Camden (p. 1385) the "Trobe." Others identify it with the Gavebba. (T. H. B.)

RAUBACI, or RAURICI ("Passus"). The term Raurici appears in Ptolemy (ii. 9. § 18), in Pliny (iv. 71)
RAURANUM.

17, and in some inscriptions. Polony mentions two towns of the Rauraci, Rauracorum Augusta and Argentoritava [Augusta Rauracorum; Argentoritava]. Augusta is Augus near Balé, in the Swiss Canton of Bâle, and may be the Augustus of Argentoritava. The position of these places helps us to form a measure of the extent of the territory of the Rauraci, which may have nearly coincided with the bishopric of Balé.

The Rauraci joined the Helvetii in their emigration, n. c. 58. [HELVEITI.] [G. L.]

The Swiss Canton of Bâle, and is placed about 10 miles from the town of the Rauraci.

It is Raurama in the Table, but the name Raurana occurs in a letter of Paulinus to Aucunus (Ep. IV. ad Aucun. v. 249), where it is "Pictoricae in arva." The place is Rome or Rousum, near Chamay, nearly due south of Ponziers. (D'Anville, Notice, &c.; Ueber. Gesch. ii. 393.) [G. L.]

RAURARIUS. [ARURARIUS.]

REATE (Pedre, Strab.; Pedres, Dionys. Ech. co. Paestum, Rauramus; Röesp, an ancient city of the Sabines, and one of the most considerable that belonged to that people. It was situated on the site of the Romanus, 48 miles from Rome (Ital. Ant. p. 506), and of the Sabine and the Regius. The Sabines were in agreement in representing it as a very ancient city: according to one account, quoted by Dionysius from Zenodotus of Troeszen, it was one of the original abodes of the Umbrians, from which they were expelled by the Falisci; but Cato represented it as one of the first places occupied by the Sabines when they descended from the neighbourhood of Ambrussum, and which was agreed upon by the Sabine Father, and the Sabines, under the name of the Goliad; but this is probably a more poetical fancy. (St. It. viii. 81.5.) No mention of Reate occurs in history before the period when the Sabines had been subjected to the Roman rule, and admitted to the Roman Franchise (n. c. 290); but its name is more than once incidentally noticed during the Second Punic War. In n. c. 211 Hannibal passed under the walls of this town, and during his retreat from Rome, or, according to Cicero, during his advance upon that city (Liv. xxvi. 11); and in n. c. 205 the Reatini are specially mentioned as coming forward, in common with the other Sabines, to furnish volunteers to the army of Scipio. (Id. xxviii. 43.) We are wholly ignorant of the reasons why it was reduced to a second-rate city, under whose special patronage the inhabitants were placed, that it was a flourishing and important town.

(C. C. & Cat. ii. 3, pro Sen. 2. § 37, de Nat. Desc. liv. 2.) Under the Empire it certainly obtained the ordinary municipal privileges, and had its own magistrates (Zumpt, de Col. pp. 98, 182; Gruter, Inscr. p. 354. 3, &c.): under Vespasian it received a considerable number of veteran soldiers as colonists, but did not obtain the rank or title of a colonia. (Jut. Col. p. 257; Orell. Inscr. 3685; Gruter, Inscr. p. 536. 2, &c.)

The territory of Reate included the whole of the lower valley of the Velinus, as far as the falls of that river; one of the most fertile, as well as beautiful, districts of Italy, whence it is called by Cicero the Remea Tempore (ad Att. iv. 15.) But the peculiar natural advantages of this district was the means of involving the citizens in frequent disputes with their neighbours of Interamna. (Varr. R. R. iii. 2. § 3.) The valley of the Velinus below Reate, where the river emerges from the narrow mountain valley through which it has hitherto flowed, and receives at the same time the waters of the Salso and Teverone, both of them considerable streams, expands into a broad plain, not less than 5 or 6 miles in breadth, and almost perfectly level; so that the waters of the Velinus itself, and those of the smaller streams that flow into it, have a tendency to stagnate and form marshes, while in other places they give rise to a series of small lakes, remarkable for their picturesque beauty. The largest of these, now known as the Langene, has been the one designated in ancient times as the LACUS VELINUS; while the fertile plains which extended from Reate to its banks were known as the ROREXI or more properly ROMERI CAMPUS, termed by Virgil the "Rosa rursus Velini." (Virg. Aen. vii. 712; Cic. ad Att. iv. 15; Varr. R. R. 7. § 10, ii. 1. § 15, ii. 2. § 10; Pint. xiv. 4. a. 3.) But this broad and level valley is at an altitude of near 1000 feet above that of the Nar, into which it pours its waters by an abrupt descent, a few miles above Interamna (Termi); and the stream of the Velinus must always have constituted in this part a natural cascade. Those waters, however, are so strongly impregnated with carbonate of lime, that they are continually forming an extensive deposit of travertine, and thus tending to block up their own channel. The consequence was, that unless their course was artificially regulated, and their channel kept clear, the valley of the Velinus was inundated, while on the other hand, if these waters were carried off too rapidly into the Nar, the valley of that river and the territory of Interamna was subjected to innumerable floods. The first attempt to regulate the course of the Velinus artificially, of which we have any account, was made by M. Curius Dentatus, after his conquest of the Sabines, when he carried off its waters by a deep cut through the brow of the hill overlooking the Nar, and thus gave rise to the celebrated cascade now known as the Falleis of Termi. (Cic. ad Att. iv. 15; Serv. ad Aen. vii. 43.) From the impressions of Cicero it would appear that the Lacus Velinus, previous to this time, occupied a much larger extent, and that a considerable part of the valley was then first reclaimed for cultivation.

But the expedient thus resorted to did not fully accomplish its object. In the time of Cicero (n. c. 54) fresh disturbances occurred between the Sabines and those of Interamna; and the former appealed to the great orator himself as their patron, who pleaded their cause before the arbiters appointed by the Roman senate. On this occasion he visited Reate in person, and inspected the lakes and the channels of the Velinus. (Cic. Pro Scauro. 2. § 27, ad Att. iv. 15.) The results of the arbitration is
unknown: but in the reign of Tiberius the Fastienses had to contend against a more formidable danger, arising from the project which had been suggested of blocking up the outlet of the Lacus Velinus altogether; a measure which, as they justly complained, would undoubtedly have inundated the whole valley. (Tac. Ann. i. 79.) Similar disputes and difficulties again arose in the middle ages; and in A.D. 1400 a new channel was opened for the waters of the Velinus, which has continued in use ever since.

No other mention occurs of Reste under the Roman Empire; but the inscriptions attest its continued municipal importance; its name is found in the Itineraries (Itin. Ant. p. 506), and it early became the see of a bishop, which it has continued ever since. Throughout the middle ages it was, as it still continues to be, the capital of the surrounding country. No ancient remains are now visible at Resti.

The territory of Reste was famous in ancient times for its breed of mules and asses; the latter were particularly celebrated, and are said to have been sometimes sold for a price as high as 300,000 or even 400,000 sestertii (Varr. R.R. ii. 8; Plin. v. 453. a. 68), though it is difficult not to suppose some error in these numbers. Hence, Q. Asinius Pollio, who had a villa on the Lacus Velinus, and extensive possessions in the Resti territory, is introduced by Varro in his dialogues De Rusticis, as discoursing on the subject of breeding horses, mules, and asses. (Varr. R.R. ii. 1. § 8; Strab. v. p. 238.) It was at this villa of the Q. Asius that Cicero lodged when he visited Reste. (Cic. ad Att. iv. 15.) The Servius Aquae, mentioned by him in the same passage, and alluded to also by Dionysius (l. 14.), were evidently some springs or sources, which supplied one of the small lakes in the valley of the Velinus. [E. E. B.]

RECHIUS. [BOLK.]

REDINTUINUM (Piedmont), a town in the northern part of the country occupied by the Marcomanni (Bohemis), is mentioned only by Ptolemy (ii. 11. § 29). Some geographers regard it as having occupied the site of the modern Praego, and others identify it with Horsio; but nothing certain can be said about the matter. [L. S.]

RE'DONES (Phœberes, Phoiberes), in the Calthaginæ of Budgenness of Tuscum (ii. 8. § 13), are placed by him in the same passage, and along the Liger. Their capital is Coudade (Romans). But the Redones were not on the Loire. Pliny (iv. 18) enumerates the Rhedones among the peoples of Gallia Lugdunensis: "Diabellini, Rhedones, Turones." After the bloody fight on the Sambre (s. c. 57) Caesar sent F. Crassus with a legion into the country of the Veneti, Redones, and other Celtic tribes between the Semois and the Loire, all of whom were submitted. (B. G. ii. 34.) Caesar here enumerates the Redones among the maritime states whose territory extends to the ocean. In n. 52 the Redones with their neighbours sent a contingent to attack Caesar during the siege of Alesia. In this passage also (B. G. vii. 75), the Redones are enumerated as being one of the tribes which, in the Celtic language were called the Armoric States. D'Anville supposes that their territory extended beyond the limits of the diocese of Remes into the dioceses of St. Malo and Dol. Their chief town, Remes, was the capital of the department of Ille-et-Vilaine. [G. L.]

REGANUM, a northern tributary of the Danube, the modern Regen in Bavaria, is noticed only once. (Geogr. Rav. iv. 25.)

REGIA (Pirych, Ptol. ii. 2. § 10).-1. A place in the interior of Hibernia, no doubt so named by the Romans from its being a royal residence, the proper name of which was unknown to them. It was perhaps seated on the river Coalseore, in the neighbourhood of Omagh.

2. (Erfia Pimich, Ptol. li. c,) another place of the same description, conjectured to have been on the river Dúnleavy Carissa. [G. H.]

REGI'A (called by Ptol. ii. 4. § 13, Pirych; comp. Geogr. Rav. iv. 44, and Regia, Plin. iii. 3.), a town of Bastic, on the road from Hippeis to Emerita. (Itin. Ant. p. 415.) Usually identified with Paelesia de Lusca, where there are Roman remains. [T. H. B.]

REGI'ANUM (Pirychavos, Ptol. iii. 10. § 10), a place on the Danube in Moesia Inferior. It is probably the same place as the Augustus of the library (p. 292; comp. Tab. Peut.) and the Agyrephos of Procopius (de Aed. iv. 6); in which case it may be identified with Colossaeus at the confluence of the Opirus and Danube. [T. H. B.]

REGULLUM (Pirychavo), a town of the Sesins in Aquitania, mentioned by ancient writers as a place of residence of Attia or Attius Claudius, who migrated to Rome about n. c. 505, with a large body of clients and followers, where he adopted the name of Appius Claudius and became the founder of the Cisalpine tribe and family. (Liv. ii. 16; Dionys. v. 40; Diod. v. 257. 1; Serv. ad Aen. vii. 706.) About 60 years afterwards C. Claudius, the son of the deceased Appius Claudius, retired to Regillum, as the native place of his forefathers (" antiquam in patriam," Liv. iii. 58; Dionys. xi. 15). The name is not noticed on any other occasion, nor is it found in any of the geographers, and we are wholly without a clue to its position. [E. H. B.]

REGILLUS LACUS (Ρηγίλλιον λίκων, Dionys. Lago di Cornovalle), a small lake in Latium, at the foot of the Tuscanian hills, celebrated for the great battle between the Romans and the Latins under C. Mamilius, in B. c. 496. (Liv. ii. 19; Dionys. vi. 5; Cic. de Nat. D. ii. 2, iii. 5; Plin. xxxii. 1. 11; Val. Max. i. 8. § 1; Vict. Vir. ill. 16; Flor. i. 11.) Hardly any event in the early Roman history has been more disguised by poetical encomium and fiction than the battle of Regillus, and it is impossible to decide what amount of historical character may be attached to it: but there is no reason to doubt the existence of the lake, which was assigned as the scene of the combat. It is expressly described by Livy as situated in the territory of Tusculum (+ ad lacum Regillum in agro Tusculano, Liv. ii. 19), and this seems decisively against the identification of it with the small lake called Il Lago della Sola Frossada, about a mile to the N. of La Colonna; for this lake must have been in the territory of Labicum, if that city be correctly placed at La Colonna [LABICUM], and at all events could hardly have been in that of Tusculum. Moreover, no lake on the coast of the Tyrrhenian Sea would more probably have been indicated by some reference to that high-road than by the vague phrase "in agro Tusculano." A much more plausible suggestion is that of Gell, that it occupied the site of a volcanic crater, now drained of its waters, but which was certainly once occupied by a lake, at a place called Cornovalle, at the foot of the hill on which
REGINA.

REGINA, in Gallia Lugdunensis, is placed in the Table on a road from Condate (Remense). The first station is Fanum Martis, and the next is Regina, a Gallic place from Condate. D'Anville fixes Regina on a Carte on the coast, between S. Brience and S. Malo. (Fanum Martis.) [G. L.]

REGINUM, a town in the northern part of Vindelicia, on the southern bank of the Danube, on the road leading to Vindobona. This town, the modern Ratisbon, or Regensburg, is not mentioned by the Roman historians, but it was not wanting in importance. As we learn from inscriptions, was successively the station of the 1st, 3rd, and 4th Italian legions, and of a detachment of cavalry, the Ala Il. Valeria. The town appears to have also been of great commercial importance, and to have contained among its inhabitants many Roman families of distinction. (In Ant. p. 250; Tab. Peut, where it is called Camis Regina; comp. Bayerer, Der Oberdonaukreis Bayerns, iii. p. 38, &c.) [L. S.]

REGIO, a town of Thrace on the river Batheia, and not far from Constantinople (Itin. Hieros. p. 570), with a roadstead, and handsome country houses. (Agath. v. p. 146; comp. Procop. de Aed. iv. 8; Theophan. p. 196.) Now known as Tarsus. [T. H. D.]

REGIVS VILLA (Pirguvovilla, Strab.), a place on the coast of Etruria, which, according to Strabo, derived its name from its having been the residence of the Pelasgic king or chief Maleas, who ruled over the neighbouring Pelasgi in this part of Etruria. (Strab. v. p. 225.) None of the other geographers mentions the probability; but Strabo places it between Castra and Gravisca; and it is therefore in all probability the same place which is called in the Maritime Itinerary Regia, and is placed 3 miles S. of the river Armenta (Flora) and 12 miles from Gravisca. (Itin. Mart. p. 499.) The site is now marked only by some projecting rocks called La Muraille. (Denni's Etruria, l. v. p. 398; Westrup's Etruria, & Inst. Rom. Ant. p. 30.) [E. B. H.]

REGISTUS or RESISTUS. [Bisanthia.]

REGIUM LEPIDII or REGIUM LEPIDIUM (Pirren Almior, Strab.; Pirren Alminor, Ptol.; Eth. Regienses: Reggio), sometimes also called simply REGIUM, a town of Gallia Cispadana, situated on the Via Aemilia, between Mutina and Parma, at the distance of 17 miles from the former and 18 from the latter city. (Itin. Ant. pp. 99, 127; Strab. v. p. 216.) We have no account of its foundation or origin; but the name would raise a presumption that it was founded, or at least settled and enlarged, by Aemilius Lepidus when he constructed the Aemilian Way; and this is confirmed by a passage of Festus, from which it appears that it was originally called Forum Lepidi. (Fest. s. v. Rhegium, p. 270.) The origin of the appellation of Regium, which completely superseded the former name, is unknown. It was perhaps probably a centre like the neighbouring town of Mutina and Parma, and evidently never rose to the same degree of opulence and prosperity as those cities, but became, nevertheless, a flourishing municipal town. It is repeatedly mentioned during the civil war with M. Antonius, both before and after the battle of Mutina (Cicad. Foss. xi. 9, xii. 5); and at a somewhat earlier period it was there that M. Brutus, the father of the murderer of Caesar, was put to death by Pompey in a. c. 79. (Oros. v. 22; Plat. Pompon. 16.) Its name scarcely occurs in history during the Roman Empire; but its municipal consideration is attested by inscriptions, and it is mentioned by all the geographers among the towns on the Via Aemilia, though ranked by Strabo with those of the second class. (Strab. v. p. 216; Plin. l. i. 15. s. 20; Ptol. iii. l. § 46; Orbis. Itin. 3983, 4138; Tac. Hist. ii. 50; Pluteus, Macrob. i.) Polonius alone gives it the title of a Colonia, which is probably a mistake; it was certainly not such in the time of Pliny, nor is it so designated in any extant inscription. Zumpt, however, supposes that it may have received a colony under Trajan or Hadrian. (Zumpt, de Colonia, p. 203.) St. Jerome notices Regium as well as Placentia and Mutina among the cities which had fallen into great decay before the close of the fourth century. (Ambros. Ep. 39.) It was not long before this that an attempt had been made by the emperor Gratian to repair the desolation of this part of Italy by settling a body of Goth in captives in the region of Reggio, and the neighbouring cities. (Ammian. xxxii. 9, § 4.) The continued existence of Regium at a late period is proved by the Itineraries and Tabulae (Itin. Ant. pp. 283, 287; Itin. Hier. p. 616; Tab. Peut.), and it is mentioned long after the fall of the Western Empire by Paulus Diaconus among the "locuples urbes of Aemilia." (P. Diacon. Hist. Lang. ii. 18.) In the middle ages it again rose to a great prosperity, and Reggio is still a considerable town with about 16,000 inhabitants. Its episcopal see dates from the fifth century.

The tract called the CAMPI MACHI, celebrated for the excellence of its wool, was apparently included in the territory of Regium Lepidi. (E. B. H.)

REGIVS, a town of the Belgae in the S. of Britannia Romana, seated between the Cantii on the E. and the Belgae on the W., in the modern counties of Surrey and Sussex. Their chief town was Noriumagnus. (Comp. Camden, p. 179.) [T. H. D.]

REGNUM, a town of the Belgae in the S. of Britannia Romana, and seemingly a place of some importance, since there was a particular road to it. (Itin. Ant. p. 477.) Camden (p. 133) identifies it with Ringwood in Hampshire. Horsey, on the contrary (p. 441), conjectures it to have been Chichester; but, though Roman antiquities have been found at Chichester, its situation does not suit the distances given in the Itinerary. (T. H. D.)

REHOB (P Hod, al. P Hodi, al. Ephod), a town in the tribe of Asher, occupied by the Canaanites. (Jos. xix. 28; Judg. i. 31.) A second city of the
same name is reckoned among the 32 cities of the same tribe (Josh. xix. 30); but neither of these can be identified with the Rhooc (Φοικός) noticed by Eusebius, 4 miles distant from Scythopolis. [G. W.]

(Rephaim Vallis) (Rephaim Vallis, Hrec. Ρεφαίμ Βάλλις in LXX.), one of the wells dug by Isaac in the country of Gerar,—after Essek (contention) and Sitnah (hated)—for which the herders did not strive: so he called it Rephoboth: "And he said, For now the Lord hath made room for us, and we shall be fruitful in the land." (Gen. xxxvi. 18, 20—22.) There were 3 wells in this district of the well, the traces of which were recovered, with the well itself, by Mr. Rowlands, in 1843. "About a quarter of an hour beyond Sábbât, we came to the remains of what must have been a very well-built city, called now Rohebèth. This is undoubtedly the ancient Rephoboth, where Abraham, and afterwards Isaac, digged a well. This line, as Rephoboth did, in the land of Gerar, outside the walls of the city is an ancient well of living and good water called Bir-Rohhebèth. This most probably is the site, if not the well itself, digged by Isaac." (Williams's Holy City, vol. i. Appendix, p. 465.)

Beel Apollinarès (Ries), in Gallia Narbonensia. Among the Oppida Latina of Gallia Narbonensis, the Roman Rule of the Latin Sea, Remi were certainly included in the Third Region of Pliny (iii. c. 4) enumerates "Alebece Reitorum Apollinarium." The old reading, "Alebecerorum Apollinarium," is a blunder made by joining two words together, which has been corrected from the better MSS., from the inscription Coll. Reior. Apollinar., and from the Table, which has Reis Apollinaris. The place may have taken its name from a temple of Apollo built after the town became Roman. The name Alebeces may be corrupt, or it may be a variation of the form Albici or Albiococi. [Albicoc.] As Pliny calls the place an Oppidum Latinitm, we might suppose that it was made a Colonia after his time, but the name Coll. Jul. Aug. Apollinaris, Reior., which appears in an inscription, shows it to have been a town of Augustus.

Ries is in the arrondissement of Digne in the department of Basses Alpes. There are four columns standing near the town, which may be the remains of a temple. The bases and the capitals are marble; the shafts are a very hard granite, and about 18 feet high. There is also a small circular building consisting of eight columns resting on a basement, but it has been spoiled by modern hands. There now stands in it a rectangular altar of one block of white marble, which bears an inscription to the Mother of the Gods and the Great Goddess. At Ries there have been discovered an enormous quantity of fragments of granite columns; and it is said that there has been a circus and a theatre in the town. (Garde de Voyageur, Richard et Hooper, p. 792.)

(Repefaim Vallis) (Repefaim Vallis, Hrec. Ρεφαιμ Βάλλις in LXX.), a place in Moesia Superior on the Danube. (Tab. Post.)

Remi (Puyaf), a people of Gallia Belgica (Ptol. ii. 9. § 12) along the Sequana (Seine). Their capital was Durocortorum (Remis). This is Ptolemy's description (ii. § 12.).

Caesar (B. G. ii. 3) says that the Remi were the nearest to the Celts of all the Belgae, and he makes the Sequana and Matrona (Marne) the boundary between the Belgae and the Celts. The Sequana is the natural frontier between the Remi and the Thames. When Caesar had entered the country of the Remi from the south (a. c. 57), he came to the Aisne (Adus), which he says is on the borders of the Remi. Eight miles from the Aisne and north of it was Bibras, a town of the Remi. The Remi then extended as far north as the Aisne, and beyond it. It was the boundary of Durocortorum, is between the Aisne and the Marne.

When the Belgae in the beginning of a. c. 57 were collecting their forces to attack Caesar, the Remi were traitors to their country. They submitted to the Roman proconsul and offered to supply him with corn, to give hostages, to receive him in their towns, and to help him against the rest of the Belgae and the Germans with all their power. (B. G. ii. 3.) The Susessiones who were in political union with the Remi joined the Belgae. When the great meeting of the Gallic states was held at Bibros (a. c. 52) to raise troops to attack Caesar at Alesia, the Remi did not come, and they continued faithful to Caesar. When Caesar entered Gallia in a. c. 50 he had possession of some of the leading nations; but when the Sequani were humbled, the Remi took their place, and those nations that did not like to attack themselves to the political party of the Aedui, joined the Remi. Thus the Aedui were the first of the Gallic political communities and the Remi were the second. (Caesar: B. G. vi. 3.) The Eburons and the Durocortorae, however, attached themselves to the Remi. (B. G. vi. 4.) Caesar rewarded the fidelity of the Remi by placing the Susessiones in dependence on them (vii. 6.)

Pliny (iv. 17) mentions the Remi as one of the Foederati Populi of Belgica. When Strabo wrote (p. 194) the Remi were a people in great favour with the Romans, and their city Durocortorum was the capital of the Roman government. (Durocortorum.)

Lucan (Pharsal. i. 424) has a line on the Remi:—

"Optimus exsequus Leucus Rheusque laevoct.

But the military skill of the Remi is otherwise unknown. They were a cunning people, who looked after themselves and betrayed their neighbours. [G. L.]

Repefandum, a town of the Coritani in Britanni Romana, probably Repesio in Derybush. (Not. Imp.: Camden, p. 586.)

Rephaim Vallis (7) Puyaf, Ezas Puyaf, Puyas, Cordus, LXX. Ρεφαιμ Βάλλις. A valley mentioned in the north border of the tribe of Judah, the south of Benjamin (Josh. xv. 8, xviii. 18), in the vicinity of Jerusalem. It is translated "the valley of the giants" in the authorised version, except in 2 Sam. x. 18, 22, where we find that the valley of Rephaim was a favourite camping ground for the Philistines, soon after the old memorial of the strength of the giant, 2 Sam. x. 18, 22. In Isaiah, xvii. 5, where it is represented as a fruitful corn-bearing tract of land, well watered to the wide valley, or rather plain, immediately south of the valley of Hinnom, traversed by the Bethlehem road, which is commonly identified by travellers as the "valley of the giants," although Eusebius places it in Benjamin (Onomast. c. 4.)
REPHIDIM.

It evidently derived its name from the Rephaim, a family of the Amalekites (Gen. xiv. 5) settled in Ashteroth Karnaim, supposed by Beland to be of the race of the Gephyreans, who came with Cadmus from Phoenicia to Greece. (Herod. v. 57; Beland, Palaeas, p. 141, comp. pp. 79, 355.) The Philistines who are said to have encamped there may have bequeathed their name to the valley. [G. W.]

That the name Re - Phides (Rephidim) is derived from the Hebrew word רע - פית "an encampment of the Israelites after leaving Egypt, the next before Sinai, "where was no water for the people to drink." (Num. xxxiii. 14.) Moses was accordingly instructed to smite the rock in Horeb, which yielded a supply for the needs of the people, from whose murm urings the place was named Massah and Meribah. Here also it was that the Israelites first encountered the Amalekites, whom they discomfited; and here Moses received his father-in-law Jethro. (Exod. xvii.) Its position, Dr. Robinson surmises, must have been at some point in Wady-esh-Sheikh, not far from the skirts of Horeb (which he takes to be the name of the mountain district), and about a day's march from the particular mountain of the same name. The Nubian Sheikhs issues from the high central granite cliffs; which locality is more fully described by Burchhardt, and Dr. Wilson, who agrees in the identification, and names the range of rocky mountains Watejek. He says that "water from the rock in Horeb could easily flow to this place." (Robinson, Bib. and Antiq, ii. 166; Burchardt, Travels in Syria, Am. 1849; Wilson, Lands of the Bible, vol. i. p. 254.)

Dr. Leipsius controverts this position and proposes El-Hesse, only a mile distant from the convent of the monastery of Pharda, as the Rephidim (= the resting-place) of the Exodus. This is at the foot of Gebel Sofar, which he regards as the mountain of the law, and finds the stadium opened by Moses "in the clear-running and well-flavoured spring of Wadi Feran, which irrigates the fertile soil of Esse, and causes it to exhibit all the riches of the gardens of Feran for the space of half a mile." (Leipsius, A Tour from Theres to the Peninsula of Sinai, pp. 74-82.) [G. W.]

REBIGONIUM (Petropolitan, Ptol. ii. 3, § 7), a town called in the Epitome of Tacitus in the SW. part of Britainis Barbaria, which seems to have been seated at the S. extremity of the Sinus Regiunique (Lock Ryan) near Stonerma. Camden identifies it with Baryeng (p. 1203). [T. H. D.]

REBIGONIUS SINUS (Petropolitanus) (Ptol. ii. 3, § 1), a bay in the country of the Novantes, as named from the town of Regiunique (g. e. Noyo Lock Ryan, formed by the Mill of Gallochlay. (Horsley, p. 375.) [T. H. D.]

RESAINA. [RESAENA.]

RESAPA and REZEPH (Phrygpa), a city of Syria, reckoned by Ptolemy to the district of Pamysore (v. 15, § 24), the Rissopa of the Pentinger Tables, 21 miles from Susa; probably identical with the Rossean of Abufloda (Thub. Syria, p. 119), which he places near Rakka, not quite a day's journey from the Euphrates. It is supposed to be identical with the Reseph of Scripture (Parôqs, LXX.), taken by Senacherib, king of Assyria, as he boasts in his insulating letter to Hezekiah. (2 Kings, xix. 12.) It has been identified with Sergiopolis, apparently wrongly so, by Menners; but with ancient Resiphia. (Mannert, Antiquitates et historiae nos Syriae, p. 413.) [G. W.]

REUDIGNI, a German tribe on the right bank of the river Albe, and north of the Longobardi, which may have derived its name from its inhabiting a marshy district, or from red or ried. (Tac. Germ. 40.) Various conjectures have been hazarded about their exact abodes and their name, which some have wished to change into Rudungi or Deurungi, so as to identify them with the later Thuringi; but all is uncertain. [L. S.]

REVESICO (Petrocor), in Gallia, is the city of the Vellavi, or Velani, as the name is written in Ptolemy (ii. 7, § 28). Revelasio is the name of the place in the Table. In the Not. Provinc. it is written Civitas Vellorum. Mabillon has shown that the place called Civitas Vetula in the middle ages is S. Paulus or Paulhem, and the Civitas Vetula is supposed to be the ancient capital of the Vellavi. S. Paulinus is in the department of Haute Loire, north of Le Puy. [G. W.]

RHA ('Pâ warudq, Ptol. v. 9, §§ 12, 17, 19, 21, vi. 14, §§ 1, 4; Amm. Marcell. xxii. 8, § 28; Poes, Agathem. ii. 10: Volgo) a river of Asiatic Sarmatia, which according to Ptolemy (i. c.), the earliest geographer who had any accurate knowledge of this longest of European streams, had its twin sources in the Cimmerian or Hyperborean mountains, and discharged itself into the Hycrranian sea. The affluents which Ptolemy (vi. 14, § 4) describes as falling into it from the Rhymnici Montes, and which must not be confounded with the river Rhymnus [Rhymus], are the great accession made to the waters of the Volgo by the Kungu in the country of Ammianus Marcellinus (i. c.) says that its banks were covered with the plant which bore the same name as the river — the "ra" or "rheon" of Dioscorides (pâ, pheor, iii. 11) and "rhecmena" of Pliny (xxvii. 105), or official rhubarb. (Comp. Fereira, Mat. Med. vol. ii. pt. 1. p. 1343.) The old reading Rha in the text of Pomponius Mela (iii. 5, § 4) has been shown by Tischendorf (ad loc.) to be a mistake of the earlier editors, for which he substitutes Catus, a river of Albania. The Oarus (Oaros, Herod. iv. 123, 124), where, according to the story of the Scythian expedition, the erection of eight fortresses was supposed to mark the extreme point of the march of Darius, has been identified by Detmold with the Brabanit (Slav. Alt. vol. i. p. 499) — who mentions that in the language of some tribes the Volga is still called "Rahn"—with this river. [E. B. J.]

RHAABENI ('Pâshypol), a people of Arabia Deserta, next to the Agabeni, who were on the confines of Arabia Felix. (Ptol. v. 18, § 2.) Above them were the Marzan; the Orenchi lay between them and the NW. extremity of the Persian Gulf. Mr. Forster justly remarks that "the description of Ptolemy rather indicates the direction, than defines the positions, of these several tribes." (Geog. of Arabia, vol. ii. p. 238.) [G. W.]

RHABDIUM ('Pâsibios, Procop. B. F. ii. 19, de Aed. ii. 4), a strongly fortified height, in an inaccessible part of Mesopotamia, opposite to Dara in the direction of Persia. The works were placed on the brow of very steep rocks which overlook the surrounding country. Justinian added additional works to it. It has not been identified with any modern place. [V.]

RHACALANIT [ROZOLANTE.]

RELACATAE ('Pamára), a German tribe mentioned by Ptolemy (ii. 11, § 26) as occupying, together with the Tercatrize, the country on the south of the Quadri, on the frontiers of Fannonia;
but nothing further is known about either of them. [L. S.]

RHACOTIS. [ALEXANDRAE, p. 95.]

RHABEA (Pellae, Ptol. ii. 10, § 10), a town in the interior of Hibernia, according to Camden (p. 135) Rhubes in Queen's County. [T. H. D.]

RHABEDUS. [BACCHUS, p. 232.]

RHAEETAE (Farrae), a place in the Arcadian district of Cynuria, at the confluence of the Gouty-nius and Alpheius. (Paus. viii. 28. § 3.)

RHAEITAL. [Parrhia]. The name of this country, as well as of its inhabitants, appears in ancient inscriptions invariably without the A, as Rhaetia and Rhaeti, while the MS. of I. X. has erroneously have the forms Rhaetia and Rhaeti,—a circumstance which goes far to show that the more correct spelling is without the A. Rhaetia was essentially an Alpine country, bordering in the north on Vindelicia, in the west on the territory inhabited by the Helveti, in the south on the chain of the Alps from Mons Ada to Mons Oeni, which separated Rhaetia from Italy, and in the east on Noricum and Vesetia; hence it comprised the modern Grisons, the Tyrol, and some of the northern parts of Lombardy. This country and its inhabitants did not attract much attention in ancient times until the reign of Augustus, who determined to reduce the Alpine tribes which had until then maintained their independence in the mountainous districts of the Alps. After a struggle of many years, in which the Etruscans and several adjoining districts were conquered by Drusus and Tibereus, n. c. 15. Rhaetia, within the boundaries above described, seems then to have been constituted as a distinct province (Suet. Aug. 21; Vell. Pat. i. 39; Liv. Epit. 138; Aurel. Vict. Epit. 1). Vindelicia, in the north of Rhaetia, must have been a separate province; but towards the end of the first century A. D. the two provinces appear united as one, under the name of Rhaetica, which accordingly, in this latter sense, extended in the north as far as the Daunae and the Limes. At a still later period, in or shortly before the reign of Constantine, the two provinces were again divided, and ancient Rhaetia received the name of Rhaetia Prima, in the east being called Curia Rhaetorum (Cesar); while Vindelicia was called Rhaetia Secunda. The exact boundary line between the two is not accurately defined by the ancients, but it is probably true that the Alpine chain extending from the Lake of Constance to the river Inn was the natural line of demarcation; it should, however, be observed that Ptolemy (ii. 12) includes under the name of Rhaetia all the country west of the river Ticinus as far as the sources of the Danubius and Rhenus, while he applies the name of Vindelicia to the territory between the Ticinus and Oenum.

Ancient Rhaetia or Rhaetia Proper was throughout an Alpine country, being traversed by the Alpes Rhodani and Alpes Aduniae. It contained the sources of nearly all the Alpine rivers watering the north of Italy, such as the Addua, Sarus, Olbia, Clemens, Mincus, and others; but the chief rivers of Rhaetia itself were the Athaesis with its tributary the Isargus (or Ilargus), and the Aenus or Oenus. The magnificent valleys formed by these rivers were fertile and well adapted to agricultural pursuits; but the inhabitants depended mainly upon their flocks (Strab. vii. p. 316). The chief produce of the valleys was wine, which was not at all inferior to that grown in Italy; so that Augustus was particularly partial to it (Strab. iv. p. 306; Plin. xiv. 3, 5, 8; Virg. Georg. ii. 96; Colum. iii. 3; Martial, xiv. 110; Suet. Aug. 77). Besides this Rhaetia produced abundance of wax, honey, pitch, and cheese, in which considerable commerce was carried on.

The ancient inhabitants of Rhaetia have in modern times attracted more than ordinary attention from their supposed connection with the ancient Etruscans. They were first mentioned by Polybius (xxxiv. 10; comp. Strab. iv. p. 304, vii. pp. 292, 313). According to tradition the Rhaetians were Etruscans who had originally inhabited the plains of Lombarth, but were compelled by the invading Gauls to quit their country and take refuge in the Alps, whereby they were cut off from their kinsmen, who remained in Italy and finally established themselves in Etruria (Justin. xx. 5; Plin. iii. 24; Steph. B. z. v. P. Mar.). This tradition derives some support from the fact recorded by Dionysius of Halicarnassus (i. 24) that the Etruscans in Etruria called themselves Etrusci, which is believed to be only another form of the name Rhaeti. A decision of this question is the more difficult because at the time when the Romans conquered Rhaetia the bulk of its inhabitants were Celts, which in the course of a few centuries became entirely Romanized. But, assuming that the Rhaeti were a branch of the Etruscan nation, it is not very likely that on the invasion of Italy by the Gauls they should have gone back to the Alps across which they had come into Italy; it seems much more probable that they, being a remnant of the nation left behind there at the time when the Etruscans originally migrated into Italy. But, however this may be, the anxiety to obtain a key to the mysterious language of the Etruscans has led modern linguists to search for it in the mountains and valleys of ancient Rhaetia; for there is the language of the conquerors, which was the language of the people in the time of Augustus consisted of Celts, who, soon after their subjugation adopted the language of the conquerors, and their language was very distinct traces of its original inhabitants is the names of places, and even in the language of ordinary life. In the districts where the nation had remained pure, as in the valley of Engadine and at the head of the Lake of Como, there is a corruption of Latin, the Romansch as it is called, intermixed with some Celtic and German elements, and a few words which are believed to be neither Celtic, nor German, nor Latin, but therefore considered to be Etruscan. Several names of places also bear a strong resemblance to those in Etruria; and, lastly, a few ancient monuments have been discovered which are of some respects like those of Etruria. The first who, after many broad and unfounded asserstions had been made, undertook a thorough investigation of these points, was L. Stenb, who published the results of his inquiries in a work Uber die Etrusker Sprache und ihren Zusammenhang mit dem Deutschen, Munich, 1843; and another scholar, Dr. W. Freund, during a residence in Rhaetia collected a vast number of facts, well calculated to throw light upon this obscure subject, but the results of his investigations have not yet been published. As to the history of the ancient Rhaetians, it has already been intimated that they became known to the ancients a wild, cunning, and rapacious mountain people, who indulged their propensity to rob and plunder even at the time when they were subject to Rome, and when their rulers had made a great road through their country into Noricum (Dion Cass. iv. 21,
Hor. Carm. iv. 14. 15). Like all mountaineers, they cherished great love of freedom, and fought against the Romans with rage and despair, as we learn from Florus (iv. 13), who states that the Rhaetian women, who also took part in the war, after having seen their menfolk, threw their own children in the faces of the Romans. Still, however, they were obliged to yield, and in B. C. 15 they were finally subdued, and their country was made a Roman province. During the later period of the Empire their territory was almost entirely depopulated; but it somewhat recovered at the time when the old Roman Theodoric, took possession of the country, and placed its administration into the hands of a Diu (Epit. Vit. S. Severi, 39; Cassiod. Var. iv. 4). After the death of Theodoric, the Boiorii spread over Rhaetia and Noricum, and the river Lucus became the boundary between the Alemanni in Vindelicia, and the Boiorii in Rhaetia. (Egin. Vit. Corol. M. 11.) The more important among the various tribes mentioned in Rhaetia, such as the Lepontii, Vindelii, Calucones, Venones, Saruvetes, Isarici, Brixenenses, Gemauini, Trittenienses, and Eugenenses, are discussed in separate articles. Trittenum was the most important among the few towns of the country; the others are known almost exclusively through the Itineraries, two of which, listing the towns of Rhaetia according to the Romans, the one leading from Augusta Vindelicum to Comum, and the other from the same town to Verona; Paulus Diaconus, however, mentions a few towns of the interior which were not situated on these high-roads, such as the town of Maiar, which was destroyed in the eighth century by the fall of a mountain, and the site of which is occupied by the town of Merco. (L. S.)

RHAEGAE. (Peyat, Arrian, Abol. iii. 30; Strab. xi. pp. 514, 524; Ptol. Isidor. Char. § 7; Ptol. Step. B. a. s.; Ptol. Pol. vi. 5. § 4; Rhages, Tobi. i. 14; EEd. "Pyrgoris"). a great town of Media Magna, the capital of the province of Rhagias, which is first known to us in history as the place to which the Jews exiles were sent. (Tobi. i. 14. iv. 4.) It was situated in the eastern part of the country towards Parthis, one day's journey from the Hyphasis Capitolina (Arrian, Abol. iii. 20) and 10 days' march from Ecbatana (Hamacl.). The name of the place is stated by Strabo to have been derived from the frequent earthquakes to which it had been subject, but this is contrary to all probability (Strab. xi. p. 514); he adds, also, that, like many other places in the neighbourhood, it had been built (or rather rebuilt) by the Greeks (p. 524). In later times it appears to have been rebuilt by Seleucus Nicator, who called it Euporus. (Strab. L. c.) Still later it appears to have been again rebuilt by one of the house of Amasis, who named it in consequence Amasia. (Strab. c. 1; Step. B. a. s.) In modern times the ancient name has returned; and the ruins of Rhai, which have been visited and described by many travellers, no doubt represent the site of the ancient Rhagae. (Ker Porter, Travels, vol. i. p. 333.) Phiny mentions a town of Parthis, which he calls Apamea Rhagians (vi. 14. § 17). Some geographers have contended that this was a town of Rhagae; but the inference is rather that it is not. (V.)

[1] [T. H. D.]

RHAMNITES. 1. (Pau moyor, Strab. xvi. p. 782), supposed by Mr. Forster to be identical with the Rhamnites of Ptolemy ('Paoevalal, vi. 7. § 24), whom that geographer places under Mount Climax. He says "their common position, north of Mount Climax, concurs with the resemblance of the two names to argue the identity" (Geogr. of Arabia, vol. i. p. 68, note); but it is by no means clear that the Rhamnites lay near Mount Climax. All that Strabo says of them is, that Marsiab, the limit of the expedition of Asius Gallus, the siege of which he was forced to raise for want of water, lay in the country of the Rhamnites; but nothing in geography is so difficult to determine as the situation of that town. [MARSYAB.] 2. A people of the same name is mentioned by Strabo, as existing on the Persian Gulf, identical with the Arabi of Ptolemy and the Epimaraebae. [G. W.]

RHAMNUS. L. (Pau moyor, -oros: Eth. Pau moyoros, fem. Pau moyororía, Pau moyoros), a demus of Attica, belonging to the tribe Asantis (Steph. B., Harpoc., Suid., s. a.), which derived its name from a thickly pricked shrub, which still grows upon the site. (Pau moyoros, contr. of pao moiros from pao myoros.) The town stood upon the eastern coast of Attica, at the distance of 60 stadia from Marathon, and upon the road leading from this town towards Marathon. (Paus. i. 33. 2.) It is described by Sclerax (p. 21) as a fortified place; and it appears from a decree in Demothenses (pro Cor. p. 238, Reiske) to have been regarded as one of the chief fortresses in Attica. It was still in existence in the time of Pliny ("Rhamnus pagus, locus Marathon," iv. 7. a. 11.). Rhamnus was the birthplace of the orator Antipho (Dict. of Rham. a. s.); but it was chiefly celebrated in antiquity on account of its worship of Nemea, who was hence called by the Latin poets Rhamnusia virgo and Rhamnusia dana. (Catull. lxi. 71; Claud. B. Get. 651; Or. Met. iii. 406, Trist. v. 8. 9; Stat. vii. 5. § 5.) The temple of the goddess was at a short distance from the town. (Paus. L. c.; comp. Strab. ix. p. 599.) It contained a celebrated statue of Nemea, which, according to Pausanias, was the work of Pheidias, and was made by him out of a block of Parian marble, which the Persians had brought with them for the construction of a trophy. The statue was of colossal size, 10 cubits in height (Hesych. s. v.; Zenob. Procev. v. 823), and on its basis were several figures in relief. Other writers say that the statue was the work of Apollonius of Paros, a disciple of Pheidias. (Strab. ix. p. 396; Plin. xxxvi. 5. a. 4. § 17, Sillig.) It was however a common opinion that Pheidias was the real author of the statue, but that he gave up the honour of the work to his favourite disciple. (Suid. s. v.; Zenob. L. c.; Fest. Chal. vii. 960.) Rhamnus stood in a small plain, 3 miles in length, which, like that of Marathon, was shut out from the rest of Attica by surrounding mountains. The town itself was situated upon a rocky peninsula, surrounded by the sea for two-thirds of its circumference, and connected by a narrow ridge with the mountains, which closely approaches it on the land side. It is now called Ormú-Kastró. (Oedip.-Kastró, a corruption of Oedip.-Kastró, a name finally applied in Greece to the ruins of Hellenic fortresses.) It was about half a mile in circuit, and its remains are considerable. The principal gate was situated upon the narrow ridge already mentioned, and is still preserved; and adjoining it is the southern wall,
about 20 feet in height. At the head of a narrow gien, which leads to the principal gate, stand the ruins of the temple of Nemesis upon a large artificial platform, supported by a wall of pure white marble. But we find upon this platform, which formed the ἱεραμὸς or sacred enclosure, the remains of two temples, which are almost contiguous, and nearly though not quite parallel to each other. The larger building was a peripteral hexastyle, 71 feet long and 33 feet broad. It stood partly upon the site, and with a peristyle, called, and posticum in the usual manner. The smaller temple was 31 feet long by 31 feet broad, and consisted only of a cela, with a portico containing two Doric columns ες κασία. Among the ruins of the larger temple are some fragments of a colossal statue, corresponding in size with that of the Ephesian Nemesis; but these fragments were made of Attic marble, and not of Parian stone as stated by Pausanias. It is, however, not improbable, as Leake has remarked, that the story of the block of stone brought by the Persians was a vulgar fable, or an invention of the priests of Nemesis by which Pausanias was deceived. Among the ruins of the smaller temple was found a fragment, including the head and shoulders, of a statue of the human size in the archaic style of the Aeginetan school. This statue is now in the British Museum. Judging from this statue, as well as from the diminutive size and rude architecture of the smaller temple, the latter appears to have been the more ancient of the two. Hence it has been inferred that the Persian war was anterior to the Persian War, and was destroyed by the Persians just before the battle of Marathon; and that the larger temple was erected in honour of the goddess, whom had taken vengeance upon the insolence of the barbarians for outraging her worship. In front of the smaller temple are two chairs (Στρώμα) of white marble upon which is inscribed Ναυαρχαῖος and upon the other Στρώματος, which has led some to suppose that the smaller temple was dedicated to Themis. But it is more probable that both temples were dedicated to Nemesis, and that the smaller temple was in ruins before the larger was erected. A difficulty, however, arises about the time of the destruction of the smaller temple, from the fact that the forms of the letters and the long vowels in the inscriptions upon the chairs clearly show that those inscriptions belong to an era long subsequent to the battle of Marathon. Wordsworth considers it ridiculous to suppose that these chairs were dedicated in this temple after its destruction, and hence conjectures that the temple was destroyed towards the close of the Peloponnesian War by the Persian allies of Sparta. (Leake, Demi of Attica, p. 105, seq., 2nd ed., Northern Greece, vol. ii. p. 434, seq.; Wordsworth, Athens and Attica, p. 34, seq.; Unedited Antiquities of Attica, c. vi. p. 41, seq.)

2. A harbour on the W. coast of Crete near the promontory Chersonesus (Ptol. iii. 17. § 2.) Pliny, on the same coast, places it in the interior of the island (iv. 12. a 20).

RHAPSII AETHIOPEs. [RHAPTA.]

RHAPTA ( realpath βασιλεῖον, Tav. 19. § 14. § 4; Peripl. Mar. Ervbr, p. 10), was, according to the author of the Periplo, the most distant station of the Arabian trade with Aegypt, Aethiopia, and the port of the barbaric Sea. Its correct lat. is 15° 2'.

The name is derived from the peculiar boats in use there. These are termed by the natives down
Rhaptum. From Rhapta they exported ivory (inferior to that of Adulis), tortoise-shell (the next best in quality to that of India), rhinoceros-horn, and nautilus (a shell probably used in dyeing). These commercial features are nearly repeated at the present day in this region. The African still builds and masts the ship; the Arab is the navigator and supercargo. The ivory is still of inferior quality, being for the most part found in the woods, damaged by rain, or collected from animals drowned by the overflow of the rivers at the equinoxes. The hawk-sbill turtle is still captured in the neighbourhood of the river Govend, and on the shore opposite the island of Pata. (See Vincent, Voyage of Neerays, vol. ii. pp. 169—183; Codley, Claudius Ptolemy and the Nile, pp. 68—72.)

Rhaptum Promontorium. [Rhapta.]

Rhaptus Fluvius. [Rhapta.]

Rhastia (Parrisia), a town in the country of the Trocmi in Galatia, in Asia Minor, which is noticed only by Ptolemy (v. 4, § 9). [L. S.]

Rhastia Promontorium (Strab. i. 3. § 3), a river on the west coast of Britannia Romana, according to Cambyses (p. 733) the Tafg. [T. H. D.]

Rhaucus (Paeon, Scyl. p. 19; Polyb. xxxi. 1. § 1, xxxiii. 15. § 1; Euh. Paeonios, fam. Paeonia, Step. B. s. c.). From the story told about the Cretan bees by Antenor in his "Cretica" (ap. Aelian. N. A. xvi. 35; comp. Dion. v. 70), it seems that there were two cities of this name in Crete. The existence of two places so called in the island might give rise to some such legend as that which he mentions. Pasley (Creta, vol. i. p. 235) fixes the site of one Rhagus at Hippo Myro, between Cnossus and Gortyna, and from its proximity to Mt. Ida infers that it is the more ancient. [E. B. J.]

Coin of Rhaucus.

Rhebas (Pisias), a very small river on the coast of Bithynia, the length of which amounts only to a few miles; it flows into the Euxine, near the entrance of the Bosphorus, north-east of Chalcedon, and still bears the name of Rhaea. (Scylax, p. 34; Dionys. Periplus, p. 794; Pol. v. 1. § 5; Arrian, Periplus P. E. p. 13; Marcian, p. 69; Plin. vi. 1; Step. B. s. c.) This little river, which is otherwise of no importance, owes its celebrity to the story of the Argonauts. (Orph. Arg. 711; Apollon. Rhod. ii. 650, 789.) It also bore the names of Rheasus and Rhessa (Plin. L. c.; Solin. 43), the last of which seems to have arisen from a confusion with the Rhessa mentioned by Homer. [L. S.]

Rheidones. [Redones.]

Reggio (Rigo in Eut. Prynus, Reginna: Reggio), an important city of Magna Graecia, situated near the southern end of the Bruttian peninsula, on the E. side of the Sicilian straits, and almost directly opposite to Messana in Sicily. The distance between the two cities, in a direct line, is only about 6 geog. miles, and the distance from Reggio to the nearest point of the island is somewhat less. There is no doubt that it was a Greek colony, and we have no account of any settlement previously existing on the site; but the spot is said to have been marked by the tomb of Jocasteus, one of the sons of Aeolius. (Herod. Poli. 28.) The foundation of Rhegium is universally ascribed to the Chalcidians, who had, in a year of famine, consecrated a tenth part of their citizens to Apollo; and these, under the direction of the oracle at Delphi, proceeded to Rhegium, whither they were also invited by their Chalcidean brethren, who were already established at Zancle on the opposite side of the strait. (Strab. vi. p. 257; Herod. L. c.; Dion. iv. 40; Thuc. vi. 4; Sevyn. Ch. 311.) With these Chalcidians were also united a body of Messenian exiles, who had been driven from their country at the beginning of the First Messenian War, and had established themselves for a time at Macistus. They were apparently not numerous, as Rhegium always continued to be considered a Chalcidian city; but they comprised many of the chief families in the new colony, so that, according to Strabo, the presiding magistrates of the city were always taken from among these Messenian citizens, down to the time of Anaxilas, who himself belonged to this dominant caste. (Strab. vi. p. 257; Paus. iv. 23, § 6; Thuc. vi. 4; Herod. l. c. 1.) The date of the foundation of Rhegium is uncertain; the statements just mentioned, which connect it with the First Messenian War would carry it back as far as the 8th century B.C.; but they leave the precise period uncertain. Pausanias considers it as founded after the end of the war, while Antiochus, who is cited by Strabo, seems to refer it to the beginning; but his expressions are not decisive, as we do not know how long the exiles may have remained at Macistus; and it is probable, on the whole, that we may consider it as taking place shortly after the close of the war, and therefore before 720 B.C. (Paus. l. c.; Antioc. ap. Strab. l. c.) In this case it was probably the most ancient of all the Greek colonies in this part of Italy. Various etymologies of the name of Rhegium are given by ancient authors; the one generally accepted by modern scholars (ap. Strab. l. c.), was that which derived it from the bursting sandur of the coasts of Sicily and Italy, which was generally ascribed to an earthquake. (Diod. iv. 85; Justin. iv. 1, &c.) Others absurdly connected it with the Latin regium (Strab. l. c.), while Herodotus gives a totally different story, which derived the name from that of an indigenous hero. (Herod. Poli. 25.)

There seems no doubt that Rhegium rose rapidly to be a flourishing and prosperous city; but we know almost nothing of its history previous to the time of Anaxilas. The constitution, as we learn from Herodotus, was aristocratic, the management of affairs resting wholly with a council or body of 1000 of the leading citizens, and the executive under the direction of Charondas at Catana, his laws were adopted by the Rhigians as well as by the other Chalcidian cities of Sicily. (Herod. l. c.; Arist. Pol. ii. 12, v. 12.) The Rhigians are mentioned as affording shelter to the fugitive Phocaeans, who had been driven from Corsica, previous to the foundation of Veii. (Herod. i. 166, 167.) According to Macrobius, they extended their dominion over many of the adjoining towns, but these could only have been small places, as we do not hear of any of colonies of importance founded by the Rhigians; and their territory extended only as far as the Hales on the E,
Rhegium.

where they adjoined the Locrian territory, while the Locrian colonies of Medma and Hippionium prevented their extension on the N. Indeed, from the position of Rhegium it seems to have always maintained closer relations with Sicily, and taken more part in the politics of that island than in those of the other Greek cities in Italy. Between the Rhegians and Locrians, however, there appears to have been a constant spirit of enmity, which might be readily expected between two rival cities, such near neighbours, and belonging to different races. (Thuc. iv. 17.)

Rhegium appears to have participated largely in the political changes introduced by the Pythagoreans, and even became, for a short time after the death of Pythagoras, the head-quarters of his sect (Lamb. Vit. Pyth. 33, 130, 251); but the changes then introduced do not seem to have been permanent.

It was under the reign of Anaxilas that Rhegium first rose to a degree of power far greater than it had previously attained. We have no account of the circumstances attending the elevation of that despot to power, an event which took place, according to Diodorus, in B.C. 494 (Diod. xi. 48); but we know that he belonged to one of the ancient Messenian families, and to the oligarchy which had previously governed. (Thuc. iii. 6; Arist. Pol. v. 12; Thuc. vi. 4.) Hence, when he made himself master of Zancle on the opposite side of the straits, he gave to that city the name of Messana, by which it was ever afterwards known. [MESSANA.] Anaxilas continued for some years ruler of both these cities, and thus was undisputed master of the Sicilian straits; still further to strengthen himself in this sovereignty, he fortified the rocky promontory of Scyllaenum, and established a naval station there to guard the straits against the Tyrrenian pirates. (Strab. vi. p. 257.) He mediated also the destruction of the neighbouring city of Locri, the perpetual rival and enemy of Rhegium, but was prevented from carrying out his purpose by the interference of his two sons; he espoused the cause of the Locrians, and whose enmity Anaxilas did not choose to provoke. (Schol. ad Pind. Pyth. ii. 34.) One of his daughters was, indeed, married to the Syracusan despot, whose friendship he seems to have sought assiduously to cultivate.

Anaxilas enjoyed the reputation of one of the wisest and most equitable of the Sicilian rulers (Justin. iv. 2), and it is probable that Rhegium enjoyed great prosperity under his government. At his death, in B.C. 476, it passed without opposition under the rule of his two sons; but the government was administered during their minority by their guardian Micythus, who reigned over both Rhegium and Messana for nineteen years with exemplary justice and moderation, and at the end of that time gave up the sovereignty into the hands of the two sons of Anaxilas. (Diod. xi. 48, 66; Herod. vii. 170; Justin. iv. 2; Macrobi. Sat. i. 11.) These, however, did not hold it long; they were expelled in B.C. 461, the revolutions which at that time agitated the cities of Sicily having apparently extended to Rhegium also. (Diod. xi. 76.)

The government of Micythus was marked by one great disaster: in B.C. 473, the Rhegians, having sent an auxiliary force of 3000 men to assist the Tarentines against the Lapygians, shared in the great defeat which they sustained on that occasion (TARENTUM); but the statement of Diodorus that the barbarians not only pursued the fugitives to the gates of Rhegium, but actually made themselves masters of the city, may be safely rejected as incredible. (Diod. xi. 53; Herod. vii. 170; Groes's Hist. of Greece, vol. v. 313.) A story told by him that the Rhegians being agitated by domestic dissensions, a body of mercenaries, who were called by one of the parties, drove out their opponents, and then made themselves masters of the city by a general massacre of the remaining citizens (Justin. iv. 8), must be placed (if at all) shortly after the death of Micythus; for the sons of Anaxilas bore no ill-will to their father's successors and this story has a very apocryphal air; it is not noticed by any other writer, and it is certain that the old Chalcidice citizens continued in possession of Rhegium down to a much later period. We have very little information as to the history of Rhegium during the period which followed its expulsion of the despots; but it seems to have retained its liberty, in common with the neighboring cities of Sicily, till it fell under the yoke of Dionysius.

In B.C. 427, when the Athenians sent a fleet under Laches and Charonades to support the Locrians against Syracuse, the Rhegians espoused the cause of the Chalcidice cities of Sicily, and not only allowed their city to be made the head-quarters of the Athenians (Herod. vii. 9), but furnished them with an auxiliary force. They were in consequence exiled in continual hostilities with the Locrians. (Diod. xi. 54; Thuc. iii. 86, iv. 1, 24, 25.) But they pursued a different course on occasion of the great Athenian expedition to Sicily in B.C. 415, when they refused to take any part in the contest; and they appear to have persevered in this neutrality to the end. (Diod. xii. 44; Strab. viii. 443.)

It was not long after this that the increasing power of Dionysius of Syracuse, who had destroyed in succession the chief Chalcidice cities of Sicily, became a subject of alarm to the Rhegians; and in B.C. 399 they fitted out a fleet of 30 triremes, and an army of 6000 foot and 600 horse, to make war upon the last of the cities of Messana. On this occasion, who first made common cause with them, having quickly abandoned the alliance, they were compelled to desist from the enterprise, and made peace with Dionysius. (Diod. xiv. 40.) The latter, who was mediating a great war with Carthage, was desirous to secure the friendship of the Rhegians; but his proposals of a matrimonial alliance were rejected with some show of indignation; in consequence concluded such an alliance with the Locrians, and became from this time the implacable enemy of the Rhegians. (ib. 44, 107.) It was from hostility to the latter that he a few years later (B.C. 394), after the destruction of Messana by the Carthaginians, restored and fortified that city, as a post command the straits, and from which to carry on his enterprises in Southern Italy. The Rhegians in vain sought to forestall him; they made an unsuccessful attack upon Messana, and were foiled in their attempt to establish a colony of Naxians at Mylas, as a post of offence against the Messenians. (ib. 87.) The next year Dionysius, in his turn, made a sudden attack on Rhegium itself, but did not succeed in surprising the city; and after ravaging its territory, was compelled to draw off his forces. (ib. 90.) But in B.C. 390 he resumed the design on a larger scale, and laid regular siege to the city with a force of 30,000 foot, 1000 horse, and a fleet of 120 triremes. The Rhegians, however, opposed a vigorous resistance; the fleet of Dionysius suffered severely from a storm and the approach of winter at length compelled his
RHEGNUM.

Rhegium was now restored to the survivors of its former inhabitants (Pol. i. 7; Liv. xxxi. 31; Appian, L.c.); but it must have suffered severely, and does not seem to have again recovered its former prosperity. Its name is hardly mentioned during the First Punic War, but in the second the citizens distinguished themselves by their fidelity to the Roman cause, and repeated attempts of Hannibal to make himself master of the city were uniformly repulsed. (Liv. xxxii. 30, xxvi. 12, xxix. 6.) From this time the name of Rhegium is rarely mentioned in history under the Roman Republic; but we learn from several incidental notices that it continued to enjoy its own laws and nominal liberty as a "fœdus civitas," though it was really in a state common with other cities in the same condition, to furnish an auxiliary naval contingent as often as required. (Liv. xxxi. 31, xxvi. 16, xxvi. 42.) It was not till after the Social War that the Rhegians, like the other Greek cities of Italy, passed into the condition of Roman citizens, and Rhegium itself became a Roman Municipium. (C. Ver. iv. 60, Piso 3, pro Arch. 3.) Shortly before this (a. c. 91) the city had suffered severely from an earthquake, which had destroyed a large part of it (Strab. vi. p. 258; Jul. Obseq. 114); but it seems to have, in great measure, recovered from this calamity, and is mentioned by Appian towards the close of the Republic as one of the eighteen flourishing cities of Italy, which were protected by the "Striga Gracchi." Trinovantes, the greatest enemy of Roman interests, was treated in the same manner towards his veterans as a reward for their services. (Appian, B. C. iv. 3.) Rhegium, however, had the good fortune to escape on this occasion by the personal favour of Octavian (78 B.C.); and during the war which followed between him and Sextus Pompeius, a. c. 38—36, it became one of the most important posts, which was often made a headquarters both of his fleet and army. (Strab. vi. p. 258; Appian, B. C. v. 81, 84; Dion Cass. xlviii. 18, 47.) To reward the Rhegians for their services on this occasion, Augustus increased the population, which was in a declining state, by the addition of a body of new colonists; but the old inhabitants were not expelled, nor did the city assume the title of a colony. Though the situation of Rhegium was not equal to that of Utica, it was more advantageous than the name of Rhegium Julianum. (Strab. L.C.; Ptol. iii. 1. § 9; Orall. Ias. 3838.) In the time of Strabo it was a populous and flourishing place, and was one of the few cities which, like Neapolis and Tarentum, still preserved some remains of its Greek civilization. (Strab. vi. pp. 253, 259.) Traces of this may be observed also in inscriptions, some of which, of the period of the Roman Empire, present a curious mixture of Greek and Latin, while others have the names of Roman magistrates, though the inscriptions themselves are in Greek. (Morisani, Ias. Regn., 4to. Neap. 1770, pp. 83, 126, &c.; Boeckh, C. I. 5760—5768.)

Its favourable situation and its importance, as commanding the passage of the Sicilian straits, preserved Rhegium from falling into the same state of decay as many other cities in the south of Italy. It continued to exist as a considerable city throughout the period of the Roman Empire (Plin. iii. 5. s. 10; Ptol. L.c.; Ias. Ant. pp. 112, 115, 490), and was the termination of the great highway which led through the southern peninsula of Italy, and formed the customary mode of communication with Sicily. In a. d. 410 Rhegium became the limit of the progress of Alaric, who after the capture of Rome advanced through Campania, Lucania,
and Bruttium, laying waste those provinces on his march, and made himself master of Rhegium, from whence he tried to cross over into Sicily, but, being frustrated in this attempt, retraced his steps as far as Consentia, where he died. (Hist. Massal. xiii. p. 333.) Somewhat later it is described by Cassiodorus as still a flourishing place (Var. xi. 14.), and was still one of the chief cities of Bruttium in the days of Paulus Diaconus. (Hist. Lang. ii. 17.) During the Gothic wars after the fall of the Western Empire, Rhegium bears a considerable part, and was a strong fortress, but it was taken by Totila in A.D. 549, previous to his expedition to Sicily. (Procop. B. G. i. 8, iii. 18, 37, 38.) It subsequently fell again into the hands of the Greek emperors, and continued subject to them, with the exception of a short period when it was occupied by the Saracens, until it passed under the dominion of Robert Guiscard in A.D. 1060. The modern city of Reggio is still a considerable place, with a population of about 10,000 souls, and is the capital of the province of Calabria, and is from that point, however, much more modern in its appearance than the ancient city it supersedes. (Cassiodorus says that it was built by the Elymians, and not by the Dorians as the Greek writers had stated.) It is a city of considerable antiquity as the birthplace of the lyric poet Hesiod, as well as that of Lycus the historian, the father of Lycurgus. (Suid. s. v. 'Hesiod; id. s. v. 'Lycurgus.) It gave birth also to the celebrated sculptor Pythagoras (Diog. Laert. viii. 1. § 47; Paus. vi. 4. § 4); and to several of the minor Pythagorean philosophers, whose names are enumerated by Parmenides (Vit. Ptole. 267), but none of these are of much note. Its territory was fertile, and noted for the excellence of its wines, which were especially esteemed for their salubrity. (Athen. i. p. 26.) Cassiodorus describes it as well adapted for vines and olives, but not suited to corn. (Var. xi. 14.) Another production in which it excelled was its breed of mules, so that Amazias the deputant was always requested to be present when the Olympic games were held, and the chariot drawn by mules (καρπαῖος), and his son Leophron obtained the same distinction. One of these victories was celebrated by Simonides. (He- raclid. Polit. 25; Athen. i. p. 3; Pollux. Onomast. v. 75.)

Rhegium itself was, as already mentioned, the termination of the line of high-road which traversed the whole length of Southern Italy from Capua to the Sicilian strait, and was first constructed by the praetor Popilius in B.C. 134. (Orell. Inscr. 3308; Mommsen, Inscr. R. N. 6276; Ritschel, Mon. Epigr. pp. 11, 12.) But the most frequent place of passage for crossing the strait was Messana, in ancient as well as in modern times, not at Rhegium itself, but at a point nearly 5 miles further to the north, which was marked by a column, and thence known by the name of Columna Rhegiana. (Itin. Avit. pp. 98, 106, 111; Plin. iii. 5. 10; ἡ Ῥήγαμιος στολή, Strab. v. p. 257.) The distance of this from Rhegium is given both by Pliny and Strabo at 12½ miles or 100 stadia, and the latter places it only 6 stadia from the promontory of Castry or Punta del Pesso. It must therefore have been situated in the neighbourhood of the modern village of Villa San Giovanni, which is still the most usual place of passage. But the distance from Rhegium is overset by both geographers, the Punta del Pesso itself being less than 10 miles from Reggio. On the other hand the inscription of La Polia (Forum Pupilli) gives the distance from the place of passage, which it designates as "Ad Statum," at only 6 miles. (Mommsen, Inscr. R. N. 6276.) Yet it is probable that the spot meant is really the same in both cases, as from the strong current in the straits the place of embarkation must always have been nearly the same. (E. E. B.)

RHEGMA (Ῥηγμα), the name of a lake or lagoon formed by the river Cydnus in Cilicia, at its mouth, about 5 stadia below Tarsus; the inhabitants of this city used it as their port. (Strab. xiv. p. 672; Stradonitz. Mar. Mag. §§ 155, 156; where it is called Ὕρμος; it. Hieros, p. 579.) The two last authorities place the Rhégma 70 stadia from Tarsus, which may possibly refer to a particular point of it, as the Rhegma was very extensive. (L. S.)

RHEGMEA. [EPHEMAI.] RHEIMEA (Ῥημεῖα, Böckh, Inscr. no. 4590), a town of Auranitis, as appears from an inscription found by Burckhardt (Travels, p. 69) at Der-el-Lebn, situated three-quarters of an hour from the modern village of Rûma-el-Lejîf, where there stands a building with a flat roof and three receptacles for the dead, with an inscription over the door. (Böckh, Inscr. 4587—4589; comp. Buckingham, Arab. Tribes, p. 926.)

RHEI. [REX.] RHEILEIA. [DELOS, p. 760.]

RHENUOS (Ῥηνεύς), one of the largest rivers in Europe, is not so long as the Danube, but as a commercial channel it is the first of European rivers, and as a political boundary it has been both in ancient and modern times the most important tier in Europe. The Rhine rises in the mountains, which belong to the group of the St. Gotthard in Switzerland, about 46° 30' N. lat. There are three branches. The Vorder-Rhein and the Mittel-Rhein meet at Düsseldorf, which is only a few miles from their respective sources. The united stream has an east by north course to Reichenheim, where it is joined by the Hinter-Rhein. At Clever (Cura), which is about 16° 30' W. of the Prime Meridian, the river becomes navigable and has a general northern course to the Bodensee or Lake of Con- stanz, the Lacus Brigitinum or Venetus. This lake consists of two parts, of which the western part or Untersee, is about 30 feet lower than the chief part, called the Lake of Constance. The course of the Rhine from the Untersee is westward, and it is navigable as far as the falls of Schaffhausen, which are not mentioned by any of the ancient geographers. It is interrupted by a smaller fall at Laufenburg, and there is a rapid near Rheinfelden, 10 miles below Laufenburg. The course is still wet
Basel (Baselina), where the Rhine is about 600 feet above the sea, and here we may fix the termination of the Upper Rhine. The drainage of all that part of Switzerland which lies north of the Lakes of Geneva and the Bernese Alps is carried to the Rhine by the Aar, which joins it on the left bank at Coblenz, one of the Roman Confluentes.

From Basel the Rhine follows a general north course to Bonna, where it enters the low country which forms a part of the great plain of Northern Europe. This may be called the Middle Rhine. In this part of its course the river receives few streams on the left bank. The chief river is the Mosel (Mosella), which joins it at Coblenz (Confluentes). On the right bank it is joined by the Neckar (Nicer), the Main (Moeuna), which joins it at Mainz (Moguntiacum), and the Lahn (Laugama), which joins it at Niedlachstein.

Below Bonna the river has still a general north course past Cologne (Colonia Agrippinensis) as far as Wesel, where it is joined on the right bank by the Lippe (Luppa), and higher up by the Rver or Ruhr (Rur) at Dusseldorf. Wesel is joined by the Rver with the Lined of the Rhine (Ems), from Wesel its course is NW. and then west to Pomerodes in the kingdom of the Netherlands. At Pomerodes it divides into two branches, of which the southern is called the Waal (Waha), and the northern retains the name of Rhine. The Waal has the greater volume of water. It runs westward, and is joined at Gorcum on the left bank by the Rhein (Mosel). The Mosel itself divides several times after its junction with the Waal. The main branch is joined on the right side by the Leck, a branch which comes from the Rhine Proper at Wyck in Dusseldorf, and flows past Rotterdam into the North Sea.

The Rhine, which was divided at Pomerodes, runs north to Arnsheim (Arenacum), above which town it communicates with the Yssel at Dusseldorf by a channel which is supposed to be the Fossa Drusiana, the canal of Drusus. [Flevolaucar.] The Yssel runs north from Dusseldorf to the Zwied Zee, which it enters on the east side below the town of Kampen. The Rhine runs westward from Arnsheim, and at Wyck in Dusseldorf, as a branch, divides into two, which, on joining, which joins the Mosel. The Rhine divides again at Utrecht (Tractum): one branch called the Eck runs northward into the Zwied Zee; the other, the Rhine, or Old Rhine, continues its course with diminished volume, and passing by Leiden enters the North Sea at Harlingen. The whole course of the Rhine is estimated at about 950 miles.

The delta of the Rhine lies between the Yssel, which flows into the Zwied Zee, and the Mosel, if we look at it simply as determined by mere boundaries. But all this surface is not alluvial ground, for the eastern part of the province of Utrecht and that part of Guelderland which is between the Rhine, the Zwied Zee, and the Yssel contains small elevations which are not alluvial. This description of the Rhine is necessary in order to understand what the ancient writers have said of it.

The first description of the Rhine that we possess from any good authority is Caesar's, though he had not seen much of it. He says (B. G. iv. 15) that it rises in the Alpine regions of the Leontii, and passes in a long course along the boundaries of the Nantuates, Helveti, Sequani, Mediomatrici, Triboci, and Treviri, in a rapid course. The name Nantuates is corrupt [Nantuates]. If we make the limits of the Treviri extend nearly to the Netherlands or the commencement of the low country, Caesar has shown pretty clearly the place where the Rhine enters the great plain. On approaching the ocean, he says, it forms many islands, and enters the sea by several mouths (capita). He knew that the Rhine divided into two main branches near the sea; and he says that one of the branches named the Waal (Waal) joined the Mosel (Mosae), and formed the Insula Batavorum [Batavorum Isula]. He speaks of the rapidity of the river, and its breadth and depth in that part where he built his wooden bridge over it. (B. G. iv. 17.) He made the bridge between Coblenz and Anenberg, higher up than the place where the river enters the low country. He crossed the Rhine a second time by a bridge which he constructed a little higher up than the first bridge. (B. G. vi. 9.)

Those persons, and Caesar of course, who said that the Rhine had more than two outlets were criticized by Asimina Pollio (Strab. iv. p. 192): and Virgil (Aeneid. xiii. 949, &c., &c.) follows Pollio's authority. But if the Mosel and Rhine still existed as it does now, Caesar was right and Pollio was wrong.

Strabo, who had some other authorities for his description of the Rhine besides Caesar, and perhaps besides Caesar and Pollio, does not admit Pollio's statement of the Rhine having a course of 6000 stadia; and yet Pollio's estimate is much below the truth. Strabo's estimate is also, it should be noted, a right line is not much above one-half of Pollio's estimate, and that if we add 1000 stadia for the windings, that will be enough. This assertion and his argument founded on the rapidity of the stream, show that he knew nothing of the great circuit that the Rhine makes between its source and Basel. He knew, however, that it flowed north, but unluckily he supposed the Severn also to flow to the North. He also made the great mistake of affirming that the country of Kent may be seen from the mouths of the Rhine. He says that the Rhine had several sources, and he places them in the Aduas, a part of the Alps. In the same mountain mass he places the source of the Aduas, or Addus (Adda), which flows south into the lake of Como (Lacus Cassiarnus). It was probably true.

The most difficult question about the Rhine is the outlet. When Pliny and Tacitus wrote, Drusus the brother of Tiberius had been on the lower Rhine, and also Germanicus, the son of Drusus, and other Roman commanders. Pliny (vi. 14) speaks of the Rhens and the Mosas as two distinct rivers. In another passage (iv. 15) he says that the Rhine has three outlets; the western, named Halstum, flows into the Mosas; the most northerly, named Fluvrum, flows into the lakes (Zwied Zee); and the middle branch, which is of moderate size, retains the name Rhens. He supposed that there were islands in the Rhine between the Halstum and the Fluvrum; and the Batavorum Insula, in which were the Caminedes, as well, is one of these. He also places between these two branches the islands of the Frisii, Chanci, Frisabona, Storii, and Marsacii. The Fluvrum of Pliny corresponds to the Flavo of Mela [Flevolaucar], who mentions this branch and only another, which he calls the Rhanae, which corresponds to Pliny's Rhena. Mela mentions no other outlets. He considered the third to be the Mosas, we may suppose, if he knew anything about it.

Tacitus (Ann. ii. 6) observes that the Rhine empties into the sea between the islands of the Frisii, Chanci, Frisabona, Storii, and Marsacii.
divides into two branches at the head of the Batavorum Insula. The branch which flows along the German bank keeps its name and its rapid course to the Ocean. The branch which flows on the Gallia bank is broader and less rapid: this is the Valleiûse (Waal), which flows into the Mosæa. (Hist. v. 33.) [BATAVORUM INSULA.] He knows only two outlets of the Rhine, and one of them is through the Mosæa. The Rhine, as he calls the eastern branch, is the boundary between Gallia and Germania. East of this eastern branch he places the Frisii (Ames. iv. 79); and here he agrees with Pliny, who places the outlet between the Middle Rhine and the Fleverein. Accordingly the Rhenus of Tacitus is the Rhenus of Meia and Pliny.

This third branch of the Rhine seems to be that which Tacitus calls the work of Drusus (Ames. ii. 6), and which Sontiusius (Claspham, c. 1) mentions without saying where it was: "Drusus trans Rhenum fossas novi et immensae opus factit, quae nunc dicitur Drusianae vocantur." Germanicus in his expedition against the northern Germans (Tac. Ames. ii. 6) ordered his fleet to assemble at the Batavorum Insula, whence it sailed through the fossa Drusiana and into the Rhine and the river Amiai (Emes). This course was probably taken to avoid the navigation along the sea-coast of Holland. On a former occasion Germanicus had taken the same course (Ames. i. 60), and his father Drusus had done the same.

Potemey (ii. 9. § 4), who wrote after Tacitus and Pliny, is acquainted with three outlets of the Rhine. He places first the outlet of the Mosæa in 24° 40' long., 53° 20' lat. He then comes to the Bataver, and he fixes the mouth of this river in 25° 30' long., 53° 20' lat. The western mouth of the Rhine is in 26° 45' long., 53° 20' lat. The middle mouth is in 27° 20' long., 53° 30'; and the eastern in 28° long., 54° 20'. His absolute numbers are incorrect and they may be relatively incorrect also. His western outlet is a little east of Lagdunum, and this should be the Old Rhine or Rhine Proper. The middle mouth is farther east than the eastern mouth further east still. The eastern mouth may be the Ysel, but it is difficult to say what Potemey's middle mouth is. Gessellius suggests that Potemey's western mouth may have been about Zandoord. He further supposes that the Middle Mouth according to his measures was about the latitude of Bantu, about 4 leagues about Zandoord, and he adds that this mouth was not known to those writers who preceded Potemey, and we may conjecture that it was little used, and was the first of the outlets that ceased to be navigable. The third mouth he supposes to correspond to the passage of the Nile. But nothing can be more vague and unsatisfactory than this explanation, founded on Potemey's measurements and guesses. So much as this is plain. Potemey does not reckon the Mosæa as one of the outlets of the Rhine, as the Roman writers do; and he makes three outlets besides the outlet of the Mosæa.

This country of swampy rivers and forests through which the Lower Rhine flowed has certainly undergone great changes since the Roman period, owing to the floods of the Rhine and the inundations of the sea, and it is very difficult, perhaps impossible, to make the ancient descriptions agree with the modern localities. Still it was a fixed opinion that the Rhine divided into two great branches, as Caesar says, and this was the division of the Rhine from the Wesel at Pasmerden, or wherever it may have been in former times. One of the great outlets was that which we call the Mosæa that flows by Roter in den; the other was the Rhine Proper that entered the sea near Leiden, and it was the stream from Pasmerden to Leiden that formed the boundary between Gallia and Germania. (Servius, ad Aen. vii. 727.) Potemey places all his three outlets in Gallia, and it is the eastern mouth which he makes the boundary between Roman Gallia and Great Germania (iii. 11. § 1). If his eastern mouth is the Ysel, it makes this river from Arminfo to the place where the Wesel leaves the eastern limit of Roman Gallia in his time. This may be so, but it was not so that Pliny and Tacitus understood the boundary. Whatever changes may have taken place in the Delta of the Rhine, D'Anville's conclusion is just, when he says that we can explain the ancient condition of the places sufficiently to make it agree with the statements of the ancient authors.

The floods of the Rhine have been kept in their limits by embankments of earth which begin at Wesel, in the Prussian province of Dambdorf, and extend along the Rhine and its branches to the sea. The Romans began these works. In the time of Nero, Pompeius Paullinus, to keep his soldiers employed, finished an embankment ("agger") on the course which Germanicus had begun six years before. (Tac. Ames. xiii. 53.) It has sometimes been supposed that this "agger" is the "moles" which Civilis broke down in the war which he carried on against the Romans on the Lower Rhine. (Hist. v. 19.) The consequence of throwing down this "moles" was to leave nearly dry the channel between the river and the Rhine. When the Romans crossed the Rhine at this place is the Rhine Proper. The effect of throwing down the "moles" was the same as if the river had been driven back ("velut abaco amnis"). This could not have been effected by destroying an embankment; but if the "moles" of Drusus was a dike which projected into the river for the purpose of preventing most of the water from going down the Wesel, and for maintaining the water in the river, then the eastern mouth of the Batavorum Insula, we can understand why Civilis destroyed and why Drusus had constructed it. Drusus constructed it to keep the channel full on the south side of the Batavorum Insula, and to maintain this as a frontier against the Germans; and so we have another proof that the Rhine Proper or the Middle Rhine was the boundary between Gallia and Germania in this part, as every passage of Tacitus shows in which he speaks of it. Civilis destroyed the "moles" to stop the Romans in their pursuit of him; for they were on the south side of the island, and had no boats there to make a bridge with. Urgel understands it so, and he is probably right.

In the Roman conquest work in the Delta of the Rhine was the canal of Corbulo. The Roman conquerors left durable monuments of their dominion in all the countries which they invaded, even in the watery regions of the Rhine, where they had to fight with floods, with the tempests of the ocean, and a warlike people whose home was in the marshes and forests.

The Rhine was the great frontier of the Romans against the German tribes. All the cities on the west or Gallia side, from Leiden to Baal, were either of their foundation or were strengthened and fortified by them. In the time of Tiberius eight legions guarded the frontier of the Rhine.
RHENUS.

This article may be read with the articles Bazaeorum Insula, Flevio Lucus, Fossa Coreulo-

nus, Moira, Morella, and Gallia Transalpina. (D'Anville, Notice, &c. "Rhenus"; Penny Cy-

clopsidea, art. "Rhine"; and Ubert, Gallium,—who has collected all the ancient and many modern au-
thorities.)

[GL.]

RHENUS (Remo), a river of Gallia Cispadana, and one of the southern tributaries of the Padua. (Plin. iii. 16. s. 20.) It flowed within about a mile of the walls of Bononia (Bologna), on the W. side of the city, and is celebrated in history on account of the interview between Antonius, Octavian, and Le-
pidus, which is generally believed to have taken place in a small island formed by its waters. [Bononia.]

It has its sources in the Apennines nearly 50 miles above Bologna, and is a considerable stream, though called by Silius Italicus "parvus," to distinguish it from its far greater namesake, the Rhenes. (Sil. Ital. viii. 599.) In the time of Pliny it is probable that it discharged its waters into the principal channel of the Padua, but at the present day they are turned aside into an artificial channel before reaching that river, and are thus carried into the arm now known as the Po di Primauro. Hence the mouth of that branch of the Po is now called the Fosco del Remo. Pliny tells us that the reeds which grew on the banks of the Rhenus were superior to all others for making arrows. (Plin. vii. 36. s. 65.) [E. H. B.]

RHESAENA (Rhesium, Potl. v. 18. § 13; Rhesus, Steph. B. a. s.; Amm. Marc. xxxii. 5; Resanna, Tab. Peut.; Basian, Notitia Imp. Eth. Perseveria, Steph. B. a. s.), a town of considerable importance at the northern extremity of Mesopotamia; it was sit-

uated near the sources of the Chaboras (Khabib), on the great road which led from Carrhae to Nicepho-

rium, about 88 miles from Nisibis and 40 from Dara. (Procop. B. iii. 19; de Aedifici. ii. 2.) It was built by the Persians. The following is a passage from the "Periplus" of Rhinocolura (quasi βους καλέωνας κεκτημένην, al. β. κε-

κτημένην), situated on the confines of Egypt and Syria, near the shore; and from its situation destitute of nearly all the necessaries of life. The soil around it was salt, and the small supply of w. water within the walls was bitter. Necessity, the mother of invention, led the inhabitants to adopt the following novel expedient for their sustenance. They collected a quantity of reeds, and, splitting them very fine, they wove them into mats, which they stretched for many stadia along the sea-shore, and so snared large quantities of quails as they came in vast flights from the sea (i. 60). Strabo copies this ac-

count of its origin (i. c.). Seneca ascribes the act to a Persian king, and designates it by the name of TACHINPHON (Hieroc. p. 793). There can be no doubt that it is at present represented by Ras-al-Asis, a considerable entrepôt of commerce in the province of Diarbekir. It was nearly de-

stroyed by the troops of Timur, in 1403. (D'Herbelot, Dict. Orient. i. p. 146, iii. p. 112; Niebuhr, ii. p. 390.)

[V.]

COIN OF RHESAENA.

RHETICO, a mountain of Germany, mentioned only by Pomp. Mela (iii. 3), along with Mount Taurus. As no particulars are stated it is impos-

sible to identify it, and German writers are so divided in their opinions that some take Rhetico to be the name of the Siebenberge, near Brem, while others identify it with a mountain in the Tirol. [L. S.]

RHIDAGUS (Curt. vi. 4. § 7), a river of Hyrcania, which flows from the mountains NW. to the Caspian. Alexander crossed it on his march in pursuit of Darius. It appears to be the same as the Choastes of Arminius (xviii. 24), and may perhaps be represented by the present Adigray. [V.]

RHINOCOBURA or RHINOCOLURA (Ρυγο-

κολουρα, Polyb. Polt. Joseph.; Ρυγοκολουρα, Strab. Eth. Ρυγοκολουρας, Ρυγοκολουρηνας), a maritime city on the confines of Egypt and Palestine, and conse-

quently reckoned sometimes to one country, some-
times to the other. Strabo, going south, reckons Gaza, Raphia, Rhinocolura (xvi. p. 758); Polybius, going north, reckons it to Egypt, calling Raphia the first city of Cœlesyria (v. 80). Poleney also reckons it to Egypt, and places it in the district of Cassiota (iv. 5. § 12), between Ostracine and An-
thedon. The Itinerarium Antonini (p. 131) places it xxii. M. F. south of Rafis, and the same distance north of Ostracine. The following is the history of its origin and name is given by Diodorus Siculus. Actienses, king of Aethiopia, having conquered Egypt, with a view to the suppression of crime in his newly-acquired dominion, collected together all the suspected thieves in the country, and, after judicial conviction, cut off their noses and sent them to colonize a city which he had built for them on the extremity of the Black Sea. This city he named after himself, Rhinocolura (quasi βους καλέωνας κεκτημένην, al. β. κε-

κτημένην), situated on the confines of Egypt and Syria, near the shore; and from its situation destitute of nearly all the necessaries of life. The soil around it was salt, and the small supply of w. water within the walls was bitter. Necessity, the mother of invention, led the inhabitants to adopt the following novel expedient for their sustenance. They collected a quantity of reeds, and, splitting them very fine, they wove them into mats, which they stretched for many stadia along the sea-shore, and so snared large quantities of quails as they came in vast flights from the sea (i. 60). Strabo copies this ac-

count of its origin (i. c.). Seneca ascribes the act to a Persian king, and designates it by the name of TACHINPHON (Hieroc. p. 793). There can be no doubt that it is at present represented by Ras-al-Asis, a considerable entrepôt of commerce in the province of Diarbekir. It was nearly de-

stroyed by the troops of Timur, in 1403. (D'Herbelot, Dict. Orient. i. p. 146, iii. p. 112; Niebuhr, ii. p. 390.)

[V.]

Z 3
River of Egypt is Wady-al-Arish. The village is situated on an eminence about half a mile from the sea, and is for the most part enclosed within a wall of considerable thickness. There are some Roman ruins, such as marble columns, etc., and a very fine well of good water. (Iruby and Mangles, Travels, p. 174, October 7.)

[Note: The rest of the text is not legible or clear.]
have retired among the Echelees. (Sclayx, l.c.) Whether the Phocidians had reached the E. shore of the Adriatic does not appear; but it could only be from traces of Phocidian settlements that this term was assigned to his wanderings. (Wilkinson, Dal- matia, vol. i. p. 381; Neugebaur, Die Süd-Slavens, p. 30.)

[EB.J.]

RHIZONICUS SINUS. [RHIZON.] RHIZOPHAGI AEITHOPIES (P'iqêphôys, Dio- dor. ii. 23; Strab. xvii. p. 770, seq.; Polyv. i. 1. § 29), one of the numerous tribes of Aeithoia, whom the Phocians drove before them. The root-eating Aeithopian dwelt above Meroy, on either bank of the Astaboras (Tucacor). and derived their principal sustenance from a kind of oaks or poêmena, made from the reeds and bulrushes that covered that alluvial region. The roots were first scrupulously cleaned, then powdered between stones, and the pulp thus obtained was dried in the sun. The Rhizophagi are described as a mild and harmless race, living in amity with their neighbours, and, probably because they had nothing to lose, unmolested by them. Their only foes were lions, who sometimes committed the greatest havoc among this unarmed race; and their best friends, according to Diodorus (comp. Agatharch. op. Hudson, Geog. Grec. Max. p. 37), were the black ants, which, while the mountains were covered with snow in winter, fed on the Athamas, which at the summer solstice (λείψεις ἀναπόθεμα ποταμός) assailed the lions in such numbers, that they fled from the marshes, and permitted the Rhi- zophagi to recruit their losses. The site of this obscure tribe probably corresponds with that of the Sykhoi (Bruce, Truculæ, vol. iii. pp. 69—72), who mention the bridge of Othias. The Taca or Alirha, on the upper Tuccoro. [W. B. D.]

RHIZUS (P'iqizus), a port-town of Pontus, at the mouth of the river Rhizus, about 130 stadia to the east of the river Calus, and 30 stadia west of the month of the Ascurus. In the time of Ptolemy (Bell. Goth. iv. 2) the place had risen to considerable importance, so that Justinian surrounded it with strong fortifications. The Table mentions on its site a place under the name of Reia, which is probably only a corruption of the right name, which still exists in the form of Rāsāk, though the place is also called Iriris. (Comp. Procop. de Aed. iii. 4; Polyv. v. 6. § 6.) [L. S.]

RHIZUS (P'iqizus: Eth. P'iqizvios), a town of Magnesia in Thessaly, whose inhabitants were transported to Demetrias upon the foundation of the latter city. (Strab. ix. pp. 436, 443; Steph. B. s. v.; Plin. iv. 9. a. 16.) We learn from Sclavus (p. 24) that Rhizus was outside the Pagassaean gulf upon the exterior shore; but its exact position is uncertain. Leave places it at the ruins eastward of Neohdri (Northern Greece, vol. iv. p. 383).

RHOCCA (P. i.e., a tent). The Table mentions on its site a temple to Artemis Rhocassa (Asian, N. A. xii. 32), which found remains at the village which still bears the name of Rhokka, of the S. of the ancient Methymna; and there can be little doubt that this is the site of the Rhocass, which, as is shown by Asian (N. A. xiv. 20), was near Methymna (Hick, Kreta, vol. i. p. 891; Paskeley, Crete, vol. ii. p. 41.)

RHODA or RHODUS (Pôdês, Steph. B. s. v.; Rhoda, Mela, ii. 6; Liv. xxxiv. 8; Pódês, Strab. xiv. p. 654; Eustath. ad Dion. Per. 604; called by Polyv. ii. 6. § 20, Pôdôvda, where we should probably read Pôdês η πόλις), a Greek empire on the coast of the Indigeatae in Hispania Tarraconensis, founded according to Strabo (l. c.) by the Rhodians, and subsequently taken possession of by the Massaliota. It is the modern Roses; but tradition says that the old town lay towards the headland at St. Pedro de Roda. (Ford, Handbook of Spain, p. 249; comp. Meurs. Rhod. i. 38; Marva, Hist. sep. ii. 18; Martin, Hist. des Gaulois, p. 218; Flores, Med. iii. p. 114; Mionnet, i, p. 148.)

[EB.J.]

RHODANUS (Pôbaris: Rhone). The Rhone rises in Switzerland, in a glaceric west of the pass of St. Goërdard, about two miles below the village of Galaluse, at an elevation of above 12,000 feet high. It has a general course, first SW., then W. by S., as far as Martigges, the Octodurus of Caesar (B. G. iii. i). The course from Martigges to the Lake of Geneva forms nearly a right angle with the course of the river above Martigges. The length of the valley through which the Rhone flows to the Lake of Geneva is about 90 miles. This long valley called Wallis, or the Val- lais, is bounded by the highest Alpine ranges: on the north by the Bernese Alps, which contain the largest continuous mass of snow and ice in the Swiss mountains, and on the south by the Leo- pontian and Pennine Alps. The Lake of Geneva, the Lacs Lemanus of the Romans [Lemanus], which receives the Rhone at its eastern extremity, is more than 2000 feet above the surface of the Mediterranean.

The Lake of Geneva lies in the form of a crescent between Switzerland and Savoy. The convex part of the crescent which forms the north side is above 50 miles in length; the concave or southern side is less than 50 miles in length. The widest part, which is 300 feet wide, is at the foot of the highest peak, which is near some high cliffs on the south coast, is stated variously by different authorities, some making it as much as 1000 feet. The Rhone enters the lake at the east end a muddy stream, and the water flows out clear at the western extremity past Geneva, an ancient city of the Al- lobroges. [GEnEVSE.]

Below Geneva the Rhone runs in a rapid course and in a SW. direction past Fort l'Eclus. Fort l'Eclus is at the point described by Caesar (B. G. i. 9) where the Jura overhangs the course of the Rhone. [HELYETI.] The river then runs south past Sequel, and making a bend turns north again, and flowing in an irregular western course to Lyon (Lugdunum) is joined there by the Saone, the ancient Aras [Arar; Lugdunum]. The length of the course of the Rhone from the Lake of Ge- neva to Lyon is about 130 miles. The Saone, as Caesar says, is a slow river, but the current is seen very plainly under the bridges in Lyon. The Rhone is a rapid stream, and violent when it is swelled by the rains and the waters from the Alpine regions. From Lyon the Rhone flows in a general southerly course. The direct distance is about 150 miles from Lyon to Arles (Arelet) where the river divides into two large branches which include the isle of Carmagne. The whole course of the Rhone from the ice-fields of Switzerland to the low shores of the Mediterranean is above 500 miles.

The valley of the Rhone below Lyon is narrow on the west bank as far as the junction of the Ar- dèche, and it is bounded by high, bare, and rocky heights. Some of the hill slopes are planted with vines. All the rivers which flow into the Rhone from the highlands on the west are small; they are the Ardèche, Cèze, Gardon (Vardo), and some smaller streams. The left bank of the Rhone from

[EB.J.]
RHODANUS.

The Rhone was earlier known to the Greeks and Romans than any other of the large rivers of Western Europe. The oldest notices of this river must have come from the Phocaeans and the Greeks of Massilia. What Arrienus has collected from some source (Ov. Mar. 633-690) is unintelligible. Pliny (iii. 4) very absurdly derives the name Rhodanus from a town which he names Rhoda; but the name Rhodanus is older than any city, and, like the names of most rivers, it is one of the oldest memorials that we have of the languages of the West. Polybius (iii. 47) supposed that the Rhone rose further east than it does, but he knew that it flowed down a long valley (αβδάω) to the west, though he does not mention the Lake of Geneva. Ptolemy (ii. 10), the latest of the classic geographers, had no exact notion of the sources of the Rhone, though the Romans long before his time must have known where to look for them. He makes the sources of the Arar come from the Alps, by which the Jura is meant, and in this statement and what he says of the course of the Arar and Dübis he may have followed Strabo (iv. p. 186), as it has been supposed.

The blunders about the sources of this river are singular. Ptolemy (iii. 8) mentions the Danubius and Rhodanus among the rivers of Germany; and in another passage he says that it rises not far from the sources of the Isar and the Rhenum (ii. 5).

There is much difference in the statements about the number of the mouths of the Rhine. Timaeus, quoted by Strabo (p. 183), says that there were five outlets, for which Polybius reproves Timaeus, and mentions only two. Megasthenes (Gr. Antiq. iii. 41) names the eastern branch the Massalitiotis. Artemidorus, as cited by Strabo, made five mouths. Strabo does not state how many he supposed that there were. He says that above the mouths of the Rhone, not far from the sea, is a lake called Sionalmate, which some make one of the outlets of the Rhone, and those particularly do who enumerate seven outlets of the river. But he shows that this was a mistaken opinion. Caesar built ships at Aureate when he was going to besiege Massilia, and he brought them down the river to that city, and by the eastern branch, as we may assume.

The Rhone was navigated by the people on its banks at the time when Hannibal with his army came to cross it, and much earlier. Polybius is the earliest extant writer who has given us any precise information about this river. Hannibal (b.c. 218) crossed it at a point above the division of the stream, and of course higher than Arela, for we assume that the bifurcation was not higher than that city in his time, if it ever was. (Polyb. iii. 43.) He probably crossed the river at Boucaucire and below the junction of the Gervaud. He then marched northwards on the east side of the river to the Inhula. [INEULA ALLOBOGUM.] Much has been written on this passage of Polybius and on Livy (xxxi), who also describes the same passage. (The March of Hannibal from the Rhone to the Alps, by H. L. Long, Esq., 1831; Ueber, Gallien, p. 561, &c.; and the modern writers quoted by each.)

Pliny (iii. 4) enumerates three mouths of the Rhone. He calls the two smaller "Libyen" if (the reading is doubtful); one of these is the Arela, of which he may assume to be the nearest to Spain; the other is Metapomum, and the third and largest is the Massaliot. Some modern maps represent three mouths of the river. Ptolemy (ii. 10) mentions only a western and an eastern mouth, and he makes a mistake in placing the Fossea Maritime [FOSIA MARITIMA] west of the western mouth. The channels of the Rhone below Arela may have been changed in some parts, even in historical periods, and the bed of the river above Arela has not always been where it is now. But there is no evidence for any great changes in the river's course since the time when Polybius wrote, though it is certain that the alluvium brought down the river must have caused some changes in the mouth of the river.

The canal of Marius, which was on the east side of the eastern outlet of the Rhone, is described under FOSIA MARITIMA; and the stony plain is described under LAPIDEI CAMPIL.

RHODANUSIA. Pliny (iii. 4) mentions Rhoda in Gallia Narbonensis as a colony of the Rhodians. He places it on the coast east of Aigaleos (Aupa), and says that it later passed to the Romans. [RHODANUS.] Hieronymus, in his Prologue to the Second Epistle to the Galatians, copies Pliny. This may be the place which Stephanus (s. v. Ροδανοῦσα) names Rhodania, and calls "a city in Massilia," by which the Massalitiot territorial must be meant. The passage in Strabo (iv. p. 180) της της Ρωδανίας της ἀρχής, in which he intends to speak of one of the Massalitiot settlements, is corrupt. Casaubon (Comment. in Strab. p. 83) sometimes thought that we ought to read της της Ρωθανίας τῆς ἀρχῆς. Groskurd (Strab. Transal. i. p. 310) thinks that Pliny has called this place Rhoda because he confounded it with Rheda or Rhodius in Iberia, which he does not mention. He observes that Scymnus (city in Asia) was called Polypius (Gr. Antiq. i. 45) rightly name it Rhodania; and he has no doubt that Strabo wrote it so. But it is by no means certain that Strabo did write it so. Groskurd's argument is this: there never was a town Rhoda in Gallia, and Strabo mentions the Iberian Rhoe or Rhodus. Since then Strabo is acquainted with both places, he has not made a mistake like Plinius; rather must we with Vossius (Note on Antiq. ii. 6) alter the corrupt Ρωθανίας into Ρωθανίας; and Koray is mistaken in rejecting Ρωθανία altogether as not genuine. We know nothing of this Gallic or Rhodania. The place is gone and has left no trace.

RHODE. [RHODANUSIA.] RHODE FLUVIUS. [SAGARIS.] RHODIA ('Ρωδία: Εἴδα, 'Ποϊεῖται'), a town of Lycia, situated in the mountains on the north of Corydallis. (Steph. B. s. v.; Ptol. v. 3. § 6; Phot. Cod. 176.) At the time when Col. Leske wrote his work on Asia Minor (p. 186) the site of this town was not yet ascertained, and Sir C. Feller did not examine the district; but the inscriptions which have since been found fix the site at the place now called Eski Hisar. (Spratt and Forbes, Pre-
RHODIUS. 713

Rhodes was believed to have at one time risen out of the sea, and the Telchines, its most ancient inhabitants, are said to have immigrated from Crete. (Vind. Olym. viii. 23; Sch. in Aesch. Agon. vi. 652; Cid. l. c.; Diod. v. 55.) The Telchines, about whom many fabulous stories are related, are said to have been nine in number, and their sister Halia or Amphitrite became by Poseidon the mother of six sons and one daughter, Rhodes, from which in the end the island received the name it still bears. Others, however, with better reason, derive the name Rhodes from podos, a rose. For the rose appears as a symbol on coins of the island, so that Rhodes would be the "island of Roses." (Eckhel, vol. ii. p. 602; Sestini, Num. Vet. p. 382.) These most ancient and fabulous Telchines are said to have perished or been driven from the island during an inundation, and Helos then crept in, and first of all the Heracleidae were called after him Heliodae; they were seven in number, and became ancestors of seven tribes, which partly peopled Rhodes itself and partly emigrated to Lesbos, Cos, Caria, and Egypt. The Heliodae are said to have greatly distinguished themselves by the progress they made in the sciences of astronomy and navigation. (Pind. I. xiii. 36; Diod. vii. 11; Conon, Narrat. 47; Strab. xiv. p. 654.) After this various immigrations from foreign countries are mentioned: Egyptians under Danans, Phoenicians under Cadmus, Thessalians and Carians, are each said to have furnished their contingent to the population of Rhodes. Whatever we may think of these alleged immigrations, they can have but little affected the national character of the Rhodians, who, in fact, did not become fixed until a branch of the Doric race took possession of the island, after which event the Doric character of its inhabitants became thoroughly established. Some Dorians or Heracleids appear to have settled there as early as the Trojan War, for the Heracleid Telipolimenos is described as having been the first king of Rhodes (II. ii. 653; Diod. iv. 58, v. 59; Appollod. ii. 8 § 2.) After the Trojan War Astathemones, a Heracleid from Argos, led other settlers to Rhodes. (Strab. xiv. p. 653; Diod. xv. 59; Appollod. iii. 2 § 1; comp. Thuc. vii. 57; Arist. Orth. xiv. p. 889.) After this time the Rhodians quietly developed the resources of their island, and rose to great prosperity and influence.

The three most ancient towns of the island were Lindus, Ialysus, and Camirus, which were believed to have been founded by three grandsons of the Halid Ochimus bearing the same names, or, according to others, by the Heracleid Telipolimenos. (Diod. iv. 58, v. 57.) These three towns, together with Gela, Kalkis, and Libia, were Rhodians, what was called the Doric hexapolis, which had its common sanctuary on the Triopion headland on the coast of Caria, Apollo being the tutelary deity of the confederation. (Herod. i. 144.) The rapid progress made by the Rhodian towns at a comparatively early period is sufficiently attested by their colonies in the distant countries of the west. Thus they founded settlements in the Balaeric islands, Rhodes on the coast of Spain, Parthenope, Salapia, Siris, and Sybaris in Italy, and Gela in
Sicily; while the countries nearer home were not neglected, for Soli in Cilicia, and Gagae and Corydalla in Lycia, were likewise Rhodian colonies. But notwithstanding this early application to navigation and commerce, for which Rhodes is so admirably situated between the three ancient continents, the Rhodians were not ranked with the great maritime powers of Greece. Herodotus speaks of them only as forming a part of the Doric confederacy, nor does Thucydides mention their island more frequently. The Rhodians, in fact, did not attain to any political eminence among the states of Greece until about B.C. 412, when the three ancient towns coalesced and built the city of Rhodes at the northern extremity of the island, and raised it to the rank of a capital. During the first period of the Peloponnesian War the towns of Rhodes paid tribute to Athens, and were reluctantly compelled to serve against Syracuse and Gela in Sicily (Thuc. vii. 57); but in B.C. 412 they joined the Peloponnesians. The popular party being favourable to Athens, soon afterwards attempted a revolution, but it was crushed (Diod. xiii. 38, 45). In B.C. 396, however, when Conon appeared with his fleet in the waters of Rhodes, the Rhodians again embraced the cause of Athens (Diod. xiv. 79; Paus. vii. 7 § 6); but the democracy which was now established was ill managed, and did not last long; and as early as B.C. 385, Conon, with the assistance of Sparta, recovered their former ascendancy. (Aristot. Politi. v. 4. 2; Xenoph. Hell. iv. 8 § 20, &c.; Diod. xiv. 97.) The fear of Sparta's growing power once more threw Rhodes into the hands of the Athenians, but soon after the battle of Lenctra a change again took place; at least the Thebans, in B.C. 364, were zealously engaged in sowing discord for the purpose of drawing Rhodes, Chios, and Byzantium over to their own side. During the Social War, from B.C. 357 to 355, the Rhodians were arrayed against Athens, being instigated by the dynast of Caria and his successor Artemisia; but as they became alarmed by the growing power of the Carian dynasty, they solicited the protection of Athens through the medium of Messenia. (The form of government throughout this period was oligarchical, which accounts for the insolent conduct of Hagesilochus, as described in Athenaeus (x. p. 444). Rhodes furnished Darius, the last king of Persia, with one of his bravest and ablest generals in the person of Memnon, who, if he had had the sole direction of affairs, might have checked the victorious career of Alexander, and saved the Persian empire. But as it was, Rhodes, like the rest of Greece, lost its independence, and received a Macedonian garrison (Curt. iv. 5). The expulsion of this garrison after the death of Alexander was the beginning of a glorious epoch in the history of Rhodes; for during the wars against the successors of Alexander, and especially during the memorable siege of the city of Rhodes by Demetrius Poliorcetes, the Rhodians gained the highest esteem and regard from all the surrounding princes and nations. During the period which then followed, down to the overthrow of the Macedonian monarchy, Rhodes, which kept up friendly relations with Rome, had acquired and extended its dominion over a portion of the opposite coasts of Caria and Lycia—a territory which is hence often called the Περαλα των Τηλων (Περαλα) — and over several of the neighbouring islands, such as Carus, Carpathus, Telos, and Chalcos. After the defeat of Perseus the Romans deprived the Rhodians of a great amount of territory and power, under the pretext that they had supported Macedonia; but the anger of Rome was appeased, and in the war against Mithridates the Rhodians defended themselves manfully again ( Dion Cass. ix. 24); but although he afterwards restored its liberty, it was at all times a very precarious possession, being taken away and given back as circumstances or the caprices of the emperors suggested (Tac. Ann. xii. 58; comp. Suet. Vesp. 8; Estr. vii. 13). In the arrangements of Constantine, Rhodes, like other islands, belonged to the Province Insularum Asiae, and was governed by a Prefectus (Hierocles, 685, &c.). During the middle ages it continued to enjoy a considerable degree of prosperity, and was the last place in Western Asia that yielded to the Mohammedans. The great prosperity which the Rhodians enjoyed during the best period of their history was owing to the first place to their extensive navigation and commerce and the great number of their commercial institutions. In respect to the former they were particularly favoured by the situation of their island, and during the Macedonian and Roman periods to Greek state could rival them in the extent and organisation of their commerce; their sailors were regarded as the best, and their laws relating to navigation were thought models worthy of being emulated by the other states of the world. The form of government of the Rhodians was indeed founded upon a popular basis, but their democracy was tempered by an admixture of oligarchy. Such at least we find it during the Macedonian period, at a time when the ancient Doric institutions had given way to a form of government more suited to the actual circumstances (Strab. xii. p. 575, xiv. p. 3; Cic. de Re Publ. i. 31; Dion Chrys. Orat. xxxii.; Arist. Orat. xiv. p. 831.) The sovereign power belonged to the assembly of the people, which had the final decision of everything; but nothing was brought before it which had not previously been discussed by the senate or Συμβολή (Polyb. xvi. 35, xxvi. 35, xxvii. 15, xxi. 8; Cic. de Re Publ. i. 31.) The executive body consisted of two magistrates called ἀσπαστῶν, each of whom governed for six months in the year as eponymus. Next to these, the admirals (ἄρχοντα) possessed the next extensive power. Other officers are mentioned in inscriptions, but their character and functions are often very uncertain. The Rhodian constitution gave the widest foundation in the character and habits of the people, who, although the vicinity of Asia had a considerable influence and created a love of splendour and luxury, yet preserved many of their ancient Doric peculiarities, such as earnestness, perseverance, valor, and patriotism, combined with
RHODUS.

active zeal for literature, philosophy, and art. The intellectual activity maintained itself in Rhodes long after it had died away in most other parts of Greece.

The island of Rhodes, which appears even in the earliest traditions as extremely wealthy (Hom. Iliad ii. 670; Pindar. Olymp. vii. 49; Philostor. Imag. ii. 27), is in many parts indeed rough and rocky, especially the coast near the city of Rhodes, and the district about Lindus, but on the whole it was extremely fertile: its vines, dried raisins and figs, were much esteemed, and its saffron, oil, marble, schelite, sponge, and fish are often spoken of. The most important productions of Rhodian industry were ships, arms, and military engines. Besides the places already mentioned, the ancients noticed Ixia and Mnasium, two forts in the south, and a place called Achaia.

By far the most important, place was the city of Rhodes at the north-eastern extremity of the island. It was built in n. c. 408 upon a regular plan formed by the architect Hippodamus, the same who built the walls of Peiraeus. (Strab. xiv. p. 654; Diodor. xix. 45, xx. 85; Harpocrat. s. v.; Tārhoδημα;) It was constructed in the form of an amphitheatre rising from the coast, and was protected by strong walls and towers, while nature provided it with two extraordinary levees, one on the south-western extremity, and on the slope of which it was the theatre. According to Strabo, Rhodes surpassed all other cities for the beauty and convenience of its ports, streets, walls, and public edifices, all of which were adornned with a profusion of works of art both in painting and sculpture. The principal statues were in the temple of Dionysus, but the most extraordinary statue, which is described as one of the seven wonders of the ancient world, was the brazen statue of Helios, commonly called the Colossus of Rhodes. It was the work of Chares of Lindus, who employed upon its execution twelve years. It cost 300 talents, and was 70 cubits in height; its gigantic size may be inferred from the fact that the men were able to encompass one of its thumbes with their arms. (Plin. xxxiv. 18; Strab. l.c.) The Colossus stood at the entrance of one of the ports, but the statement that it stood astride over the entrance, and that the largest ships could sail between its legs, is in all probability a mere fable. It was overthrown by an earthquake, 56 years after its erection, that is, in a. c. 224, or according to others a few years later. Ptolemy promised the Rhodians, among other things, 3000 talents for its restoration (Ptol. v. 89), but it is said not to have been attempted in consequence of an oracle (Strab. l.c.). Later authorities, however, speak of it as standing erect: the emperor Commodus is said to have ordered his own bust to be put upon the feet of the statue, and that a king of the Bactrians sold the fragments to a merchant who employed upwards of 900 camels to carry them away. Notwithstanding the great splendour of the city, the number of its inhabitants does not appear to have been very great, for during the siege of Demetrius Poliorcetes no more than 6000 citizens capable of bearing arms are mentioned. (Diod. xx. 94.) But Rhodes has nevertheless produced many men of eminence in philosophy and literature, such as Panaste, Steracles, Andronicles, Eudemus, Hieronymus, Pseisander, Simias, and Aristides; while Poseidonius, Dionysius Thrax, and Apollonius, surmounted the Rhodian, resided in the island for a

considerable time. The present town of Rhodes contains very few remains of the ancient city. (Comp. P. D. Paulsen, Derkav. Rhodiæ, Antist. Göttingen, 1818; H. Rost, Rhodes, ein Hist. Arch. Fragment. Altona, 1823; Th. Menegh, Vorgeschichte von Rhodos, Cöln, 1827; Rottier, Descript. des Monuments de Rhodes, Bruxelles, 1828; Ross, Reisen auf den Griech. Inseln, ill. pp. 70—113, which contains a good account of the middle-age history and the present condition of the island and city with maps and plans; Sentini, Moira Vet. p. 91.)

[LS.]

COIN OF RHODUS.

RHODUSSA, an island off the southern coast of Caria, near the entrance of the port of Panormus. (Plin. v. 85; Stadts. Mar. Mag. p. 246, where the name is written Parea.) It is mentioned in modern charters by the name of Limosa or Koreagash.

RHODUSSAE, a group of small islands in the Propontis, south of Pitessos, is mentioned only by Strabo (v. 44).

RHOE (Ῥῆς), a place on the coast of Bithynia, 20 stades to the east of Cärpe, on a steep promontory, contained a road 85 only for small vessels. (Arrian, Peripl. P. E. p. 13; Aemich. Peripl. P. E. p. 5.)

RHODUS.

[LS.]

RHOTACES. [ALBANIA, p. 89, b.]

RHOTETUM (Ῥωτέτου ή Ρωτίτου ή Ρωτίτου έκπορ), a promontory, or rather a rocky headland, running out in several points in Mydia or Trosa, at the entrance of the Haulespont, north of Ilium; it contained a small town of the same name situated on an eminence. The place is very often mentioned by the ancients. (Herod. vii. 43; Selev. p. 52; Strab. xii. p. 595; Steph. B. s. v.; Pomp. Mela, l. 18; Plin. v. 33; Thucyd. iv. 52, vii. 101; Apollon. Rhod. i. 299; Tryphon. 216; Virg. Aen. vi. 595; Liv. xxxvi. 37.) The promontory is now called Inneapolis, and the site of the ancient town is believed to be occupied by Paleo Castro, near the village of It-helmes. (Richter, Wallfahrten, p. 475; Leake, Asia Minor, p. 275.)

RHOGANA (Ῥώγανα, Ptol. vi. 8. § 7; Marcian, Peripl. i. § 26, ed. Müller), a small place on the coast of Carmania, between the promontories of Carpeia and Alambate. It is perhaps the same place as the Gogana of Arrian. (Gorg. c. 7.)

RHOGANDANI (Ῥωγανδανὶ, Ptol. vii. 4. § 9), a tribe of ancient Ceylon, at the southern end of the island. Ptolemy mentions that in this part of the island were the best pastures for the elephants, which is the case, too, at the present time. (V.)

RHOGE (Ῥῆγη), an island off the coast of Lycia, not far from the entrance of the Phœnician Portus. (Plin. v. 35; Steph. B. s. v.; Stadts. Mar. Mag. §§ 217, 218, where it is called Rhope, Ρῆξ.)

RHOGONIS (Ῥώγονις, Arrian, Ind. c. 39), a river of ancient Persis, which flows into the Persian
Gulf in lat. 39° 20', long. 48° 25' E. It was little better than a torrent, and is now doubtless marked by the present Bender-rûk. Ptolemy (vi. 4. § 2) and Ammianus (23. 6) call it Rhogonius (Ῥογόνιος), and Marcianus (Peripl. i. § 24, ed. Müller) Rhogonius (Ῥογόνιος). (Vincent, vol. i. p. 404; Thevenot, v. p. 585.) [V.]

RHOSUCUS (Ῥοσοκέнос), a place on the coast of Pamphylia, near the mouth of the Cestrus, is mentioned only in the Stadiasmus (§§ 199, 200). [L. S.]

RHOSOLOGIACUM or RHOSOLOGIA (Ῥοσολογία), a small place in the country of the Tectosages in Galatia, on the road from Ancyra to Caesarea Mazaca, not far from the river Halys. (J. A. S. pp. 143, 206; Ptol. v. 4. § 8, where some read Ῥοσολογία or Ῥοσολογιανά: It. Hieros. p. 575, where it is called Rosodosiaca.) [L. S.]

RHOSUS. [Isus.]

RHOSOZALANI. [Rhosolani.]

RHUANA (Ῥοῦανα, Ptolem. p. 16. Ροῦανα), an inland town of Arabia, placed by Ptolemy (vi. 7. § 16) in lat. 37° 48', long. 57° 30' E., of which Pausanias says it is distant from the SW. bay of the Persian Gulf, and on the river Loran. [G. W.]

RHUBON, RHUDON (Ῥοῦον, Ῥοῦον), Ptol. iii. 5. § 3; Ῥοῦον, Ῥοῦον, Marc. Herol. Peripl. § 59, ed. Müller), a river of European Sarmatia which took its source in the Azani Montes and discharged itself into the Venedicus Sinus, the Schafari (Str. Alt. vol. i. p. 497) has identified it with the Dýna, which, taking a direction generally W., falls into the Gulf of Rigo between Fort Dínas-mundus, after a course of 655 miles. This same ethnologist connects the mythic Eridanos, and the trees that wept amber, with the Rhudon of Marcian (Rhubon appears to be a corrupted form), which Sabinus, a commentator upon Virgil, a. d. 1544, calls Rhodanus. The amber could be brought by land, or by water from the coast where it was collected to the Dýna, and thence by boats conveyed to the Borysthenes and the coasts of the Euxine. The name “Eri-danos,” closely connected with Rhodanus, is composed of the words “Era” and “Don,” roots which, in several of the Indo-European languages, signify “water,” “river,” as for instance in “Rha,” the old name for the Volga, and Danubius, Tanais, Danapris, Danairis, and the like. [E. B. J.]

RHUBRICATUS (Ῥοῦρικατός, Ptol. iv. 3. § 5), a river of Numidia, the same as the Usus of the Peut. Tab., which flowed 3 M. to the E. of Hipo Regius, now called the Sebebusse (Barth, Wonderscapes, p. 70). [E. B. J.]

RHUDIANAE or RUDIANAE (Ῥοῦδιανai, Ptol.; Ῥουδίαι, Strab.: Ed. Rudinius: Ῥοῦγε), an ancient city of the Salentine, in the interior of the Roman province of Calabria, and in the immediate vicinity of Lucania (Lucco). (Strab. vi. p. 281; Ptol. iii. 1. § 76.) Strabo calls it a Greek city (睎αύς Ἑλληνίδας): but we have no other indication of this fact, and all the other notices we find of it would lead us to infer that it was a native Salentine or Messapian town. Under the Romans it appears to have enjoyed municipal rank (an inscription has “Municipes Rudini,” Orell. 3858); but in other respects it was a place of little importance, and derived its sole celebrity from the circumstance of its being the birthplace of the poet Ennius. (Strab. L. c. Mel. ii. 4. § 7; Syl. Ital. xii. 393; Cic. de Or. iii. 42.) That author is repeatedly termed a Calabrian (Hor. Carm. iv. 8; Ovid. A. A. ii. 409; Sil. Ital. l. c.; Acron, ed Hor. l. c.) and these passages confirm the accuracy of Ptolemy, who assigns Rhudianae to the Salentines, and therewith to the Calabrians according to the Roman use of the name. Pliny and Mela, on the contrary, enumerate Rudiana among the towns of the Pediculi together with Barium and Egnatia, and the latter author expressly attributes it from G. on the coast of the Messapian dialect, and many vases and other objects of antiquity. The identity of this place with the municipal town of Rudiae can therefore admit of no doubt; nor is there any reason to question the fact that this was also the birthplace of Ennius; but considerable confusion has arisen from the mistake in the Tabula of a place called “Rudiae,” which is evidently not the same as “Rudianae.” As this place would have been within the limits of the Pediculi or Peneotii, it has been supposed by some writers to be the same with the Rudiae of Pliny and Mela, and therefore the birthplace of Ennius; but the claims of Rudiae to this distinction appear unquestionable. (Galateo, de Sit. Inagy. p. 71; Boernelli, vol. ii. p. 303—102; Mommsen, Unter Ital. Dialekte, p. 88.)

The Rudiae or Rudianae of the Tabula, which is otherwise quite unknown, must have been situated somewhere in the neighbourhood of the modern Andria. [E. H. B.]

RHUS. [Megrana, p. 313, b.]

RHUTUPIAE [Buteuapiæ.]

RHYMNICI MONTES (Ῥυμνικά ἄγρα, Ptol. vi. 14. §§ 4, 10, 11), a mountain chain of Asiatian Sarmatia, of which no nearer indication can be given than that it belongs to the great meridian chain, or rather an arm of nearly parallel mountain chains, of the Oceanides. [E. B. J.]

The river RHYMNUM (Ῥυμνοῦργα, Ptol. vi. 14. §§ 2, 4), which has been a sore puzzle to geographers, took its source in these mountains and discharged itself into the Caspian between the Iba (Volga) and the Daix (Urals). In the present day there is, W. of the embouchure of the Urals, only one small stream which reaches the Caspian, under the name of the Narva Chara (Goethe, Rhein in die Seen, vol. ii. p. 342). This river is probably the Rhymnum of Ptolemy. (Humboldt, Aes. Centralis, vol. ii. p. 187.) [E. B. J.]

RHYNDAUCUS (Ῥυνδαυκός), an important river in the province of Belusspontus, which has branches at the mouth of the Erymanthus near the town of Azani. (Sclav. p. 33; Ptol. vi. 40; Pomp. Mela, i. 19; Strab. vii. p. 576.) According to Pliny, it was at one time called Lycus and had its origin in the lake of Miletopolis: but this notion is incorrect. The river flows at first as a north-western direction, forming the boundary between Macedonia and Epirus, which forms the left of the Apollonia, and in the neighbourhood of Miletopolis receives the river Megistus, and discharges itself into the Proponita opposite the island of Bocas.
RYPHES.

The Scholiast on Apollonius Rhodius (i. 1165) states that in later times the Rhynchos, after receiving the waters of the Megistas, was itself called Megistas; but Eustathius (ad Hom. II. xiii. 771) assures us that in his time it still bore the name of Rhynchos. According to Valerius Flaccus (iii. 33) its yellow water was discernible in the sea at a great distance from its mouth. In n. c. 75 Lucullus gained a victory over Mithridates in the banks of this river. (Plut. Loc. 11; comp. Polyb. v. 17; Ptol. v. i. §§ 4, 8; Steph. B. z. c.) The Rhynchos is now called Lupad and, after its union with the Megistas (Symmichis) it bears the name of Moschisulas or Muniatis. (See Hamilton's Researches, i. 83, &c.)

RIGODUNUM.

The geographers of the French Commission place Rhyphes at some ruins on the right bank of the river Tholo, where it issues into the plain; and the distance of the position on the Tholo from Vostites (Aegium) is that which Pausanias assigns as the interval between Aegium and Rhypes. But Lekse, the more scrupulous of the two chief guides of Achaea should have been only 50 stadia from each other, suspects the accuracy of Pausanias or his text, as to the distance between Rhyphes and Aegium. He accordingly places Rhyphes further W. on the banks of the river of Salamanka, and supposes Erinium to have been its port and to have been situated immediately above it at the harbour of Lambri. The position of Lambri answers very well to that of Erinium; but the reason given by Lekse does not appear sufficient for rejecting the express statement of Pausanias as to the distance between Aegium and Rhyphes. (Leake, Peloponnesus, p. 408, seq.; comp. Curtius, Peloponnesos, vol. i. 158, seq.)

RIBLAH (‘Peeradu), a city "in the land of Hamath," where Jeboaaz or Shallum was cast into chains by Pharaoh Necho, and where Nebuchadnezzar subsequently gave judgment on Zedekiah. (2 Kings. xxii. 38, xxiv. 6.) We find Nebuchadnezzar there again, after an interval of ten years, when the last remnant was carried captive and slain there. (Jerem. iii. 27.)

RICCIACUM, in North Gallia. The Table has a road from Divodurum (Mete) to Augusta Trevirum (Trier). From Divodurum to Carnunusca is xili., from Carnunusca to Ricciacum x, and from Ricciacum to Augusta x. D'Anville guessed Ricciacum to be Remick on the Mosel; but it is only a guess. There is evidently an error in the Table in the distance between Divodurum and Ricciacum, which is a great deal too much. The geographers have handled this matter in various ways. (Carrunusca.) (See also Ubert, Galliens, p. 512, and the note.)

RICINA. 1. (Eth. Riciensia: Ru. near Macerata,) a municipal town of Picenum, situated on a hill above the right bank of the river Potentia. (Potensium,) about 15 miles from the sea. Pliny is the only geographer that mentions it (iii. 13. 18); but the "ager Riciensia" is noticed also in the Liber Coloniarius (p. 296), and we learn from an inscription that it received a colony under the emperor Severus, and assumed in consequence the title of "Colonia Helvica Ricaeini." (Cred. Ann. 914; Cluver. Ital. p. 739.) Its ruins are still visible, and include the remains of a theatre and other buildings. They are situated about 3 miles from Macerata, and from Recomnus, which preserves the traces of the ancient name, though it does not occupy the ancient site. (Holsten. Not. ad Cluver. p. 137.) The Table correctly places it at a distance of 12 miles from Septempedia (S. Severino.) (Tab. Peut.)

2. A small town on the coast of Liguria, mentioned only in the Tabula, which places it on the coast to the E. of Genoa. It is commonly identified with Recco, a town about 12 miles from Genoa, but the Tabula gives the distance as only 7, so that the identification is very doubtful. (Tab. Peut. Rav. iv. 32.)

RICINA (‘Pediwa. Ptol. ii. 2. § 11), one of the Euboea insulae or Hebridis. [T. H. D.]

RIDUNA, one of the islands off that part of the Gallio coast which was occupied by the Armoric states. As the Marit. Inl. mentions Casarea (Jersey), Sarmia (Guernsey), and Riduna, it is concluded that Riduna is Aunay or Aldernay off Cap de la Hague. [G. L.]

RIGODULUM, a place on the Mosel (Mosel), "protected either by mountains or the river." (Tacitus, Hist, iv. 71.) In the war with Civilia this place was occupied by Valentinus with a large force of Treviri. Civilia, who was at Minus, marched to Rigodium in three days (tertis castris) and stormed the place. On the following day he reached Colonia Trevirum (Trier). It is supposed that Rigodium may be Reol on the Mosel. Lippius assumes Rigodium to be Rigol near Confluentes (Cobiens), but that is impossible. Ammianus Marcellinus (xvi. 6) places Rigodium near Confluentes, but his authority is small; there may be some corruption in the text. [G. L.]

RIGODUNUM (‘Prydwoor, Ptol. ii. 3. § 16), a town of the Brigantes in the N. of Britannia Romana. Camden (p. 974) conjectures it might have
been Robb chester or Riston; others identify it with Richmond.

T. H. D.

RIGOMAGUS, a village of Cisalpine Gaul, forming a station on the road from Ticiunum (Parissi) to Augusta Taurinorum (Torin). It is placed by the Itineraries 36 M. P. from Lamellium (Lomello), and 36 M. P. from Augusta or Taurin; these distances coincide with the site of Trino Vecchio, a village a little to the S. of the modern town of Trino, on the left bank of the Po (Itin. Ant. p. 339; Oliver. Ital. p. 234; Walckenaer, Géogr. des Gens, vol. iii. p. 25.).

E. H. B.

RIGOMAGUS (Remagen), on the Rhine. The Table places it between Bonna (Bonna) and Antonnacum (Andernach), viii. from Bonna and ix. from Antonnacum. The Antoninianus, which omits Riggomagus, makes the distance xvii. from Bonna to Antonnacum. Remagen is on the Rhine and on the north side of the Ahr near its junction with the Rhine. Uxert (Gallicis, p. 516, note) speaks of a milestone found at Remagen with the inscription "a col. Agripp. m. p. xxx." [G. L.]

RIMMON (Epiponon), a city of the tribe of Simeon (Josh. xix. 7), mentioned by Zechariah as the extremity of the land of Judah (xix. 10). Placed by Eusebius S. of Dacia, 16 miles from Elentropolys. (Onomast. s. v. Epiponon, Pempus.) He places another in the north of Jerusalem. (J. a. e. Pempusin.) [G. W.]

RIOBE, in North Gallia, a name which appears in the Table on a road which passes from Augustomagus (Sensis) through Calagum (Cassilis). Riebo comes after Calagum, but the distance is not given. A road, which appears to be in the direction of a Roman road, runs from Cassilis to Orbis, a few miles north of the Sessa; and D'Anville thinks that the name Orbis and the distance from Riobe to Condate (Montezeran-Tommes) enable us to fix Riobe at Orbis. [Cond. No. 2; Calagum.] [G. L.]

Ripa (Plin. iii. 1. a. 3, according to the Codex Reg., though the common reading is Ripere, a place in Hispania Baetica, which according to Resonic (Diag. Plin. ii. p. 11) occupied the site of the ancient Civitate del Río. (Cond. No. 2; Uxert. Walh. vol. ii. part i. p. 380.)

T. H. D.

RIBA, a river on the E. coast of Thrace. (Plin. iv. 11. a. 18.) Reichard conjectures it to be the Kentheus.

T. H. D.

RISARDIR (Polyb. op. Plin. v. 1), a harbour on the W. coast of Mauritania, which may be identified with the ACRA of the Ship-journal of Hanno (Aesop. Perig. § 5, ed. Müller). It is now bears the name of Agader, signifying in the Berber language (Paradis, Dictionnaire Berbère, p. 110) "a fortress," and is described as being the best roadstead along the coast of Morocco. Agader or Santa Cruz, which was called Guetguessel in the time of Loo Africans, was walled round and strengthened by batteries in 1506 by Emmanuel, king of Portugal; but was taken from the Portuguese by the Moors in 1536. (Jackson, Morocco, p. 113; Jours. de Geogr. Soc. vol. vi. p. 329.)

E. B. J.

RITHEMNA. [Rithymna.]

RITTIUM (Ritton), a place in the south-east of Lower Pannonia, situated close to the Danube, and on the road leading to Taurunum. (Itin. Ant. p. 942; Plin. ii. 16. § 5; Tac. Pest.) It is considered a garrison of Dalmatian cavalry. (Not. Imp., where the name is misspelt Ricium.) According to Mucha (Noricum, i. p. 265), its site is now occupied by the town of Titel.

L. S.]

BODUMNA.

RITUMAGUS, in Gallia, a Manio which is placed in the Antoninianus. It is in the Table on a road on the north side of the Seine from Rotomagus (Rouen) to Lutetia (Paris); and between Roumagus and Petronemus. The distance of Ricumagus from Rotomagus is viii. in the Table, i. in the Antoninianus, which distance fixes Ritusmagus near Badevign, at the mouth of the Andaule, a small stream which flows into the Seine.

G. L.

RIUSILA (Pirissana), a town in the Agri Decumates, in Germany (Plin. ii. 11. § 30), is commonly believed to have been situated in the Rhine, or near it; which may possibly derive its name from it.

L. S.

ROBOGIDI (Robogus, Plin. ii. 2. § 3), a peop in the northernmost part of Hibernia, whose name, according to Camden (p. 1411), is still perpetuated in that of a small episcopal town called Robogus in Ulster.

T. H. D.

ROBODIUM FROM. (Robodius Comes, Plin. ii. 2. § 2), a promontory on the N. coast of Ibernia in the territory of the Robodii, conjectured by Camden (p. 1411) to be Fair Head. [T. R. D.]

ROBOBARIJA, a station on the Via Laita, 16 miles from Rome, the site of which is probably marked by the Orsia della Molara, at the back of the hill of Tusculum (Itin. Ant. p. 503; Westphal, Res. Augum. vol. i. 76, 97; [Vita Latina]. [B. L.]

BOBORETTUM. [Gallia, vol. iii. p. 784 a.]

ROBRICA, in Gallia, is placed in the Table on the north side of the Loire, on a road from Juliusmagus (Angers) to Caesaraugustum (Tours). The distance of Robrica from Juliomagus is xxvi. and xxviii. from Caesaraugustum. D'Anville fixed Brivis at the distance of 16 Gallic leagues from Angers at the bridges of Longée, over the Loire, which flows into the Loire. He conjectures that Robrica contains the Celtic element Briga, a bridge or river ford, which is probably. Though D'Anville cannot make the two actual distances severally correspond to those of the Table, he finds that the whole distance between Angers and Tours agreed with the whole distance in the Table between Juliomagus and Caesaraugustum, D'Anville, in a Mémoire cited by Uxert (Gallicis, p. 481), that the ancient road deviated in many places from the modern road.

G. L.

ROBUR. Ammiannus Marcellinus (xxii. 3) mentions a fortress named Robur, which Valentinianus L. a. D. 374, built near Basilia (Basel) on the Rizera is Switzerland. Schoepflin guessed that Robur was the site of the cathedral of Bäzter, but the words of Ammianus do not give much support to this conjecture: "Prope Basilia, quod appellat se Robur." Others had made other guesses. [G. L.]

RODIUM, in North Gallia, is placed in the Table on a road between Samarobriva (Amiens) and Augustus Sossiaenium (Sceaux). It is first seen at Samarobriva to Boxem, a distance which follows along the ancient road brings us to Rioe, which represents Rodinum; but D'Anville says that to reach the ancient and modern distances agree we must go further, and as far as the belfry named Reigé.

G. L.

RODUINA (Rodina), in Gallia, is one of the towns of the Sequiani. (Plin. ii. 16. § 14.) Rodumina appears in the Table on a road which leads to Lugdunum (Lyons) through Forum Sessorium. Rodumina is Roumois on the west bank of the Loire, which gave name to the former district of Roumois. [G. L.]
ROMA.

ROMA (Pàwem, Strab. Ptol. & alli : Ekh. Romans), the chief town of Italy, and long the mistress of the ancient world.

SITUATION.

Bene was seated on the Tiber, and principally on its left bank, at a distance of about 15 miles from its mouth. The observatory of the Collage Romano, which is situated in the ancient Campus Martius, lies in 41° 53' 56" N. lat., and 15° 20' 40" long. E. of Greenwich.

Bene lies in the vast plain now called the Campagna, which extends in a south-easterly direction about 90 miles from Cape S. of Civita Vecchia, to the Grecian promontory; whilst its breadth is determined by the mountains on the NE. and by the Mediterranean on the SW., in which direction it does not exceed about 27 miles in its greatest extent. Looking from any of the heights of Rome towards the E., the horizon is bounded from the S. almost to the S. by a nearly continuous chain of mountains, at a distance varying from about 10 to 20 miles. This side offers a prospect of great natural beauty, which, to the lover of antiquity, is still further enhanced by the many objects of classical interest which it presents. In the extreme south distance of about 20 miles, lies the round and isolated mass of Soracene. Then follows the picturesque chain of the Sabine Apennines, in which the peaked and lofty summit of Lucrétius, now Monte Gennaro, forms a striking feature. A few miles farther S., at the spot where the Anio precipitates its waters through the chain, lies near, embosomed in its copious and sombre groves of olives. More southward still, and seated on the last declivities of the Sabine mountains, is the frigidum Praeneste, celebrated for its Sources and the temple of Fortune (Cic. Div. ii. 41), and, like the neighbouring Tiber, one of the favourite resorts of Horace. (Oed. iii. 4.) A plain of 4 or 5 miles in breadth now intervenes, after which the horizon is again marked by the white appearance of Mons Albanus (Monte Cavo), which closes the line of mountains towards the S. This mass is clearly of volcanic origin, and totally unconnected with the Apennines. The mountain awakens many historical recollections. Its summit was crowned by the temple of Jupiter Latiaris, the common sanctuary and meeting place of the Latin confederates, from the surrounding plain, and even visible to the mariner. Beneath lay Alba Longa with its lake; at its southern foot Lancium, and on its northern declivity Tusculum, consecrated by the genius and philosophy of Cicero. To the S. and SW. of Mons Albanus there is nothing to obstruct the view over the undulating country which sinks into the woods on the W. and NW. the prospect is bounded to a very narrow compass by the superior elevation of Mons Janiculus and Mons Vaticanus. The plain marked out by these natural boundaries is intersected by two considerable rivers, the Tiber and the Anio. The former, at first called Albitas, and afterwards Tiberis or Tribia (Liv. i. 8; Plin. iii. 5. a. 9; Virg.), is said to have been during the Republic, the boundary of the plain between Soracene and the Sabine chain before described, bends its yellow course to the S. At a distance of about 3 miles from Rome, it receives the Anio flowing from the eastward, and then with increased volume passes through the city and discharges itself into the sea at Ostia. The course of the Tiber marks the frontier of Etruria; the angular territory between it and the Anio is attributed to the Sabines; whilst on the southern side the line of the Anio and of the Tiber formed the boundary of Latium.

The Campagna of Rome consists of undulating ridges, from which scanty harvests are gathered; but the chief use to which it is applied is the fostering of vast herds of cattle. These, with the picturesque herdsmen, mounted on small and half wild horses and armed with long poles or lances, are almost the only objects that break the monotony of a scene where scarce a tree is visible, and where even the solitary houses are scattered at wide intervals. Yet anciently the Campagna presented a very different aspect. Even within sight of Rome it was thickly studded with cities at first as flourishing as herself; and in those times, when every roof of ground maintained its man, it must have presented an appearance of rich cultivation. Such is the nature of the country in the immediate neighbourhood of Rome. The celebrated group of
seven hills—the site on which the eternal city itself was destined to rise—stands on the left bank of the Tiber. To the N. of them is another hill, the Mons Pincius or Collis Hortorum, which was excluded from the ancient city, but part of it was enclosed in the walls of Aurelian. The Tiber, at its entrance into Rome, very nearly approaches the foot of this hill, and then describes three bold curves or reaches: first to the SW., then to the SE., and again to the SW. The distance from the spot where the Tiber enters the city to the SW. point of the Aventine is, in a direct line, about 2 miles. At the extremity of the second, or most eastern reach, it divides itself for a short space into two channels and forms an island, called the Insel Tiberina. At this spot, at about 300 paces from its eastern bank, lies the smallest but most renowned of the seven hills, the Mons Capitolineus. It is of a saddle-back shape, depressed in the centre, and rising into two eminences at its S. and N. extremities. On its N. or rather NE. side, it must in ancient times have almost touched the Collis Quirinalis, the most northerly of the seven, from which large portion was cut away by Trajan, in order to construct his forum. The Quirinalis is somewhat in the shape of a hook, running first to the SW., and then curving its extreme point to the S. Properly speaking, it is not a distinct hill, but merely a tongue, projecting from the same common ridge which also throws out the adjoining Viminal and the two still more southern projections of the Esquiline. It will be seen from the annexed plan, without the help of which this description cannot be understood, that the Quirinal, and the southernmost and most projecting tongue of the Esquiline, almost meet at their extremities, and enclose a considerable hollow—which, however, is nearly filled up by the Viminal, and by the northern and smaller tongue of the Esquiline. These two tongues of the Esquiline were originally regarded as distinct hills, under the names of Cispian, the northern projection, and Op-

ROMA.

781

plus the southern one; but they were afterwards considered as one hill, in order not to exceed the prescriptive number of seven. S. of the Esquiline lies Mons Caecilius, the largest of the seven; and to the W. of it Mons Aventinus, the next largest, the NW. side of which closely borders on the Tiber. In the centre of this garland of hills lies the long-profiled Mons Palatine, forming, on the NW. towards the Capitoline, on the NE. towards the Esquiline, on the SE. towards the Caesian, and on the SW. towards the Aventine.

It may be observed that, of the seven hills above described, the Quirinal and Viminal are styled collae, whilst the others, though without any apparent reason for the distinction, are called montes. It cannot depend upon their height, since those called collae are as lofty as those dignified with the more imposing name of montes; whence it seems probable that the difference originated in the ancient traditions respecting the Septimontium. A less important eminence, called Velia, which was not reckoned as a distinct hill, projected from the NE. side of the Velian hill towards the Esquiline, and separated the two valleys which in after times became the sites of the Forum Romanum and of the Colosseum. The Germaulis was another but still smaller offshoot, or spur, of the Palatine, on its western side.

On the opposite bank of the Tiber, Mons Vaticanus and Mons Janiculus rise, as before remarked, to a considerably greater height than the hills just described. The former of these hills gives rise to the Pincian, but at a considerable distance from the river, thus leaving a level space, part of which was called the Ager Vaticanus, whilst the portion nearest the river obtained the name of Prata Quincetis. To the S. of Mons Vaticanus, and close to the river, at the extreme western point of its first reach, the Mons Janiculus begins to rise, and almost straight to the S. till it sinks into the plain opposite to Mons Aventinus. The open space between this hill and the southernmost curve of the Tiber formed the Regio Transalinate. The sinuous course of the river from the Pincian to the Capitoline left a still more extensive plain between its left bank and the hills of Rome, the northern and more extensive portion of which formed the Campus Martius, whilst its southern part, towards the Capitoline, was called the Prata Flaminia.

From the preceding description it will be perceived that the Capitoline, Aventine, Caesian, and Palatine were completely isolated hills, separated from one another by narrow valleys. Those valleys which lay nearest the Tiber seems, in their original state, to have formed a marsh, or even a lake. Such was the Vallis Muricia, between the Palatine and Aventine, in later times the seat of the Circus Maximus; as well as the low ground between the Palatine and river, afterwards known as the Velabrum and Forum Boarium; and perhaps even part of the Forum Romanum itself. Thus, in the combat between the Romans and Sabines, on the spot afterwards occupied by the forum, the affrighted horse of Mettius Curtius, the Sabine leader, is described as carrying him into a marsh. (Liv. i. 12.) Nay, there are grounds for believing that the Tiber, in the neighbourhood of Rome, formed at a very remote period an arm of the sea, as pure marine sand is often found there. (Niebuhr, Lect. on Ethnogr. vol. ii. p. 39.)

In order to assist the reader in forming a clear idea of the nature of the Roman hills, we shall here insert a few measurements. They are taken from a paper by Sir George Schuburg in the "Philosophical Transactions," An. 1777 (vol. lvii. pt. 2. p. 594), and have been esteemed the most accurate. (Becker, Handbuch, vol. i. p. 83, note.) Other measurements by Calandrelli are also annexed. The latter are according to the Paris foot, which equals 12.295 inches English.

In ancient times, however, the hills must have appeared considerably higher than they do at present, as the valleys are now raised in many places from 15 to 30 feet above their former level, and in some parts much more. (Lumisien, Anst. of Rome, p. 187.) This remark is not particularly applicable to the forum, which is covered with rubbish to a great depth; a circumstance which detracts much from the apparent height of the Capitoline; whose sides, too, must formerly have been much more abrupt and precipitous than they now are. The much superior height of the Janiculum to that of any of the hills on the W. bank of the Tiber, will have been remarked. Hence it is enjoyed a noble prospect over the whole extent of the city and the Campagna beyond, to the mountains which bound the eastern horizon. The view has been celebrated by Martial (iv. 64.), and may be still enjoyed either from the terrace in front of S. Pietro in Montorio, or from the spot where the Fontana Paolina now pours its abundant waters: —

"Hinc septem domines videre montes"

Et totum leas seminare Romam,

Albanus quosque Tusculana ruin,

Et quondam jacent sub urbe frigus." —

CLIMATE.

The climate of Rome appears to have been much colder in ancient times than it is at pre-

3 A
sent. Dionysius (xii. 8) records a winter in which the snow lay more than 7 feet deep at Rome, when houses were destroyed and men and cattle perished. Another severe winter, if it be not the same, is mentioned by Livy (v. 13) as occurring B.C. 398, when the Tiber was frozen over and the roads rendered impassable. (Of. xl. 45, &c.) A very severe winter is also alluded to by St. Augustine (de Civ. Dei, iii. 17). That such instances were rare, however, appears from the minuteness with which they are described. Yet there are many passages in the classics which prove that a moderate degree of winter cold was not at all unusual, or rather that it was of ordinary occurrence. Thus Pliny (vii. 2) speaks of long snows as being beneficial to the corn; and allusions to winter will be found in Cicero (ad Qa. Fr. ii. 13), Horace (Od. i. 9, iii. 10), Martial (iv. 18), and in numerous other passages of ancient writers. At the present time the occurrence of even such a degree of cold as may be inferred from these passages is extremely rare. One or two modern instances of severe winters are indeed recorded; but, generally speaking, snow seldom falls, and never lies long upon the ground. This change of climate is accounted for by Dr. Arnold as follows: "Allowing that the peninsula form of Italy must at all times have had its effect in softening the climate, still the woods and marshes of Cisalpine Gaul, and the perpetual snows of the Alps, far more extensive than at present, owing to the uncultivated and uncleared state of Switzerland and Germany, could not but have been felt even in the neighbourhood of Rome. Besides, even in the Apennines, and in Etruria and in Latium, there is no doubt that a far greater space danced at least to fewer than twenty-five distinct legends respecting the foundation of Rome. To record all these, many of which are merely variations of the same story, would be beside the purpose of the present article. The student who desires a complete account of them will find them very clearly stated in Sir G. Cornwell Lewis's Inquiry into the Credibility of the early Roman History (vol. i. p. 394, &c.), and also, though not so fully, in Niebuhr's History of Rome (Eng. Transl. vol. i. p. 214, &c.), chiefly derived from the following ancient sources: Dionys. Halic. i. c. 72—74; Plut. Rom. 1, 2; Servius, ad Verg. Aen. i. 273; and Festus, s. v. Roma. The importance of the subject, however, and the frequent allusions to the classical writers, will permit us to pass it over in perfect silence; and we shall therefore mention, as comprehensively as possible, some of the principal traditions. All the theories on the subject may be reduced to three general heads, as follows:—I. That Rome was founded in the age preceding the Trojan War. II. That it was founded by Aeneas, or another person, a little after the fall of Troy. III. That Rome was founded by Numitor, king of Alba Longa, in the year 753 B.C., several centuries after the Trojan War. Many who held the first of these opinions ascribed the building of Rome to the Pelasgi, and thought that its name was derived from the force (Jebus) of its arms. (Plut. Rom. 1. Overberg regards it as having been founded by an indigenous Italian tribe, and called Valentia, a name of the same import, which, after the arrival of Evander and his followers from Thrace, was translated into Rome. (Niebuhr, Hist. i. p. 214.) A more prevalent tradition that of either of the preceding was, that the city was first founded by the Arcaic Evander, about sixty years before the Trojan War. The fact that Evander
settled on the Palatine hill seems also to have been sometimes accepted by those who referred the real foundation of Rome to a much later period. The tradition respecting this settlement is interesting to the toponographer, as the names of certain places at Rome were said to be derived from circumstances connected with it. The Palatine, or Palatine hill, itself was thought to have been named after the Ar- cadian town of Pallantium, the s and one t having been dropped in the course of time; though others derived the appellation in different ways, and especially from Pallas, the grandson of Evander by his daughter Dyua and Hercules (Paus. viii. 43; Dionys. l. 32.) So, too, the Porta Carmentalis of the Servian city is derived from the neighboring altar of Carmenta, or Carmenta, the mother of Evander. (Dionys. l. c.; Virg. Aen. viii. 338.) Nothing indeed can be a more striking proof of the antiquity of this tradition, as well as of the deep root which it must have taken among the Roman people, than the circumstance that to a late period divine honors continued to be paid to Carmenta, as well as to Evander himself. Another indication of a similar tendency was the belief which prevailed among the Romans, and was entertained even by such writers as Livy and Tacitus, that letters and the arts of civilization were first introduced among them by Evander. (Liv. i. 7; Tac. Ann. xi. 14; Plut. Q. R. 56.)

The greater part of those who held the second opinion regarded Aeneas, or one of his immediate descendants, as the founder of Rome. This theory was particularly current among Greek writers. Sometimes the Trojans alone were regarded as the founders; sometimes they are represented as uniting in the task with the Aborigines. Occasionally, however, the Trojans are substituted for the origin of Rome is ascribed to a son of Ulysses and Circe; may, in one case Aeneas is represented as coming into Italy in company with Ulysses. But though this view was more particularly Grecian, it was adopted by some Latin writers of high reputation. Sallust (Cat. 6) ascribes a Trojan origin to Rome; and Propertius (iv. 1), without expressly naming Aeneas as the founder, evidently refers its origin to him:

"Hoe quodcumque vides, horrea, quax maxima Romae est. Ante Phrygien Aeneas collis et herba frui."

though in the same passage he also refers to the occupation of the Palatine hill by Evander. One very prevalent form of this tradition, which appears to have been known to Aristotle (Dionys. i. 72.), represents either a matron or a female slave, named Romé, as burning the ships after the Trojans had landed. They were thus compelled to remain; and when the settlement became a flourishing city, they named it after the woman who had been the cause of its foundation.

The third form of tradition, which ascribed the origin of Rome to Romulus, was by far the most universally received among the Romans. It must be regarded as ultimately forming the national tradition; and there is every probability that it was of native growth, as many of its incidents serve to explain Roman rites and institutions, such as the worship of Vesta, the Lupercalia, Larentals, Lemuria, Arval Brothers, &c. (Lewis, vol. i. p. 409.) The legend was of high antiquity among the Romans, although inferior in this respect to some of the Greek accounts. It was recorded in its present form by Fabius Pictor, one of the earliest Roman annalists, and was adopted by other ancient antiquarians and historians (Dionys. i. 79.). Nay, from the testimony of Livy we may infer that it prevailed at a much earlier date, since he tells us (x. 23) that an image of the aie-wolf suckling the two royal infants was erected near the Capitol in commemoration of the curule aediles, n. a. 396. The story is too well known to be repeated here. We shall merely remark that although according to this tradition Aeneas still remains the mythical ancestor of the Romans, yet that the building of two cities and the lapse of many generations intervene between his arrival in Italy and the foundation of Rome by his descendant Romulus. Aeneas himself founds Lavinium, and his son Ascanius Alba Longa, after a lapse of thirty years. We are little concerned about the sovereigns who are supposed to have reigned in the latter city down to the time of Numitor, the grandfather of Romulus, ex-
cept in so far as they may serve to ascertain the era of Rome. The account which has the most pretensions to accuracy is that given by Dionysius (I. 65, 70, 71) and by Dionysius of Prusa (vii. viii. vol. Iv. p. 21, B). The sum of the reigns here given, allowing five years for that of Aeneas, who died in the seventh year after the taking of Troy, is 432 years—that is, down to the second year of Numitor, when Rome was founded by Romulus, in the first year of the 7th Olympiad. Now this agrees very closely with Varro’s era for the foundation of Rome, viz., 753 n. c. For Rome having been taken, according to the era of Eratosthenes, in 1118 n. c., the difference between 1118 and 753 leaves 361 years for the duration of the Alban kingdom.

Varro’s date for the foundation of Rome is that generally adopted. Other authorities place it rather later: Cato (751 B. C.), Polybius, in 750; Fabius Pictor, in 747.

This is not the place to enter into the question whether these dates of the Alban kings were the invention of a later age, in order to satisfy the requirements of chronology. It will suffice to remark that the next most prevalent opinion among those Romans who adopted the tradition assigned only the three centuries to the Alban kings before the foundation of Rome. This was the opinion of Virgil (Aen. i. 279),—

“Hic jam tercentum totes regnabitur annos,”

—of Justin, of Trojas Pompeius (c. 1911), and of Livy (i. 29), who assigns a period of 400 years for the existence of Alba, and places its destruction a century after the foundation of Rome. At all events the preponderance of testimony tends very strongly to show that Rome was not founded till several centuries after the Trojan War. Timeaus seems to have been the first Greek writer who adopted the account of the foundation of Rome by Romulus. (Niebuhr, Hist. vol. i. p. 218.)

II. THE CITY OF ROMULUS.

The Roman historians almost unanimously relate that Rome originally consisted of the city founded by Romulus on the Palatine. (Liv. i. 7; Vell. i. 8; Tac. Ann. xii. 34; Dionys. i. 88; Gell. xiii. 14; Ov. Tr. iii. 1. 29, &c.) The ancient settlement of Evander on the same hill, as well as a city on the Capitoline called Saturnia (Varr. L. L. x. § 42, Mull.; Festus, p. 322, Mill.), and another on Mons Janiculus called Aenea or Antipolis (Dionys. i. 73; Plin. iii. 9), must be supposed to have disappeared at the time of its foundation, if indeed they had ever existed. It seems probable enough, as Dionysius says, that villages were previously scattered about on the seven hills; but the existence of a place called Via Nova of the Tiber, and of a Quirinal on the Quirinal, rests solely on the conjecture of Niebuhr (Hist. vol. i. 223, seqq., 289, seqq., Eng. Trans.).

Pompeii,—Tacitus has given in the following passage the fullest and most authentic account of the site of the Roman city: “sed primum Romulii condidit, et specus poporum Romuli cuisit, nescire haud absurdum reor. Igitur a foro Boario, ubi aereum tabulam simulacrum adipiscimus, quia id genus animalium aratrum substrit, salus designandij opidi concepsit, ut magnam Herculis aram amplioreret. Iacit certa statua interfecti lapides, per ima montis Palatini ad aram Consoli, mox ad Curias Vetere, tum ad ascenam Laroni; forumque Romani et Capitoii non a curbi credidere.” According to this, for the Forum Boarium was by then the statue of a bull. The Forum Boarium was by then a little bull. Argentarius was by then Giorgio in Velate or Maxima.

“Constituere hic ubi parare

Hence it proceeded Valis Marea (Ara Coel. Aec. de Marea, &c. p. towards the low Argentarius now Hornell, p. 468, is nothing at all. This inference: and why do we not from whom we learn the first mention of mention any name? (Hist. of Tacitus before it occurs. Septimius of Palatine and Ca Septr.) The southernmost Septimius of Palatine (Hist. vol. i. 288), the Palatine and Curiae Vetere, been the subject of 735, and Bunsen the Curiae Vetere, Equiline, and the place the Curiae Vetere Equiline, and the place (Hist. vol. ii. 143).

founded on no ancient writers Blondus Bat. Suet. Tacitus, in his de definition of a strade as from the

SW. side of the hill, mentioning any line of the pons, it must have emerald, as Bunsen destroyed that square see further on, praef. appellation of “Retriuremonium” to the right of the hill as a seat of the town (inveo) to have authority ( egregiinpublice) Dionys. i. 88; at the Romulo institute terminatur, Gen. be shown from a so to the Palatine and
ing, a line drawn from the Aedes Larum to the forum would include the temple of Vesta (S. Maria Liberatrice), which, as we learn from Dionysius (II. 65), lay outside the walls of Romulus. Moreover, according to the amended punctuation, it might be doubtful whether Tacitus meant that the forum was included in the Romulean city, or not; and it was apparently to obviate this objection that Becker proposed to insert hoc before et (hoc et Capitolium). But these are liberties which sober criticism can hardly allow with the text of such a writer. Tacitus was not speaking like a common topographer or geographer, who is obliged to identify with painful accuracy every step as he proceeds. It is more consistent with his sententious style that, having carried the line thus far, he left his readers to complete it from the rough indication — which at the same time conveyed an important historical fact — that the forum and Capitol, which skirted at some distance the northern angle of the hill, were added by Titus, and lay therefore outside the walls of Romulus. His readers could not err. It was well known that the original Rome was square; and, having indicated the middle point in each of the sides, he might have been charged with dullness had he written, "sum ad aedem capitolium, inde ad forum"

**PLAN OF THE ROMULEAN CITY.**

Boarium." But, however, has assumed from the omission that the line of wall never proceeded beyond the sarcellum Larum, and that, indeed, it was not needed; the remaining space being sufficiently defended by a marsh or lake which surrounded it. (Beckr. vol. i. p. 138.) But, as the sarcellum Larum lay on high ground, on the top of the Velian ridge, this could not have been a reason for not continuing to the wall. If the lake were a marsh lower down, we cannot but suppose, as Becker observes (de Hist. p. 14), that the pomerium must have been carried on to its termination. Indeed the Porta Romanula, one of the gates of the Romanesque city, lay, as we shall presently see, on the NW. side, a little to the N. of the spot whence Tacitus commences his description; and if there was a gate there, & fortiori there was a wall.

The line described by Tacitus is that of the furrow, not of the actual wall; but, in the case at least of a newly founded city, the wall must have very closely followed this line. The space between them — the wall being inside — was the pomerium, literally, "behind the wall." (post muerum = murus) At the places where it could not be cultivated. The line of the furrow, or boundary of the pomerium, was marked by stones or cippi. The name pomerium was also extended to another open space within the walls which was kept free from buildings. The matter is very clearly explained by Livy in the following passage:— "Pomerium, verbi et yvrum, est utrum sequatur fraudes uterque intersit of the hill or of the city. See autem magis circa murum locus, quem in condeandis urbis olim Etrusci, qua musrus discarmin, tertis circa terminis inaugurate consecrabat: utque interiore parte seditionem moeniao contunninare, quum nunc vulgo etiam conjunguntur; et extrinsecus puri aliquid ab humano cultu patuerit soil. Hoi spatio, quod neque habitatur neque ararit far erat, non magis quod post murum easset, quam quod murus post id, pomerium Romanum appellarunt: et in urbis incremento semper, quantum moenia processura erant, tantum termini hi consecrati prohibebantur." (L. 44.) Every city founded, like Rome, after the Etruscan manner, had a pomerium. The sites observed in drawing the boundaries were the "sinuous words" (Paul. Aeg.), "shape," as Jesus (p. 256, Mull.), were as follows: the founder, dressed in Gallician fashion (cinctu Gabino), seated to a plough, on an auspicious day, a bull and a cow, the former on the off side, the latter on the near side, and proceeding always to the left, drew the furrow marking the boundary of the pomerium. There was a mystical meaning in the ceremony. The bull on the outside denoted that the males were to be dreadful to external enemies, whilst the cow inside typified the women who were to replenish the city with inhabitants. (Joann. Lydus, de Mens. 1v. 50.) The furrow represented the ditch; the clods thrown up, the wall; and persons followed the plough to throw inside those clods which had fallen outwards. At the places where the ground was the highest, a "pomerium" was also formed, by a line, or a level, or a slight mound. (Varr. L. L. v. § 143, Mull.; Pint. Q. R. 27, Rom. 11.) The whole process has been summed up in the following vigorous words of Oates: — "Qui urben novam condet, tauro et vacco arat, uti araverit, murum faciat; ubi portam vult esse, ararum sustolit et portas, ut pomerium sit, aequius, ejusque limites et murum." (Joann. Lydus.)

The religious use of the pomerium was to define the boundary of the anaspica urbana, or city anaspica. (Varr. L. c.) So Gallina, from the books of the Roman augurs: "Pomerium est locus intra agrum effusum per tobita urbis circuitum pone monea regniieuum certa determinatus, qui facti sitem urbani anaspicii." (xii. 14.) From this it appears that the pomerium itself stood within another district called the "ager effusus." This was also merely a religious, or augural, division of territory, and was of five kinds, viz., the "ager Romanus," "ager effusus," "ager iuxta aquas," "ager regnalis," and "ager territorialis," or the Roman, Gabitan, foreign, hostile, and doubtful territories. (Varr. v. § 33, Mull.) These agri or territories were called "effaiti," because the augurs declared "effaitum" after this manner the bounds of the celestial auguries taken beyond the pomerium. (Id. vi. § 33, Mull.) Hence in this sense the Ager Romanus is merely a religious or augural division, and must not be confounded with the Ager Romanus in a political sense, or the territory actually belonging to the Roman people. It was the territory declared by the augurs as that in which all auguries might be taken respecting foreign and military affairs: and hence the reason why we find so many accounts of generals returning to Rome the auspices of their army. (Livy. 1v. 23, 32, 33.)

It is impossible to determine exactly how much space was left for the pomerium between the furrow and the wall. In the case of the Romanesque city, however, it was probably not very extensive, as the nature of the ground, especially on the site of Mons Capitol, would not allow of any great development of the ground. The boundaries already laid down on the N. side, as the sarcellum Larum and Asdes Vestae, show that the line ran very close under the Palatine. This question depends upon another, which there is no evidence to determine satisfactorily, namely, whether the wall crowned the summit of the hill or ran along its base. The former arrangement seems the more probable, both because it was the most natural mode of fortification, and because we should otherwise in some parts hardly find room enough for the pomerium. Besides, one at least of the gates of the Romanesque city, as we shall see further on, was approached by steps, and must therefore have stood upon a height. There seems to be no good authority for Niebuhr's assertion (Hib.) that the Romanesque city of Rome was defended merely by the sides of the hill being escarped, and that the line of the pomerium was a later enlargement to enclose a suburb which had sprung up round about its foot. It is surprising how Niebuhr, who had seen the ground, could imagine that there was room for such a suburb with a pomerium. Besides, we are expressly told by Tacitus (L. c.) that the line of the pomerium which he describes was the beginning of building the city (initial condendii). Indeed Niebuhr seems to have had some extraordinary ideas respecting the nature of the ground about the Palatine, when he describes the space between that hill and the Capitol, now occupied by the road from the Piazza di Spagna, as a "vermiuient plane!" (Hist. i. 390, cf. p. 391.) An obscure tradition is mentioned indeed by Greek writers, according to which there was a Rome Quadrata distinct from and older than the city of Rome. ("πόλις τό μεσανά τοιούτος Ρώμης," φιτον τον Φασολίκον περὶ τῆς Φανελίκου μαρκάτος ούκ ἐγένετο, διὰ τοῦτο δὲ τὸ πορεύεται Ρώμης." "Ρώμης ὧδ᾽ ἡ Ῥώμης παλαιότερον δήμον."") But, as Becker observes (Jamblic. De Car. F. F. X. 3, 5, p. 10, 5., cf. Tzetzes, ed Lycoph. v. 1329).
ROMA. 727

p. 106, we should infer from these words, that the Rome alluded to was not on the Palatine, but on some other hill Plutarch, indeed, also alludes to the same tradition (Rom. 9), and describes Romulus as building this Rome Quadrata and afterwards enlarging it for the same purpose in Latin authors. Thus Solinus: *Nam ut narrat Varro, auctor diligentissimus, Romam condidit Romulus, Marte gentius et Rho Silvia, vel ut nonnulli, Marte et Thalia, dictaque est primum Romam quadrata, quod ad aquilinium fortis posita.* Ex gignita a silva, quae est in area Apollinis, et ad sanctificatam fortis, ubi tugurium futer Faustuli (i. 2). Now we must not take the whole of this account to be Varro's, as Becker does. (De Mari, loc. p. 18, seq., Handb. p. 106.) All that belongs to Varro seems to be taken from a passage still extant regarding the parentage of Romulus (L. L. v. § 144, Mill.), and the words after *vel ut nonnulli* do belong to Solinus himself. Varro's story is now in use and often asserts, a witness to Rome having been called *quadrata.*

The following passage in Festus, however, manifestly alludes to another sense of Roma Quadrata, namely, as a certain hallowed place where every city built with Etruscan rites possessed, and in which were deposited such things as were consecrated to Jupiter. The place is described in a passage from *Ovid* and which are described by Ovid (Fasti, iv. 821; cf. Plut. Rom. 11): *Quadrata Romae in Palatino ante templo Apollinis dictur, ubi reposita sunt quae solent bona omnium gratia in urbe solenda adhiberi, quia sacru manitu est initio in speciem quadratam.* Eius loci Emnici meminit, cum ait: 'et quis est earum Romae regnare quadrata.' (p. 255, Mill.) The place here described was, in fact, the emeas of the Romulian city. The words of Solinus, though we are ignorant of the exact position of the places which he mentions, seem to denote too large an area to be reconciled with the description of Festus. In confirmation of the latter, however, Becker (Handb. p. 107) adds a fragment of the Capitoline plan (Bellum, tab. xvi.,) where the important description *Rea Apollo (area Apollinis), and, on the space beside it, is a plan of a square elevation with steps at two of its sides. This, he observes, exactly answers to the description of Festus, being a "locus sacro munitus in speciem quadratam," and the area Apollinis was naturally before his temple. That the whole of the Romulian city, however, was also called quadrata, is evident, not only from a passage of Dionysius before cited, where he speaks of the temple of Vestra being outside of the Rome called Quadrata (δι' της τετραγώνου καλυμμένης Ρώμης, ἧς εἰκών εὐελκά, ἐκτὸς ἡστίου, ii. 65), but also from the mutilated fragment of Emnici, quoted by Festus in the passage just cited. It is without sense as it stands, and Miller's emendation appears certain: —

*Et quod se sperat Romanis regnare quadratae,*

where the meaning is inappropriate to a mere emeas, and must be referred to the entire city.

**Gate of the Palatine city.**—It was required that in a town built, like Rome, with Etruscan rites, there should be at least three gates and three temples, namely, to Jupiter, Juno, and Minerva (Serv. ad Aes. l. 429); and we learn from Pliny (iii. 9) that the city of Romulus had, in fact, three if not four gates. In the time of Varro, three gates existed at Rome besides those of the Servian walls, and two of these can be referred with certainty to the Palatine city. *Prateroa intrin saepe muro portas dici. In palatio Mucionia, a mugitum, quod ea pecus in buca circum antiquum oppidum excubat.* Alteram Romaniam ab Roma dictam, quas habet gradus in Nova Vis ad Volsciac ascendit. *Tertia est Jannia dicta ab Iano; et ibi posternum Jani signum; et juss institutum a Pomplio, ut scribit in Annalibus Piso, ut sit aperta semper, nisi quoniam bellum sit nusquam.* (L. L. v. §§ 164, 165, Mill.) The gate here called Mucio by Varro is the same as that called Mucicio by other writers, by an ordinary interchange of c and g, as in Caesus for Caesius, Germania for Germania. The gate itself, as cited by Nonius (xii. 51, p. 531, m.) is made to call it Mucio. In Paulinus Diaconus (p. 144, Mill.) we find the adjective form Mucionia, erroneously formed, however, from Mucia, the name of a man; and lastly, the form Mucinio in Solinus (l. 24).

The most important passage for determining the situation of this gate is Livy's description (i. 12) of the battle between the Sabines and Romans. The former occupy the Capitoline hill, the latter are arrayed in the valley beneath. The Romans mount to the attack, but are repulsed and driven back towards the "old gate" ("ad veterem portam") of the Palatium. Romulus, who is stationed on the high ground near it (the summit of the Velia), vows to hold this spot so long as there is a senate on this spot. And when he swears the name of "Stator," if he arrest the flight of the Romans. At this time the Sabines had driven back the Romans to the extremity of what was afterwards the forum, and their leader Metius Curtius had even penetrated nearly to the gate of the Palatium. The Romans, however, rally, the Sabines are repulsed, and the combat is renewed in the valley between the two hills. Dionysius confirms the site of the gate by describing it as leading to the Palatium from the Summa Sacra Via; which street, as will be seen when we come to describe the topography of the later city, crossed the ridge of the Velia at this spot (Παλατίναις μεν ὦθεοι διήκοναι ἐν ἐν συνέλαιον Μουσώοι, ex, ἐφικτοί, τοῦτος ἡστίαν παραβαίνεις, ii. 50). The spot is further identified by a graphic passage in Ovid, where the citizen who serves as Cicerone to this book conducts it from the fora of the Caesars along the Sacra Via, and, having crossed the eastern extremity of the Forum Romanum, arrives at the temple of Vesta; then proceeding onwards up the Sacra Via, first points out the former residence of Numa, and then, turning to the right, indicates the gate of the palace:—

"Paruit et duces, Haece sunt fora Caesarei, inquit; Haece est a sacris quaie via nomem habet. Hic locut est Vesta, qui Pallada servat et ignum; Hic fuit antiqui regis parva Numae.'

*Inde petebis eam, Porta est, ait, ista Pallat; Hic Stator; hoc primum condita Roma loco est.* (Trist. iii. 1. 27.)

The site of the temple of Jupiter Stator here given is confirmed by other writers. Thus it is described by Livy (i. 41) as near the palace of Tarquinus Priscus, from the windows of which, overlooking the Nova Via, Tanaquil addressed the people, as will be shown in its proper place, the Nova Via ran for some distance parallel with the Sacra Via, and between it and the Palatine, and, at its highest point near this gate, was called "Summa," like the Sacra Via. Thus Solinus (l. 24): "Tarquinus Priscus ad Magnium Portam supra Summanum I. 3. A 4

Digitized by Google.
Novum Viam (habitavit)." The site of the temple of Jupiter Stator near the Summa Sacra Via is sufficiently certain without adopting the proof adduced by Becker from the equestrian statue of Caelia, the history of which he completely misunderstands. The passage cannot from Pliny (xiv. 13) which he quotes (note 156) relates to another and apparently a rival statue of Valeria, the daughter of Publicola, who disputed with Caelia the honour of having awed the Tiber, and escaped from the custody of Forwena. Indeed, the two rival legends seem to have created some confusion among the ancients themselves. There was a dispute in the time of Plutarch whether the existing statue was that of Caelia or Valeria. (Popp. 19.) Becker confounds these two statues, and asserts (note 155) that Pliny, as well as Dionysius, speaks of the statue of Caelia as no longer existing in his time. But Pliny, on the contrary, in the very chapter quoted, mentions it as still in being: "Caeliae statua in equestria." It was the statue of Valeria that had disappeared, if indeed it had ever existed except in the account of Aminius Feticia. Pliny, therefore, must share the castigation bestowed by Becker on Plutarch and Servius for their careless topography: whose assertion as to the existence of the statue in their time, Becker, who knew nothing of the latter, could not have had with his own eyes (ad Aem. vil. 646). The only ground which Becker has for so peremptorily contradicting these three respectable authorities is a passage in Dionysius (v. 35); who, however, only says that when he was at Rome the statue no longer stood in its place (τὰ ταύτα ἡμῖν μὲν ἐκείνοις ἐθέλησαν ἐδρομεῖν), and that on inquiry he was told that it had been destroyed (ὑπεραρχέσθαι) in a fire that had raged among the surrounding houses. But Dionysius may have been misinformed; or perhaps ήπεραρχέσθαι is to be taken in its literal sense, and the statue was only removed for a while out of sight. We may assume, therefore, that it had been restored to its original position in the period which elapsed between Dionysius and Pliny, and that it continued to adorn the Summa Sacra Via for some centuries after the time of the former writer.

The preceding passages abundantly establish the site of the Porta Mugionis at that spot of the Palatine which faces the Summa Sacra Via, or present arch of Titus; nor does it seem necessary, by way of further proof, to resort to the far-fetched argument adduced by Becker from the nature of the ground (Handb. p. 113), namely, that this is the only spot on the NE. face of the hill which offers a natural ascent, by the road (Via Poliicerii) leading up to the Convent of S. Bonaventura. That road, indeed, has all the appearance of being an artificial rather than a natural ascent, and may have been made centuries after the fall of Romulus and Pliny, and, too, for Becker’s round assertion on this subject (Handb. p. 109), that we must ad initio embrace as an incontrovertible principle that gates are to be sought only where the hill offers natural ascents, we find that the only other known gate, the Porta Romana, was, on his own showing, accessible only by means of steps. For the situation of this gate Varro is again our principal authority. We have seen in the passage before quoted from that author that it opened into the Nova Via, near the Fessalium Volupiae, by means of steps. Varro again alludes to it in the following passage: "Hoc sacrificialium (in Acca Laurentia) fit in Velabro, qua in Novum Viam exitur, ut alium quidam, ad sephulcrum Acceae, ut quod ibi proprie factum Dies Manibus Servilibus ascordes; qui tuerescit loco urbem antiquam fuit ne longe a Porta Romana, de qua in priores libri dies." (L.L. vi. § 24, Mill.). The site of the Faestalium Volupiae cannot be determined; but the Velabrum is one of the most certain spots in Roman topography, and is still indicated by the church which bears its name, S. Giorgio in Velabro. We learn from both these passages of Varro—for Scaliger’s emendation of Nova Via for Novalia in the former is incontestable—the exact site of the Porta Romana, and for as the sacrifice alluded to was performed in the Velabrum near the spot where the Nova Via entered it, and as the P. Romana was not far from this place, it follows that it must have been at the lower end of the street or in the insula Nova Via. Varro’s account is confirmed by Festus (p. 263, Mill.), who, however, calls the gate Romana instead of Romuliana: "Sed porta Romana instituta est Romulo infimo clivo Victoriæ, qui locus gradibus in quadratam formam est; appellata autem Romana a Sabinsia pseudeps, quod ea proximius adsest erat Romam." Here the same steps are alluded to that are mentioned by Varro. The Clivus Victorius was that part of the NW. declivity of the Palatine which overhung the Nova Via. It was a very steep ascent to a temple set on the top of the hill ("in sedem Victoris, quae est in Palatino, pertulerae desin.", Liv. xxix. 14), or more probably—as this temple was not dedicated by L. Plautinius till b. c. 395—from an ancient grove, sacred to Victory, on this side of the Palatine, near the Lupercal (Dionys. i. 33), the tradition of which, though the grove itself had long disappeared, probably led to the temple being founded there. The Romulan city must undoubtedly have had at least a third gate, both from the testimony of Pliny and because it cannot be supposed that its remaining two sides were without an exit; but there is no authority to decide where it lay. Becker thinks that it was seated at the southernmost point of the hill; but this, though probably true, is nothing more than a conjecture. The Porta Janusia, the third gate mentioned by Varro, was most probably as old as the time of Romulus, though it certainly never belonged to the Palatine city. Its situation and true nature will be discussed presently. We find, however, a gate called Ferentina mentioned by Plutarch (Rosc. 20), who relates that Romulus, after the murder of Tatins, which was followed by visible signs of the divine anger, purified Rome and Laurentum by rites which still continued to be observed at that gate. We also find an account in Festus (p. 213) of a Porta Piscalaria, which was so called "propert aliquas pisculas quae ibidem Iebant;" and some have assumed (v. Müller, ad Fest. i. c) that these two gates were identical, which, however, is nothing more than a conjecture. Becker (Handb. p. 177) rejects, however, with something like indignation the idea that such a gate could have belonged to the Romulan city, and would therefore either place it in the Locus Ferentiae, or the text of Plutarch, his name excepted. Altogether, however, it does not seem quite so improbable that it may have been the third and missing gate of Romulus, since its name indicates its site near the S. extremity of the Palatine, just where we are 'in want of one.
ROMA.

III. PROGRESS OF THE CITY TILL THE TIME
OF SERVUS TULLIUS.

We can only pretend to give a probable account of the progress of the city under the first five kings. The statements on the subject in ancient authors are divergent, though the contradiction is often rather apparent than real. In the course of his reign Romulus added to his kingdom the Capitoline hill, then called Saturnia, the Caesian, then called Querquetulana, and the Aventine. But we must distinguish the nature of these additions. Dionysius (I. 37) represents the Capitoline and Aventine as enclosed by Romulus with a strong fortification consisting of a ditch and palisades, chiefly as a protection for herdsmen and their flocks, and not as surrounded with a wall, like the Palatine. Yet it is evident from the account of the attack by the Sabines on the Capitoline (Liv. i. 11) that it must have been regularly fortified, and have had a gate. Romulus had already marked it out as the arx or citadel of his future city; and when he had defeated the Caetulians and slain their king, he carried thither and dedicated the temple of an oak-tree held sacred by the shepherds, but which now became the site of the temple of Jupiter Feretrius (ib. c. 10). When Livy tells us that this was the first temple consecrated at Rome, he probably means with the exception of those which were usually erected at the foundation of every city. That the Capitoline was a much more important hill in the time of Romulus than the Aventine or the Querquetulana, is, in the fact of its opening upon it the asylum for slaves and fugitives, in order to increase the population of his city. This asylum was situated somewhere in the hollow between the two eminences of the Capitoline, and the site retained till a late period the name of "Inter duas Incos" (ib. c. 10; Dionys. ii. 15; Strab. v. 395; Pint. Rom. 9; Or. Past. ii. 431, &c.).

The Capitoline hill, or Mons Saturninus, appears then to have been a real addition to the Roman city; but the Aventine seems to have remained down to the time of Ancus Martius a mere rudely fortified enclosure for the protection of the shepherds. Various etymologies, all perhaps equally unsatisfactory, have been invented for the name of Aventine; but the only one generally received is that which so-called, who was buried on the hill (Liv. i. 3; Varr. L. L. v. § 43, Mill.; Paul. Dia. p. 19, Mill.), another from a descendant of Hercules, mentioned by Virgil (Aen. vii. 656). Servius in his commentary on this passage makes Aventinus a king of the Abrigines, but adds from Varro that the Aventine was assigned by Romulus to the Sabines, who named it after the Aevus, one of their rivers. This account is not found in the remains which we possess of Varro, who, however (l. c.), adds a few more etymologies to those already given. One of them, taken from Naevius, derives the name of the hill from the birds (aves) that resorted thither from the Tiber, to which Virgil also seems to allude (Aen. viii. 335). Varro himself thinks that it was so called "ab adventu," because, being newly separated from the other hills by a marsh or lake, it was necessary to go to it in boats; whilst others derived the name "ab adventu hominum," because, having upon it a temple of Diana common to all the Latin people, it was a place of great resort. But these various etymologies only prove that nothing certain was known.

The preponderance of authority tends to show that the Caesian hill was also colonised in the time of Romulus. Caesius Vibenna, or Caesius Vibenna, an Etruscan general who came to the assistance of Romulus against Tatinus and the Sabines, had this hill assigned to him and settled upon it with his army; whence it derived its name of "Caesia," it having been previously called Querquetulana from its woods of oak. (Varr. L. L. v. § 46, Mill.; Dionys. ii. 36; Paul. Dia. p. 44, Mill.) The traditions respecting the incorporation of this hill are, however, very various. Some authors relate that it was added by Tullus Hostilius (Liv. i. 30: Eutrop. i. 4; Aur. Vict. Vitr. iii. 4), others by Ancus Martius (Cic. Resp. ii. 18; Strab. v. p. 354); whilst some, again, place the arrival of Caesius as low down as the reign of Tarquinius Priscus. (Tac. Ann. iv. 65; Festus, p. 356, Mill.) The last account probably arose from some confusion between the arrival of the Tuscan under Romulus, and a subsequent one under the Tuscan king Tarquinius. But the sacred books relating to the Argive chapel established by Numas mention the hill under the name of Caesius (Varr. ii. § 47), and it is therefore seems probable that the arrival of Vibenna must be placed under his reign.

This Tuscan settlement appears, however, not to have been permanent. After the death of their leader a portion of his followers incurred the suspicion of the Romans, and were removed from the hill to a less defensible position on the plain, apparently between the Palatine and Capitoline, where they founded the Vicus Tuscius; whilst the remainder were transferred to the adjoining hill of the Caesius (Varr. ii. § 46). Whence also Propertius:

"Et tu, Roma, mea tribunici praemia Tuscis
Unde bovinus vicus nominis Tusci habet;
Tempore quod sociis venit Lycomediis armis,
Atque Sabini fortis contudit arma Tai."—

(iv. 2. 49.)

Here the Tuscan general is named Lycomedias, which seems to be derived from Lucumo, the name given to him by Dionysius (ii. 42, 43), and which was probably only an appellative for an Etruscan prince. The hill having been vacated by this removal of the Tuscan, was again colonised under a subsequent king, which in some degree reconciles the conflicting accounts; but we must be reserved about it at present, that in the reign of Tiberius an attempt was made to change its name again, and to call it Mons Augustus, either because Tiberius had laid out a great deal of money there in repairing the damage occasioned by a fire, or from a decree of the senate, which appointed that name to be used because a statue of Tiberius had been saved from the flames. (Tac. Ann. iv. 64; Suet. Tit. 48.) But this name never came into common use.

Legend of Tarpeia.—Porta Jamaica and Temple of Janus.—The story of Tarpeia involves two or three points of topographical interest. It shows that the Capitoline hill was regularly fortified, and had a gate. The deed of Tarpeia, whether treacherous or patriotic, for there are two versions of its story, one assigning a change in the name of the hill. It had previously been called Mons Saturninus, from Saturn, to whom it was sacred (Fest. p. 323); and there was a tradition that some Eleusinians, who had obtained their dismissal from the army of Hercules on his return from his western expedition, had been attracted by the prospect of the spoil, and had settled upon it. That of Kepro, a mountain of their own country. (Dionys. i. 34.) After the foundation of the Capitol...
Novam Viam (habitavit)." The site of the temple of Jupiter Stator near the Summa Sacra Via is sufficiently certain without adopting the proof adduced by Becker from the equestrian statue of Cloelia, the history of which he completely misunderstands. The passage from Pliny (xxxiv. 13) which he quotes (note 156) relates to another and apparently a rival statue of Valeria, the daughter of Publius, who disputed with Cloelia the honour of having swum the Tiber, and escaped from the custody of Porsona. Indeed, the two rival legends seem to have created some confusion among the ancients themselves; and it was a disputed point in the time of Plutarch whether the existing statue of Cloelia or Valeria. (Popl. 19.) confounds these two statues, and asserts (note 646) that Pliny, as well as Dionysius, speaks of the statue of Cloelia as no longer existing.

But Pliny, on the contrary, in the account of the famous statue of equestria. It was Valeria that had disappeared, and never existed except in the mind of Fcaelia. Pliny, therefore, in his account of the migration bestowed by Becker, Servius for their careless assertion as to the existing time he will not believe that he had seen it with his own eyes (en 646). The only group which can be seen in order perfectly contrive inaccessible to a passer-by, only says that a statue was no longer: else the scene is distinct but united to the Palatine, the place where he was told that a noble dwelling on the spot burned in a fire that the monument of Moneta afterwards stood on it. (Raca 21.) When Tacitus says, or perhaps he inferred, that Tacitus added the scene, we are perhaps therefore to refer the belief made upon it and made it habitually by the present people. Tacitus says, that Ovid's account of the events of the Roman people has been put in a wrong place. The gate called Janus, which was built by Varro in the passage cited from him must here be understood, owing to the Roman gates, seems undeniably to have been the passage of a sort of arch, which was a sort of arch, or aqueduct, and served as a market-place. The gate called Borsa (Borsa, vol. i. p. 145), of aqueducts (Hist. i. 222) that it was built by the two cities as a barrier of their common liberties; that it was open in time of war in order that succour might pass from one to the other; that during peace, either to prevent the quarrels which might arise from anarchy, or as a token that the cities, though united, were distinct. Becker, on the other hand, denies that it ever was a gate at all, maintain- that it only got that name because it was built in the vicinity of the temple which is generally for being called "Porta Borsa." (pp. 118, 119, and note 171.) But there seems to be ample evidence that it was originally a gate. Varro, in his passage cited, evidently considered it as such; and it is also mentioned by Macrobius as a real gate, through which the soldiers which he assumes to it will have been allowed even by those who gave the greatest solemnity to the celebrations at the beginning of the new year. After writing this article not published in 1844 (vol. i. p. 26), he adds the following sentence: "Surely the words in which it is celebrated by Macrobius, who was present, are conclusive evidence." (Sat. i. 0.)
ROMA. 731

The common thoroughfare of the Romans? Besides, we have the express testimony of Livy, that the Senate Consultum, sanctioning the departure of the army, was made in the usual place for the senator — the Curia Hostilia. "Consen- sente, comitante Fabii, conciliis, et senatus consultum expec- tem reddit" (ii. 48). Livy is the one point than Festus; or cannot be overturned, not only by itself, but by the weight of our most learned. It is inferable from his "While the Porta Nucum was the sacellum of Numa. There are, then, no grounds of Festus. It was custom, to go out at the Carmentalia through the right arch of the Forum. On the right side, until the Porta Carmentalis was the Porta Nucum ("pernum pervenimus," lb. c. 49). One gate had been assured, how could a procession like that of the virgins from the cave of Apollo to that of Juno Regina, described by Livy (xxvii. 37), have passed through it? Nor can it be told whether the relative cases refer to the Porta Carmentalis, as sense, or to secessi, as grammar, requires. Further, it would be contrary to the usual custom, as Becker correctly remarks (Handbuch, p. 139, note), for the senate to assemble outside of the gates to deliberate on a domestic matter of this nature. Then, with reference to Ovid’s description, he could not have mentioned the sacellum of Janus as adjoining two fora, had it stood where Mommsen places it, where it would have been separated from the Forum Romanum by the whole length of the Vicus Jugarius. Besides, it is plain from the passage of the Fasti before quoted that the original temple stood at the foot of a clivus, or descent from the Capitoline. Yet Mommsen places it at the very top of the hill over the Carmentalis gate ("in ipso monte," p. 310, vide his plan at the end of the volume), where the hill is most, and where there could not possibly have been any clivus, and the Porta Januallis at the bottom. We should remark, too, that the reading, "ardus in valles et fora clivus erat," is not a mere conjecture of Becker, as Mommsen seems to think (p. 310), but the common reading; and that to substitute "per fora," instead would make evident nonsense. Nor in that case do we see how the temple could have been "apud Forum Olitorium," as Tacitus says, even if opus only means near, not at; and still less how it could have adjoined the theatre of Marcellus ("juxta theatrum Marcelli"), as indicated by Servius. What has been said will also be sufficient to refute the last named commentator in stating this to be the original temple. He has evidently confused the two.

We can therefore only agree in part with the somewhat severe censure which Mommsen has pronounced on Becker on this occasion. "At quod omnium in se de se a Janus sine simulacro (p. 259), quaestum, quod Servium gravissimius error in- causavit (p. 139, n. 254, seq.), id vix concesso homini philologo" (p. 307). It appears, we trust, pretty plainly, that Festus and Servius must have been in error; but we cannot admit a temple without an image. The explanation we have already given, that Ovid is alluding to a Janus, not to a proper temple, may obviate the difficulty. But we
OMA.

its appellation, as we shall have occasion to relate further on, was again altered to that which it ever afterwards continued to bear; yet one part of the southern portion of the hill still remained the name of Rupes Tarpeia, from the vault having been burried on it. (Varr. L.L. v. § 41, Mill.) Dorotheus (ii. 40) indeed mentions the account of Piso, who ascribed the death of Tarpeia to a patriotic attempt to deceive the Sabines, in preference to that of Fabius, which brands her with disloyalty. The latter, however, seems to have obtained most currency among the Romans.; and Propertius even derives the name of the hill from her father, Tarpeius, who commanded the Roman garrison.—"Ad uno Tarpeo moes est cum omnes apertriciis" (v. 4. 92),—whilst he brands the tomb of the vault with infamy. ("Tarpeiae turpe sepulcrum," v. 4. 1). The obscure legend of the Porta Pandana, which existed somewhere on the Capitol in the time of Varro (L.L. v. § 42), is also connected with the story of Tarpeia; and Tatius is said to have stipulated, in the treaty which he made with Romulus, that this gate should always be left open. (Fast. p. 385, and Paul. Dial. p. 520, Mill.) According to an incredible account in Solinus (i. 13), it was a gate of the old Saturnian city, and was originally called Porta Saturnia; nor is the version of Polybius more satisfactory (Strip. viii. 35.), who refers the story of the Porta Pandana to the treaty with the Gauls, by which the Romans engaged always to leave one gate open, but, in order to evade the consequences, built it in an inaccessible place.

After peace had been concluded between Romulus and Tatius, they possessed two distinct but united cities,—the former reigning on the Palatine, the latter on the Capitol, and dwelling on the spot where the tombs of Juno Moneta afterwards stood (Plut. Rom. 2; Sol. l. 21.) When Tacitus says, in the passage before cited, that Tatius added the Capitoline to the city, we are perhaps therefore to understand that he built upon it and made it habitable, whilst previously it had been only a sort of military outpost. The valley between the two hills formed a kind of natural ground which was consecrated as a common property. The gate called Janusia, mentioned by Varro in the passage cited from him when treating of the Roman gates, seems undoubtedly to have belonged to the Sabine town. Niebuhr, who is followed by Bunsen (Beach. vol. i. p. 145), is of opinion (Hist. l. 292) that it was built by the two cities as a barrier of their common liberties; that it was open in time of war in order that success might pass from one to the other, and shut during peace, either to prevent the quarrels which might arise from unrestricted intercourse, or as a token that the cities, though united, were distinct. Becker, on the other hand, denies that it ever was a gate at all, maintaining that it only got that name on account of the temple which it subsequently formed being called "Porta Bello" (pp. 115, 119, and note 167). But there seems to be ample evidence that it was originally a gate. Varro, in the passage cited, evidently considered it as such; and it is also mentioned by Macrobius as a real gate, though the situation which he assigns to it will hardly be allowed even by those who give the greatest extension to the walls of the Roman city ("Cum bello Sabino—Romani portam, quae sub radicibus collis Viminalis erat, quae postea ex eventu Janusiae vocata est, claudebatur fastinatostr," Sat. l. 9). We may learn from Ovid, not only its real situation, but also that it was the very gate which Tarpeia betrayed to the Sabines. The passage fixes its site so accurately, and consequently also that of the temple of Janus,—an important point in Roman topography,—that it is necessary to quote it at length:

"Præserat ora denu. Tum sic ege nostra resolvit
Voces meae eliciens dei:
Quæ mortalium Jovi cur stare sacrato in urbe?
Hic est templo foro juxta deus hanc habet
Ille manu munecas propexem ad pectora barbare
Protonus Oebali retailt arma Tati,
Utnque levis custos, armillis capta Sabini,
Ad summas Tatium duxerit aera iter.
Inde, velut nasci est, per quem descendit in secula,
Arilae de albis et foro chrest a
eum.
Et jam consurgit portas, Saturnia cœnas
Dum aerent opposita insidias ssera.
Cum tanto veritis committere numine pugnare
Ipsa mese movit calidus artis opus,
Oraque, qua pollens opus sum, fontana reclusi
Sumeque repentinis ejaculatoris aquas.
Ante tamen calidis subjici sublara venis,
Serpentis in terris Tati servitus humor iter.
Curius ut utilius palia percuta Sabini,
Quae fuerat, tauto reddita forma loco est.
Ars mihi positio est, parvo conjuncta sacello.
Haece adulé flammas cum strue farra subit."

(Plut. i. 255. seq.)

We see from these lines, that the gate attacked by the Sabines lay at the bottom of a path leading down from the Capitoline, which path still existed in the time of Ovid, and was situated between the forum of Cæsar and the Forum Romanum. The gate was consequently at the bottom of the NE. slope of the Capitolines hill, a little to the S. of the present arch of Septimius Severus. We also learn that a small temple or sacellum was dedicated to Janus at this spot. Whether the ancient gate was incorporated in this temple, or whether it was pulled down, or whether the temple was erected by the side of the gate, cannot be determined; but at all events its form and site was commemorated by the name of the title of Porta Janusia. It is no objection to Ovid's account, as far as the topographical question is concerned, that it differs from the one usually received, which represents the Sabines as successful through the treachery of Tarpeia, and not as repulsed through the intervention of Janus. His seems to have combined two different legends; but all that we are here concerned for is his accurate description of the site of the temple, and consequently of the gate.

Its site is further confirmed by Procopius (B. G. l. 25. p. 142, Dind.), who mentions it as situated a little beyond the statues of the three Fates, as will appear in the second part of this article. The gate was decorated by the peace of Tatius, who made the opening and shutting of it the sign of war and peace. (Liv. l. 19.) Niebuhr, therefore, besides assigning an inadmissible and even absurd meaning to this custom, has forestalled its date, when he mentions it as coming into use at the union of the two independent cities.

After writing what precedes, the compiler of this article has consulted the work of Dr. Th. Mommsen, published in the Annali dell' Instituto per la year 1844 (vol. xvi.), and entitled De Comitiu Romano, in which that writer (p. 306, seq.) considers that he has irrefragably established that the temple
FOMA.

Janus was not situated in the place here assigned to it, but in the Forum Olitorium outside the Porta Carmentalis. As the opinion of so distinguished a scholar as Mommsen is entitled to great attention, we shall here briefly review his arguments. They may be stated as follows. That the temple of Janus was in the Forum Olitorium may be shown from Tacitus: "Et Javo templum, quod apud Forum Olitorium sit, jam pristini diefactum." (Ann. xii. 49.) and also from Festus: "Religiosi est quibusdam porta Carmentalique egregi et in sede Jani. Quae est extra eam, senatus haberi, quod ea egregsia sex et trecenti Fabii apud Cremeram omnibus interfecti sunt, cum in sede Jani S. C. factum esset, ut proficicierentur" (p. 285, Mill.). But this temple was undoubtedly the same as the famous one founded by Numa, and could only have restored, not built; since it can be shown that there was only one Temple of Janus at Rome before the time of Domitian. Thus Ovid (as may be seen in the passage before quoted) asks Janus,

"Cum tot sint Jani cur stas sacrificus, as suo, Hic ubi juncta foris templi duobus habes?"

The same thing appears from the following passage of Martial (x. 28. 3), which shows that, before Domitian erected the Janus Quadrigae in the Forum Transitorium, the god had only one little temple:

"Pervia signo habitabat ante Penates Phalaris qua medium Romae teretat iter."

The same situation of this only temple is also testified by Servius (ad Aen. vii. 607): "Sacroarium (Jani) Numa Pomphilus fecerat—Quod Numa instituerat, translatum est ad Forum Transitorium." And again "Sacroarium hoc Numa Pomphilus fecerat circa insum Argiletum justa theatrum Marcelli." Thus the situation of the sole temple of Janus is proved by the preponderance of the best authority, and does not rest on mere conjecture.

In these remarks of Mommsen's we miss that accuracy of interpretation which is so necessary in treating questions of this description. The word "struæsis," used by Tacitus, denotes the erection of a new building, and cannot be applied to the manner in which the site of an ancient one or other temple of Janus was known to be necessary to designate the precise situation of this temple by the words "apud Forum Olitorium." Again, the words of Ovid refer, not to one temple, but to one Janus, which, however, as we have seen, was converted into a sort of small temple. "When there are no many Janis, why is your navigation not only in one?" This, then, was not a temple in the larger sense of the word; that is, a building of such a size as to be fit for assemblies of the senate, but merely the little sacellum described by Ovid. Let us hear Mommsen's own description of it, drawn from this passage, and from that of Martial just quoted:

"Fuit enim Jani sede (quod inciditiamse appareat cum non esse super limite) frater illius alias, as ibifrons sive quadriprofons, Da die stiatus omnium, Eo, quam Numa fecit, formis sacris apud ad portam Carmentalem applicatus, quo translatum omen qui a Campo Maro Forsque Ollorico venientes Beatrix Romanunum ovato" (p. 307). But—overlooking the point how the building of Numa could have been attested in the state erected in the Forum Servium how is it possible to conceive that, as Mommsen informs us, the senate could have been assembled in a little place of this description, the common thoroughfare of the Romans? Besides, we have the express testimony of Livy, that the Senatus Consultum, sanctioning the deposition of the Fabi, was made in the usual place for the meetings of the senate,—the Curia Hostilia. "Consul e Curia egresam, comitante Fabiorum aegime, qui in vestibulo curiae, senatus consultum exspectantes, steterant, domum reddit." (ii. 48.) Livy is certainly a better witness on such a point than Festus; whose account, therefore, is overthrown, not only by its inherent improbability, but also by the weight of superior authority. All that we can infer from his words is, that the temple of Janus, outside the Porta Carmentalis, was sufficiently large to hold an assembly of the senate; but this circumstance itself is sufficient proof that it could not have been the original little temple, or sacellum, of Numa. There are other objections to the account of Festus. It was not omenous, as he says, to go out at the Carmental gate, but to go out through the right arch of the gate ("infelici via dextro Jano portas Carmentalis protecta, ad Cremeram frument perveniat," Ib. c. 49.). If the whole gate had been accursed, how could a sacred procession have passed through it? Sustained from the temple of Apollo to that of Juno Regina, described by Livy (xxvii. 37), have passed through it? Nor can it be told whether the relative as refers to the Porta Carmentalis, as sense, or to sacellum Jani, as grammar, requires. Further, it would be contrary to the usual custom, as Becker correctly remarks (Handbuch, p. 139, note), for the senate to assemble outside the walls of the city, as for the first time we have here a matter of this nature. Then, with reference to Ovid's description, he could not have mentioned the sacellum of Janus as adjoining two fora, had it stood where Mommsen places it, where it would have been separated from the Forum Romanum by the whole length of the Vicus Jugarius. Besides, it is plain from the passage given by Mommsen, he must have quoted that the original temple stood at the foot of a circus, or descent from the Capitolium. Yet Mommsen puts it at the very top of the hill over the Carmental gate ("in ipso monte," p. 310, vide his plan at the end of the volume), where the hill is most abrupt, and where there could not possibly have been any circus, and the Porta Jananula at the bottom. We should remark, too, that the original temple of fori clivus era," is not a mere conjecture of Becker, as Mommsen seems to think (p. 310), but the common reading; and that to substitute "per foro" instead would make evident nonsense. Nor in that case do we see how the temple could have been "apud Forum Olitorium," as Tacitus says, even if spared only means near, not at all and less how it could have adjoined the theatre of Marcellus ("justa theatrum Marcelli"), as indicated by Servius. What has been said will also be sufficient to refute the last named commentator in stating this to be the original temple. He has evidently confounded the two.

We can therefore only agree in part with the somewhat severe censure which Mommsen has pronounced on Becker on this plan of the temple. "At quod omnino de sede Jani sine simulacrò (p. 299), quod Festum, quod Servium gravissimi errores incusavit (p. 139, n. 254, seq.), id vix condono homini philologo" (p. 307). It appears, we trust, pretty plainly, that Festus and Servius must have been in error; but we cannot admit a temple without an image. The question is, whether, given that Ovid is alluding to a Janus, not to a proper temple, may obviate the difficulty. But we
see no reason why Janus, a very ancient Latin
divinity, and to whom the Mona Janiculorum appears
to have been sacred before the building of Rome,
should not have been honoured with a regular temple
besides the little affair which was the index of peace
and war. As the question, however, is connected
with the situation of the Argiletum and Romano-
Caesaris, we shall have occasion to revert to it,
and have mentioned it here only because the legend
of Tarpeia, and consequent building of the temple, are
closely connected with the history of the city.

Romulus, after his mysterious disappearance, was
defied under the name of Quirinus, and his suc-
cessor, Numa, erected a temple to the new God on
the Quirinal. (Dionys. ii. 63; Ov. Fast. ii. 509.)
This hill, which was previously named Agonum
(Fest. p. 254; Dionys. ii. 37), appears in the time
of Numa to have been divided into four distinct
eminences, each named after some deity, namely,
Quirinalis, Salutaria, Maculalis, and Lataria (Varr.
L. L. v. § 51, Mull); but from what deity the
meaning of Maculalis was derived is arguable inexcusably.
The name of Quirinalis, which, however, some derive
from the Quirites, who had come with Titius from
Cures, and settled on the hill (Varr. and Fast. ii. oc.),
ultimately swallowed up the other three. The
temple of Quirinus probably stood near the present
church of S. Andrea del Nocciolo. This
question, however, as well as that concerning the
site of the Roman temple that will occur when
 treating of the topography of the city.
Numa, who was himself a Sabine, also founded a capitol
(Hieron. i. p. 298), subsequently called, by way
of distinction, "vetus Capitolium," on the Quir-
inal, which hill had been chiefly colonised by his
countrymen. Of course the name of "Capitolium"
could not have been applied to it till after the founda-
tion of the Roman Capitol, and originally it was
the area of the city, containing the three usual temples
of Jupiter, Juno, and Minerva. (Varr. L. L. v. §
158, Mull.) This ancient temple of Jupiter is al-
lowed to by Martial (v. 22. 4), and probably stood
on the southern part of the Quirinal on the present
height of Magnanapoli.

Tullus is said to have added the Caesian hill
to the city after the destruction of Alba Longa,
when the population of Rome was doubled by the
inhabitants of Alba being transferred thither; and
in order to render the Caesian still more thickly inha-
'bited Tullus chose it for his own residence. (Liv. i.
30; Estrop. i. 4; Victor, Vir. Ill. 4.) The two
accounts of the incorporation of this hill by Romulus
and Tullus contain, as we have before remarked,
nothing contradictory; otherwise, Dionysius Hal-
cornensis would hardly have committed himself
by adopting them both (ii. 36, 50, iii. 1). The
first Tuscan settlement had been transferred to
another place. But when Cicero (de Rep. ii. 18)
and Strabo (v. p. 234) state that the Caesars was
added to Rome by Tullus, this is a real
divergence for which we cannot account; as the
hill could hardly have been incorporated by Tullus
and again by Ancus.

Ancus is also said, by the two authorities just
quoted, to have added the Aventine; and there is no
improbability in this, for Romulus never made it
a proper part of his city, and we learn from Plutarch
(Numa. 15) that it was uninhabited in the time of
Numa. We must remember that the earlier en-
closures were made rather to assert a future claim
to the ground when the number of citizens was in-
creased, than that they were absolutely wanted at
the time of making them ("Crecescat interim urs.
munitienibus alia atque alia appetendo loco; quam
in aepum magis futuras multitudinis, quam si quid
tum hœminum erat, munirent," Liv. i. 8). The
account of Ancus having added the Aventine is con-
duced by Dionysius (i. 33) who state that it was assigned to the citizens of the
conquered Politorium. Yet the history of the Aven-
tine is more mysterious than that of any other of
the Roman hills. At the end of the third century of
the city we find it, as an ager publicus, taken pos-
session of by the patricians, and then, after a hard
contest, parcelled out among the plebeians by a lex
Ilidia (Dionys. x. 31, 32; cf. Liv. iii. 31, 32) by
whom it was afterwards principally inhabited.
It remained excluded from the pomerium down to the
time of Claudius, though the most learned Romans
were ignorant of the reason. After some further victories over the Latins, Ancus brought may
thousands more of them to Rome; yet we can hardly understand Livy's meaning (c. c.) that he
located them in the Vallis Muras; nor is it possible
that spot seems too limited to hold so large a
number, but also because the Circus Maximus seems
already to have been designed, and even perhaps
begun, at that spot. (Dionys. iii. 68.) At all
events they could not have remained there for any
length of time, since Livy himself mentions that
the circus was in the time of Ancus Marcius (i. 35).
The fortifying of the Janiculum on the right bank of the Tiber, the building of the Sababian
bridge to connect it with Rome, and the foundations
of the port of Ostia at the mouth of the river, are
also ascribed to Ancus Marcius, as well as the ser-
ification called the Fossa Quirinorum. (Liv. i. 33;
Dionys. 44, 45; Victor, Vir. Ill. 2; Flor. i. 4.)

The circuit of Rome, then, as at the time of the
cession of Tarquinus Priscus, appears to have em-
braced the Quirinal, Capitoline, Palatine, Aventine,
and Caelian hills, and the Janiculum beyond the
Tiber. The Viminal and Esquiline are not men-
tioned as having been included, but there can be no
doubt that they were partially inhabited. Whether
the Appian Wall was surrounded with towns, as
Livy says (i. 36, 38; Dionys. iii. 67) or not, it is impossible to say; but the fortifications,
whatever their extent, seem to have been of a very
rude and primitive description (κατωθους
και φασιν ραντι ρωσιν ευρω, Dionys. iii. 67.)
Tarquinus does not appear to have made any addi-
tions to the city, but he planned, and perhaps partly
executed, what was of much more utility, a regular
and connected wall to enclose the whole city. (Liv.
i. 36, 38; Dionys. iii. 67.) Nay, according to Victor
(Vir. Ill. 6), he actually completed this wall, and
Servius only added the opper (Jub. c. 7.) The reign
of Tarquin was indeed a remarkable epoch in the
architectural progress of the city. We must re-
member that he was of Tuscan birth, and even at
Grimaudo, it seems bare to suppose that his knowledge of architects and of the
other arts of civilised life was far superior to that
of the Romans and Latins; and hence the improve-
ments which he introduced at Rome. It is satis-
factory to discover and point out undesigned coinci-
dences of this description, which greatly add to the
credibility of the narratives of ancient writers, since
there is too much disposition at the present day to
regard them as the inventors or propagators of mere
baseless fables. Tarquin also constructed those
wonderful sewers for draining the Velabrum and
forum which exist even to the present day; he improved the Circens Maximus, planned the temple of the Capitoline Jupiter, and erected the first porticoes and tabernae around the forum (Liv. i. 35, 38; Dio. lxxvii. 67—69; Tac. Hist. iii. 72); in short, he must be regarded as the founder of the subsequent architectural splendour of Rome.

The additional space included by Servius Tullius is the field of wall which he completed as variously stated in different authors. Dio. (iv. 13) and Strabo (v. p. 234) relate that he added the Viminal and Esquiline hills: Livy states that the hills which he added were the Quirinal and Viminal, and that he enlarged or improved the Esquiline ("anget Esquiliana," l. 44); while Victor (Viv. ill. 7) mentions that he added all three. It is possible that Livy means all that back or eastern portion of the Quirinal and Esquiline which run together into one common ridge, and which was fortified by the agger of Servius Tullius; and in this way we may account for his expression of "anget Esquiliana," which alludes to this extension of the hill, and the consequent amalgamation of its previously separate tongues, the Oppium and the Esquilina, and which was not a contradiction in these apparently divergent statements. Though the elder Tarquin may dispute with Servius the honour of having built the walls of Rome, yet the construction of the agger is unanimously ascribed to Servius, with the single exception of Pliny (iii. 9), who attributes it to Tarquin the Proud. The custom, however, has prevailed of ascribing not only the agger, but the description of these walls and of their gates, and an inquiry into the circumference of the Servian city, will be found in the second part of this article; but there are two other points, in some degree connected with one another, which require investigation here, namely, the Regions of Servius and the Septimontium.

Regiones of Servius. — Servius Tullius divided the city into four geophysical districts or regions, which, however, were not commensurate with its extent. Their number seems to have been connected with that of the city tribes; but there are many particulars concerning them which cannot be explained. Our knowledge of them is chiefly derived from Varro (L. L. § 45, seq., Mulli.), from whom we learn that they were: L. (for Lata), C. (for Calcanium), S. (for Subura), and E. (for Esquiline). Evidently determined, but which embraced the Caesarian hill, the valley of the Colosseum, and part of the Sacra Via, that western portion of the southern tongue of the Esquilina (Monx Oppium) known as the Carinae, the Cerroneia,—which seems to have been the valley or part of the valley between the Esquiline and Caesarian,—and the Subura, or valley north of the Oppium.

II. The Esquilina or Esquiline, which comprehended the smaller or N. tongue of the Esquilina (Monx Capiara) and its eastern back or ridge, as far as the rampart or agger of Servius, and perhaps also the eastern back of the Oppium. III. The Collina, so called from its embracing the Quirinal and Viminal hills, which, as we have before said, were called collineia in contradistinction to the other hills called montes. The intervening valleys were, of course, included. IV. The Palatina or Palatium, embraced that hill with its two spurs or offshoots, Velia and Germantia. When we compare these regions with the map of Rome we are immediately struck with some remarkable omissions. Thus, the Capitoline hill, the valley to the E. (Forum), and the way to the S. (VeiLABrum and Forum Boarium), together with the Aventine, are entirely excluded. Various conjectures have been proposed to account for these omissions. Some have imagined that the Capitol was excluded because the division of Servius regarded only the plebeian tribes, and that the Capitol was inhabited solely by patricians. Becker (Handb. p. 386) rightly rejects this hypothesis; but another, which he prefers to it, seems hardly better founded, namely, that the hill, as being the citadel, was occupied with public buildings to the exclusion of all private ones, or, at all events, as being common to all, could not be incorporated with any one region. But this would have been a better reason for the exclusion of the Quirinal, which was at that time the proper capitol of the city; nor does it seem to be a fact that private buildings were excluded from the Capitol. Various reasons have also been assigned for the exclusion of the Aventine; the principal of which are, the unfavourable anecdotes which had appeared upon it to Remus, and the circumstance of its containing a temple of Diana, which was common to all the Latin nation, and therefore prevented the hill from being made a portion of the city.

But if we accept Varro's account given by Varro of the Servian Regions (L. L. § § 41—54, Mulli.), we shall perceive that the division was entirely guided by the distribution of the Arvige chapel, instituted probably by Numa; though Varro does not explain why they should have had this influence. Thus, after giving an account of the Capitoline and Aventine, he proceeds to say (§ 49): "Reliqua urba loco arvini qui erat arvum, quod in quotannis iugis, septem et xx. partis urbis sunt disposita. Argaeos dictus potius a principibus qui sumere Hercule Argive venere Romam et in Saturnia subsedereunt. E quae prima est scripta Regio Suburana, secunda Esquilina, tertia Collina, quarta Palatina." He then proceeds to enumerate the sacrae or chapels in each region, mentioning six in each, or twenty-four in all, though he had called them twenty-seven in the passage just quoted.

The obvious meaning of this passage is, that the "other parts of the city were formerly separated (i.e. from the Capitoline and Aventine) at the time when the Arvige chapels were distributed into twenty-seven parts of the city. It would hardly, perhaps, be necessary to say why this was the case, as the foregoing scholars put a different interpretation on the passage. Thus Bunsen (Beschreibung der Stadt Rom, vol. i. p. 147), whose general view of the matter seems to be approved of by Becker (Handb. p. 187, note 185), takes Varro's meaning to be, that the remaining parts of the city did not originally form each a separate district, like the Capitol and Aventine, but were divided into smaller parts, with different names. This view has been already condemned by Müller (ad loc.), and indeed its improbability is striking; but it requires a somewhat minute examination of the passage to show that it is altogether untenable. Livy also mentions these chapels as follows: "Multa alia sacrificia locoasca sacris faciendIs, quae Argeos pontifices vocant, dedicavit" (Liv. ix. 34). Bunsen is of opinion that the statements of Livy and Varro are inconsistent, and that whilst the former under the name of Argei means places, the latter alludes to men. In conformity with this view he proceeds to construe the passage in Varro as follows: "The name of Argeis is derived from the chief's who came with the Argeis Hercules to Rome and settled in Saturnia. Of these parts of the city we find first described (via. in the Sacra Argaeorum)."
the Suburan Region, as second, &c." ("Den Namen Argei leitet man ab von den Anführern die mit dem Argiver Hercules nach Rom kamen, und sich in Saturnia niederliessen. Von diesen Stadtheilten
cinst sich zuerst versetztet (nämlich in den Sacris Argoorum) die Suburanische Region, als sweite, &c."
("Besch. i. 149.") But to say that the name of Argives was derived from other Argives can hardly be what the author intended. Besides, the sense is disjointed; for the relative quae (wrongly translated "of these parts of the city") cannot be made to refer to an antecedent that is separated from it by a long sentence. As the text stands, qua must necessarily refer to Argoee in the sentence immediately preceding. It might be thought that this sentence has been interpolated, since Varro-called an Argive Argeo, not Argives. "Itaque dicimur 'hic Argus' cum hominum dicimus; cum oppidum, Graecanico 'hoc Argos,' cum Latine, 'Argei.' " (L. L. i. § 89, Mill.) We see from this passage that the more ancient Latin name for the town of Argus was Argeo, (Asis, p. 270), and hence it might be inferred to be Livy's meaning that the chapels were called Aegro or Argosso, not Argodes. But Argoe, in still more ancient Latin than that of Varro, was also the name for Argives as we find from a verse which he quotes from Ennius (viii. § 44):"

"Libase, factores, Arges et tutulesos;"

whence we are disposed to think that the name of Argoe, however anomalous the usage may appear, was really applied to these chapels, just as a modern Italian calls a church S. Pietro or S. Paolo, and that the meaning of Varro in the second sentence of the passage quoted, is: "It is thought that these Argi (i.e. the sacrificia so called) were named after the chiefs who came to Rome with the Argive Hercules;" in which manner Varro would coincide with Livy in making these Argi places. How else, too, shall we explain Ovid (Fast. iii. 791):"

"Itur ad Argoe, qui sint essas pagina diei?"

And in like manner Masarius Sabinius, quoted by Gallus (N. A. e. 15.), "Argaei etiam cum (Flaminica) it ad Argae." A passage in Paulinus Diacous throws a gleam of light upon the matter; though, with more grammatical nicety than knowledge of antiquity, he has adopted, apparently from the Greek, a neuter form unknown to any other writer: "Argae loca appellantur Romae, quod in his septem essent quidam Argivorum illustres viri;" (p. 19, Mill.) Hence it appears that these chapels were the (reputed) burial places of these Argive heroes, and their masculina appellation thus gains still further probability. "Et qua," &c. would mean, therefore, that the different Servian Regions were marked off and named according to these chapels.

We have already remarked that though Varro mentions these Argive places, he only enumerates one, 24, Hence Becker (Homol. p. 588), as well as Bunsen, are of opinion that the three odd ones were upon the Capitol. The only reason assigned for this conjecture is that the hill had three natural divisions—two heights with a depression between them. But if we have rightly explained Varro's meaning, it is impossible that the Capitol should have had any of these chapels. Bunsen, however, goes still further, and, connecting the chapels with the Argive men of straw which were annually precipitated into the Tiber, thinks that their number might have been 30, allotting the remaining three to the ancient Capitol on the Quirinal, although Varro had already accounted for his usual number of six in that district. (Besch. i. 149.) However, it is not at all improbable that the tradition of the Argive mannikins was connected with that of the chapels, since it may be inferred from the context that Varro explains the lines of Ennius before quoted, that they were instituted by Numa. Thus the preceding line (§ 43), "menass constituit idemque ancilla," refers to Num-
ae's institutions, who is again alluded to in § 45, "etendum Pompilia sit ficeas famineas." In § 44 Varro describes the custom regarding the men of straw as follows: "Argae ab Argia; Argiae fuisse
crispis, simulacra hominum exutili. Ut et eiusmodi poetae salubri a seceroditibus publice dedit solenm in Tiberim." The origin of the custom is very variously explained; but the most probable account is that it was intended to commemorate the abolation by the Argives of human sacrifices once offered to Saturn, for these men of straw were substitutes. Next of the list of Varro's mannikins is given the number of 27 or 30; though the latter was introduced into the text by Aldus from the account of Dionysius (i. 38). Hence it would perhaps be more in accordance with the principles of sound criticism to reduce the number of chapels given by Varro (v. § 45) from 27 to 24, instead of increasing them to 30; as they would not only correspond with the number of the places among these Argive mannikins, but also with that of the chapels which Varro separately enumerates.

Septimontium.—The Septimontium seems also to be in some degree connected with these Argive chapels and the Servian divisions of the city. The word Septi-
monthium had two meanings; it signified both the com-
plex of seven hills on which Rome stood, and a festival (Septimontale sacrificia) of the Sons of the Seven. This last is a commemoration of the traditions connected with them. Now it is remarkable that Antistius Labo, quoted by Festus (p. 848, Mill.) in his account of the places where this festival was celebrated, omits all mention of the Capitoline and Aventine, just as they seem to have been left out of Numa's town and the regions of the other seven, which are all enumerated. The word Septi-
monthium, ut ait Antistii Labon, hanc montibus feriae: Palatii, cui sacrificium quod sit, Palatunum dicatur. Veliae, cui item sacrificium Fagatuli, Sabeos, Cermaulo, Oppio Caelio monti, Cispio monti. There were Argive chapels at all these places, and hence a strong presumption that the festival of the Septimontium was founded by Numa, the author of most of the ancient Roman solemnities. That Labon considered the places he enumerates to be hills is evident, not only as a direct inference from the term Septimontium itself, but also from his express words, "hanc montibus feriae,"—"there are holidays on the hills here recited." Moreover, we know as a certainty that five of the places mentioned were hills, namely, the Capitol, Velia, Oppio, Caelum, and Cispianum; hence a strong presumption that the others also were heights. Yet Niebuhr (Hist. i. 369), Bunsen, (Besch. i. 665), and Becker (Homol. p. 124), assume that one or two of them were hills at all. The places about which there can be any doubt are Fagatul and Germalus. Respecting Subura there can be no doubt at all; it was certainly a small part of the Campus of Numa's time, containing the Locus Fagatul. It was the residence of Tarquinius Superbus: "Esquillia (habitatam) supra clivum Pallium, ad Fagatulum lucum" (Selin. i. 25). But if the grove was above the crux it must
have been on a height. Servius had occupied a residence not far from it, over the Clivus Urbicus (ib. Liv. i. 48), and it was probably situated at or near the spot now occupied by the church of S. Martina. There is not the slightest ground for Niebuhr’s assumption (Hist. i. 390) that the Fagutal was what he calls the plain—the Caselian and Palatine. The Cermalus or Gerulmus—for originally c and g were the same letter—was, like the Velia, only a distinct portion of the Palatine hill. (See Bucio (Palatio) Cermalus et Velias conjunxurum,” Varr. v. § 64, Müll.) Preller (Regiones, p. 180) considers the Gerulmus to be that side of the Palatine which overhangs the Velabrum between the modern churches of S. Giorgio in Velabro and S. Anastasia; and it is not improbable, as Becker conjectures (p. 418), that the hill formerly projected further to the W. than it now does, and descended in shelves or ledges. It does not appear on what grounds Niebuhr (l.c.) assumed the Gerulmus to be a “spot at the foot of the Palatine.” It contained the Lupercal, which, being in a wood or grove, must have been a place of some hill or cliff, as indeed Dionysius states in his description of it: ἕν τῷ ἄρχοντι, ἐν λευγαμοι σύκωνοι ἔν τῇ ἀρχή μετὰ (i. 32).

All the places, then, enumerated by Laboe appear to have been heights, with the exception of the Subura. But on counting the names, we find that he mentions eight places instead of seven, or one more than is required to make a Septimontium. Hence Niebuhr (ib. p. 389) omitted the Subura,—not, however, because it was situated in the plain,—and was followed by Bunsen (Beachr, i. 141), who afterwards altered his mind, and struck out the Caesius (ib. p. 685); and this last opinion is also followed by Becker (Hist. p. 124) and Kaiser (Rev. of Festus, p. 541). The chief reason assigned for this view is that a principal part of the first regio (Suburana) was called Caesilium,—a name afterwards preserved as that of one of the regions of Augustus; and on comparing this name with that of Septimontium it is inferred that, like the latter, it must have indicated a distinct and independent city union, and consequently described a region before the tendency of the Servian union. But if there had been any distinct and independent township of this kind, we must surely have heard of it in some of the ancient authors. We do not know when the term Caesiliummontium first came into use; but it is not improbable that it arose from another small hill, the Caesius Minor or Caesilium, having been annexed to the larger one. Martial mentions them both in the following lines:

“Dum per limina te potentiorem
Sudatrix iugis ventitatis, vagumque
Major Caesius et minor fatigat.”—(xiv. 18.)

We learn from Varro that the junction of these two hills had taken place in or before his time: “Caesilium cum Caesio same conjunctum” (L. L. v. § 46, Müll.), though popular use, as we see from the lines of Martial, sometimes continued to regard them as distinct; nor can we tell for what purpose they had been united. Little can be inferred from the order in which the hills are mentioned in the text of Festus, as local sequence is entirely disregarded, or from the circumstance that Caesius is called “more” and Oppius not, unless we leave out “Caesio:” or from the omission of Caesius in some of the MSS. of Paulus Diaconus. On the whole it seems most probable that Suburana may be the redundant word; unless indeed we might suppose that there were two Fagutals or groves of Jupiter, and that Suburana was inserted here to define the place of the one which overhung it.

Becker regards the Septimontium not as a proper city festival, but as commemorating traditions connected with the site of Rome long previous to the building of the city. In confirmation of this he refers (Handb. p. 125) to a passage in Varro (L. L. v. § 41, Müll.) and to another in Festus (p. 321), where it is said that a people of Beate, called Sacran, drove the Ligurians and Sicilians out of Septimontium; and a third passage is adduced from Servius (ad Aes. xi. 317) to prove that the Sicilians once occupied the site of Rome; that they were expelled thence by the Ligurians, and the Ligurians in their turn by the Sacran. Now, without entering into the historical questions connected with these obscure traditions, it may be allowed in general to be probable enough that such traditions were alive; and when, as we have ventured to assume, Numa instituted the festival, he made them the basis of it; just as he instituted the Argive chapels and the twenty-four mannikins to commemorate the tradition of the Argive chieftains and their abolition of human sacrifices. But the festival, nevertheless, was a proper city festival. Becker urges (Hist. p. 124) that the Septimontium described by Laboe could not have been in commemoration of a city union immediately preceding that of Servius, because it included the Oppius and Cepius, which were first added to the city by Servius. A great deal depends upon what we understand by the words “added to the city” ("sur Stadt gezogen"). To say that they were not included in the wall and agger afterwards completed by Servius would be a mere possibility; but they must have been inhabited and formed part of the city before his time, since there were Argive chapels upon them (Varr. v. § 50); and these chapels, as we have seen, formed the basis of the city union formed by him. The festival must certainly have been post-Romuleum, since some of the names of places where it was celebrated were not known before the time of Servius.

So that if Caesius occupied the Caesian hill in his reign; the name of Servius is said to be derived from the twins (germanus) Romulus and Remus, who were landed there (Varr. v. § 54); whilst Oppius and Cipius are said by Festus (p. 548, Müll.), on the authority of Varro, not to have been so named till the reign of Tullus Hostilius. But as they are mentioned by those names in the sacred books of the Argives (Varr. v. § 50) it is probable that they were so called at least as early as the time of Numa.

Such, then, was the ancient Septimontium. The walls of Servius included a different group of seven hills which came to be regarded by the later Romans as the real Servian. They are not described at the beginning of this article, namely, the Quirinal, Viminal, Esquiline, Caelian, Aventine, Capitoline, and Palatine.

IV. PROGRESS OF THE CITY TILL THE TIME OF AUGUSTUS.

Having thus brought down the history of the city to the foundation of the Servian walls, we shall proceed to sketch its progress to the time of Augustus, and then tile the walls of Auralian. The former walls marked the rise and consolidation of a city, which,
though soon to become formidable to its neighbours, was not yet secure from their attacks. The latter, enclosing an area more than twice as large as that defended by the Servian walls, betokened the capital of a large state, which, after becoming the mistress of the world, was beginning to totter under the weight of its own greatness, and found itself compelled to resort to the same means of defence which had protected its infancy — no longer, however, to ward off the attacks of its immediate neighbours, but those of the remotest tribes of Asia and Europe. Thus the history of the city, during this period of eight centuries, reflects in some degree the history of the Roman people, and exhibits the varying fortunes of the greatest of all human empires. Unfortunately, however, the materials even for a slight sketch of so vast a subject and so long a period are scanty and inadequate; nor, even were they more abundant, would our present limits allow more than an attempt to draw such an outline as may serve to illustrate the topography of the city.

Tarquin the Proud, the last of the Roman kings, seems to have effected little for the city, except by completing or improving the works of his predecessors. Of these the most important was the temple of the Capitoline Jove, the description of which is given in the second book of this article.

The expulsion of the Tarquins (n. c. 510) restored to the Roman people the use of the Campus Martius. This ground, which from the earliest times had probably been sacred to Mars (Dionys. v. 13), had been appropriated by the Tarquins, and at the time of their expulsion was covered with the crops which they had sown. The unholy nature of this proceeding presumably disturbed among the people, like that of the other royal goods. The corn was ordered to be cut down and thrown into the Tiber; and according to the legend its quantity was so great that it caused the island afterwards known as the Insula Tiberina, or that of Aesculapius. (Liv. ii. 5; Dionys. l. c. Plut. Publ. 8.)

The defeat of the Etruscans under Aruns, who had espoused the royal cause, was, according to the usual principle of the Romans of incorporating the vanquished nations, the means of adding a fresh supply of citizens, as there will be occasion to relate in another place.

We have little or nothing to record respecting the history of the city from this period till it was destroyed by the Gauls n. c. 390. After the fatal battle at the Allia, the Romans returned dispirited. The city, together with the older inhabitants, was abandoned to its fate; many families escaped to Veii and other neighbouring towns; whilst the men of an age to bear arms occupied the Capitol, which they prepared to defend. The flight of the Vestal virgins, who succeeded in escaping in safety, is connected with a topographical legend. Being unable to carry away all their sacred utensils, they buried some of them in casks (dolios), in a chapel near the house of the Flamen Quirinalis; whence the place, which seems to have been near the Closse Maxima, in the Forum Boarium, obtained the name of Dolia, and was held so sacred that the house was forbidden to spit upon it. (Liv. v. 40; Val. Max. l. i. § 10.) Varro, however (L.L. v. § 157, Mill.), did not recognise this story, but attributed the name either to some bones having been deposited there, or to the burial at an earlier period of some sacred objects belonging to Numa Pompilus.

The Gauls entered the city unopposed, and through the open Porta Collina. (Liv. v. 41.) The time during which they held it is variously given at from six to eight months. (Polyb. ii. 28; Flor. i. 18; Plut. Com. 30; Serv. Aen. vi. 652.) Their attempt on the Capitol is alluded to elsewhere. They set fire to and otherwise devastated the city; but perhaps we are not to take literally the words of Livy and other writers, to the effect that they completely destroyed it (v. 42, 43; Flor. i. 13; Plut. Com. 21). It is at least apparent, from Livy's own narrative (c. 55), that the city was not altogether spared; and it seems probable that the Gauls would have had and burnt the remains of the houses for their own sakes. We may, however, conclude, that the destruction was very great and terrible, as otherwise the Romans would not have discussed the project of emigrating to Veii. The firmness and judicious advice of Camillus persuaded them to remain. But the pressing necessity of the case, which required the new buildings to be raised with the greatest haste, was fatal to the beauty and regularity of the city. People began to build in a promiscuous manner, and the materials, afforded at the public expenses, were granted only on the condition that the houses should be ready within a year. No general plan was laid down; each man built as it suited him; the ancient lines of streets were lost, and the very name of the Forum was thrown into the cloisters. Hence down to the time of Augustus, and perhaps later, the city, according to the facile expression of Livy (v. 55), resembled in arrangement rather one where the ground had been seized upon than where it had been distributed. It may be inferred from a statement of Cornelius Nepos, as quoted by Festus, that in part of the forum it was roofed with shingles. ("Scandula contrectamuisse Romam, ad Pyrrhi saepe bellum, sanus cooçlexéc, Cornelius Nepos auctor est," xvi. 15.) Livy indeed mentions the public distribution of tiles, but these perhaps may have been applied to other purposes besides roofing, such as for making the floors, &c.; and the frequent and destructive fires which occurred at Rome lead to the belief that wood was much more extensively used in building than is customary in modern times. Within a year the new city was in readiness; and it must have been on a larger scale than before the Gallic invasion, since it had acquired a great accession of inhabitants from the conquered towns of Veii, Capena, and Falisc. These Romans, who, to avoid the troubles of building, had occupied the deserted houses of Veii were recalled by a decree by which those who did not return within a fixed time were declared guilty of a capital offence. (Liv. vi. 4.) The walls of Rome seem to have been left uninjured by the Gauls, notwithstanding Plutarch's assertion to the contrary. (Cass. 93.) We nowhere read of their being repaired on this occasion, though accounts of subsequent restorations are frequent, as in the year n. c. 351 (Liv. vii. 20), and again in 217, after the defeat at Trasimene. (Id. xxii. 8.) Nothing can convey a higher notion of Roman energy than the fact that in the very year in which the city was thus rising from its ashes, the Capitol was supported by a substructure of square arches, of such measurement as to excite wonder even in the Augustan age. (Liv. l. c.; Plin. xxxvi. 24. s. 2.)

The censorship of Appius Claudius Cæcuscus, n. c. 312, forms a marked epoch in the progress of the city. By his care Rome obtained its first aqueduct, and its first regularly constructed high-road, the Aqua and Via Appia. (Liv. ix. 29.) But the
war with Pyrrhus which soon ensued, and afterwards the still larger and more destructive ones waged with the Carthaginians, prevented the progress which might have been anticipated from these beginnings. The construction of a second aqueduct, the Anio Vetus, in the censorship of Man. Curtius, Dentatus, and L. Papirius Cursor, B.C. 273, testifies, however, that the population of the city must have continued to increase. In the year B.C. 220 we find the censor C. Flaminius constructing the Flamian Way, as well as the circus which bore his name. (Liv. Epit. xx.; Paul. Diaec. p. 89.) But it was the construction of the Circus Maximus by Lucullus, which excited the curiosity both of Italy and Greece, which first gave them a taste for architectural magnificence. The first basilica was erected at Rome in the year B.C. 184, and was soon followed by others, as there will be occasion to relate when we come to speak of the forum. But it was not until ten years later that the city was first paved by the care of the censors Q. Fulvius Flaccus and A. Postumius Albinus. They also paved the public highways, constructed numerous bridges, and made many other important improvements, both in the city and its neighborhood. (Liv. xii. 21.) Yet, notwithstanding these additions to the public convenience and splendor, the private houses of the Romans continued, with few exceptions, to be poor and inconsiderable. It is the house of Cn. Octavius, on the Palatine, seems to have exhibited one of the earliest examples of elegant domestic architecture. (Cic. de Off. i. 39.) This was pulled down by Scarrus in order to enlarge his own house. The latter seems subsequently to have come into the possession of Cato (Ascon. ad Cic. Mil. Arg.), and its magnificence may be inferred from the circumstance that he gave 14,800,000 sesterces for it, or about 130,000L. (Plin. xxxvi. 24. a. 2.) Indeed, as we approach the imperial times, the dwellings of the leading Romans assume a scale of extraordinary grandeur, as we see by Pliny's description of that of Crassus the orator, who was censor in B.C. 92. It was also on the Palatine, and was remarkable for six magnificent latus-trees, which Pliny had seen in the time of Augustus, and which, till they were destroyed in the fire of Nero, were distinguished by four columns of Hymettian marble, the first of that material erected in Rome. Yet even this was surpassed by the house of Q. Catulus, the colleague of Marius in the Cimbrian war, which was also on the Palatine; and still more so by that of Q. Aquilus on the Viminal, a Roman knight, distinguished for his knowledge of civil law. (Plin. xvii. 1.) M. Livius Drusus, tribune of the people in B.C. 93, also possessed an elegant residence, close to that of Catulus. After his death it came into the possession of the wealthy M. Crassus, of whom it was bought by Cicero for about 30,000L. (ad Fam. v. 6.) It seems to have stood on the N. side of the Palatine, on the declivity of the hill, not far from the Novia Via, so that it commanded a view of the forum and Capitol. It was burnt down in the Oliodian riots, and a temple of Freedom erected on the spot; but after the return of Cicero was restored to him, rebuilt at the public expense. (Cic. ad Att. ii. 24, Fam. v. 6.; Vell. Pat. ii. 45; Dion Cass. xxviii. 17, xxix. 11, 20; App. B. C. ii. 15, &c.) The house of Lepidus, consul in B.C. 77, was also remarkable for its magnificence, having not only columns, but even its thresholds, of solid Numidian marble. (Plin. xxxvi. 8.) The luxury of private residences at Rome seems to have attained its acme in those of Sallust and Lucullus. The distinguishing feature of the former, which lay on the Quirinal, was its gardens (Horti Sallustiani), which probably occupied the valley between the Quirinal and Pincian, as well as part of the latter hill (Becker, Handb. p. 583.) The house of Lucullus, the conqueror of Mithridates and Tigranes, was situated on the Pincian, and was also surrounded with gardens of such remarkable beauty, that the desire of possessing them, which they awakened in the breast of Messallina, caused the death of their subsequent owner, P. Valerius Asiaticus. (Tac. Ann. xvi. 1; Liv. xxii. 33.) From this period they formed one of the most splendid possessions of the imperial family. (Plut. Lact. 39.)

The ambitious designs entertained by the great leaders of the aspiring Republic led them to court public favour by the foundation of public buildings rather than to lay out their immense wealth in adorning their own residences. The house inhabited by Pompey in the Campus Martius was an hereditary and though, after his triumph over Mithridates and the pirates, he rebuilt it on a more splendid scale and adorned it with the beaks of ships, yet it seems even then to have been far from one of the most splendid in Rome. (Plut. Pompe. 40, seq.) On the other hand, he consulted the taste and convenience of the Romans in building a theatre, a curia, and several temples. In like manner Caesar, when the height of his power, was content to reside in the ancient Regia; though this indeed was a sort of official residence which his office of Pontifex Maximus compelled him to adopt. (Suet. Cæs. 46.) But he formed, and partly executed, many magnificent designs for the embellishment of the city, which his short tenure of power prevented him from accomplishing. Among these were a theatre of unexampled magnificence, to be hollowed out of the Tarpeian rock; a temple of Mars, greater than any then existing; the foundation of two large public libraries; the construction of a new forum; besides many other important works, both at Rome and in the provinces. (Suet. Cæs. 26, 44; App. B. C. ii. 108, &c.) The firm was strengthened by the power exercised by Augustus, and the immense resources at his disposal, enabled him not only to carry out several of his uncle's plans, but also some new ones of his own; so that his reign must be regarded as one of the most important epochs in the history of the city. The foundation of new temples and other public buildings did not prevent him from picturing and embellishing the ancient ones; and all his designs were executed with so much magnificence that he could boast in his old age of having found Rome of brick and left it of marble. (Suet. Aug. 38.) In these undertakings he was assisted by the taste and munificence of his son-in-law Agrippa, who first founded public and gratuitous baths at Rome (Dion Cass. liv. 29); but as we shall have occasion to give an account of these works, as well as of those executed by Pompey and Caesar, in the topographical portion of this article, it will not be necessary to enumerate them here; and we shall proceed to describe the important municipal reforms introduced by Augustus, especially his new division of the city into Vici and Regions.

Residences of Augustus.—Although Rome had long outgrown its limits under Servius Tullius, yet the municipal divisions of that monarch subsisted till the time of Augustus, who made them his model, so far as the altered circumstances of the city would...
permit. Servius had formed the different Vici into religious corporations somewhat analogous with our parishes, with an appointed worship of the Lares, and proper feasts or Comitialia. During the Re-

public these corporations became a kind of political clubs, and were often made the engines of designing
demagogues. (Pruller, Regiones, p. 81.) Au-

gustus, in his new distribution, also adopted the scheme of embodying the Vici as religious corpo-

rations, and for this purpose erected chapels in the crescenta, set up images of the gods Victor, the Apollo Sandaliarius and the Jupiter Tragoedus. (Suet. Aug. 57.) Many bases of these statues have been discovered. By the term Vicus we are to understand a certain collection of houses insolated by streets running round all its sides; whereas the term comis also to be applied to the streets themselves ("altero vicis attellantur, cum id genus sediciorum
definitur, quae continentia sunt in opidi, quaeve
itinerebus regionibusque distributa inter se distant, nominibusque dissimilibus disserimina causae sunt
disparitas," Fest. p. 371, et ibi MÜLL.). Compitus, 
which means properly a cross-road, was also, 
especially in ancient times, only another name for 
Vicus; and thus we find Pliny describing Rome as divided into Succurum. The marks of the streets of Rome are still
visible. (Suet. Aug. 9.) The Vicus and Comitis, regarded as streets, were narrower than the Vias and Plateas. (Suet. Aug. 45; Amm. Marc. xxviii. 4. § 29.) They were named after temples and other objects. The Vicus were composed of two classes of houses called respect-
ively insulae and domus. The former were so called 
because, by a law of the XII. Tables, it was ordained that the doors of the buildings should have an interval of 2½ feet, called ambitus, and by later authors 
16, 111 MüLL.). This law, which seems to have been designed for purposes of health and for security against fire, was disregarded during the Republic, and again enforced by Nero when he rebuilt the city (Tac. Ann. 
xx. 45), and the insulae was conveyed to the subject by Antoninus and Verus (Dig. viii. 2. 14). By insulae, 
therefore, we are to understand single houses divided by a small space from the neighbouring ones, not a complex of houses divided by streets. The latter division formed a Vicus. Yet some insulae were so large and disposed in such a manner that they almost resembled Vici (vide Fest. p. 371, et ibi MüLL.). The 
insulae were inhabited by the muddling and lower 
classes, and were generally let out in floors ("coena-
cula meritoria," Dig. xii. 2. 30). It appears from the 
same authority that they were farmed by persons 
who undertook them; but sometimes the proprietors kept stews to collect their rents. Insulae were named after their owners, who were called "domini insularum" (Suet. Conv. Trib. 48). Thus we 
hear of the insula Encarcipana, Citoniana, Arriana, 
&c. (vide Gruter, 611. 13; Murat. 948. 9.) Rent 
was high (Juv. iii. 166), and investments in houses 
consequently profitable, though hazardous, since the 
principle of insurance was altogether unknown. 
(Gell. xvi. 1, 2.) Crescens was a great speculator in 
houses, and was said to possess nearly half Rome. 
(Paul. c. 2.) The domus, on the contrary, were the 
habitations or palaces of the rich and great, and 
consequently much fewer in number than the insulae, 
the proportion in each Region being 1 to 25 or 30. 
The domus were also commonly insulated, but not by 
any special law, like the insulae. They were also 
composed of floors or stages, but were occupied by a 
single family (Petron. 17); though parts of them, 
especially the postica, were sometimes let out (Plaut. 
Trin. i. 3. 157; Suet. Nero, 44; Vitell. 7).

The number of insulae and domus in each Vicus would of course vary. Augustus appointed that each 
should be under the government of magistrates elected 
from its plebeian inhabitants ("magistri e plebei 
quinque vicinis lecti,"—where vicinis has its origi-
nal meaning of the householders composing a Vicus, 
Suet. Aug. 30). Hence Livy calls them "in-
numorum magistratuum" (xxiv. 7.). They were 
called also Succurum, Magistri Succurum, Suc-
curum, and Magistri Larum, and their number varied 
more than to four in each Vicus. In the Basilica 
Capitolina each Vicus has 4 Magistri; but the 
Notitia and Curiosissimus mention 48 Vico-magi-
stri in each Region, without reference to the num-
ber of Vicus. On certain days, probably the Com-
itialia (Ascon. in Cic. Pl. p. 7), these magistrates 
were allowed to assume the toga praestans, and to 
be attended by two lictors; and the public slaves of 
each Region were at their command, who were commonly at 
the disposal of the sediles in case of fire. (Dion Cass. 
iv. 8; Liv. l. c.) The principal duties of their 
office were to attend to the worship of the Larum, re-
cessions of the people, &c. For Augustus restored 
the Caelian Vicus to the Romans, and in 127 the 
Lares in spring and summer (Suet. Aug. 31), and 
cause his own Genius to be added to the two Larus 
which stood in the sedicum or chapel of each com-
pitum. (Ov. Fast. v. 145.) The Vico-magistrum 
likewise superintended the worship of the popular 
deities Sta Mater and Vulcanus Quietus, to whom, as 
protectors against fire, chapels were erected, first in 
the Circus Maximus, and afterwards by the different streets. (Fest. p. 317, MüLL.; cf. Pruller, Regiones, p. 84.)

A certain number of Vicus, varying according to 
the Notitia and Curiosissimus from 7 to 78 constituted a 
Regio; and Augustus divided Rome into 14 of these 
Regions. The 4 Servian Regions were followed in 
the first 6 of Augustus. In determining the bound-
aries of the Regions Augustus seems to have been caused 
them to be measured by feet, as we see them enumer-
ated in the Notitia and Curiosissimus. The limits appear to 
have been marked by certain public buildings, not 
by cippi. We may safely assume that Augustus in-
cluded the suburbs in his city, but not within a pomer-
rium, since the Portici Octaviae is mentioned, as being 
outside of the pomerium, although it lay far within the 
9th Region. (Dion Cass. iv. 8.) The Regions 
appear at first to have been distinguished only by 
numbers; and officially they were perhaps never 
distinguished otherwise. Some of the names of 
Regions found in the Notitia and Curiosissimus are post-
Augustan, as those of Isis and Serapis and Forum 
Paetus. The period when names were first applied to 
them cannot be determined. They are designated 
only by numbers in Tacitus and Frontinus, and even 
in the Basilica Capitolina which belongs to the time of 
Hadrian. We find, indeed, in Suetonius "Regio 
Palatii" (Aug. 5, III. i. gramm. 2); and so also he 
says "Regio Martii Campi," which never was a 
Region (Cass. 39, Nero, 12); and in these in-
stances Regio seems to be used in its general 
sense.

The boundaries of the Regions cannot be traced 
with complete accuracy; but, as it is not our inten-
tion to follow those divisions when treating of the 
topography of the city, we shall here insert such a 
general description of them as may enable the reader 
to form some notion of their situation and relative 
sizes. Regio I., or Porta Capena, embraced the
embury lying outside of that gate, to the E. of the baths of Antoninus. It contained 10 Vici, and among its principal objects were, the temple of Mars, the arch of Drusus, and the sepulchre of the Scipios. Regio III., or Caesalmonita, lay to the N. of this, and comprehended the whole extent of the Caelian hill. It had 7 Vici, and among its monuments may be mentioned the Arcus Dobalaeas and the aqueduct of Nero. Regio III., called Isia and Serapis, lay to the N. of the Caesalmonita, and embraced the valley of the Colesseum, and that southern portion of the Esquiline as yet unknown as the Capitoline. The hilly area round the Vici, the principal objects were the baths of Titus and the Flavian amphitheatre or Colesseum. Regio IV., called Templum Pacis and Sacra Via, was situated to the W. of that of Isia and Serapis, and comprehended the Velian ridge and the greater part of the valley between the Palatine, Esquiline, Viminale, and Quirinal, to the exclusion, however, of that western portion which lay immediately under the Capitoline. Yet it embraced the buildings on the N. side of the forum, including the temple of Faustina, the Basilica Paulli, and the Area Vulcana. Its eastern boundary ran close to the Colesseum, since it included the Colosseus and the Meta Sudans, both which objects stood very near that building. Regio V., called Trajaniana, most probably mentioned, were the temple of Venus and Rome, and the basilica of Constantine. It embraced the Subura, the greater portion of the Sacra Via, and the Forum Transitorium, and contained 8 Vici. Regio V., or Esquilina, included the northern portion of the Esquiline (Moni Cipani) and the Viminale, besides a vast tract of suburbs lying to the E. of the Servian walls and agger. Thus it extended so far as to embrace the Amphitheatrum Castrense, which adjoins the modern church of S. Croce in Gerusalemme, and the so-called temple of Minerva Medica, near the Porta Maggiore. It had 15 Vici, and among its remaining principal objects were the gardens of Maccaroni, the arch of Galliciuses, and the Nymphseum of Alexander Severus. Regio VI., called Alta Semita, embraced the Quirinal, and extended to the E. so as to include the Praetorian camp. It had 17 Vici, and its chief objects were the baths of Diocletian, the house and gardens of Eustus, and the ancient Capitol. Regio VII., or Via Latina, was bounded on the E. by the Quirinal, on the N. by the Pincian, on the S. by the Servian wall between the Quirinal and Capitoline, and on the W. by the road called Via Latina till it joined the Via Flaminia—a point which cannot be accurately ascertained. The Via Latina was the southern portion of the modern Corso, and probably extended to the N. nearly as far as the Antonine column. The Region comprehended 15 Vici. Being without the Servian walls, part of this district was anciently a burying place, and the tomb of Ribulius is still extant. Regio VIII., or Forum Romanum Magnum, was one of the most important and populous in Rome. The ancient forum obtained the name of "Magnus" after the building thereof of Caesar. (Dion Cass. xiii. 22.) This Region, which formed the central point of all the rest, embraced not only the ancient forum, except the buildings on its N. side, but also the imperial fora, the Capitoline hill, and the valley between it and the Palatine as far as the Velabrum. It contained 34 Vici, among which were the densely populated ones Jugarius and Tuscia. The monuments in this district are so numerous and well known that it is unnecessary to specify them. Regio IX., called Circus Flaminius, comprehended the district lying between the Via Latina on the E., the Tiber on the W., the Capitoline hill and Servian wall on the S.; whilst on the N. it seems to have extended as far as the present Piazza Navona and Piazza Colonna. It contained 35 Vici, and among its objects of interest may be named the circus from which it derived its name, the three theatres of Balbus, Pompey, and Marcellus, the Pantheon, and many other celebrated monuments. The Campus Martius, or northern part of the area between the Capitoline hill and the Tiber, was not comprehended in any of the 14 Regions. Regio X., or Palatium, consisted of the Palatine hill and its declivities. It had 20 Vici. Its boundaries are so well marked that we need not mention its numerous and well-known monuments till we come to describe its topography. Regio XI., or Circus Maximus, derived its name from the circus, which occupied the greater part of it. It comprehended the valley between the Palatine and Aventine, and also apparently the northern declivities of the latter hill, as far as the Porta Trigemina. On the N., where it met the Region of the Forum Romanum, it seems to have included the Velabrum. It contained 19 Vici according to the Notitia, 21 according to the Curiosum. Regio XII., or Forum Transitorium, was bounded on the W. by the Aventine, on the N. by the Caelian, on the E. by Regio I., or Porta Capena, and on the S. it probably extended to the line of the Aurelian walls. It had 17 Vici, and its most remarkable monument was the baths of Caracalla. Regio XIII., or Aventinum, included that hill and the adjoining banks of the Tiber. It had 17 Vici according to the Notitia, 18 according to the Curiosum. Regio XIV., Transiberina, or Transiberim, comprehended all the suburb on the W., or right bank of the Tiber, including the Vatican, the Janiculum, with the district between them and the river, and the Insula Tiberina. This, therefore, was by far the largest of all the Regions, and contained 78 Vici.

Municipal Regulations of Augustus.—All these Regions were under the control of magistrates chosen annually by lot. (Suet. Aug. 30.) The government of the Regions was not corporative, like that of the Vici, but administrative; and one or more Regions seem to have been intrusted to a single magistrate chosen among the equestrian, tribunes, or praetors. (Pfleller, Regiones, p. 77.) The supreme administration, however, was vested in the Praefectus Urbis. At a later period other officers were interposed between the praefect and these governors. Thus the Basiil Capitoline mentions a Curator and Denunciator in each Region. Subsequently, however, the latter office seems to have been abolished, and the Notitia and Curiosum mention these two curators in each Region. They were also subordinate officers, such as praecores or criers, and a number of imperial slaves, or libertinii, were appointed to transact any necessary business concerning the Regions. (Pfleller, p. 79.)

One of the chief objects of Augustus in establishing these Regions seems to have been connected with a reform of the city police. For this purpose he established 7 Cohortes Vigilum, whose stations were so disposed that each cohort might be available for two Regions. Each was under the command of a tribune, and the whole was superintended by a Praefectus Vigilum. (Suet. Aug. 30; 3 b 2)
Dion Cass. I. v. 26; Paulus, de Offic. Praef. Vigi., Dig. i. 15.) As these stations were necessarily near the borders of Regions, we find them frequently mentioned in the Notitia and Consilia. They seem to have been a sort of barracks. But besides the 7 principal stations, the Prefectures mention 14 escusioria, or outposts, which seem to have been placed in the middle of each region. The corps of which they were composed were probably supplied from the main stations. The duties of the vigiles were those of a night-police, namely, to guard against fires, burglaries, highway robberies, &c. The first of their functions mentioned is that of certain triumphs, called from their functions nocturni, who were assisted by public slaves stationed at the gates and round the walls. The same office was, however, sometimes assumed by the secediles and tribunes of the people. (Paulus, l. c.) The vigiles were provided with all the arms and tools necessary for their duties; and from a passage in Petrarch (c. 79) seem to have possessed the power of breaking into houses when they suspected any danger. The numbers of the vigiles amounted at last to 7000 men, or 1000 in each cohort. Augustus also established the Cohortes Praetorianae, or imperial guard, of which 9 cohorts were disposed in the neighbourhood of Rome, and 3 only, the Cohortes Urbanae, were permitted within the city. (Tac. Ann. iv. 5; Suet. Aug. 49.) These cohorts of Augustus were under the command of the Praefectus Urb. (Tac. Hist. iii. 64.) It was his successor, Tiberius, who, by the advice of Sejanus, first established a regular Praetorian camp at Rome, a little to the eastward of the agger of Servius, and placed the bands under the command of a Praefectus Praetoria. (Tac. Ann. iv. 2; Suet. Tiber. 37.)

Augustus also paid considerable attention to the method of building, and revived the regulations laid down by P. Rutulus Rufus with regard to this subject in the time of the Gracchi (Suet. Aug. 89); but all we know of these regulations is, that Augustus forbade houses to be built higher than 70 feet, if situated in the city, and 100 feet, if situated in the camp. This law was subsequently regulated by Nero and Trajan, the last of whom fixed it at 60 feet. (Aur. Vict. Epit. c. 13.) Yet houses still continued to be inconveniently high, as we see from the complaints of Juvenal, in the time, probably, of Domitian, and dangerous alike in case of fire or falling, especially to a poor post who lived immediately under the tiles;

"Nus urbem olimus temui tibicines fultum
Magna parte sui; nam sic labenteris obstat
Villeus, et vetus rimos quum tezit hiustum
Securos pendente jubet dormire ruina.
Vivendum est illice ubi nulla incendia, nulli
Nocte metus. Jam paecat aquam, jam frivola
transfert"

Usecogon: tabulata tibis jam tertia fumant:
Tu necie; nam si gradibus trepidatur ab imis
Ulitimus ardebit, quem tegula sola sustet
A pluvia, molles ubi redundat ova columbae."

(iii. 193.)

Augustus Roma. — Strabo, who visited Rome in the reign of Augustus, and must have remained there during part of that of Tiberius, has left us the following lively picture of its appearance at that period: "The city, having thus attained such a size, is able to maintain its greatness by the abundance of provisions and the plentiful supply of wood and stone for building, which the constant fires and continual falling and pulling down of houses render necessary; for even pulling down and rebuilding in order to gratify the taste is but a sort of voluntary ruin. Moreover the abundant mines and forests, which have been formed, afford wonderful means for these purposes. Such is the Anio, flowing down from Alba (Fucensis), a Latin city lying towards the territory of the Marsians, and so through the plain till it falls into the Tiber: also the Nar and the Tenes, which likewise join the Tiber after flowing through Umbriam and Etruria, and to the north the river the territory of Chasian. Augustus Caesar took great care to obviate such damages to the city. To guard against fires he appointed a special corps composed of freedmen; and to prevent the falling down of houses he ordained that no new ones should be built, if they adhered the public streets, of a greater height than 70 feet. Nevertheless the renovation of the city would have been impossible but for the before-mentioned mines and forests, and the facility of transport.

"Such, then, were the advantages of the city from the nature of the country; but to these the Romans added those which spring from industry and art. Although the Greeks are supposed to excel in this department, the Romans were not behind them in the beauty of their architecture and the strength of their situation, but also to the selection of a fertile country and convenient harbours, yet the Romans have surpassed them by attending to what they neglected, such as the making of high-roads and aqueducts, and the constructing of sewers capable of conveying the whole drainage of the city into the Tiber. The high-roads have been constructed through the country in such a manner, by levelling hills and filling-up hollows, that the wagons are enabled to carry freight sufficient for a vessel; whilst the sewers, vaulted with hewn blocks of masonry, are sometimes large enough to admit the passage of a hay-cart. Such is the volume of water conveyed by the aqueducts; and of the rivers which serve to drain the city, which are carried off by the sewers. Thus almost every house is provided with water-pipes, and possesses a never-failing fountain. Marcus Agrippa paid particular attention to this department, besides adorning the city with many beautiful monuments. It may be said that the ancient Romans neglected the beauty of their city, being intent upon greater and more important objects; but later generations, and particularly the Romans of our own day, have attended to this point as well, and filled the city with many beautiful monuments. Pompey, Julius Caesar, and Augustus, as well as the children, friends, wife and sister of the last, have bestowed an almost excessive care and expense in providing these objects. The Campo Vaccino, and the special care, the natural beauties of which have been enhanced by their designs. This plain is of surprising extent, affording unlimited room not only for the chariot races and other equestrian games, but also for the multitudes who exercise themselves with the ball or hoop, or in wrestling. The neighbouring buildings, the picturesque verdure of the grass, the hills which crown the opposite banks of the river and produce a kind of scenic effect, all combine to form a spectacle from which it is difficult to tear oneself. Adjoining this plain is another, and many porticoes and sacred groves, three theatres, an amphitheatre, and temples
so rich and so close to one another that they might appear to exhibit the rest of the city as a mere supplement. Hence this place is considered the most honourable and sacred of all, and has been appropriated to the monuments of the most distinguished men and women. The most remarkable of these is that called the Mausoleum, a vast mound near the river Tiber, made of white stone, and surmounted by a large obelisk. On the top is a statue of Augustus; whilst under the mound are the tombs of himself, his relatives, and friends, and at the back of it a large grove, affording delightful promenades. In the middle of the Campus is an enclosed space where the body of Augustus was buried, also constructed of white stone, surrounded with an iron wall, and planted in the interior with poplar trees. Then if we proceed to the ancient forum, and survey the numerous basilicas, porticoes, and temples which surround it, and view the Capitol and its works, as well as those on the Palatine and in the portico of Livius, we might easily be led to forget all other cities. Such is Rome.

In spite, however, of this glowing picture, or rather perhaps from the emphasis which it lays on the description of the Campus Martius, whilst the remainder of the city is struck off with a few light touches, it may be suspected that in the time of Augustus the ancient part of Rome, with the exception of the immense vicus, the forum, and Capitol, did not present a spectacle of any great magnificence. The narrowness and irregularity of the streets, the consequence of the hasty manner in which the city was rebuilt after its destruction by the Gauls, still continued to disfigure it in the time of Augustus, as is shown by a passage in Livy (v. 55), already cited (cf. Tacitus, Ann. xv. 38; Obornia urbe artis hibernus, hueque et illius flexae, atque enormis vicis, quasio vites Roma fuit)—that is, before the fire. This defect was not remedied till the great fire in the reign of Nero, which forms the next remarkable epoch in the history of the city.

V. THE CITY TILL THE TIME OF AURELIAN.

Fire under Nero.—There had been a destructive fire in the reign of Tiberius, which burnt down all the buildings on the Caesian hill (Tac. Ann. iv. 64); but this was a mere trifle compared with the extensive conflagration under Nero. The latter, the most destructive calamity of the kind that had ever happened at Rome, is unequivocally said by Suetonius (Nero, 38) to have been caused by the wilful act of the emperor, from disgust at the narrow and winding streets. Nero is represented by that historian as contemplating the flames with delight from the tower of Maecenas, on the Esquiline, and as converting the awful reality into a sort of dramatic spectacle, by singing as the fire raged, in proper scenic attire, the Sack of Troy; nor does the more judicious Tacitus (Ann. xv. 27, 38, seq.) pretend to doubt this. The fire commenced at the lower part of the Circus Maximus, where it adjoined the Caesian and Palatine, in some shops containing combustible materials. Thence it spread through the whole length of the circus to the Forum Boarium, and northwards over the whole Palatine till it was arrested as the foot of the Esquiline. It lasted six days and seven nights, and its extent may be judged from the fact that out of the fourteen Regions three were completely destroyed, and seven very nearly so, whilst only three escaped altogether untouched.

The three Regions utterly destroyed must have been the xith, xth, and xivth, or those called Circus Maximus, Palatium, and Tempulum Pacis. The forum must have suffered considerably, but the Capitol seems to have escaped, as the Capitoline temple, after its first destruction in the time of Sulla, remained entire till burnt by the Vetulitans. The narrow and crooked streets, and the irregularity of which ancient Rome was composed, rendered it impossible to arrest the conflagration. Nero was at Antium when it broke out, and did not return to Rome till the flames were threatening his own palace, which he had not the power to save. This was the Domus Transitoria, the domain of which he had extended from the Palatine to the gardens of Maecenas on the Esquiline. What chiefly directed suspicion against Nero, as having wilfully caused the fire, was the circumstance of its breaking out aesh in the Aeolian property of his minister Tigellinus.

Much irremovable loss was occasioned by this fire, such as the destruction of several time-honoured temples, with their priceless treasures, and a vast amount of private property. Among the venerable temples which perished on this occasion, were that of Luna, erected by Servius Tullius, the altar and fane of Hercules in the Forum Boarium, the temple of Jupiter Stator, founded by Romulus, those of Vesta and of the Penates Populi Romani, and the Regia of Numa. Yet all the other buildings, the fire made room for great improvements. Nero caused the town to be rebuilt on a regular plan, with broad streets, open spaces, and less lofty houses. All the buildings were isolated, and a certain portion of each was constructed with Alban or Gabiniian stone, so as to be proof against fire; to guard against which a plentiful supply of water was laid on. As a means of escape and assistance in the same calamity, as well as for the sake of ornament, Nero also caused porticoes to be built at his own expense along the fronts of the insulae. He supplied the proprietors with money for building, and specified a certain time by which the houses were to be completed (Tac. Ann. xv. 38—43; Suet. Nero, 38). Thus Rome sprang a second time from her ashes in a style of far greater splendour than before. The new palace, or domus aurea, of the emperor himself kept pace with the increased magnificence of the city. Its bounds comprehend large parks and gardens, filled with wild animals, where solitude might be found in the very heart of the city; a vast lake, surrounded with large buildings, filled the valley in which the Flavian amphitheatre was afterwards erected; the palace was of such extent as to have triple porticoes of a thousand feet; in the vestibule stood a colossal figure of Nero himself, 120 feet in height; the ceilings were panelled, the chambers gilt, and inlaid with gems and mother-of-pearl; and the baths flowed both with fresh and sea water. When this magnificent palace was completed, Nero unqualifiedly, and with his usual artlessness, confessed that his wish for it was to be the wonder of the world. But to have the name of an emperor who had vouchsafed to honour it with his qualified approbation, and been heard to say, "that he was at last beginning to lodge like a man." (Suet. Nero, 31; Mart. de Spect. 2.)

Changes under subsequent Emperors.—The two predecessors of Nero, Caligula and Claudius, did not effect much for the city; and the short and turbulent reigns of his three successors, Galba, Otho, and Vitellius, were characterised rather by destruction than improvement. Caligula indeed perfected some of the designs of Tiberius (Suet. Cal.
ROMA.

21); and the reign of Claudius was distinguished by the completion of two aqueducts and the construction of several beautiful fountains (Id. Claud. 20). The factious struggles between Otho and Vitellius were marked by the ominous burning of the Capitol. At length the happier era of the public-spirited Vespasian distinguished alike by his regard for the civil liberties of the Romans, and for their material comforts, by the attention which he paid to the improvement of the city, and by his restoring to the public use and enjoyment the vast space appropriated by Nero for his own selfish gratification. The bounds of the imperial palace were again restricted to the limits of the Palatine, and on the site of Nero's lake rose a vast amphitheatre destined for the amusement of so many thousands of the Roman people, whose ruins we still gaze at with wonder and admiration. Vespasian was likewise the founder of the temple of Peace, near the Forum, and of a temple to Claudius on the Caelian hill. Titus pursued the popular designs of his father, and devoted a large portion of the former imperial gardens on the Esquiline to the foundation of public baths. (Suet. Tit. 7; Mart. iii. 20. 15.) Under this emperor another destructive fire raged for three days and nights at Rome, and again laid a great part of the city in ashes. (Suet. Tit. 8.) The chief works of Domitian were the rebuilding of the temple of Jupiter Capitolinus, which had again been burnt, on the site of the ancient Forum, and which was said to have expended 12,000 talents, or nearly three millions sterling; and the foundation of a new forum, which, however, was not finished till the time of Nero, whose name it bore. (Id. Dom. 5.) Trajan constructed the last of the imperial fora, with which was connected the Basilica Ulpia. (Dion Cass. lxxiv. 4.) Rome probably attained its highest pitch of architectural splendour under the reign of his successor Hadrian. That emperor had a passion for building, and frequently furnished his own designs, which, however, were not always in the best taste. His most remarkable works were the Mausoleum on the right bank of the Tiber, now the Castello di S. Angelo, the Temple of Venus and Rome near the Colosseum, whose remains are still seen at the foot of the ascent which leads to Tivoli. (Spart. Hadr. 19; Procop. B. G. i. 22.)

It would be tedious and unprofitable to recount the works of succeeding emperors down to the time of Aurelian; and it may suffice to mention that those who most contributed to renovate or adorn the city were Septimius Severus, Caracalla, and Alexander Severus. During this period Rome betrayed unequivocal symptoms of her approaching decline and fall. Large bodies of the barbarians had already penetrated into Italy, and, in the reign of the accomplished but feeble Gallienus, a horde of the Alemanni had invaded and insulted Rome itself. After a lapse of eight centuries its citizens again trembled for the safety of their families and homes; and the active and enterprising Aurelian, whilst waging successful wars in Egypt and the East, found himself compelled to secure his capital by fortifying it with a wall.

This great undertaking, commenced A. D. 271, was completed in the reign of Probus, the successor of Aurelian. (Vopisc. Aur. 31, 32; Ann. Vict. Cass. 35; Eutrop. ix. 15; Zosim. i. 49.) The accounts of the circumference of this wall are discrepant and improbable. Vopiscus (Aurel. c. 39) mentions the absurd and extravagant measure of nearly 50 miles; which, however, has been adopted by Lippius and Isaac Vossius, as well as by Nibby (Metr. v. c. 120, seq.). The walls of Aurelian were repaired by Honorius, and with the exception of that part beyond the Tiber, and some modern additions by the Popes, are substantially the same as those which now exist, as appears from the inscriptions which give the name of the emperor. Without the additions referred to, their circumference would be between 11 and 12 miles, thus reducing the city to about the same dimensions as those given by Pline in the time of Vespasian; nor is there any reason to believe that, in the sinking state of the Empire, the city would have received any increase of inhabitants. Another measurement by Ammon, the geometer, just before the siege of the city by Alaric, gave a circumference of 21 miles (Philo. B. B. 80, p. 63, ed. Bekk.); but this number, though adopted by Gibbon, and nearer to the truth, cannot be accepted any more than that of Vopiscus. (Gibbon, Decl. and Fall, vol. ii. p. 17, ed. Smith, and notes.) Palaus suggested that Vopiscus meant pedes instead of passus, and other emendations of both the passages have been proposed; but without discussing the merit of these, it is sufficient to know that the texts are undoubtedly either corrupt or erroneous. This may be briefly but decisively shown from the following considerations, which will, for the most part, apply to both the statements:—1st, the incredible extent of the work; 2nd, the size of the area which it would cover, if built within the buildings within their supposed limits, such as would naturally belong to a city; 4th, the fact that the extant inscriptions ascribe to Honorius the restoration of an old line of walls and towers, not the construction of a new one. (Bunbury, in Class. Metr. iii. p. 368.)

VI. DECLINE AND FALL OF THE CITY.

The history of the city from the time of Aurelian presents little more than a prospect of its rapid decline. The walls of that emperor were ominous of its sinking fortunes; but the reign of Diocletian forms the first marked era of its decay. The triumph of that emperor and of his colleague Maximian, A. D. 305, was celebrated by a most magnificent festive procession and games in Rome, the principal events of which are distinguishable by the trophies of an important Persian victory. (Eutrop. ix. 27.) The Roman emperors had long ceased to be of Roman extraction; Diocletian, the descendant of slaves, was born in Dalmatia; Maximian, the son of a peasant, was his fellow countryman; and thus neither was wedded by any ties of birth or patriotism to the ancient glories of the eternal city. These were the first emperors who deserted the capital to fix their residence in the provinces. Maximian established his court at Milan, whilst Diocletian resided at Nicomedia, on the embellishment of which he lavished all the treasures of the East, in endeavouring to render it a rival worthy of Rome. His only visit to the ancient capital seems to have been on the occasion of his triumph; it was not prolonged beyond two months, and was closed with unexpected precipititation and abruptness. (Lact. Mort. Pers. c. 17.) Yet his reign is distinguished as having conferred upon the city one of the latest, but most magnificent of its monuments,—the baths on the Quirinal which bear his name, by far the largest in Rome, whose enormous ruin may still be traced, and afford room enough for various churches, convents, and gardens. (Vopisc. Pr. 2; Oriell. Inscr. 1056.) Subsequently, indeed, Maxentius,
ROMA.

the partner and rival of Constantine, resided at Rome during the six years of his reign, and affected to prize the elegance of the ancient metropolis; whilst his lust and tyranny, supported by squandering its treasures, created more disgust among the Romans than the absence of their former sovereign. Maxentius, however, adored the city which he polluted by his vices, and some of his works are among the last monuments worthy to be recorded. He restored the temple of Venus and Rome, which had been damaged by a fire, and erected that magnificent basilica, afterwards dedicated in the name of Constantine, whose three enormous arches may still be viewed with admiration. (An. Vict. Cas. c. 40. § 26.) The final transfer of the seat of empire to Byzantium by Constantine gave the last fatal blow to the civic greatness of Rome. Yet even that emperor presented the city—we can hardly say adored it—with a few monuments. One of them, the arch which records his triumph over Maxentius, still subsists, and strikingly illustrates the depth of degradation to which architectural taste had already sunk. Its beauties are derived from the barbarous pillage of former monuments. The sculptures, the statues of the acts and victories of Trajan, were ruthlessly and absurdly constrained to typify those of Constantine; whilst the original sculptures that were added, by being placed in juxtaposition with those beautiful works, only serve to show more forcibly the hopeless decline of the plastic arts, which seem to have fallen with paganism.

*Home in the Time of Constantius II.*—From this period the care of the Romans was directed rather towards the preservation than the adornment of their city. When visited by the Second Constantius, A.D. 357, an honour which it had not received for two and thirty years, Rome could still display her ancient glories. The lively description of this visit by Ammianus Marcellinus, though written in a somewhat inflated style, forms a sort of pendant to Strabo's picture of Rome in the age of Augustus, and is striking and valuable, both as exhibiting the condition of the eternal city at that period, and as illustrating the fact that the men of that age regarded its monuments as a kind of Titanic reliquarum, which they hoped or longed to think of imitating. "Having entered Rome," wrote the historian, "the seat of empire and of every virtue, Constantius was overwhelmed with astonishment when he viewed the forum, that most conspicuous monument of ancient power. On whatever side he cast his eyes, he was struck with the thronging wonders. He addressed the senate in the Curia, the people from the tribunal; and was delighted with the applause which accompanied his progress to the palace. At the Circus games which he gave, he was pleased with the familiar talk of the people, who, without betraying pride, asserted their hereditary liberty. He himself observed a proper mean, and did not, as in other cities, arbitrarily terminate the contests, but, as is customary at Rome, permitted them to end as chances directed. When he viewed the different parts of the city, situated on the sides of the seven hills and in the valleys between them, he expected that whatever he first saw must be superior to everything else: such as the temple of the Tarpeian Jove, whose excellence is like divine to human; the baths which occupy whole districts; the enormous mass of the amphitheatre, built of solid Tiburtine stone, the height of which almost baffles the eye; the Pantheon, which may be called a circular Region, vaulated with lofty beauty; the high, but accessible mounds, bearing the statues of preceding princes; the temple of Rome, the forum of Peace; the theatre of Pompey, the odeum, the stadium, and other similar monuments of the eternal city. But when he came to the forum of Trajan, which we take to be a structure unparalleled in the whole world, he was confounded with astonishment as he surveyed those gigantic proportions, which can neither be described nor again imitated by man. Wherefore, laying aside all hope of attempting anything of the kind, he merely expressed the power and the wish to imitate the horses of Trajan, on which that prince is seated, and which stands in the middle of the Atrium. Hereupon prince Hormisdas, who stood near him, exclaimcd with national gustigation: 'First of all, emperor, order such a stable to be made for it, if you can, that the horses you propose making may lodge as magnificently as the one we behold.' The same prince being asked his opinion of Rome said that the only thing which disappased him was to perceive that men died there as well as in other places. So great was the emperor's surprise that all three nights he lay awake, fearing that rumour, which commonly magnifies everything, had here shown itself weak and malignant, and had given but a feeble description of the wonders of Rome. Then, after much deliberation, he resolved that the only way in which he could add to the ornaments of the city would be by erecting an "*Circus Maxil" in the Forum.*" (xvi. 157.)

The same historian from whom the preceding topographical picture has been transcribed has also left some lively and interesting notices of the manners of the Romans at this period. These have been paraphrased in the eloquent language of Gibbon, to whose work the reader is referred for many interesting particulars concerning the state of Rome at this time (vol. iv. pp. 70—89, ed. Smith). We may here observe with surprise that whilst Alaric, like another Hannibal, was threatening her gates, her nobles were revelling in immoderate wealth, and squandering the revenues of provinces on objects of pomp and luxury, though, as we have seen, the arts had fallen to so low an ebb that there was no longer any hope of rivalling the works of those ancients. The poorer classes of the people, few of whom could now boast a pure Roman descent, resembled the inmates of a poorhouse, except that their pleasures were provided for as well as their wants. A liberal distribution of corn and bacon, and sometimes even of wine, relieved their necessities, whilst health and recreation were promoted by gratuitous admittance to the baths and public spectacles. Yet Rome was now struggling for her existence. We have already mentioned the restoration of the walls by Honorius. It was under the same emperor that the first example occurs of that desecration by which the Romans stripped and destroyed their own monuments. If we may credit Zosimus (v. 38), Stilicho was the first to lay violent hands on the temple of the Capitoline Jove, by stripping off the plates of gold which lined its doors, when the following inscription was found beneath them: "Minero regi servavtm." In after times this example was but too frequently followed; and it may be said with truth that the Romans themselves were the principal destroyers of their own city.

*The Baths at Rome.*—After two sieges, or rather blockades, in 408 and 409, the Goths
under Alaric, Rome was captured and sacked on
a third occasion in 410 (A. u. c. 1183) — the
first time since the Gallic invasion that the
city had actually been in the hands of an enemy. But
though it was plundered by the Goths, it does not
appear to have sustained much damage at their
hands. They evacuated it on the sixth day, and all
the mischief they seem to have done was the setting
fire to some houses near the Salarian gate, by which
the enemy could command the Forum; the Goths spread the Agrippa.EventType as if it
were a valley (f. 6.). That the aqueducts were perfect
also appears from Propocius (B. G. i. 19), who says
that in the subsequent siege under Vitiges, the
Goths broke them down, to deprive the inhabitants
of their supply of water. The theatres had suffered
only from the effects of time, and were repaired by
Theodoric (Classed. std. i. 51).

In the year 536 the Gothic garrison, with
the exception of their commander Lenderius, who
preferred captivity to flight, evacuated Rome on the
approach of Belisarius, the lieutenant of Justinian.
Belisarius entered as the Arian gate; and, after
anealination of six years, Rome was restored to
the Senate and People, and remained a Roman cit
for several months; the city was besieged by the numerous host of Vitiges,
the newly elected king of the Goths; and its de-
defence demanded all the valour and ability of Be-
lisarius. For this purpose he repaired the walls,
which had again fallen into decay. Regular bastions
were constructed; a chain was drawn across the
Tiber; the arches of the aqueducts were fortified;
and the workshops of the convict prisoners were
converted into a storehouse. A new defensive wall
was built, to ensure the safety of the city. The Tiber
was bridged, and a light bridge was thrown across it
at the Forum Flaminium to the Porta Praenestina; whilst a seventh
section of the walls was formed near the Vatican, for
the purpose of command the Tiber and the Milvan bridge. In
the general assault which followed, a feat was made at
the Salarian gate, but the principal attacks were
directed against the mole of Hadrian and the Porta
Praenestina. It was on this occasion that the
Romans took advantage of the confusion of the
forces of the army, knights and foot soldiers, to
molest the'soldiers with arrows and missiles, and
burladown upon the besiegers. When
the ditch of St. Angelo was cleansed in the pontifi-
cate of Urban VIII., the Sleeping Fame of the Bar-
berini Palace was discovered, but in a sadly mutilated
state. (Winkelmann, Hist. d'Art, to. ii. p. 52, sq.)

But the assault was not successful, and after a fruit-
less siege, which lasted a year, the Goths were
forced to retire.

After the recall of Belisarius the Goths recovered
strength and courage, and, under Totila, once more
threatened the walls of Rome. In 544 Belisarius
was again despatched into Italy, to retrieve the
faults of the generals who had succeeded him; but
on this occasion he was himself successively
through the Visigoths, and, after a fruitless
attempts to relieve the city, was compelled to retreat to Ostia.

In December, 546, the Goths were
admitted into the city by the treachery of some
Maurian sentinels posted at the Asinian gate.
Rome was again subjected to pillage, and appears
in all the circumstances of this former occasion.
A third part of the walls was destroyed in different
places, and a great many houses were burnt.
Totti threatened to destroy the finest works of antiquity, and even issued a decree that Rome should be turned into a desert. The Senate decreed that laws should be promulgated, and the city should be made into a desert, and that the ruins should be removed to make it uninhabitable. Totti's men went on to destroy the statues and monuments in the city.

Rome under the Popes. — Towards the close of the sixteenth century Rome had touched the lowest point of degradation. The Roman citizens lived in continual fear of the attacks of the Lombards; the inhabitants of the surrounding country, who no longer dared to devote themselves to the pursuits of agriculture, took refuge within the walls; and the conquest of Rome by the Lombards, under Lupi, Astolfo, and other kings. In 846 the various measures of its calamities was filled up by an attack of the Saracens — as if the former mistress of the world was destined to be the butt of wandering barbarians from all quarters of the globe. The disciples of Mahomet pillaged the church of St. Peter, as well as that of St. Paul outside the walls; the Porta Settimia was invaded and occupied; and the city itself. They were repulsed by the vigilance and energy of pope Leo IV., who repaired the ancient walls, restored fifteen towers which had been overthrown, and enclosed the quarter of the Vatican; on which in 858 he bestowed his blessing and the title of Città Leonina, or Leonine city (now the Borgo di S. Pietro). In the period between 1081 and 1084 Rome was thrice fruitlessly besieged by the emperor Henry IV., who, however, by means of corruption at last succeeded in gaining possession of it; but the ruins of the Septizonium, defended by the nephew of Pope Gregory VII., resisted all the attacks of Henry's forces. Gregory VII., afterwards restored to his See by the pope, gave the Church of S. Angelo, and invoked the assistance of his vassal, Robert Guiscard. Henry fled at the approach of the warlike Norman; but Rome suffered more at the hands of its friends than it had ever before done from the assaults of its enemies. A tumult was excited by the imperial adherents, and the Saracens in Robert's army, who despised both parties, seized the opportunity for violence and plunder. The city was fired; a great part of the buildings on the Campus Martius, as well as the spacious district from the Lateran to the Colosseum, was consumed, and the latter portion has never since been restored. (Malaterra, lli. c. 87; Donatus, iv. 8.)

But Rome has suffered more injury from her own citizens than from the hands of foreigners; and its ruin must be chiefly imputed to civil dissensions
of the Romans, and to the use which they made of the ancient monuments to serve their own selfish and mercenary purposes. The façades of the Guelph and Ghibelline, of the Colonna and Urbini, which appear to belong to the 13th century and lasted several hundred years, must have been very destructive to the city. In these sanguinary quarrels the ancient edifices were converted into castles; and the multitude of the latter may be estimated from the fact that the senator Brancalzone during his government (1283—1288) caused 140 towers, or fortresses, the strangest of which is the so-called Palazzo di Roma and its neighbourhood; yet subsequently, under Martin V, we still hear of forty-four existing in one quarter of the city alone. (Matthew Paris, Hist. Maj. p. 741, seq.) Some of these were erected on the most celebrated buildings, as the triumphal monuments of Caesar, Titus, and the Antonines. (Montfaucon, Hist. Ital. p. 238, seq.) But still more destructive were the ravages committed on the ancient buildings during times of peace. The beautiful sculptures and architectural members, which could no longer be imitated, were seized upon and appropriated to the adornment of new structures. We have seen that this barbarous kind of pillage was attempted as early as the reign of Constantine, who applied the sculptures of some monument of Trajan's to adorn his own triumphal arch. In after ages Charlemagne carried off the columns of Rome to decorate his palace at Aix-la-Chapelle (Siegbert, Chron. in Bouquet, Historiens de France, v. p. 375); and several centuries later Petrarch mentions that his friend and patron, Robert, King of Sicily, was following the same pernicious example. ("Itaque nunc, he dolo! he scelus indignum i de vestris maravoris columnis, de liminibus templorum (ad quae nuper ex orbe toto concursus devotissimus flebat), de imaginibus sepulcrorum sub quibus patrum vestrorum venerabilis cins erat, ut reliquias aleam, desidiosis Napolii adornatur, " Petrarch, Opus. iii. p. 205, seq.) It was not the end of the depredations committed by the popes and nobles in order to build their churches and palaces. The abbé Barthélemy (Mem. de l'Acad. des Inscr. xxviii. p. 585) mentions that he had seen at Rome a manuscript letter relating to a treaty between the chiefs of the factions which desolated Rome in the 14th century. According to such ancient records, it is agreed that the Colosseum shall be common to all parties, who shall be at liberty to take stones from it. (De Sale; Vie de Pétryarque, i. 328, note.) Sixtus V. employed the stones of the Septizonium in building St. Peter's. (Greg. Lett. Vita di Sisto V. III. p. 50.) The nephews of Paul III. were the principal destroyers of the Colosseum, in order to build the Farnese palace (Muratori, Ann. d'Italia, xiv. p. 371); and a similar reproach was proverbs of stile applied to those of Urban VIII. (" Quod non fecerunt Barbari, securo Barberini," Gibbon, viii. p. 284, note.) But even a worse species of desecration than this was the destruction of the most beautiful marble columns, by converting them into lime. Poggio complains (A. p. 1430) that the temple of Concord, which was almost perfect when he first came to Rome, had almost disappeared in this manner. (" Capitolo contiguo forum versus superest porticus sedia Concordiae, quam primum ad urbem accessit, vidi febre integram, opere marmore adimplens admodum spe- colorum Romani postmodum, ad calorem, sedem totam et porticus partem, digerenda column, sunt demersam," de Var. i. 12.) And the same practice is reproved in the verses of Augustus Sylvius, afterwards Pope Pius II. —

"Sed tuts hic populus, muris defossa vetustatis, Calixtus in obsequium marmoru dura coquit.
Impia terentum si sic gens egredit annos
Nullam hic indicem nobilitatis erit."

(In Mabillon, Mem. Ital. i. 97.)

The melancholy progress of the desolation of Rome might be roughly traced from some imperfect memorials. The account of the writer called the Anonymous Emissariensis, written about the end of the 9th century, which has been published by Mabillon (Anec. iv. p. 502), and by Haeckel (Arch. f. Philol. u. Pädag. i. p. 115), exhibits a much more copious list of monuments than that of another anonymous writer, who compiled a book De Misteriis Romae, in the 12th or 13th century. (Montfaucon, Hist. Ital. p. 238, seq.; Bibby, Epigramm. Lett. d'ital. 1820, Fasc. i. iv.) Several passages in the works of Petrarch exhibit the neglected and desolate state of Rome in the 14th century,—the consequence of the removal of the holy see to Avignon. Thus, in a letter to Urban V., he says: "Jasero domus, labant maesta, tempus rursus, sacra praebentia, unde sedes et domus, '' Lateranum humi jacet et Ecclesiarum mater omnium tecta carera ventus patet ac pluvia," etc. (Of lib. ix. ep. 1.) Yet the remains of ancient splendour were still considerable enough to excite the wonder and admiration of Manuel Chrysoloros at the commencement of the 15th century, as may be seen in his letters to John Palaeologus (enquiries to Codinus, de Antiq. C. P. p. 107, seq.) Much destruction must have been perpetrated during this period to the time, and even during the life, of Poggio. But the progress of desolation seems to have been arrested subsequently to that writer, whose catalogue of the ruins does not exhibit a great many more remains than may yet be seen. Care has been taken to arrest, as far as possible, the inevitable influence of time; and the antiquaries has at present nothing to regret except that more active means are not applied to the disinterment of the ancient city. The funds devoted to the re-erection of a magnificent basilica far without the walls, and on so unwholesome a site that the very benefactors are forced to shut their eyes during the heat of summer, might, in the eye at least of transmontana taste, have been more worthily devoted to such an object.

VII. Population of Rome.

Before we close this part of the subject it will be expected that we should say something respecting the probable amount of the population of Rome. The inquiry is unfortunately involved in much obscurity, and the vagueness of the data upon which any calculation can be founded is such that it is impossible to arrive at any wholly satisfactory conclusion. The latitude hence allowed may be judged from the fact that the estimates of some of the best modern scholars are about four times as great as those of others; and whilst Dureae de la Malle, in his Economie politique des Romains (i. p. 540, seq.), sets down the population at 562,000 souls, Hiek, in his Römische Geschichte (vol. i. pt. ii. p. 335, seq.), estimates it at 2,265,000; nay Lipsius, in his work De Magnisimis Romaniis (iii. 3), even carried it up to the astronomically enormous number of 6,000,000. But this is an absurd exaggeration; whilst, on the
scher hand, the estimate of Duran de la Malle is undoubtedly much too low.

The only secure data which we possess on the subject are the number of citizens who received the congiaria or imperial largesses, for it is only during the imperial times that we can profess to make any calculation. We learn from the Monumen-
tum Anonymum that Augustus, in his 12th consulate, distributed a pecuniary gift to 320,000 of the plebeian urbana. (Consul XIX. trecentis et viginti milibus plebi urbanae monitis.) A strict inquiry into the number of such recipients might throw much light on the social and economic conditions of the time. The number of these recipients cannot be estimated from the evidence of ancient authors.

(FO minores quidem poeriores praeteritis quamvis nonnulli ab undecimo aetatis anno accepserunt consuetudinis, Suet. Aug. 41.) The distribution of corn seems to have been regulated on a stricter scale, as these were regular, not extraordinary, like the largesses. From these the children must be deducted, probably the sick, and to a certain extent a stricter inquiry made into the titles of the recipient.

Thus we learn from the Mon. Anonymum that the number of recipients in the 13th consulate of Augustus amounted to more than 320,000. (Cf. Dion Cass. iv. 16.) From the same document it appears that the number of recipients increased in the provinces and was distributed to fewer than 250,000 persons. (Quae mens congiaria pervenerunt ad hominum mille trium minus quantum quinquecentis et ducentis, Jeb, where Hock, Rom. Gesch. i. p. ii. p. 388, by erroneously reading seestan tum instead of hominem, has increased the number of recipients to 62,000.)

From a passage in Spartan's life of Septimius Severus (c. 250) we learn that he distributed to the following number of persons: 100,000.* From this we conclude that the average number of recipients of the largesse distributed to the people of Rome during the first centuries of the Empire at less than 320,000; and at least twice as much again must be allowed for the remandis, giving a total of 1,050,000. There are no very accurate data for arriving at the numbers of the senators and knights. Bunsen (Beschr. i. p. 184), without stating the grounds of his calculation, sets them down, including their families, at 10,000. This is evidently much too low an estimate. We learn from Dionysius Halicarnassensis (viii. 18) that in the ancient Greek cities the number of the knightly class was 500. If we assume that the number of the knightly class was 500. If we assume that the number of them was three times as much as the number of the knightly class, we must have a total of 1,050,000. 

Reside at Rome. We see from the complaints of Horace how the equestrian dignity was prostituted in the imperial times to liberti and aliens, provided they were rich enough for it. (Epist. iv. 18. Menand. cf. Juvi. 1. 28.) We should therefore perhaps have been below the mark in fixing the number of knights and senators at 15,000. If we allow a wife and one child only to each, this would give the number of individuals composing the senatorial and equestrian families at 45,000, which is a small proportion to 1,050,000 freemen of the lower class. It may be objected that many were very much out of fashion with the higher classes at Rome during the time of Augustus; but the omission was supplied in another manner, and the number of kept women and illegitimate children, who would count as population just as well as the legitimate ones, must have been considerable. In this calculation it is important not to underestimate the number of the higher classes, since they are very important factors in estimating the slave population, of which they were the chief maintainers.

The preceding sum, then, would give a total of 1,095,000 free inhabitants of Rome, of all classes. To these are to be added the aliens residing at Rome, the soldiers, and the dependents of the state. This number must have been very numerous. There must have been a great many provincial persons settled at Rome, for purposes of business or pleasure, who did not possess the franchises, a great many Greeks, as tutors, physicians, artists, &c., besides vast numbers of other foreigners from all parts of the world. The Jews alone must have formed a considerable proportion. There is little question about the number of aliens at Rome, that in times of scarcity we sometimes read of their being banished. Thus Augustus on one occasion expelled all foreigners except tutors and physicians. (Suet. Aug. 43.) According to Seneca, the greater part of the inhabitants were aliens. "Nullum non hominum genus concursus in urbe extrin-
sibus et vitis magnis praemis consuetum. Unde domo quies qui, quaere; videba majorem partem esse, quae relicta sedibus sui venerit in maximam quidem et pulcherrimam urbem, non tamen saeurn." (Cons. ad Helv. c. 6.) In this there is no doubt some exaggeration; yet we find the same complaints reiterated by Juvenal:

"Jam pridem Syrus in Tiberim defluxit Orientem."  
"Hic alia Sicyme, ait hic Amydona relicta, 
Hic Andro, ille Samo, hic Trailibus aut Albanidae, 
Equilias dictamque petunt a Vimine collem, 
Vescara magnarum domum, dominique futuri" (iii. 62, seq.)

It would perhaps then, be but a modest estimate to reckon the aliens and foreigners resident at Rome, together with their wives and families, at 100,000. The soldiers and the vigiles, or police, we can hardly estimate at less than 25,000; and as many of these men must have been married, we may reckon them, with their families, at 50,000. Hence 100,000 aliens and 50,000 military, &c., added to the foregoing sum of 1,095,000, makes 1,245,000 for the total miscellaneous free population of Rome.

There are great difficulties in the way of estimating the slave population, from the total absence of any accurate data. We can only infer generally that it must have been exceedingly numerous—a fact that is evident from many passages of the ancient authors.
The number of slaves kept as domestic servants must have been exceedingly large. Horace mentions (Sat. ii. 6, 2) that the singer Tullius had sometimes as many as 200 slaves; but when he was taken with a sudden fit of economy, he reduced them to the very modest number of 10. No doubt, however, he was a first-rate vocalist, and, like his brethren in modern times, a man of fortune. Tullius the praetor, who was a stinging churl, when he was himself in distress, had 5 slaves at his heel to carry his cooking utensils and wine. (Jb. i. 6, 107.) Horace himself, who of course was not so rich a man as Tullius, when he sat down to his frugal supper of cakes and vegetables, was waited upon by 3 slaves; and we may presume that these did not compose his entire household. (Ib. v. 115.) In the reign of Nero, 400 slaves were maintained in the palace of Pedanius Secundus, who were all put to death, women and children included, because one of them had murdered his master. (Tac. Ann. xiv. 42, seq.) The slaves no longer consisted of those born and bred on the estates of their masters, but were imported in multitudes from all the various nations under the wide-spread dominion of the Romans. ("Pedanius was not a native of the "habeatus, "quibus diversi ritus, externas sacras, aut multis sunt, coloni isiam non mise molecusa." (Ib. c. 44.) The case of Pedanius, however, was no doubt an extraordinary one. It cannot be imagined that the plebs urbana, who received the public pastures, were capable of maintaining slaves; nor probably are we justified in assigning to the slaves. But if we place the patrician and equestrian families at 15,000, and allow the moderate average number of 30 slaves to each family, this would give a total number of 450,000. Some also must be allowed to the richer part of the plebs—to persons who, like Horace, were not patrician nor equestrian, yet could afford to keep a few slaves; as well as to the aliens resident at Rome, so that we can hardly compute the number of domestic slaves at least than 500,000. To these must be added the public slaves at the disposal of the various municipal officers, also those employed in handicraft trades and manufactures, as journeymen carpenters, builders, masons, bakers, and the like. This would not perhaps be too much to estimate at 500,000, thus making the total slave population of Rome 800,000. This sum, added to that of the free inhabitants, would give a total of 2,045,000.

The Notitia and Curieusae state the number of isola at Rome at 46,602, and the number of domus at 1790, besides salae, lupanaria, military and police stations, &c. If we had any means of ascertaining the average number of inhabitants in each isola, it would afford a valuable method of checking the preceding computation. But her again we are unfortunately reduced to uncertainty and conjecture. We may, however, pretty surely infer that each isola contained a large number of inmates. In the time of Augustus the yearly rent of the convenio of an isola was really produced by 40,000 sesterces, or between 300l. and 400l. sterling. (Dig. 19. tit. 2. a. 30. a. Gibbon, ch. 31. note 70.) Petronius (c. 95, 79.) and Juvenal (Sat. iii. passim) describe the crowded state of these lodgings. If we take them at an average of four stories, each accommodating 15 or 18 persons, this would give about 60 persons in each isola or house, and if the inmates men, women and boys, would be paying an average yearly rent of about 71 per head. The inmates of each domus could hardly be set down at less, since the

family, with tutors and other hangers on, may perhaps be fairly estimated at 10, and the slaves in each domus at 40. We learn from Valerius Maxim. (iv. 4. 2.) that the celebrated Gens Aelia lived in one small house with their families; but this seems to have been an exceptional case even in the early times, and cannot be adopted as a guide under the Empire, New, taking the isola actually inhabited at 40,000—since some must have been let, or under repair—and the inhabited domus at 1500 = 41,500, and the number of inmates in each at 50, we should have a total population of 3,075,000, a sum not greatly at variance with the amount obtained by the previous method. But the reader will have seen what data the calculation proceeds, and must draw his own conclusions accordingly. (Cf. Bunsen, Rechtsgeschichte des römischen Reiches, p. 15. sec.; Durnen de la Mall, Economie politique des Romains i. p. 340, seq.; Mommsen, Die Römischen Tribus, p. 187, seq.; Blck, Römische Geschichte, i. pt. ii. p. 383, seq.; Zumth, Ueber den Stande der Bevölkerung in Alterthum, Berlin, 1841; Gibbon, Decline and Fall, vol. iv. p. 87, seq., with the note of Smith.)

PART II. TOPOGRAPHY.

Having thus given an account of the rise and progress, the decline and fall of the Roman city, we shall now proceed to describe its topography. In treating this part of the subject we shall first follow those divisions which are marked out either by their political importance or by their natural features rather than be guided by the arbitrary bounds laid down in the Regions of Augustus. The latter, however convenient for the municipal purposes which they were intended to serve, would be but ill calculated to group the various objects in that order in which they are most calculated to arrest the attention of the modern reader, and to fix them in his memory. We shall therefore, after describing the walls of Servius Tullius and those of Aurelian, proceed to the Capitol, one of the most striking objects of ancient Rome, and then to the Forum and its environs, the remaining hills and their valleys, with the various objects of interest which they present.

I. WALLS AND GATES OF SERVIIUS TULLIUS.

At the commencement of the Roman Empire the walls of Servius Tullius could no longer be traced. Instead of dreading the assaults of the surrounding nations, Rome had now extended her frontiers to the Euphrates and the Atlantic; her ancient bulwarks were become entirely useless, and the increase of her population had occasioned the building of houses close to and even over their remains; so that in the time of Dionysius of Halicarnassus, who came to Rome in the reign of Augustus, it was difficult to discover their course (iv. 12). To attempt now to trace their exact outline would therefore be a hopeless task. The remains of the agger of Servius are still, however, partly visible, and the situation of a few of the ancient gates is known with certainty, whilst that of others may be fixed with at least some approach to accuracy from notices of buildings and streets: we shall write in these materials that we must endeavour to reconstruct the line of the Servian walls, by first determining the probable sites of the gates, and by then drawing the
ROMA.

wall between them, according to indications offered by the nature of the ground. We learn from Cicero that Servius, like Romulus, was guided in the construction of his wall by the outline of the hills: "Caules (urbis) est tractatus augurique munia quam Romulii tum etiam religiosum regum augurium definitione ex oem parte arduis praesupraque montibus, ut unus aditus, qui esset inter Esquillinum Quirinalisque montem, maximis augeret objecta foessae cingendarum vastissima; atque ut se muntra arx circumjecto ardeo no quasi circumcisso saxo nitentibus, ut etiam in illa temperatate horribili Gallici adventus incolam atque intacta permanerint." ([De Regn. ii. 6.) Becker (in Marz., p. 64, Handb. p. 129) asserts that Cicero here plainly says that Servius erected walls only where there were no hills, or across the valleys, and concludes that the greater part of the defences of the city consisted of the natural ones offered by the hills alone. Becker, however, appears to have misunderstood Cicero; for notwithstanding what is here said, we find him a few pages further on, conducting the line of wall not only along the height of the Quirinal, but even over the summit of the Capitoline hill itself (Handb., pp. 131, 156, de Marz., pp. 65, 70.) Neither his first, or theological, nor his second, or presbyterian, View, is correct. The only correct contradiction to his authority; for Cicero says that the other kings did like Romulus; and he, as we have seen, and as Becker himself has shown, walled in his city all round. Cicero, says as plainly as he can speak, that there was a wall, and that it was defined along its whole extent ("extensum ex omnibus") by the height of its hill. If it be run along their summit, we cannot except Pliny's assertion ([iii. 9]) that the agger equalled the height of the walls ("Namque eum (aggerem) muris sequavit quae maxime patebat (urbe) aditu plano: castra munira prorsus egressi muris, aut abruptis montibus, &c."); since it would be a great extolling of its height to say that it was raised to the level of a wall in the valley. Cicero, however, makes two exceptions to the continuous line, and the fact of his pointing these out proves the continuity of the wall in the remainder of the circuit. The first exception is the agger just mentioned, upon the top of which, however, according to Dionysius (ix. 68), there seems also to have been a sort of wall, though probably of a less remarkable extent of the same nature, at least he uses the comparative when speaking of it: τεχνης υποηγος φησιαρθρω (iv. 54). The second was the Arx, or Capitoline hill, which, being on its western side much more abrupt and precipitous than the other hills, was considered as sufficiently defended by nature, with a little assistance from art in reinforcing its sides. There was no wall at this spot is also proved, as Niebuhr remarks (Hist. vol. i. p. 396) by the account of the Gauls scaling the height. (Liv. v. 47; comp. Bunbury, Class. Mus. vol. iii. p. 847.) The Cap-itoline, therefore, must have been the spot to which Dionysius alluded, when he said that Rome was partly defined by the agger and partly by the Tiber (ix. 68); as well as Pliny in the passage just cited, where we must not infer from the plural (montibus) that he meant more than one hill. This is merely, as in Dionysius also, a general mode of expression; and we have before observed that Pliny's own account shows that the wall crowned the hills. Lastly, had there been no wall upon them, it is difficult to see how there could have been gates; yet we find Becker himself placing gates at spots where, according to his theoretical view, there could have been no wall. Niebuhr (L. c.), who, like Becker, does not confine the escarpment to the Capitol, but thinks that the greater part of the city was fortified merely by the steepness of its hills, places towers, walls, and gates just at the different ascents; but this view, improbable in itself, and unsupported by any authority, cannot be maintained against the express testimony of Cicero. There seems, however, to have been an interior fortification on the E. side of the Capitoline, protecting the ascent by the circus, as we shall see in the sequel. It was probably intended to secure the citadel, in case an enemy succeeded in forcing the external walls. We have seen before that the hill was fortified by Romulus; but whether these ancient fortifications, as well as those on the Palatine, were retained by Servius, it is impossible to say.

We may assume then that the wall of Servius, or his predecessors—which seems to have been built of stone ("muro lapidem," Liv. i. 15)—surrounded the whole city, with the exception of the Capitoline hill and a small part defended by the Tiber,—thus justifying the noble lines of Virgil (Georg. ii. 553.):—

"rerum facta est pulcrituris Roma.
Septemque una sibi muro circumcrescit arces."

Our next task will be to determine the outline of this wall by means of the site of the different gates; though, of course, where the outline of the hills is well defined this alone will be a guide. The situation of the caputium, the meeting point of two of the gates, is necessarily that of the Porta Collina, at the N. extremity of the agger, and that of the Esquiline at its southern end. Taking, therefore, the former as a starting-point, and proceeding continually to the left, we shall make the circuit of the whole city, till we again arrive at the Porta Collina.

This, the most northerly of all the gates, lay near the point where the Via Salaria branches off from the Via Nomentana. From this spot the first gate to the W. was probably the Porta Salutaris, so named, apparently, from its being on that division of the Quiri- nal which in the time of Numa and in the sacred books of the Argives was called Colis Salutaris, from an ancient sanctuary of Salus which stood upon it (Varr. L. L. v. § 51). When Paulus Diaconus tells us (p. 327, Mūll.) that it was named after the temple of Salus, he seems to be alluding to the later and more famous temple dedicated by C. Junius Bubulcus in B. C. 303, which we shall have occasion to describe in the sequel: but it is probable that it obtained its name, as we have said, at a much earlier period. As the new temple probably stood at or near the site of the ancient one, and as the Notitia in describing the 6th Region, or Alta Semita, takes this temple for a starting point, and, proceeding always in a circuit to the left, arrives at last at the baths of Diocletian, it may be assumed that this gate was the first important object westward of the baths. It seems to have been named a Cibus Salutaris, which Cai- nina (Roma Antica, p. 187) places, with much probability in the Via delle Quattro Fontane, where it ascends from the Piazza Barberina. (Of. Peller, Regiones, p. 134.)

The next gate to the left seems to have been the Porta Sanqualia, so named from the temple of San- cum (Paul. Dia. p. 345, Mūll.) This was the same
divinity as Deus Fidius (Fest. p. 241, Müll.), whose sacrarium is mentioned by Livy (viii. 20) as situated near the temple of Quirinus. It is also recorded in the fragments of the Argive books as seated on the Collia Mucia (Varr. L.L. v. § 62, Müll.), which hill comes next in order after the Collia Sabataria. We have already mentioned the temple of Quirinus as having been situated near the present church of S. Andrea delle Fratte. Another sepulchral monument was Porta Sanqualia, mentioned the ascent to at or near the modern Via della Dataria.

Between the Porta Sanqualia and the Capitoline hill there were probably two gates; at all events there must undoubtedly have been one in the very narrow ravine which in early times separated the Capitoline from the Quirinal, and which afforded the only outlet from the neighbourhood of the forum. This was, perhaps, the PORTA BATUMENA, which we learn from Pliny (viii. 65: "unde postes nomen est") and Plutarch (Popol. 13: "τοῖς τὴν πόλην, καὶ τὸν ἡρακλῆος καλοῦς") was still existing in their time. Becker, indeed, disputes the inference of its existence from Pliny’s words, and disbelieves the assertion of Plutarch. But there is nothing at all incredible in the fact, and therefore no reason why we should disbelieve it. We know, from the example of London and other cities, that a gate, and especially the name of a gate marking its former site, may remain for ages after the wall in which it stood has been removed. Even the local tradition of its name would have sufficient to mark its site, but it is highly probable, from the nature of the ground where it stood, that the gate itself had been preserved. The road through so narrow a gorge could never have been disturbed for building or other purposes; and it is probable that the gate remained standing till the ravine was enlarged by cutting away the Quirinal in order to make room for Trajan’s forum. We learn from the passus ita citus, as well as from Festus (p. 274), that the gate derived its name from a charioteer, who, returning victorious from the Circensian games at Veii, was thrown out of his chariot and killed at this spot, whilst the affrighted horses, thus freed from all control, dashed up the Capitoline hill, and, as the legend runs, did not finish their mad career till they had thrust through the circuit of the temple of Jupiter Capitolinus. (Plin. viii. 65.) So remarkable an omen would have been a sufficient ground in those days for changing the name of the gate. But it matters little what faith we may be disposed to place in the legend; for even if it was an invention, it must have been framed with that regard to local circumstances which would have lent it probability, and no other gate can be pointed out which would have so well suited the tenor of the story. Its existence at this spot is further confirmed by the tomb of Bibulus, one of the few remaining monuments of the Republic, which stands in the Macello dei Corvi, and by the discovery this year of another sepulchral monument not far from it.

Bunnen, however, is of opinion (Boscr. vol. iii. p. 33) that it lay within the walls, and infers from the inscription, which states that the ground was presented as a burial-place to Bibulus and his descendants by the Senate and people, "honoris virtutisque causa," that he was one of those rare exceptions mentioned by Cicero (de Leg. ii. 20) of persons who obtained the privilege of lying buried within the circumvallations. This unfortunate conjecture was hardly ever hazarded.

Becker has justly pointed out that the words of the inscription merely mean that the ground was presented to Bibulus, without at all implying that it was within the walls; and an attentive consideration of the passage in Cicero will show that it could not possibly have been so. Even since the passing of the law of the XII. Tables against interment within the walls, Cicero could find only one example in which it had been set aside, namely, in honour of C. Fabri·cianus. Now if Bibulus had lived in the period between the composition of the De Legibus and the final abolition of the Republic, we could not have failed to hear of an individual who had achieved so extraordinary a mark of distinction; and if, on the other hand, he lived before that work was written, — of which there can scarcely be a doubt,—then Cicero would certainly have mentioned him.

Besides the gates already enumerated between the spot from which we started and the Capitoline hill, and that of the Porta Batumena and Porta Sanqualia, unless indeed we adopt the not improbable conjecture of Preller (Schneider's Philologus, p. 84), that the Batumena was one of the gates of the fortification on the Cirrus Capitolinus, and that the Porta Fontinalis was the gate in the gorge between the Quirinal and the Capitoline, this latter gate is mentioned by Paulus Diaconus (p. 85, Müll.), in connection with a festival called Fontinalis. It is also mentioned by Varro (L.L. vi. § 82, Müll.) and other writers; and we learn from Livy (xxv. 10) that a portico was constructed from it to the altar of Mars, forming a thoroughfare into the Campus Martius. The same historian states that the Ara Martis as being in the Campus (p. 45), but there is nothing to indicate its precise situation. Numa instituted a festival to Mars, as a pledge of union between the Romans and Sabines (Fast. p. 372, Müll.), and it was probably on this occasion that the altar was erected. It is impossible to place any gate and the starting from it in the short space which fell on the S. side of the Capitoline, and therefore its site was perhaps that already indicated. The altar must have stood at no great distance from the gate, and could hardly have been so far to the W. as the...
Porta Carmentalis. This gate lay just at the foot of the Capitol, and is one of the most certain entrances to the Servian city. It was named after a难者 of Carmenta, the mother of Evander, which stood near it. This altar is mentioned by Dionysius (i. 32), and appears to have existed at least as long ago as his time, as is seen by A. Gallus (vii. 7) and by Servius (ad Virg. Aen. viii. 337). The street called Vicus Jugiarius ran from the Porta Carmentalis round the base of the Capitoline to the Forum, as we learn from Livy's description (xxviii. 37) of the procession of the virgins to the temple of Juno Regina on the Aventine, when two white heifers were led from the temple of Apollo before mentioned through the Porta Carmentalis and Vicus Jugiarius to the Forum.

The exact site of the gate was probably a little to the NW. of the church of S. Omobono.

The principal gates of Rome had commonly more than one thoroughfare. These archways, or passages, were called Fornices and Jani. Oviedo's etymology of the latter word shows the meaning attached to it, though the etymology itself is absurd: "Ab ęnduo nomem est ductum: ex quo transitiones perrae Jani, foresque in liminis profanarum sacrum jamus nominatur," Nat. Deor. i. 37.

We have already said that the right Janus of the Porta Carmentalis, on going out of the town, was regarded as having the name Porta Sclaratoa, from its having been through which the Fabii passed on their fatal expedition to the Cremers. (Liv. ii. 49.) So Ovid (Fast. i. 201):

"Carmentis portis dextro viae proxima Jano est: Ira per hanc noli, quisquis es, omen habebis."

Festus (p. 285, Mühll.), Servius (Aen. viii. 337), and Orosius (ii. 5) have completely misunderstood these passages in applying the epithet acratoa to the whole gate, as we have before remarked.

In the short piece of wall between the Capitoline hill and the Tiber there must have been at least another gate besides the Carmentalis, namely the Porta Triumphalis, as Orosius (i. 5) says. The Porta Carmentalis is mentioned (ad Att. vii. 3), and its situation near the river may be inferred not only from its name, but also from passages in Livy, which mention it in connection with inundations (xxxix. 9, 21). Plutarch also (Otho, 4) records a great inundation which had caused much damage in the corn-market, at that time held in the Forum under the Porta Carmentalis (Not. Reg. 12); but the words of Paulus Diaconus are incomprehensible, who says that a part of the Tiber once actually flowed through this gate ("Flumentana Porta Romae appellant, quod Tiberis partem ex fluvio affirmat," p. 89, Mühll.). The site of the Porta Triumphalis is not mentioned in the guides to the populace of the suburb just outside the gate: "Nam quod extra urbem est adficium, nihil magis idea est villa, quod eorum adfici quae inhabitant extra portam Flumentam, aut in Aemiliis." (R. R. ii. 2). This neighbourhood had early become very thickly inhabited, as is evident from the many public and private buildings, which are mentioned there (see Preller, Regiones, p. 156, seq.). But Livy's narrative of the trial of Manlius (vi. 20) is one of the most striking proofs of the situation of the P. Flumentana, though it is a stumbling-block to those who hold that the temple of Jupiter was on the SW. summit of the Capitoline hill. A spot near the place where the Circus Flaminius afterwards stood was at that time used for the assemblies of the Comitia Centuriata, by which Manlius was tried. From this place both the Capitol and the Arx were visible; and Manlius had produced a great effect upon his judges by calling upon them to pronounce their verdict in the sight of those very gods whose temple he had preserved; "Ut Capitolium sacrum immortale prece, ut Arx immortales vesi, do se judicaret." In order to deprive him of this appeal the tribunes adjourned the assembly to a spot just outside the Porta Flumentana, called "lucus Paelatinus," whence the Capitol could not be seen ("unde espectus in Capitolium non esset"). A place at any map of Rome will show that this was the only spot where the Capitol and Arx had in those times been visible from the temple, from its being hidden by the SW. summit, which we assume to have been the Arx, was concealed from view. The tribunes would doubtless have been glad to conceal the Arx also, had it been in their power; but an appeal to the Arx alone would have lacked the effect of the rescript which was sworn, with the emperors of Romana. They were no longer in the presence of those rescued deities in whose sight Manlius had invoked their judgment. There is no occasion therefore to try, with Becker, to alter Livy's text, by reading Fluventaria for Flumentana, or seek to place the scene of the trial at another spot, since the Comitia Centuriata were usually assembled in the Campus.

The ancient topographers, as well as the modern Italians (Nabby, Musa, 9c. p. 132; Canina, Indicazioni Topografiche, pp. 34, 653, ed. 1850), place another gate, the Porta Triumphalis, between the Carmentalis and the Flumentana. That there was such a gate is certain, since it is frequently mentioned in classical authors, but unfortunately in such a manner that no decided inference can be drawn respecting its situation. Hence various theories have been advanced on the subject, which have led to warm controversies. The German school of topographers, though not united among themselves, have agreed in departing from the Italian view, chiefly because it is so much to them abhorrent to imagine that there could have been three gates in so short a piece of wall. If, however, as it will be shown to be probable, the Porta Triumphalis was opened only on occasions of state, there really seems to be very little force in this objection. Bunsen and his followers allow that it formed a real entrance into the city, opening directly into the Circus Maximus; whilst Becker, on the other hand, holds that it was no gate at all properly
so called, but a mere triumphal arch situated in the Campus Martius. The theory of Bunsen necessarily rests on the assumption of a different line of wall from that laid down in the preceding account; and as another line is also adopted by Niebuhr (Hist. i. p. 397, Eichmayr. ii. p. 49), it will be necessary to examine this point before proceeding to the question of the gate. Neither and Bunsen are, however, far from coinciding. The line drawn by the former proceeds along the banks of the river; that drawn by the latter runs from the Porta Carmentalis to the N. angle of the Circus Maximus, and, adopting the NW. front of the circus, or what was called the Oppidam, as part of the line, proceeds towards the Aventine, thus shutting the greater part of the Forum Boarium out of the city. Both these theories, however, agree in so far as they assume an entrance continuus, or continued line of wall; and therefore, if this notion can be shown to be false, both fall to the ground. Now it can be proved on the very best evidence that there was no wall in this part of the city, which was defended solely by the Tiber. We have already adduced a passage from Dionysius in confirmation of this statement; and the same author in another passage repeats the same thing in so plain a manner that there can be no reasonable doubt of the fact: ἡ γὰρ ἡ ἀπὸ τοῦ Δημοκριτοῦ ἐκ τοῦ Ἰωάννου τοῦ οἰκίζοντος ἐσσιτε ἐς τὸν τάφον τοῦ τούτων μενοῦ (v. 23). But Dionysius does not stand alone. We have Livy also as an authority for some the facts, who, in narrating the entrance of Pompey against Rome, observes that the citizens regarded some parts of their city as secured by the wall, and other parts by the Tiber: "Alia muris, alia Tiberi objecto videbantur tuta" (ii. 10). The same fact appears, though not in so direct a manner, from the same author's account of the procession of the virgin from the temple of Apollo, outside the Carmental gate, to that of Juno Regina on the Aventine, to which we have before briefly alluded. The route is described as follows: "A porta (Carmentalis) Jugario vicio in forum venere. Inde vico Tusco Velabroque per Boarium forum in clivum Publicium atque asdem Junias Reginae persequuntur" (xxii. 37). Now the same facts are repeated by Bunsen in his passage: "Boarium must have been outside of the wall, since the temples of Fortune and Mater Matuta, which stood upon it (Liv. xxxii. 27), were within the Porta Carmentalis (id. xxv. 7). The procession, then, after passing through that forum, must have gone out of the city at another gate,—Bunsen's Flumenata,—and have entered it again by the Trigemina, before it could reach the Clivus Publicius,—facts which are not mentioned by Livy in his very precise description of the route.

Having thus shown on the best evidence that no wall existed at this point, it would be a mere waste of time to refute arguments intended to show that it possibly might have existed,—such as a wall gate would keep out an inundation, whether the Fabii went over the Subunician bridge, and others of the like sort, which would have paled an ancient haruspex. We will therefore proceed to examine Becker's hypothesis, that the Porta Triumphalis was, in fact, no gate at all, but merely an arch in the Campus Martius, a theory which is also adopted by Livy, through the enables variation, by Preller (Regiones, p. 162, and Anhang, p. 239).

Becker places this arch at the spot where the Campus Martius joins the Regio called Circus Flaminius, and takes it to be the same that was rebuilt by Domitian (of course he must mean rebuilt, though it is not very clearly expressed. De Moris, p. 92, Handl, p. 153). His conjecture is founded on the following lines in a poem of Martial's (vi. 65) in which he describes the erection of this arch and of some other buildings near it:

"Haece est digna tua, Germanico, porta triumphalis, Hos aditus urbem Martis habere desceet."

Becker, however, is totally unable to prove that this arch and the temple of Fortuna Redux near it were even in the Campus Martius at all. Thus he says (Handl. p. 643): "It is not indeed expressly said that the Arx of Fortuna Redux was in the Campus Martius; but it becomes probable from the circumstance that Domitian built here, and, as he have conjectured at p. 153, close to the Porta Triumphalis, a temple to the same goddess. The argument then proceeds as follows: "We know from Martial that Domitian built a temple to Fortuna Redux where her altar formerly stood, and also a triumphal arch near it. We do not know that this altar was in the Campus Martius; but it is probable that it was, because Domitian built this temple close to it, and also close to the arch, which, as I conjectured, was the Porta Triumphalis!"

There is, however, another passage of Martial, either overlooked or ignored by Becker, which tends very strongly to show that this arch of Domitian's really stood there, but at a quite a different spot from that so conveniently fixed upon by him. It is the following (x. 6):

"Felices quibus uraeus edicit spectacrum Salus Arctos aedibusque ducem. Quand o erit iles dies quo Campus et arbor et omnis Lucebit Latia culta fenestra nurn? Quand o mors dulce, longuque a Caesare pulvis, Toteque Flaminia Roma videnda via?"

There can be no doubt that these lines refer to the same triumphal entry of Domitian's as those quoted by Becker; and they plainly show, as Cassius Dio does, that the Porta Triumphalis stood nearer the Villa Publica and temple of Bellona, close to the Via Lata. For this site he adduces several plausible arguments: near the temple of Bellona was the piece of ager hostilia, where the Fetiales went through the formalities of declaring war; as well as the Columna Beller, whence a lance was thrown when the army was going to take the field; also a Senatum "circa modern Bel- lona", in which audience was given to foreign ambassadors whom the senate did not choose to admit into the city. The Villa Publica also served for the reception of the latter, and probably also of Roman generals before their triumph, and of all who, being cum imperio, could not cross the pomerium, and therefore in the ordinary course took up their abode there. At this time the place of Dictatorium was used in its stead, in which Claudius passed some nights, and in which probably Vespasian and Titus slept before their triumph. This
who, we are told, assembled the senate at the same place precisely on the ground that it was outside of the pomerium, and that consequently he did not violate their privileges by assembling them there (kai tē Ὄκταποι τὴν Βουλήν ψέφον δὲ τὸ ἴδιο τοῦ πομερίου ἀνή τε εἶναι, lv. 8). But as these instances occurred in the imperial times, when it may be said with Becker (Handb. p. 151, note) that the ceremony no longer had any meaning, we will go back for an example to the early ages of the Republic. First, however, we must demand the acknowledgment that the actual triumph of Vespasian was the same, or at least stood on the same spot, as that which had been in use from time immemorial. We cannot allow it to be shifted about like a castle on a chessboard, to suit the convenience of commentators: and we make this demand on the authority of Josephus himself in the very passage under discussion, who tells us that it took its name from the circumstance that the triumphal processions had always passed through it (καὶ τῷ πνεύματι αὐτῆς ἐκ τοῦ δρόμου τῆς προσγορίας ἀν' αὐτῶν τετυμμένης). Now Livy, in his account of the triumph of the consuls Valerius and Horatius, relates that they assembled the senate in the Campus Martius to solicit that honour; but when they were refused the conclave (where they were Overawed by the presence of the military, the consuls called the senate away into the Prata Flaminia, to the spot occupied in the time of the historian by the temple of Apollo. (“Conules ex compoiso eodem diebus ad urbern accesserie, sena-
tumque in Martium Campum eonsceviri. Ubi quum de rebus a se gens erat, quasi primores Patrum, senatum inter milites dederit, marce sese habebi. Itaque inde Conules, ne criminationi esset locum, in prata Flaminia, ubi nunc sedes Apollinis (jam tum Apollinar e appellabant) eonsceviri senatun,” iii. 65.) This temple was situated close to the Porta Octavia (Becker, Handb. p. 605), and therefore considerably nearer the city than the spot indicated either by Becker or Preller. The consuls therefore must have already passed beyond the Porta Triumphalis before they began to solicit the senate for leave to do so!

Becker, however, has been more careful, and has not extended the jurisdiction of the city beyond the walls of Servius, at this part of the Campus, before the time of the emperors Claudius. But what results from his view? That the whole affair of the Porta Triumphalis was mere force,—that it led nowhere,—that the triumphal general, when he had passed through it by permission of the senate, was as much outside the city boundary as he was before. But that it afforded a real entrance into the town clearly appears from the passage in Cicero's oration against Piso (c. 23). "Cum ego Caesarei-
tana porta introroe dixeram, non possum mei Euclisina introroe, homine promteismius lacessant. Quasi vero id aut ego scire debuerim, aut vestrum quisiam audiendiat, aut ad rem pertinentia qua tu porta introroe, modo ne triumphalle; quae porta Macedonica semper procenesis ante te patuit." The Porta Triumphalis being here put on a level with the Caelimontana and Euclidina, the natural conclu-
sion is that, like them, it afforded an actual, though not customary, entrance within the walls. We further learn from the preceding passage that this same Porta Triumphalis had been open to every proconsul of Macedonia before Piso, including of course L. Aemilius Paullus, who triumphed over Etruria n. c. 167.
(Irv. xiv. 39), thus establishing the identity of the gate to at least that period.

But to return to Becker's explanation of the passage of Josephus. Admitting Piutarch's account of the triumphs of Pausias and Lucullus, namely, that they passed through the Circus Fiammianus, yet what does this prove? how is it connected with the Porta Triumphalis? Those generals may have marshalled their processions in the Campus and passed through the Circus Fiammianus in their way to the Porta Triumphalis. The procession would have been equally visible in the Circus as in the streets of Rome, just as the Lord Mayor's show may, or might, be seen at Westminster as well as in the city. It is possible indeed that in the case of Vesuvius there was no procession till he arrived at the gate; but it does not necessarily follow that the same line was always precisely observed. In truth we may perceive a difference between the expressions of Josephus and those of Piutarch. The former says that Pausias went his way ἐκ τῆς λεωποδοντῆς; whilst Piutarch says, of Paulius, that the people assembled ἐν τῷ ἱερῷ ἱστορίῳ, καὶ Κίππος καλοσθείς; of Lucullus, that he adorned the Φαληρικαὶ ἱερᾶς ἰδρυμένι. Here the cinctures are precisely designated as ἱεροπρόπετος; but Josephus uses the general term ἱερόπροπες, which may indicate theatres of all kinds. Now we will suppose a more probable route than that given by Becker, according to which the præfect must have crossed the forum twice. After coming out at the further end of the circus, Vesuvius turned down to the east, between the Palatine and Caelian, the modern Via di S. Gregorio. This would bring him out opposite his own magnificent amphitheatre, the Colosseum, then in course of construction. Even if it had not risen much above its foundations, still its ample area by means of scaffolding, would have accommodated a vast number of spectators; and as to Vesuvius personally, it would have imparted so small a relish to his triumph to pass through so magnificent a work of his own creation. Hence his road lay plain and direct over the Sibylla Sacra Via to the forum and Capitol.

Now, taking all these things into consideration, we will venture to suggest a very slight change in the text of Josephus, a change not so great as some of those often proposed by Becker upon much smaller occasions, and which will release us from a great deal of perplexity. The alteration is that of an και into a, a very slight one in the uncial character, but, by reading ἵππος ἱερῶν, for ἵππος ἱερῶν, we would make Vesuvius depart from the Porticus Octaviae to the Via that had always been used for triumphs, instead of retracing his steps towards one of which nobody can give any account.

But whatever may be thought of the individual case of Vesuvius, we will hold it to be incontestable that the Porta Triumphalis, against which the case of Josephus seems to be that it was near two other gates, is to be sought in that part of the Servian wall between the P. Carmentalis and the P. Farnesiana. The objection just alluded to would indeed have some force, if we could assume, with Becker, (Hist. p. 134), that the Porta Triumphalis, just like an ordinary one, lay always open for common traffic. But it is surprising how any body could ever have proposed a route after retracing the passages which Becker has himself cited from Suetonius, Tacitus, and D. C. Cassius, or that in Cicero's oration against Piso before quoted. The first of these authors relates that after the death of Augustus
stand. It seems probable that it has, included a considerable extent, had it proceeded along the most natural supposition is that it was the Porta Capena, which is twice mentioned by Juvenal (iii. 11):—

“Substitut ad vetere arcus madidamique Capenam,”

where we learn from the Schola that the gate, which in later times must have lain a good way within the town, was called “Arcus Stillans.” So Martial (iii. 47):—

“Capena grandi porta qua pluit gutta.”

A little way beyond this gate, on the Via Appia, between its point of separation from the Via Latina and the P. S. Sebastiano, there still exists one of the most interesting of the Roman monuments—the tomb of the Scipios, the site of which is marked by a solitary cypress.

From the Porta Capena the wall must have ascended the Caelian hill, and skirted its southern side; but the exact line which it described in its progress towards the agger can only be conjectured. Becher (Handb. p. 167), following Pliny and Bunsen, draws the line near the Ospedale di S. Giovanni, through that part of the hill on which the Lateran is situated, although, as Canina observes (Indicazioni, p. 36), this is the highest part of the hill. There was perhaps a gate at the bottom of the present Piazza di Navicella, but we do not know its name; and the next gate respecting which there is any certainty is the Porta Caeciliana. Bunsen (Bibl. i. p. 638) and Becher, in conformity with their line of wall, place it by the hospital of S. Giovanni, now approached by the Via S. Giovanni in Laterano, the ancient street called Caput Africana. The Porta Querquetulana, if it was really a distinct gate and not another name for the Caeciliana, must have stood a little to the N. of the latter, near the church of S. S. Pietro e Marcellino, in the valley which separates the Caelian from the Esquiline. This gate, which was also called Querquetulana, is several times mentioned, but without any more exact definition. (Plin. xvi. 15; Festus, p. 261.) The Caelian hill itself, as we have before remarked, was anciently called Querquetulana. From this point the wall must have run northwards in a tolerably direct line till it joined the southern extremity of the agger, where the Porta Esquilina was situated, between which and the Querquetulana there appears to have been no other gate. The Esquiline, like the others on the agger, is among the most certain of the Roman gates. We learn from Strabo (v. p. 237) that the Via Labicana proceeded from it; whilst at a little distance the Praenestina branched off from the Labicana. It must therefore have lain near the church of S. Vito and the still existing arch of Gallinus; but its exact site is connected with the question respecting the gates in the Aurelian wall which corresponded with it, and cannot therefore at present be determined.

The site of the Porta Collina, the point from which we started, is determined by the fact mentioned by Strabo (ib. p. 229) that both the Via Salaria and Via Nomentana started from it; and it must consequently have stood near the northern corner of the baths of Diocletian at the commencement of the present Via del Macao. We learn from Paulus Diaconus (p. 10) that this gate was also called Agonensis and Quiroliana. Agonum, as we have said, was the ancient name of the Quirinal hill.

The Porta Collina, then, and the Porta Esquilina were seated at the northern and southern extremities of the Roman comitum.
(Liv. xlvi. 39), thus establishing the identity of the gate to at least that period.

But to return to Becker's explanation of the passage of Josephus. Admitting Plutarch's account of the triumphs of Paulinus and Lucullus, namely, that they passed through the Circus Flaminius, yet what does this prove? how is it connected with the Porta Triumphalis? Those generals may have marshalled their processions in the Campus passed through the Circus Flaminius in their to the Porta Triumphalis. The procession have been equally valid in the Circus as streets of Rome, just as the Lord Mayor's, or might, be seen at Westminster as well.

It is possible indeed that in the period there was no procession till the gate; but it does not necessarily the same line was always precisely the same.

we may perceive a difference between of Josephus and those of Plutarch. Plutarch says that Vespasian went de voce eteoaeti. It seems, that he adds the of Lucullus, that he adds the.
the entrance to Numa’s regia, as we learn from Plutarch (de Fort. Rom. 10). Among the arches of sculptors to which the name of gate was applied, or perhaps be ranked that alluded to by Martial (vi. 41):—

“Olim pulta Vipsania portae columna,” &c.

But the gates called Ferentina and Praetoria have offered a conjecture. [See p. 37.] In the street-slaughters, the Ferentina rests solely on a false reading of Statius (Silv. 6. 2, Paeon. 3. 97.) On the other hand, the Praetoria seems better supported by the reading of a Vitellius, which is the first time the Praetoria appears in a text at Rome; it is also mentioned by Pliny (Nat. Hist. 36. 32) as one of the gates to which the name of gate was applied. However, the Praetoria seems to have been pierced in a later period, and a new wall was built to enclose the road along which it stood, and a new line of gates was erected. Gradually the old gates began to disappear, but the opening was never entirely closed, and the line of gates was not entirely abandoned. When it was finally abandoned, the Praetoria was no longer a gate, but became a station for the collection of tolls. However, it was the last of the gates to be abandoned, and was finally dismantled in the 11th century. The Praetoria was also mentioned in the Portae Praenestinae, vii. Mai, which date agree with Ovid (Fast. iv. 590) in the case of the elephants, and in the case of the elephants which the entrances of a dog were by the flames in the Lucus Holmis. It was also mentioned in the Portae Praenestinae, vii. Mai, which date agree with Ovid (Fast. iv. 590).

This discrepancy is to be reconciled. It can hardly be supposed that one of the Roman gates derived its name from a trifling rustic sacrifice; unless, indeed, it was a duplicate one, used chiefly with reference to ascendency customs, as seems to have been sometimes the case, and in the present instance, to indicate the position of the gate to the spot where the annual rite was performed. Paulus Diaconus also mentions (p. 37) a Porta Collatina, which he affirms to have been so called after the city of Collatia, near Rome. But when we reflect that both the Via Tiburtina and the Via Praenestina are issued from the Porta Esquilina, and that a road to Collatia must have run between them, the impossibility of a such a Porta Collatina is at once apparent. The Duodecim Portae are placed by Bunsen (Buchh. i. p. 633) in the wall of the Circus Maximus; but as it appears from Pliny (I. c.) that they stood on the ancient line of wall, and as we have shown that this did not make part of the wall of the circus, this could not have been their situation. We do not know the number of the gates of the Duodecim Portae to which the force of Piale’s celebrated discovery that the Duodecim Portae must have been a place at Rome, because Julius Obsequens says that a mule brought forth there; which it might very well have done at one of the gates. Becker’s opinion (Hands. p. 180) that it was an arch, or arches, of the Aqua Appia seems unfounded as that of Bunsen (Vide Preller, Regiones, p. 193). It is mentioned by the Notitia in the 11th Region, and therefore probably stood somewhere near the Aventine; but its exact site cannot be determined. It seems probable, as Preller remarks, that it may have derived its name from a complex of twelve arched thoroughfares like the Aenosbocahina, or perhaps the Belikhon at Athens.

Transiberinacium Wall.—Ananus M. Mons in the times we have related, fortified the Janiculum, or hill on the right bank of the Tiber commanding the city. Some have concluded from Livy (i. 33):—

“Janiculum quoque adjectum, non inopia locorum, sed ne quando ex arx hostium esset. Id non muro solutum, sed istam ob commoditatem Himetis ponte Sublicio tam primum in Tiberi facto contumui urbi

3 c 3
of the agger. But besides these, Strabo (7.5. p. 234) mentions another lying between them, the Porta Viminalis, which is also recorded by Festus (p. 376) and by Florus (Ap. 19). It must have lain behind the SE angle of the baths of Diocletian, where an ancient road leads to the rampart, which, if prolonged, would run to the Porta Claudia of the walls of Aurelian, just under the southern side of the Castra Praetoria. It is clear from the words of Strabo, in the passage just cited (ὅπερ μένει δι’ τοῖς ἐρείπιον ἱστορεῖν τοὺς ἐκτίματα τοῖς Ἑλλήνιστοι Λῆμφοι), that there were only three gates in the agger — the agger itself occupied a considerable portion of the circumference of the city, and it could not have been possible to find room for two or three more in this short space, the whole length of the agger being but 6 or 7 stadia (Strab. l.c.; Dionys. iv. 68), or about $\frac{1}{2}$ of a mile. Its breadth was 50 feet, and below it lay a ditch 100 feet broad and 50 feet deep. Remains of this immense work are still visible near the baths of Diocletian and in the ground of the Villa Negrotto, especially at the spot where the remains of Rome now stand.

**Survey under Vespasian and Circumference of the City.**— In the preceding account of the gates in the Servian wall we have numerated twenty, including the Porta Triumphalis. Some topographers have adhered to a greater number. When we observe that there were only nine or ten main roads leading out of ancient Rome, and that seven of these issued from the three gates Capena, Esquilina, and Collina alone, it follows that five or six gates would have sufficed for the main entrances, and that the remainder must have been unimportant ones, destined only to afford the means of convenient communication within the city. Of these, the distinction was almost always given only to the Collina, Viminalis, Esquilina, Castrimontana, Capena, Trigemina, Carmelitana, and Raturnena, which seem to have been of any great importance. Nevertheless it appears from a passage in Pliny (iii. 99) that in his time there must have been a great number of smaller ones, the origin and use of which we shall endeavour to account for presently. As the passage, though unfortunately somewhat obscure, is of considerable importance in Roman topography, we shall here quote it at length: "Urban tres portas habentem Romulos reliquit, aut (ut plurimas tradentibus credamus) quattuor. Moesia ejus collegere amnibit Imperatoribus Caesaribusque Vespasianoae ardua conditae posseduntur. Complementum semetipsum, ipsa divinitur in regiones quattuordecim, computa Larion collev. Ejusdem spatium, mensura currente a milliario in capite Romani fori statuto, ad singulas portas, quas sunt hosque numero triginta septem, ita ut duodecim semel numerentur, praetererque quinquies et sex lateribus septem, quae esse desiderant, efficit passuum per diemtrium $\times \times \times \times \times \times \times \times \times \times \times \times \times \times \times \times \times \times the entrance to Numa's regia, as we learn from Pintarch (de Fort. Rom. 10). Among the arches of aqueducts to which the name of gate was applied, may perhaps be ranked that alluded to by Martial (iv. 18):—

"Qua vicina pluit Vipsanis porta columnis," &c.

Respecting the gates called FERNETELLA and FACCULARIA we have before offered a conjecture. [See p. 728.] The PORTA MIXTA rests solely on a false reading of Plantinus. (Cass. ii. 6, Pesc. i. 3. 97.) On the other hand, a PORTA CATULARIA seems to have really existed, which is mentioned by Paulus Diaconus (p. 45; cf. Festus, p. 285) in connection with certain sacrifices of red-coloured dogs. This must be the scene of the city of Colonia, near Rome (Fast. iv. 905), in which the entrails of a dog were offered by the flames in the Lucus Robiginis. It is also mentioned in the Fasti Praenestini, vii. Kal. Mai, which date agrees with Ovid's: "Fe-
i-rose Robigo Via Claudia, ad milium v., ne ro-
bigo furmentis nocet." But this is at variance with the first, with Otho, who was marching to Rome by the Via Nomentana, not the Via Claudia, and, consequently, with itself, since the Via Claudia did not branch off from the Via Flaminia till the 10th milestone, and, consequently, no sacrifice could be performed on it at a distance of 5 miles from Rome. However this discrepancy is to be reconciled, it can hardly be supposed that the name of the Roman gates derived its name from a trifling rustic sacrifice; unless, indeed, it was a duplicate one, used chiefly with reference to sacerdotal customs, as seems to have been sometimes the case, and in the present instance to denote the gate leading to the spot where the annual rite was performed. Paulus Diaconus also mentions (p. 37) a PORTA COLLATINA, which he affirms to have been so called after the city of Colonia, near Rome. But when we reflect that both the Via Tiburtina and the Via Praenestina issued from the Porta Equilina, and that a road to Collatium must have run between them, the impossibility of a substantive Porta Collatina is at once apparent. The DUODECIM PORTAE are placed by Bunsen (Beschr. i. p. 635) in the wall of the Via Prenestina, but as it appears from Pliny (l. c.) that they stood on the successus of the road, the term "porta" must be interpreted as meaning an archway of the wall, and as we have shown that this did not make part of the wall of the circus, this could not have been their situation. We do not see the force of Piale's celebrated discovery that the Duodecim Portae must have been a place at Rome, because Julius Obsequens had brought forth there; which it might very well have done at one of the gates. Beckner's opinion (Handb. p. 180) that it was an arch, or arches, of the Aqua Appia seems unfounded as that of Bunsen (vide Freiler, Regionen, p. 193). It is mentioned by the Notitia in the 11th Regio, and therefore probably stood somewhere near the Aventine; but its exact site cannot be determined with any probability from the remarks, that it may have derived its name from being a complex of twelve arches, through which the Esquiline of the Palaeisone at Athens.

Transitoriae Wall.—Ancus Marcus, as we have related, fortified the JANICULUM, or hill on the right bank of the Tiber commanding the city. Some were called "Portae" (Cat. vi. 6) "Januentine quoque adjectum, non inopiae porum, sed ne quando ea ara hostium esset. Id non muro solum, sed etiam ob commoditatem itineris ponte Sublicium tum primum in Tileri facto conjungi urbi
that a wall was built from the fortress on the top of the hill down to the river, but the construction of conjungi in this passage may be a zeus. It seems strange that Ancus should have built a wall on the right bank of the Tiber when there was yet none on the left bank; and it is remarkable that Dionysius (iii. 45), in describing the fortification of the Janiculum, makes no mention of a wall, nor do we hear of any gates on this side except that of the fortress itself. The existence of the wall, moreover, seems hardly consistent with the accounts which we have already given from the same author of the defenseless state of the city on that side. Niebuhr (Hist. i. p. 396) rejected the notion of a wall, as utterly erroneous, but unfortunately neglected to give the proofs by which he had arrived at this conclusion. The passage from C. Arrianus (Kassiodorus 327\textsuperscript{2}) seems to regard as decisive proves little or nothing for the earlier periods of the city; and even had there been a wall, the passing it would not have afforded an entrance into the city, properly so called.

II. Walls and Gates of Aurelian and Honorius.

In the repair of the wall by Honorius all the gates of Aurelian vanished; hence it is impossible to say with confidence that any part of Aurelian's wall remains: and we must consider it as represented by that of Honorius. Procopius (B. G. iii. 24) asserts that Totila destroyed all the gates; but this is disproved by the inscriptions still existing over the Porta S. Lorenzo, as well as over the closed arch of the Porta Maggiore; and till the time of Pope Urban VIII. the same inscription might be read over the Ostiense (P. S. Paolo) and the ancient Portuense. It can hardly be imagined that these inscriptions should have been preserved over restored gates. The only notice respecting any of the gates of Aurelian on which we can confidently rely is the account given by Ammianus Marcellinus (xviii. 4. § 14) of the carrying of the Egyptian obelisk, which Constantius II. erected in the Circus Maximus, through the Porta Ostiense. It may be assumed, however, that their situation was not altered in the new works of Honorius. By far the greater part of these gates exist at the present day, though some of them are now walled up, and in most cases the ancient name has been changed for a modern one. Hence the problem is not so much to discover the sites of the ancient gates as the ancient names of those still existing; and these do not admit of much doubt, with the exception of the gates on the eastern side of the city.

Procopius, the principal authority respecting the gates in the Aurelian (or Honorian) wall, enumerates 14 principal ones, or στός, and mentions some smaller ones by the name of στίλια (B. G. i. 19). The distinction, however, between these two appellations is not very clear. To judge from their present appearance, it was not determined by the size of the gates; and we find the Pinciana indifferently called στοις and στίλια. (Urbichus, Class. Mix. vol. iii. p. 196.) The conjecture of Nibby (Storia, ge. p. 317) may perhaps be correct, that the στός, were probably those which led to the great highways. The unknown writer called the Anonymus Ensidelensis, who flourished about the beginning of
obtained its present name cannot its ancient one was undoubtedly from Via Flaminia, which it spanned across, and indeed long before, but had bent outwards from the spur of the Pincian hill, whence it fronsus or incinosus, just as it is in the toro. (Procop. B. G. i. 23) proceeding always to the right, Pinciana, before, merely walled up in the time of a Einsiedlen. It of course de- are described as the one house near this gate (Anastas., 106); and either from this explains performed before it, it is supposed to have been called, a name which actually occurs in the passages of Procopius (B. G. i. 18). And it is called, though the latter claim to this second appellation, which Belisarius himself defended; it is probable that there was no such name in the passage, in which Aurelian by means of a gate now blocked up, but still extant, just at the angle where those walls join on to the Castra Praetoria.

Assuming this to have been the original Tiburtina, Niebuhr (followed by MM. Bunsen and Urlichs) considers the Porta S. Lorenzo to have been the Praenestina, and the Porta Maggiore to have been the Labicana; but that as the gate adjoining the Praetorian camp was blocked up, the road to Tivoli was transferred to the Porta S. Lorenzo, and that to Praeneste to the gate next in order, which thus acquired the name of Praenestina instead of its former one of Labicana (Beschreibung, p. 637, seq.). To this suggestion there appear to be two principal objections brought forward by M. Becker, neither of which M. Urlichs has answered: the first, that, supposing the Via Tiburtina to have been so transferred, which taken alone might be probable enough, there is no apparent reason why the Via Praenestina should have been also shifted, instead of the two thenceforth issuing together from the same gate, and diverging immediately afterwards; and secondly, that there is no authority for the existence of such a gate called the Labicana at all. The passage of Strabo, already cited, concerning the Via Labicana, certainly seems to imply that that road in his time was separated from the Praenestina immediately after leaving the Esquiline gate; but there is no improbability in the suggestion of M. Becker, that its course was altered at the time of the construction of the new walls, whether under Aurelian or Honorius, in order to avoid an unnecessary increase of the number of gates. Many such changes in the direction of the principal roads may have taken place at that time, of which we have no account, and on which it is impossible to speculate. Westphal, in his Römische Campanien (p. 78), has adopted the same view of the case: but he considers the Via Labicana to have originally had a gate assigned to it, which was afterwards walled up, and the road carried out of the same gate with the Via Praenestina. The only real difficulty in the ordinary view of the subject, supported by M. Becker, appears to
be that, if the Via Tiburtina always issued from the Porta S. Lorenzo, we have no road to assign to the now closed gate adjoining the Praetorian camp, nor yet to the Porta Viminalis of the Servian walls, a circumstance certainly remarkable, as it seems unlikely that such an opening should have been made in the aeger without absolute necessity. On the other hand, the absence of all mention of that gate prior to the time of Strabo would lead one to suspect that it was not one of the principal outlets of the city; and a passage from Ovid, quoted by M. Becker, certainly affords some presumption that the road from Tibur, in ancient times, actually entered the city by the Porta Esquilina (Fast. v. 684). This is, in fact, the most important, perhaps the only important, point of the question; for if the change in the names had already taken place as early as the time of Procopius, which Niebuhr himself seems disposed to acknowledge, it is hardly worth while to inquire whether the gates had borne the same appellations during the short interval from Honorius to Justinian" (Class. Mus. vol. iii. p. 369, seq.).

The Porta Tiburtina (S. Lorenzo) is built near an arch of the Aquae Marcia, Tepula, and Julia, which here flows over one another in three different canals. The arch of the gate corresponds with that of the aqueduct, but the latter is encumbered with rubbish, and therefore appears very low, whilst the gate is built on the rubbish itself. As the inscription on it appeared on several of the other gates, we shall here insert it: S.P.Q.R. Imp. D.D. N.V. invictissimis principibus Arcadio et Honorio victoribus et triumphatoribus aetern. August. ob sacratoa urbe ascensionem munus portae aut turris ejusdem immensa rubris ex supplicatione V.C. et inutilia comitii et magistri aeternus militiae. Fil. Stiliconus ad perpetuationem nominis eorum simulacra constituit curante Fil. Macrobio Longiniano. V.C. Prope Urbis D. N. M. Q. eorum. In like manner the magnificent double arch of the Aqua Claudia and Anio Novus, which flows over it, was converted into the Porta Praenestina (Maggiore).

The right arch, from the city side, is walled up, and concealed on the outside by the Honoran wall. Just beyond the gate is the curious tomb of Eurytaces, the baker, sculptured with the inscrip-

ments of his tomb in 1838, by the carver who had built the Porta San Pancrazio of the closed Honorius over the Porta Esquilina. There are three inscriptions—builder, and Veritas. The gate had a dedicatory column.

Hence the vestiges of the Aqua Claudia are at this point; when Beneventum was a suburb embracing the confluence of the Anio and Metaurus. The Porta Asinaria of Giovanni, built by Pope Gregory the Great, having a span of the Mura, &c. p. 40, and is frequently mentioned in the point where the Metaurus and the Metaurus flows into the Tiber (Merid. p. 11.)

The two new aqueducts have entirely replaced this one another and work in the Via Appia to Capena, for which reason they have not yet received names, which is the road to Tivoli. When the Porta Giove Stabiana retained its name, it was called Porta Senesi, but now called Porta S. Giorgio, Eurytaceae, situated outside the city, for the arch is now called arch of Eurytaces. A little farther on an arch called Porta Ardeatina (Froopep. B. G. p. 370.) called arch of Eurytaces, lies walled up at a place named Arsura, which issues from the Servian walls. This gate was walled up at a time when the side of the Via S. Paolo, forms the outside of it, and the most splendid monument of Anmnius, now covered by a tower belonging to St. Pauli apse (Froopep. B. G. p. 370.) is on the second, the side of the Via S. Paolo is covered by a tower belonging to the remains of the Iovi. From this point the Via S. Paolo runs through Monte Testaccio...
contrary to this, was first brought into vogue by Nardini in the last century, and has since been held by most Italian scholars and topographers. It is not, however, so exclusively Italian but that it has been adopted by some distinguished German scholars, among whom may be named Göttling, and Braun, the present accomplished Secretary of the Archæological Institute at Rome.

Every attempt to determine this question must now rest almost exclusively on the interpretation of passages in ancient authors relating to the Capitolium hill, and the inferences to be drawn from them; and the decision must depend on the preponderance of probability on a comparison of these inferences. Hence the great importance of attending to a strict interpretation of the expressions used by the classical writers will be at once apparent; and we shall therefore preface the following inquiry by laying down a few general rules to guide our researches.

Preller, who, in an able paper published in Schneidewin's Philologus, vol. i., has taken a very moderate and candid view of the question, consoles himself and those who with him hold the German side, by remarking that no passage can be produced from an ancient and trustworthy writer in which Capitolium is used as the name of the whole hill. But if the question turns on this point—and to what extent it certainly does—such passages may be readily produced. To begin with Varro, who was both an ancient and a trustworthy writer. In a passage where he is expressly describing the hills of Rome, and which will therefore admit neither of misapprehension nor dispute, Varro says: "Septimo mortuam nostram urbs urbe muria comprehendit. E quae Capitolium dicitur, quod hic, quom fundamenta foderunt saeclis Jovis, caput humanum dicatur inventum. Hic monte ante Tarpeius dicitur," Sc. (L.L. v. § 41, Mill.) Here Capitolium can signify nothing but the Capitoline hill, just as Palatinum in § 53 signifies the Palatine. In like manner Tacitus, in his description of the Roman period before cited: "Forumque Romanum et Capitolium non a Romulo sed a Tito Tatius additum urbi crediderint" (Ann. xii. 24), where it would be absurd to restrict the meaning of Capitolium to the Capitol proper so called, for Tatius dwelt on the Arx. So Livy in his narrative of the exploit of Horatius Cocles: "Sic transit a terra religiis, jam plus hostium in Capitolium dicitum, quum in Juniculo, fori." (ii. 10), where its unison with Palatum shows that the hill is meant; and the same historian, in describing Romulus consecrating the spolia opima to Jupiter Feretrius a couple of centuries before the Capitoline temple was founded, says: "in Capitolium consecuit" (i. 10). The Greek writers use τὸ Καστόριον in the same manner: Πάριον μὲν τὸ Παλάτιον καταστρεφον — Τὸν δὲ τὸ Καστόριον. (Dionys. ii. 50.) Hence we deduce as a first general rule that the term Capitolium is sometimes used of the whole hill.

Secondly, it may be shown that the whole hill, when characterised generally as the Roman citadel, was also called Arx: "Atque ut sua munia arx circumjacta ardeo et quasi circumsca saxo nitens, in illis tempore horribilis Gallici adventus incola atque intacta permanerint." (Cic. Rep. ii. 6.) "Sp. Tarpeius Romanae praeerat aedil." (Livy i. 11.) But there is no need to multiply examples on this head, which is plain enough.

But, thirdly, we must observe that though the terms Capitolium and Arx are thus used generally...
be that, if the Via Tiburtina always issued from the Porta S. Lorenzo, we have no road to assign to the now closed gate adjoining the Praetorian camp, nor yet to the Porta Viminalis of the Servian walls; a circumstance certainly remarkable, as it seems unlikely that such an opening should have been made in the agger without absolute necessity. On the other hand, the absence of all mention of that gate prior to the time of Strabo would lead one to suspect that it was not one of the principal outlets of the city; and a passage from Ovid, quoted by M. Becker, certainly affords some presumption that the road from Tibur, in ancient times, actually entered the city by the Porta Esquilina (Fast. v. 684). This is, in fact, the most important, perhaps the only important, point of the question; for if the change in the names had already taken place as early as time of Procopius, which Niebuhr himself disposed to acknowledge, it is hardly worth while to inquire whether the gates had borne the appellations during the short interval from to Justinian " (Cass. Ann. vol. iii. p. 35).

The Porta Tiburtina (S. Lorenzo) was an arch of the Aquae Marcia, Tepula, which here flowed over one another in one canal. The arch of the gate that of the aqueduct, but the less with rubbish, and therefore appears the gate is built on the rubthus inscription on it appeared on gates, we shall here insert it: "N.V. urbis insignis princeps

To signify the whole hill, they are nevertheless frequently employed in a stricter sense to denote respect to one of its summits, or rather, the temple of Jupiter Capitolinus and the opposite summit; and in this manner they are often found mentioned as two separate peaks as opposed to one another: "De aliquo capite Capitolinis occupato — nunii reiunt." (Cass. Ann. i. 18) — "Est autem etiam arx Vetus
N. Aurea et Capitolium." (Geol. N. A. v. i.)
ROMA.

(i. 32), he used the adjective form Καπηλιώτις (κανήλιοτιός), whilst in the present instance he is made to use the form Καπηλιανός. Herodotus must have landed below the line of wall running to the river, where, as the wall continued along its banks, he would have obstruction. And this was evidently the brought down his men in boats; gate had been always left open for him to have marched. He could have avoided the protracted landing his men. It is (Schnedein's Phi-
lius, or rather per-
chon, were confounded in Pandana, on the there there descrip-
sion already said,

in the entrance to the θρόνος of Dionys-
the Cape, or towards the forum, impossible. Thus Solinus: "Iadem
duobus, & montem Capitolinum Saturnium
preceli quaque, quod excelsior, por-
num appellaverunt, quae postmodum Pan-
diatis acta est" (i. 13). We also learn from this, who mentions the same castrum, or fort, that it was situated in the lower part of the Clivus Capitolinus. "Saturni quoque dioebantur,
qui castrum in imo clivo Capitolino incloent." (p. 322, Mull.) This, then, was the θρόνος first captured by Herodotus, and not, as Becker supposed, the Capitol; and hence, as that writer says, he pressed on to the western height, which, however, was not the Capitol but the Arx. When Dionysius says of the latter that it adjoined, or was connected with, the Capitolium, this was intended for his Greek readers, who would otherwise have supposed, from the fashion of their own cities, that the Arx or Acropolis formed quite a separate hill.

The story of Herodotus, then, instead of being "alone decisive," and which Becker (Wasmung, pp. 43, 44) called upon Braun and Preller to explain, before they ventured to say a word more on the subject, proves absolutely nothing at all; and we pass on to the next, that of Pontius Cominius and the Gauls. "The messenger climbs the rock at the spot nearest the river, by the Porta Carmentalis, where the Gauls, who had observed his footsteps, afterwards make the same attempt. It is from this spot that Manlius casts them down" (p. 389). This is a fair representation of the matter; but the question remains, when the messenger had climbed the rock he was in the Capitol or in the Arx? The passage quoted as decisive in favour of the former is the following: "Inde (Cominius) qua proximum fuit a ripa, per praebeturque neglectum hostium castellae saxum in Capitolium erudit." (Liv. v. 46.) "Galli, seu vestigio notato humano, seu sua sponte animadverso ad Carmentis saxorum adscensum sequo — in summum evasere" (Ib. 47). Now, it is plain, that in the former of these passages they are the Capitoline hill, and not the Capitol strictly so called; since, in regard to a small space, like the Capitol Proper, it would be a useless and absurd distinction, if it lay, and was known to lie, next the river, to say that Cominius mounted it "where it
to signify the whole hill, they are nevertheless frequently employed in a stricter sense to denote respectively one of its summits, or rather, the temple of Jupiter Capitolinus and the opposite summit; and in this manner they are often found mentioned as two separate localities opposed to one another: "De aere captis Capitolisque occupato — multii veniunt." (Liv. iii. 18.) "Est autem aetam aedes Veforis Romae inter arcem et Capitolium." (Gell. N. A. v. 12.) On this example, if

The process possibly selected how lonely it employed; and of the poets, an embarrassed bias of the hill, s
(i. 32), he used the adjective form Kaufsirvis (vapà
vaiis Kapmuvis tòlais), whilst in the present in-
stance he is made to use the form Kapmuvisitsex. Her-
domus must have landed below the line of wall running
from the Capitoline to the river, where, as the wall
was not continued along its banks, he would have
met with no obstruction. And this was evidently
the reason why he brought down his men in boats;
for if the Centurial gate had been always left open
it would have been better for him to have marched
overland, and thus to have avoided the protracted
and hazardous operation of landing his men. It is
clear, as Peller has pointed out (Scheideler, Rhet. lo-
logos i. p. 85, note), that Dionysius, or rather per-
haps his transcribers or editors, has here confounded
the Porta Carmentalis with the Porta Pandana,
which, as we have before seen, was seated on the
Capitoline hill, and always left open, for there
could hardly have been two gates of this descrip-
tion. The Porta Pandana, as we have already said,
was still in existence in the time of Varro (L. L. v.
§ 42, Mull.), and was in fact the entrance to the
ancient fort or castellum— the φαρετρὸς of Diony-
sus—which guarded the approach to the Capitoline
hill, of course on its E. side, or towards the forum,
where alone it was accessible. Thus Sallust: "Idem
(HERCULIS) et montem Capitolium Saturnium
meminrant, Castelli quosque, quod exilaverat Klon-
tam Saturnium appellaverunt, quae postmodum Pan-
dana vocitata est" (i. 13). We also learn from
Frontus, who mentions the same cas tum, or fort,
that it was situated in the lower part of the
Clivus Capitolinus. "Saturnii quoque dicebantur,
quem cas tum in insulo Capitolio incoletam" (p.
322, Mull.). This, then, was the φαρετρὸς first
captured by Herodotus, and not, as Becker supposes,
the Capitol: and hence, as that writer says, he pressed
on to the western height, which, however, was not
the Capitol but the Arx. When Dionysius says of
the latter that it adhered, or was connected with,
the Capitol, this was intended for his Greek readers,
who would otherwise have supposed, from the fashion
of their own cities, that the Arx or Acropolis formed
quite a separate hill.

The story of Herodotus, then, instead of being
"alone decisive," and which Becker (Wunder, pp.
43, 44) called upon Braun and Peller to explain, be-
fore they ventured to say a word more on the subject,
proves absolutely nothing at all; and we pass on to
the next, that of Pontius Cominius and the Gaul.
"The messenger climbs the rock at the spot nears
the river, by the Porta Carmentalis, where the
Gauls, who had observed his footsteps, afterwards
make the same attempt. It is from this spot that
Manlius casts them down" (p. 389). This is a fair
representation of the matter; but the question re-
 mains, when the messenger had clomb the rock was
he in the Capitol or in the Arx? The passages
quoted as decisive in favour of the former are the
following: "Inde (Cominius) quaproximo fuit
e ripa, per praeruptum etc. etc." (Liv. v. 46.)
"Galli, seu vestigio notato humano, seu sua sponte
animadverso ad Capitem saxorum adacrem sequo
—in summum erature" (ib. 47). Now, it is plain,
that in the former of these passages Livy means
the Capitoline hill, and not the Capitol strictly so
called; since, in regard to a small space, like the
Capitol Proper, it would be a useless and absurd
distinction, if it lay, and was known to lie, next the
river, to say that Cominius mounted it "where it
was nearest to the river. "Cominius in Capitolium erudit" is here equivalent to "Romulus in Capitolium ascendit," in a passage before cited. (Liv. i. 10.) Hence, to mark the spot more precisely, the historian inserts "ad Carmentis" in the following chapter. There is nothing in the other authorities cited in Becker's note (no. 750) which yields a conclusion either one way or the other. We might, with fair superior justice, quote the following passage of Ciceron, which we have adduced on another occasion, to prove that the attempt of the Gauls was on the Arx or citadel: "Atque ut in sua munitione Arx circumjecit arduo et quasi circumcisco saxo nitetur, ut etiam in illa tempestate horribili Gallici adventus incolumis atque intacta permanerit." (De Rep. ii. 6). But, though we hold that the attempt was really on the Arx, we are nevertheless of opinion that Ciceron here uses the word only in its general sense, and thus as applicable to the whole hill, just as Livy uses Capitolium in the preceding passage. Hence, Mr. Bunbury (Class. Mus. vol. iv. p. 430) and Mr. Preller (L. c.) have justly regarded this narrative as affording no evidence at all, although they are adherents of the German theory. We may further observe, that the house of Manlius was on the Arx; and though this circumstance, taken by itself, presents nothing decisive; yet, in the case of so sudden a surprise, it adds probability to the view that the Arx was on the southern summit.

We now proceed to the next illustration, which is drawn from the account given by Tacitus of the attack of the Vetuliani on the Capitol. Becker's interpretation of this passage is so full of errors, that we must follow him sentence by sentence, giving, first of all, the original description of Tacitus. It runs as follows: "Cito agmine forum et immeminenti foro templum praetererit: erigit aciem per advensum collem usque ad principes Capitolinum arcis fores. Erant antiquitatis porticus in lateri clivi, dextrae subuentibus: in quorum tectum egressi axiis tegnulisque Vetuliani obsuebat. Neque illis manus nisi gradum armatæ: et accessorius tormenta ant missilia tela longum videbatur. Facies in prominenti porticus pectore et sequebantur ignem: ambustaque Capitolii fores penetrassent, ni Sabinus resursum undique statuas, decora majorum in ipso aditus vice muri obiectiss. Tum diversos Capitolii aditus invadunt, proficis libanam coniunxerat, nec nisi per axem ingremuit. Nec satis potenter scandentes per conjuncta, sedidique, quae in multa pace, in altum edita solum Capitolii sequatur. Hic ambiguitur, ignem tectis oppugnatores inquinat, an obessi, quae crebrior fama est, quo nito ant progressos deplerellent. Inde lapset ignis in porticus appostas aedibus: mox sustinentes fastigium aquilae veteris ligurn transrustat Sannam aluertique. Sic Capitolium clausis foribus indeorsum et indireptum confagurat." (Hist. iii. 71.)

"The attack," says Becker, "is directed solely against the Capitol; that is, the height containing the temple, which latter is burnt on the occasion" (p. 390). This is so far from being the case, that the words of Tacitus would rather show that the attack was directed against the Arx. The temple is represented as having been shut up, and neither attacked nor defended: "clausis foribus, indeorsum et indireptum confagurat." Such a state of things is inconceivable, if, as Becker says, the attack was directed solely against the Capitol. That part of the hill was evidently deserted, and
not however so mutilated but that the sense is plain — "Nonerunt funestam locum [cum altera parte], Capitolium coniungi" (p. 343), where Müller remarks, "non multum ab Urini supplemento discedere licebit."

Becker then proceeds to argue that the temple of Juno Moneta was built on the site of the house of M. Manlius Capitolinus, which was on the Arx (Liv. v. 47; Plut. Cae. 36; Dion Cass. Fr. 31, &c.); and we learn from Ovid (Fast. i. 637) that there were steps leading from this temple of Concord, to that of Juno Moneta. Now as the former temple was situated under the height of Araccali, near the arch of Severus, this determines the question of the site of Juno Moneta and the Arx. Ovid's words are as follows:—

"Candida, te niveo posuit inx proxima templo
Qua fert sublimis alta Moneta gradus;
Nunc bene prospiciis Latiam, Concordia, tur-
barum," &c.

This is very obscure; but we do not see how it can be inferred from this passage that there were steps from one temple to the other. We should rather take it to mean that the temple of Concord was placed close to that of Moneta, which latter was approached by a flight of lofty steps. Nor do we think it very difficult to point out what these steps were. The temple of Juno was on the Arx; that is, according to our view, on the SW. summit; and the lofty steps were no other than the Centum Gradus for ascending the Rupes Tarpeia, as described by Tacitus in the passage we have just been discussing. Had there been another flight of steps leading up to the top of the Capitoline hill, the Vitellians would certainly have preferred them to clambering over the tops of houses. But it will be objected that according to this view the temple of Concord is placed upon the Arx, for which there is no authority, instead of on the forum or clivus, for which there is authority. Now this is exactly the point at which we wish to arrive. There were several temples of Concord, but only two of any renown, namely, that dedicated by Flurius Camillus, n. c. 367, and re-dedicated by Tiberius after his German triumph, which is the one of which Ovid speaks; and another dedicated by the consul Opimia after the sedition and death of Gracchus. Appian says that the latter temple was in the forum: —

Τὸ δὲ Σαββάτον ὕπαρκε Οὐασσολας αὐτοὶ ἦσαν Κονκούρδια καὶ θαλών Χρηστῆς ἱερεῖας (B. C. i. 26). But in ordinary language the clivus formed part of the forum; and it would be impossible to point out any place in the forum, strictly so called, which it could have occupied. It is undoubtedly the same temple alluded to by Varro in the following passage: — "Senatum super Graecos etiam ubi aedem Concordiae et basilica Opimia" (L. L. v. p. 156, Müller); from which we may gather that Opimia built at the same time a basilica, which adjoined the temple. Becker (Handb. p. 309) denies the existence of this basilica; but by the time he published his Wärmung he had grown wiser, and quoted in the Appendix (p. 58) the following passage from Cicero (p. Sest. 67): — "L. Opimia cujus monumentum celeberrimum in foro, sepulcrum desertissimum in littore Dyrrachino est relicium;" maintaining, however, that this passage related to Opimia's temple of Concord. But Urticcia (Röm. Top. p. 26), after pointing out that the epithet celeberrimum, "very much frequented," suited better with a basilica than with a temple, produced...
two ancient inscriptions from Marinii’s 
\textit{Attli de Fratelli Arseci} (p. 212); in which a basilica Opimia 
is recorded; and Becker, in his \textit{Anteord} (p. 33), 
confessing that he had overlooked these inscriptions, 
retracted his doubts, and acknowledged the existence 
of a basilica. According to Varrus, then, the 
Aedius Concordiæ and basilica of Opimius were close to 
the senaculum; and the situation of the senaculum 
is pointed out by Festus between the Capitol and 
Forum: “Unum (Senaculum) ubi nunc est aedii 
Concordiæ, inter Capitolium et Forum” (p. 347, 
Mühl.). This description corresponds exactly with the 
site where the present remains of a temple of Con- 
cord are unanimously agreed to exist: remains, how-
ever, which are supposed to be those of the temple 
founded by Camillus, and not of that founded by 
Opimius. According to this supposition there must 
have been two temples of Concord on the forum. 
But if these remains belong to that of Camillus, 
who shall point out those of the temple erected by 
Opimius? Where was its site? What is its history? 
When was it demolished, and its place either left 
vacant or occupied by another building? Appian, 
as we have seen, expressly says that the temple built 
by Opimius was in the forum; where is the evidence 
that the temple of Camillus was also in the forum? 
There is positively none. Plutarch, the only direct 
evidence as to its site, says no such thing but only 
that it looked down upon the forum: \textit{ἐπισημαντα-} 
την μὲν Ὀμολογαὶ ἐσχοῖν, διότερ πέταλο ὃ ᾔδιμπλον, 
εἰς τὴν ἀγοράν καὶ ἐν τῇ ἐκκλησίᾳ ἐκτοπν ἐπὶ 
τοῖς γεγενημένοις ἱδρύοις θεοῦ (Camill. 42). Now 
ἀνάπεδες means to 
\textit{view from a distance}, and espe-
cially \textit{from a height}. It is equivalent to the Latin 
\textit{prospicere}, the very term used by Ovid in describing 
the same temple:—

“Nunc bene prospícies Latiam, Concordia, turbae.”

These expressions, then, like Ovid’s allusion to the 
“sublimis gradus” of Moneta, point to the \textit{Arx} as 
the site of the temple. It is remarkable that Lucan 
(\textit{Phars.} i. 195) employs the same word when de-
scribing the temple of Jupiter Tonans, erected by 
Augustus, also situated upon the \textit{Arx}, or Rupe 
Tarpeia:—

“\textit{O magna qui moenia prospícies urbis}”

\textit{Tarpeia de rupe Tonantis.}

This temple indeed, has also been placed on the 
clivus, on the authority of the pseudo-Victor, and 
against the express evidence of the best authorities. 
Thus an inscription in Gruter (Ixxi. No. 5), con-
sisting of some lines addressed to Fortuna, likewise 
places the Jupiter Tonans on the Tarpeian rock:—

“\textit{Tu quae Tarpeio coloris vicina Tonanti}”

\textit{Votorum vindex semper Fortuna meorum,” &c.}

Suetonius (\textit{Aug.} c. 29 and 91), Pliny (\textit{xvii.} 6) 
and the \textit{Mil. Ancrepanum}, place it “in Capit-
olium,” meaning the Capitoline hill. It has been 
abundantly inferred that it was on the clivus, be-
cause Dion says that those who were going up to 
the great temple of Jupiter met with it first,—\textit{ἐν τοῖς 
ποιμη τοῖς ἄνδροις ἐστὶ τὸ Καπιτῶλον ἐνεύρετον} 
(Liv. iv), which they no doubt would, since the 
clivus led first to the western height.

On these grounds, then, we are inclined to believe 
that the temple of Concord erected by Camillus stood 
on the \textit{Arx}, and could not, therefore, have had any 
steps leading to the temple of Juno Moneta. The 
latter was likewise founded by Camillus, as we 
learn from Livy and Ovid:—

“I have a very good view of
linus is adduced, which ran to and must have led directly to it derived its name. But this is the question, and the other derived its name from the clivus, however, proves to be not disposed so lay—rather proves the reverse. The clivus was a continuation of which, as we shall have occasion of that road, the augurs Arx after taking the auguries, carried up their new year's carried up their new year's lictus, who lived upon the Arx; total language the clivus itself (Varro, L.L. v. § 47, Mill.) with their eyes could reach: "quo longissime conspectum oculi ferabant." (Liv. i. 18; cf. Cic. de Off. liii. 16.) The great extent of the prospect required may be inferred from an anecdote related by Valerius Maximi (viii. 2. § 1), where the augurs are represented as ordering Claudius Centumalus to lower his lofty dwelling on the Caelian, because it interfered with their view from the Arx,—a passage, by the way, which shows that the auguries were taken from the Arx till at all events a late period of the Republic. Nor, supposing with Becker, that the Arx was on the NE. summit, what sort of prospect would the augurs have had? It is evident that a large portion of their view would have been intercepted by the huge temple of Jupiter Capitolinus. The SW. summit is the only portion of the hill which, in the words of Livy, would afford a noble prospect, "in urbem agrumque." It was doubtless this point to which the augur conducted Numa, and which remained ever afterwards the place appointed for taking the auguries. Preller is of opinion that Augustus removed them to a place called the Auguratorium on the Palatine. (Philologus, i. p. 92.) But the situation laid down for that building scarcely answers to our ideas of a place adapted for taking the auguries, and it seems more probable that it was merely a place of assembly for the college of augurs.

Another argument that has been adduced in favour of the NW. summit being the Arx, is drawn from its proximity to the river, and from its rocky and precipitous nature, which made it proper for a citadel. But on this we are not inclined to lay any great stress.

Other arguments in favour of the Italian view may be drawn from the nature of the temple itself; but in order to understand them it will first be necessary to give a description of the building. The most complete account of the Temple of Jupiter Capitolinus is that given by Dionysius (iv. 61), from which we learn that it stood upon a high basis or platform, 8 pletreas, or 800 Greek feet square, which is nearly the same in English measure. This would give about 200 feet for each side of the temple, for the length exceeded the breadth only by about 15 feet. These are the dimensions of the original construction; and when it was burnt down a generation before the time of Dionysius,—that is, as we learn from Tacitus (Hist. iii. 78.), in the consobrinth of L. Scipio and Norbanus (s. c. 83.),—it was rebuilt upon the same foundation. The materials employed in the second construction were, however, of a much richer description than those of the first. The front of the temple, which faced the south, had a portico consisting of three rows of columns, whilst on the flanks it had only two rows; and as the back front is not said to have had any portico, we may conclude that there was nothing on this side but a plain wall. The interior contained three cells.
parallel to one another with common walls, the centre one being that of Jove, on each side those of Juno and Minerva. In Livy, however (vi. 4), Juno is represented as being in the same cells with Jupiter. But though the temple had three cells, it had but one fustigium, or pediment, and a single roof.

TEMPLE OF JUPITER CAPITOLINUS.

(From a Coin of Vespasian.)

Now the first thing that strikes us on reading this description is, that the front being so ornamented, and the back so very plain, the temple must have stood in a situation where the former was very conspicuous, whilst the latter was but little seen. Such a situation is afforded only by the NE. summit of the Capitoline. On this site the front of the temple, being turned to the south, would not only be visible from the forum, but would also present its best aspect to those who had ascended the Capitoline hill; whilst on the other hand, had it stood on the SW. summit, the front would not have been visible from the forum, and what is still worse, the temple would have presented only its nude and unadorned back to those who approached it by the usual and most important ascent, the Clivus Capitolinus. Such a state of things, in violation of all the rules which commonly regulate the disposition of public buildings, is scarcely to be imagined.

We will now revert to Becker's objection respecting the ARA CAELESTE. It must be admitted that the dimensions of the temple would have allowed but little room for this area on the height of Arvaces, especially as this must have contained other small temples and monuments, such as that of Jupiter Feretrius, &c. Yet the Area Capitolina, we know, was often the scene not only of public meetings but even of combats. There are very striking indications that this area was not confined to the height on which the temple stood, but that it occupied part at least of the extensive surface of lower ground lying between the two summits. One indication of this is the great height of the steps leading up to the vestibule of the temple, as shown by the story related by Livy of Annius, the ambassador of the Latins; who being rebuked by Manlius and the fathers for his insolence, rushed frantically from the vestibule, and falling down the steps, was either killed or rendered insensible (viii. 6). That there was a difference in the level of the Capitol may be seen from the account given by Paterculus of Scipio Nasica's address to the people in the solitude of the Gracchi. Standing apparently on the same lofty steps,—"ex superiori parte Capitolii summis gruidibus insistens" (ii. 3).—Nasica incited by his eloquence the senators and knights to attack Gracchus, who was standing in the area below, with a large crowd of his adherents, and who was killed in attempting to escape down the Clivus Capitolinus. The area must have been of considerable extent and the same in the class of the opposite sides being, if not a temple, at least a building of some importance; and consequently the tyrant was not only magnanimous, which honours him as one of the first Roman emperors, but at the same time he would not neglect the temple as the site destined to the deities and Juventas, but hasten to move, and accordingly the site chosen for the future greatness of Rome.

§ 41. Mühlberg has given the area of the god, on the summit of Frigidarium (see above, pp. 68-69.) It is stated that at the head in dignitate, et in auctoritate a front of the Capitol, the temple was presented with a silver plate in the form of Truc. l. 2. 46. As the coins are exceedingly rich, this "patera" was not a mere trifle. (Liv. vi. 4). As we see, the temple at Rome had carried length the peculiar character of the censors, and the census Lepidus were but simple superfluous and ornamental. As the steps leading lasted till they came down the Clivus Capitolinus, it was by design ("ut in rupem"") and consequentlyconfined to the opposite eastern side of the area, the name of Cottulus was naturally preserved to the temple that was so connected with its history.
The new building, however, stood but for a very short period. It was again destroyed soon after Vesuvius’s death in a great fire which particularly desolated the 9th Region, and was rebuilt by Domitian with a splendour hitherto unequalled. (Suet. Dom. 10; Dion Cass. lxxi. 24.) Nothing further is accurately known of its history; but Domitian’s structure seems to have lasted till a very late period of the Empire.

TEMPLE OF JUPITER CAPITOLINUS RESTORED.

Vesuvius, as we have already seen, ruined for meetings or contiones; but at other times it was frequently held for important public affairs. (Plin. xxxvi. 5.) After its destruction, Vesuvius restored it as it still is on the original plan, with no alteration except a slight change. (Tac. Hist. iv. 53; Suet. Aug. 8; Dion Cass. lxxvi. 10, &c.)

The temple of VENUS CAPITOLINA and VENUS VICTRIX are also mentioned, but it is not clear whether they were separate edifices. (Suet. Cal. 7, Gall. 18; Fast. Am. VIII. Id. Oct.) We also hear of two temples of JUPITER (Liv. xxxv. 41), and a temple of ORS (xxxix. 22). It by no means follows, however, that all these temples were on the Capitol, properly so called, and some of them might have been on the other summit, Capitolium being used generally as the name of the hill. This seems to have been the case with the temple of FORTUNATE, respecting which we have already cited an ancient inscription when discussing the site of the temples of Concord and Jupiter Tonans. It is perhaps the temple of Fortuna Primigenia mentioned by Plutarch (Fort. Rom. 10) as having been built by Servius on the Capitol and alluded to apparently by Clemens. (Protrept. iv. 51. p. 15. Syll.) The temple of HONOR AND VIRTUS, built by C. Marius, certainly could not have been on the northern eminence, since we learn from Festus (p. 34, Mill.) that he was compelled to build it low lest it should interfere with the prospect of the augurs, and he should thus be ordered to demolish it. Indeed Propertius (iv. 11. 43) mentions it as being on the Tarpeian rock, or southern summit:—

"Fœdusque Tarpeio conopia tendere saxo
Jura dare et statuas inter et arma Mari."
hill than the auricularium, and probably near its
declivity. The building of it by Marus is testified
by Vitruvius (iii. 2, 5), and from an inscription
(Orelli, 543) it appears to have been erected out of
the spoils of the Cimbrie and Teutonic war. We
learn from Cicero that this was the temple in which
the first senatus consultum was made decreeing his
recall. (Sest. 54, Planc. 39, de Div. i. 28.)

We have already had occasion to allude to the
temple erected by Augustus to Jupiter Tonans. Like
that of Fortune it must have stood on the SW
height and near the top of the ascent by the Clivus,
as appears from the following story. Augustus
dreamt that the Capitoline Jove appeared to him
and complained that the new temple seduced away
his worshippers; to which having answered that
the Jupiter Tonans had been merely placed there
as his janitor or porter, he caused some bells to be
hung on the pilen of the latter temple in
token of its janitorial character. (Suet. Aug. 81.)

That the same emperor also erected a temple to
Mars Ultor on the Capitoline, besides that in his
turn, seems very doubtful, and is testified only by
Irenaeus Cassius (br. 10). Domitian, to commemorate
his preservation during the contest with the Vitellians,
dedicated to Jupiter Conservator, or the Preserver,
in the Velabrum, on the site of the house of the
aediles, or saristan, in which he had taken refuge; and afterwards, when he had obtained
the purple, a large temple to Jupiter Custos on the
Capitoline, in which he was represented in the bosom
of the god. (Tac. Hist. iii. 74; Suet. Dom. 5.) We also
hear of a temple of Beneficence (Erinyopaea)
erected by M. Aurelius. (Don. Lex. 34.)

But one of the most important temples on the
SW. ascent or Akropolis was that of JUNO MONETA,
erected, as we have said, in pursuance of a vow made
by Casarius on the spot where the house of M.
Marcellus Capitolineus stood. (Liv. vii. 28.) The
name of Moneta, however, seems to have been
assigned to the temple some time after the dedica-
tion of the temple, since it was occasioned by a voice
heard, after an earthquake, advising (meanwhile) that
expiations should be made with a pregnant sow.
(Cic. ros. 4. 45.) The temple was erected in 368 B.C.
396. The Roman mint was subsequently established
in it. (Luc. v. 20; of Sallust, Mar. vii.) It was
probably at this time that the temple was
increased in size, as we have seen, to correspond to
the edifice erected by Caesar and restored
by Augustus, as well as the other senatorial
vexilla at the same point of the great process,
during the Second Punic War, b.c. 217.

We shall now pass to the temple of Pallas
Athena. It is remarkable that this temple
is the first of all that we shall mention, and the
most ancient. Among all the temples of Rome, that of the Roman
Athena (or Minerva) is probably the oldest. It was
begun by Romulus, or, at least, by his son Tullus
Hostilius, in the sixth year of the city. The mother of this, which
was no sooner built, was dedicated to M. Claudius
Lentulus, the son of a Cinna. The building was made
of stone, as is the armour and helmets of
the Sneanese statues, and made at about a date that

It could be seen on the Albani, be useless to its
beauty, and for the sake of its marble column,

Such an account is incon- possible, as the Tabularium, and also with cept which we have ventured to the considerable part of it was occupied consider occasion. But, secondly, the account of an olive. But, secondly, the account already pointed out, is quite Becker's view. The Vitellians, for the summit of the Clivus, retreat attempt: two other ascents, one of the Lucus Asyli. And this agrees from Livy's description of the qui nunc septus descendentibus ascent, the enclosure of which by those who descended the "inter Whence the place is called "inter duas lucos" inter Asylum, the enclosure of which thirdly, the asyli must have been to it; and this, on Becker's own life; and this, on Becker's own p. 415, was under the NE. summit. In the career and temple of Concord, of Severus. This ascent has been called Clivus Asyli, as there was in the Capitoline hill. But it is that an ascent on this side of the that the fire broke out which deo Jupiter Capitolinus; and the Jupiter, must have been on the NE. respect to the asylum, we need only further remark, that it contained a small temple, but to what deity it was dedicated nobody could tell (plu vnto tovataivevov 5nov de 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5ov 5
hill than the auguraiulum, and probably near its declivity. The building of it by Marius is testified by Vitruvius (iii. 2, 5), and from an inscription (Orelli, 543) it appears to have been erected out of the spoils of the Cimbrian and Teutonic war. We learn from Cicero that this was the temple in which the first senatus consultum was made decreeing his recall. (Sest. 54, Pliny, 32, de Div. i. 28.)

We have already had occasion to allude to the temple erected by Augustus to Jupiter Tonans. Like that of Fortune it must have stood on the height and near the top of the ascent by the c as appears from the following story. A dreamt that the Capitoline Jove appeared and complained that the new temple was his worshippers; to which having a the Jupiter Tonans had been mere as his janitor or porter, he caused hung on the pediment of the token of its janitorial character.

That the same emperor also Maus Uloton on the Capitol forum, seems very doubtful, Dion Cassius (iv. 9). D his preservation during the dedicated a sacellum to the Preserver, in the house of the aedificia taken refuge; and the purple, a large Capitoline, in wh of the god. 

IV. THE FORUM AND ITS ENVIRONS.

The forum, the great centre of Roman life and culture, is so intimately connected with the Capitol as to be naturally led to treat of it next. Its original site was a deep hollow, extending from the eastern foot of the Capitoline hill to the spot where the Velia begins to ascend, by the remains of the temple of Antoninus and Faustina. At the time of the battle between the Romans and Sabines this ground was in its rude and natural state, partly swampy and partly overgrown with wood. (Dionys. ii. 50.) It could, however, have been neither a thick wood nor an absolute swamp, or the battle could not have taken place. After the alliance between the Sabines and Romans this spot formed a sort of neutral ground or common meeting-place, and was improved by cutting down the wood and filing up the swampy parts with earth. We must not, indeed, look for anything like a regular forum before the reign of Tarquinius Priscus; yet some of the principal lines which marked its subsequent extent had been traced before that period. On the E. and W. these were marked by the nature of the ground; on the former by the ascent of the Velia, as the latter by the Capitoline hill. Its northern boundary was traced by the road called Sacra Via. It is very of late years, however, that these boundaries have been recognised. Among the earlier historians views equally erroneous and discordant.
The Sacra Via was thus intimately connected with the forum; and as it was both one of the oldest and one of the most important streets, it will demand a particular description. But in obscurity. According to some accounts, it has been already in existence when the forum was first thought of, since it is derived its name of the "Sacred Way" or "Street of the Gods," which appears to be the street that lies between the Roman Forum and the Capitoline Hill. It was also the road by which the augurs descended from the arx when, after taking the auguries, they proceeded to inaugurate anything in the city below. It was as though Titus Tatius instituted the custom that on every new year's day the augurs should bring before the people presents of verbenas from the grove of Strenae, or Strenua, to his dwelling on the arx ("ab exortu poene urbis Martiae Streniarii usus adolevit, auctoritate regis Tatii, qui verbenas felicis arboris ex luco Streuniae anni novi auspiciis primus accept," Symm. Epist. x. 35). This custom seems to have been retained in later times in that known as the augurium salutis. (Cic. Leg. ii. 8; Tac. Ann. xii. 23; Lucian, Pseudeph. 8.) Hence perhaps the appellation of "sacra," though the sense of sacred is lost.
hability that among a people like the Romans a public execution would take place at a public and conspicuous spot. The Circus Grarius, or Hundred Steps, were probably near it; but their exact situa-

tion it is impossible to point out. The other objects on the Clivus and slopes of the hill will be described in the next section.

IV. THE FORUM AND ITS ENVIRONS.

The forum, the great centre of Roman life and business, is so intimately connected with the Capitol that we are naturally led to treat of it next. Its original site was a deep hollow, extending from the eastern foot of the Capitoline hill to the spot where the Vellis begins to ascend, by the remains of the temple of Antoninus and Faustina. At the time of the battle between the Romans and Sabines this ground was in its rude and natural state, partly swampy and partly overgrown with wood. (Dionys. ii. 50.) It could, however, have been neither a thick wood nor an absolute swamp, or the battle could not have taken place. After the alliance between the Sabines and Romans this spot formed a sort of neutral ground for common meeting-place, and was improved by cutting down the wood and filling up the swampy parts with earth. We must not, indeed, look for anything like a regular forum before the reign of Tarquinus Priscus; yet some of the principal lines which marked its subsequent extent had been traced before that period. On the E. and W. these are marked by the nature of the ground; on the former by the ascent of the Vellis, on the latter by the Capitoline hill. Its northern boundary was traced by the road called Sacra Via. It is only of late years, however, that these boundaries have been recognised. Among the earlier topographers views equally erroneous and discordant prevailed upon the subject; some of them extending the forum lengthways from the Capitoline hill to the summit of the Vellis, where the arch of Titus now stands; whilst others, taking the space between the Capitoline and temple of Faustina to have been its breadth, drew its length in a southerly direction, so as to encroach upon the Velabrum. The latter theory was adopted by Nardini, and prevailed till very recently. Piax (Del Foro Romano, Roma, 1816, 1832) has the merit of having restored the correct general view of the forum, though his work is not always accurate in details. The proper limits of the forum were established by excavations made between the Capitol and Colosseum in 1837, and following years, when M. Fos saw opposite to the temple of Antoninus and Faustina, a piece of the pavement of the Sacra Via, similar to that which runs under the arch of Severus. (Bunsen, Le For. Rom. expliquèd, p. 7.) A similar piece had been previously discovered during excavations made in the year 1742, before the church of S. Adriano, at the eastern corner of the Via Bonella, which Ficoroni (Vestigia di Roma antica, p. 75) rightly considered to belong to the Sacra Via. A line prolonging through these two pieces towards the arch of Severus will therefore give the direction of the street, and the boundary of the forum on that side. The southern side was no less satisfactorily determined by the excavations made in 1835, when the Basilica Julia was discovered; and in front of its
steps another paved street, enclosing the area of the forum, which was distinguishable by its being paved with slabs of the ordinary size. This street continued eastwards, past the ruin of the three columns or temple of Castor, as was shown by a similar piece of street pavement having been discovered in front of them. From this spot it must have proceeded eastwards, past the church of Sta. Maria Liberatrice, till it met that portion of the Sacra Via which ran in a southerly direction opposite the temple of Faustina (S. Lorenzo in Miranda), and formed the eastern boundary of the forum. Hence, according to the opinion now generally received, the forum presented an oblong or rather trapezoidal figure, 671 English feet in length, by 202 at its greatest breadth under the Capitol, and 117 at its eastern extremity. (Bunse, Les Forum de Rome, p. 15.)

SACRA VIA. — The SACRA VIA was thus intimately connected with the forum; and as it was both one of the most ancient and one of the most important streets of Rome, it will demand a particular description. Its origin is lost in obscurity. According to some accounts it must have been already in existence when the battle before alluded to was fought, since it is said to have derived its name of the "Sacred Way" from the treaty concluded upon it between Romulus and Tatius. (Dionys. ii. 46; Festus, p. 290, Müll.) This, however, seems highly improbable; not only because the road could hardly have existed at so early a period, when the site of the forum itself was in so rude a state, but also because a public highway is not altogether the place in which we should expect a treaty to have been concluded. The name of the comitium has also been derived, perhaps with no greater probability, from the same event. It is more likely that the road took its origin at a rather later period, when the Sabine and Roman cities had become consolidated. Its name of Sacra Via seems to have been derived from the sacred purposes for which it was used. Thus we learn from Varro (L. L. § 47, Müll.) that it began at the sacellum of the goddess Sterrenia, in the Carinae; that it proceeded thence as far as the arx, or citadel on the Capitoline hill; and that certain sacred offerings, namely, the white sheep or lamb (ovis idulis), which was sacrificed every five to Jove (Ovid, Fast. i. 56; Macrobi. S. l. 15; Paul. Dia. p. 104, Müll.), were borne along it monthly to the arx. It was also the road by which the augurs descended from the arx when, after taking the auspices, they proceeded to inaugurate anything in the city below. It likewise appears that Titus Tatius instituted the custom that on every new year's day the augurs should bring him presents of verbenses from the grove of Sterrenia, or Sterrenus, to his dwelling on the arx ("ab excertos poenis urbis Martiae Sterrenorum usus adolevit, anctoritate regis Tati, qui verbenses felicis arboris ex iuco Sterrenus annis novi auspicia primus accept," Symm. Epist. x. 35). This custom seems to have been retained in later times in that known as the augurium salutis. (Cic. Leg. H. 8; Tac. Ann. xii. 23; Lucian, Pseudol. 8.) Hence perhaps the appellation of "sacra," through the
whole extent of road was called Sacra Via only
in sacerdotal language, between which and the
common usage we have already had occasion to note
a diversity when giving an account of the Servian
gate. In common parlance only that portion of the
road was called Sacra Via which formed the
ascent of the Velia, from the forum to its summit
("Huius Sacrae Viae pars haec sola vulgo nota quae
est a foro semit primo clivo, Varr. f. c."). Hence
by the poets it is sometimes called "Sacra Clivus;"
"Inde sacro veneranda petes Pataviv clivo." (Mart.
iv. 90. 2); and

"primaque talis foroce
Per sacros clivros, imerita decoros
Frons, Sciambros." (Hor. Od. iv. 3. 34.)

compared with

"Intactus aut Britannus ut descendere
Sacra catensius via." (Id. Epod. vii. 7.)

(Comp. Ambrosch. Studien und Aendert.
p. 78, seq.)

The origin of the vulgar opinion is explained by
Festus in the following passage: "Itaque ne estus
quidem, ut vulgo opinatur, sacra appellationa est, a
ruralibus, sed ex sacris officiis sacrae sacrificii
domo ad sacellum Streniase, et ritus a regia
usque in arcam" (p. 290, Mill.). Whence it appears
that only the part which lay between the Regia, or
house of the pontifex maximus, and that of the
rex sacrificius, was commonly regarded, and probably
for that very reason, as "sacra." This passage,
however, shows clearly that it was plain enough in the
regard that there must have been a space between those two
residences, that has caused some embarrassment on account
of a passage in Dion Cassius (iv. 27), in which he
says that Augustus presented the house of the rex
sacrificius (τον βασιλέα των ιερων) to the Vestals
because it adjoined their residence (οδοντοσ της
δια); and as we know from Pliny (Ep. vii. 19)
that the vestals dwell close to the temple, it seems
impossible, if Dion is right, that there should have
been a street lying between the two places men
tioned. But the matter is plain enough; though
Becker (de Murio, pp. 30—35, Handb. pp. 226—
237) wastes several pages in most far-fetched
reasonings in order to arrive at a conclusion which
appears, on the contrary, a reader of the text of
Dion for which there is actually MS. authority.
Augustus was chosen pontifex maximus (Αρχιερεσις),
not rex sacrificius, as Dion himself says in
this passage. But the two offices were perfectly
distinct ("Regem sacrificium creat. Id sacer-
dotium pontiflc subjicere," Liv. iv. 2). Augustus
would hardly make a present of a house which did
not belong to him; and therefore in Dion we must
read, with some MSS., τον βασιλεα των ιερων,
for ιερων; Dion thus, in order perhaps to convey
a lively notion of the office to his Greek readers,
designating the Roman pontifex maximus as "king
of the priests," instead of using the ordinary Greek
term Αρχιερεσις. The matter therefore lies thus.
Varro says that in ordinary life only the cloister
or ascent from the forum to the Summa Sacra Via,
obtained the name of Sacra Via. Festus repeats
the same thing in a different manner; designating
the space so called as lying between the Regia, or
house of the pontifex maximus, and that of the
rex sacrificius. Whence it follows that the latter
must have been on the Summa Sacra Via. It can
scarcely be doubted that before the time of Augustus

the Regia was the residence of the pontifex maxi-
mus. The building appears to have existed till a
late period of the Empire. It is mentioned by
the Younger Pline (Ep. xiii. 26) and by Plutarch (qui
Rom. 18) as extant in their time, and also
probably by Herodot (i. 14) in his description of
the burning of the temple of Peuce under Commemus.
After the expulsion of the kings, the rex sacrif-
icus, who succeeded to their sacerdotal preroga-
tives, was probably presented with one of the royal
houses. To which, however, it was more
bribebourhood of the Summa Sacra Via; that being
the spot where Ancus Marcius, Tarquinius Priscus, and
Tarquinius Superbus had dwelt. (Liv. iv. 41; Solf.
iv. 23, 24; Plin. xxxiv. 13.) We cannot tell the
exact direction in which the Sacra Via traversed
the valley of the Coloseum and ascended to the
arch of Titus, nor by what name this part of the
forum, commonly called in the language of the
people; but it probably kept along the base of
the Velia. At its highest point, or Summa Sacra
Via, and perhaps on the site afterwards occupied
by the temple of Venus and Rome, there seems to
have been anciently a market for the sale of fruit,
and also probably of nick-nacks and toys. (Summa
Sacra Via. (Varr. R. R. 1. 2.)

Hence Ovid (A. A. ii. 265.).

"Rure suburbano potestis tibi dicere missa.
Illa, vel in Sacra sint locit emi Via." 

Whilst the nick-nacks are thus mentioned by Pu-
pertius (iii. 17. 11.).

"Et modo parvons canes fabella superba
Et manibus dura frigus habere pilis,
Et curat imiatum tales me poscere eburnas
Quaeque sitent Sacra villa dona Via." 

The direction of the Secra Via is indicated by
Horsae's description of his stroll: "Ibam forte Via
Sacra," &c. (s. i. 9.) He is going down it towards
the forum, commonly coming from the villa of
Mecenas, on the Esquiline, when he is interrupted
by the eternal bore whom he has pilloried. The
direction of his walk is indicated by his unavailing
excuse that he is going to visit a sick friend over
the Tiber (v. 17) and by the arrival at the temple of
Vesta (v. 35); the Secra Via having been thus
quitted, the poet is at liberty to say that the two
extremities of the street, as commonly known, are
indicated in the following passage of Cicero: "Hoc
tamen miror, cur tu huc potius simulacrae, qui
longissime a te aulceaut. Equidem, si quando ut flut,
jactor in turbis, non illum accusce, qui est in Summa
Sacra Via, cum ego ad Paolium Foraminem im-
petor, et eax qui me accipat similem ascipe
eunt igitur." (p. Planc. 7.) The Forum Fabius, as
it will be seen hereafter, stood at the eastern extremity
of the forum; and Cicero has made the most of his
illustration by taking the whole length of the street.
Beyond this point, where it traversed the N. side
of the forum, we are at a loss to tell what its vulgar
appellation may have been; and if we venture to
suppose that "Ibam forte Via Sacra" is merely a
conjecture from Horsae (Epist. i. 1. 54), where "hai
racis summus ab imo" seems to suit better
with a street — just as we should say, "all
Lombard street" — than with two Jani, as is
commonly interpreted, or than with a building
containing several floors let out in counting houses.
(Oct. Sat. ii. 5. 18.) This view is supported by the Scholiens
on the first of these passages, where it is said:

"Rure suburbano potestis tibi dicere missa.
Illa, vel in Sacra sint locit emi Via." 

Whilst the nick-nacks are thus mentioned by Pu-
pertius (iii. 17. 11.).

"Et modo parvons canes fabella superba
Et manibus dura frigus habere pilis,
Et curat imiatum tales me poscere eburnas
Quaeque sitent Sacra villa dona Via." 

The direction of the Secra Via is indicated by
Horsae's description of his stroll: "Ibam forte Via
Sacra," &c. (s. i. 9.) He is going down it towards
the forum, commonly coming from the villa of
Mecenas, on the Esquiline, when he is interrupted
by the eternal bore whom he has pilloried. The

of the forum; and Cicero has made the most of his
illustration by taking the whole length of the street.
Beyond this point, where it traversed the N. side
of the forum, we are at a loss to tell what its vulgar
appellation may have been; and if we venture to
suppose that "Ibam forte Via Sacra" is merely a
conjecture from Horsae (Epist. i. 1. 54), where "hai
racis summus ab imo" seems to suit better
with a street — just as we should say, "all
Lombard street" — than with two Jani, as is
commonly interpreted, or than with a building
containing several floors let out in counting houses.
(Oct. Sat. ii. 5. 18.) This view is supported by the Scholiens
on the first of these passages, where it is said:
ROMA.

"Jesus autem hic pater dicturus, ubi mercavere et
sacerdotes sortis causa convenire solabant." In
fact it was the Roman Change. The ascent from
the forum to the summit of the Capitoline hill,
where the Sacra Via terminated, was, we know,
called Clivus Capitolinus.

It only remains to notice Becker's dicturus (de
Mars., p. 23) that the name of this street should
always be written Sacra Via, and not in reversed
order Via Sacra. To the exceptions which he noted
there himself, he adds some more in the Handbuch
(v. iii. p. 123) and in his Dictionary, where also
p. xxix. p. 299, Bipp.) in his Addenda; and Uhlirks
(Röm. Topogr. p. 8) increases the list. On the
whole, it would seem that though Sacra Via is the
more usual expression, the other cannot be regarded
as uncritical.

Vicus Jugurrius.—Of the name of the street which
ran along the south side of the forum we are not
entirely ignorant; but from it issued two streets, which were
among the most busy, and best known, in Rome. These
were the Vicus Jugarius and Vicus Tuscus. We have before had occasion to mention that the former ran close under the Capitoline hill, from the forum to the Porta Carmentalis. It was thought to
derive its name from an altar which stood upon the
Muro Jugario, the presiding deity of wedge-lock. (Paul. Dialc.
p. 104, Mutil.) It does not appear to have contained
any other sacred places in ancient times; but Augustus
dedicated in it altars to Ceres and Ops Augusta. (Fast. M.t. IV. 1. Aug.) At the top of
the street, where it entered the forum, was the
fountain called Locus Servilus, which obtained a
considerable degree of fame, not only as it was there
that the heads of the murdered senators were exposed. (Cic. Rosc. Am. 32; Senec. Prog. 3.)
M. Agrippa adorned it with the effigy of a hydra
(Festus, p. 290, Mutil.) Between the Vicus Jugarius and Capitoline hill, and close to the foot
of the latter, lay the Asquaminium (Liv. xxviii. 28),
said to have derived its name from occupying the site
of the house of the demagogue, Sp. Maelius, which had been razed (Varr. LL. v. 157, Mutil.; Liv.
iv. 16.) It served as a market-place, especially
for the sale of lambs, which were in great
request for sacrifices, and probably corresponded with
the modern Via del Monte Tarpeo. (Cic. Div.
ii. 53.)

Vicus Tuscus.—In the imperial times the Vicus
Jugarius was bounded at its eastern extremity by
the Basilica Julia; and on the further side of this
building, again, lay the Vicus Tuscus. According to some
authorities this street was founded in a. c. 507,
being assigned to such of the Etruscans in the
vanquished host of Aruns as had fled to Rome, and felt
desire to settle there (Liv. ii. 15; Dionys. v. 36);
but we have before related, on the authority of Varro
and Tacitus, that it was founded in the reign of
Romulus. These conflicting statements may, per-
haps, be reconciled, by considering the later settle-
ment as a kind of second or subsidiary one. How-
ever this may be, it is with the topographical facts
that we are here concerned, as the statements out
which Diodoruses communicates some interesting particulars. He describes the ground assigned to
the Tuscans as a sort of hollow or gorge situated
between the Palatine and Capitoline hills; and in
length nearly 4 stadia, or half a Roman mile, from
the forum to the Circus Maximus (v. 36). We
must presume that this measurement included all
the windings of the street; and even then it would
seem rather exaggerated, as the whole NW. side
of the Palatine hill does not exceed about 2 stadia.
We must conclude that it was continued through
the Velabrum to the circus. Its length as Canina
observes (Pom. i. p. 287) is said to be such that
the forum must have extended from NW. to SE.,
and not from NE. to SW.; as in the latter case, the
space for the street, already too short, would have been
considerably curtailed. This street, probably
from the habits of its primitive colonists, became the
abode of fishmongers, fruit-sellers, bird-fanciers, silk-
mercers, and saddle-makers, and acquired a
reputation ("Tacit. titra impia vici, Her. S. ii. 3.
29.) It was here, however, that the best silks in Rome
were to be procured ("Nec nisi prima vellet de Tusco
serica vico," Mart. xi. 27. 11.) In fact, it seems to
have been the great shopping street of Rome; and
the Roman gentlemen, whose ladies, perhaps, some-
times induced them to spend more than what
was agreeable there, ventured their ill humour by
abusing the tradesmen. According to the sciolist
on the passage of Horace just cited, the street was
also called Vicus Turarius. This appellation was
doubtless derived from the primus lincens and perfu-
ses sold in it, whence the al. l.ion in Horace (Ep.
i. 1. 267):—

"Ne capsa verrorce aperta
Deferar in vicum ventendum tux et odoros,
Et piper, et quicquid chartis amicitiae insepia."

Being the road from the forum to the circus and
Aventine, it was much used for festal processions.
Thus it was the route of the Popes Circumvales, which
proceeded from the Capitol over the forum, and
by the Vicus Tuscus and Velabrum to the circus.
(Dionys. vii. 72.) We have seen that the
procession of the virgins passed through it from the
temple of Apollo outside the Porta Carmentalis to
that of June Regina on the Aventine. Yet not
withstanding these important and sacred uses, it is
one of the charges brought by Cicero against Verres
that he had caused it to be paved so villanously
that he himself would not have ventured to ride
over it. (Verr. i. 59.) We see from this passage
that a statue of Vertumnus, the national Etruscan
deity, stood at the end of the street next the forum.
Becker (Hist. p. 505) places him at the other ex-
tremity near the circus externus, and suggests that
Verres, that he had caused it to be paved so villanously
that he himself would not have ventured to ride
over it. (Verr. ii. 5.) Those following words into
the god's mouth, are alone sufficient to decide the
matter (Class. Mus. vol. iv. p. 444):—

"Neo me tua vultus, nec templum laestor uberno
Romanum satia est posse videre forum."

Comitia.—Having thus described the streets which
either encircled the forum or afforded outlets from it,
we will now proceed to treat of the forum itself, and
the objects situated upon and around it, and endea-
vor to present the reader with a picture of it as it
existed under the Kings, during the Republic, and
under the Empire. But here, as in the case of the
Capitol, we are placed at a disadvantage, or rather
no investigation. We know that a part of the forum,
called the comitium, was distinguished from the
rest by being appropriated to more honourable uses;
but what part of the forum it was has been the
subject of much dispute. Some, like Canina, have
considered it to be a space running parallel with the
forum along the whole southern extent of the others,
such as Bunsen and Becker, have thought that it formed

3 D 4
a section of the area at its eastern extremity, in size about one-third of the whole forum. An argument advanced by Becker himself (Hondb. p. 278) seems decisive against both these views, namely, that we never hear any building on the S. side of the forum spoken of as being on the comitium. Yet in spite of this just remark, he ends by adopting "the theory of Bunsen, according to which the comitium began at or near the ruin of the three columns and extended, like the forum, to the exedra, and thus both the temple of Vesta and the Regia must have stood very close to it. The two chief reasons which seem to have led him to this conclusion are, the situation of the rostra, and that of the Tribunal Praetorius. Respecting the former, we shall have occasion to speak further on. The argument drawn from the latter, which is by far the more important, we shall here consider.

It proceeds as follows (Hondb. p. 280): "The original Tribunal Praetorius was on the comitium (Livy. vi. 15. xxi. 16; Gell. xx. 1, 11, 47 (from the XIL Tables); Varro, L. L. v. 32. p. 154; Plant. Poem. iii. 6. 11; Macrobr. Sat. ii. 12), which, however, is also mentioned as being merely on the forum. (Livy. xiv. 31.; varro, L. L. v. 32.) But certainly no more than the territory of the tribunal was the Puteal Libonis or Scribonianum, and this is expressly mentioned as being near the Forum. Fabius, the Atrium Vestae, the rostra, and lastly the seas Divi Julii (Porphyry. ad Hor. Ep. i. 19. 8; Schol. Crugbff. 7b. Id. ad Sat. ii. 6. 35; Fest. p. 353; Schol. ad Pers. Sat. iv. 49); consequently the comitium also must have been close to all these objects."

We presume that Becker's meaning in this passage is, that the first or original tribunal was on the comitium, and that it was afterwards moved into the forum. It could hardly have been both on the comitium and forum, though Becker seems to hint at such a possibility, by saying that it is "also mentioned as being on the forum; and indeed there seems to be no physical impossibility in the way, since it is evident that the tribunal at first was merely a movable chair ("dictator — stiputus ex multidivina, sella in comitio positis, vistorem ad M. Maniliim misit: qui — aegmine ingenti ad tribunal venit," Liv. vi. 13). But if that was his meaning, the place would be better off if he had not bear him out. In the first Livy merely says that a certain letter was carried through the forum to the tribunal of the praetor, the latter of course being on the comitium ("esse literas per forum ad tribunal praetoris latas," xxvii. 50). The other two passages cited contain nothing at all relative to the subject, nor can there be any doubt that in the earliest times of the Republic the comitium was the usual place on which the praetor took his seat. But that the tribunal was moved from the comitium to the forum is shown by the scholiast on Horace whom Becker quotes. Thus Porphyrio says: "Puteal autem Libonis sedes praetoris fuit prope Arnum Fabisnun, distitque quon libe Libonis ilio primum tribunal et subailla locata sit. Sed cum neque aestimare se pote coeundi ad comitium — i. e. "that the first or original tribunal was placed there by Libo;" but an adverb — "that the tribunal was first placed there by Libo."
The former version would be nonsense, because Libo's tribunal could not possibly have been the first. Besides the meaning is unambiguously shown by the Schol. Copen. Except it is manifest from its application to the Forum and from the accounts we read of rain falling upon it (Liv. xxxiii. 46, xl. 19), of buildings being of these scholiasts is suspicious as to the fact of this removal, though there are no apparent grounds for suspicion, yet Becker at least events is not in a condition to invalidate their testimony. He has quoted them to prove the situation of the puteal; and if they are good for that, they are also good to prove the removal of the tribunal. Yet with great inconsistency, he tacitly assumes that the tribunal had always stood in its original place, that is, on the comitium. The evidence of the comitium to the contrary is very strong, and the evidence that the latter was on the forum ("Puteal locatur in fora," Schol. Crugbff. ad Sat. ii. 6. 35.) Libo flourished about a century and a half before Christ. [See Dict. of Byz. Vol. ii. p. 779.] Now all the examples cited by Becker in which the tribunal is alluded to as being on the comitium, are previous to this data. The first two in note 457 might be passed over, as they are certainly not relevant to the argument. The comitium from the practice of coming together there (coire) for the decision of suits, of course refers to the very origin of the place. A passage from Plautus can prove nothing, since he died nearly half a century before the change effected by Libo. The passage alluded to in Macrobius (ii. 19) must be in the same sense, for it is the speech of C. Titus in favour of the Lex Fannia: "Inde ad comitium venit, ut ilium placitum factum ad forum daretur," etc. But the Lex Fannia was passed in n. c. 164 (Macrobr. ii. 13); or even if we put it four years later, in n. c. 160, still before the probable date of Libo's alteration; who appears to have been tribune in n. c. 149. Thus the argument does not prove our case, but absolutely nothing against it; it is its inventor; for if, as the School of Curiatiania informs us, Libo moved the tribunal from the comitium to the forum, and placed it near the puteal, then it is evident that this part of the area could not have been the comitium. The comitium, then, being neither on the south nor the north, west, or east, is not placed upon its fortunate luck, as has been the case in the Volsanid, qut ad supra Comitium "(p. 290, Mill.). In like manner Dacierius describes the Volsanig as standing a little above the forum, using, of course, the latter word in a general sense for the whole area, including the comitium: xai τις του συνόδου ὁμοίως ἐνισχύεται, ἐν Ἱππαλκίστῳ ὑπηρετεῖς εἰς ἄρθρον ἄναθυμ μὲν ὀνομαστικάς τοῖς ἔμφοι ἐν (ii. 50). Where indeed is not more, but simply not in a convenient place; mere an area consecrated to the god, and having probably an altar. It was a rule that a temple of Volsin should be outside the town (Virg. v. 7); and thus in later times we find one in the Campos Martius ("tactum de caelo sedem in campo Volsanii"). Liv. xxviii. 10. That the Volsani was merely a name of the temple is manifest from its application to the Forum, and from the accounts we read of rain falling upon it (Liv. xxxii. 46, xl. 19), of buildings being
erected upon it (Id. ix. 46). But that it had an altar appears from the circumstance that sacrifices of live fish taken in the Tiber were here made to Vulcan, in propitiation for human souls. (Feastus in Piscatoris Ludi, p. 238, Mull.) Another fact which shows it to have been a sacred place, and at the same time tends to direct us to its site, is the lotus-tree which grew upon it, the roots of which are said to have penetrated as far as the forum of Caesar, which, as we shall show in its proper section, lay a little N. of the Forum Romanum. "Verum altera lata in Vulcanalio, quod Romulus constituit ex victoria de decumio, aequaeva uti intelligentia, ut auctor est Manilius. Iadicis ejus in foro usque (Cassiarum per stationes municipiorum penetrat." (Plin. xvi. 86.) From which passage — whatever may be thought of the tale of the tree — we deduce these facts: that the Vulcanalium existed in the time of Pliny; that it had occupied the same spot from time immemorial; that it could not have been at any very great distance from the forum of Caesar; otherwise the roots of the tree could not possibly have reached thither. Let those consider this last circumstance who hold with Canina that the comitium was on the south side of the forum; or even with Bunsen and Becker that it was on the east. The Vulcanalum must originally have occupied a considerable space, and not have been merely a place for a place of consultation between Romulus and Taurus, with their respective senates. (Dionys. ii. 50; Plut. Rom. 20.) Its extent, however, seems to have been reduced in process of time, since the Graecoattisia was taken out of its area; a fact which appears from Livy mentioning the Aedes Concordiae, built by Flavius, as being "in area Vulcanalia" (iv. 48); whilst Plineus (Nat. Hist. iii. 126) has "una cum Concordia," which was probably denominative in its right place near the forum, to shade the spectators who occupied it from the sun. That the comitium was an open place is evident from many circumstances. Thus, the prodigious rain, which so frequently falls in the narrative of Livy, is described as wetting it (Livy. xxxiv. 45; Juel. Obseq. c. 103), and troops are represented as marching over it. It was here, also, that the famous battle was on the forum, as Livy (xxiii. 58), which seems to have been transplanted thither from the Palatine by some juggle of Attius Navius, the celebrated augur (Livy. xvi. 20; ap. Bunsen, Les Forum de Rom. p. 43, seq.), though we can by no means accede to Bunsen's emendation of that passage.

The principal destination of the comitium was for holding the comitia curiata, and for hearing lawsuits ("Comitium ab eo quo coibint eo, comitia curiata, et litium causa," Var. L. L. v. § 155, Mull.), and it must, therefore, have been capable of containing a considerable number of persons. The comitia centuriata, on the other hand, were held in the Campus Martius, such as the tribunes of the forum, to render it more proper. The curiae were, however, sometimes held on the Capitol before the Curia Calabra. The comitium was also originally the proper place for comitiones, or addresses delivered to the assembled people. All these customs caused it to be regarded as more honourable and important than the forum, which at first was nothing more than a mere market-place. Hence, we frequently find it spoken of as the most distinguished place of the forum; and seats upon it for viewing the games were assigned to persons of rank. Its distinction from the forum, as a place of honour for the magistrates, is clearly seen in the following passage of Livy, describing the alarm and confusion at Rome after the defeat at the Milvian Bridge: "Putes eat et unus cum ingenti terrae as tumulus concurrit in forum populi estactus. Matronae vagina per vias, quae repens clades adiuit, quaeque fortuna exercitus esset, omnis percontatur. Et quem frequentissimi contendit modo turba comitiis et curiam versus magistratus vocaret." (infra. xlii. 7.) When not oc-
cupied by the magistrates it appears to have been open to the people. Thus, the senate being assembled in the curia to hear the ambassadors of those made prisoners at the battle of Cannae, the people are represented as filling the comitium:

"ubi in fume fecit, extemplo ab eis turbis, quae in comitio erat, clamor sebilia est sublatus, manusque ad curiam tendingere, fuit." (Id. xxi. 60.) Being the place for the continuance of course had a suggestion, or rostra, from which speeches were delivered; but we shall have occasion to describe this and other objects on and around the comitium and forum when we arrive at them in their chronological order.

It was not till after the preceding account of the comitium had been committed to paper that the writer of it met with the essay on the comitium by Mommsen in the Annali dell' instituto (vol. xvi.), to which reference has before been made. The writer was glad to perceive that his general view of the situation of the comitium had been anticipated, although he is unable to concur with Mommsen regarding the details; such as the situation of the Curia Hostilia, of the temple of Janus, of the Forum Caesaris, and some other objects. In refuting Becker's views, Mommsen has used much the same arguments, though not in such detail, as those just adduced; but he has likewise thought it worth while to refute an argument from a passage in Herodian, incidentally adduced by Becker in a note (p. 339). As some persons, however, may be disposed to attribute more weight to that argument than we do ourselves, we shall here quote Mommsen's refutation:

"Minus etiam probat alterum, quod à Becker, p. 339, n. 612, afferitur, argumentum desuntum ex narratione Herodiani, i. 9, Severum in sonno vidisse Pericarmac eum vectum ad locum quidem aevi saec. sec. i., qui cum venisset, certa vel egressum titi arma in turba, dux. ina, dux. ducat. per se, cum ex eis subisse Severum eumque vixisse prius titi arma ustris non intelligi cur vixisse. Non nostrum, sed eumque leviter repaturus ad titi arma neque ad titi arma, quod multo est simplicitas. Nam ut optimum quasi in foro insistente videatur qui rerum Romanarum perspicue fere temere inepte haec dicentur; accedit quod, si ad titi arma titi arma omen pertinet, Severus ibi constitutus fuisse, neque in foro mediocriter. Nullaigit idoneus argumentum topographi Germani comitium eam partem esse staterunt, quae Vellii subjaces." (p. 389).

So much for the negative side of the question: on the positive side Mommsen adduces (p. 299) an argument which had not occurred to the writer of the present article in proof of the position above indicated for the comitium. It is drawn from the Sacrum Claustrum. That shrine, Mommsen argues, stood by the Tabernae Novae, that is, near the arch of Severus, as Becker has correctly shown (Hist. p. 321) from Livy iii. 48; but he has done wrong in rejecting the result that may be drawn from the comparison of the two legends; first, that the comitium was so called because Romulus and Tatius met upon it after the battle (p. 273); second, that the Romans and Sabines cleansed themselves, after laying aside their arms, at the spot where the statue of Venus Cl或者是 afterwards stood (Plin. xv. 18. n. 36); whence it follows that the statue was on the comitium. A fresh confirmation, Mommsen continues, may be added to this discovery of the truth. For that the Tabernae were on the comitium, and not on the forum, as Becker supposed, is pretty clearly shown by Dionyssus (τυμβὸς τὸν γεγονός ἐν τῇ διδόμος καὶ ξεκλεισθείς, καὶ τὸι ἁλᾶς ἐπηλοῦσα πολυκάμια πρόξει, εἴδοναγιν, ἐργαπετισθε χειρὶ καὶ τοῖς ἀλᾶς κεφαλαὶ πωλαμεῖ); ii. 67).

We are not, however, disposed to lay any great stress on this argument. We think, as we have already said, that Varro's etymology of the comitium, from the political and legal business transacted there rendering it a place of great resort, is a much more probable one; since, as the forum itself did not exist at the time when Romulus and Tatius met after the battle, it is at least very unlikely that any spot should afterwards have been marked out upon it commemorative of that event. It is, nevertheless, highly probable that the statue of Cluaca was upon the comitium, but without any reference to these traditions. We do not, however, think that the tabernae occupied the comitium. By ἄγος Dionyssus means the whole forum, as may be inferred from "per se."

The Forum under the Kings. — In the time of Romulus, then, we must picture the forum to ourselves as a bare, open space, having upon it only the altar of Jupiter at about the middle of its western side, and the Vulcanal on its NW. side. Under Numa Pomplius it received a few improvements. Besides the little temple of Janus, which did not stand far from the forum, but of which we have already had occasion to speak, when treating of the Porta Janzia in the first part of this article, Numa built near it his Regia, or palace, as well as the celebrated temple of Vesta. Both these objects stood very near together at the SE. extremity of the forum. The Aedes Vestae was a round building (Festus, p. 362; Plut. Numa. 11), but no temple in the Roman sense of the word; since it had been purposely left uninaugurated, because, being the resort of the vestal virgins, it was not deemed right that the senate should be at liberty to meet in it (Serv. Aen. viii. 153). Its site may be inferred from

TEMPLE OF JANUS. \[From a Coin\]

did not stand far from the forum, but of which we have already had occasion to speak, when treating of the Porta Janzia in the first part of this article, Numa built near it his Regia, or palace, as well as the celebrated temple of Vesta. Both these objects stood very near together at the SE. extremity of the forum. The Aedes Vestae was a round building (Festus, p. 362; Plut. Numa. 11), but no temple in the Roman sense of the word; since it had been purposely left uninaugurated, because, being the resort of the vestal virgins, it was not deemed right that the senate should be at liberty to meet in it (Serv. Aen. viii. 153). Its site may be inferred from

TEMPLE OF VESTA. \[From a Coin\]
several passages in ancient authors. Thus we learn from Dionysius (ii. 66) that it was in the forum, and that the temple of the Dioscuri, whose site we shall point out further on, was subsequently built close to it (Id. vi. 13; Mart. i. 70. 2). It is also said to have been near the banks of the Tiber. (Val. Max. i. 8. 1; Ov. F. l. 707.)

All these circumstances indicate its site to have been near the southeast corner of the Forum Romanum, where, indeed the graves of twelve vestal virgins, with inscriptions, were discovered in the 16th century. (Aldrando, Memoria, n. 3; Lucio Fano, Antich. di Roma, p. 206.) In all its subsequent restorations the original round form was retained, as symbolic of the earth, which Vesta represented (Ov. v. 265). The temple itself did not immediately abut upon the forum, but lay somewhat back towards the Palatine; whilst the Emons, which lay in front, and a little to the E. of it, marked the boundary of the forum on that side. The latter, also called Atrium Vestae, and Atrium Regium, though but a small building, was originally inhabited by Numa. (Ov. v. 365; Plut. Numa, 14, &c.)

The exact position of the temple is almost certain, for Caesar's body being burnt before it (App. B. C. ii. 148); and, indeed, Servius expressly says that it lay "in radicibus Palatii finibusque Romani fori" (ad Aen. viii. 363). At the back of both the buildings must have been a sacred grove which ran towards the Palatine. It was from this grove that a votive statue of Vesta was taken, and was afterwards placed in the Capitol, bidding the Romans repair their walls and gates. The adoration was neglected; but this impety was subsequently expiated by building at the spot an altar or sanctuary to Vesta (Cic. Div. i. 45.)

Tullus Hostilius, after the capture of Alba Longa, adorned the forum with a curia or senate-house, which was called after the Curia Hostilia, and continued almost down to the imperial times to be the most usual place for holding assemblies of the senate. (Varr. L. L. v. 155, Mill.; Liv. i. 30.)

From the same spoils he also improved the comitium: "Fecitique idem et seipsum moenia comitium et curiam" (Cic. Rep. ii. 17); whence we can infer that the walls of the comitium were built with a fence or wall, but more probably that he marked it off more distinctly from the forum by raising it higher, so as to be approached by steps.

The Curia Hostilia, which from its pre-eminence is generally called simply curia, must have adjoined the eastern side of the Vulcain. Niebuhr (Beschr. vol. iii. p. 60) was the first who indicated that it must have stood on the N. side of the forum, by pointing out the following passage in Pliny, in which the method of observing noon from it is described: —

"Duodecim tabulis ortus tantum et occasus nominatur; post aliquot annos adjectus est meridies, accensum consulal id proutiantanea, cum curia inter rostra et graecostaeam prosperisset solemn." (Varr. v. 155.)

This seems to have been observed from it, it must have faced the south. If its front, however, was parallel with the northern line of the forum, as it appears to have been, it must have looked a little to the W. of S.; since that line does not run due E., but a few degrees to the S. of E. Hence the necessity, in order to observe the true median line between the Graecostaeis and rostra, now the Curia Hostilia — at a period of course long after Tullus Hostilius, and when mid-day began to be observed in this manner — was a lofty substraction on the right or W. side of the curia; and the rostra were also an elevated object situated directly in its front. This appears from the passage in Varro just adduced to: —

"Ante hanc (curiam) rostra: quosquos loci id vocabantum, quod ex hostibus capta fissa sunt rostra, Sub destrae aquis (curiae) a comito locus substructus, ubi nationum subseriendus legati, qui ad senatum esse sedem legissent, curia Graecostaeis, a parte ut multa. Senaculum supra Graecostaeis, ubi sedes Concordiae et Basiliae Opinia." (L. L. v. § 155, 156.) When Varro says that the Graecostaeis was sub destra curiae, he is of course looking towards the south, so that the Graecostaeis was on his right. This appears from his going on to say that the senaculum lay above the Graecostaeis, and towards the temple of Concord; which, as we have had occasion to mention, was seated on the side of the Capitoline hill. It further appears from this passage that the Graecostaeis was a substraction, or elevated area (locus substructus) at the side of, or adjoining the comitium (comp. Plin. xxxii. 8); and must have projected in front of the curia. The relative situation of these objects, and the substraction is further proved by Pliny's account of observing midday, with which alone it is consistent. For, as all these objects faced a little to the W. of S., it is only on the assumption that the Graecostaeis lay to the W. of the curia, that the meridian sun could be observed with accuracy from any part of the latter between Graecostaeis and Curia. A singular theory is advanced by Mommsen respecting the situation of the Curia Hostilia, which we cannot altogether pass over in silence. He is of opinion (l. c. p. 289, seq.) that it lay on the Capitoline hill, just above the temple of Concord, which he thinks was built up in front of it; and this he takes to be the reason why the curia was rebuilt on the Capitoline. His authority for this view is the following passage in Livy: "(Censorc) et olivum Capitolinum silicets aternum curvarunt et porticum ab aede Saturni in Capitolium ad Senaculum ac super id Curtiam" (xii. 27). From these words, which are not very intelligible, Mommsen infers (p. 292) that a portico preceded from the temple of Saturn to the Capitol, and thence to the curia above it, which stood on the Capitol on the spot afterwards occupied by the Tabularium (p. 292). But so many evident absurdities follow from this view, that Mommsen, had he given the subject adequate consideration, could hardly, we think, have adopted it. Had the curia stood behind the temple of Concord, the ground plan of which is still partly visible near the arch of Severus, it is quite impossible that, according to the account of Pliny, mid-day could have been observed from it between the rostra and Graecostaeis, since it would have faced nearly to the east. Mommsen, indeed (p. 296), asserts the contrary, and makes the Ceramic Mamertina and arch of Titus lie almost due N. and S. as also showed by the plan to the end of the volume. But the writer can affirm from his own observation that this is not the fact. To a person standing under the Capitol at the head of the forum, and opposite to the column of Phocas, the temple of Faustina bears due E. by the compass, and the arch of Titus a few degrees to the S. of E. To a person standing by the arch of Severus about the assumed site of the curia, the arch of Titus would of course bear a little more S. still.

Something must be allowed for variation of the
Here the senaculum is represented, not as a place in which the senate assembled previously to delibera

tion, but as one in which it actually deliberated.

It is impossible, however, that this could have been the case. For in that case, there would have been no

temple of the curia? in which the senate is constantly represented as assembling, except in cases where
they held their sittings in some other temple. Be-
sides we have no accounts of the senaculum being an

inaugurated place, without which it would have been

unlawful for the senate to deliberate in it.

Nicostrotrus therefore, who, from his unerring eye, could confound the sen-

aculum with the curia, and other temples in which the senate assembled; and at all events his account
cannot be set against the more probable one of Varro and Valerius Maximus.

There is, however, one part in the account of Festus, which seems to set

the matter in a different point of view. The words, "... in the case of

deliberare," seem to point to the senaculum not as a place where the senators deliberated among

themselves, but where they conferred with the magis-

trates; such magistrates we may suppose as were

not entitled to enter the curia.

Such were the tribunes of the people, who, during the deliberations of

the curia, appear before the senators and ask the

decree of the Fathers before they became laws,

we may easily imagine that it was sometimes

necessary for the tribunes and senators to confer

together, and these conferences may have taken

place at the senaculum (" Tribunis plebis inture cru-

sa, ... antea senatus posita a plebis ..."

Val. Max. ii. 2. § 7.)

In this manner the senaculum would have answered two purposes: as places in which the senators met,

previously to the assembling of the curia, and as a

site of neutral ground for conferences with the plebeian

magistrates.

With regard to the precise situation of the senac-

ulum belonging to the Curia Hostilia, we can hardly

assume, with Mommsen, that it occupied the spot at

which the temple of Concord was afterwards actually

erected, in order to deliberate. Thus Varro: "Senacul

um vocatum ubi senatus aut ubi seniores consistere..."

citatum praemia in Curia

varius..." (v. § 156, MULL.)

Valerius Maximus gives a still more explicit account: "Senatus asci

dium stationem ex loco per sequebat qui hodieque

senaculum appellatur; nec especiabat ut edicto

contrectaretur..."

nicostrotrus in libro, quod iussit gravem se habendo:

sumus, ubi nunc est ad situm Concordiae inter

Capitolium et Forum; in quo solet magistratus
domum C. tallianum 

tertium, citra sedem Bellonae, in

quo exterritorium nationum legatos, quos in urbe ad

mititere solet, senatus debet habere " (p. 347, MULL.)
ROMA.

("Hic est arbor et ante sanctulum," i. 8). This must have been near the sanctuary of the Curia Hostilia, but could hardly have been the same. If Macrobius is right, then Festus is wrong in limiting the sanctuary to three; and it does not seem improbable that the area near temples, where the senate was accustomed to meet, may have been called sanctuary.

To Ancus Marcus we can only ascribe the Carcer Mamertinus, or prison described by Livy as having been "in imo clivo Capitolino." Moreover, the milliarium aureum, which stood at the top of the forum (Plin. iii. 9) was under the temple of Saturn: "ad milliarium aureum, sub aedem Saturni" (Tac. B. i. 27); "sub aedem Saturni, ad milliarium aureum" (Suet. Otho c. 6). Further, the Monumentum Ancyranum mentions the Basilica Julia as "inter aedem Castoris et aedem Saturni." Now what has Becker got to oppose to this overwhelming mass of the very best evidence? His objections are, first, that Servius (Aen. ii. 116) mentions the temple of Saturn as being "justa Concordiae templum;" and though the eight columns are near the temple of Concord, yet they cannot, without awkwardness, be called justa. Secondly, the Notitia, proceeding from the Carcer Mamertinus, names the temples in the following order: Templum Concordiae et Saturni et Vespasiani et Titii. Now, as the three columns are next to the temple of Concord, it follows that they belong to the temple of Saturn. The whole force of the proof here adduced rests on the assumption that the Notitia mentions these buildings precisely in the order in which they actually occurred. But it is notorious that the authority of the Notitia in this respect cannot be at all depended on, and that objects are named in it in the most preposterous manner. We need no other witness to this fact than Becker himself, who says of this work: "Opertera cavendum est diligentere, nta, quales plurias simul templum nominantur, aedem ex ordine junctauisse arbitrorum." (De Muris, &c., p. 12, note.) But thirdly, Becker proceeds: "This argument obtains greater certainty from the inscriptions collected by the Anonymous of Einsiedeln. Fortunately, the entire inscriptions of all the three temples are preserved, which may be still partly read on the ruins. They run as follows:

1 Senatus populusque Romanorum incendio consumptum restituit Divo Vespasiano Augusto, s. p. q. r. imp. Caes. Severus et Antoninus pii felic Aug. restituent. [| S. P. Q. R. aedem Concordiae vetustate collapsam in meliorum faciem opere et cultu splendidiori restituerunt. Now as the whole of the first inscription, with the exception of "non annotare," is quoted as follows: "Divo Vespasiano Augusto," are still to be read over the eight columns, and the letters restituerunt, a fragment of "restituerunt" in the second inscrip-

TABULARIUM AND TEMPLES OF VESPASIAN, SATURN AND CONCORD.
tion, over the three columns, Becker regards the order of the Notitia as fully confirmed, and the three temples to be respectively those of Concord, Vespasian and Titus, and Saturn.

With regard to the proper division of the first two, there is great difference of opinion. Bunsen and Becker divide them as above, but Canina (Foro Rom. p. 179) contends that the first finishes at the word "restituit," and that the words from "Divò Vespasiano" down to "restitutae rustae" form the second inscription, belonging to the temple of Vespasian and Titus. In the original codex containing the inscriptions, which is in the library of Einsiedeln, they are written consecutively, without any mark where one begins and another ends; so that the divisions in subsequent copies are merely arbitrary and without any authority. Now it may be observed that the first inscription, as divided by Canina, may still be read on the architrave of the eight columns, which is exactly full, leaving no space for any more words. Becker attempts to evade this difficulty by the following assertion: "There is no room," he says (Hist. p. 357). "for the dedication 'Divò Vespasiano,' on the front of the temple; and although it is unusual for one half of an inscription to be placed on the back, yet on this occasion the situation of the temple excuses it!"

We are of opinion, then, that the whole of the words after "restituit" down to the beginning of the inscription on the temple of Concord, belong to the temple of Vespasian, or that of which three columns still remain. Another proof that the words "Divò Vespasiano Augusto" could never have existed on the temple with the eight columns is that Poggio (de Variet. Fort. p. 12), in whose time the building was almost entire, took it to be the temple of Concord, which he could not have done had the dedication to Vespasian belonged to it. (Bunbury, in Class. Aes. iv. p. 27, note.) Thus two out of Becker's threearguments do not hold, and the third, that he has to adduce against the mass of evidence, from the best classical authorities, on the other side, is a stiff and pedantic interpretation of the preposition juxta in such a writer as Servius. Thus it is Becker himself who is amenable to his own charge of shutting his eyes against historical evidence. His attempt to separate the altar from the temple (Hist. p. 313), at least in locality, is equally unfortunate.

The remains of the temple of Saturn, or the portico with the eight columns at the head of the forum, are in a rude and barbarous style of art, some of the columns being larger in diameter than others. Hence Canina infers that the restoration was a very late one, and probably subsequent to the removal of the seat of empire to Constantinople. From the most ancient times the temple of Saturn served as a arsenal, or state treasury, where the public money, the military ensigns, and important documents were preserved (Liv. iii. 69; Plut. Q. R. 43; Macrob. i. 8; Solin. i. 12, &c.). On account of its preci;ous origin and the sacredness of the site, it was formed at the altar of sacrifices, and at the Greek rite, that is, capite aperito, instead of capite velato as among the Romans (Macrob. l.c.).

Adjoining the temple of Saturn was a small cella or Aedes of Ops, which served as a bank for the public money. The Fasti Amierianae and Caprensium mention it as being "ad Forum," and "in Vico Jugario," which determines its position here (Calend. Amst. Dec.; Cal. Caprens. Aug.). It is several times alluded to by Cicero: "Pecunia utam capite velato ad Opas maneret." (Phil. i. 7, cf. i. 14.) Before the temple stood a statue of Silvanus and a sacred fig-tree, which it was necessary to remove in a. c. 493, as its roots began to upset the statue (Finn. xxvii. 1). It was of the kind of the Etruscan, or Angiopoetum, and about midway up the ascent of the cli
tus, was the Vesta STercoraria, leading to a place where the ordele from the temple of Vesta was deposited on the 15th of June every year. (Varr. L. L. vi. § 32, Mull.; Festus, p. 344.) This custom seems to have been connected with the epitaph of Scurvicitia applied to Saturn by the Romans, as the inscription is in the manner of the Scurvicitia of Tac. Sat. i. 7.) Close to the Ara Saturnia there was a SACKELLUM DITIS, in which wax masks were suspended during the Saturnalia. (Fb. 11.)

But the most important alteration made by Tarquinus Priscus with regard to the forum was the causing of porticoes and shops to be erected around it (Varr. L. L. i. 31; Diony. Dys. i. 623). This gave the forum a fixed and unalterable shape. We may wonder at the smallness of its area when we reflect that this was the great centre of politics and business for the mistress of the world. But we must recollect that its bounds were thus fixed when she herself was not yet secure against the attempts of surrounding nations. As her power and population gradually increased various means were adopted for procuring more accommodation—first, by the erection of spacious basilicas, and at last, in the imperial times, by the construction of several new fora. But at first, the structures that arose upon the forum were rather of a useful than ornamental kind: and the tabernae of Tarquin consisted of butch- shops, schools, and other places of a like description, as we learn from the story of Virginia. These Ta- BERNÆ were distinguished by the names of Veteres and Novæ, whence it seems probable that only the former were erected in the time of Tarquin. The two sides of the forum, lengthways, derived their names from them, one being called sibí Veteribus, the other as sibi Novis. We have a passage in Cicero, where he describes these tabernae with the old and new Academy, enables us to determine their respective sites: "Ut iti, qui sub Novis solem non ferunt, item ille cam satu arct, veterem, ut Maenianorum, ac Academiorum ubram secutus est." (Acad. iv. 29.) Hence it appears that the Novæ, being exposed to the sun, must have been on the northern side of the forum,
and the Vestae of course on the south side. This relative situation is also established by the accounts which we have of basilicae being built either on or near their sites, as will appear in the sequel. Their arrangement cannot be satisfactorily ascertained, but of course they could not have stood before the curia and comitium. In process of time the forum began to put on a better appearance by the conversion of the butchers' shops into those of silversmiths ("Hoc inter vallo primum fornas digittas crevit, atque ex tabernis laenias argenteriae factae.") Varro in Nov. p. 532, 2, M.) No clue, however, is given to the exact date of this change. The earliest period at which we read of the games being held in Livy's description of the triumph of Papirius Cursor, n. c. 308 (l.x. 40). When the consuls were declared it seems it has been customary for the argentarii to close their shops. (Varr. L. L. vi. § 91, Müll.) The tabernae were provided with Maeniana or balconies, which extended beyond the columns supporting the porticoes, and thus formed convenient places for beholding the games on the forum (Front. p. 134, Müll.; Isid. Orig. xv. 3, 11.) These Maeniana appear to have been painted with subjects. Thus Cicero: "De monstravri digito pictum Gallum in Mariano scuto Cimbrico sub Noris (de Or. lii. 66.) Pliny mentions another picture, or rather caricature, of a Gaul sub Paulus; and the subject of this path was the scene of a battle with a stick. The latter appears to have been considered by the Romans as a valuable work, as some of them asked a German ambassador what he valued it at? But the barbarian, who had no taste for art, said he would not have it as a gift, even if the man was real and alive (xxxv. 8.) According to Varro, quoted by the same author (ib. 97), the Maeniana sub Noris were the most splendid he had seen. Another service which Tarquin indirectly rendered to the forum was by the construction of his cloaca, which had the effect of thoroughly draining it. It was now that the Lacus Curtius, which had formerly existed in the middle of the forum, disappeared ("Curtium in locum palatium, tum fuls in foro, annusque quodam anno, sub Turione venit in foro.") The legend connected with this subject is found in Varro (L. c.) It was perhaps in commemoration of the drainage that the shrine or sacellum of Venus Clitumnus was erected on the N. side of the forum, near the Tabernae Novae, as appears from the story of Virginius snatching the butcher's knife from a Every year the people used to throw pieces of money into it, a sort of anguria saltia, or new-year's gift for Augustus. (Suet. Aug. 57.) Close to it grew a fig-tree, a vine, and an olive, which had been fortuitously planted, and were sedulously cultivated by the people; and near them was a spring dedicated to Vulcan, which was removed at the time of the gladiatorial games given at Caesar's funeral. (Plin. xv. 20; cf. Gruter, Inscri. ixi. 1, 2.)

Servius Tullius probably carried on and completed the works begun by his predecessor around the forum, just as he finished the wall; but he does not appear to have undertaken anything original excepting the adding of a lower dungeon, called after him Tullianum, to the Mamertine prison. ("In hae (careere) pars quae sub terris Tullianum, ideo quod additum a Tullio rege," Varr. L. L. v. § 151.) This remains to the present day, and still realises to the spectator the terrible description of Sallust (Cat. 55.)

The Roman Cicero points out to the traveller the Scalae Gemoniae inside the Mamertine prison, where there are evident remains of an ancient staircase. But it appears from descriptions in ancient authors that they were situated in a path leading down from the Capitol towards the prison, and that they were visible from the forum. (Dion Cass. Ill. 5; Valer. Max. vi. 9. § 13; Tac. Hist. iii. 74.) traces of the path are visible in the Forum Boarium, as is shown in the Lucius Quinctius Cincinnatus and on the floor of the (Locus Adruin. Ant. di Roma, p. 32,) and also not many years ago in excavating the ground by the arch of Severus.

It does not appear that any additions or improvements were made in the forum during the reign of Tarquiniius Superbus.

The Forum during the Republic.—One of the earliest buildings erected near the forum in the republican times was the temple of CUSTO and POLIUS. After the battle at lake Regillus, the Dioscuri, who had assisted the Romans in the fight, were seen refreshing themselves and their horses, all covered with dust and sweat, at the little fountain of Juturna, near the temple of Vesta. (Dionys. vi. 33. 8. l. 2., 2.) A temple had been vowed to these deities during the Latin War by Postumius the dictator; and the spot where this apparition had been observed was chosen for its site. It was dedicated by the son of Postumius n. c. 484. (Liv. ii. 42.) It was not a temple of the largest size; but its conquest on the forum, and the fact that it was one of the best known in Rome, from the same circumstance the flight of steps leading up to it served as a kind of suggestion or rests from which to address the people in the forum; a purpose to which it seems to have been sometimes applied by Caesar. (Dion Cass. xxxvi. 6; cf. Cic. p. Sest. 15.; Appian, B. c. liii. 4.) The temple served for assemblies and for judicial business. Its importance is thus described by Cicero: "In sede Castoris, celeberrimo clarissimoque monumento, quod templum in cenae quotidianoque conspectum populi Romani est postumum; quo saepem nembro senatus convocat; quoniam maximum rerum frequentissimae quotidie aedificiis funt;" (in Fftrr. i. 49.) Though dedicated to the temple was commonly called only Aedes Castor, in the preceding passage; whence Bibulus, the colleague of Caesar in the senate-ship, took occasion to compare himself to Pollux, who, though he shared the temple in common with his brother, was never once named. (Suet. Cass. 10.) It was restored by

SHRINE OF CUIAICA. (From a Coin.)

shop close to it. (Liv. iii. 48: ; cf. Plin. xv. 86.) The site of the Lacus Curtius after its disappearance was commemorated in another manner. Having been struck with lightning, it seems to have been converted into a dry pustule, which, however, still remained to bear the name of Lacus Curtius (cf. Varr. v § 150): "Curtius ille lacus, sciacus qui sustinet aras, Nunc solida est tellus, sed lacus antit fuit." (Ov. Past. vi. 397.)
Metellus Dalmatens (Cic. Scaur. 46, et ibi Ascon), and afterwards rebuilt by Tiberius, and dedicated in his and Drusus's name, A.D. 6. (Suet. Tib. 20; Dion Cass. iv. 27.) Caligula connected it with his palace by breaking through the back wall, and took a foolish pleasure in exhibiting himself to be adored between the statues of the twin deities. (Suet. Cal. 22; Dion Cass. lxx. 28.) It was restored to its former state by Claudius (Id. lxx. 6). We learn from Dionysius that the Roman Knights, to the number sometimes of 5000, in commemoration of the legend respecting the foundation of the temple, made an annual procession to it from the temple of Mars, outside of the Porta Capena. On this occasion, dressed in their state attire and crowned with olive, they traversed the city and proceeded over the forum to the temple (vi. 13). Its neighborhood was somewhat contaminated by the offices of certain persons who trafficked in slaves of bad character, who might be found there in shoals. ("Num moleste feram si mihi non reddiderit nomen alliquis ex his, qui ad Castoriam negotiantur, nequum mancipia ementes vendentesque, quorum tabernae pessimorum servorum turba referant suis,") (Sene. de Sapiens. 15; cf. Dion Cass. iv. 1. 20.) The three temples built near the forum, under the Palatine, are most probably remains of this temple. We have seen in the preceding account that it stood close to the forum, as well as to the temple of Vesta, a position which precisely agrees with that of the three columns. None of the other various appropriations of this ruin will bear examination. Poggio (de Ven. Fort. p. 22) absurdly considered those columns to be remains of Caligula’s bridge. By the earlier Italian topographers they were regarded as belonging to the temple of Jupiter Stator; but it has been seen that this must have stood a good deal higher up on the Velia. Nardini thought they were remains of the comitium, and was followed by Bunsen (Foro Rom. p. 60) and Burgers (Ania. of Rome, p. 365). We have shown that the comitium was not at this side of the forum. Canina takes them to have belonged to the Curia Julia (Foro Rom. part. i. p. 132), which, however, as will appear in its proper place, could not have stood here. Bunsen (Les Forains de Rome, p. 58) identifies them with a temple of Minerva, which, as he himself observes (p. 59), is a "denomination entièrement souveraine," and indeed, though new, not true. It arises from his confounding the Chalidicium mentioned in the Monumentum Anconium with the Atrium Minervas mentioned by the Notitia in the 8th Region. But we have already observed that the curia and Chalidicium, which adjoin it, were quite misplaced here. The Curiebus, indeed, under the same Region, mentions besides the Atrium Minervas a Templum Castorum et Minervas, but this does not appear in the Notitia. Bunsen was more correct in his previous adoption of the opinion of Fess, that the columns belonged to the temple of Castor. (Bull. litt. dell’ Inst. 1835; cf. Bunsen in Cic. de fin. iv. p. 19.)

The capture of the city by the Gauls, a. c. 390, which, as we have before said, inflicted so much injury that the Romans entertained serious thoughts of migrating to Veii, must of course have occasioned considerable damage in the vicinity of the forum. The Curia Hostilia, however, must have escaped, since Livy represents the senate as debating in its respecting this very matter (v. 5). Such shops and private houses as had been destroyed were probably restored in the fashion in which they had previously existed. It was now that the little temple to Aius Loquens, or Locutius, to which we have before alluded, was erected on the Nova Va, not far from the temple of Vesta (Ib. 50). From this period the forum must have remained without any important alterations down to the time of M. Porcius Cato, when basilicae first began to be erected. During this interval all that was done was to adorn it with statues and other ornaments, but no building was erected upon it; for the usual ex vota temple to Concord, which appears to be the case in Cic. de fin. iv. 20), the brazen rostra, erected on the Capitol by the sedile C. Flavius, a. c. 303 (Id. ix. 46), can hardly come under that denomination. It was probably also during this period that the Gracchi...
or elevated area, which served as a waiting-place for foreign ambassadors before they were admitted to an audience of the senate, was constructed on the Viminal hill close to the curia, as before described. The adornment of the suggestum or oratorical platform on the comitium with the beaks of the ships taken from the Antigates, forms, from the connection of this celebrated object with the history of republican Rome, and the change of name which it underwent on the occasion of the sort of epoch in the history of the forum. This occurred in the c. 337. (Plin. xxxiv. 11.) The Rostra at this time stood, as we have said, on the comitium before the curia—a position which they continued to occupy even after the time that new ones were erected by Julius Caesar. (Dion Cass. xliii. 49; Ascon. ad Cíc. Mil. 5.) The rostra were a temple, or place consecrated by auguries ("Rostrisque earum (navium) suggestum in foro excitatur, adornari placuit; Rostraque id templum appellatum," Liv. viii. 14; comp. Cíc. in Vat. ii. 10.) They are distinguished by Dion Cassius (lvi. 34) from those erected by Caesar, by the epithet of Βιβια δεσποτερα, and by Suetonius by that of vetera. (Suet. Aug. 100.) It may be inferred from a passage in a letter of Frontio to the emperor Antoninus, that the rostra were not raised to any very great height above the level of the comitium and forum ("Neo tautulo superiore, quanto rostra foro et comitio excelsiora; sed altiores antennae sunt prora vel potius carina," lib. i. ep. 2). When speaking from the rostra it was usual in the more ancient times for the orator to turn towards the comitium and curia,—a custom first neglected by C. Licinius Crassus in the consulship of Q. Maximus Scipio and L. Mancrius, who turned towards the forum and addressed himself to the people (Cíc. Am. 25); though, according to Plutarch (Gracch. 5), this innovation was introduced by C. Gracchus.

On the forum in front of the rostra stood the statue of Marsyas with uplifted hand, the emblem of civic liberty. (Serv. ad Aen. iv. 58; cf. Macrobi. Sat. iii. 12.) Here was the great resort of the consocii, and also of the Roman courtiers. Hence Martial (ii. 64. 8):—

"Ipee potest féri Marysta canid民心." Horace (Sat. i. 6. 190) has converted the pointed finger of the Satyr into a sign of scorn and derision against an obnoxious individual:—

"—Censuremus Marysta, qui sed Vultum ferre negat Noviorum posse minoris." It was here that Julius, the daughter of Augustus, held her infamous orgies, in company with the
vest of the Roman prostitutes. (Gensor. Rem. vi. 39; Plin. xxi. 6.) The account given by Servius of this statue has been the subject of much discussion, into which the limits of this article will not permit us to enter. The whole question has been exhaustively treated by Cretzler. (Studii ii. p. 289, seq.; cf. Savigny, Gesch. des Röm. Rechts, i. 53.)

Near the rostra were also the statues of the Tanais Scipio and Varro (Plin. xxi. 11), which are apparently the same as the three Maius or Fates, mentioned by Procopius. (B. Goth. i. 25.) These also were at the head of the forum, towards the temple of Janus, a position which points to the same result as the Duiulan column with respect to the situation of the comitium.

Livy's description of a great fire which broke out about the forum n. c. 211 affords some topographical particulars: "Interruptus host seremones nocte, quae prides Quinquiratius fuit, pluribus simul locis circa forum incendium ortum. Eodem tempore septem Tabernae, quae postas quinque, et argentarariae, quae nunc Novae appellantur, ararer. Cetera, postas publicae et privatae, necque eminendi basilicae erst: comprehensae Lantumiae, foro quisciscorum, et atrium regium. Aedii Vestae vix defensae est." (xxvi. 27.) As the fire, wilfully occasioned, broke out in several places, and as the Curia Hostilia does not seem to have been endangered, we may perhaps conclude that the Septem Tabernae here mentioned were on the S. side of the forum. The argument afterwars called Novae were undoubtedly on the N. side, and, for the reason just given, they perhaps lay to the E. of the curia, as the fire seems to have spread to the eastward. It was on the N. side that the greatest damage was done, as the fire here spread to the Lantumiae and Forum Flaccutum. The Septem Tabernae appear to have been the property of the state, as they were rebuilt by the censors at the public expense, together with the fish-market and Atrium Regium ("Loca verunt inde reficienda quae circa forum incendium consumpta erant, septem tabernae, macellum, atrium regium," Id xxvii. 11.). This passage would seem to show that the reading guisase (tabernae) in that previously cited is corrupt. Muratius has observed that the inder has "quae postas semel est," which in others was contracted into ve, and thus taken for a numeral. (Becker, Fronto. p. 297, notes.) Hence we may infer that the Vetere Tabernae on the S. side of the forum were seven in number, and from the word postas applied to them, whilst reso is used of the Novae, it might perhaps be inferred that the distinctive appellation of Vetere did not come into use till after this accident.

It also appears from this passage, that there were no basilicae at Rome at this period. It was not long afterwards, however, namely n. c. 184, that the first of these buildings was founded by M. Porcia Cato in his censorship, and called after him Basilica Porcia. In order to secure the requisite ground, Cato purchased the houses of Maenius and Titius in the Lantumiae, and four tabernae. (Liv. xxxix. 44.) Hence we may infer that the Lantumiae lay close at the back of the forum; which also appears from the circumstance that Maenius, when he sold his house, reserved for himself one of its columns in order to secure the requisite ground.

This column must not be confounded with the monument called the Columna Maenia, which stood on the forum. The Basilica Porcia must have stood close to the curia, since it was destroyed by the same fire which consumed the latter, when the body of Clodius was burnt in it (Ascon. ad Cic. pro Mil. Arg. p. 34, Orelli; but it must have been on the eastern side, as objects already described filled the space between the curia and the Capitoline hill. The forum Porcia stood close behind the curia, since Plautus describes the unsavoury colours from that market as driving away the frequenter of the basilica into the forum:"

"Tum piscatores, qui praebeat populo populus fortest
Qui advehuntur quadredupendi crucianti canterio
Quorum odos subbasilicianos omnes abigit in forum."

(Capit. iv. 2. 33.)

In the time of Cicero, the tribunes of the people held their assemblies in the Basilica Porcia. (Plut. Cato Min. 5.) After its destruction by fire at the funeral of Clodius it does not appear to have been rebuilt; as at events we do not find any further reference to it.

The state of the forum at this period is described in a remarkable passage of Plautus; in which, as becomes a dramatist, he indicates the different localities by the characters of the men who frequented them (Cerc. iv. 1):"

"Qui perjuram convenire volit hominem mittio in comitium; Qui mendoacem et glorium, apud Clusiacensium sacrum
Ditis damnonos maritos sub basilica quaerito;"

Hicem erunt scorta exoleta, quique stipuliari solent; Symbolaem collatorae apud Forum Piscarium; In foro infimo boni homines atque dites ambulant, In medio propter canalem, ibi ostentatoribus meri; Confidentes garrullique et malevoli supra lumen, Qui alteri de nihil audacter dicunt contemniam
Et qui ipse habent, quod in se possit vere diicer.
Sub Veteribus ibi sunt, qui dant quicquid accipiunt
Sane.

Pone sedem Castoris ibi sunt, subito quisqu quaedam
Male.

In Tusco Vicus ibi sunt homines, qui ipsis ses uaderant.

In Velabre vel pistorum, vel laniuni, vel aruspicem,
Vel qui ipse vorant, vel qui alii ut venustat pae

["Ditis damnonos maritos apud Lencadim Omopiam."]"

This is such a picture as Greene might have drawn of Paul's, or Ben Jonson of Moor Fields. The good men walking quietly by themselves in the obscurest part of the forum, whilst the flash gentlemen without a denarius in their purses, are strutting conceitedly in the middle; the "pompeius" gathering round the fishmarket and clubbing for a dinner; the gentlemen near the Lacus Curtius, a regular set of scandal-mongers, so ready to speak ill of others, and so wholly unconscious that they live in glass-houses themselves; the perjured witness prowling about the comitium, like the man in Westminster Hall in former days with a straw in his shoe; the tradesman in the Vicus Tuscus, whose spirit of trading is so in-bred that he would sell his very self; all these sketches from life present a picture of the same time of the Roman Republic, when Cato himself was censor, which shows that human nature is very much the same thing in all ages and countries. In a topographical point of view there is little here but
what confirms what has been already said respecting the forum and its environs; except that the users of Peterius show that the bankers' shops were not confined to the N. side of the forum. What the condition of the floor of the forum was not clear, but it was perhaps a drain. The passage is, in some places, probably corrupt, as appears from the two obscure lines respecting the sacelli Ditis, the second of which is inexplicable, though they probably contain some allusion to the Sacelli Ditis which we have mentioned as adjoining the temple of Forum. Cicer. remarks (C. L. 69) that Sestius, the last of the last, would use "dites damnosae mariti," &c., taking these "dites" to be the rich users who resorted to the basilica and lent young men money for the purpose of corrupting city wives. But what has tended to throw doubts upon the whole passage is the mention of the basilica, since, according to the testimony of Cicero (Brut. 15), Plautus died in the very year of Caesar, the Vicus Tuscanus, and the Basilica is also alluded to in another passage of Plautus before quoted; so that we can hardly imagine but that it must have existed in his lifetime. If we could place the basilica in Cato's sedesile instead of his censorship, every difficulty would vanish; but for such a view we can produce no authority.

A great many, however, (B. p. 301) has made an ingenious, and not improvable attempt to show, that Plautus, as becomes a good poet, has mentioned all these objects on the forum in the order in which they actually existed; whence he draws a confirmation of the view respecting the situation of the comitium. That part of the forum is mentioned first as being the most excellent. Then follows on the left the Sacrum Clancinum, the Basilica Porcia, and Forum Piscatorium, and the Forum Infimum. Returning by the middle he names the canals, and proceeds down the forum again on the right, or southern side. In the "malevola supra lacum" the Lacus Servilis is alluded to at the top of the Vicus Jugarsus. Then we have the Vetus Tabernae, the temple of Caesar, the Vicus Tuscanus, and the Valeria. The Basilica Porcia was soon followed by others. The next in the order of time was the Basilica Fulvia, founded in the censorship of M. Aemilius Lepidus, and M. Fulvius Nobilior, B.C. 179. This was also "post Argentaria Novas" (Liv. xii. 51), and must therefore have been very close to the Basilica Porcia. The date of the others is sometimes called Basilicae Aemilii et Fulviae. (Varr. L. L. vii. § 4, Müller.) All the subsequent embellishments and restorations appear, however, to have proceeded from the Genius Aemilius. M. Aemilius Lepidus, consul with Q. Lutatius in B.C. 78, adorned it with bronze shields bearing the effigies of his ancestors. (Plin. xiii. 4.) It appears to have been entirely rebuilt by L. Aemilius Paulus, when asidie, B.C. 53. This seems to have been the restoration alluded to by Cicero (ad Att. iv. 16), from which passage — if the punctuation and text are correct, for it is almost a locus desperatus — it also appears that Paulus was at the same time constructing another new and magnificent basilica. Hence a difficulty arises respecting the sites of the latter, which are unable to solve, since only one Basilicae Pauli is mentioned by ancient authors; and Plutarch (Caes. 29) says expressly that Paulus expended the large sum of money which he had received from Caesar as a bribe in building on the forum, in place of the Basilica Fulvia, a new one which bore his own name. (Cf. Appian, B. C. ii. 26.) It is certain at least that we must not assume with Becker (Handb. p. 308) that the latter was but a poor affair in comparison with the new one because it was built with the ancient columns. It is plain that in the words "nihil gravissime illo monumento, nihil gloriosius," Cicero is alluring to the restoration of the ancient basilica, since he goes on to mention it as one which used to be extolled by Atticus, which would not have been possible of a new building; and the employment of the ancient columns only added to its beauty. The building thus restored, however, was not destined to stand long. It seems to have been rebuilt less than twenty years afterwards by Paulus Aemilius Lepidus (Dion Cass. xlii. 42); and in about another twenty years this second restoration was destroyed by a fire. It was again rebuilt in the name of the same Paulus, but at the expense of Augustus and other friends (Id. liv. 24), and received further embellishments in the reign of Tibertus, A.D. 72. (xxxvi. 24.)

BASILICA AEMILIA. (From a Coin.)

The third building of this kind was the Basilica Sampronia, erected by T. Sempronius Gracchus in his censorship, B.C. 169. For this purpose he purchased the house of Scipio Africanus, together with some adjoining butcher's shops, behind the Tabernae Veteres, and near the statue of Vertumnus, which, as we have said, stood near the forum at the end of the Vicus Tuscanus. (Liv. xlii. 16.) This, therefore, was the first basilica erected on the S. side of the forum. We hear no further mention of it, and therefore it seems probable that it altogether disappeared, and that its site between the Vicus Tuscanus and Vicus Jugarsus was subsequently occupied in the imperial times by the Basilica Julia.

The Lautumiae, of which we have had occasion to speak when treating of the Basilica Porcia, was not merely the name of a district near the forum, but also of a prison which appears to have been constructed during the Republican period. The Lautumiae are first mentioned after the Second Punic War, and it seems very probable, as Varro says (L. L. v. § 151, Müller), that the name was derived from the prison at Syracuse; though we can hardly accept his second suggestion, that the etymology is to be traced at Rome, as well as in the Sicilian city, to the circumstance that stone quarries formerly existed at the spot. The older topographers, down to the time of Bunsen, supposed that Lautumiae was only another and later designation for the Carcer Mamertinus, a misconception perhaps occasioned by the abruptness with which Varro (L. c.) passes from his account of the Tullianum to that of the Lautumiae. We read of the latter as a place for the custody of hostages and prisoners of war in Livy (xxxii. 26, xxxvii. 3); a purpose to which neither the size nor the dimension of the
STRUCTION OF THE TEMPLE WOULD HAVE ADAPTED IT.

That the Lacustrinae was of considerable size may also be inferred from the circumstance that when the consul Q. Metellus Celer was imprisoned there by the tribune L. Flavius, Metellus attempted to assemble the senate in it. (Dion Cass. xxxviii. 50.) Its distinctness from the Carcer Mamertinus is also shown by Seneca (Contros. 27, p. 303, Bipont.)

An important alteration in the arrangement of the forum, to which we have already alluded, was the removal of the Tribunals Praetorium from the comitium to the eastern end of the forum by the tribune L. Scribonius Libo, apparently in A.D. 149. It now stood near the Puteal, a place so called from its being open at the top like a well, and consecrated in ancient times either from the whetstone of the anghr Naruis having been buried there, or from its having been struck by lightning. It was repaired and re-dedicated by Libo; whence it was afterwards called Puteal Libonis, and Puteal Scribonianum. After this period, its vicinity to the judgment-seat rendered it a noted object at Rome, and we find it frequently alluded to in the classics. (Hor. Ep. i. 19, 8, Sat. ii. 6, 33; Cic. p.p. 6, 15.)

PUTEAL LIBONIS OR SCRIBONIANUM.

Sest. 8, &c.) The tribunal of the praetor urbana seems, however, to have remained on the comitium. Besides these we also find a TRIBUNAL AURELIUM mentioned on the forum, which seems to have stood near the temple of Castor (Cic. p. Sert. 15, in Plut. p. Genn. 34), and which, it is conjectured, was erected by the consul M. Aurelius Cotta B.C. 74. These tribunals were probably constructed of wood, and in such a manner that they might be removed on occasion, as for instance, when the whole area of the forum was required for gladiatorial shows or other purposes of the like kind; at least it appears that the tribunals were used for the purpose of making the fire in the curia when the body of Clodius was burnt in it. (Ascon. ad Cic. Mil. Arg. p. 34.)

In the year B.C. 121 the TEMPLE OF CONCORD was built by the consul L. Opinius on the Clivus Capitolinus just above the comitium (Varr. L. L. vi. § 156, Muller); but, as we have already had occasion to discuss the history of this temple when treating of the Capitol and of the sensecum, we need not revert to it here. At the same time, or a little afterwards, he also erected the BASILICA OPIMIN, which is mentioned by Varro in close connection with the temple of Concord, and must therefore have stood on its northern side, since on the opposite side there would have been space for it. Of this basilica, we hear but very little, and it seems not improbable that its name may have been afterwards changed to that of "Basilica Argentaria," perhaps on account of the silver that had been removed thither from the tabernae on the forum. That a basilica Argentaria, about the origin of which nobody can give any account, existed just at this spot is certain, since it is mentioned by the Notitia, in the 8th Regio, when proceeding from the forum of Trajan, as follows: "Cohors sextam Viguins, et Basilicum Argentarium," i.e. the basilica of the Vespasian, which, as we shall see in the sequel, stood next to the temple of Castor and was called the basilica "Innula Argentaria" (Becker, Handb. p. 413, seq.). In the same year the forum was adorned with the triumphal arch called FORNIUS FABRIO or Fabrius, erected by Q. Fabius Allobrogicus in commemoration of his triumph over the Allobroges. This was one of the earliest, though not precisely the first, of the triumphal monuments at Rome, it being preceded by the three arches erected by L. Stertinius after his Spanish victories, of which two were situated in the Forum Boarium and one in the Circus Maximus. (Liv. xxxiii. 27.) We may here remark that fornix is the classical name for such arches; and that the term arcus, which, however, is also used by Seneca of this very arch (Epist. xvi. 1, Sep. 1), did not come into general use till a later period. The situation of this arch is indicated by several passages in Roman authors. We have already cited one from Cicero (p. Pianc. 7), and in another he says that Memmius, when coming down to the forum (that is, of course, down the Sacra Via), was accustomed to bow his head when passing through it ("in his ibi pium magnum Memmiu, ut in forum descendens caput add fictoria Fabii demitteret," de Orat. ii. 66). Its site is still more clearly marked by the Pseudo-Asconius (ad Cic. Vet. i. 7) as being close to the Regia, and by Porphyrio (ad Hor. Epist. i. 19. 8) as near the Puteal Libonis.

The works about the forum during the remainder of the Republican period were merely restorations or alterations. Sulla when dictator seems to have made some changes in the curia (Pil. xxxiv. 12), and in B.C. 51, after its destruction in the Clodian riots, it was rebuilt by his son Faustus. (Dion Cass. xi. 50.) Caesar, however, caused it to be pulled down in B.C. 45, under pretense of having vowed a temple to Felicitas, but in reality to efface the name of Sulla. (Id. 5iv. 5.) The reconstruction of the Basilica Fulvia, or rather the superseding of it by the Basilica Passeti, has been already mentioned.

It now only remains to notice two other objects connected with the Republican Forum, the origin of which cannot be assigned to any definite period. These were the Schola Xanthia and the Jani. The former, which lay back considerably behind the temple of Saturn and near the top of the Clivus Capitolinus, consisted of a row of arched chambers, of which three are still visible. They appear from inscriptions to have been the offices of the scribs and secretaries. The same has been said of the basilica of the same name connected to by Cicero. (Philipp. ii. 7, p. Sert. 12.) Another row was discovered in 1835 at the side of the temple of
Verpianum and against the wall of the Tabularium, with a handsome though now ruined portico before them, from which there was an entrance into each separate chamber. From the fragments of the architrave an inscription could still be deciphered that was dedicated to the temple of the Muses.

(Cassius, Foro Romae, p. 807, Bullet. d. Inst. 1835.)

This discovery tallies remarkably with the following passage in Varro: "Et quoniam (ut ait) Dei facientes adjuvare, prius invocabo eum; nec ut Horatius et Ennius, Musae, sed xii. deos consenire. neque tamen eum urbano, quorum imagines ad forum muras stant, aut aequalis esse merces testudinis, sed illos xii. deos, qui maxime agricolarium duces sunt." (R. K. i. 1). We may, however, infer that the inscription was posterior to the time of Varro, probably after some restoration of the building; since in his De Lingua Latina (viii. § 71) he asks: "Item quiserant, si ad analogia, cur appellante omnes aedem Deum Consentium et non Deorum Consentium?" whereas in the inscription in question we find it written "Consentium." We may further remark that the former of these passages would sanction the including of the whole Clivus Capitolinus under the appellation of "forum."

With respect to the Janus on the forum, it seems rather problematical whether there were three of them, or whether there had been a separate temple to the Basilicas Pauli, to which the money-lenders chiefly resorted. (Schol. ad Hor. Ep. i. 1. 54.) But when Horace (Sat. ii. 3. 18) says—

---"postquam omnis res jam Janum
Ad medium fracta est," he probably means, as we said before, the middle of the street, and not a Janus which lay between two others, as Becker thinks must necessarily follow from the use of the word medius. (Handb. p. 327, note.)

The Forum under the Empire. — The important alterations made by Julius Caesar in the disposition of the forum were the foundation of its subsequent appearance under the Empire. These changes were not mere caprices, but adaptations suited to the altered state of political society and to Caesar's own political views. But the dagger of the assassin terminated his life before they could be carried out, and most of them were left to be completed by his successor Augustus. The most important of these designs of Caesar's was the building of a new curia or senate-house, which was to bear his name. Such a building would be the badge of the senate's servitute and the symbol of his own despotic power. The former senate-house had been erected by one of the kings; the new one would be the gift of the first of the emperors. We have mentioned the destruction of the old curia by fire in the time of Sulla, and the rebuilding of it by his son Faustus; which structure Caesar caused to be pulled down under a pretence, never executed, of erecting on its site a temple of Felicitas.

The curia founded by Pompey near his theatre in the Campus Martius—the building to which Caesar was assassinated—seems to have been that commonly in use; and Ovid (Met. xvi. 801), in describing that event, calls it simply Curia:—

---"neque animus ullus in urbe
Ad facinus diramque placet, nisi Curia, caedem." We may suppose that when Caesar attained to supreme power he was not well pleased to see the meetings of the senate held in a building dedicated by his great rival.

A new curia was voted a little before Caesar's death, but he did not live to found it; and the Monumentum Ancyranum shows that it was both begun and completed by Octavianus. Respecting the site of the Curia Julia the most discordant opinions have prevailed. Yet if we accept the information of two writers who could not have been mistaken on such a subject, its position is not difficult to find. We learn from Pline that it was erected on the comitium: "Idem (Augustus) in Curia quoque quam in Comitio consecravit, duas tabulas impressit Hostili, but, xv. 10. 1; and this site is confirmed by Dion Cassius: το θυσιαστήριον το Ιωάνου, τα μέτα το κοιμητήριον μεταμορφώθηκε ἰσχυρὸν, διὰ ἡμέραν ημέρα βιωσάται" (xli. 19). It is impossible to find any other spot for it on the comitium than that where the old curia stood. Besides the author last quoted expressly informs us that in consequence of some prodigy that occurred in the year before Caesar's death, it had been resolved to rebuild the Curia Hostilia (καὶ διὰ τούτο το θυσιαστήριον το οὔστιλον ἀνακοσμητεῖται καὶ ἐνιαύτης, L. xiv. 17.) At the time when this decree was made Caesar was himself pontifex maximus; it would have been a flagrant reach of religion to neglect a solemn vow of this description; and we cannot believe that Becker's assertion that this vow was never accomplished. (Handb. p. 331, note 608.) We cannot doubt that the curia erected by Augustus was in pursuance of this decree, for Caesar did not live even to begin it ("Curiam et continemci ei Chalcidicum — fecit," Mos. Ancyr.); but though the senate-house was rebuilt, it was no longer in the old site, when in the time of the curia new founder, Julia. Now what has Becker got to oppose to all this weight of testimony? Solely a passage in Gallieni—which, however, be misapprehended,—in which it is said, on the authority of Varro, that the new curia had to be inaugurated, which would not have been the case had it stood on the ancient spot ("Cum adscriptum a Varro de locis in quibus consul situm est, dixit, quod pontificem Augustum versus curiam apud Boloscum confirmavit: nisi in loco popi auxores constituit, quod templum appelleraret, senatum consultum factum esset, justum id non fuisse. Propertius et in Curia Hostilia et in Pompeia, et post in Julia, cum profusa es loca fuisse, tempus esse per auxores constituit," xiv. 7. § 7.) But Becker has here taken only a half of the passage as aural rite. As a temple could not be built without being first inaugurated, so neither could it be pulled down without being first exaugurated. This is evident from the accounts of the exauguration of the fames in order to make room for the temple of the Capitoline Jupiter. ("Et, ut libera a castellis regionibus area estot tota Jovis templique ejus, quod insacredatur, exauguratur fames sacellique statutos, quae ad somniu iat Tatio regis secreta inauguraturque postes fustant," Liv. i. 55, cf. v. 54; Dion. Halic. iii. 69.)

When Caesar, therefore, pulled down the curia of Faustus he first had it exaugurated, by which the site again became a locus profanus, and would of course require a fresh inauguration when a new temple was erected upon it. The curia, therefore, in the time of the Pontifices (iv. i. 111) must have been in the Curia Julia; and the following lines seem to show that it had risen on the site of the ancient one:—

"Curia praetexta quae nune nitet alta Senatu
Pellios habitis, rustica corda, Patres."
ROMA.

A further confirmation that the new curia stood on the ancient spot is found in the fact that down to the latest period of the Empire that spot continued to be the site of the senate-house. The last time that mention is made of the Curia Julia is in the reign of Caligula ("Consenatus [senatus] ut consoles non in Curia, quia Julia vocabatur, sed in Capitolium convocatum," Suet. Cal. 60); and as we know that the curia was rebuilt by Domitian, the Julia must have been burnt down either in the fire of Xero, or more probably in that which occurred under Tiberius, and it is not until the reign of Nero (Handb. p. 347), that Vespasian and Titus would have suffered an old and important building like the curia to lie in ashes whilst they were erecting their new amphitheatre and baths. The new structure of Domitian, called Senatus in the later Latin ("Senatum dicit et pro loco et pro hominibus," Gell. xvi. 7, 5), is mentioned by several authorities (Hieronym. an. 92, l. p. 443, ed. Rom.); Cassiod. Chron. ii. p. 197; Catal. Imp. Vimin. p. 243.) The place of this senatus is ascertained from its being close to the little temple of Janus Geminius, the index bellici pacisque (Iex bellici pacisque) in the temple of Farnes. (Handb. p. 41. Tacit. 3.) The same situation is confirmed by other writers. Thus Dion Cassius mentions that Didius Julianus, when he first entered the curia as emperor, sacrificed to the Janus which stood before the doors (lxiii. 13). In the same manner we find it mentioned in the Notitia in the viili Region. That it occupied the site of the temple of Severus, is subsequently dedicated to and now known as S. Luca, close to the arch of Severus, appears from an inscription (Gruner, cxx. 5) which formerly existed in the Ampio, or temple of S. Martina, showing that this hemicycle, which was afterwards built into the church, originally formed the Secretarium Senatus (Urlichs, Röm. Top. p. 57, seq.; Feller, Regiones, p. 142.) The Janus temple seems to have been known in the middle ages under the appellation of templum fatale, by which it is mentioned in the Mirabilia Urbis. ("Juxta eum templum fatale in S. Martina, juxta quod est templum refugi, i.e. S. Adriana," Ib.) In the same neighbourhood was a place called in the later ages "Ad Templum," which connects the senatus with this spot, as being both near to that place and to the Arcus Severi. Thus Ammianus: "Deinde ingressus urbem Theodoreum, venit ad Senatorum, et ad Palamum populo alloquuntur," &c. (Excerpta de Odo. 65.) And in the Acta SS., Mai. vol. 12: "Ligaverunt ei manus a tergo et decolaverunt extra Capitolium et extrahere juvencum cum iuxta arcum triumphi ad Palamum" (et Anaxas. V. Stat. c. 45.) The appellation "ad Palamum" was derived from a statue of Claudius II. clothed in the tunica palmata, which stood here: "Illi totius orbis judicis in Rostris positae est columna capsum palmata statua superfixa." (Trebi. Pollio, Claud. c. 2.)

We cannot doubt, therefore, that the curia or senatus was built by Domitian on the arch of Severus, which is indeed admitted by Becker himself (Handb. p. 555). But, from his having taken a wrong view of the situation of the comitium, he is compelled to maintain that this was altogether a new site for it; and hence his curia undergoes no fewer than three changes of situation, receiving a new one almost every time that it was rebuilt, namely, first, on the N. side of his comitium, secondly on the S. side, and thirdly near the Arcus Severi, for which last site the evidence is too overwhelming to be rejected. We trust that our view is more correct, in which the site of the curia house, as was most probable, appears to have always retained its original position. And this result we take to be no slight confirmation of the correctness of the site which we have assigned to the comitium. In their multitudinous variations, Bussen and Becker are sorely puzzled to find a place for their second curia—the Julia. They compare the passages before cited from Pliny and Dion ineffectually fixing them. Bussen's strange notions have been sufficiently refuted by Becker (Handb. p. 333), and we need not therefore examine them here. But though Becker has succeeded in overthrowing the hypothesis of his predecessor, he has not been able to establish one of his own in its place. In fact he gives it up. Thus he says (p. 335) that, in the absence of all adequate authority, he will not venture to fix the site of the curia; yet he thinks it probable that it may have stood where the three columns are; or if that will not answer, then it must be placed on the (his) Vinculanum. But his complaint of the want of authorities is unfounded.

If he had correctly interpreted the position of the comitium in its right situation, and if he had given due credit to an author like Dion Cassius when he says (i.e.) that it was determined to rebuild the Curia Hostilia, he had not needed to go about seeking for impossible places on which to put his Curia Julia.

There are three other objects near the forum into which, from their connection with the Julia, must be included, if the Julia, we must inquire at the same time. There are the CHALCIDICUM, THE IMPERIAL GRAECOPICUS, and A TEMPLE OF MINERVA. We have already seen that the first of these buildings is recorded in the Monumentum Augustanum as erected by Augustus adjoining the curia; and the same edifice is also mentioned by Dion Cassius among the works of Augustus: το τε Αθηναίων και το Χαλκιδικον οιμαμαντών, και το Βενετίων, και το τον παρόδο αυτώ τιμη γενομένων, καθαρωτέρων (ii. 22). But regarding what manner of thing the Chalcidicum was, there is a great diversity of opinion. It is one of those names which have never been sufficiently explained; but it was perhaps a sort of portico, or covered walk (delta dikylon), annexed to the curia. Bussen, as we have mentioned when treating of the temple of Castor in the preceding section, considers the Athenaeum and Chalcidicum to have been identical; and as the Notitia mentions an Atrium Minervae in the 8th Region, and as a Minerva Chalcidica is recorded among the buildings of Domitian, he assumes that these were the same, and that the unlucky ruin of the three columns, which has been so transmitted by the topographers, belonged to it. In all which we can only wonder at the uncritical spirit that could have suggested such an idea; for in the first place the Monumentum Augustanum very distinctly separates the aedes Minervae, built by Augustus, from the Chalcidicum, and in the latter it is marked by five lines apart; secondly, the aedes Minervae is represented to be on the Aventine, where we find one mentioned in the Notitia (cf. Ov. Fast. vi. 728; Festus, n. Quinqueatras, p. 257, Müller.), and consequently a long way from the curia and its adjoining Chalcidicum; thirdly, they are also mentioned separately by Dion Cassius in the passage...
Roma.

before cited, whose text is not to be capriciously meddled with by reading, τις τε Αθηναίων τοις Χαλκίδοις ἑφορᾶμεν, in order to prop a theory which cannot support itself. We need not, therefore, pursue the matter further. That of Becker (Handb. p. 335) seems probable enough, that the Chalcidicum usurped the place of the uscatulum of the curia, though we should be more inclined to say that of the Graccoctasis, as the position of the latter seems at all events to have been shifted about this period. We learn from Pliny (xxxii. 6) that the building was longer named a "Comitium." Yet such a place seems to have existed to the latest period, and is mentioned in the Notitia (Regio viii.) under the altered name of Graccoctadium, close to the Basilica Julia, though the MSS. vary with regard to the position. It had probably, therefore, been removed before the time of Pliny to the south side of the forum, and perhaps at the time of the absence of Caesar in his life of the time was the removal of the ancient rostra. The comitium, which may be called the aristocratic part of the forum, had become in a great measure deserted. The popular business was now transacted at the lower end of the forum; and Caesar, who courted the mob, encouraged this arrangement. The steps of the Comitium in the Forum of Caesar had been converted into a sort of extempore rostra, whence the demagogues harangued the people, and Caesar himself had sometimes held forth from them. (Dion Cass. xxxviii. 6; cf. Cic. p. Sest. 15; App. B. C. iii. 41.) Dion Cassius expressly mentions that the rostra were changed by Caesar (xlii. 49). The change is also mentioned by Asconius: "Era enim tum rostra non sola nova curia, sed etiam Comitium prope juncta Curiae" (ad Cic. Mil. 5), where, by this absolute and unqualified mention of the curia, he must of course have meant the curia existing in his time, which was the Julia; and this shows that it stood on the ancient site of the Hortilia. Another proof that the rostra were moved in Caesar’s lifetime may be derived from Livy (Epit. xxiv.): "Caesarius corpus a plebe ante Rostrum crematum est." For, as Appian (B. C. ii. 148) indicates the place in another manner, and says that the burning of the body took place before the Regia, it is plain that the rostra mentioned in the Epitome just cited must have been very near the Regia. But we have seen that the ancient rostra were on the comitium, at the other end of the forum. There are other passages from which we may arrive at the exact situation of the new rostra. Thus Suetonius, in his account of the funeral of Octavia, the sister of Augustus, that Drusus also on that occasion pronounced a panegyric from the new rostra, or those commonly used, as we must conclude from Dion’s mentioning them, and Caesar’s existence of the same. Quintus Caecina (Foro Rom. p. 129) adopted the common reading, with the omission of sub, because he imagined that "sub Veteribus" must mean "under some old building," instead of its being a designation for the S. side of the forum. And Cicero, when pronouncing one of his invectives against Antony, does not distinguish, by any indication, the rostra at the equestrian statue of Antony, which, as appears from what Cicero says a little further on, stood before the temple of Castor. (Phil. vi. 5.) From a comparison of all these passages we may state with precision that the new rostra were established by Caesar on the SE. side of the forum, between the temple of Castor and the Regia, a spot which we have seen was not originally on the site of the comitium. Dion Cassius expressly mentions that the new rostra were erected, and he is therefore obliged to place them a great deal higher up towards the Capitol, where they did not exist in Caesar’s lifetime. Even in questions of this sort, one error always begot another, he is thus puzzled to account for the circumstance how Cicero, speaking from these rostra, could allude to the statue of Antony as being on his left (Handb. p. 337); and, in order to avoid this contradiction, asserts that Dion Cassius has been misled by an error of details, that may possibly be found at the right of the equestrian statue of Antony, which, as appears from what Cicero says a little further on, stood before the temple of Castor. (Phil. vi. 5.)

Roma.
that an elevated terrace, presenting the segment of a circle, which was excavated at this part of the forum some years ago, is the actual rostra (Indicazioni, p. 270, ed. 1850, and his Dissertation "Sui Rostr. del Foro Romano" in the Atti dell’Accademia Rom. di Archeologia, viii. p. 107, seq.; cf. Becker, Handbuch, p. 339). It seems also to have been here that Augustus received the homage of Tiberius, when the latter was celebrating his German triumph: "Ac prinsquam in Capitolium flectert, descendit e curru, seque praeidenti ad genus submissit." (Suet. Tib. 20.) The scene is represented on the large Vienna Cameo. (Eckhel, Pierre Gros, v. 1; Mongea, Iconogr. Rom. 19, vol. ii. p. 62.) If these preferences are just the ancient rostra would appear to have been used occasionally after the erection of the new ones.

The Statues of Sulla and Pompey, of which the former appears to have been a gil equestrian, were re-erected near the new rostra, as they had formerly stood by the old ones. After the battle of Pharsalus they were both removed, but Caesar replaced them. It seems to have been the Status of Caesar, and an equestrian Status of Octavian. (Dion Cass. xiii. 18, xliii. 49, xlv. 4; Suet. Cass. 75; App. B.C. i. 97.)

Caesar also began the large basilica on the S. side of the forum, called after him the Basilica Julia; but, like most of his other works, he left it to be finished by Augustus ("Forum Julium et Basilicam quae fuit inter aedem Castoria et aedem Saturni, ceputa profugisqua opera patre meo perfec," Mon. Ancyr.). Its situation is here so accurately fixed thus leaving no doubt that they were the same. (Bullettino dell’ Inst. Marso, 1835) Panvinius, whose work was written in 1558, as appears from the dedicatory epistle, says that the inscription was found "pans ante in foro Romano propop columnam," that is, the column of Phocas. The basis on which it stood must therefore have been again covered with rubbish, till the inscription was re-discovered in its more imperfect form after a lapse of nearly three centuries. Anullinus and Fronto were consul A.D. 199, and consequently in the reign of Septimius Severus, when the basilica appears to have been repaired.

Altogether, therefore, the site of the basilica may be considered as better ascertained than those of most of the imperfect monuments. It must have been bounded on the E. and W., like the basilica Sempronius, by the Vicus Tuscus and the Vicus Jugarius. It appears from the Monumentum Anchianum that the original building, begun by Caesar, and continued by Augustus, was burnt down during the reign of the latter, and again rebuilt by him on a larger scale, with the design that it should be dedicated in the names of his grandsons Caius and Lucius ("Et sancte basilicam consumptam incendio amplato eis solo sub titulo nominis fillorum [meorum] inchoavi et, si vivus non perfecissem, perfid ab hereditibus [meis jussi]."") But, from a supplement of the same inscription recently discovered, it appears that Augustus lived to complete the work ("Opera fecit novo—forum Augustum, Basilicam Julia.") (Vater, Archäol. Zeit. ii. 1843). Nevertheless it seems to have anciently borne the names of his grandsons: "Quae- dam etiam opera sub nomine alieno, nepotum scilicet et uxoris soroarique fecit: ut porticum basilicamque Lucii et Cali, &c." (Suet. Aug. 29.) The addition which Augustus mentions having made to the building ("amplato eis solo") may probably have been the portico here mentioned. In A.D. 293 it was again destroyed by fire, and was rebuilt by Diocletian (Catal. Imp. Vienne. p. 247, Rom.)

The Basilica Julia was chiefly used for the sittings of law-courts, and especially for the causes centumvirales (Pline, Epist. v. 21, ii. 14.) Its immense size may be inferred from another passage in Pline (vi. 33.), from which we learn that 180 judges, divided into 4 conciliis, or courts, with 4 separate tribunals, and numerous benches of advocates, besides a large concourse of spectators, both men and women, were accustomed to assemble here. The 4 tribunals are also mentioned by Quintilian (In. Or. xii. 5, 6).
The funeral of Caesar was also that of the Republic. After his death and apotheosis, first an Altar and then an Arae Divi Juliae were erected to him, on the spot where his body had been burnt (Suet. Aug. 34, 35). We also find mention of columns of marble nearly 30 feet high, erected to him in the forum by the people, with this inscription: "Parenti Patriae," (Suet. Caes. 88.) This, however, seems to have been the same monument sometimes called ara; for Suetonius goes on to say that the people continued for a long while to offer sacrifices and make vows at it. ("Aedes divi Julius sed est," Dion Cass. xiv. 23.) Such were the alterations made by Julius Caesar in the forum, and by Augustus in honour of his adoptive father. The latter also made a few other additions. He erected at the head of the forum, under the temple of Saturn, the Millarium Augustum, which we have before had occasion to mention. (Dion Cass. liv. 8; Suet. Otho, 6; Tac. Hist. i. 27.)

It was in shape like a common milestones, but seems to have been of bronze gilt. Its use is not very clear, as the milestones along the various roads denoted the distances from the gates. But when we recollect that Augustus included a great extent of new streets in his Regions, it seems not improbable that it was intended as a measure of distances within the city; and indeed we find that it was made the starting point in the survey of the city under Verusian. (Plin. iii. 9.) Hence it might be regarded, as Plutarch says (Caes. 24), the common centre at which all the roads of Italy terminated. The Umbilicus Romae which Becker confounds with it (p. 344) appears to have been a different thing, as the Noticia mentions both of them separately under Regio viii. The piece of column excavated near the arch of Severus must have belonged to this umbilicus, or to some other monument, not to the millarium, which appears from the Noticia and Curiosus to have retained till a late period its original position near the temple of Saturn at the head of the forum.

We also read of a forum Augusti or triumphal arch erected on the forum in honour of Augustus, but its position is nowhere accurately defined; though from some Scholia on Virgil (Aen. vii. 606) edited by Mai, it is supposed to have been near the temple of Julius (Canina, Foro Rom. p. 139 note.)

THE MILLARIUM.

clear, as the milestones along the various roads denoted the distances from the gates. But when we recollect that Augustus included a great extent of new streets in his Regions, it seems not improbable that it was intended as a measure of distances within the city; and indeed we find that it was made the starting point in the survey of the city under Verusian. (Plin. iii. 9.) Hence it might be regarded, as Plutarch says (Caes. 24), the common centre at which all the roads of Italy terminated. The Umbilicus Romae which Becker confounds with it (p. 344) appears to have been a different thing, as the Noticia mentions both of them separately under Regio viii. The piece of column excavated near the arch of Severus must have belonged to this umbilicus, or to some other monument, not to the millarium, which appears from the Noticia and Curiosus to have retained till a late period its original position near the temple of Saturn at the head of the forum. We also read of a forum Augusti or triumphal arch erected on the forum in honour of Augustus, but its position is nowhere accurately defined; though from some Scholia on Virgil (Aen. vii. 606) edited by Mai, it is supposed to have been near the temple of Julius (Canina, Foro Rom. p. 139 note.)

THE MILLARIUM.
The Arch of Titus, another triumphal arch, dedicated to Tiberius, was erected at the foot of the Cirrus Capitolinus near the temple of Saturn, in commemoration of the recovery of the Roman standards lost with the army of Varus. (Tac. Ann. ii. 41.) Tiberius also restored the temple of Castor in the name of himself and of his brother Drusus, as well as the temple of Concord, as we have before had occasion to remark.

Under the following emperors down to the time of Domitian we do not read of many alterations on the forum. The fire of Nero seems to have chiefly destroyed its lower part, where the temple of Vesta and the Regia lay; the upper portion and the Capitol appear to have escaped. The Octavia Julia was probably burnt down in the fire which occurred in the reign of Titus; at all events it was certainly rebuilt by Domitian. The celebrated Statue of Victory, consecrated in the curia by Augustus, appears, however, to have escaped, since Dion Cassius expressly says that it existed in his time, and we find it mentioned even later. (Suet. Aug. 100; Dion Cass. lib. 45 ed. Hier., v. 1.) It may be that this statue, or more correctly perhaps the altar which stood before it, that occasioned so warm a contention between the Christian and heathen parties in the senate in the time of Theodosius and Valentinian II., the former being led by Ambrosius, the latter by Symmachus, the prefectus urbis. (Symm. Epist. x. 61; cf. Ambrose. Epist. ed. colones Symm. ed. Par. i. p. 740, ii. pp. 475, 482; Gibbon, Decline and Fall, vol. iii. p. 409, seq. ed. Smith.) Ambrose is said to have obtained its removal; though this, perhaps, relates only to the altar, since the statue is mentioned by Claudian as still existing in the time of Honorius. (De VI. Cons. Hon. v. 597):—

"Adfuit ipsa suis also Victoria templis
Romanae tutela torse: quae divite penus
Patricii reverenda foro sacraria costus."

Domitian had a peculiar predilection for two deities, Janus and Minerva. He erected so many archways all over the city that an ancient paquinade, in the form of a Greek pun, was found inscribed upon one of them: "Janus arcusque cum quadrigis et insignibus triumphorum per Regiones urbis tantos so tot extruxit ut cuidam Graecus inscriptionem sit, &c." (Suet. Dom. 13; cf. Dion Cass. liv. 1.) Among other temples of Minerva he is said by some authorities to have erected one on the forum between those of Vesta and Castor. (Becker, Handb. p. 356.) But there seems to have been hardly room for one at this spot; and, as we have before remarked, the Notitia does not mention it. Domitian also built, in honour of his father and brother, the Temple of Vespasian and Titus, next to the temple of Concord. The three columns on the Olivarus Capitolinus must probably belong to it. The opinion that the eight Ionic columns are remains of this temple has been already discussed.

Such was the state of the forum when the colossal equestrian Statue of Domitian was erected on it near the Lacus Curtius. Statius (Silv. I. i.) has written a small poem on this statue, and his description of it affords many interesting topographical particulars, which fully confirm what has already been said respecting the arrangement of the forum:—

"Quae superimposuit moles geminata colonos
Statu Latium complexa forum? coelonea percutum"

The ruins of the small basilica of Constantine at the foot of the Capitol, 795 upper part of which is reached by a very steep staircase from the Forum of Nerva, were said to be the basilica of St. Peter. Suetonius (Caes. c. 55) says that the basilica of Constantine was "the only temple of the old type left standing in the forum." The last important monument erected on the forum after the time of Domitian appears to have been the Temple of Antoninus and Faustina, considerable remains of which still exist before and in the walls of the modern church of S. Lorenzo in Miranda. It stood at the eastern extremity of the N. side of the forum. These remains, which are now sunk deep in the earth, consist of the pronao or vestibule, composed of eight columns of cipollino marble supporting an architrave, also part of the cells, built of square blocks of piperno. The architrave is ornamented with arabesque candelabra and griffins. On the front the inscription is still legible:—

DIVO. ANTONINO. ET
DIVA. FAUSTINA. EX. S. C.

But as a temple was decreed both to Antoninus Pius and his wife, the elder Faustina (Capitol. Anton. P. c. 6, 13), and to the younger Faustina, their daughter (Ib. c. 26), and as divine honours were also rendered after his death to M. Aurelius Antoninus, the husband of the latter, it becomes doubtful to which pair the temple is to be referred (Nibby, Foro Rom. p. 183). It seems, however, most probable that it was dedicated to Antoninus Pius and the elder Faustina. It is stated by Pirro Ligorio (ap. Canina, Foro Rom. p. 192) that in the excavations made here in 1547, the basis of a
statue was discovered with an inscription purporting that it was erected by the guild of bakers to Autominus Pius. In the time of Palladio the temple was a great deal more perfect than it is at present, and had an atrium in front, in the middle of which stood the bronze equestrian statue of M. Aurelius, which now adorns the Capitol. (Architectura, lib. iv. c. 9.) The inscription in Gruter (col. 6) probably belonged to the pedestal of this statue. It was found in the Sacra Via in 1562. Some difficulty, however, arises with regard to this account, since from various other sources we learn that the statue stood for a long while before the church of St. John Lateran. From Palladio’s account of the cortile, or court, it would appear that the building lay some distance back from the Sacra Via.

In the reign of Commodus a destructive fire, which lasted several days, occasioned much damage in the neighbourhood of the forum, and destroyed among other things the temple of Vesta. (Herodian, l. 14.) According to Dion Cassius the same fire extended to the Palatine and consumed almost all the records of the empire (lxxii, 24). It was on the same occasion that the shop of Galen, which stood on the Via Sacra, was burnt down, and also the Palatine Library, as he himself assures us. (De Compso Medicam. i. c. 1.)

This damage seems to have been repaired by Septimius Severus, the munificent restorer of the Roman buildings, who with a rare generosity commonly refrained from inscribing his own name upon them, and left their honours to the rightful founders ("Romae omnibus adae publicas, quae vitam temporum labebatur, instauravit; quaeque profu pro nomine inscripto, servatis tamen ubique titulis conditorum," Spart. Seren. c. ult.). Of the original monuments erected that emperor the principal one was the Augusteum or triumphal arch, which still exists in good preservation at the top of the Roman forum. The inscription informs us that it was dedicated to Severus, as well as to his two sons, Caracalla and Geta, in his third consulate and the 11th year of his reign, consequently in A.D. 203. Between the temple of Concord and the arch, the church of SS. Sergio e Bacco was built in the middle ages, with its tower

ARCH OF SEPTIMIUS SEVERUS.

resting upon the arch. It appears from a medal of Caracalla that a chariot with six horses and persons within it stood on the summit of the arch, and other persons on horseback at the sides, supposed to be the emperor’s sons. It was erected partly in front of the temple of Concord, so as in some degree to conceal the view of that building, and thus to disbar the whole arrangement of the edifices at this part of the forum. Originally it does not seem to have spanned any road; as the latest excavations show that it stood somewhat elevated above the level of the forum, and that the two side arches were approached by means of steps. (Casina, Foro Rom. p. 202.) The paved road that may be now seen under it must have been made at a later period. It would be quite a mistake to suppose that the Sorus was paved under it. This view is supported by the Cistum (17) Consolatum begun to ascend the hill in front of the temple of Saturn and under the arch of Tiberius.

There seem to have been several other arches in the neighbourhood of the curia or senators, and further on in the street which led into the Campus Martius; but whether these belonged to the numerous ones before alluded to as erected by Domitian, or were the works of a later age, cannot be determined, nor are they of such importance as to justify any extended research in this place. The haphazard names bestowed on them in the middle ages, as Arcus manus carnarse, and perhaps also pane mariae, afford no clue by which to determine their use with any certainty.

Augurinus erected a golden statue of the Genius of the Roman People on the rostra; and that these were the ancient rostra may be inferred from this statue being mentioned as close to the senatus, or curia, in the Notitia. ("Aurelianus—Genius Populi Romani in Rostra postulat," Catal. Imp. Venaec. t. ii. p. 246, ed. Rome; "continent,—Genius Populi Romani in Augustae et Equitum Senatorum, Arcium Minerwne, &c. Not. Reg. viii.") The same inference may be deduced from a passage in Dion Cassius (xliii. 9), which describes some vultures settling on the temple of Concordia, as also on the sacellum of the Genius of the People; but as this passage relates to Augustus and Antony, it likewise proves that the sacella named have been there long previous to the time of Aurelian, though when it was erected cannot be determined. The Equus Constantini, recorded in the preceding passage of the Notitia, is also mentioned by the Anonymous Einsiedlenensis near the arch of Severus, under the title of Carolus Constantini.

We shall here mention three other statues which stood in this neighbourhood, since they serve to confirm the topography of it as already described. First mentions three STATUES OF THE SYBYL as standing near the rostra. ("Equidem et Sibyllae Juetai Rostros esse non miror, tres sint licked, xxxiv. 11") That he meant the ancient rostra is evident from his going on to say that he considered these statues to be among the earliest erected in Rome. At a late period of the Empire these seem to have obtained the name of the Fates (Maia or Parcae). They are mentioned by Procopius, in a passage before alluded to, as in the vicinity of the curia and temple of Janus (pho atavros mev vev evy aptwv poytov bolelumyov klytrn uteret eva rv pictures 1000. 25). A whole street or district of this quarter seems to have been named after these, since both the modern church of S. Adriano, at the eastern corner of the Via Bonella, and that of SS. Cosmo e Damiano, which stands a little beyond the temple of Faustina, and consequently out of the proper boundaries of the forum, are said to have been founded in it. ("Facit ecclesiam beato Adriano martyr in tribus Fauis," Anastas. V. Honor. i. p.
Caesar did not live to see it completed, and it was finished by Augustus, as we learn from the Monumentum Ancyranum. We are told by Appian (B.C. ii. 102) that the temple was surrounded with an open space, or τέφρων, and that it was not destined for traffic but for the transaction of legal business. As it stood in the very heart of the city Caesar was compelled to lay out immense sums in purchasing the area for it, which alone is said to have cost him "super h. s. millies," or about 900,000l. sterling. (Suet. Caes. 26; Plin. xxxvi. 44.) Yet it was similarly the custom for a temple to stand which now, in contradistinction to that of Caesar, obtained the name of Forum Magnum. (Dion Caes. xiii. 22.)

No vestige of the Forum Julium has survived to modern times, and very various opinions have been entertained with regard to its exact site; although most topographers have agreed in placing it behind the N. side of the Forum Romanum, but on sites varying along its whole extent. Nardini was the first who pointed to its correct situation behind the church of Sta. Martina, but it was reserved for Caninia to adduce the proof.

We must here revert to a letter of Cicero's (ad Att. iv. 16), which we had occasion to quote when speaking of the Forum of Augustus; it is written under the forum of the Republic. It has an important passage with regard to the situation of the Forum Julium, but unfortunately so obscurely worded as to have proved quite a riddle to the interpreters. It appears to have been written in n. c. 54, and runs as follows: "Paulius in medio foro basilicae jam paene textu edificii octavo orbe nostrorum, itaque antiquum locavit facit magnificissimam. Quid quiseris? nihil gratius illo monumento, nihil gloriosius. Itaque Caesaris amici (me dico et Opptium, dirumparti licet) in monumentum illud, quod tu tollere landibus salebas, ut forum laxaremus et usque ad atrim Libertatis explicaremus, contemptimus sexcentis n. s. Cum privatis non poterat transigis munere pecuniae. Eificentur revocare gloriosissimum; nam in Campo Martio septa tributis comititiis marmoreas sumus et tecta facturi esque cingemus excelsa porticus," &c. Of these words Becker has given two different interpretations. He first imagined (Handb. p. 302, seq.) that Cicero was speaking only of two buildings: the Basilica Aemilia, which Paulius was restoring, and a new basilica, which the same person was building with Caesar's money, and which was afterwards named the Basilica Julia. But before he had finished his work he altered his mind, and at p. 460 pronounces his opinion that Cicero was speaking of no fewer than four different edifices: 1st, the Basilica Paulii ("Paulius—Columna"); 2nd, the Basilica Julia ("illam—gloriosam"); 3rd, the Forum Julium ("illam—pecunia"); 4th, the Septa Julia ("Eificentum," &c.). With all these views, except the second, we are inclined to agree; but we do not think it probable that Paulius would be constructing two basilicas at the same time; nor do we perceive how a new one only then in progress could have been a monument which Articus had been sent to Rome to praise. The chief beauty of the basilica of Paulius was derived from its column ("Nonne inter magnifica dicamus basilicam Paulii columnis Phrygibus mirabilibus," Plin. xxxvi. 24, s. 1); and though it had undergone two or three subsequent restorations before the time of Pliny, we are nevertheless inclined to think that the columns praised by him were the very same
which Atticus had so often admired. However, this may be, we see through the obscurity of Cicero’s letter the rough sketch of a magnificent design of Caesar’s, which had not yet been perfectly matured. The whole space from the back of the Basilica Aemilia as far as the Septa Julia in the Campus Martius was to be thrown open; and perhaps even the excavation of the extremity of the Quirinal, ultimately executed by Trajan, may have been contemplated in the plan. The immense expense involved in half abando this vast outlay in favour of Caesar, and seeks to excuse it with Attius by leading him to infer that it will place his favourite monument in a better point of view. When Cicero wrote the plan was evidently in a crude and incipient state. The first pretence put forth was probably a mere extension of the Forum Romanum; but when Caesar a few years later attained to supreme power the new foundation became the Forum Julium. In his position some caution was requisite in these affairs. Thus the curia of Faustus was pulled down under pretence of erecting on its site a temple of Felicitas—a compliment to the boasted good fortune of Sulis, and his name of Felix. But instead of the Forum Julium, the temple to Fortuna ancestral curiae mentioned by Cicero and Sestonius probably arose from the circumstance that as the work proceeded it was found necessary to buy more houses. If this buying up of private houses was not for the Forum Julium, for what purpose could it possibly have been? The Curia Julia stood on the site of the Curia Hostilia, the Basilica Julia on that of the Senate House, and we know of other buildings designed by Caesar about the forum.

With regard to the situation of the Atrium Libertatis, to which Cicero says the forum was to be extended, we are inclined to look for it, with Becker, on that projection of the Quirinal which was subsequently cut away in order to make room for the forum. The words of Livy: "Cenones extemplo in atrium Libertatis ascendamus" (xiiii. 16), seem to point to a height. A fragment of the Capitoline plan, bearing the inscription Libertatis, seems to be rightly referred by Canina to the Basilica Ulpia. (Foro Rom. p. 185; cf. Becker, Antiqu. ge. p. 39.) Now, if our conjecture respecting the site of the Atrium Libertatis is correct, we have been occupied by the forum on the side of Trajan and its appurtenances; and it therefore appears probable that the Atrium was comprehended in the Basilica Ulpia. Nor is this a mere unfounded guess, since it appears from some lines of Sidonius Apollinaris (Epiq. 2), that in his time the Basilica Ulpia was the place where slaves received their manumission. And that the old Atrium Libertatis was devoted to manumission and other business respecting slaves appears from several passages of ancient authors. Thus Livy: "Postremo o doscanum est, ut ex quattuor urbanis tribus unam palam in Atrio Libertatis sortirentur, in quam ommes, qui servitutem servassent, convocaret" (xv. 15). And Cicero: "Sed questions urgent Miloneum, quae sunt habita tione in Atrio Libertatis: Quibusnam de servis?" & c. (Mil. 29). Lastly, it may be mentioned that the following fragment of an inscription was found near the church of S. Martina, and therefore near this spot:—

EXCURSUS. POPULVSQUE ROMANVS.

LIBERTAS.

(Canina, Foro Rom. p. 391).

The preceding letter of Cicero’s points to the Forum Julium as closely adjoining the Basilica Aemilia, and there are other circumstances that may be adduced in proof of the same site. Ovid (Fast. i. 258) alludes to the temple of Janus as lying between two fora, and these must have been the Forum Romanum and the Forum Caesaris. Pliny’s story (xvii. 86) of the lotus-tree on the Vulcanal, the roots of which penetrated to the forum of Caesar, whatever may be its absolute truth, must at all events have possessed some ancient probability in it is not actually incredible; and there is no situation for Caesar’s forum which tallies with that story better than that here assigned to it with relation to the site of the Vulcanal, as established in the preceding pages. Our Vulcanal need not have been distant more than about 50 yards from the Forum Julia; that of Becker lies at about five times that distance from it, and would render Pliny’s account utterly improbable.

Palladio mentions that in his time considerable remains of a temple were discovered behind the place where the statuary of Marforio then stood, near the church of S. Martina, which, from the cornices being adorned with sculptures of dolphins and tridents, he identified with the temple of Neptune. But, it would appear, no accounts of a temple of Neptune in this neighbourhood, and as these emblems would also suit the sea-born goddess, it seems probable that the remains belonged to the temple of Venus Genetrix. This is still more strikingly confirmed by Palladio’s account of its style of architecture, which was perfectly different from that of S. Martina: "Sunt geminas bellis portae—Sacramentum hoc Numae Pomponiae fece circa annum Augusti iuxta theatrum Marcelli, quod fuit in dobro brevisissimis tempus. Deus autem propter Janum bifrontem. Postea captus Falliscis, civitate Tusciac, inventum est simulacrum Ianii cum frontibus quattuor. Unde quod Numae insitus aut translatum est ad forum Transitorium, aut quattuor portae sunt complectentes, ex instar Augusti." (Archit. lib. iv. 31; comp. Vitruv. iii. 23.)

We can hardly doubt, therefore, that the forum of Caesar lay on this spot, as is indicated by so many various circumstances. The only objection that has been urged against it is the following passage of Servius, which places the Augustal, a district which undoubtedly adjoined the Forum Julium, in quite a different part of the town: "Sunt geminis bellis portarum—Sacramentum hoc Numae Pomponiae fecerat circa annum Augusti iuxta theatrum Marcelli, quod fuit in dobro brevisissimis tempus. Deus autem propter Janum bifrontem. Postea captus Falliscis, civitate Tusciac, inventum est simulacrum Ianii cum frontibus quattuor. Unde quod Numae insitus aut translatum est ad forum Transitorium, aut quattuor portae sunt complectentes, ex instar Augusti." (Archit. lib. iv. 311, 31 seq.) We trust, however, that the situation of the small temple of Janus, the index belli pacisca, has been clearly established by what we have said in the former part of this article. Servius is evidently confounding this little temple with the larger one near the theatre of Marcellus; and indeed the whole passage is a heap of trash. For how can we connect such remote events as the
ROMA.

Taking of Falisc, or rather Falerii, and the erection of a Janus Quadrifrons on the Forum Transitorium, which did not exist till many centuries afterwards: Livy also indicates the Janus-temple of Numa as being in the Argiletum ("Janum ad infinitum Argiletum indicat paccellae factum." 1.19); hence we must conclude that it was a district lying on the N. side of the forum. We do not think, however, with Becker (Handb. p. 261), that any proof can be drawn from the words of Virgil (Aen. viii. 345, seq.), where, with a poetical license, the various places are evidently mentioned without regard to their order. But since the district called Argiletum may have been encroached upon by the imperial fora it is impossible to say.

The forum of Caesar must have been very splendid. Before the temple of Venus stood a statue of the celebrated horse which would suffer nobody but Caesar to mount him, and whose fore-feet are said to have resembled those of a human being (Suet. Cæs. 61; Plin. viii. 614). The temple was adorned with pictures by the best Greek artists, and enriched with many precious offerings (Plin. vii. 38, ix. 57, xvii. 5, &c.). It was one of the three fora devoted to legal business, the other two being the Forum Romanum and Augustum:—

"Caesus, inquis, agam Cicerone disertus ipse
Atque erit in triplici par mibi nemo foro."

(Mart. iii. 38. 2.)

Whether it was ever used for assemblies of the senate seems doubtful; at all events the passage cited by Becker (Handb. p. 369) from Tacitus (Annales xvi. 27) proves nothing, as the word curia here seems to be used in the sense of Curia Julia, a term taken from the history of the Forum Cassarum but little known. It appears to have escaped the fire of Nero; but it is mentioned among the buildings restored by Diocletian after the fire under Carinus ("Opera publica ase- runt Senatorum, Forum, Cassarum patrimonium, Basilicam Julianum et Oraeostodiam, Catal. Imp. Vien., where, according to Preller, Reg. p. 143, we must read "Forum Cassarum, Atrium Minervae.") It is mentioned in the Ordo Romanae, in the year 1143, but may then have been a ruin.

Forum Augustum:—This forum was constructed for the express purpose of affording more accommodation for judicial business, which had now increased to such an extent that the Forum Romanum and Forum Julium were too small for it. It included in its area a TEMPLE OF MARS ULTOR, vowed by Augustus in the civil war which he had undertaken to avenge his father's death:—

"Mars aëres, et satia scelerato sanguine farrum,
Stetque favor causa pro meliore tuncus.
Templa feres, et, me victore, vocabem Ullor.
Voverat, et fuso laetus ab hoste rediti."

(Ov. Fast, v. 575, seq.)

This temple was appointed to be the place where the senate should consult about wars and triumphs, where provinces cum imperio should be conferred, and where victorious generals should deposit the insignia of their triumphs (Suet. Aug. 42). The forum was constructed on a smaller scale than Augustus had intended, because he could not obtain the consent of some neighbouring householders to part with their property (Ib. 56). It was opened for business before the temple was finished, which was dedicated n. c. 1 (ib. 29; Vell. Pat. ii. 100). The forum extended on each side of the temple in a semicircular shape (Palladio, Archit. iv.), with porticoes, in which Augustus erected the statues of the most eminent Roman generals. On each side of the temple were subsequently erected triumphal arches in honour of Germanicus and Drusus, with their statues (Tac. Ann. ii. 64). "The Temple of Mars Torquatus enhanced its splendour (Plin. xxxi. 54), and was adorned, as well as the forum, with many works of art (Ib. vii. 53, xxxiv. 18, xxviii. 10; Ov. Fast. v. 555, &c.). The Sallii were accustomed to banquet here; and an anecdoté is recorded of the emperor Claudius, that once when he was sitting in judgment in this forum, he was so attracted by the appearance of Augustus dinner preparing for these priests, that he quitted the tribunal and joined for these."

(Suet. Claud. 33.) This anecdoté has partly served to identify the site of the temple, an inscription having been discovered on one of the remaining walls in which the Sallii and their Monumenta are mentioned (Canina, Foro Rom. p. 150).

The remains of three of the columns, with their entablature, of the temple of Mars Ultor are still to be seen near the place called the Arco de' Pontani. It must therefore have adjoined the back of the Forum Cassarum. These three columns, which are tall and handsome, are of the Corinthian order. All we know respecting the history of the Forum Augustum is that it was restored by Hadrian (Suet. Hadr. 19). The church of S. Basilio was probably built on the site of the temple (Ordo Rom. 1143; Mabill. Mus. Ital. ii. p. 143).

TEMPLE OF MARS ULTOR.

Forum Transitorium or Forum Nervae.—This forum was begun by Domitian, but completed and dedicated by Nero (Suet. Dom. 5; Aur. Vict. Cæs. 12). We have said that Domitian had a particular predilection for Minerva, and he founded a large temple in this forum ("Deificavit altera pars Minervae eminenitis consuetudini magnificeuti." A. Vict. Res. 4). From this circumstance it was also called Forum Palladium ("Limina post Pacis Palladiumque forum," Mart. i. 2. 8); besides which it also had the name of Pervium or Transitorium, apparently because it was traversed by a street which connected the N. and S. sides of the city, which was not the case with the other forum (Niebr. in the Beschreibung Rom., iii. p. 288). Thus Lampridius (Alex. Sec. 28): "In foro Divi Nervae, quod Transitorium dicitur;" and Aurelius Victor in the passage just cited. From the line of Martial's before quoted, it appears to have adjoined the temple of Peace, erected by Vespasian, which we shall have occasion to describe in another section. There appears to have stood upon it a temple, or rather perhaps fourfold archway of Janus Quadrifrons, probably somewhat resembling that which still exists near S. Georgio in Valerio, connecting the roads which led to the four different forums, namely, the Forum Romanum, Forum Cassarum, Forum Nervae, and Forum Pacis, as Vespasian's temple of Peace was sometimes called. The passage

Digitized by Google
ancient author has left us a satisfactory description of it, and we are obliged to make out the plan, as best we may, from what we can trace of the remains; a task somewhat aided by the excavations made by the French when they had possession of Rome at the commencement of the present century. (See Tournon, Eléments Stratigraph. Rome, tom. ii. p. 233; pl. 26; Fosco, Notizie degli scavi nell’ Augurale Flavio e nel Foro Trajano, Rom. 1813; Brunen, Le Forse de Rome, ii. p. 24, seq.) This immense work consisted of the following parts:—

1. The forum, properly so called, a large open area immediately adjoining the NW. sides of the fora of Caesar and Augustus, and filling the whole space between the Capitoline and Quirinal,—much of the latter hill, indeed, and some of the former, having been cut away in order to make room for it. This part, which was called the area or atrium fori (Gell. xii. 24; Amm. Marc. xvi. 10), contained, in the middle, an equestrian statue of Trajan, and was adorned with many other statues. The SW. and NE. sides of this square, where the ground had been cut away from the hills, was occupied with semicircular buildings. There are still large remains of that under the Quirinal, which are vulgarly called the baths of Paulius Aemilius. The lower part of this edifice, which has only been laid open within the last few years, consists of quadrangular niches, which probably served as little shops; above them was a vanished portico, with rooms and staircases leading to the upper floors. Piranesi and other topographers conjectured that there was another similar building on the side of the Capitol, at the place called the Chiasse d’Oro; but Canina was the first to demonstrate its existence in his Indicazioni Topografiche. Along the front of each of the crescents thus formed there were an audience room, with the stage in the middle, the back of which gave to the forum its proper rectangular form. The forum was thus divided into three parts, through both the exterior ones of which there was a road for carriages, as appears from traces of pavement; whilst the square, or middle division was paved with flag-stones. In the middle of the SE. side there seems to have been a triumphal arch, vestiges of which were discovered in the time of Giovanni Vasco (Memorie, no. 46), forming the principal entrance on the side of the imperial fora.

2. Next to the forum on the NW. side lay the Basilica Ulpia, which extended across it lengthways, and thus served to form one of its sides. The basilica was called Ulpia from Trajan’s family name. The plan of the middle part is now laid entirely open. It seems to have been divided internally by four rows of columns, thus forming five aisles, with circular abside or chalcidicae at each end. During the ex-
space was bounded on its two sides by porticoes with double columns. In the NW. side of the ba-

COLUMN OF TRAJAN.

silica, on either side of the column, were two libraries, the Bibliotheca Graeca and Latina, as indicated by Sidonius:

"Cum meis poni statuam perennem
Nerva Trajanus titulis videret
inter sanctores utrinque fixam
Bibliothecae."—(ix. Epigr. 16.)

* It is remarkable, however, that the library is called by A. Gellius, "Bibliotheca templi Trajan" (xi. 17).
3. There are evident traces that Trajan's forum extended still farther to the NW., though it is doubtful whether this extension was owing to Trajan himself or to Hadrian. Excavations in this direction have brought to light enormous granite pillars belonging probably to the temple which Hadrian dedicated to Trajan (Spart. Hadr. 19), and which different objects mentioned. We have already described the situation and height of the hill. The latter, however, cannot be very accurately given, as the soil is covered to a great depth with rubbish, the sole remains of those magnificent edifices which once stood upon it. On the side of the Circus Maximus, indeed, in the Pigna del Collegio Inglese, these ruins assume something of a more definite form; but the gigantic arches and terraces at that part, though they may still excite our wonder, are not sufficiently perfect to enable us to trace any plan of the buildings which they once formed. However, they must all have been subsequent to the time of Nero; since the ravages of the fire under that emperor were particularly destructive on the Palatine hill. Hence the chief topographical interest attaches to the declivities of the hill, which present more facilities for ascertaining spots connected with and sanctified by the early traditions of the city, of which several have already been discussed, as the Porta Romana and Cibus Victorina, the Porta Mugonias, the Curia Vetere, etc.

We have already seen that the declivity towards the Capitoline hill was called GERMALUS or CERIMALUS; but though in ancient times this was regarded as a separate hill, the reason is not clear, since it by no means presents any distinct features, like the Velia. Here was the LUPERCAL, according to tradition a grove sacred to Pan ever since the time of the Arcadians (Dionys. l. 322, 79), and near it the FICUS RUMINALIS, or sacred fig-tree, under which Romulus and Remus were discovered suckled by the wolf. It is difficult to determine the exact spot of the Lupercal. Evander points it out to Aeneas as lying "gelida sub rupe" (Virg. Aen. viii. 343), and Dionysius (l. c.) describes it as on the road (σημείῳ τῆς θεώς) leading to the Circus Maximus; and his authority is preferable to that of Servius, who describes it as "in Circio" (ad Aen. viii. 90). Its most probable site therefore is at the western angle of the hill, towards the circus. Its situation is in some degree connected with that of the CASA ROMULI. The description of the 10th Book is, in the Notitia, beginning with the Casa Romuli, and proceeding round the base of the hill to the N. and E. ends, in coming from the circus, with the Lupercal; whence it is plain that the Casa Romuli must have stood a little to the N. of it. Plutarch notices the Casa Romuli, which was also called Taguriunum Faustal, in the following manner: ἐν οὗ δὲ ἡ γέφυρα τῆς καταλύσιμος τῶν ἀνατριχίων οὖν τῆς τοινυν ἐν Παλατίνῳ καταβολῆς (Rom. 20). Here the expression ἀνατριχίων is puzzling, as an equivalent name does not occur in any Latin author. Properly ἀνατριχίων signifies the sea-shore, and cannot therefore be applied to the banks of the Tiber; nor, in prose at least, to an inland bank. Hence Preller is inclined to think that it is merely Plutarch's awkward translation of the Roman name for a place called Palum Rupes, which obtained this appellation after the Lupercal had been restored by Augustus and adorned with architectural elevations. (Regiones, p. 181.) But Plutarch was surely master of his own language; and though he may not have been a very profound Latin scholar, yet as he lived some time in Rome and occupied himself with studying the history and manners of the people, we may perhaps give him credit for knowing the difference between rupes and θέρη. It seems more probable therefore that the Romans
name of the place alluded to was Pulcher Littus than Pullera Rupes (though unfortunately we do not find it mentioned in any Latin author), and that, like the Casa Romuli and Lupercal, it was a traditionary name, and of Roman antiquity and importance of itself. According to that story, we must recollect that the Tiber had overflowed its banks and formed a laks here, and that the cradle was washed ashore at the foot of the Palatine; whence the name Littus, which is frequently used of the shores of a lake, might without impropriety be applied to this spot. The legends or stories attached to the neighborhood of the Casa Romuli stood the cherry-tree said to have sprung from the lance hurled by Romulus from the Aventine to the Palatine; and that the tree withered and died from the roots having been injured when Caius Caesar (Caligula) caused the steps to be made there. (Calv. in Cae. 2, 1.) Hence Becker draws the conclusion that this was the origin of the steps, and that they did not exist before the time of Caligula. But this is by no means a necessary consequence from Plutarch's words, since the steps often signifies to repaie or make better. We find the same steps mentioned by Solinus under the name of Scilae Caci: "Ad supercillum sclaramur Caci habet terminum (Roma Quadrata), ubi turgurium fuit Fabalati. Iti Romulus maestivat," etc. (i. 18). It cannot be doubted that these are the same steps mentioned by Propertius and Plutarch. Gerhard proposed to emend this passage by reading Caci for Caci. The idea of passing the Man. above approved, as it suits his view that the steps did not exist before the time of Caligula. But unfortunately he was not aware of a passage of Solinus in Diodorus Siculus which also mentions these steps in a manner confirmatory of the account of Solinus and Propertius: τονδε Καλατον εν τη Παλατει κατασκευαζοντο δεναι την άυτην κληρονομον τον ινομογενεον τον Καλατον Καλατον (iv. 21). And as Diodorus wrote in the age of Augustus, the existence of the steps before the time of Caligula is thus proved.

An Aedes Romuli is also mentioned on the Germ. in the sacred books of the Argives quoted by Varro (L. L. v. § 54, Mill.). But it is not found in any other author, and hence it may appear doubtful whether it existed at the age of Romulus and Remus. The round church of S. Teodoro on the W. side of the Palatine has frequently been identified with this Aedes Romuli, and it is very probable that it was built over the remains of some ancient temple; but it is too far from the circus to have been the Casa Romuli, which lay more towards S. Anastasia. Besides the Casa seems to have been nothing more than a little thatched hut; of which, as we have

seen, there appears to have been a duplicate on the Capitol.

In the dearth of any more accurate information we cannot fix the situation of these venerable relics of Roman antiquity more satisfactorily than has been gathered from the preceding general indications. M. Valerius Messala and C. Cassius Longinus, who were censors in B.C. 154, projected, and even began, a theatre at this spot, which was to extend from the Lupercal on the Germainus towards the Palatine. But this scheme was opposed by the rigid morality of Scipio Nasica, and all the works were put up to auction and sold. (Vell. Pat. i. 15; Val. Max. ii. 4, § 2; Appian, B. C. i. 28.) The Lupercal is mentioned in the Monumentum Augustum, as reconstructed by Augustus; whence Canina infers that the ancient one must have been destroyed when this theatre was commenced. (Indicationes Topogr. p. 460, 1860.) The Casa Romuli is represented by Fabius Pictor, as translated by Dionysius of Halicarnassus (i. 79), to have been carefully preserved in his pattern, the damage occasioned by age or tempests being made good according to the ancient pattern. Whether the building mentioned in the Notitia was still the same it is impossible to say. We have already noticed that the temple of the city of Romulus, the Sanctuary of Victoria—probably a sacred grove—and the Clivus Victoriae on the NW. slope of the Palatine. At or near this spot an Aedes Matris Deum was erected n. c. 191, to contain the image of the Mater Idasa, which Scipio Nasica had brought from Asia thirteen years before (Liv. i. 40, 18). Cic. Hor. R. 12. It must have been to the N. of the Casa Romuli, since it is mentioned after it in the Notitia, when proceeding in that direction, yet at some distance from the N. point of the hill, between which and the temple the Domus Tiberiana must have intervened. It is recorded as having been twice burnt down; once in n. c. 110, when it was rebuilt by Metellus (Jan. Ov. 18), and again by A. D. 2, in the same fire which destroyed the palace of Augustus, by whom it was restored. (Val. Max. i. 8, § 11; Dion Cass. iv. 12; Mon. August.) It must also have been destroyed in the configuration under Nero, and again rebuilt. Becker (Handb. p. 421) observes that its front must have faced the temple of Clitumnus, as the statue of Tiberius was described by Dion Cassius as looking that way (xlvi. 43). But this relates only to the statue; and we fancy that there is some reason to believe, from a passage in Martial, that the temple was a round one, and could not therefore be properly said to face any way. In this passage two temples are mentioned (i. 70. 9):

"Flecte visa hae qua masid aut tacta Lyaei
Et Cybeleae picto stat Corybante tholus."
indeed, they are mentioned in one breath in the Notitia. ("Aedem Matris Deum et Apollinis Rhamnusii.") That this Thulus Cybeles may have been the temple which once occupied the site of the present circular church of St. Theodore before referred to, we can only offer a conjecture; its situation, at least, admirably corresponds with that of the temple of the same name mentioned by Cassius. We find a temple of this deity, as well as one of Jupiter Victorius mentioned in the Monumentum Agrippaeum (tab. iv. l. 6) as erected by Augustus on the Palantine. The first of these may, however, have been only a restoration of the ancient temple. We can hardly conclude from the word foci that it was an entirely new and separate structure; since we find the same word used in that record with relation to other edifices which were among the most ancient in Rome, and of which it is not likely that there should have been duplicates: such as the temple of Jupiter Feretrius on the Capitol, that of Quirinus, that of Juno Regina on the Aventine, and others. In those cases it seems probable that the edifices were restored on a narrow site, at least; from the cognate fact that Augustus found it necessary to rebuild them from their foundations; which would justify the use of the word foci instead of refoei, but hardly the regarding of them as entirely new temples. The great care used by Augustus in restoring the ancient temples is attested to by Horace (Od. iii. 6). The temple of Jupiter Vitalis may possibly have been new; as at all events it could hardly have been the one dedicated by C. Licius Lucullus about the same time as that of the Mater Magna Musae, since the former was in the Circus Maximus. (Liv. xxxvi. 36; cf. Cic. Brut. 18, ad Att. l. 18.)

What the Pentaptychum may have been which is mentioned in the Notitia between the temple of Apollo and the palace of Augustus, it is difficult to say, except that it was probably a building with five gates. Preller (Regiones, p. 153) cites a passage from an anonymous describer of the Antiquities of Constantinople in Banduri (Imp. Orientis, i. p. 21), in which a building in that city called Tetrapiysson, which was set apart for inspection and dwelling by the corpse of the emperor, or of that of any member of his family, is mentioned; and as this building is said to have been imitated from one at Rome, Preller thinks it highly probable that the Pentaptychum in question may have afforded the model, and been used for a similar purpose.

C. Collet, Jupiter Victor and Jupiter Satonis — the former near the Nova Via and Porta Magnoia, the latter farther off towards the Sacra Via — we have already spoken when describing the Romanian city; besides which there seems to have been a temple of Jupiter Propogator, probably the site of the Antonines, known only from an inscription. (Gruter, loc. cit.; Curs. Inscr. cxxxii. 5; Orell. 2244); a fanum, or Arx Fertres (Cic. Leg. ii. 11; Val. Max. ii. § 6; Plin. ii. 5), an ancient sacellum of the Dea Virglica, the appeasing deity of cornubial quarrels (Val. Max. ii. l. § 6); and an

The Augusteum, or Temple of Vesta (Dio Cass. lxv. 3).

When the Romans began to improve their domestic architecture, and to build finer houses than those which had contained their more simple ancestors, the Palatine, from its excellent and convenient situation, early became a fashionable quarter. We have already alluded slightly to some of the more noted residences on this hill. The house of Vespasian was one of the most ancient which we have mentioned in this quarter. It was pulled down in B.C. 330 in consequence of the trespassous practices of its owner; after which the site remained unbuilt upon, and obtained the name of Vesta Pollio (Liv. viii. 19); Pa. Cic. p. Dom. 38); but how long it remained in this state it is impossible to say. The Porticus Cutilii rose on the Palatine from a similar cause. Its site had previously been occupied by the house of M. Fulvius Flaccus, who perished in the sedition of C. Gracchus; the house was then razed, and the ground on which it stood called Flacciana Aera, till this portico was erected on it by Q. Lutatius Catulus (Liv. viii. 3; § 1; Pa. Cic. p. Dom. 43.) Near it stood the House of Cicero which he bought of Crassus, — probably not the celebrated orator, — the fate of which we seem to have lost track. It seems to have been on the NE. side of the Palatine, as Cicero is described by Plutarch as traversing the Sacra Via in order to arrive at the forum (Cic. Thras. 15; Var. Csel. vii. 4; Cic. v. 5; Cic. Fd. v. vii. his "vicinium consulis," that is, of Caesar, who then dwelt in the Regia (ad Att. ii. 24). Cattileus' house was also on the Palatine, and was annexed by Augustus to his residence. (Suet. lll. Johnson. 17.) Here also was a House of Antoninus, which Augustus presented to Agrippa and Messala (Dio Cass. liii. 27); and also the House of Scavius, famed for its magnificence. (Cic. Scæv. 27; Plin. xxxvi. 3.)

With the reign of Augustus a new era commenced for the Palatine. It was now marked out for the imperial residence; and in process of time, the buildings erected by successive emperors monopolized the forum. The temple of Jupiter Vitalis, begun by Augustus in that neighborhood, was restored by Tiberius and Claudius, and dedicated in 42 B.C. by Augustus under the title of House of Hortensia, a dwelling conspicuous neither for size nor splendour. (Ib. 73.) After his victory over Sextus Pompeius, he appears to have purchased several houses adjoining his own, and to have vowed the Temple of Apollo which he afterwards built (Vell. Pat. i. 81; Dio Cass. lxxix. 15.) This temple, the second dedicated to that deity at Rome — the earlier one being in the Circus Flaminius — does not, however, appear to have been begun till after the battle of Actium, or at all events the plan of it was extended after that event. It is well known that after that victory Augustus dedicated a temple to the Laucian Apollo near Actium, and in like manner the new structure on the Palatine was referred to the same deity; whence the phrases "Actius Apollo" (Verg. Aen. vii. 834; Prop. iv. 6. 7), and "Phoebus Navales" (—"ubi Navales" saec. Palatia Phoebi, Prop. iv. 1. 3). It was dedicated in B.C. 27. It was surrounded with a portico containing the Bibliotheca Graeca.
inherited, as he was born on the Palatine. (Suet. Tüb. 5.) In his youth, when he lived in a quiet, retired manner, he first inhabited the house of Pompey in the Circaea, and afterwards that of Maecenas on the Esquiline (Tüb. 15); but when he became emperor, it is most probable that he resided on the Palatine, till he seconded the claims of C. Octavius and of C. Caesar on the right of Caprease. The Domus Tiberiana must have stood near the NW. corner of the Palatine, since it is described as affording an exit into the Velabrum ("per Tiberianam domum in Velabrum," Tac. Hist. i. 27). Suetonius, speaking of the same departure of Otho, says that he fastened out at the back of the palace ("prospectu as a postica parte Palatii," Odo, 5), from which passages it would be extended to the front. It was from the latter antiquities connected together, that of Augustus being the more conspicuous towards the forum, whilst that of Tiberius formed the back front. It was from the latter that Vitellius surveyed the storming of the Capitol. (Suet. Vit. 15.) At a later period of the Empire we find a BIBLIOTECA mentioned in the palace of Tiberius, which had probably superseded the Public Library, as the latter is no longer mentioned. (A. Gall. xiii. 19; Vopisc. Prov. 2.) All these buildings, however, must, of course, have been destroyed in the fire of Nero; but we must assume that, after they were rebuilt, the Domus Augusti et Tiberii still continued to be distinguished, as they are mentioned as separate buildings in the Novella; and indeed Josephus expressly says that the different parts of the complex of buildings forming the imperial palace were named after their respective founders. (Ant. Jud. xix. 1. § 15.)

On or near the Palatine we must also place the TEMPLE AUGUSTI— one of the only two public buildings which Tiberius undertook at Rome, the other being the scene of the treat of Posey. Even these he did not live to finish, but left them to be completed and dedicated by Caligula. (Tac. Ann. iv. 45; Suet. Tüb. 47, Cal. 21.) The circumstance of Caligula using this temple as a sort of pier for his bridge to the Capitoline makes it doubtful whether it could have stood on the Palatine hill. Yet Plin. xxv. 22. and others, give the temple as "in Palatini templum," and if it was not exactly on the summit of the hill, it could not have been very far from it. Becker conjectures that the BRIDGE OF CALIGULA passed over the Basilica Julia; but the only proof is, that Caligula was accustomed to fling money to the people from the roof of the basilica, which he might have ascended without a bridge. (Suet. Cal. 37, Jos. Ant. Jud. xix. 1, § 11.) The bridge, perhaps, did not stand very long. Caligula seems to have made extensive alterations in the imperial palace, though we cannot trace them accurately. ("Bis vidimus urbem totam cingi domibus principum Cali et Neronis," Plin. xxxvi. 24. a. 5.) We have already mentioned that he built on the hill its vastness, and that of the buildings, as Pliny mentions that the lotus-trees belonging to the house of Crassus at that spot lasted till the fire of Nero. (Ib. xvii. 1.) The enormous buildings of the last-named emperor probably expressed the importance of the Palace of Tiberius; events we hear no more of private houses there after the commencement of his reign. We have already adverted to Nero's two palaces. The first of these, or DOMUS TRANSITORIA, with its gardens, though not finished in the same style of splendour
as its successor, the domus aurea, seems to have occupied as large an extent of ground, and to have reached from the Palatine to the gardens of Maecenas and the agger of Servius on the Esquiline. (Suet. Nero, 31; Tac. Ann. xv. 39.) The AURUM DOMUS was a specimen of luxury and extravagance. A stair or vestibule was placed on the Velia, on the spot where the temple of Venus and Rome afterwards stood, and in it rose the colossal STATUE OF NERO, 120 feet high, the base of which is still visible at the NW. side of the Colosseum. We may gain an idea of the vastness of this residence by comparing the precise description of Suetonius with the poetical one of Martial, when we shall see that the latter has not abused the privilege of his calling. (Suet. Nero, 31; Mart. de Spect. 3.) It was never perfectly finished, and Vespasian, as we have said, restored the ground to the public. We know but little of the arrangement of the buildings on the Palatine itself under Nero, except that the different parts appear to have retained their former names. Domitian added much to the palace, now again confined to this hill, and fitted it up in a style of extraordinary magnificence; but, though we frequently hear of single parts, such as baths, diaetae, a portico called scicius, a dining-room dignified with the appellation of Cosmio Doris, &c., yet we are not always presented with a clear conception of the whole (cf. Plut. Popul. 15; Plin. xxxv. 5 a. 38; Capit. Port. 11; Mart. viii. 38; Stat. Silv. iii. 4. 47, iv. 2. 18, &c.) The anxiety and terror of the tyrant are strikingly depicted in the anecdotes told by Suetonius (Dom. 14.), that he caused the walls of the portico in which he was accustomed to walk to be covered with a pavement of glass, called phlogente, in order that he might be able to see what was going on behind his back. It is uncertain where the Adonias, or gardens of Adonis, lay, in which Domitian received Apollonius of Tyana, and which are marked on a fragment of the Capitoline plan (Bellori, tab. xi.) Of the history of the palace little more is known. Several accounts mention the domus aurea as having been burned down in the reign of Trajan (Oros. vii. 12; Hieron. an. 105, p. 447, Ronc.), and the palace which succeeded it appears to have been also destroyed by fire in the reign of Commodus (Dion Cass. lxxxii. 24; Herodian, i. 14.)

At the southern extremity of the Palatine, Septimius Severus built the Septizonium, considerable remains of which existed till near the end of the

16th century, when Pope Sixtus V. caused the pillars to be carried off to the Vatican. Representations of the ruins will be found in De Paeere (tav. 13) and Gannucci (Antichità di Roma, p. 83, Speculum Rom. Mogos Sceceoetis, t. 45.) The name of the building, which, however, is very variously MSS. of different authors, is by some supposed to have been derived from its form, by others from the circumstance of seven roads meeting at this spot. It seems not improbable that a similar place existed before the time of Severus, since Suetonius mentions that Titus was born near the Septizonium (c. 2); and all who have taken the pains to examine the grounds, have assigned this to the 3rd Regio. It has been inferred from the name that the building had seven rows of columns, one above another, but this notion seems to be without foundation, as the ruins never exhibited traces of more than three rows. The tomb of Severus must not be confounded with it, which was built on the Via Appia, and built so as to resemble the Septizonium. The same author informs us (Sec. 24) that the design of Severus was to make the Septizonium an atriun of the palace, so that it should be the first object to strike the eyes of those coming from Africa, his native country. But the true nature and destination of these remains remain enigmatical.

We know of no other Alterations in the palace except some slight ones under the emperors Elagabalus and Alexander Severus. The former constructed there the Temple of Helios Ablulis (Lampr. Heliosc. 3; Herodian, v. 5), and opened a public bath, also destined apparently as a place of lictoriness (Lampr. Ib. 6). Of the buildings of Alexander Severus we hear only of an Asia, erected in honour of his mother Julia Mammea, and commonly called "ad Mammam" (Id. Al. Sec. 26). Those desata were small isolated buildings, commonly in parks, and somewhat resembled a modern Roman casem or pavilion (Plin. Ep. ii. 17, v. 6). It is also related of both these emperors that they caused the streets of the Palatine to be paved with porphyry and sertices antiaco (Lampr. Hel. 24, Al. Sec. 35.) The Palatium was probably inhabited by Maxentius during his short reign, after which we hear so much of it. That emperor is said to have founded baths there. (Catal. Imp. Viena, t. ii p. 248, Ronc., Vitr.)

The VICTORIA GERMANICANA, the only object recorded in the Notitia between the Septizonium and the Lupercol, and which must therefore have stood as the side next the circus, was probably one of those numerous monuments erected either in honour of Germanicus, of which Tacitus speaks (Agr. ii. 83), or else to Caracalla, who likewise bore the name of Germanicus. (Regiones, p. 197.)

We have already treated generally of the Velia and Sacra Via, and of some of the principal objects connected with them, as well as of the Nova Via under the Palatine. The NOVA VIA was not a very important road, and we have little more to add respecting it. It seems to have begun at the Porta Maggiunus, where, like the Sacra Via, at the same spot, it was called Sacra Nova via (Solin. i. 1). From its place it ran almost parallel with the Sacra Via, and between it and the hill, as far as its northern point, where it turned to the S., and still continued to run along the base of the Palatine as far at least as the Porta Romana (near S. Giorgio in Velabro). Some, indeed, carry it on as far as the Circus Maximus (Canina, Indic. Topa. p. 391); a view which does not
seem to be supported by any authority. The lower part of it, both on the side of the forum and of the Velabrum, was called Inunna Nova Via. (Varro, v. § 43, MulL.) Ovid describes it as touching the forum ("Qua Nova Romanse nunc Via Juncta foro est," etc.). The temple of Vesta not only the open space itself, but also the ground around it on which the temples and basilicae stood, was included under the appellation of forum. A road appears, however, to have led from the Nova Via to the forum between the temples of Vesta and Castor, as is shown by remains of pavement discovered. Ovid has described a similar road near the temple of Venus Vesta but this, however, is not alluded to by Ovid, from whose words would seem to have been comparatively recent. The Lucumae Vestaie must have lain behind the Nova Via, towards the Palatine, and, indeed, on the very slope of the hill, as appears from the following passages: "Exaudita vox est a lucuo Vestaie, qui sae Palatii radice in Novam Viam deversus est." (Cic. Dei. c. 45.) "M. Caesar Vestaie necat in Novam Viam in Vestaie, ubi nunc sacellum est supra sedem Vestaie vocem noctis silentio audisse clarem humana." (Liv. v. 32). The sacellum here alluded to was that of Aius Locunae. (Cic. i. L. c. ii. 32.) It is described by Varro (Geol. xvi. 37) as "in inume Nova Via"; whence we must conclude that it was in the halae of the forum. Valerius is said to have been born in Vesta, which was evidently at the bottom, and, according to Becker's own showing, in a district called Sub Vedia? His attempts to evade these difficulties are feeble and unsatisfactory. (de Marte, p. 45). Yet they are not incapable of solution, without abandoning Niebuhr's theory respecting the Velia, which he held to be the same as the Velia within the forum. Though called Vesta, the road must have been of high antiquity, since Livy mentions that Terquinius lived in it (i. 47); and perhaps it received its name from its newness in comparison with the Sacra Via. Before we proceed to describe the monuments on this road, we must observe that some writers and especially the Italian school of topographers (Canina, Foro Rom. p. 60, seq., Indic. Top. p. 466), do not allow that the Velia consisted of that height which lies between the Palatine, the Esquiline, and the eastern side of the forum, but confine the application to the northern angle of the Palatine, which, it is contended, like the Germini, was in ancient times a hill, separated from the remainder of the hill. Indeed it appears that Niebuhr first applied the name of Velia to the ridge in question (Hist. p. 390, Eng. trans.), in which view he was of course followed by Bunsen (Besehr. iii. p. 81.). One of the chief arguments advanced against is the account given of the house of Valerius Publicola. Valerius is said to have been born building a house on the same spot where Tullus Hostilius had previously dwelt (Cic. Rep. ii. 31.) and the residence of Tullus Hostilius again is recorded to have been on the Velia, on the spot afterwards occupied by the Aedii Deum Penatuum (Varro, ap. Nov. xii. 51, p. 383, Gerl.; "Tullus Hostilius in Velia, ubi posuit Deum Penatum sedes factas est," Solin. i. 22.) Now Bunsen (Ib. p. 85), and after him Becker (de Mori, p. 43, Handb. p. 249), hold that the Aedii Deum Penatium here alluded to was that mentioned by Dionysius Halicarnassensis (i. 68) as standing in the short cut which led from the forum to the Caturae, in the district called Trastevere. This latter view is the meaning of this name; but we think with Becker that the Velia, or rather "Sub Velia," is meant, as Guicciardini has translated the word: and Casaubon (ad Mom. Angyr.) reads Obaeeae. But, whatever opinion may be entertained on that point, the other part of the description of Dionysius, namely, that the temple stood in the short cut between the forum and the Carinae, sufficiently indicates the locality; and we are of opinion, with Becker, that Bunsen arrived at a very probable conclusion in identifying this temple with the present circular vestibule of the church of SS. Cosma e Damiano. Yet, if we assume with these writers that this temple was not, contrary to the Penates on the Velia, and consequently the spot on which the house of Publicola stood, then we must confess that we see considerable force in the objection of Canina, that such a situation does not correspond with the descriptions given by Cicero, Livy, and other writers. All these descriptions convey the idea that Publicola built a somewhat considerable, though not very great, elevation. Thus Dionysius characterises the spot as lacs novere exspectati, namely, the affected exspectati, and peremptorium (v. 19). And Cicero says of the house; "Quod in excolentium loco conspectus edificari." (Reg. ii. 31.). A still more decisive passage is that of Livy; "Aedificavit in assa Velia" (ii. 7.). For how can that be called the Sub Velia, which was evidently at the bottom, and, according to Becker's own showing, in a district called Sub Velia? His attempts to evade these difficulties are feeble and unsatisfactory. (de Marte, p. 45). Yet they are not incapable of solution, without abandoning Niebuhr's theory respecting the Velia, which he held to be the same as the Velia within the forum. The temple of the Penates on the Velia, namely, that identified by Bunsen with SS. Cosma e Damiano, and another "in Summa Velia," as Livy says; which latter occupied the site of the residence of Tullus Hostilli, and of the subsequent one of Valerius Publicola. Thus Solinus: "Tullus Hostilli in Velia habitavit in Palatini, SUB VELIA habitationes factas est" (i. 22). We cannot determine the length of this passage; but it was most probably after the time of Publicola, and perhaps a great deal later. But the other temple was certainly older, as it is mentioned in the sacred books of the Arviges (ap. Varro, LL. v. § 54; "In Velia apud sedem Deum Penatum"); and thus it is plain that there must have been two temples. The one near Tullus Hostilli Velia is the Sacellum Larum mentioned by Tuczsz, in describing the pomerium of Romulus (Aew. xii. 24); and this is another proof that there were two temples; for it is impossible to imagine that the pomerium could have extended so far to the N. as the church of SS. Cosma e Damiano. The situation of this sacellum would agree with all the circumstances of the passages before cited. For there is still a very considerable rise from the forum to the arch of Titus, near to which the sacellum must have stood, which rise was of course much more marked when the forum was in its original state, or some 20 feet below its present level. Indeed the northern angle of the Palatine, which Canina supposed to have been the Velia, does not present any great difference of height: and thus the objections which he justly urges against the sacellae near the temple of Faustina do not apply to one on the site that we have indicated. Besides it appears to us an inseparable objection to Canina's view that he admits the forum near the temple of Faustina to have been called Sub Velia, though it is separated by a considerable space and by the intervening height, from the N. angle of the Palatine. The account of Asconius (ad Cic. Frs. 22) of a house of P. Valerius "Sub Velia, ubi nunc sedes Victoriae est," is too confused and imperfect to draw any satisfactory conclusion from it. By all other authorities the
Aelia Victorinae is said to be not at the foot of the Velia, but on the summit of the Palatine.

But there is another argument brought forward by Canina against the Trojan hypothesis, for it lies, the Velia. He observes that the area on which the temple of Venus and Rome stands is divided from the Palatine by the Sacra Via, and hence could not have belonged to the Velia; since the Sacra Via, and all the places on the opposite (northern) side of it, were comprehended in the 1st Region of Servius, or the Suburans, whilst the Palatine, and indeed all including the 4th Region (Judicia. Topogr. p. 469, cf. Foro Rom. p. 61). Now if this were so, it would certainly be a fatal objection to Niebuhr’s view; but we do not think that any such matter can be inferred from Varro’s words. In describing the 1st Region, in which a place called Cencelatiwm was included, he says, “Cercule, and a Carinaium junctum dicta Carina, postea Cercle, quod hoc oritur caput Sacrae Vmæ ab Sternia satellit;” &c. (J. L. v. § 47.) The passage is obscure, but we do not see how it can be inferred from it that the Sacra Via formed the boundary between the 1st and 4th Servian Regions. Varro seems rather to be explaining the origin of the name Cercule, and the foundation of the further developed and confirmed by Canina, (Judicia. Topogr. p. 131, seq.) As Becker has also adopted the same conclusion, it will not be necessary to state the grounds which led to it, as they would occupy considerable space; and we shall therefore refer those readers who desire more information on the subject to the works just mentioned. Annexed to the temple was a library, in which the learned were accustomed to meet for the purposes of study and literary intercourse. (A. Bell. v. 21, xvi. 8.)

The temple was burnt down a little before the death of Commodus. (Dion Cass. lii. 24; Herodian, i. 14; Galen, de Corp. Med. i. 1.) It does not appear to have been restored, but the ruins still remain undiscovered. According to the compilers of the itinerary of the 6th century, the temple was the last building that could be found. And it is not at all likely that an eminence of this sort, which is sufficiently marked, and lies in the very heart of the city, should have been without a name.

Assuming the Velia, therefore, to have been that rising ground which lies between the valley of the forum on the one hand, and that of the Colosseum on the other, we shall proceed to describe its monuments. The Aedes Peneturi, before referred to as standing on the declivity of the ridge, or Sub Vilia, and described by Diodorus (i. 68), seems to have been one of the most venerable antiquities. In it were preserved the images of the household gods said to have been brought from Troy, having upon them the inscription: “Quae gens Veliens cuncta ex ipso Troiano.” There is some controversy; namely, whether it is a scribe’s error for HECANAEI, that is HECANAEI = Peneturus, or whether it should have been ALAE MACINE (Dios Mag.), &c. &c. (See Ambrosch, Studi u. Aedent. p. 231, seq.; Clausen, America u. die Penatens, ii. p. 824, n. 1116; Herzberg, de Die Rom. Praet. lib. ii. c. 18.) We shall here follow our usual rule, and give Diodorus credit for understanding what he was writing about, as there does not appear to be any grave objection to doing so; and as he immediately adds, after citing the above epigraph, that it referred to the Penates (HECANAEI synergophr Συγνοιμ, διθυσιος ουκ Πενατ), we shall assume that this was really the temple of the Trojan household gods. The Italian writers regard it as the temple of Venus.

We do not find any large buildings mentioned upon the Velia till the time of Nero, who, as we have seen, occupied it with the vastitude of his palace. A considerable part of it had perhaps been a market previously. Close to its NW. foot, immediately behind the Palatine, there just existed, Vespasian, after his triumph over Jerusalem, built his celebrated Templum Pacis, to which we have already had occasion to allude, when describing the imperial fora. (Joseph. B. J, vii. 5, § 7; Suet. Vesp. 9; Dion Cass. lxxvi. 15.) It stood in an enclosed space, much like the temple of Venus Genitrix in Caesar’s forum, or that of Venus Capitolina in the forum of Augustus; though not designed like them as a place for legal business, it was nevertheless sometimes called Forum Pacis. The temple was built with the greatest splendour, and adorned with precious works of art from Nero’s palace, as well as with the costly spoils brought from the temple of Jerusalem, which made it one of the richest and most admired buildings on the earth ever beheld. (Joseph. l, c.; Plin. xxxiv. 8. b. 84, xxxvi. 24; Herodian, i. 14.)

Hence its attraction and notoriety gave a new name to the 4th Region, in which it stood, which was previously called "Sacra Vilia," but now obtained the name of "Templum Pacis." The exact site of this temple was long a subject of dispute, and the older topographers maintain that the remains of the three vast arches a little to the E. of the spot just described, and now universally allowed to belong to the basilica of Constantine, were remnants of it. Piranesi raised some doubts on the point, but Nibby was the first who assigned to these monuments their true position (Foro Rom. p. 169, seq.) and his views have been warmly defended and confirmed by Canina. (Judicia. Topogr. p. 131, seq.) As Becker has also adopted the same conclusion, it will not be necessary to state the grounds which led to it, as they would occupy considerable space; and we shall therefore refer those readers who desire more information on the subject to the works just mentioned. Annexed to the temple was a library, in which the learned were accustomed to meet for the purposes of study and literary intercourse. (A. Bell. v. 21, xvi. 8.)

The temple was burnt down a little before the death of Commodus. (Dion Cass. lii. 24; Herodian, i. 14; Galen, de Corp. Med. i. 1.) It does not appear to have been restored, but the ruins still remain undiscovered. According to the compilers of the itinerary of the 6th century, the temple was the last building that could be found. And it is not at all likely that an eminence of this sort, which is sufficiently marked, and lies in the very heart of the city, should have been without a name.

Assuming the Velia, therefore, to have been that rising ground which lies between the valley of the forum on the one hand, and that of the Colosseum on the other, we shall proceed to describe its monuments. The Aedes Peneturi, before referred to as standing on the declivity of the ridge, or Sub Vilia, and described by Diodorus (i. 68), seems to have been one of the most venerable antiquities. In it were preserved the images of the household gods said to have been brought from Troy, having upon them the inscription: “Quae gens Veliens cuncta ex ipso Troiano.” There is some controversy; namely, whether it is a scribe’s error for HECANAEI, that is HECANAEI = Peneturus, or whether it should have been ALAE MACINE (Dios Mag.), &c. &c. (See Ambrosch, Studi u. Aedent. p. 231, seq.; Clausen, America u. die Penatens, ii. p. 824, n. 1116; Herzberg, de Die Rom. Praet. lib. ii. c. 18.) We shall here follow our usual rule, and give Diodorus credit for understanding what he was writing about, as there does not appear to be any grave objection to doing so; and as he immediately adds, after citing the above epigraph, that it referred to the Penates (HECANAEI synergophr Συγνοιμ, διθυσιος ουκ Πενατ), we shall assume that this was really the temple of the Trojan household gods. The Italian writers regard it as the temple of Venus.

We do not find any large buildings mentioned upon the Velia till the time of Nero, who, as we have seen, occupied it with the vastitude of his palace. A considerable part of it had perhaps been a market previously. Close to its NW. foot, immediately behind the Palatine, there just existed, Vespasian, after his triumph over Jerusalem, built his celebrated Templum Pacis, to which we have already had occasion to allude, when describing the imperial fora. (Joseph. B. J, vii. 5, § 7; Suet. Vesp. 9; Dion Cass. lxxvi. 15.) It stood in an enclosed space, much like the temple of Venus Genitrix in Caesar’s forum, or that of Venus Capitolina in the forum of Augustus; though not designed like them as a place for legal business, it was nevertheless sometimes called Forum Pacis. The temple was built with the greatest splendour, and adorned with precious works of art from Nero’s palace, as well as with the costly spoils brought from the temple of Jerusalem, which made it one of the richest and most admired buildings on the earth ever beheld. (Joseph. l, c.; Plin. xxxiv. 8. b. 84, xxxvi. 24; Herodian, i. 14.)

Hence its attraction and notoriety gave a new name to the 4th Region, in which it stood, which was previously called "Sacra Vilia," but now obtained the name of "Templum Pacis." The exact site of this temple was long a subject of dispute, and the older topographers maintain that the remains of the three vast arches a little to the E. of the spot just described, and now universally allowed to belong to the basilica of Constantine, were remnants of it. Piranesi raised some doubts on the point, but Nibby was the first who assigned to these monuments their true position (Foro Rom. p. 169, seq.) and his views have been warmly defended and confirmed by Canina. (Judicia. Topogr. p. 131, seq.) As Becker has also adopted the same conclusion, it will not be necessary to state the grounds which led to it, as they would occupy considerable space; and we shall therefore refer those readers who desire more information on the subject to the works just mentioned. Annexed to the temple was a library, in which the learned were accustomed to meet for the purposes of study and literary intercourse. (A. Bell. v. 21, xvi. 8.)
Between the basilica of Constantine and the Colosseum, and consequently on the eastern side of the Velian height, Hadrian built the splendid Temple of Roma and VenVS, commonly called at a later period Tempulum Urbis, considerable remains of which still exist behind the convent of S. Francesca Romana. In the middle ages it was called Tempulum Concordiae et Piestatis (Mirabilia Romae in Ephemeriit. Letter. i. p. 385); the older topographers gave it various names, and Nardini was the first to designate it correctly. The remains exhibit the plan of a double temple, or one having two cells, the semicircular tribunes of which are joined together back to back, so that one cell faced the Capitol and the other the Colosseum; whence the description of Prudentius (Contr. Symm. i. 214):—

"Atque Urbis Venerisque pari se culmine tollunt
Temple, simul geminis adolentur tura deabus."

The cells facing the Colosseum is still visible, but the other is enclosed in the cloisters of S. Francesca. In them were colossal statues of the goddesses in a sitting posture. Hadrian is related to have planned this temple himself, and to have been so offended with the free-spoken criticisms of the great architect, Agrippa, as to wish his name to be put to death. (Dion Cass. lix. 4.) Apollodorus is related to have particularly criticised the extravagant size of the two goddesses, who he said were too large to quit their seats and walk out of the temple, had they been so minded. The temple was of the style technically called pseudo-dipterus desacystale, that is, having only one row of ten columns, but at the same distance from the cells as if there had been two rows. With its porticoes it occupied the whole space between the Sacra Via and the street which ran past the front of the Basilica Constantini. For a more detailed description of it see Fo. Romano, p. 359, seq., and Canina, E. di Roma, classe ii. A ground plan, and elevations and sections of it as restored, will be found in Burges, Antiquities and Topography of Rome, i. pp. 268, 280. Servius (ad Aen. iii. 227) speaks of snakes on the statue of Roma similar to those on that of Minerva. From some coins of Antoninus Pius the temple appears to have been restored by that emperor. Silver statues were erected in it to M. Aurelius and Faustina, as well as an altar on which it was customary for brides to offer sacrifice after their marriage. (Dion Cass. lix. 31.) It was partly burnt down in the reign of Maxentius, but restored by that emperor.

The Arch of Titus, to which from its conspicuous position we have so frequently had occasion to allude, stood close to the SW. angle of this temple, spanning the Sacra Via at the very summit of the Velian ridge. Its beautiful reliefs, which are unfortunately in a bad state of preservation, represent the Jewish triumphs of Titus. The arch could not have been completed and dedicated till after the death of that emperor, as is evident from the inscription on the side of the Colosseum, whilst a relief in the middle of the vault represents his apotheosis. It has undergone a good deal of restoration of a very indifferent kind, especially on the side which faces the forum. During the middle ages it was called Septem Lucernae and Arcus Septem Lucernarum, as we see from the Anonymus.

![Diagram of the Arch of Titus restored.](image)

We shall here mention two other monuments which, though strictly speaking they do not belong to the Palatine, yet stand in such close proximity to it that they may be conveniently treated of in this place. These are the Arch of Constantine and the Meta Sudans. The former, which stands at the NE. corner of the Palatine, and spans the road now called Via di S. Gregorio, between that hill and the Caetian, was erected, as the inscription testifies, in honour of Constantine's victory over Maxentius. It is adorned with superb reliefs relating to the history of Trajan taken from some arch or other monument of that emperor's. They contrast strangely with the tasteless and ill-executed sculptures belonging to the time of Constantine himself, which are inserted at the lower part of the arch. This monument is in a much better state of preservation than the arch of Titus, a circumstance which may perhaps be ascribed to the respect entertained for the memory of the first Christian emperor. For detailed descriptions and drawings of this arch see Niebuhr (Beschr. iii. p. 314, seq.), Canina (E. di Roma, classe xii.), Overbeke (Restituta di Romae, ii. t. 8, 9), Piranesi (Ant. Rom. i.).

The Meta Sudans, so called from its resemblance to the mutes of the circus, was a fountain erected by Domitian, remains of which are still to be seen.
between the arch of Constantine and the Colosseum.

(Hieron. p. 443, Rome; Cassiod. Chron. i. p. 198.)

It stands in the middle of a large circular basin, where downwards to the last excavations at that spot, as well as traces of the conduit which con-

veyed the water. A metope adumbras is mentioned in Seneca (Ep. 56), whence we might infer that the one now existing superseded an earlier one (v. Becher. iii. 319, seq.; Canius, Index. p. 119).

ARCH OF CONSTANTINE.

VII. THE AVVENTINE.

We have already adverted to the anomalous character of this hill, and how it was regarded with suspicion in the early times of Rome, as ill-omened. Yet there were several famous spots upon it, having traditions connected with them as old or older than those relating to the Palatine, as well as certain remains of antique temples. One of the oldest of these legendary monuments was the ALTAR OF EVANDER, which stood at the foot of the hill, near the Porta Trigemina. (Dionys. i. 32.) Not far from it, near the Salinas, was the CAVE OF Cacus, a name which a part of which the hill near the river still retains. (Solinus, i. 8; cf. Virg. Aen. viii. 190, seq.; Ovid, Fast. i. 551, seq.) Here also was the altar said to have been dedicated by Hercules, after he had found the cattle, to JUPITER INVENTOR. (Dionys. i. 39.)

A spot on the summit of the hill, called REMORIA, or Remuria, preserved the memory of the sanctuary taken by Remus. (Paul. Dial. p. 276; Dionys. i. 85, seq.) Niebuhr, however, assumes another hill beyond the circuit of the Latium, and consequently far outside the walls of Aurelian, to have been the place called Remoria, destined by Remus for the building of his city. (Hist. i. p. 223, seq. and note 618.) Other spots connected with very ancient traditions, though subsequent to the foundation of the city, were the Armilustrum and the Laurentum. The ARMILINUS, or Armilustrum, at first indicated only a festival, in which the soldiers, armed with asculi, performed certain military sports and sacrifices; but the name was subsequently applied to the place where it was celebrated. (Var. L. L. v. § 155, vi. § 32, Mull. Liv. xxvi. 37; Plut. Rom. 23.) Plutarch (I. c.) says that king Titus was buried here; but the LAURENTUM, so named from its grove of laurels, is also designated as his place of sepulture. (Var. L. L. v. § 152; Plin. xv. § 40; Dionys. iii. 43; Festus, p. 360.) There was a distinction between the Laurentum Major and Minor (Cal. Capron. Id. Aug.); and the Basis Capitoline mentions a Vicus Locietorum and another Lociet Minoris. The same document also records a Vicus Aurelii. A temple dedicated an altar to JUPITER ELATUS on the Avventine. (Var. L. L. vi. § 54; Liv. i. 20; cf. Ov. F. iii. 295, seq.) and the Calendars indicate a sacrifice to be performed there to Consus (Fast. Capron. XIII. Kal. Sep.; Fast. Ambr. Fr. Id. Dec.); but this is probably the same deity whose altar we have mentioned in the Circus Maximus.

The TEMPLE OF DIANA, built by Servius Tullius as the common sanctuary of the cities belonging to the Latin League, with money contributed by them, conferred more importance on the Avventine (Varr. L. L. v. § 43; Liv. i. 45; Dionys. iv. 26). This union has been compared with, and is said to have been suggested by, that of the Ionians for building the Artemision, or temple of Diana, at Ephesus. It has been justly observed that Rome's supremacy was tacitly acknowledged by the building of the temple on one of the Roman hills (Liv. l. c.; Val. Max. vii. 3, § 1). Dionysius informs us that he saw in this temple the original stele or pillar containing the Fossid Lamianum, as well as that on which the Lex Icilia was engraved. It appears, from Martial (vi. 64. 13), to have been situated on that side of the Capitoline Hill, and not on the Circus Maximus, whence it may have stood, as marked in Bufalini's plan, at or near the church of S. Prisco (cf. Canini, Indiscrizione, p. 532). We may further observe that Martial calls the Avventine "Collis Dianae," from this temple (vii. 73, xiii. 18. 3). We learn from Suevionius that it was rebuilt by L. Cornelius, in the reign of Augustus (Aug. 29). That emperor does not appear to have done anything to it himself, as it is not mentioned in the Monumentum Agrippae.

Another famous temple on the Avventine was that of JUNO REGINA, built by Camillus after the conquest of Veii, from which city the wooden statue of the goddess was carried off, and consecrated here: but the temple was not dedicated by Camillus till four years after his victory (Liv. v. 22, seq.; Val. Max. i. 8, § 3). Hence, probably, the reason why "cupressus simulacra," or images of cypress, were subsequently dedicated to this deity (Liv. xxvii. 37; J ohn. Obs. 108); although a bronze statue appears to have been previously erected to her. (Liv. xxii. 63.) We have already seen from the processions of the virgins in Livy (xxvii. 37) that the
roma

T. Sempronius Gracco, the father of the conqueror of Beneventum; the latter caused a picture representing his victory to be placed in the temple. (Liv. xxiv. 16.) Some difficulty has been occasioned by the manner in which the restoration of this temple by Augustus is mentioned in the Monumen
tum of Ancona, where, as we see, "Aedes Minervae et Jovis Libertatis in Aventino (seci)
(tab. iv. l. 6). In the Greek translation of this record, discovered in the temple at Ancona, and
communicated by Hamilton (Researches in Asia Min. ii. n. 102), the words "Jovis Libertatis" are
rendered Aias ἀνακατασκευασμον, whence Franz assumed that the Latin text was corrupt, and that we ought
to read "Jovis Libertatis," perhaps "Jovis Libertatis." (Zetzung, ii. p. 25.) But there is no mention of
any such temple at Rome, though Jupiter was certain
ly worshiped there under the title of Liberato
(see the section on the Circus Maximus); whilst the
existence of a temple of Libertas on the Aven
tine is attested not only by the passage just cited
from Livy, but also by Pliny the Elder. (Hist.
"Temp. Libertatis templum in Aventino fuerat conscribendum," p. 121.) Hence it seems most probable that
the Greek translation is erroneous, and that the reading
"Jovis Libertatis" is really correct, the copula being omitted, as is sometimes the case; for
example, in the instance "Honoris Virtutis," for
"Honoris et Virtutis," as would be more likely
under, we find a temple of Jupiter Libertatis indi
cated in inscriptions belonging to municipal towns
of Italy (v. Orell. Inscr. no. 1249, 1252; cf.
Becker, Handb. Nachtr., p. 721; Zumpt, in
Mon. Anz., Commentar., p. 69). Another question
concerning this Tempulum Libertatis, namely,
whether there was an Atrium Libertatis connected
with it, has caused much trouble. The Atrium Libertatis mentioned by Cicero (ad Att.
iv. 16), the situation of which we have examined in
a preceding section, could not possibly have been on
the Aventine; yet the existence of a second one
adjoining the temple of Libertas on that hill has been
sometimes assumed, chiefly from Martial (xii. 12).
The question turns in part on the view that the words "Domus alta Remi," in that epigram, nec
necessarily mean the Aventine; for our own part we
think they do not. The question, however, is some
what long; and they who would examine it more
freely may refer to Becker (Handb., p. 458, seq.;
Urichs, Rom. Topogr., p. 51, seq.; Becker, Anzkoer,
p. 25, seq.; Cancr., Indissocium, p. 536, seq.;
Ur
tichs, Anzkoer, p. 5, seq.)

As the Basis Capitolina names among the Vici
of the 18th Region, a Vicus Fidem et a Vicus Fortu
nare Dubiae, we may perhaps assume that there
were temples to those deities on or near the Aven
tine; but nothing further is known respecting them.
The Notitia mentions on the Aventine, "Therma
minutarias et Decumanus," to the formation of which
seems to have been built by Trajan, and dedicated in
the name of his friend Licinius Sura, to whom he was
partly indebted for the empire. ("Hic ob hono
rems Surae, cujus studio imperium arripuit, lavacra
15; Spart. Adv. 2, seq.) The dwelling of Sura
was on that very spot which formed the Circus
Maximus, and probably, as we have said, near
the temple of Diana:

"Quia videt proprius Magni certamina Cirri
Laudat Aventinæ vicinis Sura Dionæae." (Mart. vi. 64. 12.)
ROMA.

Whence we may perhaps conclude that the baths also were near the same spot (v. Fleider, Regiones, p. 200; Caunus, Isaeus, p. 585, seq.), where they were borne by the Oxyrhynchi, as well as by the Puteali (Balletti of Puteoli, 15 m. high according to Conti, and about one-third of a mile in circumference). Its origin is enveloped in mystery.

According to the vulgar legend it was composed of the fragments of vessels in which the subject nations brought their tribute. A more plausible opinion was that this was the quarter of the potters, whose wares rose from the pieces 15 m. high in the process of manufacture; but this notion was refuted by the discovery of a tomb, during the excavation of some caves in the interior to serve as wine-cellar. (Beauch. iii. p. 434.) The whole district round the hill is strewn to a depth of 15 or 20 feet with the same sort of rubbish; the Porta Capena, built by E. Sabina, is itself a mass of factitious soil, which is thus proved to have existed at the beginning of the fifth century; but its origin will never, perhaps, be explained.

The last object we need mention here is the Forum Boarium, or Bakers' Market, so named apparently not because they made or sold their goods there; for in the years they bought their corn. We may remark that it was just opposite this point, under the Janiculum, that the corn-mills lay. (Fleider, Regiones, p. 205.)

VIII. THE VELABRUM, FORUM BOARIOUM, AND CIRCUS MAXIMUS.

Between the Palatine, the Aventine, and the Tiber, the ground was occupied by a series of districts called the Velabrum and the Forum Boarium, whilst the valley between the two hills themselves was the site of the Circus Maximus. It will be the object of the present section to describe these districts and the monuments which they contained. They were comprehended in the 11th Region of Augustus, called "Circus Maximus," of which the Velabrum formed the boundary on the N., where it joined the 8th Region, or "Forum Romanum."

All accounts concur in representing the Velabrum as a marsh, or lake, at the time when Rome was founded, whence we may conclude that it could not have been built upon till the ground had been thoroughly drained by the construction of the Cloaca Maxima and the Circus Maximus. Thus Tibullus (ii. 5. 23):—

"At quae Velabri regio patres, ite soletem
Exiguus pulvis per vada linter aqua."

(Cf. Varr. L. L. v. 48, seq. Mill.; Prop. v. 9, 5; Or. Inst. vi. 399, &c.) Its situation between the Vicus Tuscus and the Forum Boarium, cannot be accurately determined, but seems not to have been very great. Its terminus on the S. was by the Arcus Argentariorum, close to the modern church of S. Giorgio in Velabro, which marked the entrance into the Forum Boarium. This site of the Velabrum is also proved by testimonies which connect it with the Nova Via, the Porta Romana, and the sepulchre of Asca Larentia. (Varr. L. L. vi. § 84, Mill.; cf. Cic. ad Brut. 15. 106; Macrobius, 1. 17.) It is uncertain whether the Sacellum Volturiae, which also lay on the Nova Via, should be assigned to the Velabrum or to the Palatine. (Varr. L. L. v. § 164; Macrobius, 1.)
There was also a Velabrum Minus, which it is natural to suppose was not far distant from the Velabrum Majus. Varro says that there was in the Velabrum Minus a lake or pond formed from a hot spring called Lautolan, near the temple of Janus Geminus (ib. § 156); and Paulus Diaconus (p. 119) describes the Latulase as being "locus extra urbem." Hence it would seem that the Janus Geminus alluded to by Varro, must have been the temple near the Porta Carmentalis; but both the spring and the lake had vanished in the time of Varro, and were no longer anything but matters of antiquity.

The Arcus Argentarius already mentioned as standing near the church of S. Giorgio in Velabro appears, from the inscription, to have been erected by the Negotiantes and Argentarii of the Forum Boarium in honour of Septimius Severus and his family. (Gruter, cselv. 2; Ovill. 913.) Properly speaking, it is no arch, the lintel being horizontal instead of vaulted. It is covered with ill-executed sculptures. Close to it stands the large square building called Janus Quadrifrons, vaulted in the interior, and having a large archway in each front. The building had an upper story, which is said to have been used for mercantile purposes. The architecture belongs to the time of Vespasian and Titus. It was asserted to have been constructed with fragments of other buildings, as shown by the inverted bas-reliefs on some of the pieces. (Reschr. iii. p. 359.) The Notitia closes the description of Regio xi. by mentioning an "Arcus Constantini," which, of course, refers to the triumphal arch on the other side of the Palace of the Prefects, and is assigned to a date before the time of Constantine. (Reschr. Anh. iii. p. 663.)

Does not seem improbable, that this Janus was meant; and from its style of architecture it might very well belong to the time of Constantine.

The Forum Boarium, one of the largest and most celebrated places in Rome, appears to have extended from the Velabrum as far as the ascent to the Aventine, and to have included in breadth the whole space between the Palatine and Circus Maximus on the E. and the Tiber on the W. Thus it must not be conceived as a regular forum or market surrounded with walls or porticoes, but as a large irregular space determined either by natural boundaries or by those of other districts. Its connection with the river on the one side, and the circus on the other is marked by the following lines of Ovid (Fast. vi. 477):—

"Ponibus et Magno juncta est celerrimae Circo Areo quas posito de bove monebat habet."

Its name has been variously derived. The referring of it to the cattle of Hercules is a mere poetical legend (Prop. v. 9, 17, seq.); and the derivation of it from the statue of a bronze bull captured at Aegina and erected in this place, though apparently more plausible, is equally destitute of foundation, since the name is incontestably much older than the Macedonian War. (Plin. xxiv. 5; Ov. l.c.; Tac. Ann. xii. 24.) It seems, therefore, most probable, as Varro says (I.L. v. § 146; cf. Paul. Disc. p. 80), that it derived its name from the use to which it was put, namely, from being the ancient cattle-market; and it would appear from the inscription on the Arcus Argentarius before alluded to that this traffic still subsisted in the third century. The Forum Boarium was rich in temples and monuments of the ancient times. The most famous were those of Hercules, Fortuna, and Mater Matuta; but unfortunately the positions of them are not very precisely indicated. There seems to have been more than one Temple of Hercules in this district, since the notices which we meet with on the subject cannot possibly all refer to the same temple. The most ancient and important one must have been that connected with the Magna Area Herculis, which tradition represented as having been founded by Evander. ("Et magna ara famunque, quae praeint Herculi Areas Evander sacraverat," Tac. Ann. xvi. 41; cf. Jb. xlii. 24; Solin. i. 10.) This appears to have been the Hercules styled triumphans, whose statue, during the celebration of triumphs, was clothed in the costume of a triumphant general; since a passage in Pliny connects it with that consecrated by Evander. ("Hercules ab Evandro sacraus ut prodit, in Foro Boario, qui triumphatus vocatque atque per triumphos vestitur habitu triumphali," xxxiv. 16.) It was probably this temple of Hercules into which it was said that neither dogs nor flies could find admittance (Jb. x. 41; Solin. i. 10), and which was adorned with a painting by Pacuvius the poet (Plin. xxxiv. 7).

A round Temple of Hercules, also in the Forum Boarium, seems to have been distinct from this, since Livy (xii. 28) applies apparently the epithet "rotundus" to it, in order to distinguish it from the other. ("Insignem suppilationem facit certamen in sacello Pudicitiae Patriciae, quae in Foro Boario est ad aedem rotundam Herculis, inter matronas ortum.") Canina (Indicaciones, p. 338) assumes from this passage that the temple to which it refers must have been in existence at the time of the contest alluded to, namely, B.C. 197, but this, though a probable inference, is by no means an absolutely necessary one, since Livy may be merely indicating the locality as it existed in his own time. The former of these temples, or that of Hercules Triumphalis, seems to be the one mentioned by Macrobius (Sat. iii. 6) under the name of Hercules Victor; and it appears from the same passage that there was another with the same appellation, though probably of less importance, at the Porta Trigemina. Besides these we hear of a "Hercules Invictus" by the Circus Maximus (Fast. Amicern; Prid. Id. Aug.), and of another at the same place "in sede Pompeii Magni" (Plin. xxxiv. 6. 57), which seems to refer to some Asseus Herculis, though restored by Pompey, though we hear of nothing more of any such temple. Hence there would appear to have been three or four temples of Hercules in the Forum Boarium. The conjecture of Becker seems not improbable that the remains of a round temple now existing at the church of S. Maria del Sole, commonly supposed to have belonged to a
temple of Vesta, may have been that of Hercules, and the little temple near it, was the church of S. Maria Eugenia, that of Pudicissia Patricia. (Handb. p. 478, seq.)

This question is, however, in some degree connected with another respecting the sites of the Temples of Fortuna and Mater Matuta. Canina identifies the remains of the round temple at the circus Flaminia with that of Mater Matuta; whilst the little neighbouring temple, now the church of S. Maria Eugenia, he holds to have been that of Fortuna Virilia. His chief reason for maintaining the latter opinion is the following passage of Dionysius, which points, he thinks, to a temple of Fortuna Virilia, built by Servius Tullius close to the banks of the Tiber, in a position which corresponds to that of S. Maria Eugenia: καὶ ὡς δὲ καταστεμαθέως Τύχης, τῷ μὲν ἐκ γέφυρα την καλυμμένη Βοαρία, τῷ δὲ ἐντερυ νωτι ἔχειν τῷ Τίβερι, ἵνα Ἀδρεία προσγεί- ρεναι, δι καὶ νῦν ἐν τῷ Ρωμιω κατείστη. (Ant. Rom. iv. 27.) It should be premised that Canina does not hold the two temples in question to have been identical, but only just at its borders. (Corrisonspovanoa davi acino al Foro Boario, Handb. p. 338.) The temple of Fortuna Virilia here mentioned by Dionysius was, he contends, a distinct thing from the temple of Fortuna, which he allows lay outside of the city on the other bank of the Tiber (p. 508). Indeed the distinction has been often shown from the circumstance that their festivals were celebrated in different months: that of Fortuna Virilia being in April, that of Fortuna in June. (Comp. Opp. Fast. iv. 145, seq., with the Fasti Praenestini in April; "Frequent er mulieres supplicant . . . Fortunae Virillae humillaiores." Also comp. Opp. Fast. vi. 773, seq., with the Fasti milvianii, VIII. Kal. Iul., "Forti Fortuna transibat, ad Milliar. Prim. et Sextum." (VIII. Kal. Jul.)

Now these passages very clearly show the distinction between Fortuna Virilia and Fortuna; and it may be shown just as clearly that Dionysius confounded them, as Plutarch has also done. (De Fort. Rom. 5.) Servius Tullius, as Dionysius says, built a temple of Fortuna in the Forum Boarium; but it cannot be considered by any particular epithet. Dionysius gives her none in the passage cited; nor does any appear in passages of other authors in which her temple is mentioned. Thus Livy: "De manusibus duos foro in foro Boario ante Fortunae sedem et Matris Matutae, unum in Maximo Circo fecit" (xxxvii. 27). So also in the passages in which he describes the fire in that district (xxxv. 47, xxy. 7). One of the two temples of Fortuna built by Servius Tullius was that on the Forum Boarium, as shown in the preceding passages from Livy and from Dionysius: that the other was a temple of Fortuna and not of Fortuna Virilia appears from Varro: "Dies Fortis Mextrum, ab Servio Tullio Bene, quod eum forum Fortis Fortunae secondum Tiberius extra Urbem Roman de dedicavit Junio mens" (L. L. vi. § 17, Müll.) Therefore it is plain that both Dionysius and Plutarch have made a mistake which foreigners were likely enough to fall into. Temples being generally named in the genitive case, they have supposed that the adjective must be equivalent to adaequi or virilia (v. Busen, Besch. iii. Nachtr. p. 665; Becker, Handb. p. 478, note 998), and thus confounded two different temples. But as this temple of Fortuna was "extra Urbem," it could not have been the same as that with which Canina identifies it, which, as Livy expressly says, was "intra portam Carmentalem" (xxxv. 7). The site of the temple of Fortuna Virilia cannot be determined, and Bunsen (l. c.) denies that there was any such temple: but it seems probable from the passage of Ovid referred to above that there was one, or at all events an altar; and Plutarch (Quaest. Rom. 74) mentions a Vicus "AdEpiscopum," and on other hands, there seem to have been no fewer than three temples of Fortuna on the right bank of the Tiber. First, that built by Servius Tullius, described by Varro as "extra Urbem secundum Tiberium." Second, another built close to that of Servius by the consul Sp. Carvilius Maximus (a. c. 298); De reliquo sede serva Fortunae, de manibus facundis domino, prop sedem ejus Dea ab rege Serv. Tullio dedicatam." (Liv. x. 46.) Third, another dedicated under Tiberius (a. D. 16) near the Tiber in the gardens of Caesar, and, of course, on the right bank of the river: "Aedis Fortis Fortunae, Tiberim juxta, in horreis qua Caesar dictator populos accipere locaverat." (Tac. Ann. v. 5.) That these and the Horti Cineraria were on the right bank of the Tiber we know from Horace (S. I. 9. 18) and Plutarch. (Brut. 20.) The temple built by Servius must also have been on the right bank, as it seems to be referred to in the following passage of Donatus: "Fortis Fortuna est cujus die festum coloni qui sine arte aliqua vivunt: hujus sedes trans Tiberin est" (Reg. Tert. Phorm. v. 6.1). The same thing may be inferred from the Fasti Amilurci: "Forti Fortunae Transibit, ad Milliar. Prim. et Sextum." (VIII. Kal. Jul.) The temple in the gardens of Caesar seems here to be alluded to as at the distance of one mile from the city, whilst that of Servius, and the neighbouring one erected by Carvilius Maximus, appear to have been at a distance of seven miles. But this need not excite our suspicion. There are other instances of temples lying at a considerable distance from Rome, as that of Fortuna Maebria at the fourth milestone on the Via Latina. (Fest. p. 542; cf. Val. Max. i. 8. § 4, v. 2. § 1; Liv. ii. 40, 46.) It would appear, too, to have been some way off the river, as it was customary to repair thither in boats, and to employ the time of the voyage in drinking (Fast. vi. 777): —

"Para pedis, para stiam colori decorrurta cynba. Neo probat postes ito ridere domum. Ferte coronatas juvenum convivia intres. Multa ex per medias vina bibant aquas."

We have entered at more length into this subject than its importance may perhaps seem to demand, because the elegant remains of the temple now forming the Armenian church of S. Maria Eugenia cannot fail to attract the notice of every admirer of classical antiquity that visits Rome. We trust we have shown that it could not possibly have been the temple of Fortuna Virilia, as assumed by Canina and others. The assumption that the neighbouring round temple was that of Mater Matuta may perhaps be considered as disposed of at the same time. The only grounds for that assumption seem to be its vicinity to the supposed temple of Fortuna Virilia. Like the Praenestine church, it is a structure consisting of two tiers of arches erected in the Forum Boarium before the two temples appearing to indicate that they lay close together. With regard to the probability of this little church
having been the temple of Pudicitia Patriciae, it might be objected that there was in fact no such temple, and that we are to assume only a statue with an altar (Sachse, Gesk. i. S. Rom. i. p. 365). Yet, as Becker remarks (Handb. p. 480, note 100), Livy himself (x. 23) not only calls it a sacellum, a name often applied to small temples, but even in the same chapter designates it as a templum ("Quum se Virginia, et patriciam et pudiciam in Patriciae Pudicitiae templum ingressam vero gloriararet"); and Propertius (ii. 6. 25) also uses the same appellation with regard to it. On the other hand some have fixed on S. Morio de Convenatione as the site of this temple, but with little appearance of probability. Becker seeks in the church just named the temple of Fortuna built by Servius Tullius in the Forum Boarium. The church appears to have been erected on the remains of a considerable temple, of which eight columns are still perceptible, built into the walls. This opinion may be as probable as any other on the subject; but as on the one hand, from our utter ignorance of the site of the temple, we are unable to refute it, so on the other we must confess that Becker’s long and laboured argument on the subject is far from being convincing (Handb. p. 481, seq.). The site of the Temple of Mater Matuta is equally uncertain. All that we know about it is that it was founded by Servius Tullius, and restored by Camillus after the conquest of Veii (Liv. v. 17), and that it lay somewhere on the Forum Boarium (Ovid, Fast. vi. 471). If we were inclined to conjecture, we should place both it and the temple of Fortuna near the northern boundary of that forum; as Livy’s description of the ravages occasioned by the fire in that quarter seems to indicate that they lay at no great distance within the Porta Carmentalis (xxiv. 47, xxv. 7). The later history of both these temples is unknown. In the Forum Boarium, near the mouth of the Cloaca Maxima, was also the place called Dolilola, mentioned in the former part of this article as regarded with religious awe on account of some sacred relics having been buried there, either during the attack of the Gauls, or at a still more ancient period. (Liv. v. 40; Varr. L.L. v. § 157, Müll.) When the Tiber is low, the mouth of the Cloaca Maxima may be seen from the newly erected iron bridge connecting the Ponte Rotto with the left bank. The place is called Ad Bursa Gallaca where it is said that the bodies of the Gauls were burnt who died during or after the siege of the Capitoline, has also been assumed to have been in this neighbourhood because it is mentioned by Varro (L. B.) between the Asquemineum and the Dolilia (cf. Liv. v. 48, xxii. 14). But such an assumption is altogether arbitrary, as Varro follows no topographical order in naming places. Lastly, we shall mention two objects named in the Notitia, which seem to have stood on the Forum Boarium. These are the Apollo Cosmepex and the Hercules Olivarius, apparently two of those statues which Augustus dedicated in the different Vicus. Becker (Handb. p. 493) places them in the Velabrum, and thinks that the epistle of Olivarius was derived from the oil-market, which was established in the Velabrum (Plaut. Capt. iii. 1. 29), but it seems more probable that it denoted the crown of olive worn by Hercules as Victor (Prueller, Regionem, p. 194). The Forum Boarium was especially devoted to the worship of Hercules, whence it seems probable that his statue stood there; besides both that and the Apollo are mentioned in the Notitia in coming from the Porta Trigemina, before the Velabrum. Before we quit the Forum Boarium we must advert to a barbarous custom of which it appears to have been the scene even to a late period of Roman history. Livy relates that after the battle of Cannae a Gallic man and woman and a Greek man and woman were, in accordance with the commands of the sibyline books, buried alive in a stone sepulchre constructed in the middle of the Forum Boarium, and that this was not the first time that this barbarous and un-Roman custom had been practised (xxiv. 57). Dion Cassius adverts to the same instance in the time of Fabius Maximus Verrucosus (Fr. Vales. 12), and Pliny mentions another which had occurred even in his own time ("Bosrio vero in foro Graecum Graccus, ante illorum gentium, cum quibus tum res esse, etiam nostra resi vidit." xxviii. 3; cf. Plut. Q. R. 88). It may also be remarked that the first exhibition
of gladiatorial combats at Rome took place on the Forum Boarium, at the funeral of the father of Marcus Octavius Brutus, n. c. 294. (Val. Max. ii. 4. § 7.)

The valley between the Palatine and Aventine, occupied by the Circus Maximus was, as we have had occasion to mention in the former part of this article, in earlier times called Vallis Murcia, from an altar of the Dea Murcia, or Venus, which stood there. This altar was one of the most famous ruins which marks the site of the imperial palace on the S. side of the Palatine hill may still trace the extent and configuration of the circus, the area of which is occupied by kitchen gardens, whilst a gas manufactory stands on the site of the carceres. The description of the circus itself will be reserved for a separate narrative. The objects of this description, and we shall here only treat of the different monuments contained in it as a Region or district. The whole length of the circus was 31 stadia, or nearly half a mile, the circular and being near the Septizonium, and the carceres or starting place nearly under the church of S. Anastasio, where the Circus joined the Forum Boarium. Its proximity to the latter is shown by the circumstance that the Maxima Ara Herculis before alluded to is sometimes mentioned as being at the entrance of the Circus Maximus, and sometimes as on the Forum Boarium ("Ingentem cursum pos juxta Circum Maximam," Serv. ad Aen. viii. 271; cf. Dionys. i. 40; Ovid, Fast. i. 581; Liv. l. 7, &c.) The large templum of Herculaneum must undoubtedly have been close to this altar, but on the Forum Boarium. The Vallis Murcia contained several old and famous temples and altars, some of which were included in the circus itself. Such was the case with the altar or SACELLUM OF MURCIA herself ("Intauum Circus ad Muricum vocatur — l habi sacellum ei," Varro, L. L. viii. § 154, Mutil.); but its exact site cannot be determined. Censorius had also a subterranean altar in the circus, which was opened during the games and closed at other times. It is described by Tertullian as being "ad primas metas," and therefore probably at a distance of about one-third of the whole length of the circuses, and near the middle of the S. side of the Palatine hill. (Tert. de Spect. 5; Varro, L. L. vi. § 20, Mutil.; Tac. Ann. xii. 24; Plut. Rom. 14.) But the chief temple on the circus was the Temple of the Sun, to which deity it was principally consecrated ("Circus Soli principaliter consecratur: culpae sedes medii spatio et effigies de fastigio aedibus erat," Tert. Spect. 8). Tactitus mentions the same ancient temple as being "apud Circus" (Ann. xv. 74); and from a comparison of these passages we may conclude that it stood in the middle of one of its sides, and probably under the Aventine. The Notitia and Curiosum mention it ambiguously in conjunction with a Temple of Luna, so that it might possibly be inferred that both deities had a common temple ("Templum Solis et Lunae," Reg. xi.). It seems, however, more probable that there were two distinct temples, as we frequently find them mentioned separately in authors, but never in conjunction. It is perhaps the same temple of Luna which we have already mentioned on the Aventine, in which case it might have been built after the declivity of that mountain and behind the temple of Sol. Luna, like Sol, was a Cicernian deity, both performing their appointed circuits in quadrigae. (Joh. Lydus, de Mens. i. 12; Tert. Spect. 9; Cass. Var. iii. 51.) The situation of the Templum of Marcurius, mentioned next to the two preceding, which may be determined with more accuracy, if we may believe an account recorded by Nardini (Rom. Ant. lib. vii. c. 3) on the authority of a certain Francesco Passeri, respecting the discovery of the remains of a small temple of that deity in a vineyard between the Circus Maximus and the Aventine. The remains were those of a little temple, built over the carceres, which marks the site of the imperial palace on the S. side of the Palatine hill. The temple is represented as a small temple, which appears to have rested on its site. The site agrees with that described by Ovid (Fast. v. 669):—

"Templi tibi posueris patres spectantia Circum
Idibus: ex illo est hsec tibis festa dies."

A comparison of this passage with Livy, "saeis Mercurii dedicata est Idibus Maias" (ii. 21), shows that the same ancient sanctuary is alluded to, the dedication of which caused a dispute between the consuls, n. c. 493 (ib. c. 27). We next find mention of another temple and altar, and another of JOVIVS ABORATORIUS, for which we should probably read "Liberatoris." The Magna Mater was one of the Cicernian divinities. Her image was exhibited on the spina (Tert. Spect. 8), and it would appear that she had also a temple in the vicinity. Of a temple of Jupiter Liberator we know nothing further, though Jove was certainly worshipped at Rome under that name (Tac. Ann. iv. 64, xvi. 35), and games celebrated in his honour is the month of October. (Calend. Vinc. ab. Preller, Reg. p. 192.)

Next to these an AXDES DITVS PATRIS is named in the Notitia, but does not appear in the Curiosum. Some writers would identify Dispater with SCAEDNAVUM, quasi Summus Maniwm (v. Gruzer, MMV. ; Mart. Capell. ii. 161); but there was a great difference of opinion respecting this old Sabine god, and even the Romans themselves could not tell precisely who he was. Thus Ovid (Fast. vi. 725):—

"Reddita, quisque est, Summano templum faruntur
Tune cum Romanis, Pyrrhe, timendus eras."

The temple to him here alluded to was, however, certainly near the Circus Maximus, since Pliny mentions some annual sacrifices of doves as made "inter aedem JVuntatit sit Summanum" (xii. 4); and that the Temple of Jovitatis was at the Circus Maximus we learn from Livy: "Jvuntatit ad sens in Circro Maximo. G. Licinius Lucullus triumvir dedicavit" (xvii. 36; cf. Calend. Aser. XII. Kal. Jul.; "Summano ad Circ. Max.""). The temple of Summanus, therefore, must have been dedicated during the war with Pyrrhus, and that of Jovitatis in B. C. 192.

Close to the W. extremity of the circus, and towering as it were over the carceres, from its being built apparently on the slope of the Aventine (\(\phi v\) \(\alpha s z\) \(n\) \(\delta\) \(\mu\) \(\nu\) \(\epsilon\) \(n\) \(\nu\) \(\epsilon\) \(\beta\) \(\epsilon\) \(\rho\) \(\epsilon\) \(\iota\) \(\theta\) \(e\) \(\iota\) \(h\) \(i\) \(e\) \(s\) \(a\) \(s\)), stood a famous TAXELS OF CIRCUS, dedicated also to LIBER AND LIBERA. Thus Tactitus, relating the dedication of the temple to Tiberius, it having been restored by Augustus, says: "Liber, Liberasque et Caesar, summanum in circi decumum et in infirmos dis- tator venerat (dedicavit)" (Ann. ii. 49). It is mentioned by other writers as "ad Circum Maximum"; whence Canina's identification of it with the church of S. Maria in Cosmedin seems improbable (Indica."

Digitized by Google
p. 498), since that building is at some little distance from the circus, and certainly does not stand on higher ground. The temple of Ceres contained some precious works of art (Plin. xxxv. 10. a. 36. § 99), especially a picture of Dionysus by Aristides, which Strabo mentions that he saw (viii. p. 381), but which was afterwards destroyed in a fire which consumed the temple.

We also find a TEMPLE OF VENUS mentioned at the circus, founded by Q. Fabius Gureges, B. C. 295, very appropriately out of the money raised by fines levied on certain matrons for incontinence. (Liv. 25. 8.) It seems to have been at some distance from the Forum Boarium, since the census M. Livius and C. Claudius contracted for the paying of the road between the two places. (Id. 29. 37.) Yet we have no means of defining its site more accurately, nor can we even tell whether it may not have been connected with the altar of Venus Murcia before mentioned. But the temple of FLORETA, founded by the families L. and M. Publicians, the same who constructed the Temple of Vesta, was also assigned to the Aventine which bore their name, must have lain close to that ascent, and consequently also to the temple of Ceres just described; since Tacitus, after relating the re-dedication of the latter under Tiberius, adds: "codemque in loco sedem Flora (dedicavit), ab Lucio et Marco Publicii sedilibus constitutam." (Ann. ii. 49.) The Publicius applied part of the same money—raised by fines—with which he had constructed the Flora, in instituting floral games in honour of the divinity which they had here consecrated, as we learn from the account which Ovid puts into the mouth of the goddess herself (Pers. v. 268).

There are all the temples that we find mentioned in this quarter; but before we leave it there are one or two points which deserve to be noticed. The CAVE OF CACTUS was reputed to have been near the Clivus Publicius. Solinus mentions it as being at the Saline, near the Porta Trigemina (i. 8); a situation which agrees with the description in Virgil of the meeting of Asses and Evander at the entrance of Herculæum, from which spot Evander points out the cave on the Aventine (Ann. viii. 190, seq.)—

"Jam primum saxus suspendens hanc adspice
ruinem," &c.

Of the DUCEDUM PORTAE mentioned in the NOTITIA in this Region we have already spoken [Part II. p. 757].

IX. THE CAELIAN HILL.

The Caelian presents but few remains of ancient buildings, and as the notices of it in the classics are likewise scanty its topography is consequently involved in considerable obscurity. According to Livy (i. 30) Tullus Hostilius fixed his residence upon it; but other accounts represent him as residing on the Velia. (Cio. Rep. ii. 31.) We find a SACELLUM DIANAE mentioned on the Caelius—an undefined part of the eastern ridge (de Har. Resp. 15); another of the DEA CARNA "in Caelio monte" (Macrob. S. i. 12); and a little TEMPLE OF MINERVA CAPTA situated on the declivity of the hill:

"Caelis ex alto qua Mons descendit in sequum,
Hic ubi non plana est, sed propia plana via est,
Parva host videoas Captae delubra Minervae."

(Or. Pers. iii. 267, seq.)

Hence it was probably the same ancient sanctuary called "Minervum" in the sacred books of the Argives, which lay on the northern declivity of the Caelian towards the Tabernaola ("Circa Minervium qua e Caelio monte iter in Tabernaola est," Varro. L. L. v. 47), and probably near the modern street Via della Nauologia.

The most considerable building known on the Caelian in later times was the TEMPLE OF DYEUS CLAUDIUS, begun by Agrippina, destroyed by Nero, and restored by Vespasian. (Suet. Vesp. 9; Aur. Vict. Cae. 9.) The determination of its site depends on the question how far Nero conducted the Aqua Claudia along the Caelian, since we learn from Frontinus that the arches of that aqueduct terminated at the temple in question. (Front. Ag. 20, 76.) These Arches Neronianae (also called Caeserian., Gruter, Insac. clxxxv. 3) extend along the ridge of the narrow hill, supposed to be the Caelius, from the Porta Maggiore to the Santa Scala opposite the Lateran, where they are interrupted by the palace and basilicas built on the Aventine, and that remains of a huge substruction at this spot belonged to the temple of Claudius. (Indic. p. 73, seq.) Canina is further of opinion that the Aqua Claudia was distributed a little beyond this spot, and that one of the uses to which it was applied by Nero was to replenish his lake, which occupied the site of the Flavian amphitheatre. Other, however, are of opinion that the aqueduct did not proceed beyond the church of S. Stefano Rotondo, and therefore that the temple of Claudius stood near that spot, or that the church may even have been built on its foundations. But there are no sufficient grounds for arriving at any satisfactory conclusion on these points, and altogether the view of Canina is perhaps the more probable.

The ARCH OF DOLABELLA, just alluded to, appears from the inscription on it to have been erected in the consulship of Dolabella and Silanus, A. D. 10. Its destination has been the subject of various conjectures. Some have imagined it to be a restoration of the Porta Maggiore; but this does not generally be the case, since, if the Servian walls had run in this direction, half of the Caelian hill would have been shut out of the city. On the other hand, its appearance excludes the notion of a triumphal arch; and it could not originally have formed part of an aqueduct, since it was erected previously to the construction of the Aqua Claudia. It seems most probable therefore that it is designed as an entrance to some public place; but there are appearances that Nero subsequently conducted his aqueduct over it. (Canina, Indic. p. 77.) The road which led up to it from the Via di S. Gregorio seems in ancient times to have been called CLIVUS SACRUL. It is mentioned under that name in the Epitome of S. Gregory (vii. 143), and the Augustan Epitome calls it Clivus Tauri, which is probably a scribal error.

Next to the temple of Claudius, the NOTITIA mentions a MACELLUM MAGNUM, probably the market recorded by Dion Cassius as founded by Nero (τὸ ὁμοιὸν τῶν θηρίων, τῷ μακελλῷ δεσποτικῷ, κα-
ROMA.

M. C. A. V. C.

ROMA.

n. 18). Nardini, who is followed by Canina (Indicazioni, p. 82), is of opinion that the Basilica of St. Paul outside the Walls was part of the macellum, perhaps a slaughter-house with a dome, and surrounded with porticoes.

MACELLUM.

The CAstra Perigrina recorded in the Notitia are not mentioned by any author except Ammianus Marcellinus, who relates that Chnodmar, when conquered by Julian, was conducted to and died in this camp on the Caesian (xxvi. 12, ext.). The name, however, occurs in several inscriptions in connection with a temple of Jupiter Bocalus, as in that found in the church of S. Maria in Domnica (Gruter, xxii. 3; Orell. 1256). These inscriptions also mention a Princeps Peregrinorum, the nature of whose office we are unacquainted with; but it seems probable that he was the commander of the foreign troops stationed in this camp. Near the same church were found several little marble ships, apparently votive offerings, and one which stood a long while before it gave to the church and to the surrounding place the name of della Navicella.

An Iustum, or temple of Isis, is mentioned by Treb. Pullo (XXX. Tyrann. 25) on the Caesian, but it occurs nowhere else. It was probably one of the many temples erected to this goddess by Caracalla (Lampr. Carac. 9). The spring called the Aqua Mercurii recorded by Ovid near the Porta Capena (Fasti, v. 673) was rediscovered by M. Fes in 1836, in the vigne of the Padri Camaldolensi di S. Gregorio. On the Caesian was also the Campus Martialis, which was sometimes still held in the Church of the Colosseum, since the Anoynous Eunucleas mentions it between the Meta Sudans and the church of SS. Quattro Coronati; whence it is held to have corresponded with the modern street which bears the name of that church (Nibby, Mura di Roma, p. 175, note 140; Uricchio, Rom. Topogr. p. 101).

Becker (Handb. p. 608), to this name does not appear in any earlier writer, and connects it with some building founded by Septimius Severus, in order to strike his countrymen, the Africanas, who arrived at Rome by the Via Appia; though, as Uricchio observes, they must have gone rather out of their way "to be imposed upon." Varro mentions a Vicus Africani on the Esquilina, so named because the African hostages in the Panic War were said to have been detained there ("Exquisita vicus Africani, quod ibi obides ex Africa bello Panico dicuntur custodiis," L. L. v. § 159.). Hence it is very probable, as Canina remarks (Indicazioni, p. 91), that the head, or beginning, of this street stood at the spot indicated by Asinianus, namely, near the Colosseum, whence it ran up in the direction of the Esquilina, although Becker (Handb. p. 560) denies that the Caput Africani had any connection with the Vicus Africani. The Arbor Sacra is inexplicable.
The Ludus Matutinus et Gallicus (or Decius), the Spoliarium, Saniarus, and Armamentarium, were evidently gymnastic schools with their apparatus. Cicero the Syracusian, as we know, saw a side of the Caesarian, not far from the amphitheatre. Officers attached to these institutions are frequently mentioned in inscriptions. The Spoliarium and Armamentarium speak for themselves. The Saniarius is a word that does not occur elsewhere, and is thought by Pfeiler to denote a hospital (a sanitarium) where the wounded gladiators were received. For a further account of these institutions see Pfeiler, Regionum, pp. 120–122. Lastly, the Mīca Aurora appears from an epigram of Martial's to have been a banquetting room of Domitian's (ii. 59):

"Mīca vocor; quid sim o伦nis; cœnotar pars.
Ex me Cassareum propiciis, ece, tholum."

It is also mentioned, along with the Meta Sudans, as built by Domitian in the Chronica Regia Colossiani, in Ecard's Corpus Historicum (vol. i. p. 745.)

X. THE DISTRICT TO THE S. OF THE CAELIAN.

To the S. of the Caelian lies a somewhat hilly district, bounded on the W. by the Aventine, and comprehending the 1st and 12th Regions of Augustus, or those called Porta Capena and Piscina Publica. The latter of these is decidedly the least important district of Rome, but the former presents several objects of considerable interest. Of the lower Caerulae, Capena, or the Porta Capena, nothing remains, as it was evidently inside the city walls. The Temple of Honor and Virtus, vowed by Marcellus in his Gallic war, but not erected till after his conquest of Syria, was the first intention of Marcellus that both the deities should be under the same roof; and, indeed, the temple seems to have been a mere restoration of an ancient one dedicated to Honors by Q. Fabius Verrucosus many years before. (Cic. N. D. ii. 23.) But when Marcellus was about to dedicate it, and to introduce the statue of another deity within the sanctuary, the pontifex intercessed, and forbade him to do so, on the ground that the procurator, or excision of any prodigy occurring in a temple so constructed, would be difficult to perform, unless this one was constrained to add another temple of Virtus, and to erect two images of the deities "separatis sedibus;" but though the work was pressed on in haste, he did not live to dedicate them. (Liv. i. c.; Val. Max. i. i. § 8.) Nevertheless, we frequently find the termple mentioned in the singular number, as if it had formed only one building ("ad aedem Honoris atque Virtutis," Cic. Verr. iv. 54; cf. Ascon. ad Cic. Piso, 19; also the Notitia and Curiosa.) Hence, perhaps, the most natural conclusion is that it consisted of two cellas under the same roof, like the temple of Venus and Rome, a form which agrees with the description of Symmachus: "Majores nostrī—sedes Honori et Virtutis genitella facie junctam locuntur." (Epist. i. 21.) The temple was adorned with the spoils of Latin art brought by Marcellus from Syria; an instance noted and condemned by Livy as the first of that kind of spoliation, which he observes was subsequently inflicted upon the Roman temples themselves, and especially upon this very temple of Marcellus; for, in Livy's time, few if any of the temples remained. He most probably rendered it an object of attraction to all strangers who visited Rome (xxv. 40; cf. xxxiv. 4).

They probably disappeared during the Civil Wars, in which the Roman temples seem to have suffered both from neglect and spoliation; for in the time of the empire, when the city was restored, the temple of Mars (in Verr. iv. 54) appears to have been burnt in the fire of Nero, since it is mentioned as having been restored by Vespasian. (Plin. xxxv. 37.)

According to Aurelius Victor (Vit. Ill. 32) the annual procession of the Roman knights to the temple of Castor and Pollux, who stood near the temple of Honor and Virtus, because Dio byanes (xi. 13) names the temple of Mars as the starting-place. Becker (Handb. p. 311) regards the discrepancy between these accounts as tending to prove the correctness of his assumption that the temples must have lain close together. That one of the accounts is erroneous is a more probable conclusion, for it is a certain one that it is fallacious to draw any topographical deductions from such very shadowy premises. The true site of the Temple of Mars has been ascertained as satisfactorily as that of any of the monuments which do not actually speak for themselves; such, we mean, as the Colosseum, Trajan's column, etc. We may, therefore, trust to the evidence of description. There can be no doubt that the temple of Mars, instead of being close to the Porta Capena, or at S. Sisto, as Becker places it (Handb. p. 513), lay on the Via Appia, at the distance of about 1½ miles from that gate. The proofs are overwhelming. In the first place an inscription, still preserved in itself at the Vatican, recording the levelling of the Clivus Marsialis, was found in the Via Neronis outside the Porta Appia (the modern S. Sebastianino). Secondly, another inscription, in the Palazzo Barberini, recorded by Fabretti (Inscr. p. 724, no. 443), Marini (Flatr. Arr. p. 8), and others, testifies that Salvia Marcellina gave a piece of ground to the Collegium of Asseclauius and Hygla for a small temple, dedicated to the god Mars, between the first and second milestone on the Via Appia, on the left-hand side in going from the city. Thirdly, both the Notitia and Curiosa place the Aedes Martis at the extremity of the first Region, close to the Flumen Almonis. The Almo flows outside the Porta Appia, near the Vigna Neronii—

"Est locus ante urbe, qua prima ascensor ingens Appia, quaque Italo geminus Almonis Cybebe
Punici, et idaeae jam non reminiscitur annae."

(Stat. Silv. v. 1. 222.)

A brook now flows between the Porta S. Sebastianino and the church of Domus quo vadis, which, with great probability, has been identified with the Almo. (Cluver, Ital. Ant. p. 718; Westphal, Röm. Campagna, p. 17.) Fourthly, the same locality is indicated by several documents of the middle ages. Thus, in the Acta of the Martyrs:

"Tune B. Stephanius duxit a milibus foras muros Appiae portae ad T. Martis" (Act of S. Stephanius and S. Iulius). "Diasene decursum in clivum Martis ante templum et ibidem decollatus est" (Act of S. Sisinnius). And the Mirabilia (in Montfaucon, Dicr. Ital. p. 283): "Hae sunt locia quae inveniuntur in passionibus sanctorum foris porta Appiam, ubi beatus Syrus celeps decollatus fuit, et ubi Dominus apparuit Petrus, Domine quo vadis. Haec sunt pars porta, arcus Syllae." Now, the passages in the classics which relate to the subject do not run counter to these indications, but, on the contrary.
tend to confirm them. Appian (B.C. iii. 41) mentions a temple of Mars 15 stadia distant from the city, which would answer pretty nearly to the distance of between 1 and 2 miles given in the inscription quoted. Ovid says (Fast. vi. 191) :

"Lux aedem Marti festa sit; quem prospecit extra
Appustum tectos Porta Capena vise."

The word prospecit denotes a long view; and as the temple of Mars stood on a hill, as is evident from the Clivus Martis, it might easily be visible at the distance of a mile or two. The words of Stattius ("qua primum nascitur, &c.") must be corrected, being both tautological and contrary to fact. The paving of the road from the Porta Capena to the temple would not have been worth twice recording by Livy, had it lain only at a distance of some 200 yards (x. 32, xxxvii. 23). The only way in which Becker can escape from the legitimate conclusion is by assuming two temples of Mars in this quarter; in which few, we suppose, will be inclined to follow him, and which may be regarded as equivalent to a confession of defeat. (Becker, Handb. p. 511, seq.; Asseu. p. 65, seq.; Urtica, Rom. Topogr. p. 66, sect. 3; Canina, Indications, p. 56, seq.)

Close to the Porta Capena and the temple of Honos et Virtus lay the Valley of Egeria with the Lucus and Aedes Camenarum, the traditional spot where Numa sought inspiration and wisdom from the nymph Egeria. (Liv. i. 21; Plut. Numa. 13.) The site is recorded by Piso, and the spot is a locus classicus for its topography, the grove and temple had been prospected and let out to the Jews:

"Substitit ad veteres arcus madidamque Capenum
Hic ubi nocturnae Numa constituebat amicis.
Nunc sacrī fontis nemus et delubra locantur
Judaeis, quorum cophinis fœnumque superplex.
Omnis enim populo mercedem pandere jussa est
Arbor, et ejus membris Silva Camenis.
In vallem Egeriae descendimus et spoluces
Disimiles veris. Quanto praestantis esset
Nunus aquae, viridi si marginis clauderet undas.
Herba, nee ingenuum violentiae marmorum to plumb."
(Sat. iii. 10, seq.)

It is surprising how Becker could doubt that there was an Aedes Camenarum here, since it is not only alluded to in the preceding passage, but also expressly mentioned by Pliney (xxxiv. 10.) The modern Cicerone point to the traveller on the valley of Egeria a pretty retired spot some distance outside of the Porta S. Sebastiano, in the valley called La Caffarella, near which are the remains of a little temple, called by some the temple of Honos et Virtus, by others a temple of Bacchus, with a grove said to be sacred to the latter deity. But though at present we imagine would more gladly fix on this spot as the scene of the conferences between Numa and his nymph, and though respectable authorities are not wanting in favour of this view (Venuti, Descr. di Roma. ii. p. 18; Guattani, Rom. Descr. ii. p. 43), yet the preceding passages, to which we are justly referred ("Sed enim propter eas sedes Honoris et Virtutis") Camenarum religio sacro fonti adverterit," Epist. i. 21) and the Notitia, which places the temple of the Camenarum close to that of Honour and Valour, are too decisive to allow us to do so; and we must therefore assume the valley of Egeria to have been that near the church of S. Sisto, opposite to the baths of Caracalla. The little fountain pointed out as that of Egeria in the valley Caffarella, is perhaps the remains of a nymphaeum. Here was probably a sanctuary of the Alno, which waters the valley.

Near the temple of Mars, since it is mentioned in the Notitia in conjunction with it, lay the TEMPLE OF TEMPESTAS, built by L. Cornelius Scipio, the victor of Aleria, in commemoration of the escape of the Roman fleet from shipwreck off the island of Corsica, as appears from the inscription on his tomb. The temple and the occasion of its foundation are alluded to by Ovid (Fasti, vi. 193) in the following lines:

"Te quoque, Tempesta, meritum delubra fatemur,
Cum paene est Coris obvulta classis aqua.

But of the TEMPESTAS, also mentioned at the same time with that of Mars, we know nothing more. Near the last was preserved the LaPS MANALIUS, a large cylindrical stone so called from the cup on its top, called the "pater of Jerusalem," because during ancient times it was carried in procession into the city, for the sake of procuring rain. (Paul. Diae. p. 128; Var. ap. Non. xv. p. 375, Gerl.)

Close to the Porta Capena, and probably outside of it, lay one of the three SEMICULA mentioned by Festus; but the only time at which we find mention of it, and that, is following the battle of Cannae, when they appear to have been regularly held at this place. (Liv. xxii. 32.) During the same period the tribunal of the priest or was erected at the PISCINA PUBLICA. This last object, which seems to have been a swimming-place for the people in the Republican times (Festus. p. 218), gave name to the 12th Region, which adjoined the 1st, or that of Porta Capena, on the W. (Amm. Marc. xvii. 4; cf. Cicad ad Quint. Fr. iii. 7.) This pond had, however, vanished in the time of Festus, and its exact situation cannot be determined. There are several other objects in this district in the like predicament, such as the Lucus Pronomtheus, the BALNEI TIBURTICI, and others mentioned in the Notitia, that Thermes Commodianae and the Semicula will be considered under the section which treats of the thermes. The MEGUROTAS CAMERARIUS, perhaps a kind of imperial villas (Pfuhl, Reg. p. 115), appears to have been situated near the modern church of S. Balbina. (Montfaucon, op. Utica, Rom. Topogr. p. 112.) The three TURRIM IMPERIAL ARCHS OF TRAJAN, VIBILUS, and DRUSUS, mentioned by the Notitia in the 1st Regia, probably spanned the Via Appia in the space between the temple of Mars and the Porta Capena. The arch still existing just within the Porta S. Sebastiano is generally thought to be that of Drusus, the father of the emperor Claudius. ("Praeterea Semicula, quae ad templum loca conjuncta, maris nemorum et tropaeis via Appia decravit (Druse)," Suet. Claud. 1.)

For many miles the tombs of distinguished Romans skirt both sides of the Via Appia; and these remains are perhaps better calculated than any other object to impress the stranger with an adequate idea of the glory of their greatness. For though, however, they lie beyond the bounds of the present subject, and we shall therefore content ourselves
with mentioning a few which were contained within the actual boundaries of the city. They appear to have commenced immediately outside the Porta Capena ("An tu egressus porta Capena, cum Calatini, Sapiorum, Servillorum, Metellorum sepulcris, miseros putas illos?" Cic. Tusc. l. 7); and hence many of them were included in the larger circuit of the walls of Aurelian. The tomb of Horatia, slain by the hand of her victorious brother, seems to have been situated just outside the gate. (Liv. i. 28.) Fortunately the most interesting of those mentioned by Cicero—the Tomus OF THE SCIPIONS—is still in existence. It was discovered in 1780 in the Vigna Sasal, on the left-hand side of the Via Appia, a little beyond the spot where the Via Latina branches off from it, and about 400 paces within the Porta S. Sebastiano. Its entrance is marked by a single tall cypress tree. In Livy's time the tomb was still adorned with three statues, said to be those of Publius and Lucius Scipio, and of the poet Ennius, who was interred in the sepulchre of his patrons. (Hieron. Chron. p. 379, Ronc.) It was here that the sarcophagus of L. Scipio Barbatus, consul in B.C. 298, now preserved in the Vatican, was discovered, together with several monumental stones with inscriptions relating to other members of the family, or to their connections and freedmen. The originals were carried off to the Vatican and copies inserted in their stead. The most remarkable of these inscriptions are those of Scipio Barbatus; of his son Lucius Cornelius Scipio, the conqueror of Corsica, consul in B.C. 259; of Publius Scipio, son of Africanus Major, whose feeble state of health is alluded to by Cicero (Cato Maj. 11), and whose touching epitaph shows that he died young; of L. Cornelius Scipio, grandson of the conqueror of Spain, gathered to his fathers at the early age of 30; and of another of the same name, the son of Asciatus, who died aged 35, whose title to honour is summed up in the laconic words, "Pater regum Anatiniae," subgenus of the Scipios. All the inscriptions of this tomb will be found in Visconti (Mon. degli Scipioni, Rom. 1785) and in the Beschreibung Roma (vol. iii. p. 612, seq.), where the various epitaphs are given.

Also on the left-hand side of the Via Appia in going from the Porta Capena was the Mausoleum of Septimius Severus, which he caused to be erected for himself in his lifetime, in imitation of his Septizonium, but probably on a reduced scale. (Spart. Gete, 7.) In the same neighbourhood are some of those Columbaria, or subterranean chambers, which formed the common resting-places for the ashes of persons of a lower condition. One of these, not far from the tomb of the Scipios, is said to contain the remains of the courtiers and domestics of the Caesars, from Julius to Nero. Among others there is an inscription to M. Valerius Cesticus, with a bust. The walls, as well as a large pier in the middle, are hollowed throughout with vaulted recesses like large pigeon-holes,—whence the name,—in which are contained the ashes of the dead. The Mausoleum of Carcilia Metella, which stands on the Via Appia, about 2 miles outside the Porta S. Sebastiano, though it does not properly belong to our subject, demands, from the magnificence of its construction, as well as from Byron's well-known lines (Childe Harold, canto iv.), a passing word of notice here.

The remaining part of the district, or that forming the 12th Regio, and lying to the W. of the Via Appia, does not present many monuments of interest. The most striking one, the Thermes Antoniniannes, or baths of Caracalla, will be spoken of under its proper head. We have already treated of the Bona Dea Subsaxanae and of the Isiaum. Close to the baths just mentioned Caracalla built the street called Nova Via, reckoned one of the handsomest in Rome. (Spart. Carac. 2; Aur. Vict. Cas. 21.) Respecting the Fortuna Mammona, we know nothing more than that the Bona Capitolina mentions a street of the same name in this neighbourhood. In the later period of the Empire this district appears to have contained several palaces, as the Septem Domus Pastrorum, the 3 e 3.
DOMUS CILONIS, AND DOMUS CORNIFICIÆS. The Domus Parthorum and Cilonis seem to have been some of those palaces erected by Septimius Severus, and presented to his friends. (Aur. Vict. Epit. 30.) Cilon is probably the same person mentioned by Dion (Thuc. x. 87, ed. virg. 8), and in the Digest (i. 12. 1, and 15. 4.) The Parthi seem to have been Parthian nobles, whom Severus brought with him to Rome, and of whose luxurious habits Tertullian has drawn a characteristic picture. (De Hab. Mug. 7.)

The Private Adiann and the Domus Corrificiæ (Cornificiæ) mentioned in the Notitia, lay doubtless close together. The前者 must have been the private residence of Hadrian, where M. Antoninus dwelt after his adoption by that emperor. (Jul. Capit. M. Anton. 5.) M. Antoninus had a younger sister named Anna Cornificia, to whom the house bearing her name doubtless belonged. (Jub. c. 1; Prenner, Regiones, p. 198.)

XI. THE ESQUILINA AND ITS NEIGHBOURHOOD.

The Esquilina (Esquilinae, or in a more ancient form Esquilique) was originally covered with a thick wood, of which, in the time of Varro, the only remains were a few sacred groves of inconceivable extent, the rest of the hill having been cleared and covered with buildings. (Var. L. L. i. § 49; Mulli.) Yet the derivation of the name of the hill from Asculeatum seems to have been unknown to antiquity, and is a mere conjecture of Müller’s (ad loc.); the ancient etymology being derived either from Ascumbia regius, because Servius Tullius had fixed his abode there, or from Asculeum, because the hill was first cleared and settled by that king. (Var. l. c.; Ov. Fast. iii. 246.)

We have already described the Esquilina as throwing out two tongues or projections, called respectively, in the more ancient times of Rome, Oppius and Ciparius. Their relative situation is indicated in the following passage of Festus: “Oppius autem appelletur est, ut sit Varro rerum humanarum L. viii, ab Optia Oppia Tusculana, qui cum praesidio Tusculanorum missa ad Romam tuendam, dum Tullus Hostilius Vetus oppugnaret, consederat in Carinis et ibi castri habuerat. Simi-
extended the district so as to embrace the western extremity of the Oppius; whilst Urlich's, on the contrary, confined the Carinae entirely to that hill. (Besc. vol. iii. part ii. p. 119, seq.) That the Italian view is, at all events, partly erroneous, can hardly fail to be seen of itself. Besides the preceding passage of Festus, which clearly identifies the Carinae as part of the Oppius, there are other places in ancient writers which show that a portion at least of the district so called lay on a height. Thus Dionysius, speaking of the Tegillum Sororium, says that it was situated in the lane which led down from Corins to the Carinae to the Vicus Cyprianus (iv. xiv. 10, f, τὸ τερέτριον τῆς φώρας ἄνω Καρίνας κατὰ τὸ ἄλτον τὸν Καρίνας ἐφικομένος τετράγωνον, iii. 22). Again Varro (L. L. v. § 68), in describing the Subura or valley at the foot of the Oppius, says that it lay "sub muro terreo Carinarum;" obviously indicating that the latter place was on a height. Becker, indeed, makes the Carinae to the Vicus Cyprianus (Liv. xvi. 41), thereby the gorge between the Esquiline and Quirinal, it is easy to see how much the terms in the district of the Carinae could have been so situated as to overhang the Subura, except upon the hill. The following words of Varro (L. c.) are even perhaps still more conclusive. He identifies the Subura with the Pagus Socius, - the ancient name of Subura, being Sacrum, by an interchange of ã and e, - and holds it was thus named "quod e cum Carinae:" where, whatever we may think of his etymology, it is plain that he regarded the Carinae as a height. It may be added that the western part of the Oppius, where the church of S. Pietro in Vincoli now stands, bore the name of Carre at least, in the 16th century. (And. Felicis, de Urb. Ant. p. 304; cf. Niebuhr, Hist. i. p. 390, seq.)

It cannot therefore be doubted that the Carinae occupied the extreme of the Oppius; but how far that district extended eastwards cannot be said. It is a more difficult question to determine whether part of the valley lying at the western foot of the hill also belonged to the Carinae. The question is connected with another question respecting the site of the Temple of Tellus. We know that this temple — which was a considerable one, since assemblies of the senate were sometimes held in it — lay in the Carinae, and that it was built on the site of the house of Sp. Cassius, which was confiscated and pulled down when the demagogue was convicted of a design to make himself sovereign of Rome. (Liv. ii. 41; Val. Max. vi. 3. § 1; Pliny. xxiv. 14.) That event took place B.C. 485; but the temple does not seem to have been built till B.C. 269. Its site is further determined by notices respecting the house of Pompey, which subsequently came into the possession of M. Antony, the situation of which is known; the passage of Suetonius, which is the only one which, in my opinion, gives the time close to the temple of Tellus: "Docet (Lestres) in Carina, ad Telluris sedeem, in qua regione Pompeioporum domum fuerat." (Suet. Ill. Gramm. 15, cf. Id. Tull. 15; Vell. Pat. ii. 77; Aur. Vict. Vit. Ill. 84; Dion Cass. xlvii. 38.) And Servius says expressly, though in some respects unintelligibly, "Carinae sunt sedes fictae in Carinarum medio, quae erant circa templum Telluris" (ad Aen. viii. 561). There is nothing in the preceding passages to exclude the possibility of the Temple of Tellus having been on the summit of the hill; since it is not necessary to refer the statement of Urlich to be on its very edge (Röm. Topogr. p. 117); in which case, as there was an area attached to the temple, its back front must have been turned towards the road leading up to it from the valley, and the area has lain before it on the summit of the hill—a disposition which does not appear very probable. Yet there are some other considerations tending to show that the temple was situated in the valley. Dionysius mentions it as being, not in the Carinae, but on the road leading to the Carinae (Peregr. vii. 16, 12, περιπέτειας ἐν αὐτῶν, viii. 79). A curious view, taken by Urlich (L. c.) of the construction of the wall in this passage is one of the reasons which led him to place the temple on the summit of the hill. He thinks that it must necessarily mean "up to;" but it might just as well be said that it means "down to;" in a passage quoted a little while ago from the same author respecting the situation of the Carinae and the Vicus Cyprianus. In both cases it simply means "to." It will be perceived that Dionysius is here at variance with his author, before quoted respecting the site of the temple. If the allusion of Urlich be extended over some part of the adjacent valley it is possible that Dionysius, as a foreigner, might have been unaware of that fact, and have attached the name only to the more striking part of the district which lay on the hill. And there is a passage in Varro, a very obscure one indeed, from which it might be inferred that part of the Carinae seems to have been the name of the valley between the Casilian, the Esquiline, and the Velian ridge, had likewise borne the name of Carinae ("Cerolinis a Carinarum juncto dictus Carinae, postea Cerialis, quod hinc currit caput Sacrae Vies", B.C. 47). These passages would seem to indicate that the temple of Tellus lay in the valley, and not on the summit of the hill; but the passages relating to the subject are far from being decisive; and the question is one of that kind in which much may be said on both sides.

Two striking legends of early Roman history are connected with the Esquiline and its vicinity; that of the murder of Servius Tullius by his inhuman daughter, and that of the Tegillum Sororium, or the Marystone, which is typical yoke, by the carry-carrier, on which Carinus, the son of Tullius, is supposed to have expiated the murder of his sister. We have before related that Servius Tullius resided on the Esquiline, and that he was the first to clear that hill and make it habitable. It was on his return to his residence on it, after his ejection from the curia by his son-in-law, Tarquinii Superbus, that he was murdered by the hirelings of that usurper. Livy's narration of the
transmission is clear and graphic, and the best guide
to the topography of the neighbourhood. The aged
man was said to have reached the top of the Vicus Cyprius
("ad summum Cyprium vicum") when he was
overthrown and slain. His daughter followed in her
riga, and, having arrived at the same spot where
stood a temple of Diana a little before the time when
Livy wrote, she was just turning to the right in order
to ascend the Clivus Ursinus, which led to the
summit of the Esquiline, when the affrighted driver
reined his horses, and pointed out to Tullia the bleeding
corpse of her murdered father; but the
friend-like Tullia bade him drive on, and arrived at
home bespattered with the blood of her parent.
From this unnatural deed the street which was the
scene of it obtained the name of Vicus Scaena Scaena
(L. 48). The question that has been sometimes raised
whether Tullia was returning to her father's or to
her husband's house, does not seem to be of much
importance. Solinus, indeed (i. 35), represents Ser-
Vius Tullius as residing "supra clivum Urbium," and
Tarquinius Superbus, also on the Esquiline, but,
"Supra clivum Vollium ad Fagutalum lucum." The
house of Tullia, therefore, as a matter of course, must
have been on the Oppius, on which theLucus Fagutalis was
situated, and most probably upon the southern side of it;
but he may not have resided here till after he became
king. On the other hand, as Tullia is represented
as turning to the right in order to ascend the Clivus
Urbium to the royal residence, it is plain that the
Vicus Cyprius lay to the north side of
one of the tongues of the Esquiline; and as we are
further informed by Dionysius, in a passage before
quoted (iii. 22), that there was a lane which led
down from the Carinae, or western extremity of the
Oppius, to the Vicus Cyprius, the conclusion is
forced upon us that the palace of Servius Tullius
must have been situated upon the eastern part of
the northern side of the Oppius, and that conse-
quently the Vicus Cyprius must have corresponded
with the modern Via di S. Lucia in Solco. The
Summus Cyprius Vicus was evidently towards
the head of the valley, the lower part of the street
running under the Carinae; and hence the Clivus
Urbium and the palace of Servius may be placed
somewhere near the church of S. Martino.
Before the usurpation of Tarquin, he and his wife may
have resided near his father-in-law, or even under the
same roof; or, what is still more probable, Tullia, as
Ovid represents her ("patriae initia Penates," Fast.
vi. 602), was proceeding to take possession of her
father's palace, since his deposition had been effected
in the senate before his murder. Urtica (Roma.
Topogr. p. 119) admits that the Vicus Cyprius
answered to the Via di S. Lucia, yet holds that
Servius resided on the Cisprius; a view utterly ir-
reconcilable with the fact that the Clivus Urbium
and palace lay on the right of that street. The
passages before adduced prove the direction of the
Vicus Cyprius as close to the Esquiline as Rome can
be proved which depends for its determination
solely on notices in the classics. Yet Becker shutes
his eyes to this satisfactory evidence, and maintains
that the Vicus Cyprius corresponded with the
modern Via del Colosseo (Antonius, p. 78); although
in that case also it would have been impossible for
Tullia to reach the Esquiline by turning to the
right. The only ground he assigns for this in-
comprehensible view is an arbitrary estimate of the
distances between the objects mentioned in Regio IV.
of the Notitia, founded also on the assumption that
these objects are enumerated strictly in the order in
which they actually lie followed one another. But we
have already shown from Becker himself that this is
by no means always the case, and it is evidently not
so in the present instance; since, after mentioning
the Tigillum Sororium, which lay in or near the
Subura, the order of the catalogue leaves that spot
and proceeds onwards to the Colosseum, and then
again at the end of the list reverts to the Subura.
The chief objection to placing the Vicus Cyprius
under this side of the Oppius is, as Mr. Burney
observes (Class. Mus. vol. v. p. 227), that it would
thus seem to interfere with the Subura. But this
objection is not urged either by Becker or Urila, and indeed the Subura, like the Velabrum, seems
to have been a district rather than a street, so that we
may conceive the Vicus Cyprius to have run through it.

The position of the Tigillum Sororium is de-
determined by what has been already said; namely,
in a narrow street leading down from the Carinae to the
Vicus Cyprius. It seems to have been a broken
beam erected across the street. As it is mentioned
in the Palatine inscription of Rome's early legends, must
have existed down to the 5th century; and indeed Livy (i. 26)
 informs us that it was constantly repaired at the public
expense. We learn from Dionysius (iii. 22) and
 Festus (p. 297, Mutil.) that on each side of it stood
an altar; one to JUCO SORORUM, the other to JANUS
CERES.

Having had occasion to mention the Subura, it
may be as well to describe that celebrated locality
before proceeding further with the topography of the
Esquiline. We have already seen from Varro
that it was one of the most ancient districts in
Rome; and its importance may be inferred from its
having given name to the 1st Servian Region.
We have also alluded to a passage in the same author
(L. v. § 48, Mutil.) which shows it to have been
originally a distinct village, called Succus or Pagus
Sucosanum, lying under the Carinae. Varro adds,
that the name still continued to be written with a C
instead of a D; a statement which is confirmed by the
fact that in inscriptions the Tribus Suburana is always
denoted by the abridged form of its name, T. Subarna.
Inst. Or. i. 7 § 29; Mommsen, Die Röm. Trüm., p. 79, seq.) A piazza or place under the church of S. Pietro in Vincoli still bears the name of Subura;
and the church of S. Agostino, Via di S. Serva,
which skirts the eastern foot of the Quirinal
hill, bore in the middle ages the name of "in
Subura" or "super Suburam." Hence it seems
probable that the Subura occupied the whole of
the valley formed by the extremities of the Quirinal,
Viminal, and Esquiline, and must consequently have
been, not a street but, a region of some extent; as
indeed we find it called by Gregory the Great in
their capacity of an ancient region of Rome, the
name of "Quirinalis dicitur," Dial. iii. c. 30). But that it extended
westward as far as the Forum Trajanorum, a supposition
that seems to rest solely on the order of the
the names in the 4th Region of the Notitia, we can
hardly conceive. We have shown that the district
between the back of the imperial fora and the western
wall of the Esquiline has always been called Suburana,
and not, as is generally supposed, that part of the
district of the Carinae; but it can hardly have been
called both Carinae and Subura. The latter seems
to have properly begun at the point where the
Quirinalis approaches the extremity of the Oppium; and
ROMA.

This seems to have been the spot called by Martial the primum finesse of the Subura (ii. 17):

"Tenetrix Suburae facundus sedet primis,
Cruenta pendent qua flagella tortorum
Argique ietum multos obedit sutor."

Juvenal (v. 106) represents the Circos Maximus as penetrating to the middle of the Subura, and this fact was established by excavations made in the year 1743. (Ficoroni, Vestigia di Roma, ap. Bunsbury, Class. Mus. vol. v. p. 219.)

From its situation between the imperial fora and the eastern hills, the Subura must have been one of the most frequented thoroughfares in Rome; and hence we are not surprised to find many allusions to its dirt and noise. It was the peculiar aversion of Juvenal,—a man, indeed, of many aversions ("Ego vel Prochyam praepons Suburae," Sat. iii. 5); a trait in his friend's character which had not escaped the notice of Martial (xii. 18):

"Dum tu forstian iniquieta erras
Clamosa, Juvenalis, in Suburra.
"

The epithet clamosa here probably refers to the cries of itinerant chapmen: for we learn from other passages in Martial that the Subura was the chief place in which he used to market (vill. 31, x. 94, &c., cf. Juv. xi. 136, seq.). It appears also to have been the birthplace of prostitutes (v. 66; comp Hor. Epod. v. 58.). It was therefore what is commonly called a low neighbourhood; though some distinguished families seem to have resided in it, even Caesar himself in his early life (Suet. Caes. 46), and in the time of Martial, L. Arruntius Stella (xii. 3. 9). The Suburranenses, or inhabitants of the Subura, kept up to a late period some of the ancient customs which probably belonged to them when they formed a distinct village; especially an annual contest with the Sacravenses, or inhabitants of the Sacra Via, for the head of the horse sacrificed to Mars in the Campus Martius every October. If the Suburranenses gained the victory they fixed the head on a tower in the Subura called Turrres Marinilla, whilst the Sacravenses, if successful, fixed it on the Regia. (Festus, s. v. October Equus, p. 178, Mill.; Paul. Diaec. p. 181.)

Throughout the time of the Republic the Equilinum appears to have been by no means a favourite or fashionable place of residence. Part of it was occupied by the Campus Equilinus, a burying-ground, principally for the very lowest class of persons, such as panniers and slaves; whose bodies seem to have been frequently cast out and left to rot here without any covering of earth. But under the Empire, and especially the later period of it, many palaces were erected on the Equiline. The gardens were the first to improve it, by converting this field of death and infamy of the Subura, its environs, its burying-ground itself, into an agreeable park or garden. Horace (S. I. 8. 14) mentions the laying out of these celebrated Horti Marchematis:

"Nunc licet Equiliniae habitabes salubries atque
Aggeres in aprici spatiiari, qua modo tristes
Albis inornem spectantem osibus agrum."

It appears from these lines that the Campus Equilinus adjoined the agger of Servius Tullius, which, by the making of these gardens, was converted into a cheerful promenade, from which people were no longer driven by the disgusting spectacle of moldering bones. The Campus Equilinus being a cemetery, must of course have been on the outside of the agger, since it was not lawful to bury within the pomerium; and Varro (L.L. v. 25) mentions it as "ultra Exquillum," by which he must mean the Servian Region as a whole, which was bound on the left by the agger. Its situation is also determined by a passage in Strabo (v. p. 237), where the Via Labicana, which issued from the Equiline gate at the southern extremity of the agger, is said to leave the campus on the left. It appears to have also been the place of execution for slaves and ignoble criminals (Suet. Claud. 25; Tac. Ann. ii. 32; xv. 60; Plant. Mnl. ii. 4. 6, ed. RitschL). There does not seem to be any authority for Becker's assumption that the whole of the Exquillum outside of the Servian walls was called Campus Equilinus (Handb. p. 554), nor that after the laying out of the gardens of Maecenas the ancient place of execution was transferred to the Subura, near S. Croce in Gerusalemme. Part of the campus was, in fact, that of which the scholar of Horace says, by some person as a burying-place. The Sessorium mentioned in the Commentarii Valerianus de Odoacre (69) was a palace; and though Theodoric ordered a traitor to be beheaded there it can hardly have been the ordinary place of execution for common malefactors. Besides the Sessorium mentioned by the scholars on Horace (Epod. v. 100, Sat. i. 8. 11) was close to the Equiline gate, a full mile from S. Croce, and seems, therefore, to have been another name for the Campus Equilinus, if the scholars are right in calling it Sessorium. The executions recorded in the passages before quoted from Suetonius and Tacitus took place long after the gardens of Maecenas were made; yet when Tacitus uses the words "extra Portam Equilinam," there can be no doubt he means just without the gate. It would be a wrong conception of the Horti Maecenatis to imagine that they resembled a private garden, or even a gentleman's park. They were a common place of recreation for the Romans in general. Thus Juvenal describes the agger as the usual resort of fortune-tellers (S. V. 854); and we see from the description of Horace that not even all the tombs had been removed. Candies comes there to perform her incantations and evoke the shades of the dead; at sight of which infernal rites the moon hides herself behind the sepulchres (v. 35).

"...lunamque rubentem,
Ne perit siles testis, post magna latera sepulcras."

Such a place, therefore, might still have been used for executions; though, doubtless, bodies were no longer exposed there, as they had formerly been. These "magna sepulcras" would also indicate that some even of the gladiator classes were buried here; and the same thing appears from Cicero. (Phil. ii. 7.)

The Horti Maecenatis probably extended within the agger towards the baths of Titus, and it was in this part that the House of Maecenas seems to have been situated. Close to these baths, on the N.E. side, other buildings of the Trajan, existed in ancient times, although all traces of them have now disappeared. They have sometimes been confounded with those of Titus; but there can be no doubt that they were distinct and separate foundations. Thus the Notitia mentions in the 3rd Region the "Thermas Titianae et Trajanae," and their distinction is also shown
by the inscription of Ursus Togalinus: Thermenii Traiani Thermenii Agrippae et Titii, &c. (Graec. III. 26, 10). This dedication to Trajan, close to the church of St. Martin, may be determined from another inscription found near that church, in the pontificate of Paul III, which records some improvements made in it; as well as from a notice by Anastasius, in his Life of Symmachus (p. 88, Blanck.), stating that the church alluded to was consecrated to St. Thomas Trajanus. It is a very common opinion that the house of Macænas occupied part of the site of the baths of Titus, and this opinion is as probable as any other. It was a very lofty building. Horace describes it as a "molens propinqui quam nudibus arundis" (Od. iii. 50, 10), and from its situation and height must no doubt have commanded a wide prospect over the Tiber. We learn from various authorities that the Roman houses most magnificent do not draw that conclusion from the immediately preceding lines, where we think the far better reading is, "Ut semper adum Tibur, &c., the semper belonging to "udum," and not to "contemplare," (cf. Tate's Horace, Proleg. p. 24). We have before related how Nero beheld the fire of Rome from the house of Macænas, which was one of the last scenes, which, he often named a "tura Macæsantia" (Nero, 58), by which, perhaps, we are not to understand a tower, properly so called, but a lofty superstructure of several stories over the lower part of the house (Becker, Charités, i. p. 195). Macænas bequeathed his house and gardens to Augustus; and Tibérius lived there after his return from Elba, and before he was succeeded to the empire (Suet. Tit. 15). The subsequent history of the house is unknown; but, as we have said, it may probably have been included in the baths of Titus.

Close to the gardens of Macænas lay the Horti Lamiiani (Phil. Jud. vol. ii. p. 597, Mang.), belonging perhaps to the Actibus Lamiæ celebrated by Horace (C. 9. 10, 7). We learn from Varro (i. iv. 8. 7) that the ancient family of the Aelii dwelt where the monument of Marus afterwards stood; whence it seems probable that the Horti Lamiiani may have lain to the east of those of Macænas, towards the church of S. Bibiana. It was here that the body of Caligula was first hastily buried, which was afterwards burnt and reinentered by his sisters (Suet. Cal. 59).

There appear to have been several more gardens between the Porta Esquilina and the modern Porta Maggiore; as the Horti Pallantiani, founded apparently by Pallas, the powerful freedman of Claudius (Tac. Ann. i. 29; Suet. Claud. 28; Plin. Ep. viii. 8); and which, from several passages of Frontinus (Aq. 19, 10), appear to have been situated between P. Maggiore, the Marian monument, and the church of S. Bibiana. Frontinus also mentions (Aq. 68) certain Horti Epaphroditiani, perhaps belonging to Epaphroditus, the libertus of Nero, who assisted in putting that emperor to death (Suet. Nero 49, Dom. 16; Tac. Ann. xvi. 53); as well as the Horti Tauriqutani (c. 5), apparently in the same neighbourhood. The Campus Viminalis sub Aggeribus of the Noticia was probably an exercise ground for the Praetorian troops on the outside of the agger near the Porta Viminalis. Hence the eastern ridge of the Viminal and Esquiline beyond the Servian walls must have been very open and airy.

The Esquiline derives more interest from its having been the residence of several distinguished poets and authors than the most splendid palaces could have conferred upon it. Virgil dwelt upon the Esquiline, close to the gardens of his patron Macænas. Whether Horace also had a house there cannot be said; but it is not improbable that he, like the other free notables of Rome, was loved to saunter on "the sunny agger," and he was at last buried close to the tomb of his munificent benefactor at the extremity of the hill. (Sest. V. Hor. 20.) Propertius himself informs us that his abode was on the Esquiline (iii. iv. 23); and there also dwelt the younger Pliny, apparently in the house formerly belonging to the poet Publius Acetas (Plin. Ep. iii. 21; Mart. x. 19). Its precise situation will be examined a little further on, when treating of the Locus Orpheæ.

The Esquiline and its neighbourhood did not contain many temples of note. That of Tellus, already mentioned, was the most important one; and we have already adverted to the ancient acreans mentioned here by Varro (L. L. v. 49, seq.); as the Luccus and Sacellum of Jupiter Faugulus, on the southern side of the Oppus; the Luccus Esquilineus, probably near the Esquiline gate; a Luccus Faustini, which was lying near the Via Patricia (Festus, s. a. Septembris, p. 351, M. B.); and a Luccus de Juno Lycia, where, according to Pliny (viii. 85), a temple was built to that goddess, s. c. 374; although it would appear from Dionysius (v. 15) that there must have been one there previously in the time of Servius Tullius.

The house of Augustus was called the Fortuna and the Memmia; and the temple of Ceres Lactans is said to have been found in 1770, in digging the foundations of the monastery of S. Paolo, in the road which separated the Oppus and Campus. We learn from Ovid (Fast. ii. 485) that the grove lay beneath the Esquiline; but as it appears from Varro that the temple stood on the Campus, whilst the stones with the inscription in question was found on the side of the Oppus; it is probable that it may have raised down from the monastery of the Filipolii on the opposite height (Nibby, Roma nel secolo 1685, p. 670; Ulrichs, Rosen. Top. p. 190; Canina, Index, p. 151).

The Sacellum Sereinianum, where the Sacra Via began, probably lay on the S. side of the Carinae, near the Colossseum. It seems not improbable that the temple of Lictor may have been situated on the Esquiline, on account of the neighbourhood of the Campus Esquilineum; but there are no authorities by which its site can be satisfactorily determined. It was the great magazine for funereal paraphernalia (cf. Dionysius iv. 15; Festus, s. a. Rusticus, Viminale, p. 265; Plut. Q. R. 23). On the Esquiline were also the Aegapæ, and the temple of Ferrer, the latter close to the Marian monument (Gie. N. D. iii. 25; Plin. ii. 5; Val. Max. i. 5. 6). We may likewise mention a TEMPLE OF FORTUNA RESPECTRIX (Plut. Fort. R. 10), of Fortuna Searia in the Vicus Sandalinus (Isaur. ap. Grose. These. iii. p. 268; Plin. xxxvii. 46), and one of Diana in the Vicus Varus, from which some were excluded (Plut. Q. R. 5). The Herculeus Victor or Herculeus Sullanus of the Noticia was perhaps only a statue. We shall close this list by mentioning a TEMPLE OF SEPS VETVS, near the Horti Pallantiani, several times alluded to by Frontinus; of Iunia Patricia, probably in the Vicus Patricius; and of Minerva Medica, commonly identified with the ruins of a large building standing in a vineyard near the Porta Maggiore. This building bore, in the middle age, the name of Le Galatea, whence Canina is of opinion that it was the place where the emperor Gallienus...
ROMA.

was accustomed to divert himself with his court. (Trebat. Polia, Gall. Deo, c. 17.) The temple of Minerva Medica mentioned in the Notitia may probably have stood in the neighbourhood; but the building in question seems too large to be identified with it.

Among the profane monuments of this district we have had occasion to mention once or twice an object called the TROPHIES OF MARVUS. Valerius Maximus relates that Marvis erected two troopes (vi. 9, § 14); and that these must have been on the Esquiline, as appears from a passage of the same author (ii. 5, § 6). Tito Pliny, who resided on the slope of the hill, expresses the site of the altar of Febris. A building which stands at the junction of the Via di S. Biagio and Via di P. Maggiore a little way outside the ancient Porta Esquilina bore during the middle ages the name of Temple Marii, or Cirimin, and was adorned with those sculptured trophies which were removed in the pontificate of Sixtus V., to be placed in the Piazza del Campidoglio, where they still remain. (Ordo Rom. an. 1143, ap. Malab. Mus. Ital. ii. p. 141; Poggio, de Var. Fort. p. 8, ed. Par. 1723.)

There can be no doubt, however, that the building so called was no temple, but the castellum of an aqueduct, and is in all probability the object mentioned in the Notitia as the Templo Maximi Divi Alessandrino. It must have been a substantial principal castella of the Aqua Julia, and from the trophies which stood in the neighbourhood having been applied to its adornment it was mistaken in a later age for a temple erected by Marvis. (Canina, Indic. p. 156, seq.; Preller, Regiones, p. 131.)

Herein this Nymphaeum and the Porta Esquilina stands the Arcus Gallieni, which must have spanned the ancient Via Praenestina. It is a simple arch of travertine, and we learn from the inscription upon it, which is still legible, that it was erected by a certain M. Aurelius Victor in honour of the emperor Gallienus and his consort Salonia. Originally there were another arches on each side of it (Spec. Rom. Magn. tab. 24), but at present only the middle one remains.

Close to this arch and between it and the basilica of S. Maria Maggiore, lay the Forum ESQUI- LINUM and MACELLIUM LIVIANUM. This position of the macellum is certain. The basilica just named was built by the Emperors M. Livius Livianus (Agnes. V. Lib. et V. Sist. III. 7). That it is similar to the arch of Gallienus appears from the Ordo Romanae. ("Intrus sub arcum Gallieni ubi dicitur Macellum Lunanum (Livianum) progreditur ante templum Marii quod dicitur Cirimin," Anni. 1143, p. 141.) And the church of S. Vito close to the arch was designated as "in Macello." (An. Pulvinas, Ant. E. ii. 13. 8.) But it is a more difficult question to determine whether the Forum Esquilinum and Macellum Livianum were distinct objects or one and the same. We know that the Foro Esquirini was in existence in n. c. 88, since it is mentioned by Appian (B. C. i. 58) as the scene of the struggle between Marius and Sulla. (Mansi, It. nec. Hept. i. 17.) But we have said that the temple of Augustus was erected in the Vicus Sallusti; and as this temple was included in the domain of the golden house of Nero (Plin. xxxvi. 46) we may conclude that it was in or near the Carinae. (Becker, Handb. p. 561.) The COLOSSEUM will be described in a separate section.

founded by Augustus, and named after his consort Livia. (Preller, Regiones, p. 131.)

There was also a PORTICUS LIVIAE somewhere on the Esquiline, named in the Notitia in the 3rd Region after the baths of Titus. It was a quadriportico and was built by Livia, n. c. 14, on the site of the house of Vedius Pollio, which he had inherited. (Dion Cass. liv. 23.) As the same author (iv. 8) calls it a rebus, we may conclude that it contained the TEMPLE OF CONCORD mentioned by Ovid. (Fast. vi. 633.) It is alluded to by Strabo (v. p. 326), and by both the Pllinys. (civ. 3; v. 3. 15; cf. Becker, Handb. p. 549, Anm. p. 78.) We also read of a PORTICUS JULIA, built in honour of Carinus and Lucinus Cassar (Dion Cass. ivi. 27, as amended by Markel ad Op. Fast. p. cal.), but its situation cannot be determined.

Near the church of S. Croce in Gerusalemme, towards the side of the Porta Maggiore, lie the ruins of a large building already alluded to, which in the middle ages bore the name of Sessorianum. We have remarked that in the Exccpta Valeriana the edifice was called at the end of Ammianus Marcellinus it is called a palace ("in palatio, quod appellatur Sessorianum," de Odac. 69). It is identified by a passage in Anastasia stating that the church of S. Croce was erected there. (Pall. Silv. p. 43; Bibo, loc. cit. 5, p. 4.)

Also near the same church, but on the other side of it, and built into the wall of Aurelian, are the remains of a considerable amphitheatre which are usually identified as the AMPHITHEATRE CARRERE OF THE NOTITIA. Becker, however (Handb. p. 552, seq.), denies this identity, his chief objection being that the structure which must have occupied if this building is included in it, and holds that the true Amphitheatre Caracalla must have been near the Castra Praetoria. There are, however, no traces of the remains of an amphitheatre in that direction, and Becker acknowledges (Handb. p. 558) that he is unable to give any name to that by S. Croce. But there could not have been many structures of this description in Rome, and on the whole it seems most reasonable to conclude with Preller (Regiones, p. 132) that the one in question was the Castrum; especially as we know from Procopius (B. G. i. 32, seq.) that there was a vivarium, or place for keeping wild beasts used in the sports of the amphitheatre, close to the Porta Praesernorum.

In the valley under this amphitheatre were the GARDEN AND CIRCUS OF ELAGABALUS (Lamp. Helio. 14, 23), where the obelisk was found which now stands on the promenade on the Pincian (Ligorio, Sit. Cerchi, p. 3; Canina, Indic. p. 178). Just outside the Porta Maggiore is the curious MONTUKER CVB, the building of the baker, which has been spoken of above, p. 760.

The remaining monuments in the district under consideration are few and unimportant. The APOLLO SANTALLARIUS mentioned in the Notitia in the 4th Region was one of those statues which Augustus erected in the different Vicus. (Suet. Aug. 37.) We have said that the temple of Apollo in the Vicus Sallusti; and as this temple was included in the domain of the golden house of Nero (Plin. xxxvi. 46) we may conclude that it was in or near the Carinae. (Becker, Handb. p. 561.) The COLOSSEUM will be described in a separate section.

The 3rd Region, in which it was situated, must doubtless have contained a splendid TEMPLE OF
ROMA.

Iess and Serrapif, from which the Region derived its name, but the history of the temple is unknown. The same remark applies to the Monument mentioned in this Region, which seems to have been the imperial mint. (Plutarch, Reg. p. 126.) It is mentioned in inscriptions of the time of Trajan. (Marini, Asl., 2c. p. 458.) The Summum Crematorium is inexplicable. The Lactus Pastorum or Pastora was a fountain near the Colossus, as appears from the Acta Sanctorum (26 Nov.).

The Ludus Bruttii Praestantis probably lay on the Esquiline. Marcus Aurelius annexed Commodus with the daughter of a Bruttus Præsens. (Capitol. M. Anton. Phé, c. 37.) A Porticus Claudia stood at the extremity of Nero's golden house, not far from the colossus of that emperor.

"Claudius diffusus nbi porticus explicis umbros
Ultima pars aulae defectus erat." (Mart. de Spec. 2.)

It is mentioned by the Anonymous Einaliedea and in the Mirabilia under the name of "Palatium Claudia," between the Colosseum and S. Pietro in Vincoli. The Ludus Magnus was a gladiatorial school apparently near the Via di S. Giovanni. (Canina, Indici. p. 108.) The Schola Quaestorum et Capitulum or Capitatorum seems to have been an office for the scribes or clerks of the quaestors, as the Schola Xanthia on the Capitol was for those of the curule aediles. The Capitators were those officers who had charge of the copiae or copulæ, that is, the bowls with handles used in sacrifices (Varri. L.L. v. § 131); but where this schola may have been cannot be said. The Castra Minervi were the city station for what we may call the marines, or soldiers attached to the fleet and naval station at Misenum, established by Augustus. (Tac. Ann. iv. § 5; Suet. Aug. 49.) This camp appears to have been situated near the church of S. Vito and Vico Muralia, where also there was an aedescula of Neptune. (Canina, Indicius, p. 110.) The Balneum Daphneida, perhaps alluded to by Martial (iii. 5. 6), was probably near the Subura and Carinae. Lastly, the Lactus Orpheus, or fountain of Orpheus, seems to have lain near the church of S. Lucia, which bore the epithet in Orfeo, or, as the Anonymous calls it, in Orpha. It is described in the lines of Martial, in which he desires Thalia to carry his book to Pliny (x. 19. 4, seq.)—

"I, perfer, brevis est labor peractae
Altum vincere transitam Suburae.
Illis Orpheae prope videbis
Ubi vertice Iubericum theatris.
Mirantissque sive saevius regis
Euphnet qui pringas purtulit Tonant.
Illis parvi tuis donat Psedon
Casaeas est aquilae minora penna."

From this description it would appear that the fountain was in a circular basin—for such seems to be the meaning of "subum theatrum," because a statue of Orpheus playing on the lyre stood high in the midst of the basin, wet and shining with spray, and surrounded by the fascinated beasts as an audience. (Becker, Hamd., p. 559, note.) The situation of the fountain near the church mentioned is very clearly indicated in these lines. As Martial lived on the street, he knew the way from his house to that spot would of course lie through the Subura. At the top of the street lead-

ROMA.

ing through it, which, as we have seen, must have been the Vicus Cypricus, a short but steep ascent brought the pedestrian to the top of the Esquiline, where the first object that met his eye is this fountain in question. The locality is identified by another poem of Martial's addressed to Paulus, in which also lived on the Esquiline (v. 22. 4)—

"Alta Suburani vincenta est semita clivi
Et nunc quoque scio sordida saxa gradus;"

where we must not take Clivius Suburanus to be the name of a road, like Clivius Capitolinus, Publicius, &c., but merely a synonymous appellative with what Martial calls "altae trames" in the other poem. It may be further observed that this situation of the fountain agrees with the order of the Notitia, where it is named immediately before the Macellum Livinianum. Close to it lay the small house formerly inhabited by Pedro Alphonso, and in Martial's time the residence of his friend the younger Pliny.

XII THE COLLES, OR THE VIMINALE, QUIRINAL, AND PINCIAN HILLS.

We have already remarked that the three northernmost hills of Rome were called Colles, in contradistinction to the others, which were called Montes. Only two of the former, the Viminal and Quirinal, were enclosed within the walls of Servius Tullius, and considered as properly belonging to the city; but part of the Pincian was included within the walls of Servius Tullius.

The Colles Viminalis, the smallest of the three hills, is separated from the Esquiline by the valley through which ran the Vicus Patricius, and by a hollow running towards the rampart of Servius. On the other side, towards the Quirinal, is another valley, which divides it from that hill, at present traversed by the street called Via dei Serpenti and Via di S. Vittale. The most northern part of the valley, through which the latter street runs, was the ancient VALLIS QUIRINIS (Juv. ii. 135). The hill derived its name from the osiers with which it was once covered ("dictum a viniame collem," Id. iii. 71); and upon it was an altar of Jupiter Viminalis, by the sacred spring of the Viminalis. (Eutr. L.L. v. § 51; Eust. p. 372.) The Viminal was never a district of much importance, and seems to have been chiefly inhabited by the lower classes. The only remarkable building which we find recorded on it is the splendid Palatium of C. Aquillius (Plin. xii. 2). The existence of some baths of Agrippina upon it rests only on traditions of the middle ages. The baths of Diocletian, which lay on the ridge which united the Viminal and Quirinal, will be described in the section on the thermae. The SACELLUM OF ANNIA lay without the Porta Viminalis. (Paul. Dac. p. 165.)

After the Palatine and Capitoline hills, the Quirinal is by far the most ancient quarter of the city. As the seat of the Sabine part of the population of Rome, it acquired importance in the period of its early history, which however it did not retain when the two nations had become thoroughly amalgamated. The Quirinal is separated from the Pincian on the N. by a deep valley; its western side is skirted by the wall of Servius; to the east it is surrounded by the streets which parted from the Viminal by the Valls Quirini has been already described. The street which was
through this last valley was called Vicus Longus, as we learn from the Anonymous of Einsiedlen, who mentions the church of S. Vitalis as situated "in vico longo." We find its name recorded in Livy (x. 23), and Valerius Maximus (i. 5. § 6). Of the different ancient divisions of the Collis Quirinianus and the members of the senate Giustino (L. L. v. § 28),司马的 name has already spoken in the former part of this article.

The Quirinal abounded in ancient fanes and temples. One of the earliest foundations of this sort was the Temple of Quirinus, erected by Numa to Romulus after his apotheosis. The first practical notice that we find of it is, however, in n. c. 15, when Augustus rebuilt it and dedicated it to the god of war, the spiritus divinus, in the same manner as the senate in it; a fact which shows that it must have been a considerable building. A new one was dedicated, probably on the same spot, by L. Papinius Cursor, n. c. 292. (Liv. x. 46; Plin. viii. 60.) This structure appears to have been burnt in n. c. 48, and we do not hear of its re-erection till n. c. 15, when Augustus rebuilt it and dedicated it to the spiritus Augusti, as by Dion Cassius (liv. 19). Yet in the interval between these dates we find it alluded to as still existing (Ibd. xiiii. 45; Cic. ad Att. xiii. 28), whereas we may conclude that it had been only partially destroyed. Dion (liv. 19) describes the new structure of Augustus as having 76 columns, equaling the years which he had lived. Hence, it appears to have been the same building as that added by Vitruvius (iii. 2. 7) as an example of the dippers oastacys祠; for that kind of temple had a double row of columns all round; namely, two rows of 8 each at the front and back; and, without counting the outside ones of these over again, two rows of 11 each at the sides (32 + 44 = 76). This noble portico was later by L. Vipsanius Agrippa, who, as we have before remarked, took its name from that sanctuary; and we must seek for the temple of Flora on the W. side of the Quirinal, or that which faced towards the Campus Martius. That it stood on this side is confirmed by what Martian says respecting the situation of his house, which, as we learn from one of his epigrams, lay near the temple of Flora (v. 22. 2):

" Sed Tiburiae sum proximus socola pilae
Quis vides antiquum rusticis Flora Jovem."

(Cf. vi. 27.) From which we also learn that the temple of Flora could not have been very far from that of Jupiter in Numa's Capitol; as indeed likewise appears from the passage of Varro before quoted, with the addition that it was laid on a lower part of the hill. But as Martian's house is shown to have been near the temple of Flora, so also that it was on the W. side of the hill appears from another epigram (i. 108. 2):

"At mea Vipsanias spectat coacnula laurus
Factus in hac ego sum jam regio senex."

It can hardly be doubted that this passage contains an allusion to some laurel trees growing near the Porticus Vipsania, erected, as will appear in a subsequent section, near the Via Lata by Agric平, whose family name was Vipsania. This portico is plainly alluded to in another passage of Martial (iv. 18), under the name of Vipsianae Columnae. There is nothing surprising in Martial's indicating a locality by certain trees. In ancient Rome trees were noted objects, and claimed a considerable share of public attention, as we have already seen with regard to several that grew in or about the forum. Two laurel trees grew before the imperial palaces (Tit. Apol. 35); and in front of the temple of Quirinus
just described were two sacred myrtles, which were characterised by distinctive appellations as patrieis and plesios. But, to have faced the Porticus Vipsaniana, (vii. 18) would have been situated on the western side of the Quirinal, but also towards its southern extremity; which likewise appears from what has been said in the preceding section respecting the roots from it to that of his friend Pliny being through the Subura and Vicus Cypricus; for this would have been a roundabout way from Martial dwells towards the northern part of the hill.

All these circumstances tend to show that Numa's Capitol must have stood on the spot before indicated, and the temple of Flora a little to the N. of it. The part of the hill which it occupied was probably that called LATTARIS in the Argive fragments. The pantheon of the Latins may have been situated near the gate of the same name, derived from the ancient SACELLUM DE SALUS, which stood near it; in place of which a regular TEMPLE OF SALUS was dedicated by C. Junius Bubulcus, c. 203 (Liv. ix. 43, x. 1), and adorned with paintings by Fabius Pictor. These were still to be seen in the time of Pliny; which temple was destroyed by fire in the reign of Claudius (xxxv. 7; cf. Val. Max. viii. 14, § 6).

Cicero's friend Atticus lived close to the temple of Salus ("in seius vicina Salantis," ad Att. iv. 1), and at the same time near that of Quirinus: "Certe non longe a tuae seulis inanibus place, quae super Boeni procul Julo, sed in desum esse et Quirinum vocari, templumque sibi dedicari in loco jussisset." (De Leg. i. 1.) The vicinity of the temples is likewise indicated in another passage relating to a statue of Caesar, which had been erected in that of Quirinus: "De Caesare vicino scriptorum ad te, quia cognosce ex tuis literis: sum vixissor Quirino malo quam Saluti." (ad Att. xii. 45.)

The temple of Quirinus stood near the temple of Salus, and that of Quirinus some yards to the S. of it, at the church of S. Andrea, so we may assume that the house of Atticus lay between the two, and we would thus be a close neighbour to both. According to ancient tradition, the Quirinal was that of Semo Sancus or Gusius Fidicenum. We have shown, when treating of the Servian gates, that the Porta Sanquarlis took its name from this sacellum; and Livy (viii. 20) describes it as facing the temple of Quirinus. Hence it must have stood on or near the site of the Palatino Quirinale, between the temple of Salus and that of Jova. It had a perforated roof for the deity loved the open air, whence his title of Dios; and some thought that no oath by this god should be sworn under a roof. (Varr. L. L. v. § 66.) Sancus was an old Sabine deity, and his temple at Rome appears to have been founded by Tarquin. (Ov. Fast. vi. 213; Prop. v. 9. 74; Ter. c. ad Nat. ii. 9.) Its antiquity is attested by the circumstance that the castellum and sandals of Tanaquil, the wife of Tarquinus Priscus, are recorded to have been preserved in it, and are said to have been in existence down to the time of Augustus. (Plin. viii. 74; Plut. Q. R. 30.) It appears to have been rebuilt by Tarquinus Superbus, but its dedication was reserved for his son Postumus. (Deor. ii. 15.) The part of the hill where it stood must have been the COLLIS MUCIALIS of the Argive fragments. (Varr. v. § 52.)

There were several Temples of Fortuna on the Quirinal, but they do not seem to have been of much importance; and the notions respecting them are very confused. (vii. 38) It was situated on the site of Fortuna Publica (Fast. iv. 375, v. 729), and by Livy, who mentions a temple of Fortuna Prima, on this hill (xxxv. 58). There was also an Altar of Fortuna in the Vicus Longurus. (Livy, xvi. 30.)

In the street just named stood also a SACELLUM Pudicitiae Plebs, founded by Virginia, the daughter of Aulus, after the quarrel between the matrons in that of Pudicitia Patricia alluded to in a former section (Liv. x. 23). Outside of the Porta Collina was a temple of VENUS ERYXIA, a temple not only of Venus but of Aeneas, whose image there was dedicated by Camus. (Grotius, xxxv. 6; Peller, Reg. p. 124.)

These are all the ascertained temples that lay on the Quirinal; for it is a disputed point whether we are to place on this hill the splendid TEMPLE OF SOL, erected by Aurelius. (Av. Vict. Cass. 23; Eratost. in loc. 9; Vopiscus, Aesop.) Allegories, however, the most probable conclusion is that it stood there, and Becker's objections admit of an easy answer (Hom. l. p. 587, sqq.). By those who assume it to have been on the Quirinal it is commonly identified with the remains of a very large building, on the declivity of the hill, in the Colosseum gardens, on which spot a large Mithraic stone was discovered with very beautiful and sepulchral inscriptions, called the Columna Antonina, p. 174.) This position may be very well reconciled with all the ancient accounts respecting the temple. Becker objects that it is mentioned in the Notices in the 7th Region (Vls Lata). But this Region adjoined the western side of the Quirinal, and the temple of the sun was not recorded in it, and the temple and buildings on the declivity of the Aventine are enumerated in the 11th Region, or Cirrus Maximus.

In the Catalogus Imperatorum Vicos. (ii. p. 246, Ronc.) it is said of Aurelian, "Templum Solis et Castra in Campo Agrippae dedicavit;" and it will appear in the next section that the Campo Agrippae was added to the temple of theQuirinal. Becker assumes from the description given by Vopiscus of his ride with Tiberiaus, the conversation during which was the occasion of his writing the life of Aurelian, that the temple in question could not have been so near the Palatine as the spot indicated ("ibi quum animus a causa atque a negotii metu, et commissis so liber vacaret, sermone Caesaris, multum a Palatio anque ad aedibus Valerianii instituit, et in ipsa praecipue de vita principi.) Quumque ad templum Solis veniamus ab Aureliano principe consecratum quod ipsas monant enos ex ejus origine sanguinem deceret, quaesivit," &c., Vopiscus, Aesop. 1.) We do not know where the temple of Portus stood. (Deor. ii. 15.) As assumed by Peller, have been identified with that of Lucullus on the Fiaccian, subsequently in the possession of Valerianus Antonius (Tac. Ann. xi. 1),
ROMA.

though these continued to bear in general the name of Locullus. But Becker interprets the passage wrongly when he thinks that the temple of Sol lay beyond these gardens: on the contrary, the passing that temple gave rise to the conversation, which lasted till Vopiscus and his friend arrived at the Horti Valerianii, wherever these may have been; and if they were on the borders of Sol, in the locality indicated, would have been on the road to them from the Palatium. Lastly, we may observe that the Quirinal had, in very early times, been dedicated to the worship of Sol, who was a Sabine deity (Varro, L. L. v. § 74); and there was a FULTIMAL SOLIS in the neighbourhood of the temple of Quirinus and Vesta. 

Such were the sanctuaries of the Quirinal. The ancient topographers, who are followed by the modern Italians, have assigned two circi to this quarter: the CIRCUS FLORENS, which was straitened on the north by the Circus Salustii, and in the gardens of Salust, between the Quirinal and Pincian. The former has certainly been invented by misconstruing an inscription relating to the games of Flora in the Circus Maximus. (Becker, Handb. p. 673.) It is more doubtful whether a Circus Salustii may not have existed. We have seen from a passage of Livy that the Ludi Apollinares were performed outside the Porta Collina when the overflowing of the Tiber prevented their performance in the usual place; and, according to Canina (Indic. p. 199), traces of a circus are still visible in that locality. But none is mentioned in the catalogues of the Regions, nor does it occur in any ancient author. The site of the Circus Salustii lay in the valley between the Quirinal and Pincian, but their exact extent cannot be determined. They were formed by Salustius the historian with the money which he had extorted in Numidia. (Dion Cass. xiii. 9.) The house of Salustius lay near to the (subsequent) Porta Salaria, as we learn from Pliny, but it was straitened on the south by the storm of the city by Alaric, and that its half-consumed remains still existed in his time. (B. V. i. 2.) The Anonymous of Einsiedeln mentions some Thermar Sallustianarum near the church of S. S focus, and the older topographers record that the neighbourhood continued to be called Sallustianica or Sallustianarum. (Juv. 11, 16, 2.)

The Aenian of Einsiedeln mentions some Thermar Sallustianarum near the church of S. S focus, and the older topographers record that the neighbourhood continued to be called Sallustianica or Sallustianarum. (Juv. 11, 16, 2.)

The Horti Sallustianae subsequently became imperial property, though in what manner is unknown. The first notice which we find of them as such occurs under Nero in the passage just cited from Tacitus (Hist. iii. 82), which, however, presents none if rightly understood. The Flavian troops which had penetrated to the gardens of Sallust on their way were those which marched on the Flaminian, not the Salarian, way, just as Nero is described as finding his way back to these gardens from the same road. (Tac. Ann. xiii. 49.)

The Flavian troops which had penetrated to the gardens of Sallust on their way were those which marched on the Flaminian, not the Salarian, way, just as Nero is described as finding his way back to these gardens from the same road. (Tac. Ann. xiii. 49.)

At the Porta Collina, but inside and to the right of it, lay the Campus Sceleratus, immediately under the agger. The spot obtained its name from being the place where Vestal Virgins convicted of unchastity were buried alive; for even in this frightful punishment they retained their privilege of being interred within the walls. Dionysius attributes the introduction of this mode of execution to Tarquinius Priscus; and, according to Livy, the first example of its application was in the case of Minucia, c. 348. Dionysius, however, calls the first vestal who suffered Pinaria. (Dionys. ii. 67, iii. 67; Liv. viii. 15; Plut. Rom. 10.)

The emperor appears to have shared with the vestals the privileges of intramural interment, although they did not always avail themselves of it. Indeed, the first example of this use was in the case of Minucia, c. 348. Dionysius, however, calls the first vestal who suffered Pinaria. (Dionys. ii. 67, iii. 67; Liv. viii. 15; Plut. Rom. 10.)

Trajan was the only emperor buried within the walls; but this statement is certainly erroneous, since Domitian erected a magnificent mausoleum for the Flavian family somewhere between the gardens of Sallust and the spot subsequently occupied by the baths of Diocletian. It is the object mentioned under the name of "the garden of Flavia," and is alluded to in several epigrams of Martial, in one of which he designates it as being near his own dwelling (v. 64. 5) —

"Tam vicina jubent nos vivere Mausoleo, Quam deoant ipsose posse perire des." (Cf. ix. 2 and 35; Stat. Silv. iv. 3. 18.) It was commonly called TEMPLE GENTIS FLAVIAE, as appears from Suetonius (Dom. 17); but the same passage shows it to have been a sepulchre also, since the ashes of Julia, the daughter of Titus, as well as those of Domitian himself, were deposited in it. (Cf. Becker, de Muris, &c. p. 69.) It was erected on the site of the house in which Domitian was born, designated as being AD MALUM NOSTRUM (Suet. Dom. 1); which name occurs again in the Notitia, and could not, therefore, have been applied to the whole Region, as Preller supposes (Regiones, p. 69), but must have denoted some particular spot, perhaps a vicus, called after a pomegranate tree that grew there. We have already adverted to the importance attached to trees growing within the city.

The other object that remains to be noticed on the Quirinal is the PRAETORIAN CAMP, since the baths of Diocletian will be described under the proper head. We have related in the former part of this article that the Castra Praetoria were established in the gardens outside the Porta Collina, to the eastward of the agger. They were arranged after the usual model of a Roman camp, and were enclosed within a brick wall, of which there are still some remains. (Canina, Indic. p. 194.) They were included within the wall of Aurelian, which preserved their outline. We need only add that the 6th Region of Augustus, of which the Esquiline formed the principal part, was called ALTA SEMITA, from a road which ran along the whole back of the hill, answering to the modern Strada di Porta Fia. The Pincian Hill presents but few objects of importance. Its earlier name was COLLIS HORTULANUS, or HORTULORBIS, derived from the gardens which covered it; and it was not till a late period of the empire that it obtained the name of Mons Pincus, from a magnificent palace of the Pincian family which stood upon it. (Urlichs, Bauchr. vol. iii. part. ii. p. 572; Rom. Top. p. 156.)

This DOMUS PINCINATA is rendered interesting from
its having been the residence of Belisarius during his defence of Rome. It is the same building mentioned by proconsul Tarquinius. The name of the area
(Procer., B. G. ii. 8.; Anastasius, V. Flor. pp. 104, 106, Blanch.) The part of the hill included within the later city was bounded by the wall of Auqelian, by the valley which separates the Pincian from the Quirinal, and by the Campus Martius on the west.

The most famous place on the Pincian was the Gardens of Lucullus. Their situation is determined by a passage in Frontinus, from which we learn that the arches of the Aqua Virgo began under them. (Ag. 2.) This must have been in the street called Capo le Case, since the arches are in existence from that spot to the Fontana di Trevi. (Canina, Itin. p. 395.) The early history of these gardens is obscure. They were probably formed by a Lucullus, and subsequently came into the possession of Valerius Asiaticus, by whom they were so much improved that Messalina's desire of possessing them caused the death of Valerius. (Tac. Ann. xi. 1, 32, 37.) They appear to have been called after him "Horati Asiatici" (Becker, Hist. p. 321.) They were in state, but we are told before, that they may sometimes have borne the name of "Horati Valeriani." They were the scene of Messalina's infamous marriage with Silius (Juv. S. x. 334) and of her death by the order of Claudius. (Tac. Ann. xi. 37.) The gardens remained in the possession of the imperial family, and were reckoned the finest in the land. (Plut. Lucull. 39.) The family of the Domitii, to which Nero belonged, had previously possessed property, or at all events a sepulchre, on the Pincian; and it was here that the ashes of that emperor were deposited. (Suet. Ner. 50.) Popular tradition places it on that part of the hill which overhangs the church of S. Maria del Popolo near the gate of the same name.

XIII. The Campus Martius, Circus Flaminius, and Via Lata.
The whole plain which lies between the Pincian, Quirinal, and Capitoline hills on the E. and the Tiber on the W.,—on which the principal part of modern Rome stands,—may be designated generally by the name of Campus Martius, though strictly speaking it was divided into three separate districts. It is narrow at the northern part between the Pincian and the river, but afterwards expands to a considerable breadth by the winding of the Tiber. It is terminated by the approach of the latter to the Capitoline hill, between which and the street a part of the wall forming its southern boundary anciently ran. It was cut through its whole length by a straight road, very nearly corresponding with the modern Corso, running from the Porta Flaminia to the foot of the Capitol. The southern part of the district lying between this road and the hills formed, under the name of Via Laba, the 7th of the Augustan Regions; but so far it extended to the N. cannot be determined. From its northern boundary, wherever it may have been, to the Porta Flaminia and beyond that gate, the road before described was called Via Flaminia. The southern portion of the Campus Martius lying between the same road and the Tiber, as far N. as the modern Piazza Navona and Piazza della Rotonda, was called the Circus Augustus, under the name of Circus Flaminius.

In the earlier times all this district between the hills and the river was private property, and was applied to agricultural purposes. We have already pointed out in the former part of this article, how, after the expulsion of the Tarquins, the Campus Martius was assigned, or rather perhaps restored, to the public use. But the southern portion of the plain appears still to have belonged to private owners. The most considerable of these possessions was the Flamenia, or Circus Flaminius, which, however, must soon have become public property, since we find the part assemblies of the people here under the decemvirs. (Liv. iii. 54.) Among these private estates must have been the Aeres Cattii, in which was a fountain whence the stream called Petronia flowed into the Tiber, and seems to have formed the southern boundary of the proper Campus Martius (Petronia annisa est in Tiberim perfingitur, quam magisteri suscipit transversum cum Campo quid agere volunt,” Fest. p. 250; cf. Paul. Dia. p. 45); also the Campus Tiberinii, the property of the vestal Taricia, or Saffetia, which she presented to the people. (Plin. xxxiv. 11.)

We shall begin the description of this district from its southern side; that is, from the Servian Wall to the Porta Maggiore. Immediately before the Porta Carmentalis lay the Forum Olimtorium. It was, as its name implies, the vegetable market. (Var. L.L. v. § 145.) The Equestrian Hermaphroditus, or bronze statue of an elephant, which stood near the boundary of the 8th Region (v, Noticia) has by some topographers been connected with this forum, merely, it would seem, from the epithet hermaepondion: but there is nothing to show that any such space had here a decided separation between the 8th and 9th Regions. There were several temples in the Forum Olimtorium, as those of Spes, of June Sospeta, of Piaetas, and of Janus. The Temple of Spes was founded by M. Atilius Calatinus in the First Punic War. (Tac. Ann. ii. 49; Cic. N. D. i. 33; Liv. xxxiv. 62.) It was destroyed by fire which devastated this neighbourho during the Second Punic War (Liv. xxiv. 47), and though soon rebuilt, was again burnt down in B. C. 30; after which the restored temple was dedicated by Germanicus. (Tac. i. c.) The Temple of Juno was consecrated by C. Cornelius Cathlgus in B. c. 154, and is actually named the Temple of Juno on the names of Sospeta and Matuta applied to this deity (xxxii. 30, xxxiv. 53); and it is difficult to decide which epithet may be the correct one. The Temple of Pietas is connected with the well-known legend of the Roman daughter who nourished her father (or mother) when in prison with the milk of her breast, and is said to have resided on the spot where the temple was erected. (Pestus, p. 209; Val. Max. ii. 5.§ 1.) It was dedicated in B. c. 180 by the son of M. Acilius Glabrio, in purrinance of a vow made by his father, on the day when he engaged king Antiochus at Thermopylae. (Liv. xli. 34.) It was pulled down in order to make room for the theatre of Marcellus. (Plin. xxxvi. 38.) There appears, however, to have been another temple of Pietas in the Circus Flaminius itself. (Jull. Obs. 114.) Close by was the Temple of Janus, to which we have already adverted in the former part of this article. The greater portion of the Forum Olimtorium must have been occupied by the Theatre of Marcellus, of which I will speak in some other section; and it may therefore be doubted whether it continued to serve the purposes of a market when the theatre was
erected. On the Forum Oltorium also stood the Columna Lactancia, so called because children were provided with milk at that spot. (Paul. Dial. p. 118.) The supposition that there was likewise a Forum Piscarium in this neighbour-
hood rests only on a doubtful reading in Varro. (L. L. v. § 146.)
The Campus Flaminius began at an early period to be occupied with temples and other public build-
ings. One of the most ancient and renowned of the former was the Temple of Apollo. The site appears to have been sacred to that deity from very early times, and was called Apolloena, probably from a altar which stood thereon. (Liv. iii. 63.) The temple was dedicated in B.C. 450, in conse-
quence of a vow made by some of the nobles after a most terrible pestilence. (Liv. iv. 25. 29.) It remained down to the time of Augustus the only temple of Apollo at Rome, and must have been of considerable size, since the senate frequently assembled in it. It lay between the Forum Oltorium and the Circus Flam-
inius, or, according to Pliny's designation, which appears about the same time as the temple of Minerva, close to the Porticus Octaviae. (Ascon. ad Cic. in Top. Cons. p. 90; Orelli; Plin. xxxvi. 5. s. 24.)
Another celebrated and important temple was the Aedes Bellonae, since it was the chief place for assembling of the senate when it was necessary for them to meet outside of the pomerium; as, for instance, when the Senate was preparing for a war, or taking the strategy of a problem, or for the reception of foreign ambassadors whom it was not advisable to admit into the city, and other similar occasions. Close to it was one of the three Scaenacula mentioned by Festus (p. 347). The temple of Bellona is said to have been built in pursuance of a vow made by Appius Claudius Caecus, in the battle against the Etruscans with T. Manlius (Liv. xix. 19); but according to Pliny (xxxv. 8) it was built by Appius Claudius Regillensis, two centuries earlier, who placed the images of his forefathers in it, B.C. 494; in which case the vow of Appius Claudius Caecus must have been accomplished by restoring the former temple. In front of the temple lay a small artificial lake, called the Lago Foglia, so called because it was the spot whence the Tiber threw a lance in the ceremony of declaring war. When the war with Pyrrhus broke out this custom could not be observed in the usual manner by throwing the lance into the enemy's country; wherefore, a captured soldier of Pyrrhus's was made to buy a piece of ground near the temple, which symbolized the territory of the enemy; and into this the lance was flung on all subsequent occasions of declaring war against a people whose country lay beyond the sea. (Serv. ad Aen. ix. 53.) This custom was observed as late as the time of Marcus Aurelius. (Dion Cass. lxi. 53.) There are two points in dispute about this temple: first, whether the area containing the Columna Bellica stood before or behind it; and secondly, whether the temple itself stood at the eastern or western end of the Circius Flaminius; which latter question also concerns the site of the temple of Hercules Custos, as will be seen from the following lines of Ovid (Fast. vi. 208): —
"Prosperg a temple summum brevis area Circum: Et ibi non parvae parvae columnas narrant. Hinc solebat manu, bellis praebentibus, multi, in regem et gentes quum placat arma capi. Altera parva Circe custodie sub Hercule tuta est Quod deus Euboico carmine munus habet."

In the first line Becker (Hermdb. p. 607) reads "a targa," with Merkle, instead of "a templo," which is the reading of Heinsius, and of most editions, and thus places the area behind the temple. But this was not the usual situation for an area, and there is express authority that the column stood before the temple. (Paul. Dial. p. 53; Serv. loc. c., where Becker admits that we should read "ante aedem," &c. "prae templis," &c. and further point respecting the site of the temple depends on whether "summus circus" means the part where the caryatides were, or the circular end. Becker adopts the former meaning, and consequently places the temple of Bellona at the eastern end of the circus, and that of Hercules Custos at the western end. Unless we are prepared to admit a mistake in support of his view Salmassius, ad Solis., p. 639, a.; "Parc circii, ubi metas ultimae superior dictatur; inferior ad caryatides." (Ascon. p. 31.) This is a point that is not altogether established; but Becker's view seems in this case the more probable one, as we will appear a little further on, when we come to treat of the Vibe Octaviae. The Circus Flaminius itself, which will be described in another section, lay under the Capitol, on which side its caryatides were, and extended in a westerly direction towards the river. Between it and the theatre of Marcellus lay the Porticus Octaviae,—which must be carefully distinguished from the Octaviae, built by C. Octavius, enclosed Temples of Jupiter Stator and Juno. This portico occupied the site of a former one built by Q. Cascius Metellus, after his Macedonian tri-
umph, and called after him Porticus Metellina. It seems most probable that the two temples before alluded to were in existence before the time when Metellus erected his portico; but the notices on this subject in ancient authors are obscure and contradictory. (Becker, Hermdb. p. 608, seq.)

There can be no doubt, however, that the Porticus Ocatiae superseded that of Metellina. (Plin. xxxiv. 14; cf. Plut. C. Gracc. 4.) It was erected by Augustus, and dedicated in the name of his sister; but at what date is uncertain. (Suet. Aug. 29; Ov. A. A. 449; Vir. Cons. 139.) The remains of the latter, which was destroyed in the great fire in the reign of Titus, with all its literary treasures. (Dion Cass. xliii. 43, lviii. 24; Suet. IIl. Gramm. 31.) This library was probably in the part called the "Schola in porticus Octaviae," and, like the Palatine library, was sometimes used for assembling of the senate. (Plin. xxxiv. 10. s. 114, xxxvii. 5. s. 29, s. 38; Dion Cass. iv. 8.) Hence, it was even called Octavia Curia, and sometimes Octavia Opera. The church of S. Angelo in Pescaria now stands opposite to its principal entrance towards the river.

Close to the Porticus Octaviae, on its western side, lay the Porticus Philippa, enclosing a tem-
pie of Hercules Muralbum. This temple was built by M. Fulvius Nobilior, the conqueror of the Astolians (Cio. Arch. 11), and rebuilt by P. Marcius Philippus, the step-father of Augustus, who also surrounded it with the portico. (Suet. Aug. 29.) The name of the temple does not signify, as Becker supposes (Hermdb. p. 618), that it was dedicated to Hercules and the Museus, but to Hercules as leader of the Museus (Metam. 2), since he appears as depending on Hercules, as appears from coins of the gens Pomponia, where he is represented in that character, with the legend HERCVLVR MURAL-
BVM, as well as from an inscription in Gruter (mxxx., 3 x.)
ROMA.

5) HERCVLI . MVBRVM . PVTVS (Urbica, Rom. Topogr. p. 140, and Annot. p. 32). Indeed Eumemius expressly says that Fulvius Nobilior when in Greece had heard “Herculum Musagetum esse comitum ducecumus Musarum” (pro Inst. Scrol. Aug. p. 195, Art.); and we learn from Ovid that the statue of Hercules represented him with a lyre (Fast. vi. 810):

“Annuit Ailecas, increpatique lyram.”

The vicinity of the temple and portico is indicated in Martialis (v. 49. 8). It is supposed that the THEATRUM BALBI lay close to the western side of this portico, and a little farther on, opposite the round end of the circus, but rather to the north of it, the THEATRUM POMPEII; of which latter there are still some remains at the Palazzo Pio. Pompey’s theatre must have lain close to the boundary between the Campus Martius and Circus Flaminius since Pliny mentions that a colossal statue of Jupiter, erected by the emperor Claudius in the Campus, was called Pompeianus from its vicinity to the theatre (“Talis in Campo Martio Jupiter a Divo Claudio Cassare dicitur, qui vocatur Pompeianus a vicinitate theatri,” xxxiv. 18). The same thing might also be inferred from Cicero (“Quid enim loci naturae afferte potest, ut in portico quem in Campus Pompeiano de Fate, 4.” Hence it would appear that the boundary of the two districts, after proceeding along the northern side of the Circus Flaminius, took a north-westerly direction towards the river. The PORTICUS POMPEII adjoined the aecusa of his theatre, and afforded a shelter to the spectators in the same weather. (Urb. Topogr. p. 675, Ronc.) But what conferred the greatest interest on this group of buildings was the CURIA POMPEII, a large hall or hexasca in the portico itself, sometimes used for the representation of plays as well as for assemblies of the senate. It was here that Caesar was assassinated, at the base of Pompey’s statue; an event which caused it to be regarded as a locus sacer, and to be walled up in consequence. (Cic. Dei. ii. 9; Dion Cass. xlv. 16. 52; Sest. Cass. 80. 88; Plut. Brut. 14, Cass. 66, &c.) The statue of Pompey, however, was first taken out by order of Augustus, and placed under a marble arch or Janus, opposite the portico. (Sest. Aug. 31.) It is a question whether the portico styled HACATO-STRUM to the west, having a hundred columns, was only another name for the portico of Pompey, or quite a distinct building. It is sometimes mentioned in a manner which would seem to intimate that it was identical with the Porticus Pompeii. Thus both are said to have had groves of plane-trees (Prop. ii. 32. 11), and to have been consumed in fire at the same time. (Eur. Chir. p. 675, Ronc.) The following lines of Martial, however, appear to show that they were separate, but adjoining buildings (ii. 14. 6):

“Inde petit centum pendentia tecta columnis;
Innec Pompeii dona nemusque duplex”

From these lines, and from two fragments of the Capitoline Plan, Canus has correctly inferred that there were two distinct porticoes, and that the Hacatostrum adjoined the N. side of that of Pompey. (Indics. p. 373.) Pompey also built a private dwell- ing-house near his theatre, in addition to the house which he possessed in the Carina. The former of these seems to have been situated in some gardens.

(Plut. Pomp. 40. 44.) We find other HORTI POMPEII mentioned with the epithet of superiores, probably from their lying on the Pincian hill. (Ascon. ad Cic. Afr. Arg. p. 37, and c. 25. p. 50, Orell.)

Near the theatre of Pompey was also the THEATRUM BALBI, which, as we have said, must be carefully distinguished from the Porticus Pompei. It was a double portico originally erected by Ca. Octavius after his triumph over Perusia. It was likewise called Corethusa, from its columns being adorned with bronze capitals. (Plin. xxxiv. 7: Vell. Pat. ii. 1; Fast. p. 178.) Augustus rebuilt it, but dedicated it again in the name of its founder. Also near the theatre was the TRIBUNAL ARCH OF TIBERIUS, erected by Claudius. (Suet. Claud. 11.)

Other temples in the district of the Circus Flaminius, besides those already enumerated, were a TEMPLE OF DANA, and another of JUNO REGINA, —different from that of Juno in the Porticus Octavia — both dedicated by M. Asinius Legatus c. 179. (Liv. xii. 59.) AN ACEX FORTUNAE EQUSTRI VOWED by Q. Fulvius Flaccus in a battle against the Celtsiberians, b. c. 176. (Liv. xl. 40, 44, xii. 3, 10.) It stood near the theatre of Pompey in the time of Vitruvius (ii. 3. 5, 2, Schn.), but seems to have disappeared before that of Tacitus. (Dion Cass. lxxvi. 5.) The temple of Venus Equina, by D. Junius Brutus Calliachus (Plin. xxxvi. 5. s. 26), one of NEPTUNI, cited as “delubrum Ca. Domitii” (Hb.; Gruter, Inscr. cxcviii. 5); one of CAPTOR AND POLLUX (Vitr. iv. 8. 4); and probably also one of VULCAN. (Paus. Capras. x. 5. 3.) Some of these last, however, were perhaps mere records, mere names.

A few profane objects will close the list of public buildings in this quarter. THE STABULI IV. FACIUMON of the Notitia must have been the stables in which the horses of the four factions or colours of the circus, alba, prasina, ruana, and veneta, were kept. Domitian added two more colours, the aurata and purpurea, and another reading of the Caricae mentions six stables, whilst the Notitia presumably erroneously — names eight; but it seems most probable that there were only four. (Peller, Regiones, p. 167.) Some of the emperors paid great attention to these stables. Tacitus represents Vitellius as building some (Hist. ii. 94); and Caligula was constantly dining and spending his time in the stables of the Great Stabulum. (Suet. Cal. 53.) The stables in question were probably situated under the Capitol, near the carceres of the Circus Flaminius. Between the Porticus Philippi and the theatre of Balbus lay two PORTICUS MINUCIA, styled respectively VETUS and FRUMENTARIA, both built by Minucius who was consul in b. c. 111. (Vell. Pat. ii. 8.) The Frumentaria appears to have been a large council-place in which the tesserae were distributed to those entitled to share the public gifts of corn. (Appul. de Afrar. extr. p. 74. 14, Elm.; cf. Cic. Phil. ii. 84; Lapp. Com. 16.) The CHRYSTAL BALBI mentioned in the Notitia was probably a peculiar species of portico, and most likely attached to the theatre of Balbus. Some were differen from a portico by having one of its sides walled, and by being covered with a roof, in which were windows. (Urbica, Besbr. vol. iii. pt. ii. p. 62.)

Such were the public buildings in the district called Circus Flaminius; immediately to the N. of which lay the CAMPUS MARTIUS, sometimes called merely Campus. The purposes to which this plain
was applied were twofold; it served for gymnastic and warlike exercises, and also for large political assemblies of the people, as the comitia and conscribes. At first it must have been a completely open field with a number of few sacred groves, as the state owned it; and it was not till the 6th century of the city that regular temples began to be built there. By degree it became covered with buildings, except in that part devoted to the public games and exercises, and especially the equites, or horse-races, instituted by Romulus in honour of Mars. (Varr. L. L. vi. § 31; Disc. p. 81.) The exterior of these temples is signed by Ovid (Fast. iii. 519) :

"Altera grammesque spectabat Equites campo,
Quam Tiberis curvus in latum urgeat aqua.
Qui tamen ejecit saepe tenebrior aestas.
Caesius accepit pulvereus laudis."

The part of the Campus the side of which may be said to be "pressus upon" by the stream of the Tiber, is that lying between Flaminia Nova and the bridge of S. Angelo, where the ground forms an angle opposite to the descending waters. Here also was the bathing-place of the Roman youth. (Hor. Od. iii. 7; 25; Comp. Cic. pro Cest. I.)

Some writers have assumed that this spot was reserved for the forming and dividing men called CAMPO MINOR, while the remainder of the plain was called CAMPO MAJOR. (Pferrl, Regiones, p. 160; Urrich, Röm. Morgen, p. 12; Canini, Jdouc, pp. 884, 413.) But this distinction does not appear to rest on adequate authority. It is derived from a passage in Cassius : "Te campo quaequevima minore," (iii. 15. 3); and from another in Strabo, quoted in the former part of this article, where, in describing the Campus Martius, he speaks of another field, or plain, near it (apar epi tou teatou kal Xalos teatou, kal stoud kai lein avdis Megalou, &c. &c.). But, as Becker observes (Ham. p. 599), Strabo has already described the Campus Martius as the usual place for gymnastic exercises, and therefore his Xalos teatou cannot be part of it just described. It seems most probable that he meant the Campus Flaminius, which still retained its ancient name, though for most part covered with the porticoes and other buildings which he describes; just as we have Moorfields and Goodman's Fields in the heart of London. The Campus Minor, though may have been the Campus Martialis on the Caesian; or, as Preller observes, the punctuation may be:—

"Te campo quaequevima, minore
Te in circo."

The ancient loci religiosi on the Campus Martius were the following:—The PALUS CAPITARES, or CAPRARAE, where Romulus is said to have disappeared during the holding of an assembly of the people: its situation is unknown; but it does not seem improbable, as Preller suggests (Regiones, p. 137), that its site may have been marked by the AERIDICA CAPRARIA, mentioned in the Notitia in the 7th region, and which were first traced by Gellius, though he may have lain somewhere under the Quirinal. (Liv. i. 16; Or. Fast. ii. 429, &c.) A place called TARCENTUM, or TARENTUM, which appears to have been volcanic (campus ignifer), with a subterranean AEA DIISIS PATRIS ET PROSERPINARUM, where the indi sacellae were performed. The legend of Veluine and his children, and an account of the institution of the games, will be found in the Dictionary of Antiqui-

3 H 2
of those fields in the district called Vaticana: "Armill quattuor suas jugera in Vaticano, quae præter Quinctia aequitatem, Cincinnati violentius dictaturam" (xviii. 4). That the Navallia were in the Campus Martius may also be inferred from Livy (xlv. 42): "Navis regis captae de Mace- donibus in usurata ante magnitudinis in Campo Martio subducta sunt"; and from Plutarch's ac- count of the return of the yokes from Cyprus, in which he relates that although the mag- nistrates and senate, as well as a great part of the Roman population, were ranged along both banks of the Tiber in order to greet him, yet he did not stop the course of his vessels till he arrived at the Navallia (C. Ast. 39); a circumstance which abates the truthfulness of the story, since the upper part of the stream's course through the city. Hence, though we cannot define the boundary between the Janiculum and the Vatican, nor consequently the exact situation of the Praet Quinctia, yet the site fixed upon by Becker for the Navallia, namely, between the Phasis Navona and Pons Sublicius, seems sufficiently probable. Morellius is disposed to place them rather lower down the stream, but without any adequate reason (Regiones, Anh. p. 248).

It was Caesar who began the great changes in the Campus Martius to which we have before alluded. He had at one time meditated the gigantic plan of diverting the course of the Tiber from the Milvian bridge to the Vatican hill, by which the Ager Vaticanus would have been converted into a new Campus Martius, and the ancient one appropri- ated to building; but this project was never carried into execution. (Cic. ad Att. xiii. 33.)

The only building which he really began in the Campus was the Septa Julia. It has been said, when trestling the bridge to the Vatican hill, by which the Circus Flamininus was appropriated to the holding of the Comitia Centuriata. In early times it was enclosed with a rude kind of fence or boundary, probably of hurdles: whence, from its resemblance to a sheep-fold, it obtained the name of Ovilia, and subsequently of Septa. (Livy xxvi. 23; Juv. vi. 526; Serv. ii. 144; de mul. iv. 24.) For the present, however, we shall confine our remarks to the primitive fence Caesar substituted a marble building (Septa mammonea), which was to be surrounded with a portico a mile square, and to be connected with the Villa Publica. (Cic. ad Att. iv. 16.) It was probably not much advanced at the time of Caesar's assassination; since we find that it was continued by the emperor Augustus, and finished by Agrippa (Dio Cass. liii. 23; but whether it was completed on the magnificent plan described by Cicero cannot be said. Its situation may be deter- mined by a passage in Frontinus, in which he says that the arches of the Aqua Virgo ended in the Campus Martius in front of the Septa. (Ag. 22.) These arches, which as we have seen before, were begun under the governor of Lucullus on the Pincian, were conducted to the baths of Agrippa. Donati men- tions that remains of them were discovered in his time in front of the church of S. Ignazio (near the Collegio Romano). (De Urb. R. iii. 18.) This coincides with remains of the portico of the Septa existing near the Palazzo Doris and church of S. Maria in Via Lata, in the Convent (Canina, Indice 400); and we may therefore conclude that the Septa Julia stood at this spot. The portico must have enclosed a large open space where the assemblies were held, and in which gladiatorial shows, and on one occasion even a naumachia, were exhibited. (Suet. Aug. 43, Cal. 18, Ner. 12; Dio Cass. iv. 8, liz. 10.) There was of course a suggestion or restra, for haranguing the people. (Dio Cass. Ivi. 1.) The Septa were destroyed in the great fire under Titus (Dio Cass. Ivi. 24), but must have been restored, since, in the time of Domitian, when they had lost their political importance, they appear to have been used as a market, in which the most valuable objects were exposed for sale. (Mart. ix. 60.) They appear to have undergone a subsequent restoration under Hadrian. (Spart. Hadr. 19.)

The Villa Publica adjoined the Septa Julia, and must have been on its S. side, since it is described by Varro (R. R. iii. 2) as being "in Campo Martio et extremo et extremo" and must have extended to the temple towards the Septa and the Circus Flamininus, near the Palaestra della Vesta. The original one was an ancient and simple building, and is mentioned by Livy (iv. 22) as early as the year 436 B.C. It was used by the consuls for the livery of troops, and by the censores for taking the census (Var. i. 2); also for the procession of the aediles, which was not thought advisable to admit into the city, and of Roman generals before they obtained permission to enter the gates in triumph (Liv. xxx. 21, xxxiii. 24, &c.). It was the scene of the massacre of the four Marian legions by Sulla (Val. Max. ii. 2. § 1; Liv. Epit. ixxxviii.; Strabo. v. 249.) A passage in Lucan respecting this horrible transaction confirms the position of the Villa Publica close to the Septa (ii. 115):—

"Tunc flos Hesperiae, Latii jam soles juvenates
Concitt et miserae maculavit Ovilia Romae."  

And another passage in Plutarch shows that it must have adjoined the Circus Flamininus on the other side (Ου μὴν ἢδη ἐκτὸς ἡ Ρώμη τὸς παρεγειφέντος εἰς ηὔσαστον κλημον ἔφερεν πάρα τὸν ἐνεμομον, ἀλλ' ἡν ἡ στρατεύματος εἰς τῆς Ἑρωδον ἱππο, Sull. 30.) Seneca (de Clem. i. 12) likewise mentions the assembling of the senate in the neighbouring temple of Bellona, where the cries of the massacred soldiers were heard; and Pliny, with no great reserve in such matters, says that he had no doubt that the temple in question was situated at the eastern end, or towards the cornices, of the Circus Flamininus, since the Septa and Villa Publica must have lain towards that end of it nearest to the Capitol. The simple building described by Varro must have been that rebuilt in the censorship of S. Aelius Paulinus and C. Cornelius Cethegus, a. c. 194. Caesar could hardly have done anything to it, since a coin of C. Fonteius Capito, consul in a. c. 53, testifies that the latter either restored or rebuilt it.

The name of M. Vipsanius Agrippa, the son-in-law of Augustus, is connected with the principal changes and the most important buildings in the Campus Martius. The latter consisted of the Pan- theon, the thermæ, a portico, and the large estacum called the Diribitorium. The Campus Agrippae and its buildings will be described when we come to treat of that part of the district under consideration called Via Latina.

The Pantheon of Agrippa, which is still in so good a state of preservation that it serves for public worship, is one of the most important monuments still standing in ancient Rome. An inscription on the frieze of the portico testifies that it was erected by Agrippa in his third consulate; whilst another below records repairs by the emperors Septimius Severus and Caracalla. From
Excellent state of preservation partly to the solidity of its construction, partly to its having been consecrated as a Christian church as early as the reign of Phocas, and the name of the Pantheon in connection with that of the Argonautarum, we know nothing further.

Augustus also erected a few monuments on the Campus Martius. Among them was the Solarium Augusti, an obelisk which now stands on Monte Citorio, which served as a gigantic gnomon, and an immense marble flooring that surrounded it, exhibited not only the hours, but also the increase and decrease of the days (Plin. xxxvi. 15). In the northern part of the Campus, between the Via Flaminia and the Tiber, he caused to be constructed during his life-time that superb mausoleum, a description of which by Strabo has already been cited in the former part of this article. This district had for some time previously served as a burying-place for the most distinguished persons. Among others buried near this spot were Sulla, Caesar together with his aunt and daughter, and the two consul Hiurius and Pansa, who fell at Mutina. Several members of the family of Augustus had been entombed in the mausoleum before the subterranean structure of Augustus himself were deposited within it: as Marcellus, Agrippa, Octavia, and Drausus (Dion Cass. lili. 30; Virg. Aem. vi. 873, seq.; Ov. Cons. ad Liv. 67). By the time of Hadrian it was completely filled; which caused him to build a new one on the opposite side of the river (Dion Cass. lxix. 23).

There are still considerable remains of the monument of Augustus. The site on which the sepulchre of the Caesars stood is now converted into a sort of amphitheatre for spectacles of the lowest description: sic transit gloria mundi. It is doubtful whether a third building of Augustus called Porticus ad Nationes, or xiv. Nationes, stood in the Campus Martius or in the Circus Flaminius. It appears to have been near the theatre of Pompey, and contained statues representing different nations (Plin. xxxvi. 5, s. 4; Serv. ad Aen. viii. 721.)

Near the Mausoleum appears to have been a portico called Via Tecta, the origin of which is un-
known. Its situation near the place assigned is determined by the following passage in Seneca's Apocolocyntosis: "Injicit illi (Clando) manum Talithybius deorum nuntius et tradit capite obvoluto, ne quis sum possit agnosco, per Campus Martium et per Tiburnum Testamentum desendet ad inferos" (p. 389, Bip.). If this descent to the infernal regions was at the subterranean altar of Pluto and Proserpine before mentioned, it would go to fix the situation of the Tarentum in the northern part of the Campus; but this, though probable, is not certain. The Via Tecta is mentioned once or twice by Martial (iii. 5, viii. 72).

Among the other monuments relating to Augustus in the Campus Martius, was an ARA PACIS, dedicated to Augustus on his return from Germany, B.C. 13. (Dion Cass. liv. 25; Ov. Fast. iii. 882; Fast. Proen. III. Kal. Feb.) The ARA FORTUNAE Redux was another similar altar (Dion Cass. liv. 19); but there is nothing to prove that it was on the Campus Martius.

In the reign of Augustus, Statilius Taurus erected an AMPHITHEATRE on the Campus,—the first built of stone at Rome; but its situation cannot be determined. (Dion Cass. li. 23; Suet. Aug. 29.)

A long interval ensued after the reign of Augustus before any new public buildings were erected on the Campus Martius. Caligula began, indeed, a large amphitheatre near the Septa; but Caligula caused it to be pulled down. Nero erected, close to the baths of Agrippa, the THEATRUM NECROMANÆ, which seem to have been subsequently enlarged by Alexander Severus, and to have obtained the name of THEATRUM ALEXANDRINÆ. The damage occasioned in this district by the fire of Nero cannot be stated, since all that we certainly know is that the amphitheatre of Statilius Taurus was destroyed in it (Dion Cass. lixii. 18). The fire under Titus was considerably more destructive in this quarter (Id. lxvi. 24); but the damage appears to have been made good by Domitian. Among the buildings restored by him on this occasion we find the TEMPLES OF ISIS AND SERAPIS mentioned; but we have no accounts respecting their foundation. Their site may, however, be fixed between the Septa Julia and the baths of Agrippa, near the modern church of S. Maria sopra Minerva. Thus Juvenal (vi. 527):—

"A Mercis portabit aquas, ut spargat in sedem Isidis, antiquo quae proxima surgit Ovili."

(Cf. Joseph. B. Jud. vii. 5, § 4.) It was near the spot indicated that the celebrated group of the Nile was discovered which now adorns the Vatican (Braun, Museums of Rome, p. 160), together with several other Egyptian objects (Flaminio Vacco, Mem. nos. 26, 27; Bartoli, Mem. no. 112, &c.). Alexander Severus devoted much attention to these temples (Lampr. A. Ser. 258), and they must have existed till a late period, since they are enumerated in the Notitia.

Domitian also restored a temple of Minerva which stood near the same spot, the MINERVA CHALCIDICA of Cassiodorus (Chrom. sub Domiti) and of the Notitia. (Montf. Dicr. Ital. p. 298). It must have been the temple originally founded by Pompey in commemoration of his eastern victories, the inscription on which is recorded by Pliny (vi. 27). It was from this temple that the church of S. Maria just mentioned derived its epithet of sopra Minerva; and it seems to have been near this spot that the celebrated statue of the Giustiniani Palace, now in the Braccio Nuovo of the Vatican,
were in existence in the time of the Anonymous of Einsiedeln (Pfeller, Regiom. p. 171). The assumption that this place was occupied by a stadium built by Alexander Severus—in which case that of Domitian must be sought in some other part of the Campus—rests only on traditions of the middle ages (Canina, Indic. p. 392).

Trajan is said to have built a theatre in the Campus Martius, which, however, was destroyed by Hadrian. (Spart. Hadr. 8.) The same emperor probably erected what is called in the Notitia the Basilica Marciana (Marcianae), which was probably a temple in honour of his sister, Marciana. The Antonines appear to have adorned this quarter with many buildings. The Basilica Marciana (Marcianae) was perhaps erected by Antoninus Pius, and consecrated to Matidia, the wife of Hadrian; as well as the Hadrianum, or temple to Hadrian himself, also mentioned in the Notitia. (Pfeller, p. 175.) The Templum Antonini and Columna Coclise were the temple and pillar erected in honour of M. Aurelius Antoninus. (Capitol. M. Ant. 18; Ann. Vict. Epit. 18.) All these buildings stood near together in the vicinity of the Piazza Colonna, on which the column (Columna Antoniniana) still exists. For a long while this column was thought to be that of Antoninus Pius, and was even declared to be such in the inscription placed on the pedestal during the pontificate of Sixtus V. But the sculptures on the column were subsequently perceived to relate to the history of Antonine the philosopher; and this view was confirmed not only by the few remaining words of the original inscription, but also by another inscription found in the neighbouring Piazza di Monte Citorio, regarding a permission granted to a certain Adrastus, a freedman of Septimius Severus and Caracalla, to erect a small house in the neighbourhood of the column, as curator of it. This inscription, which is now preserved in the corridor of the Vatican, twice mentions the column as being "Divi Marci." (Canina, Indic. p. 417, seq.) The column is an imitation of that of Trajan, but not in so pure a style of art. Both derive their name of cochlea from the spiral staircases (cochlea, κόχλαι) in the interior of them. (Isid. Orig. xii. 2, 38.) The Columna Antonini Pius was a large pillar of red granite, erected to him, as appears from the inscription, by M. Aurelius Antoninus the Younger. It was discovered in the portico of the Capitolium of Clement XI., in the garden of the Palazzo di Monte Citorio. It broke in the attempt to erect it in the Piazza di Monte Citorio, where the obelisk now stands; but the pedestal with the inscription is still preserved in the garden of the Vatican. (Canina Indic. p. 419.) The sculptures on the pedestal represent the Apotheosis of Antoninus Pius and Faustina.

The Thermæ Commodianæ and Alexanderine will be treated of in the section on the baths. After the time of Alexander Severus we find but few new buildings mentioned in this district. Gordian III. is said to have entertained the design of building an enormous portico under the Pincian hill, but it does not appear that it was ever executed. (Capitol. Gord. III. c. 32.) Respecting the Porticus Flaminia, see the article Posidius. Some porticos near the Pons Aelius, which appear to have borne the name of Macriniæ, were terminated by the Triumphal Arch of Gaius, Valentinian, and Theodosius; the inscription on which will be found in the Anonymous of Einsiedeln, and in Gruter (clxxii. 1). Claudius, who was prefect of the city under Valentinian I., erected a portico near the baths of Agrippa, which he called Porticus Bonti Evertus, after a neighbouring temple with the same name. (Ann. Mar. xxix. x.) With regard to this temple we have no information.

We shall now proceed to that part of the district under consideration comprised in the 7th Region of Augustus, and subsequently called Via Lata, from the road which bounded its western side, and which formed the southern extremity of the Via Flaminia. The most important topographical question connected with this district is the situation of the Campus Agrrippae, and the buildings connected with it. We have already shown from the situation of Martial's house, as well as from the probable site of the temple of Sol, that the Campus Agrippae must have lain under the western side of the Quirinal, and not under the Pincian, where Becker places it. It is probable, too, that it lay on a line with the Pantheon and thermae of Agrippa, although divided from them by the Via Lata; and hence Canina correctly describes it as facing the Septa (Indic. p. 215), whilst Ursich and Pfeller, in like manner, place it between the Piazza degli Apostoli and the Fonteone Trento. (Becker, vol. iii. p. 112; Regiomont. p. 138.) The Campus Agrrippae contained gardens, porticos, and places for gymnastic exercises, and was, in short, a kind of Campus Martius in miniature. It was also a favourite lounge and promenade. (A. Gell. xiv. 5.) It appears from a passage in Dion Cassius, that the Campus was not finished before Agrippa's death, and that it was opened to the public by Augustus (iv. 8.) It contained a Porticus Polae, so named after Agrippa's sister Polla or Polla; which is probably the same as that allotted to by Martial, in some passages before quoted, under the name of Vipaniana. The latter name seems to be corrupted in the Notitia into Porticus Oppianica. Becker (Handb. p. 506) would identify the Porticus Polae with the Porticus Euvae; but they seem to be different structures. (Ursich, Röm. Topogr. p. 139.) The latter, which derived its name from a picture of the rape of Europe, is frequently mentioned by Martial (i. 14, iii. 20, xi. 1). Its situation cannot be determined; but most topographers place it in the Campus Martius, among the other buildings of Agrippa, Indic. p. 392; Ursich, Röm. Marsfeld, p. 116.) It appears from the Notitia that the Campus Agrippae contained Castra, which, from the Catalogue Imperial, Vienna. (t. ii. p. 246, Ronc.), appear to have been dedicated by Aurelius; but the Porticus Vipaniana served as a
sort of barracks as early as the time of Galba. (Tae. H. l. 31; Plut. Golb. 25.)

Several objects mentioned in this district are doubtful as to site, and even as to meaning, and are not important enough to demand investigation. It contained TRIUMPHAL ARCHES OF CLAUDIUS AND M. AURELIUS. The latter subsisted in a tolerably perfect state near the Prima Porta in the Corso, till the year 1653, when pope Alexander VII. caused it to be pulled down. Its relics still adorn the staircase of the Palazzo dei Conservatori. (Canina, Indice. p. 230.)

ARCH OF AURELIUS.

We shall conclude this section with noticing a very humble but very useful object, the FOERMUS BURNIUM. Bacon was an article of great consumption at Rome. It was distributed, as well as bread, among the people, and its annual consumption in the time of Valentine III. was estimated at 3,628,000 pounds. (Gibbon, Decline and Fall, vol. iv. p. 85, ed. Smith.) The custom of distributing it had been introduced by Aurelian. (Vopisc. Aedal. 25.) A country in which the people eat the cheapest meat betrays a low state of farming. The swine still abounds in Italy; but in ancient times the Eoman market was principally supplied from the forests of Lucania. The market was important enough to have its special tribune, and the "pigmens of the eternal city" ("Porcinarii Urbis soterrae") were considered such a useful body that peculiar privileges were granted to them. (Cod. xi. tit. 16; Not. Dignit. Part. Occ. p. 16; Gruter, Insor. exed. 4.) The market is alluded to in a sort of proverbial manner by Philostratus (Atte v. xal kouda phoas &u, bovev on avno geto. Heroic. p. 283. 19, ed. Kayser.) It is supposed to have stood near the present church of S. Croce dei Lamachis, which was substituted for that of S. Nicola a Porcellibus. (Canina, Indice. p. 209; Peller, Regions. p. 139.)

XIV. THE TRANSTITIBERINE DISTRICT.

Although the district beyond the Tibre formed one of the 14 Regions of Auguslus, and although part of it was enclosed with a wall as early as the time of Ancus Marcius, and was certainly included in that of Aurelian, yet, while it was considered a part of Rome, it never belonged to the Urbs, properly so called. The distinction be-

between Roma and Urbs was at least as old as the time of Augustus, and was thus laid down by Alfenus Varus: "Ut Alfenus sit, Urbs est Roma, qua muro cincteretur; Roma est etiam, qua continetia sedidit aquarum." (Digest. l. tit. 16. l. 87.) This circumstance rather tends to strengthen Niebuhr's opinion that Ancus Marcius only built a citadel on the Janiculum, and not across the river. [See above, Part II. Sect. l. sub fin.] The district in question is naturally divided into three parts, the Mons Janiculium (or Janiculum), the Mons Vaticano,—each with its respective plains towards the river,—and the Insula Tiberina. We shall begin with the last.

We have already mentioned the legend respecting the insula Tiberina through the corn belonging to the Tarquins being thrown into the river. In the year B. C. 291 the island became sacred to Ascanius. In consequence of a pestilence an embassy was despatched to Epidaurus to bring back to Rome the image of that deity; but instead of the statue came a snake, into which it was supposed that the god himself had transmi-
tered. As the vessel was passing the Tiberine island the snake swam ashore and hid itself there; in consequence of which a TEMPLE OF ASCANIUS was built upon it, and the island ever afterwards bore the name of the god. (Liv. Epit. xi; Ov. Met. xv. 739; Val. Max. i. 8. § 2; Dionys. v. 15; Suet. Aug. 6.) Such persons resorted to this temple for a cure; but it does not appear that there was any hospital near it, as was the case at Epidauros. There is no classical authority for the fact that the sides of the island were afterwards walled round in the shape of a ship, with the prow against the current, typifying the vessel which brought the deity; but it is said that vestiges of this substitution are still visible. (Canina, Indice. p. 574.) The island also contained a TEMPLE OF JUPITER and a TEMPLE OF FAUNUS, both dedicated in B. C. 193. (Liv. xxxiii. 43, xxxiv. 53.) The temple of Jupiter appears to have adjoined that of Ascanius. (Ov. Fast. l. 293.) It has been concluded, from the following verses of Ovid, that the temple of Faunus must have stood on the upper part of the island (Fast. ii. 193):—

"Idibus agrestis fenum altaria Fenni
Hic, ubi discretas insula rumpit aquas;"

but this, though a probable, is not a necessary in-
ference. SCAEO SANCUS, or Deus Fidius, seems also to have had a cellum here, as well as Thalattus, as the river-god is called in the Indiginitions, or religious books. (Fast. Amit. VI. Ied. Dec.) By a curious error the early Christian writers con-
formed the former deity with Simon Magnus, and thought that he was worshipping on the island. (Just. Mar. Apol. 2; Euseb. H. E. Vol. ii. 12.) After the building of the bridges which connected the island on either side with the shore, it seems to have obtained the name of "INTER DUO PONTES" (Plut. Popul. 8); and this part of the river was long famous for the delicious pike caught in it; which owed their flavour apparently to the rich feeding afforded by the proximity of the banks. (Plut. Popul. 8; Ma-

groth. Soc. ii. 12.) In the Acta Martiorum the island is repeatedly styled "Insula Lycosia;" it is at present called "Isola di S. Bartolomeo," from the church and convent of that name.

The JANICULUM begins at that point opposite the Campus Martius where the Tibre reaches farthest
to the W., whence it stretches in a southerly direction to a point opposite the Aventine. The name
clinus form of the name (Janiculum), through em-
ployed as a substantive by some modern writers,
seems to rest on no classical authority, and can only
be allowed as an adjectival form with mons or colile.
(Becker, Hist. p. 653.) The name Janiculum is usu-
ally derived from James, who is said to have had
an ewer or candle here. (Ov. Fast. i. 545; Macrobr.
Sat. iii. 16.) As the ridge runs in a tolerably straight
line nearly due S. from the point where it com-
menes, the curve described by the Tiber towards
E. leaves a considerable plain between the river
and the hill, which attains its greatest breadth at
the point opposite to the Forum Boarium. This was
the originalласина TRANSITERIBEREA. It appears
to have been covered with buildings long before the
time of Augustus, and was principally inhabited
by the lower classes, especially fishermen, tanners, and
the like, though it contained some celebrated gar-
dens. Hence the Ludus Piscatorum were held in this
quarter. (Ov. Fast. vi. 237; Fest. pp. 310, 238.)
It was the ancient Oneto, or Jews' quarter, which
necessarily opposed to it. (Pline, de Viet. ii. p. 668,
Mangy.)
The Regio Transtiberina contained but few tem-
ple or other public buildings. Of the temple of
Fons Fortuna we have already spoken when dis-
cussing the question respecting that of Paducita
Patricia [supra, p. 814]. Of other local religios
in the quarter, there is no information. The name
was the Lucus Feroniae, mentioned in the nar-
rowly the death of C. Gracchus. (Anu. Viet.
35; Plut. C. Gracch. 17.) Cicero con-
ected this grove with the Eumenides, or Furies
(Nat. Deor. iii. 18); but there is no account of
those Attic deities having been naturalised at Rome,
and we should rather infer from Varro that the grove
was consecrated to some Attic goddess.
(L. L. vi. § 19, Mull.) It was a uni-
versal tradition that Numa was buried in the Jani-
culum (Dionys. ii. 76; Plut. Numa. 28; Val. Max.
i. 1 § 12). Cicero, in a corrupt passage, places his
tomb "and proue a Fonti Aria" (or Fontis Aria)
(de Leg. ii. 28); but of such a deity or altar we
have no further account. We have the Lucus
Corincondarum Divum "mentioned by Paulus
Diaconus (p. 64, Mull.) as "trans Tiberim;" but
though the names of these goddesses are also found
in an inscription (Gruter, lxxxviiii. 14), what they
were cannot be told. Lastly, as the Bassia Cap-
tolina records a Vicus Larum Ruralium in this
district, we may consider that they had a sanctum
here.
Among the profane places trans Tiberim were
the Mucia Frata and the field called Codeta.
The farmer—the land given to Mucius Scacella by
the Senate as a reward of his valor (Liv. ii. 13)
—may, however, have lain beyond the district now
under consideration, and probably farther down the
Tiber. The Codeta, or Ager Codetanum, was so
named from a plant that grew there resembling a
horse's tail (coda) (Paul. Diacon. pp. 38 and 38
Mull.),—no doubt the Equisetis, or Equisetum
palustre of Linnæus. ("Invisa et equisetis est, a
similitudinibus equinae setae," Plin. xviii. 67. s. 4.)
There seems to have been a Codeta Major and a
Codeta Minor under consideration, and perhaps the
latter a naval battle in the latter, where he had formed
a lake (in minore Codeta defosso laco," Cas. 89)
Dion Cassius, on the other hand, represents this
trans Tiberim as taking place in the Campus Martius
(cæs. 89). Becker (Hist. p. 656, note) would
reconsider these opinions, ax that the Codeta Minor lay in the Campus Martius, and the
Codeta Major opposite to it, on the other side of
the Tiber. (Cf. Piller, Regiones, p. 218.) But
there seem to be some grave objections to this as-
sumption. It is not probable that two places
bearing the same name should have been on different
sides of the river. Besides, though we can, pro
mero district, as the Codeta evidently was, in the
Campus Martius, in the time of Caesar. Besides,
had the latter contained a place called Codeta Minor,
which must have been of considerable size to
afford room for the exhibition of a naval com-
bat,—we should surely have heard of it from some other
source. Becker adduces, in proof of his view,
another passage from Suetonius (B. c. 44), from
which it appears that Caesar contemplated building a
magnificent temple of Mars, on the site of the
lake, after causing it to be filled up; a project,
however, which does not seem to have been carried into
execution. Becker assumes that this temple must
have been in the Campus Martius; though
on what grounds does not appear, as we have pre-
Dated seen that there was a temple of Mars a long
way outside the Porta Capena, besides a subsequent
one in the forum of Augustus. We are, there-
fore, of opinion, that the word "Apelles," in Dion Cassi-
us, must be a mistake either of his own, or of his
librarii, and that the Campus Codetanum of the
Noticia must have lain rather below the city, on
the right bank of the Tiber. (Cf. Canina, Indice,
p. 566, seq.) The Notitia mentions a Campus
Bruttium in connection with the Campus Code-
tanum, but what it was cannot be said. Some have
conjectured that it was called after the Bruttii, who
were employed at Rome as public servants. (Paul.
Dio. p. 31.)
Near the same spot must have been the Horat
Casarum, which Caesar bequeathed to the Roman
people. (Suet. Cas. 83; Tac. Ann. ii. 41; Cia.
Phil. ii. 42.) According to Horace, they must have
lain at some distance:
"Trans Tiberim longus cubat is, prope Casarum
hortos."
(Stat. i. 9. 18.)
And it may be inferred from the situation of the
Temple of Fons Fortuna, which we have already
discussed [supra, p. 814], that they must have
been at about a mile's distance from the Portus
Portuensis. (Fast. Amil. VII. Kal. Jul.) It seems
probable that they were connected with the Campus
Casarum, where Augustus exhibited a nemastachis,
and where a grove or garden was afterwards laid
out. ("Navalis proeli spectaculodum populo dedit
trans Tiberim, in quo loco nunc nemastacrum est,
Casarum" Mon. Ancyri.) This would rather tend
to confirm the view that the codeta was in this
neighborhood. In Tacitus (Ann. xii. 56, "Ut quosdam
Augustum structura a Tiberiis fugisse nostro"") it
therefore probably to read sale for cis, which ancient form
seems to have been retained in designating the
trans Tiberiana district ("Diecibatur cis Tiberim et
§ 83, Mull.; Pompom. Dig. 1. tit. 2. 1. § 51.) The
Nemus Casarum seems to have been so called from
Casii and Lucii, or the Codeta Major and Codeta
Minor, or from the Codeta Codetanum which we are not to suppose that it occupied the site of
the lake excavated for the nemastachis, but was
planted round it as we learn from Tacitus ("apud
nemus quod navali stagno circumposuit Augustus." Ann. xiv. 15). There are several passages which show that the lake existed long after the time of Augustus. Thus Statius (Silv. iv. 4: 5):—

"Continuo dextrae flavi pete Tyrridias oras,
Lydia qui petant stagnum navale coercet
Rips, suburbanisque vadam praestuit hortis."

This passage likewise confirms the situation of the lake on the right, or Etruscan, bank (Lydia ripes) with the Nemus round it (cf. Suet. Tib. 72). It was used by Titus to exhibit a nemmacheia (Suet. Tib. 7; Dion Cass. i. c.); and remains of it were visible even in the time of Alexander Severus (id. iv. 10). Although the passage in the Mosa is

Angyrossena in which Augustus mentions this lake or basin is rather mutilated, we may make out that it was 1800 feet long by 1300 broad.

The Notitia mentions five Naumachiae in the 14th Region, but the number is probably corrupt, and we should read two. (Prerier, Regiones, p. 206.) We know at all events that Domitian also made a basin for ship-fights in the Transiberine district. (Suet. Dom. 4.) The stone of which it was constructed was subsequently employed to repair the Circus Maximus (ib. 5). That it was in a new situation appears from Dion Cassinius (4 η χειραμάτω των χρυσων, lvi. 8). It probably lay under the Vatican, since St. Peter's was designated in the middle ages as "apud Naumachiam." (Flav. Blond. Instaurat. R. i. 24; Anastas. V. Leo. III. p. 306, Blanck.; Monst. Diar. Ital. p. 291.) The nemmacheia ascribed to the emperor Philip (Aur. Vict. Cass. 38) was perhaps only a restoration of this, or of that of Augustus.

Among other objects in the district of the Janiculum, we may only mention the Horti Getae and the Castra Leptacarium. The former were probably founded by Septimius Severus, and inherited by his son Geta. We know at all events that Severus founded some baths in this district (Spart. Sept. Soc. 19; cf. Becker, de Meris, p. 127) and the arch called Porta Septrihania; and it likewise appears that he purchased some large gardens before his departure into Germany. (Spart. Tb. c. 4.) The Leptacorices were either sedan-chairmen, or men employed to carry biers, and their casta mensa nothing more than a station for them, just as we hear of the Castra Tabellarionium, Victimarium, &c. (Prerier, Regiones, p. 218.)

The Moun or Collier Vaticanus rises a little to the NW. of the Moun Janiculum, from which it is separated only by a narrow valley, now Valdese d'Inferno. The origin of the name of this district, at present the most famous in Rome, cannot be determined. The most common derivation is from a story that the Romans gained possession of it from the Etruscans through an oracular response (Vatum responso expulsis Etruscis, Paul. Disc. p. 379). We have already remarked that there is no ground for Niebuh's assumption respecting the existence here of an Etruscan city called Vaticos or Vaticena [see p. 734]. This district belonged still less then the Janiculum to the city, and was not even included in the walls of Aurelian. It was noted for its unhealthy air (Tac. H. ii. 93), its unfruitful soil (Cic. de Leg. Agr. ii. 35), and its execrable wine. ("Vaticana bibia, bibia venesum," Mart. vi. 92. 93; cf. 45.) In the Republican times the story is beautifully told by Livy (iii. 36) of the great dictator L. Quintius Cincinnatus who was saluted dictator here whilst cultivating his farm of four acres, the Prata Quintia, lends the only interest to the scene, whether it may belong to the romance of history or not. There were no buildings in this quarter before the time of the emperors, and almost the only use of any note in all antiquity was a sepulchre—the Maurolium or Moun Hadrian, now the Castello di S. Angelo. (Dion Cass. lix. 23;
These gardens of the Domitian family are frequently mentioned in inscriptions; and those who are curious respecting their history will find a long account of them in Preller's Regimen (p. 207, seq.). They appear to have existed under the same name in the time of Aurelian. (Yopie. Avsul. 49.) In the same district were also the Horti Agricola. These came into the possession of her son, Caligula, who built a circus in them, afterwards called the Circus Neronis. It will be treated of in another section; and we shall only mention here that this was the place in which the Christians, having previously been wrapped in the twine molosor or piscata, were burnt, to serve as torches for the midnight games. (Tac. Ann. xvi. 44.)

Both the gardens mentioned came into the possession of Nero, and may therefore also have been called Horti Neronis. (Tac. I. b. and c. 39.)

The neighbourhood seems to have been a chosen spot for the sepulchres of the great. One of them, a pyramid larger than the still existing monument of Cestius, existed till the end of the 15th century, and was absurdly regarded sometimes as the sepulcrum Romuli, sometimes as the sepulcrum Scipionis Africanus. It appears from notices belonging to the middle ages that on or near the spot where St. Peter's Church now stands, there was an ancient Temple of APOLOINE, or more probably of Sol. (Anastasius, Vit. Silvester, p. 42; Montf. Dioeci. i. p. 155.)

Having thus gone over the various districts of the city, and noted the principal objects of interest which they contained, we shall now proceed to give an account of certain objects which, from their importance, their general similarity, and the smallness of their number, may be most conveniently ranged together and treated of in distinct sections. Such are,—(1) the structures destined for public games and spectacles, as the Cirri, Theatres, and Amphitheatres; (2) the Thermes or Baths; (3) the Bridges; and, (4) the Aqueducts.

The general characteristics of these objects have been so fully described in the Dictionary of Antiquities, that it will be unnecessary to repeat the descriptions here. We shall therefore content ourselves to what may be called their topographical history; that is, an account of their origin and progress, their situation, size, and other similar particulars.

XV. The Circi, Theatres, and Amphitheatres.

Horse and chariot races were the earliest kind of spectacle known at Rome. The principal circus in which these sports were exhibited, and which by way of pre-eminence over the others came ultimately to be distinguished by the title of Circus Maximus, was founded, as we have already related, by the elder Tarquin, in the valley between the Palatine and Aventine. To have Theobalds and was little more than level and mark out the ground; for certain spaces around it were assigned to the patricians and knights, and to the 30 curiae, on which, at the time of the games, they erected their own seats or scaffoldos, called spectaculae and fori. (Liv. I. 55; cf. Dionys. iv. 58.) According to Livy, the same custom continued at certain of the other spectaculae of the city. (ib. c. 56); though Dionysius represents that monarch as surrounding the circus with peristyles (iv. 44). It was not till the year n. c. 228 that coecores for the chariots were built. (Liv. viii. 20.) We cannot tell what the original number of coecores may have been, but it was probably adapted to that of the race. According to Tertullian (de Spect. 9) there were originally only two Circimonial factions, or colours, the albatas and russeta—that is, winter and summer; but these distinctions of colours and factions do not seem to have been known till the time of the Empire. Joannes Lydus (de Mens. iv. 25, Becc.) states the original number of the factions to have been three, the russeta, albatas and prasina; and this seems to agree with the following passage in Cicero—if, indeed, it is to be interpreted strictly, and is anything more than a fortuitous coincidence: "Neque enim in quadrigis eum secundum numeraverint, ant tertium, qui vix e carceribus excitret, cum palamim jam primus acciperit." (Brut. 47.) However this may be, we know that in the early part of the Empire there were four colours, though by whom the fourth, or cemena, was added, cannot be said. Domitian added two more, the cavatas and purpureas (Suet. Dom. 7), but these do not seem to have come into customary use. The usual mensa, or seat, consisted of four chariots, as we learn from Virgil with the note of Servius:

"Centum quadrigas agitabo ad flumina currus" (Georg. iii. 19);

where the commentator remarks from Varro—"Id est, unus diei exhibebito circenses habebis, quia, ut Varro dicit in Comm. Reip. iv. 36. et 46, immemor XXVII. mensae Sisantis." It appears probable that the coecores were twice the number of the chariots which started, in order to afford agree to those which had finished the course, whilst fresh charioteers were waiting in those which were closed to begin a new course (v. Becker, de Muses. p. 87.). Thus in the Lyons mosaic eight coecores are represented; but in the Circus Maximus, after the increase of the factions to six, there were probably twelve coecores; and such also appears to have been the number in the circus on the Via Appia. (Of C. Cassiod. Fab. i. 51.) The Circus Maximus seems to have remained in a very rude and imperfect state till the time of Julius Caesar. He increased it by adding new topographies; and its size when thus enlarged appeared to have been 3 stadii in length and 1 in breadth. Caesar also surrounded it with a canal, called Eurus, in order to protect the spectators from the fury of the elephants; but this was filled up by Nero and converted into seats for the equites, whose increased numbers probably required more accommodation. (Suet. Cas. 39; Plin. viii. 7, xxxvi. 24. a. 1.) The description of the circus by Dionysius (iii. 68) is the clearest and longest we possess, but the measurements which he gives differ from those of Pliny, as he makes it 33 stadii long and 4 cteni, or 60 of a stade, broad. But perhaps those authorities may be reconciled by supposing that he took the inner and the other the outer circumference. The reader will find a lengthened examination of these different measures in Cassius's Indicationem Topographica, p. 491, seq. In Caesar's circus it was only the lower rows of seats that were built of stone; the upper rows were of wood, which accounts for the repeated fires that have happened there. The first of these occurred in n. c. 31, a little before the battle of Actium, and destroyed a considerable
part of the building. (Dion. Cass. i. 10.) Augustus rebuilt the Palatine, or place on which the presents of the gods were laid, and erected the first obelisk between the streets. (Mom. Augur.; Suet. Aug. 45; Plin. xxxvi. 14. s. 5.) The side towards the Aventine was again burnt in the reign of Tiburiae. (Tac. Ann. vi. 45.) Claudius much improved the appearance of the circus by substituting marble canopics for those of tufo, and seated of gilt bronze the previous ones of wood. He also appropriated certain seats to the senators. (Suet. Claud. 21.) We have seen that the fire of Nero broke out in the circus, whence it is natural to conclude that it must have been completely destroyed. Yet it must have been soon restored, since Nero caused his ridiculous triumphal procession to pass through it, and on his triumphal wreaths round the obelisk of Augustus. (Dion. Cass. lxxii. 21.) The effects of another fire under Domitian were repaired with the stone from his samianwack. and it was now, perhaps, that 12 canopics were first erected. (Suet. Dom. 5. 7.) We read of another restoration on a still more magnificent scale by Tiberius. (Dion. Cass. lxxii. 7.) Commencing the celebration of the Ludi Apollinares in the reign of Antoninus Pius, some of the rows of seats fell in and killed a large number of persons. (Capitol. Anton. P. 9; Catal. Imp. Vienne. ii. p. 244.) We know but little more of the history of the Circus Maximus. Constantine the Great appears to have made some improvements (Aur. Victor. xxvii. 10) and from the hear of the games being celebrated there as late as the 6th century. (Cassiod. Var. iii. 51.) The circus was used for other games besides the chariot races, as the Ludi Trojani, Curtissum Gymnacium, Venatio, Ludi Apollinares, &c. The number of persons it was capable of accommodating is variously stated. Pilins (xxxvi. 24. s. 1) states it at 250,000. One cock on the Notitia mentions 485,000, another 385,000; the latter number is probably the more correct. (Peller, Regiones, p. 191.) The circus seems to have been enlarged after the time of Pilins, in the reign of Trajan.

The Circus Flaminius was founded in B.C. 280 by the censor of that name. (Liv. Epit. xx.; Cest. Flor. i. 9.) We learn little respecting this circus, which lay under the Capitoline, with its canopics towards the hill, and its circular end towards the river. The Ludi Flaecii, and those called Tauri, were celebrated here (Val. Max. l. 7. § 4; Varr. L.L. v. 154), and Augustus afforded in it the spectacle of a crocodile chase. (Dion. Cass. iv. 10.) It also served for meetings of the people, which had previously been held in the Praet Flaminia. (Liv. xxxvii. 21; Cic. ad Att. 1. 14.) We find no mention of the Circus Flamininus after the first century of our era; and in the early part of the 9th century it had been so completely forgotten that the Anonymous of Einsiedeln mistook the Circus of the temple of Venus in Castrense, outside the walls of Aurelian. (Urlichs. Rép. Topogr. p. 126, seq.; Becker, Antworts. p. 81.) We have already said that the existing of a Circus Flaminus in the 6th Region, is a mere invention; and that of a Circus Sallustii, in the same district, rests on no satisfactory authority.

What is sometimes called by modern topographers the Circus Agonalis, occupied, as we have said, the site of the present Nonoza. But the Agonalis were certainly not celebrated with Circensean games, and there are good reasons for doubting whether this was a circus at all. Its form, however, shows that it was a place of the same kind, and hence Becker's conjecture seems not improbably (Mendels. 679) that it was the stadium founded by Domitian. The Grecian foot-races had been introduced at Rome long before the time of Domitian. Both Caesar and Augustus had built temporary stadia in the Campus Martius (Suet. Cass. 39; Dion. Cass. lxxiii. 1), and Domitian seems to have constructed a more permanent one. (Suet. Dom. 5. 7; Cassiod. Chron. 1. 10. 27.) We are indeed told that it was in the Campus Martius, but this is the most probable place for it; and the Notitia after mentioning the three theatres and the Odeum in the 9th Region names the stadium. It is also mentioned in conjunction with the Odeum by Annius Marcellinus (xvi. 10. § 14). It is discriminated from the circus by Lampridius as Odeum, and this is the most probable name for it.

(Heliod. 36.) In the middle ages it seems to have been called "Circus Alexandriaus," an appellation doubtless derived from the neighbouring thermal of Alexander Severus. By the Anonymus Einsiiden- sius it was condemned, as we have said, with the Circus Flaminianus. The Circus on one side, therefore, the third circus, properly so called, founded at Rome, would be that which Caligula built in the gardens of his mother Agrippina in the Vatican. (Plin. xvi. 40, xxxvi. 11; Suet. Claud. 21.) From him the place subsequently obtained the name of Galeria (Dion. Cass. lxxii. 14), by which it is found mentioned (Aur. Victor. xxvii. 10) and this name was used by Nero, whence it commonly obtained the name of Circus Neroni. (Plin. l. c.; Suet. Ner. 22; Tac. Ann. xiv. 14.) In the middle ages it was called Palatium Neronom. Some writers assume another circus in this neighbourhood, which Canina (Indic. p. 590) calls Circus Hadrianei, just at the back of the mausoleum of that emperor; but this seems hardly probable. (Cf. Urlichs. Class. Mus. vol. iii. p. 209.) The chief passage on which this assumption is founded is Procopius, de Bell. Goth. ii. 1 (Peller, Regiones, p. 212).

A fourth circus was that of Maxentius about two miles on the Via Appia, near the tomb of Cecilia Metella. It used to be commonly attributed to Tiberius, but Peller assigns it to Domitian. In the Notitia it is mentioned Romulus, the son of Maxentius (Oros. Inacor. 1069); and this agrees with the Catalogue Imperatorum Vienneus, which ascribes the building of a circus to Maxentius (ii. p. 245, Rosc.). This building is in a tolerable state of preservation; the spina is entire, and great part of the external walls remains; so that the spotting career presents a clear idea of the arrangements of an ancient circus. A complete description of it has been published by the Rev. Richard Burgess (London, Murray, 1828).

The fifth and last of the circuses at Rome, which can be assumed with certainty, is the Circus Agonalis in the 6th Region, outside the walls of Aurelian. (Urlichs. Rép. Topogr. p. 126, seq.; Becker, Antworts. p. 81.) We have already said that the existence of a Circus Flaminus in the 6th Region, is a mere invention; and that of a Circus Sallustii, in the same district, rests on no satisfactory authority.

Although theatrical entertainments were introduced at Rome at an early period, the city possessed no permanent theatre before the Theatre Pompei, built in the second consulship of Pompey, B.C. 55. (Vell. Pat. ii. 48; Plut. Pompei. 52.) I pre-
viciously to this period, plays were performed in wooden theatres, erected for the occasion. Some of these temporary buildings were constructed with extravagant magnificence, especially that of M. Aurelius Scævus in b.c. 59, a description of which is given by Pliny (xxvii. 24. a. 7). An attempt, to which we have before alluded, was indeed made by the censor Cassius, b.c. 154, to erect a more permanent theatre near the Lupercal, which was defeated by the rigid morality of Scipio Nasica (Vell. Pat. i. 15; Val. Max. ii. 4. § 2; Liv. Epit. xlviii.; Oros. iv. 21). A good deal of this old Roman feeling remained in the time of Pompey, and in order to overcome, or rather to evade it, he dedicated a temple to VENUS VICTRIX on the summit of his theatre, to which the rows of seats appeared to form an ascent (Tac. Ann. xiv. 20; Tert. de Spect. 10; Plin. viii. 7). Gallius places the dedication of the theatre in the third consulship of Pompey, which is at variance with the other authorities (N. A. x. 1). We have spoken of its situation in a preceding section, and shall refer the reader who desires any further information on this head to Cassius (Juv. ex. p. 363, sq.), who has bestowed much labour in investigating the remains of this building. There is great discrepancy in the accounts of the number of spectators which this theatre was capable of accommodating. According to Pliny, in whose MSS. there are no variations, it held 40,000 persons (xxvii. 24. a. 7); and the account of a visit of the German ambassadors seems to indicate a large number ("Intraverse Pompeii theatrum, quo magnitudinem populi viserunt," Ann. xiii. 54). Yet one of the codices of the Notitia assigns to it only 22,888 seats, and the Curiosis still fewer, or 17,580. It was called theatrum lapidaeum, or marmoreum, from the material of which it was built; which, however, did not suffice to protect it from the ravages of fire. The scaena was destroyed in the reign of Tiberius, and re-edificated by Claudius (Tac. Ann. iii. 72; Dion Cass. ix. 6). The theatre was burnt in the fire under Titus, and again in the reign of Philip; but it must have been restored on both occasions, as it is mentioned by Ammianus Marcellinus and other authors. We have not in his account of the visit of Constantius II. (xvi. 10). We learn from the Catalogus Imperatorum, that it had been repaired by Diocletian and Maximian; and it was also the object of the care of Theodoric (Casiod. Par. iv. 51).

THE THEATRE OF BALBUS, dedicated in b.c. 12 (Suet. Aug. 19; Dion Cass. xxxii. 49), and dedicated by Augustus, b.c. 12, to the memory of his nephew, Marcellus. (Mon. Ancyr. ; Suet. Aug. 29; Dion Cass. liv. 26.) We have already mentioned its situation in the Forum Olitorium; and very considerable remains of it are still to be seen in the Piazza Montec urma. Its audience is now occupied by dirty workshops. It does not appear to have enjoyed so much celebrity as Pompey's theatre. According to the Curiosis it was capable of accommodating 20,000 spectators. The scenae was restored by Vespasian (Suet. Vesp. 19); and Lampridius mentions that Alexander

Severus contemplated a renovation of the theatre (Anon. 44.)

These were the three Roman theatres, properly so called (Or. Tü. iii. 12. 24.)—

"Quoque tribus resonant ternis theatra foris."

Some of the MSS. of the Notitia mention four theatres, including, of course, the Odеum, which was a roofed theatre, intended for musical performances. According to the most trustworthy accounts, it was built by Domitian, to be used in the musical contests of the Capitoline games which he instituted (Suet. Dom. 4; Cassiod. Chron. p. 197, Rom.); and when Dion Cassius (ix. 42) ascribes it to Trajan, we may perhaps assume that it was finished or perfected by him. Nero appears to have first introduced musical contests (Tac. Ann. xiv. 20), but the theatre in which they were held was probably a temporary one. The Odеum was capable of holding 10,000 or 12,000 persons. It is mentioned by Ammianus Marcellinus (xvi. 10).

The AMPHITHEATRE OF STATILIUS Taurus was the first permanent building of that kind erected at Rome. After the chariot races, the gladiatorial combats were the most favourite spectacle of the Romans; yet it was long before any peculiar building was appropriated to them. We have already related that the first gladiators were exhibited in the Forum Boarium in b.c. 264; and subsequently these combats took place either in the circus or in the Forum Romanum: yet neither of these places was well adapted for such an exhibition. The former was
inconvenient, from its great length, and the maces and spines were in the way; whilst the latter, besides its moral unsuitableness for such a spectacle, became by degrees so crowded with monuments as to leave but little space for the evolutions of the combatants. The first temporary amphitheatre was the wonderful one built of wood by Caesar's partisan, C. Scribonius Curio. It consisted of two separate theatres, which, after dramatic entertainments had been given in them, were turned round, with their audiences, by means of hinges or pivots, and formed an amphitheatre (Plin. xxxvi. 24. 8). Caesar himself afterwards erected a wooden amphitheatre (Dion Cass. xiii. 22); but that of Statilius Taurus was the first built of stone, and continued to be the only one down to the time of Vespasian. We have mentioned that it was in the Campus Martius. It was dedicated in the fourth consulship of Augustus, n. c. 30. (Dion Cass. li. 23; Suet. Aug. 29.) The amphitheatre erected by Nero in the Campus Martius was a temporary one of wood. (Suet. Nero, 12.) The amphitheatre of Taurus, which does not appear to have been very magnificent (Dion Cass. lix. 10), was probably destroyed in the fire of Nero; at all events we hear no more of it after that event. The Amphitheatrum Flavium,

erected by Vespasian, appears to have been originally designed by Augustus. (Suet. Vesp. 9.) It stood on the site previously occupied by the lake of Nero, between the Velia and the Esquiline. (Mart. Spect. 2. 5), and was capable of containing 87,000 persons. (Notitia, Reg. iii.) A complete description of this magnificent building will be found in the Dictionary of Antiquities, and need not be re-

peated here. It was not completely erected, till the reign of Domitian; though Titus dedicated it in the year 80. (Suet. Tit. 7; Aur. Vict. Cass. 9. 7.) In the reign of Marcus it was so much damaged by a fire, occasioned by lightning, that it was necessary to exhibit the gladiators and exca-
tiones for several years in the Stadium. (Dion Cass. lxxxvii. 25.) The restoration was undertaken by Elagabalus, and completed by Alexander Severus. (Laun. Hel. 17, Alex. 24.) It suffered a similar calamity under Decius (Hieron. Chron. p. 475); but the damage was again made good, and exca-
tiones, or combats with wild beasts, were exhibited in it as late as the 6th century. In the middle ages it was converted into a fortress; and at a later period a great part of it was destroyed by the
Roma. Romans themselves, in order to build the Colosseum and the Palazzo Farnese with the materials. Enough, however, is still left to render it one of the most striking and important monuments of imperial Rome. Its name of Colosseum, first mentioned by Bede (ap. Dunciæ, Gloss. ii. p. 407, ed. Bœc.)

ELEVATION OF COLOSSEUM. 

We, of course, propose to speak here only of those large public institutions which were open either gratis or for a mere trifle to all, and of which the first were the Theatrum Agrippae, near his Pantheon. The theatre must not be regarded as mere balconies, or places for bathing. They like the contained gymnasia, or places for gymnastic exercises; hæsodromes, or rooms for the disputation of philosophers; as well as apartments for the delivery of lectures, &c. The Theatrum of Agrippa do not seem to have been so splendid as some of the subsequent ones; yet, though they suffered in the fire under Titus, they were preserved till a late period, and are mentioned more than once by Martial (Ilii. 20.15, 36. 6). The Theatrum Neronicum were erected by Nero very near to those of Agrippa (Tusc. Amm. xiv. 47; Suet. Nero, 12). After their restoration by Alexander Severus, who appears, however, to have also enlarged them (Lamprid. Alex. 25), they obtained the name of Theatrum Alexandrinæ (Cassiod. Orig. Hist. i. 14). They were the best, or at least the most sumptuous, of all the Theatres of the Trajanae (Vit. Symmachii, p. 88, Blanck.). His object in building them may have been to separate the baths of the sexes; for the men and women had hitherto bathed promiscuously: and thus the Catal. Imp. Vien. notes, under Trajan: "Hoc Imperat. mulierum in Termas Trajanis lavaret." The emperor Commodus, or rather his freedman Glesander in his name, is said to have built some baths (Lamp. Comm. 17; Herod. i. 19); and we find the Theatrum Commodianæ set down in the 1st Region in the Notitia, whilst, by the Anonymous of Einsiedlen, on the contrary, they are three or four times mentioned as close to the Botanica. Their history is altogether obscure and impenetrable. The Theatrum Theodosianæ are also recorded in the Notitia in the 1st Region in connection with the Comodiana. They are mentioned by Lampridius (Suer. 19); but no traces of them remain.

The Theatrum Antoninnianæ or Caracallæ present the most perfect remains of any of the Roman baths, and from their vastness cannot fail to strike the spectator with astonishment. The large hall was regarded in antiquity as inimitable. (Sparr. Carac. 9, Sever. 21.) They were dedicated by Caracalla; but Elagabalus commenced the outer porticoes, which were finished by Alexander Severus. (Lampr. Hist. 17, Alex. 23.) They are situated under the church of S. Balbina, on the right of the Via Appia.

But the largest of all the baths at Rome were the Theatrum Diocletianæ. Unfortunately they are in such a ruined state that their plan cannot be traced so perfectly as that of the baths of Caracalla, though enough remains to indicate their vast extent. They are situated on the site of the agora of Servius, between the ancient Porta Collina and Porta Viminalis. Vopiscus mentions them in connection with the Bibliotheca Ulpia, which they contained (Prob. 9). These were followed by the
ROMA.

Thermæ Constantinianæ, the last erected at Rome. They are mentioned by Aurelius Victor as an "opus caeteris hand multo dispars" (Cæs., 40. 27). In the time of Du Pérac, there were still some vestiges of them on the Quirinal, on the site of the present Palazzo Rossiglione; but they have now entirely disappeared. At one time the colossal figures on Monte Cavallo stood near these baths, till Sixtus V. caused them to be placed before the Quirinal palace. Tradition connects them with the Equi Tucidatis Regis Arseniorium, mentioned in the Notitia in the 7th Region; in which case they would belong to the time of Nero. On the other hand they claim to the works of Phidias and Praxiteles; but there is no means of deciding this matter.

Besides the baths here enumerated, the Notitia and Curiosiss. mention, in the 13th Region, but under mutilated forms, certain Thermæ [Sura]e et Descilane, to which we have already alluded in the 5th Section. They do not, however, seem to have been of much importance, and their history is unknown.

XVII. THE BRIDGES.

Rome possessed eight or nine bridges; but the accounts of them are so very imperfect that there are many parts of the history of which can be satisfactorily ascertained. The Pontes Subliciius, the oldest and one of the most frequently mentioned of all the Roman bridges, is precisely that whose site is most doubtful. It was built of wood, as its name imports, by Ancus Marcius, in order to connect the Janiculum, which he had fortified, with the city. (Liv. i. 33; Dionysii. III. 45.) It was considered of such religious importance that it was under the special care of the pontifices (Varr. L. L. v. § 83), and was repaired from time to time, even down to the reign of Antoninus Pius. (Capitol. Ant. P. 8.) Nay that it must have existed in the time of Constantius is evident, not only from its being mentioned in the Notitia, but also from the fact of a bridge at Constantinople being named after it, no doubt to perpetuate in that city the remembrance of its sacred character. (Descr. Const. Reg. xiv.) Yet the greatest difference of opinion prevails with regard to its situation; and as this question also involves another respecting the site of the Pontes Armillius, we shall examine them both together.

Pons Sublicius, restored by Canina.

the other. An inference might perhaps be drawn from a passage in Seneca, compared with another in Pliny, in favour of the bridge being outside of the Porta Trigemina: "In Sublicium Pontem me transfer et inter agentes me abige: non ideo tamen me despiciam, quod in illorum numero cognosco, qui manum ad stuprum porrigrunt." (Sen. de V. Best. 25.) As the Pons Sublicius is here shown to have been the haunt of beggars, so Plautus intimates that their station was beyond the P. Trigemina (Cæs. i. 1. 22):—

"Ire extra Portam Trigeminarum ad aequum lectam."

When the Tiber is low the piles of a bridge are still visible that existed just outside of the Porta Trigemina, near the Portus di Roma Grande (Canina, Indicium, p. 587); and the Italian topographers, as well as Bunsen, have assumed them to be the re-
We may be sure that the pontesfices would not have taken upon themselves the repairs of a bridge subject to the wear and tear of daily traffic. Ovid (Fast. v. 622) adverts to its existence, and to the sacred purposes to which it was applied:

"Tunc quoque priscorum virgo simulacra virorum
Mittere roboreo scripse pontes solet."

The coexistence of the two bridges, the genuine wooden Sublician, and its stone substitute, is shown in the following passage of Plutarch: οὗ γὰρ ἡμῶν, ἀλλ' ἐκαστοῦ γενέτευρος ἔστηκεν τὴν κατάλυμα τῆς ἐμοῦ γεφύρας... Ἡ δὲ λίθος

The testimoni of Servius: "Cum per Sublicium pontem, hoc est ligneum, qui modo lapideus dicitur, transire cohaeret (Pomera)." (Ad Aen. viii. 644). There must certainly have been a strong and practicable bridge at an early period at this place, for the heavy traffic occasioned by the neighbourhood of the Emporium; but when it was first erected cannot be said. The words of Plutarch, ἔστηκεν τοῦ Αμοιλίου ταμειόστορα, are obscure, and perhaps corrupt; but at all events we must not confound this notice with that in Livy respecting the building of the Pons Aemilius: the piles of which were laid in the censorship of M. Aemilius Lepidus and M. Fulvius Nobilius, lib. c. 179, and the arches completed some years afterwards, when P. Scipio Africanus and L. Mummius were censors (xl. 51). There is no proof that the Ponte Rotto is the Pons Aemilius; but Becker, in his second view, and Canina assume that it was; and this view is as probable as any other.

There were several bridges at Rome before the Pons Aemilius was built, since Livy (xxv. 21) mentions that two were carried away by the stream in b.c. 193; and these could hardly have been all, or he would undoubtedly have said so. The Insula Tiberina was, in very early times, connected with each shore by two bridges, and hence obtained the name of Inter Duos Pontes. (Plut. Popi. 8; Macrobr. Sat. ii. 12.) That nearest the city (now Ponte Quattro Capi) was the Pons Fabricius, so named from its founder, or probably its restorer.
the exception of sixty passus conducted on arches from the Porta Capena. Its water began to be distributed at the imus Clivus Publicius, near the Porta Trigemina. (Front. Ag. 5.)

The AQUA VETUS was commenced by the censor M. Curius Dentatus in B.C. 273, and completed by M. Fulvius Flaccus. (Ib. 6; Aer. Vict. Ver. III. 33.) It began above Tiber, and was 45 miles long; but only 521 passus, or less than a quarter of a mile, was above ground. It entered the city a little N. of Porta Maggiore.

The AQUA MARCIA, one of the noblest of the Roman aqueducts, was built by Q. Marcius Rex, in pursuance of a commission of the senate, n. c. 144. It began near the Via Valeria at a distance of 26 miles from Rome; but its whole length was nearly 69 miles, of which 6935 passus were on arches. Respecting its source, see the article FUCINUS LATUS [Vol. I. p. 918]. It was lofty enough to supply the AQUA CAPODITO. Augustus added another source to it, lying at the distance of nearly a mile, and was called after him, AQUA AUGUSTA, but was afterwards reckoned as a separate aqueduct. (Frontin. Ag. 12; Pin. xxxi. 24; Strab. v. p. 240.)

The AQUA TEPULA was built by the censors Cn. Servilius Caspio and L. Cassius Longinus, n. c. 127. Its source was 2 miles to the right of the 10th milestone on the Via Latina.

The preceding aqueduct was united by Agrrippa with the AQUA JULIA, which began 2 miles farther down; and they flowed together as far as the Fiscina on the Via Latina. From this point they were conducted in separate channels in conjunction with the AQUA MARCIA, so that the AQUA JULIA was in the uppermost canal, the Marcia in the lowest, and the Tepula in the middle. (Front. Ag. 8, 9, 19.)

Remains of these three aqueducts are still visible, one at the Porta S. Lorenzo and Porta Maggiore.

The AQUA VIRGO was also conducted to Rome by Agrippa in order to supply his baths. According to Frontinus (Ag. 10) its name was derived from its source having been pointed out by a young maiden, but other explanations are given. (Pline. xxxii. 25; Cassiod. Ver. vi. 6.) It commenced in a marshy district at the 8th milestone on the Via Collatina, and was conducted by a very circuitous route, and mostly underground, to the Pincian hill; whence, as we have before mentioned, it was continued to the Campus Martius on arches which still exist under the gardens of a nobleman. It is the only aqueduct on the left bank of the Tiber which is still in some degree serviceable, and supplies the Fontana Trevi.

The AQUA ALBANITINA belonged to the Transalpine Region. It was constructed by Augustus, and had its source in the Lacus Albanius (now Lago di Albano), lying 64 miles to the right of the Via Salaria. Its ancient history is uncertain. Its water was bad, and only fit for watering gardens and such like purposes. (Front. 11.)

The AQUA CLAUDIA was begun by Caligula, and dedicated by Claudius, A.D. 50. This and the Anio Novus were the most gigantic of all the Roman aqueducts. The Claudia was derived from two rivers, but other called Casuinius and Servius, near the 38th milestone of the Via Sublacensis, and in its course was augmented by another spring, the Albudius. Its water was particularly pure, and the best after that of the Marcia.

The Anio Novus began 4 miles lower down the Via Sublacensis than the preceding, and was the
longest and most lofty of all the aqueducts, being 58,700 passus, or nearly 89 miles, long, and its arches were occasionally 109 feet high. (Front. 15.) This also was completed by the emperor Claudius, as appears from the inscription still extant upon it remains over the Porta Maggiore; where both enter the city on the same arch, the Anio Novus flowing over the Claudius. Hence it was conducted over the Claudian Wall to the Arsura Septimiani; or Carlomontani, which terminated, as we have already said, near the temple of Claudius.

As Procopius mentions fourteen aqueducts, five new ones must have been added between the time of Frontinus and that of historian; but respecting only two have we any certain information. The first of these is probably the Aqua Trajaniana, which we find recorded upon coins of Trajan, and which is also mentioned in the Acta Martyr. S. Anton. The water was taken from the neighbourhood of the Lactus Sabatinus (Lago di Broccaccio), and, being conducted to the height of the Janiculum, served to turn the mills under that hill. (Procop. B. G. i. 19.)

The second is said to have been a branch of the Aqua Pozzilum, which, however, has been split by water taken from the lake. It was also called Cimella.

The Aqua Alessandrina was constructed by the emperor Alexander Severus for the use of his baths. (Lamprid, Alex. 25.) It was so named as that now called Acqua Felice, but conducted at a lower level.

The Aqua Severiana is supposed to have been made by the emperor Septimius Severus for the use of his baths in the 1st Region; but there is no evidence to establish its construction.

The Aqua Antoniniiana was probably executed by Caracalla for the service of his great baths in the 13th Region; but this also is unsupported by any satisfactory proofs. (Costa, Ind. 620.) The names and history of a few other aqueducts which we sometimes find mentioned are too obscure to require notice here.

It does not belong to this subject to notice the Roman Viae, an account of which will be found under that head.

Sources and Literature of Roman Topography.

With the exception of existing monuments, the chief and most authentic sources for the topography of Rome are the passages of ancient authors in which different localities are alluded to or described. Inscriptions also are a valuable source of information. By far the most important of these is the Monumentum Augustanum, or copy of the record left by Augustus of his actions; an account of which is given elsewhere. (Vol. I. p. 134.) To what is there said we need only add that the best and most useful edition of this document is that published at Berlin with the emendations of Fränck, a commentary by A. W. Zumpt (1845, 4to, pp. 120). Another valuable inscription, though not nearly so important as the one just mentioned, is that called the Basis Capitolina (Gruter, ed.), containing the names of the Vici of 5 Regions (the 1st, 10th, 12th, 13th, and 14th), whose curatores and vicomagistri erected a monument to the memory of Hadrian. It will be found at the end of Becker's Handbuch, vol. i. We may also mention among sources of this description the fragments of Calendars which have been found in various places, and which are frequently useful by marking the sites of temples where certain sacrifices were performed. For the most part the original marbles of these fragments have disappeared, and the inscriptions on them are consequently only extant in MS. copies. One of the most ancient monuments of this kind is the Fasti Maffeiorum or Calendarium Maffeiunum, so called from having been preserved in the Palazzo Maffei. With a few lacunae, it contains all the twelve months; but what little information that is to be found above the principal festivals, relates chiefly to Augustus. The next in importance is the Fasti Frasnensis, discovered at Freneste (Palaestrina) in 1774. Verrius Flaccus, the celebrated grammarian, arranged and annotated it, caused it to be cut in marble, and erected it in the forum at Præsepiaco. (Suet. III. Gramma. c. 17.) Only four or five months are extant, and those in an imperfect state. The Calendarium Amittinianum was discovered at Amittinum in 1703, and contains the months from May to December, but not entire. The calendar called Fasti Capranicorum, so named from its having formerly been preserved in the Palazzo Capranico, contains August and September complete. Other calendars of the same kind are the Antialatum, Venetum, &c. Another lapidary document, but unfortunately in so imperfect a state that it often serves rather to puzzle than to instruct, is the Capitoline Plan. This is a large plan of Rome cut upon marble tablets, and apparently of the age of Septimius Severus, though with subsequent additions. It was discovered by the architect Giovanni Antonio Dosi, in the pontificate of Pius IV., under the church of SS. Cosmo e Damiano; where, broken into many pieces, it was used as a covering of the walls. It came into the possession of Cardinal Farnese, but was put away in a lumber room and forgotten for more than a century. Being subsequently brought to light, it was purchased by Giovanni Pietro Bellori, librarian to Queen Christina; and subsequently at the end of the 4th volume of the Thesaurus of Graevius. The original fragments were carried to Naples with the other property of the Farnese family, and were subsequently given by the king of Naples to Pope Benedict XIII. In 1742 Benedict presented them to the Capitoline Museum at Rome, where they now appear on the wall of the staircase; but several of the pieces had been lost, for which copies, after the designs of Bellori and marked with a star, were substituted. On these fragments the plans of some ancient buildings may be made out, but it is very seldom that their topographical connection can be traced.

Among the literary records relating to Roman topography, the first place must be assigned to the Nottilla. The full title of this work is: Notitia Dignitatum urbisque Imperii, or in Partibus Orientis et Occidentis; and it is a statistical view of the Roman empire, of which the description of Rome forms only a small portion or appendix. It cannot be later than the reign of Constantine, since no Christian church is mentioned in it, and indeed no building later than that emperor; nor, on the other hand, can it be earlier, since numerous buildings of the 3rd century, and even some of Constantine's, are named in it. The design of it seems to have been, to name one principal, buildings or roads in which the ancient boundaries of the different Regions; but we are not to assume that these objects are always named in the order in which they occurred, which is far from being the case. This
catalogue has come down to us in various shapes. One of the simplest and most genuine seems to be that entitled *Curiosarum Urbis Romanæ Regiones X. III. cum Breviariis suis*, the MS. of which is in the Vatican. Some of the names given to the regions seem to have been interpolated. The spelling and grammar betray a late and barbarous age; but it is impossible that the work can have been composed at the time when the MS. was written.

Besides these there are two catalogues of the so-called Regionarius, Publius Victor, and Sextus Rufus, which till a very recent period were regarded as genuine, and formed the chief basis of the works of the Italian topographers. It is now, however, universally allowed that they are compilations of a very late date, and that even the names of the writers of them are fortresses. It would be too long to enter into this place into the reasons which have led to the opinion called the historians who are desirous of more information will find a full and clear statement of the matter in a paper of Mr. Bunbury's in the *Classical Museum* (vol. iii. p. 373, seq.).

The only other authorities on Roman topography that can be called original are a few notices by travellers and writers in the middle ages. One of the principal of these is a collection of inscriptions, and of routes to the chief churches in Rome, discovered by Mabillon in the monastery of Emaus, whence the author is commonly cited as the Anonymus Emausensem. The work appears to belong to the age of Charlemagne, and is at all events older than the Leonine city, or the middle of the 9th century. It was published in the 4th vol. of Mabillon's *Analecta*; but since more correctly, according to the arrangement of Gustav Haenel, in the *Archiv für Philologie und Pädagogik*, vol. v. p. 115, seq. In the Routes the principal objects on the right and left are mentioned, though often lying at a considerable distance.

The works of the Minucius Rufus, prefixed to the *Chronicon Romanae Salernitanae* in a MS., preserved in the Vatican, and belonging apparently to the 12th century, seems to have been the first attempt at a regular description of ancient Rome. It was compiled from statistical notices, narratives in the *Acta Martyrum*, and popular legends, often with variations in the Liber Census of Cencius, and in many subsequent manuscripts, and was printed as early as the 16th century. It will be found in Montefonc, *Diarium Ital.* p. 283, seq., and in Nibby's *Effemeride Letterarie*, Rome, 1820, with notes. A work ascribed to Martinus Poloniae, belonging probably to the later part of the 13th century, seems to have been chiefly founded on the *Mirmiælia*. Accounts of some of the gates of Rome will be found in William of Malmsbury's work *De Gestis Regum Anglorum* (book iv.).

The Florentine Poggio, who flourished in the 15th century, paid great attention to Roman antiquities. His description of Rome, as it existed in his time, is a mere sketch, but elegant, scholar-like, and touching. It is contained in the first book of his work entitled *De Varietate Fortunæ Urbis Romanæ*, and will be found in Sallegre, *Nov. Theat. Ant. Rom.* vol. i. p. 501. A separate edition of his work was also published in Paris, 1728. His work, however, has, in a few particulars respecting the state of the city in his time; but he treats the subject in an uncritical manner.

The traveller Kyriacus, called from his native town Anconitanius, who accompanied the emperor Sigismund, passed a few days in Rome during the time that Poggio was also there, which he spent in collecting specimens of the ancient monuments, and marks. His work, entitled *Kyriaci Anconitani Itinerarium*, was published at Florence in 1747.

Such are the chief original sources of Roman topography. The literature of the subject is absurdly copious, but our space will permit us to do little more than present the reader with a list of the principal works. The first regular treatise on the antiquities of Rome was that of Biondo Flavio (Benedus Flavius) (1388-1453), who was at once a man of business and a man of letters. His work entitled *Roma Instaurata*, a gigantic step in Roman topography, was published by Froben at Basle, 1513, fol. An Italian translation by Lucio Fano, imperfect, appeared at Venice towards the end of the 15th century, Julius Pomponius Laetus founded the Roman Academy. Laetus was an enthusiastic collector of inscriptions, but his fondness for them was such that he sometimes invented what he failed in discovering, and he is accused of having forged the inscription to the statue of Clodius Albinus. A very curious work of this kind is the *Tiraboschi, Storia della Lett.* vol. ii. lib. iv.). His book, De *Romanorum Urbis vestigia*, is uncritical, and of small value. Janus Farrasius had a little previously published the pseudo-Victor. To the same period belong the *De Urbis Romae Collectaneis* of the bishop Fabricius Varra, a compilation chiefly borrowed from Biondo, and published, like the work of Laetus, in the collection of Manzoci, Rome, 1513, 6vo. Bernardo Rucellai, a friend of Lorenzo de' Medici, commenced a description of Rome, by way of commentary on the so-called Victor. It was never completed, and the MS., which is of considerable value, was first printed among the Florentine "Scriptores," in an Appendix to Muratori's collection (vol. ii. p. 735).

The next work that we need mention is the *Antiquitates Urbis Romae* of Andreas Fulvius, Rome, 1527, fol. Bresc. 1545, 8vo. This production is a great step in advance. Fulvius procured from Raphael a sketch of the 14 Regions, according to the restoration of them by himself, but it does not seem to have been published before 1558. The Tuscan knight Bartholomaeus Mariani published his *Urbis Romae Topographia*, a work in many points still unsurpassed. An augmented and much improved edition was published in 1544; but that of 1586 is a mere reprint of the first. It will also be found in the *Thesaurus of Graecius*, vol. iii. Mariani was the first to illustrate his work with plans and drawings, though they are not of a very superior kind. Lucio Fano's *Dello Antichità della Città di Roma* appeared at Venice in 1548. It contains a few facts which had been overlooked by his predecessors. The celebrated hermit Omphrius Panvinius of Verona, published at Venice in 1558 his *Commentariorum Regum Romanorum Libri IIII.* The first book, entitled *Antiquis Urbis Imagines*, which is the topographical part, is written with much learning and acuteness. It was intended merely as a preface to a complete description of Rome according to the Regions of Augustus, but the early death of Panvinius prevented the execution of this plan. His work, however, has, in a few particulars respecting the city in his time; but he treats the subject in an uncritical manner.
appeared at Stuttgart in 1839, the last in 1842.
As a literary production — we are speaking of course of the ancient parts — it is of little service to the history of Roman topography, and the ancient ones being intermingled with the modern have to be sought through a voluminous work.
A still graver defect is the almost entire absence, especially in the earlier volumes, of all citation of authorities.
At this period in the history of Roman topography W. J. Freiler paid a short visit to Rome. Becker took up the subject of his researches as a point of national honour; and in his first tract, De Romanis Vetricis Monumentis (Leipzig, 1842), devoted two pages of the preface to an attack upon Canina, whom he suspected of the grave offence of a want of due reverence for German scholarship. But with an inborn pedantry he failed against his own countrymen. Amidst a little faint praise, the labours of Bunnus and Urlichos were censured as incomplete and unsatisfactory. In the following year (1843) Becker published the first volume of his Handbuch der Römischen Alterthümer, containing a view of the topography of Rome. A review of his work by L. Freiler, in Zeitschrift für Alte Geschichte Romanische, Athenische, und Alpimische Literatur-Zeitung, though written with candour and moderation, seems to have stung Becker into fury. He answered it in a pamphlet entitled Die Römische Topographie in Rom, eine Warnung (Leipzig, 1844), in which he accused Freiler of having taken up the cudgels in favour of Canina, though that gentleman is a moderate advocate of the German school of topographers. Nothing can exceed the arrogant tone of this pamphlet, the very title of which is offensive. It was answered by Urlichos in his Römische Topographie in Leipzig (Stuttgart, 1845), in which, though Becker well deserved castigation, the author adopted too much of the virulent and personal tone of his adversary. The controversy was brought to a close by a reply and rejoinder, both written with equal bitterness; but the dispute has served to throw light on some questions of Roman topography. In a purely literary point of view, Becker's Handbuch must be allowed to be a very useful production. His views are arranged and stated with great clearness, and the plates of Buffier, if nothing else, are at the bottom of the page very convenient to the student. The writer of this article feels himself bound to acknowledge that it would not have been possible for him to have prepared it without the assistance of Becker's work. Nevertheless he is of opinion that many of Becker's views on the most important points of Roman topography are entirely erroneous, and that they have gained acceptance only from the extraordinary confidence with which they are asserted and the display of learning by which they are supported. Amongst other German topographers we need only mention here L. Freiler, who has done good service by some able papers and by his useful work on the Regions of Augustus: (Die Regionen der Stadt Rom, Jena, 1846, 2vol.). We may add that the English reader will find a succinct and able sketch of the views of the German school, and particularly of Becker, in a series of very valuable papers by Mr. Bunbury, published in the Classical Museum (vols. iii. iv. and v.).
We shall close this list with the names of two modern German topographers. Between the years 1820 and 1835, Stefano Piale published some very useful dissertations on various points of Roman topography, among which the following may be particularly mentioned: Delle Porte settentrionali del Regno di Napoli; Delle Porte orientali, delle porte di Sant'Angelo, e di quelle del Monte Aventino della stessa cinta; Delle grandissimi di Roma al tempo di Plinio; Dei Foro Romano; Delle Mura Aureliane; e degli antichi Arsenali detti Navalia, &c. But at the head of the modern Italian school must be placed the Commentatore, Luigi Canina. Canina has a real enthusiasm for his subject, which, from his point of view, results from a more scientific, rather than a philological point of view; and this, combined with the advantages of a residence at Rome, goes far to compensate the absence of the profounder, but often unrivaled, erudition of the Germans. The later editions of his works have been freed from some of the errors which disfigured the first, and, on the whole, have instead much new information, even if not always rendered always with scrupulous criticism. But yet, however, which in a greater or less degree must be the lot of all who approach the very extensive and very debatable subject of Roman topography. Canina's principal works are the Indicazioni topografiche di Roma antica, 4th ed., Rome, 1850, and 2nd ed. 1865; and especially his magnificent work in four large folio volumes entitled Gli Edifizi di Roma antica, with views, plans, and restorations.
It now only remains to notice some of the principal maps and other illustrations of Rome. The Fiorentine San Gallo, who flourished in the 15th century, invented several of the most remarkable one-sheet maps. The sketches and plans of Antonio Labacco, executed at the beginning of the 16th century, are valuable but scarce. We have already mentioned that Raphael designed, or thought of designing, a plan of the restored city. This plan, if ever executed, is no longer in existence; but a description of it will be found in a letter addressed by Castiglione to Pope Leo X. (Published in the lettere di Ettore Castiglione, Padua, 1735. There is a translation of it in the Beschreibung der Städte, vol. i. p. 266, seq.) Serio of Bologna, architect to Francis I., gave many plans and sketches of ancient Roman buildings in the 3rd book of his work on architecture (Venice, 1544, fol.), to which, however, he added restorations. Leonardo Buffier, in the second part of his album, his Buffier album, published in Paris in 1797, had a plan of the suburb of Caprarola; and a plan of the fora was the most important for Roman topography. It was drawn on wood in 24 plates; but unfortunately all that now remains of it is an imperfect copy in the Barberini palace. Pirro Ligorio and Bernardo Gumotti published several views in Rome about the middle of the 16th century. In 1570 appeared the great work of the most learned man of the 16th century, Mattia Antonio Rusca, Della topografia, della natura, &c. (Venice, fol.), in the 4th book of which are several plans of ancient temples; but the collection is not so rich as that of Serio. Saccomo's Diario sopra le Antichità di Roma (Venice, 1852, fol.) contains some good views, but the letter-press is insignificant. In 1574 Pulvini Urania assisted the Parian architect Du Pérac in drawing up a plan of the restored city, which was published in Paris, and a plate of sheet by Giacomo Lauris. It is erroneous, incomplete, and of little service. Of much more value are the views of ancient monuments published by Du Pérac in 1579, and republished by Lossi in 1773. In the time of Du Pérac several monuments were in existence which have now disappeared, as the forum of Nerva, the Temple of Vesta, the Temple of Minerva and Mars. The sketches of Pietro Sant' Bartoli, first published in 1741, are clever but full of mannerism.
Antonius Damodes, sent to Rome by Colbert, published in Paris in 1689 his work in folio entitled "Les Édifices antiques de Rome mesurés et dessinés." The measurements are very correct, and the work indispensable to those who would thoroughly study Roman architecture. Noll's great plan of Rome, the first that can be called an accurate one, appeared in 1748. In 1784 Piranesi published his splendid work the "Antichità Romane" (Rome, 4 vols. fol.), containing the principal ruins. It was continued by his son, Francesco Piranesi. The work of Michel d'Oervebeke, "Les restes de l'ancienne Rome" (à la Haye, 1673, 2 vols. large fol.), is also of great value. In 1822 appeared the "Antichità Romane di Luigi Rossini" (Rome, 1822, large fol.). To the plans and restorations of Canina in his "Edifici" we have already alluded. His large map of Rome represents on course his peculiar views, but will be found useful and valuable. Further information on the literature of Roman topography will be found in an excellent preface to the "Beschreibung" by the Chevalier Brun.

T. H. B.}

**COIN OF ROME.**

**ROMATINIUS.** [CORNOELIA.]

**ROMEXCHUKM**, a place on the east coast of the British peninsula, mentioned only by Ovid, in his description of the voyage of the Epidaurian serpent to Rome (Ovid. Met. x. 705). The geography of the passage is by no means very precise; but according to local topographers the name of Ruscic is still retained by a place on the coast near Roscoile, about 12 miles N. of the ruins of Lescy (Romanelli, vol. i. p. 156, Quatremoii, Not. de Berri Civitates. iii. 13.)

[**E. H. B.**]

**ROMULA.** a place in Upper Pannonia, on the road leading from Aquincum along the river Savus to Sirmium. (It. Ant. p. 274; Tab. Peut.) It is perhaps the modern Carlsbad, the capital of Ceruca.

[**L. S.**]

**ROMULA.** [DACIA, p. 744. b.]

**ROMULIA** (Posdalia, Steph. B.: Bioncia), a city of Samnium, mentioned by Livy (x. 17), as being visited by the Roman consul P. Decius, or according to others by Fabius, in the Third Samnite War, B. C. 327. It is described as being a large and opulent place; but seems to have afterwards fallen into decay, as the name is not noticed by any other writer, except Stephanus of Byzantium, and is not found in any of the geographers. But the Itineraries mention a station Sub Roma, which they place on the Appian Way, 21 miles beyond Amerculum, and 22 miles from the Poos Autili. (Itin. Ant. p. 120.) Both these stations being known, we may fix Romula, which evidently occupied a hill above the road, on the site of the modern town of Bioncia, where various ancient remains have been discovered. (Romanelli, vol. ii. p. 348; Claver. Ital. p. 1204; Pratili, Vit. Appia, iv. 5.)

[**E. H. B.**]

**ROSCHIA/NUM (Rosano), a town of Bruttium, situated on a hill about 2 miles from the sea coast, on the gulf of Tarentum, and 12 miles from the mouth of the Crathia. The name is not found in the geographers, or mentioned by any earlier writer; but it is found in the Itinerary of Antoninus, which places it 12 miles from Taurii, and is noticed by Procopius during the Gothic wars as a strong fortress, and one of the most important strongholds in this part of Italy. (Itin. Ant. p. 114; Procop. B. G. iii. 30.) It was taken by Totila in A. D. 548, but continued throughout the middle ages to be a place of importance, and is still one of the most important towns in the province of Calabria. [E. H. B.]

**ROSTROMI MIAVIAE, a place in the central part of Vindelicia, on the river Virdo. (It. Ant. pp. 237, 258.)

[**L. S.**]

**ROTONAGUS ('Perduburger'), in Gallia Lugduno-maia, is mentioned by Ptolemy (II. 8. § 8) as the capital of the Venetiocast, as the name is written in some editions. [VELLOCIARUM.] The place of the name is written Rattomagus, with the mark which indicates a capital town; and in the Antonine Itin. it occurs in the corrupted form Latomagus on the road which runs from a place called Caracoctinum. Ammianus (av. 11) speaks of it in the plural number Rotomagi. There are said to be coins with the legend Rattomaiia.

Rotomagus is Rouen on the north side of the Seine, and the capital of the department of Seine Inferieure. The old Gallic name was shortened to Rotomom or Rodomom, and then to Rouen, as Rodomna has been shortened to Rotomme. The situation of Rouen probably made it a town of some importance under the Roman Empire; but very few Roman remains have been found in Rouen. In the Roman times the town have been mentioned. [**G. L.**]

**ROXLONAI' (Poloplosalou), a people belonging to the Sarmatian stock, who first appear in history about a century before Christ, when they were found occupying the steppes between the Nysper and the Dom. (Strab. ii. p. 214, vii. pp. 294, 306, 307, 309; Flain. iv. 12; Pol. iii. 5. § 39, 42.) Afterwards some of them made their footing in Dacia and behind the Cappadocia. Strabo (vi. p. 306) has told the story of the defeat of the Roxolani and their leader Tascius by Diophantus, the general of Mathriades, and takes the opportunity of describing some of their manners which resembled those of the Sarmatian stock to which they belonged. (Hist. i. 79.) They were the first of the people, when making an inroad into Moesia during Otho's short lease of power. From the inscription (Orelli, Inscr. 750) which records the honours paid to Plantius Silvanus, it appears that they were also defeated by him. Hadrian, who kept his frontier quiet by subsidising the needy tribes, when they complained about the payment came to terms with their king (Spartius, Hadr. 6) — probably the Rasparasana of the inscription (Orelli, Inscr. 833). When the general raising broke out among the Sarmatian, German, and Scythian tribes from the Rhine to the Tanais in the reign of M. Aurelius, the Roxolani were included in the number. (Jul. Capit. M. Asteon, 220.) With the invasion of the tribes the name of the Roxolani almost disappears. They probably were partly exterminated, and partly united with the kindred tribes of the Alan, and shared the general fate when the Huns poured down from the interior of Asia, crossed the Don, and oppressed the Alan, and, later, with the help of these, the Ostro-Goths. It has been assumed that the name of the Roxelani (Poxalads, Ptol. iii. 5. § 24) is not different from that of the Roxolani, who, according to
Schafrāk (Slav. Alt. vol. i. p. 342), received their appellation from the Sarmatian "Batae,"—perhaps the Volga or some other river in their settlements. [E. B. J.]

RUADITAE. [Maracarta, p. 278, a.]

Rubia (Eliad. book 47, Rubatius; ruvo), a city of Apulia, situated on the branch of the Appian Way that left Bocchoris, and about 10 miles distant from the sea-coast. It is mentioned by Horace, as one of the places where Maecenas and his companions slept on the journey from Rome to Brundusium. (Hor. Sat. i. 5. 94.) The distance from Cannus is given as 23 miles in the Antonine Itinerary, and 30 in the Jerusalem Itinerary, which is the more correct, the direct distance on the map being above 20 miles. (Itin. ev. p. 116; I.1. H. H. p. 610.) Neither Strabo nor Ptolemy notices the existence of Rubi, but the inhabitants are mentioned under the name of Rubustini by Pliny, among the municipal towns of Apulia, and the "Rubustinum Ager" is enumerated in the Liber Columbarum among the "Civitatis Apuliae." (Plin. iii. 13. 32.) The Itinerarium Antonini also attests the municipal rank of Rubi in the reign of the younger Gordian. (Mommsen, Inscri. R. N. 624.)

The singular ethnic form given by Pliny is confirmed by the evidence of coins, which have the name FV BA2.TRINQ at full. These coins show also that Rubi must have received a considerable amount of Greek influence and cultivation, and this is still more strongly confirmed by the discoveries which have been recently made by excavations there of numerous works of Greek art in bronze and terra cotta, as well as of vast numbers of painted vases, of great variety and beauty. These, however, like all the others found in Apulia and Lucania, are of inferior execution, and show a declining state of art as compared with those of Nola or Volci. All these objects have been discovered in tombs, and in some instances the walls of the tombs themselves have been found covered with paintings. (Romanelli, vol. ii. p. 172; Bullet. dell' Inst. Arch. 1829, p. 173, 1834, pp. 36, 164, 326, &c.) The modern town of Ruvo is still a considerable place, with an episcopal see. [E. H. B.]

RUBICON. (Poetica), a small river on the E. coast of Italy, flowing into the Adriatic sea, a few miles N. of Ariminum. It was a trifling stream, one of the least considerable of the numerous rivers that in this part of Italy have their rise in the Apennines, and discharge their waters into the Adriatic; but it possessed some importance from its having formed the boundary between Umbria, or the part of the Gaulish territory included in that province, and Cisalpine Gaul, properly so called. Hence, when the limits of Italy were considered to extend only to the frontiers of Cisalpine Gaul, the Rubicon became on this side the northern boundary of Italy. (Strab. v. p. 217; Plin. iii. 15. 20; Lucan. i. 316.) This was the scene of the great and memorable Civil War between Caesar and Pompey; Cisalpine Gaul was included in the government of the former, and the Rubicon was therefore the limit of his province; it was this which rendered the passage of this trifling stream so momentous an event, for it was, in fact, the declaration of war. Caesar himself makes no mention of its passage, and it is difficult to believe that he would have set out on his march from Ravenna without being fully prepared to advance to Ariminum; but the well-known story of his halt on its banks, his hesitation and ultimate decision to cross it, in detail by Suetonius and Plutarch, as well as by Lucan, and has given a proverbial celebrity to the name of the Rubicon. (Suet. Caes. 31; Plut. Caes. 32; Appian, B.C. ii. 55; Lucan, i. 185, 213—227.) The river is alluded to by Cicero a few years later as the frontier of Gaul; and M. Antonius was ordered by a decree of the senate to withdraw his army across the Rubicon as a proof that he abandoned his designs on the Gallic province. (Cic. Phil. vi. 3.) Strabo still reckons the Rubicon the limit between Gallia Cisalpina and Umbria; but this has seemed to have been altered in the division of Italy by Augustus; and though Pliny alludes to the Rubicon as "quondam finis Italicus," he includes Ariminum and its territory as far as "the end of the Rubicon," to which also Rossano, Velia, and other cities of Campania (Plin. l.c.; Plut. iii. 1. § 23.) Its name, however, was not forgotten; it is still found in the Tabula, which places it 12 miles from Ariminum (Tab. Peut.), and is mentioned by Sidonius Apollinaris. (Ep. i. 5.) But in the middle ages all traces of it seem to have been lost; even the Geographer of Ravenna, he more nearly its proximity to his native city.

In modern times the identification of this celebrated stream has been the subject of much controversy, and cannot yet be considered as fully determined. But the question lies within very narrow compass. We know with certainty that the Rubicon was intermediate between Ariminum and Ravenna, and between the rivers Sapins (Sasico), which flowed some miles S. of the latter, and the Ariminum or Marecchio, which was immediately to the N. of the former city. Between these two rivers only two streams now enter the Adriatic, within a very short distance of each other. The southernmost of these is the Lusero or Lusius, a considerable stream, which crosses the high-road from Rimini to Ravenna about 10 miles from the former city. A short distance further N. the same road crosses a stream now called Fiumicino, which is formed by the united waters of three small streams or torrents, the most considerable of which is the Pisello (the uppermost of the three); the other two are the Rapose or Rivo, called also, according to some writers, the Rugone, and the Pluva, called also the Fiumecino. These names are those attested by the best old maps as well as modern ones, especially by the Atlas of Magini, published in 1620, and are in accordance with the statements of the earliest writers on Italian topography, Flavio Biondo and Leandro Alberti. Olivero, however, has the northwestern most stream the Rugone, and the one next to it the Pisello. This point is, however, of little importance, if it be certain that the two streams always united their waters as they do at the present day before reaching the sea. The question really lies between the Lusius and the Fiumicino, the latter being the name given both to the Rugone and the Pisello. A papal bull, issued in 1756, proves in favour of the Lusius, which, has, in consequence, been since commonly termed the Rubicon, and is still called by the peasants on its banks Il Rubicone. But it is evident that such an authority has no real
The name of *Rubicus* applied to one of the three branches of the *Fiumicino*, would be of more value, if it were certain that this name had not been distorted by antiquarians to suit their own purposes. But it appears that old maps and books write the name *Rugus*. Two arguments, however, may be considered as almost decisive in favour of the *Fiumicino*. The redness of the gravel in the bed of the stream, from which it was supposed to have derived its name, and which is distinctly mentioned by Lucan (Sidon. Ep. i. 5; Lucan, i. 214), was remarked by Cluverius as a character of the *Fiumicino*, which was wholly wanting in the *Luce*. The circumstance which has been relied on by some authors, that the latter river is a more considerable and rapid stream than the other, and would therefore constitute *Rubicus*, is not regarded as certain by Apollodorus (ii. p. 426) and by Syme. *Fiumicino* certainly speaks of the Rubicon as a trifling stream, with little water in it except when swollen by the winter rains.

The arguments in favour of the *Fiumicino* or *Piscatelio* (if we retain the name of the principal of its three continuities) thus appear decidedly to preponderate; but the question still will require a careful examination on the spot, for the statements of Cluverius, though derived from personal observation, do not agree well with the modern maps, and it is not improbable that the petty streams in question may have undergone considerable changes since his time; still more probable is it that such changes may have taken place since the time of Caesar. (Cluver. Ital. pp. 226—227; Bopp. Salm. Apoll. Illust. p. 343; Alberti, Descriptions d' Italia, p. 245; Magni, Carta di Romagna; Mannert, Geographie von Italien, vol. i. p. 234; Murray's Handbook for Central Italy p. 104. The older dissertations on the subject will be found in Graevius and Burnmann's Thesaurus, vol. vii. part 2.)

**RUBRE SUS LACUS. [Atax.]**

**RUBRICA'TA (Pompeii, Post., ii. 6. § 74), an inland city of the Latians in the N.E. part of Hispania Tarraconensis, on the river Rubricaus; according to Reichard, Olona. [T. H. D.]**

**RUBRICA'US or UM (Pompeii, Post., ii. 6. § 18), a river of Hispania Tarraconensis flowing into the Mare Internum a little west of Barchino, the modern Llobregat.** (Mela, ii. 6. § 5; Plin. iii. 3. s. 4.)

**RUBRECICATUS, in Numidia. [RUBRECICATUS.]**

**RUBRUM MARIS ERYTHRAEUM MARE.** (Herod. i. 180, 202, ii. 8, 156, 159, iv. 39; Polyb. v. 54, § 12, ix. 43. § 2; Strab. i. pp. 32, 33, 50, 56, xvi. pp. 765, 779, xvii. pp. 804, 815; Pompt. Mela, iii. 8. § 11; Plin. vi. 2. § 7). The sea called Erythra in Herodotus has a wide extension, including the *Indian Ocean*, and its two gulfs the *Red Sea* and the *Persian Gulf* (Pompeius Sabinus and AD Rubras) to a certain extent considered as a gulf, but as part of a continuous saline line; when the *Red Sea* specifically is meant it bears the name of Arabicus Sinus [*ARABICUS SINUS*].

The thick, wall-like masses of coral which form the shores or fringing reefs of the cleft by which the waters of the *Indian Ocean* advance through the straits of *Bab-el-Mandeb*, with their red and purple hues, were no doubt the original source of the name. Thus also in Hebrew (*Ezek. x. 19, xii. 18; Ps. cvi. 7, 9, 22*) it was called "yam saph," or the "woody sea," from the coralline forests lying below the surface of the water. *Basses Miamoun* (Sosœris) was the first (1398) and the long-continued habit of the priests—who with long ships subjected to his dominion the dwellers on the coast of the Erythraean, until at length sailing onwards, he arrived at a sea so shallow as to be no longer navigable. Diodorus (i. 55, 56; comp. Herod. ii. 102) asserts that this conqueror advanced in India beyond the Ganges, and to the great island of Taprobane or the memorial pillor of Sosœris near the strait of Deira or *Bab-el-Mandeb*. It appears that the *Persian Gulf* had been opened out to Phoenician navigation as three places were found there which bore similar if not identical names with those of Phoenicia, Tylus or Tyros, Aractus, and Dora (Strab. xvi. pp. 766, 784, comp. Ptolemy, v. 11. §§ 270, 271), where the Phoenicians founded colonies. The expeditions of Hiram and Solomon, joint undertakings of the Tyrians and Jarselites, sailed from Ezion Geber through the Straits of *Bab-el-Mandeb* to Ophir, one locality of which may be fixed in the basin of the Erythraean or *Indian Ocean*. (*Ulysses*). The *Lapid. kings of Aegypt availed themselves with great success of the channel by which nature brought the traffic and intercourse of the *Indian Ocean*, within a few miles of the coast of the Interior Sea. Their vessels visited the whole western peninsula of India from the gulf of Barygaza, Gauerat, and Camboye, along the coasts of Malabar to the Brahminical sanctuaries of Cape Comorin, and to the great island of Taprobane or Ceylon. Neearchas and the companions of Alexander were not ignorant of the existence of the periodical winds or monsoons which favour the navigation between the E. coast of Africa, and the N. and W. coasts of India. From the further knowledge acquired by navigators of this remarkable local direction of the winds, they were enabled to send embassies to sail from Ocelis in the straits of *Bab-el-Mandeb* and hold a direct course along the open sea to Muziris, the great mart on the Malabar coast (S. of Mangalore), to which internal traffic brought articles of commerce from the E. coast of the Indian peninsula, and even gold from the remote Chryse. The Roman empire in its greatest extent on its E. limit reached only to the meridian of the *Persian Gulf*, but Strabo (i. p. 14, ii. p. 118, xvii. p. 781, xvii. pp. 798, 815) saw in Aegypt with surprise the number of ships which sailed from Myos Hormos to India. From the Zend and Sanscrit words which have been preserved in the geographical names of Ptolemy, his tabular geography remains an historical monument of the commercial relations between the West and the most distant regions of Southern and Central Asia. At the same time Ptolemy (iv. 9, vii. 3. § 5) did not give up the fable of the "unknown southern land" connecting Prasum Prom. with Cattigara and Thinae (Sinarum Metropolis), and therefore joined E. Africa with these last coasts on the one hand, and the isthmus-hypothesis, derived from views which may be traced back to Hipparchus and Marinus of Tyre, in which, however, Strabo did not concur, made the *Indian Ocean* a Mediterranean sea. About half a century later than Ptolemy a minute, and as it ap-
pears a very faithful, account of the coast was given in the Periplus of the Erythraean Sea (a work erroneously attributed to Arrian, and probably not anterior to the 2nd century A.D. by his son Cassander) (Suid. s.v. Περίπαλος). During the long wars with Persia, the Assyrian and Syrian population, cut off from their ordinary communication with Persia and India, were supplied by the channel which the shores of the Persian Gulf and the Red Sea afforded; and in the reign of Justinian this commerce was very important. After the disturbances caused by the wars of Heraclius and Chosroes, the Arabs or Saracens placed upon the confines of Syria, Egypt, and Persia, had the greatest portion of the rich trade with Aethiopia, S. Africa, and India thrown into their hands. From the middle of the ninth century the Arab population of the Hadjies maintained connection with the Nile, the importance of communication between the commerce of the Red Sea and that of the Euphrates has never been restored. For all that concerns the data furnished by the ancient writers to the geography of the Erythraean sea the Atlas appended by Müller to his Geographi Graeci Minores (Paris, 1855) should be consulted. He has brought together the positions of Agatharchides, Artemidoros, Pindy, Polieny, and the Pseudo-Arian, and compared them with the recent surveys made by Moreseus, Carellis, and others. [E. B. J.]

RUSSO M. [Dacia, p. 744, b.]

BUSSIEN. [Revue des.]

RUFINIANA (PONTIFICIA). Polieny (ii. 9, § 17) names Nosomagus [NOSSOMAEGUS, No. 2.] and Rufiniana as the two towns of the Nomenes, a people on the Isthmus between the Boeotian and Thessalian or Thebais. If we place Rufiniana with D’Anville and others at Raufocha in Upper Alaca and in the present department of Host Rhin, we must admit that Polieny has made a great mistake, for Raufocha is within the territory of the Baurac. But D’Anville observes that it is not more extraordinary to find Rufiniana misplaced in Thessaly than his place Argentoratum in the territory of the Vangiones. [G. L.]

RUFRAE, a town of the Samnites on the borders of Campania, mentioned by Virgil (Aen. vii. 739) in a manner that would lead us to suppose it situated in Campania, or at least in the neighbourhood of that country; while Silvia Italicus distinctively includes it among the cities of the Samnites (viii. 683), and Livy also mentions Rufrium (i. p. 493) and other local topographers are mere conjectures. [E. B. H.]

BUFRUIN. [RUFRAE.]

RUGI, RUGI (Povrya or Pórya), an important people in the north of Germany, occupying a considerable part of the coast of the Baltic. Their settlements are on the right bank of the river Vinnas in the west, under the Vistula in the east, and surrounded in the west by the Sideni. In the south by the Holmevacs, and in the east by the Sciri, who were probably a Samarian tribe. Strabo does not mention them, and Polieny (ii. 11, § 14) speaks of the Povryas, which were probably the Rugi, as living on the coast as the Rugi. After their first appearance in Tacitus, a long time passes away during which they are not noticed, until they suddenly reappear during the wars of Attilla, when they play a conspicuous part. (Suid. Apoll. Pumpe. ap. Av. 319; Paul. Disc. de Gest. Rom. p. 534, ed. Erazm.) After the death of Attilla, they appear on the north side of the Danube in Litorium Scirium and Upper Hungary, and the country there inhabited by them was now called Rugi, and formed a separate kingdom. (Procop. Bell. Goth. 1. 14, iii. 2; Paul. Disc. Longob. p. 19.) But while in this latter country no trace of their name is now left, their name is still preserved in their original home on the Baltic, in the town of Rügenshagen and perhaps also in Regia and Regenswalle. (Comp. Latham on Tac. L. c., and Prolegom. p. xiv., who strangely believes that the Rugi of Tacitus dwelt on the Gulf of Riga.)

RUGIUM (Povrya), a town in the north of Germany on the coast of the Baltic (Pol. ii. 15, § 87), the old name of which, according to the recent researches of the ancient Rugi, that of the modern Regenswalle, on the river Rega, though others seek it elsewhere. (Wilhelm, German. p. 273.)

RUNICATAE (Povrya), an Alpine tribe in the north-east of Vindelicia between the Oenus and Danubius. (Pol. ii. 18, § 1.) In the inscription of the great trophy quoted by Pliny (ii. 26) they are called Bontinates. [L. S.]

RURA (Rovere), a river of Western Germany, which flows into the Rhine from the east near the town of Düsseldorf. (Geogr. Rev. iv. 24.) [L. S.]

RURADA (Burda), a place in Hadrianople, which appears only upon coins, the present Rus near Bacau. (Flor. Esp. viii. 2.)

RUSADIA (Plin. v. 1; Povrya), Plin. iv. 1, § 7; Rusader, Russ. Ant.), a colony of Manretans, situated near Metagonites Prom., which appears sometimes to have been called from the town Rürasdir. (Pol. iv. 1 § 19.) It is represented by the “barbaro” of Mélita, or Spanish penal fortress, on the hill then formed between C. Tres Fontes and the Málaga. [E. B. J.]

RUSZUZ. [MAURTEMANN, p. 298, b.]

RUSCION (Povrya, Povrya), a city of the Voivocz Tectosages in Gallia Narbonensis. (Pol. ii. 10, § 9.) When Hannibal entered Gallia by the Pyrenees, he came to Iliberis (Ehés), and thence marched past Rues, and in the town of Rues passed on a river of the same name (Pol. Strab. Povrya, Plin. iv. 10, ed. Bekker) the same name about the river and the fish, which, however, he says, feed on the plant agrisit. (Athen. viii. p. 332.) The low tract which was divided by the Rucino is the Cynthiscum Littus of Avienna (Ur. Mar. v. 365):—

post Pyrenaeum jugum, Jacent arnae in litoris Cyntis, Esquiae iustae solucat annis Rosciani.
RUSSELLAE.

Mela (v. 5) names the place a Colonisa, and so the title appears on coins, COL. HAR. LEG. VI. Pliny calls it "Oppidum Latinorum." It seems to have been a Colonisa Latina.

The name is incorrectly written Ruscone in the Antonine Itin. and in the Table. It is placed between Combusta (COMBUTA) and Illiberis, and it is represented by Castel-Rossellone or the Torre de Rossellone on the Têt, the ancient Ruscino, a short distance from Perpignan, the capital of the French department of the Pyrénées Orientales. Perpignan lies on the high-road from France into Spain, and there is no other great road in this part of the Pyrénées.

Ruscino is named Rossellone in middle age documents, and from this the modern name Rossillon is derived. Rossillon was a province of the ante-revolutionary history of France, and it corresponds to the modern department of Pyrénées Orientales.

The river Ruscino or Ruscunus is the Têt of Mela (v. 5), the Tét; and we may probably conclude from the latter that the river was exemplified in the Têt rises in the Pyrénées, and flows past Perpignan into the Mediterranean, after a course of about 70 miles. Sometimes it brings down a great quantity of water from the mountains. [G. L.]

RUSSELLAE (Rossellone: Etr. Russellannsc: Rosselle), an ancient and important city of Etruria, situated on the right bank of the river Onfre (Umbra). In common with several of the ancient Etruscan cities, we have very little information concerning its early history, though there is no doubt of its great antiquity and of its having been at a very early period a powerful and important city. There is every probability that it was one of the twelve which formed the Etruscan League (Müller, Etruriae, vol. i. p. 346). The first mention of it in history is during the reign of Tarquinius Priscus, when it united with Clusium, Arretium, Volaterrae, and Vetulonia, in declaring war against the Roman king, apart from the rest of the confederacy—a sufficient proof that it was at that time an independent and sovereign state. About the year 510 B.C. the Etruscans, we hear no more of it until the Romans had carried their arms beyond the Ciminius forest, when, in B.C. 301, the dictators M. Valerius Maximus carried his arms, apparently for the first time, into the territory of the Rusellae, and defeated the combined forces of the Etruscans who were opposed to him. (Liv. xiv. 4, 5.) A few years later, in B.C. 294, the consuls L. Postumius Megellus not only laid waste the territory of Russelat, but took the city itself by storm, taking more than 3000 of the inhabitants captives (id. x. 37). No other mention of it occurs during the period of Etruscan independence; but during the Second Punic War the Rusellaeans are mentioned among the "populi Etrusci" who came forward with voluntary supplies to equip the fleet of Scipio (v. c. 205), and furnished him with timber and cork (id. xxviii. 45). It is evident that at this time Russelat was still one of the principal cities of Etruria. We find no subsequent notice of it under the Roman Republic, but it was one of the places selected by Augustus to receive a colony (Plin. iii. 5. 4, 2; Zumpt, de Col. p. 847); notwithstanding which it seems to have fallen into decay; and though the name is mentioned by Ptolemy (iii. 1. 48) we meet with no later notice of it in ancient times. It did not, however, altogether cease to exist till a much later period, as it retained its episcopal see down to the twelfth century, when it was transferred to the neighbouring town of Grosseto. (Repetti, Dia. Top. vol. ii. pp. 526, 822.)

The site of Rossellone is now wholly desolate and overgrown with thickets, which render it very difficult of access. But the plan may be distinctly traced, and the line of the ancient walls may be followed in detached fragments throughout the entire circuit. It stood on the flat top of a hill of considerable elevation, about 6 miles from the modern city of Grosseto, overlooking the broad valley of the Ombrone and the level plain of the Maremma, which extends from thence to the sea. The walls follow the outline of the hill, and enclose a space of about 19 miles in circuit, with a rampart of very rude and massive stones, in some places with an approach to horizontal structure, similar to that at Volterra and Populonia; but in other parts they lose all traces of regularity, and present (according to Mr. Dennis) a strong resemblance to the rudest and most irregular style of Cyclopian construction, which he notes as the most interesting remnant of an Etruscan city—has yet been discovered at Russelat. But the site is so wild and so little visited, that no excavations have been carried on there. (Dennis, l. c. p. 254.)

About 3 miles from the ruins, and 4 from Grosseto, are some hot-springs, now called I Bagni di Rosselle. On a hill immediately above them are the mediaeval ruins of a town or castle called Montepulciano, which have been often mistaken for those of Russelat. (Dennis, l. c.)

RUSGU'NIA (Rus. Ant; Povetovio, Ptol. iv. 2. § 6), a town of Marazania, and a colonia, which lay 15 M. P. to the E. of Icosium. Its ruins have been found near Cape Matyas or Temesvody (Barth, Wunderungen, p. 65). See Auloten, 1857, No. 144. [E. H. B.]

RUSICADE (Plin. v. 2; Mela, l. v. § 1; Povetovia, Ptol. iv. 3. § 3; Rusicade, Rov. Ant., Pent. Tab.), the harbour of Cirta in Numidia, and a Roman colonia, at the mouth of the small river Thapsus (Vib. Sec. de Fed. p. 19; C. Sall.), and probably therefore identical with the Thapsa (Gallica), a port, or harbour-town, of Scylax (p. 50). Its site is near Stora; and the modern town of Philippouolle, the Râs-Siktâda of the Arabs, is made in part of the materials of the old Rusicade (Barth, Wunderungen, p. 66). [E. B. J.]

RUSIDA'VA. [Dagia, p. 744, b.]

RUSPE (Pent. Tab.; Povetovio al. Povetov, Ptol. iv. 3. § 10), a town of Numidia between Acholla and Usilla, near the Caput Vadoorum (Corippus, Joh. i. 366; C. Xabikudch), and the sea of Fulgentius, well-known in the Pelagian controversy; he was exiled from it by the Vandal Thrasamund. Barth (Wunderungen, p. 177) found remains at Schebba. [E. B. J.]

RUSPINUM (Povetovio, Stra. VI. p. 851; Ruspina, Auct. B. Afr. 6; Plin. v. 3; Pent. Tab.), a town of Africa Proper, where Caesar defeated Scipio, and which he afterwards made his position while waiting for reinforcements. It is probably the
same place as the pHierman of the Coast-describer (Stadilus, § 114, ed. Miller), near the ruins of
Leptis Parva. [E. B. J]

RUSTICIANA (Poviercia, Potl. ii. 5. 7), a city of the Vettonum in Lucania, on the right ban
t of the Tagna. Situed midway between Corithys and 
Galatium. (It. Ant. v. 433.) [T. H. D.]

RUSSUERIUM, RUSCUERIUM (Pilus. v. 
1; It. Ant.; Poviercia, Potl. ii. 2. v. 8), a 
town of Mauretania, which Claudius made a muni-
cipium (Plin. l.c.), but which was afterwards a 
colonia (Itus. Ant.). Barthes (Vanderweges, p. 60) 
has identified it with the landing-place Delica in Al-
geria, where there is good anchorage. [K. B. J.]

RUTE'iNI (Poviercia), and Puravel in Polotymy 
(ii. 7. § 21), who places them in Gallia Aquitania. 
Pliny (iv. 19) says that the Ruteni border on the 
Narbonensia Provincia; and Strabo (iv. p. 191) 
places them and the Galliaca or Gabelli next to the 
Narbonensis. Their country was the old province of 
Aegeorum, and their eastern boundary, about 90 miles in a western direc-
tion. The chief town was Rhades. The modern 
department of Aveyron comprehends a large part of 
the aenever. There were silver mines in the 
country of the Ruteni and their neighbours the 
Gabelli, and the floss of this country was 
gendered.

The Arverni and Ruteni were defeated by Q. 
Fabius Maximus, m. c. 191, but their country was 
not reduced to the form of a Roman province (Caes. 
B. G. l. 43). In Caesar's time part of the Ruteni 
were included in the Provincia under the name of 
Ruteni Provinciales (B. G. vii. 5. 7). Verulamitrix in 
the Caes. B. G. iii. 5. 27, is mentioned as the 
historian of the six chief towns of the 
country of the Ruteni to bring them over to 
the Gallic confederation, which he did. Caesar, in order 
to protect the Provincia on this side, placed troops in 
the country of the Ruteni Provinciales, and among 
the Volca, Aremontica, and Toloseta. Pliny, who 
enumerates the Ruteni among the people of Aqui-
tania, also mentions Ruteni in the Narbonensis (iii. 4), 
but he speaks of them as the town Sequarum [Sequi-
na]. The Ruteni Provinciales of course were 
farther west to the Tectosages than the other Ruteni, 
and we may perhaps place them in that part of 
the departments of Avenae and Taun which is south 
of the Narcan (Taun). It may be conjectured that 
part of the Ruteni were added to the Provincia, either 
and the rest of the Ruteni by Maximus, or after 
the conquest of Tolos by Caspia (m. c. 106.) [G. L.]

RUTICLAE. [Rudil.]

RUTUBA (Roja), a river of Liguria, which rises 
in the Maritime Alps, near the Coll de Tende, and flows 
into the sea at Ventimiglia (Albium Intemelium). 
Its name is found in Pliny (iii. 3. 7. 7), who places 
its mouth, which is at the W. of Albium Intemelium, 
whereas it really flows on the E. side of that town; 
Lucan also notices it among the streams which flow 
from the Apenines (ii. 422), and gives it the 
epithet of "cavu," its flowing through a deep 
bed or ravine. From the mention of the Tiber just 
after, some writers have supposed that he must 
mean another river of the same name, but there is 
no reason to expect such a strict geographical order 
from a poet, and the mention of the Marsa a few 
lines lower down sufficiently shows that none such 
was intended. Vibia Sequat (p. 17) who makes 
the Rutuba fall into the Tiber, has obviously misunder-
stood the passage of Lucan. [E. H. B.]

RUTUBIS (Polyb. ap. Plin. v. 1; POWIS, Potl. 
iv. 5. § 1), a port of Mauretania, which must be 
identified with the low rocky point of Memonnog. 
The town situated upon this was the last possessed 
by the Portuguese in Morocco, and was abandoned 
by them in 1769. (Jackson, Morocco, p. 104; 
Jenkin, coast of Morocco, 306.) [T. H. D.]

RUTULI (Persepolis), a people of ancient Italy, 
who, according to a tradition generally received 
il later times, were settled at a very early period in a 
part of Latium, adjoining the sea-coast, their capital 
un city being Ardea. The prominent part that 
they and their king Turnus bear in the legendary 
history of Aeneas and the Trojan settlement, especially 
in the form in which this has been worked up by 
Virgil, has given great celebrity to their name, 
but they appear to have been, in fact, even according 
to these very traditions, a small and unimportant 
people. Their king Turnus himself is represented 
as dependent on Latinus; and it is certain that in 
the historical period Ardea was one of the cities 
of the Latins Cerere (Liv. iv. 61), while the name of 
the Rutuli had become merged in that of the Latia 
people. Not long before this indeed Livy represents 
the Rutuli as a still existing people, and the arms of 
Tarquinii Superbus as directed against them when 
he proceeded to attack Ardea, just before his expul-
sion. (Liv. iv. 56, 57.) According to this narrative 
the fortress of Ardea is first mentioned, but we learn from 
another authority (the treaty between Rome and Carthage 
preserved by Polybius, iii. 22) that it had fallen 
under the power of the Romans before the close of 
the monarchy, and it is possible that the extinction 
of the Rutuli as an independent people may date from 
this period. The only other mention of the Rutuli 
which we have is in the line found in the list given by 
Cato (qu. Piscivens. iv. p. 699) of the cities that took part in the 
foundation of the celebrated temple of Diana at Aricia, 
a list in all probability founded upon some ancient re-
cord; and it is remarkable that they here figure as 
distinct from the Ardestes. There were some ob-
scure traditions in antiquity that represented Ardea 
as founded by the Romans, by means of a branch of 
these that are regarded by Niebuhr as tending to prove 
that the Rutuli were a Pelasgic race. (Niebu. vol. i. 
p. 44, vol. ii. p. 21.) Schwegler, on the other hand 
considers them as connected with the Etruscans, and 
probably a relic of the period when people had 
extended their dominion throughout Latium and 
Campania; and finds that the name of Turnus, or after 
the name of Turnus, which may probably be connected 
with Tyrrhenus, as well as in the union which the 
legend represents as subsisting between Turnus and the 
Etruscan king Menesius. (Schwegler, Röm. 
Gesch. v. 1. p. 330, 331.) But the whole subject 
is so mixed up with fable and poetical invention, 
that it is impossible to feel confident in any such 
conjectures. [E. H. B.]

BUTUNNIUM (It. Ant. p. 469), apparently 
a town of the Cornovii in the W. part of Britannia 
Emania. Camden (p. 651) identifies it with 
Roetton in Shropshire, Horasey (p. 418) with 
Wem. [T. H. D.]

RUTUPIAE (Poviercures, Potl. ii. 3. § 27; in 
the Tana. Ant. and Not. the name is within 
Rutupiae, also Portus Rutupienus and Portus 
Rutupius: Adj. Roepiupina, Luc. Pharsa. vi. 67; 
Juv. iv. 141), a town of the Cantii on the E. coast 
of Britannia Prima, now Richborough in Kent. 
Rutupiae and Portus Rutupienus were probably 
distinct, the former being the city, the latter its harbour 
at some little distance. The harbour was probably
RYSSADIUM.

Samos, not Sandaeis; which latter town seems to have sprung up under the Saxons, after Rutupiae had begun to fall into decay, and was indeed probably built with materials taken from it. According to Camden (p. 244) the etymology of the name of Rutupiae is analogous to that of Sandaeis, being derived from the British Rhudnaeth, signifying "sandy bottom"; a derivation which seems much more probable than that from the Eturi, a people who occupied the district in France now called La Roerey. The territory around the town was styled Rutipinae Ager (Auston. Parent. xviii. 8) and the coast Rutipinae Littus (Luc. i.e.); the latter was so named for its coves, as the coast near Myrae and Reculver is to the present day. Later towns of the place, with its hill conical form, is the present neighbourhood, at a depth of from 4 to 6 ft. underground. The port is undoubtedly that mentioned by Tacitus (Agri. 38), under the erroneous name of Trutnus Larus, as occupied by the fleet of Agricola. It was a safe harbour, and the usual and most convenient one for the passage between Britain and England. (Gell and Mon. Antiqu. ii. 8. § 6.) The principal Roman remains at Richborough are those of a castrum and of an amphitheatre. The walls of the former present an extensive ruin, and on the N. side are in some places from 20 to 30 feet in height. Fragments of sculptured marbles found within their circuit show that the fortification must have consisted of several banks and buildings. The foundation walls of the amphitheatre were excavated in 1849, and are the first remains of a walled building of that description discovered in England. There is a good description of Richborough, as it existed in the time of Henry VIII., in Leland's Itinerary (vol. vii. p. 128, ed. Hearne). Leland mentions that many Roman coins were found among the stones. In the same work, Tacitus was under the jurisdiction of the Cornu Icarios Saxonicis, and was the station of the Legio Ila Augusta. (Notitia, c. 55.) A complete account of its remains will be found in Smith's Antiquities of Great Britain, vol. i. It was the residence of the first of the name of the house of Wiltshire, about 1700 B.C. (T. H. D.)

SABA.

SABA, SABAEI (Sadah or Száfa; Eth. Szábae, fam. Száfale), were respectively the principal city and nation in Yemen, or Arabia Felix. [ARABIA.] Ancient geographers differ considerably as to the extent of territory occupied by the Sabaeans, Eratosthenes assigning them a much larger area than Ptolemy. The difference may perhaps be reconciled by examining their respective accounts.

Our knowledge of the Sabaeans is derived from three sources: the Hebrew Scriptures, the Greek historians and geographers, and the Roman poets and encyclopaedists, Piny, Solinus, &c. The Arabian geographers, also give some light upon this ancient and far-reaching race.

1. In the Hebrew genealogies (Genesis x. 6, xxv. 3) the Sabaeans are described as the descendants of Cush, the son of Ham. This descent was probably not so much from a single stem, as from several branches of Hamite origin; and as the tribes of Cush were numerous, some of them may have proceeded immediately from Cush, and others from later progenitors of the same stock. Thus one tribe descended from Seba, the son of Cush, another from Jokshan, Abraham's son by Keturah; a third from Sheba, the son of Raamah—the 'Peryah of the LXX. (Compare Job xlix. 10; Ezek. xiv. 14; Ezekieli. xxv. 29, 30, xxviii. 13.) The most material point in this pedigree is the fact of the pure Semitic blood of the Sabaeans. The Hebrew prophets agree in celebrating the stature and noble bearing, the enterprise and wealth of this nation, therein concurring with the expression of Agatharchides, who describes the Sabaeans as having vā ισπανα καθολογμα. Their occupations appear to have been various, as would be the case with a nation so widely extended ("Sabei... ad utrasque maris percorrit"); Pilin. vi. 26, 32; for there is no doubt that in the south they were actively engaged in commerce, while in the north, on the borders of Idumea, they retained the predatory habits of nomadics. (Job, ii. 15.) The 'Queen of the South,' a word which attracted to Palestine by the fame of Solomon, was probably an Arabian sovereign. It may be observed that Yemen and Sabæa have nearly the same import, each signifying the right hand; for a person turning his face to the rising sun has the south on his right, and thus Sabæa or Yemen, which was long regarded as the southern limit of the habitable zone, is the left-hand, or southern land. (Comp. Herod. iii. 107—113; Forster's Geogr. of Arabia, vol. i. pp. 24—38.) A river Sabæi, in Carmania (Mela, iii. 8. § 4), and a chain of mountains Sabae, at the entrance of the Persian Gulf (Arrian, Periplus. M. Erythrae, ὅπως μέσωνα λέγομεν Σαμα, comp. Pol. vi. 7. § 32), appear only to an extension of the Sabæans beyond Arabia Proter. That they reached to the eastern shore of the Red Sea is rendered probable by the circumstance that a city named Sabæ or Sabæ stood there, about 36 miles S. of Podrum, in lat. 14° 20' N. (Pol. vi. 7. § 38, v. 23. § 14.)

2. The first Greek writer who mentions the Sabæans by-name is Xenophon. His account, however, represents a more recent condition of this nation than is described by Artemidorus, or by Agatharchides, who is Strabo's principal authority in his narrative of the Sabæans. On the other hand, Diodorus Siculus professes to have compiled his
accounts of them from the historical books of the Egyptian kings, which he consulted in the Alexan-
drian Library. (Diod. iii. 38, 46.) There can be little doubt that the Greeks knew of the fact, but
not name the Sabaeans, describes them in various
passages, when speaking of the Arabians, the south-
ermost people of the earth. (Herod. ii. 86, iii. 107
-113.) The commerce of Yemens with Phoenixia and
Aegypt under the Pharaohs would render the name of the Sabaeans familiar in all the havens of
the Red Sea, and in the eastern Mediterranean. The
Aegyptians imported spices largely, since they em-
ployed them in embalming the dead; and the Phoe-
nicians required them for the Syrian markets, since
perfumes have in all ages been both favourite
luxuries and among the most popular medicines of
the East. At the time when Ptolemy wrote (in the
second century B.C.) their trade with Syria and
Aegypt was so considerable that the carriers of the silks and spiccs so
much in request at Rome, brought the Sabaeans
within ken of the scientific geographer and of the
learned generally.
3. Accordingly, we meet in the Roman poets with numerous, although vague, allusions to
the wealth and luxury of the Sabaeans. "Moies, " de-
virginis, Moses, " Emelai, " the names of the most
celebrated cities of the Sabaeans, and are commonly
mentioned by them. (See Catull. xi. 5; Propert. ii. 10. 16,
ib. 29. 17, iii. 13. 8; Virgil, Geor. i. 57, ii. 150,
Aen. i. 416; Horace, Car. iii. 9, ii. 12. 24; Id.
Epist. i. 6, ib. 7. 36; Statius, Silv. iv. 8. 1;
Senec. Hercules, Ost. v. 376.) The expedition of
Aelius Gallus, indeed (s. c. 24), may have tended
to bring Syria and Arabia more immediately under
the notice of the Romans. But their knowledge
was at best very limited, and rested less on facts
than on rumours of Sabaeanc opulence and luxury.
Pliny and the geographers are rather better in-
formed, but even they had very erroneous conceptions
of the physical or commercial character of this nation.
Not until the passage to India by the Cape had been
opened was Sabaea or Yemens really explored by
Europeans.
Assuming, then, that the Sabaeans were a widely-
spread race, extending from the Persian Gulf to the
Red Sea, and running up to the borders of the
desert in the Arabian peninsula, we proceed to exa-
nine the grounds of their reputation for excessive
opulence and luxury. At all events, they were
undoubtedly native; they supplied Aegypt and
Syria from the remotest periods with frankincense
and aromatics; and since the soil of Yemens is highly
productive, they took in exchange, not the corn or
wine of their neighbours, but the precious metals.
But aromatics were by no means the capital source
of their wealth. The Sabaeans possessed for many
centuries the keys of Indian commerce, and were
the intermediate factors between Aegypt and Syria,
as these countries were in turn the Indian agents
for Europe. During the Pharaonic era of Aegypt,
no attempt was made to disturb the monopoly of the
Sabaeans in this traffic. Ptolemy Philadelphus (s. c.
274) was the first Aegyptian sovereign who com-
cerned the value of the Red Sea and its harbours to
his kingdom. He established his Indian empire at
Myca-Hormus or Arinisco, and under his succes-
sors Berenice, which was connected with Coptos on
the Nile by a canal, shared the profits of this com-
mmercial enterprise. But even then the Sabaeans lost
a small portion only of their former exclusive ad-
vantages. They were no longer the carriers of
Indian exports to Aegypt, but they were still the
importers of them from India itself. The Egyptian
flutes proceeded no further than the havens of Sab-
betha or Marib, while the Sabaeans, long prior to
the Greeks, and with whom they were on terms of
commerce across the ocean with the monsoon to Ceylon
and the Malabar coast. Their vessels were of larger
build than the ordinary merchant-ships of the
Greeks, and their mariners were more skillful and
intrepid than the Greeks, who, it is recorded, shrunk
back with terror from the Indian Ocean. The track
of the Arabian Sea passed through the strait of GIS-
drosia, since Nearchus found along its shores many
Arabic names of places, and at Passeng engaged a
pilot acquainted with those seas. In proportion as
luxury increased in the Syro-Macedonian cities (and
their extravagance in the article of perfumes alone is
recorded by Athenaeus, xii.), and subsequently also in Rome, the Indian trade became more valuable to the
Sabaeans. It was computed that at the time of the
Empire, that, for every pound of silk brought to
Italy, a pound of silver or even gold was sent to
Arabia; and the computation might fairly be ex-
tended to the aromatics employed so lavishly by the
Romans at their banquets and funerals. (Comp.
Pomponius, c. 64, with Plutarch, Sulla, c. 38.)
Thus the wealth of the Sabaeans rested on the
trading routes by Petra and the Elantion Gulf, the other up
the Red Sea to Arinisco, the Ptolemaic canal, and
Alex-
andria. We may therefore fairly ascribe the extra-
ordinary wealth of the Sabaeans to their long
monopoly of the Indian trade. Their country, how-
ever, was itself highly productive, and doubtless, from
the desert to the red sea, and from the peninsula to the
southern extremity was densely populated. The
Sabaeans are described by the Hebrew, the Greek,
and the Arabian writers as a numerous people, of
lofty stature, implying abundance of the means of
life; and the recurrence of the name of Saba through-
out the entire region between the Red Sea and Car-
menia shows that they were populous and powerful
enough to send out colonies. The general barbarism of the northern and central districts of Arabia drove
the population down to the south. The highlands
that border on the Indian Ocean are distinguished
by the plenty of wood and water; the air is tem-
perate, the animals are numerous (the horses of
Yemens are strong and serviceable), and the fruits
of the desert are seen, and in a few hours home the Sab-
aeans were enabled to divert themselves to trade
with undivided energy and success.
Nothing more strikingly displays the ignorance of
the ancient geographers as regards Sabaea than
their descriptions of the opulence of the country.
Their narratives are equally pompous and extra-
vagant. According to Agatharchides and Diodorus,
the odour of the spice-woods was so potent that the
inhabitants were liable to apoplexy, and counter-
acted the noxious perfumes by the ill odours of burnt
goats'-hair and asphaltite. The decorations of their
houses, their furniture, and even their domestic uten-
sils were of gold and silver; they drank from vases
done up with gems; they used cinnamon chips for
firewood; and no king could compete in luxury with
the merchant-princes of the Sabaeans. We have only
to remember the real or imputed sumptuousness of
a few of the Dutch and English East India Company's
merchants in the 18th century, while the trade of
the East was in a few hands, in order to appreciate
the extravagance of these descriptions by Agatharchides and Diodorus.

The delusions of the ancients were first dis-
SABA.

pelled by the traveller Niebuhr. (Description de l'Arabie, p. 125.) He asserts, and he has not been contradicted, that Yemas neither produces now, nor ever could have produced, gold; but that, in the district of Saba, they continued to be a people of great notoriety by easier describers, — which were worked when he visited the country. He states, moreover, that the native frankincense is of a very ordinary quality, Sabaean yielding only the species called Li-bi, while the better sorts of that gum are imported from Semenra, Siama, and Jazza. The distance from which the superior kinds of myrrh, frankincense, hard, and osaia were fetched, probably gave rise to the strange tales related about the danger of gathering them from the trees, with which the Sabaens regaled the Egyptian and Greek merchants, and through them the Greek geographers also. One cause of danger alone is likely to have been truly reported; the spice-woods were the abode of venomous reptiles; one of which, apparently a purple cobra, was aggressive, and, springing on intruders, inflicted an incurable wound. The ancients, however, said and believed that cinnamon was brought to Yemas by large birds, which build their nests of its chips, and that the bedowen was combed from the beards of goats.

The Sabaens were governed by a king. (Dion Cass. xxiv. 23, 24.) The functions of the royal office was, that he should never quit his palace; found beyond its precincts, it was allowable to stone him to death. The rule which governed the succession to the throne was singular. A certain number of noble families possessed equal claims to the crown; and the first child (females were eligible) born after an interregnum, was heir to the reigning monarch. This exclusion of the king, and the strange mode of electing him, seem to indicate a sacrificial influence, similar to that which regulates the choice of the Grand Lama and the homage paid to him by the Thibetians. The precise boundaries of Saba is it is impossible to ascertain. The area we have presumed is encompassed within the Arabian Sea W., the Persian Gulf E., the Indian Ocean S., and an irregular line skirting the Desert, and running up in a narrow point to Idumea N.

For the principal divisions of the Sabaenan see the articles on Arabia; Adramytta; Michael.

The Sabaen language has been traced from two canons: (1) the more direct intercourse of the Assyrio-Greeks with India, and (2) the rivalry of the powerful tribe of the Homerites, who subdued them. In the account of their eastern traffic, and of the characteristics of their land, we have traced the features of the race. Compared with the Arabs of the Desert, the Sabaens were a highly civilised nation, under a regular government, and, as a mercantile community, jealous of the rights of property. The author of the Peripitus remarks upon similar security among the Adramites; the interests of the merchant had curbed and softened the natural ferocity of the Arab. This also, according to Niebuhr (Descrip. de l'Arabie, p. 315), is still observable. The Yemenis distinguish the provinces of Hujza, and Negal. [W. B. D.]

SABA. Three cities of this name are distinguished by ancient geographers: the name indeed was a common appellation of towns, and signified head of the province, or of its lesser divisions. (Comp. Plin. vi. 26. a. 32.) (Saba'i, Steph. B. s. a. Saz, Agatharch. op. Phot. p. 63,) was the chief city of the Sabaens. It is described by Diodorus (iii. 46) as situated upon a lofty wooded hill, and within two days' journey of the frankincense country. The position of Saba is, however, quite uncertain: Mammert (Geogr. der Griech. u. Röm. vol. vi. pt. i. p. 66) places it in the modern Soada; other geographers identify it with Merob [Mariana]; and again Sabatha, both from its site in the interior and its commercial importance, seems to have a good title to be considered as Saba [Zedeq of Agatharchides] or Sheba, the capital of the Sabaens.

2. (Zedeq, Strab. xvii. p. 771; Zeller, Plut. iv. 7. § 8), on the western shore of the Red Sea, was the capital city of the Sabaens, and its harbour the Red Sea, the Aethiopica (Zedeqa ovân, Strab. xvii. p. 770). The position of Saba, like that of so many Aethiopian races and cities, is very uncertain. Some writers place it at the entrance of the Arabian gulf (Heeren, Histor. Researches, vol. i. p. 333); others carry it up as high as the bay of Adul, lat. 15° N. Bruce (Travels, vol. iii. p. 144) identifies the modern Asab with the Sabaens, and places it between the tropics and the Arabian highlands. Combes and Taminier (Voyages, vol. I. p. 89) consider the island Massowa to have a better claim: while Lord Valentia (Travels, vol. i. p. 47) finds Saba at Port Montgomery. But although neither ancient geographers nor modern travellers are agreed concerning the site of the Aethiopian Saba, they agreed in placing it on the northern coast of the kingdom or island of Merob, and between the Sinus Avallites and the bay of Adul, i.e. between the 12th and 15th degrees of N. latitude. On the opposite shore were seated the Sabaens of Arabia, and as there was much intercourse between the populations of the opposite sides of the Red Sea, the Sabaens at least in earlier periods, may be regarded as one of the principal tribes of the Aethiopian kingdom of Merob. [MEROB.] Josephus (Antiq. ii. 5) affirms that the Queen of Sheba or Saba came from this region, and that it bore the name of Saba before it was known by that of Merob. There seems also some affinity between the word Saba and the name or title of the kings of the Aethiopians, Saba-sen, comparison of the name.

[SABADDIBA光泽. (Zedeq, Strab. vii. 2. § 28), three islands, mentioned by Ptolemy, in the neighbourhood of the Aures Chersonesus in India extra Gangem. From the great resemblance of the name, it is not unlikely that he has conformed it with that of the island of Cabedus (or Sabadus), which he mentions in his next section.] [SABADDIBA.]
SABAGENA, a town in Lesser Armenia, is mentioned only by Ptolemy (v. 7. § 10) as belonging to the province of Laviniana. [L. S.]

SABALINGI (Σαβαλινγι), a German tribe, placed by Pomponius (s. 11. § 11) in the province of Carnuntum, in the Christian position, the modern Schlesien. In the absence of all further information about them, it has been inferred, from the mere resemblance of name, that they dwelt in and about the place called Solzeholm in the island of Lolland. [L. S.]

SABARIA (Σαβαρία), an important town in the north of Upper Pannonia, was situated in a plain between the river Arbrabo and the Deserta Batorum, on the road from Carnuntum to Postumium. The town, which seems to have been an ancient settlement of the Boi, derived its importance partly from the fertility of the plain in which it was situated, and partly from the fact that it formed a kind of central point at which several roads met. The emperor Claudius raised it to the rank of a Roman colony, and gave it the surname of Claudia. (Plin. iii. 27; Ptol. ii. 15. § 38.) In this town Septimius Severus was proclaimed Augustus (Aurel. Vict. Epit. 19), and the emperor Valentinian resided there some time before (Amm. Marc. xxx. 5.) Owing to this and other circumstances, the town rose to a high degree of importance, and was one of the great cities of the Roman Empire; and its ancient greatness is still attested by its numerous remains of temples and aqueducts. Many statues, inscriptions, and coins also have been found at Stein am Äuger, which is the modern name of the town, or, as the Hungarians call it, Szombathely. (It. Ant. pp. 253, 261, 263, 455; Orell. Inscript. ii. 60, 105; Pococke in his travels which he made in Hungary, p. 45; Muchar, Noricum, i. p. 167.) [L. S.]

SABARCUS SINUS. [INDICUS OCEANUS.]

SABATA or SABDATA (Ptol. vi. 27. s. 31.), a town of Asyria, probably the same place as the Sabadd of Zosimus (iii. 23), which that writer describes as 30 staadia from the ancient Seleucia. It is also mentioned by Abufloda (p. 253) under the name of Sabadda.

SABATIA VADA. [VADA SABATIA.]

SABATIUS LACUS (Σαβατιανός Λίμνη, Strab.: Lago di Bricciamento), one of the most considerable of the lakes of Etruria, which, as Strabo observes, was the most southerly of them, and consequently the nearest to Rome and to the sea. (Strab. v. p. 225.) It is the most regular of the lakes in that region, and formed in the crater of an extinct volcano, and has consequently a very regular basin-like form, with a circuit of about 20 miles, and is surrounded on all sides by a ridge of hills of no great elevation. It is probable that it derived its name from a town of the name of SABATA, which stood on its shores, but the name has been extended to the two adjacent villages, and the positive evidence of its existence is its mention in the Tabula as a station on the Via Claudia. (Tab. Post.) The lake itself is called Sabata by Strabo, and Sabate by Festus, from whom we learn that it gave its name to the Sabatine tribe of the Roman citizens, one of those which was formed out of the new citizens admitted to the state in B.C. 367. (Liv. vi. 4, 5; Fest. s. v. Sabatina, pp. 342, 343.) Silius Italicus speaks of the "Sabatia stagna" in the plural (viii. 492), probably including under the name the much smaller lake in the same neighbourhood called the Lacus Alsietinus or Lago di Martignano. The same tradition was reported of this lake as of the Ciminian, and of many others, that there was a city swallowed up by it, the remains of which could still occasionally be seen at the bottom of its clear waters. (Sotion, de Mir. Post. 41, where we should certainly read Σαβατόρως for Σαβατόρως.) It abounded in fish and wild-fowl, and was even stocked artificially with various kinds of the luxurious Romans of late times. (Columnell. viii. 16.)

The Tabula places Sabate at the distance of 36 miles from Rome, but this number is much beyond the truth. The true distance is probably 27 miles, which would coincide with a site near the W. extremity of the lake about a mile beyond the modern town of Bricciamento, where there are some ruins of Roman date, probably belonging to a villa. (Tab. Post.; Holsten. Not. ad Clever. p. 44; Westphal. Röm. Kampagnen, pp. 156, 158.) The town of Bricciamento, which now gives name to the lake, dates only from the middle ages and probably does not occupy an ancient site. [E. E. B.]

SABATUS. 1. (Sabbato), a river of Samnia, in the marshes of the Murius, larv., and received the tributaries of the Calor (Calore), with which it unites under the walls of Beneventum. [CALOR.] The name of the river is not found in any ancient author, but Livy mentions the Sabatinii among the Campanians who were punished for their defection to Hannibal in the Second Punic War. (Liv. xxvi. 33, 34.) It may have taken its name possibly from the valley of Sabatini, or there may have been, as supposed by Oliver, a town of the same name on the banks of the river. (Claver. Ital. p. 1199.)

2. (Sanvto), a river of Bruttium, on the W. coast of the peninsula, flowing into the sea between Asamian and Capo Suaro. Its name is known only by its personal form, and is supposed to be derived from the name of a river which it crossed by the high-road to Rhegium 18 miles S. of Consentia (Coscentia), a distance which, combined with the name, clearly identifies it with the modern Sanveto. (Itin. Ant. pp. 105, 110.) It is generally identified by geographers with the Ocinarum of Lycochrus, on the banks of which the Greek city of Terina was situated; but this assumption rests on no sufficient grounds. [TERIUM.] [E. E. B.]

SABBATA or SABBATIA. [VADA SABATIA.]

SABBATH (Σάββαθ, Ptol. vi. 7. § 38; Sabatha, Ptol. vii. 28. s. 32), was the capital of the Adramyttes, a Sabæan tribe inhabiting the S. coast of Arabia Felix (Lat. 14° N.). [ADRAMYTTE.] Its inhabitants were called Sabatha. It was the capital of the Decumani (Descr. Orbis Terr. v. 1136). Sabatha was seated far inland, on the coast of a navigable river (Prion) — an unusual circumstance in that region, where the streams are brief in their course and seldom navigable. (Peripl. Mar. Erythrai. p. 15.) If it really contained sixty temples within its walls, it must have ranked in size and importance among the cities of Arabia. Its monopoly of the Indian trade doubtless rendered it a wealthy and important place. At no other haven on the coast were the spices, gums, and silks of India permitted to be landed: if exposed to sale elsewhere, they were confiscated, and their vendors punished with death. They were conveyed up the river in small vessels of leather, strained over wooden frames. One gate alone — probably for the convenience of detecting fraud — of Sabbath was assigned to this branch of commerce; and after the bales had been examined, the goods were not handed over to their owners until a tithe had been deducted for a deity named Sahal (= dominus), and also a portion for the king.
SABIN.

Geographers attempt to identify Sabatha with Maria (Maro), but the proofs of their identity are unsatisfactory; and it may even be questioned whether Sabatha be not an elongated form of Sabas, a common appellation for cities in Arabia Felix. The Σαβαθαβατος of Strabo (vii. p. 768) is supposed by his translator Graecurd (vol. iii. p. 287) to be an error for Σαβεθαβατος, and sharply to prefix Σαβα, in the form of Sabatha. [See MARLBA, vol. ii. p. 274.]

We B. D.

SABITI (Sabati), a people of Central Italy, who inhabited the rugged mountain country on the W. of the central chain of the Appennines, from the sources of the Nar and Velinus to the neighbourhood of Baeate, and from thence southwards as far as the Tiber and the Anio. They were bounded by the N. and W. by the Umbrians and Etruscans, on the N.E. by Picenum, from which they were separated by the main ridge of the Appennines; on the E. by the Vestini, the Marsi, and Aequuli, and on the S. by Latium. Their country thus formed a narrow strip, extending about 55 miles in length from the lofty ground of the Apennine to the plain. Northward, the N. of the Nar takes its rise (now called the Monti della Sibilla), to the junction of the Tiber and Anio, within a few miles of Rome. The southern limit of the Sabines had, however, undergone many changes; in Pliny's time it was fixed as above stated, the Anio being generally received as the boundary between them and Rome. In the latter part of the 2nd century B.C., when the Roman, as the 3rd and 4th centuries A.D. the Roman, power extended to the Sabine territory, and it required a law, the Lex Anicia (A.D. 325), to fix the boundary between the Sabines and Latins. By this law the Sabines were entitled to the same immunities as the Latins, and were entitled to the same immunities as the Latins; their limits were thus extended, and their territory was thus enlarged. The Sabines were generally considered as a Sabine city. (Strab. v. p. 228; Plin. iii. 5. s. 9, 12. s. 17; Itol. iii. 1. § 63.) In like manner Pliny includes the important city of Tibur among the Sabines, though it was certainly commonly reckoned a Latin city, and never appears in the early history of Rome in connection with the Sabines. The limit of Sabine territory between the Sabines and Latins was in early times constantly fluctuating, as the Sabines on the one hand were pressing down from the N., and on the other were driven back in their turn by the arms of the Romans and Latins. But on the division of Italy into regions by Augustus, the Anio was established as the boundary of the 1st region, and for this reason Sabinae was considered by Pliny as the limit also between the Latins and Sabines. (Plin L. c.)

It is remarkable that no name for the country is found in ancient writers, standing in the same relation to that of the people which Samnium does to Sammites, Latium to Latini, &c.; it is called only the land of the Sabines (Sabinarum aper, or Sabinus) in Liv. ii. 68, &c.; Tac. Ann. xl. 88, &c.; and Roman writers would say in Sabini versari, in Sabino proficiare, &c.; the Greeks indeed used Zabirion for the name of the country (Strab. v. pp. 219, 228, &c.; Steph. Byz. s. v.), which is called to the present day by the Roman peasantry La Sabina, but we do not find any corresponding form in Latin authors. The Sabines, however, always occupied in Rome the same place in the assembly as the Romans, as the seats of the Sabines in the Forum were among the chief on the Capitol. The Sabine seat is said to have been occupied by the Sabines as one of the most ancient races of Italy, and as constituting one of the elements of the Roman people, at the same time that they were the progenitors of the far more numerous races which had spread themselves to the E. and S., under the names of Picentes, Peligni, and Samnites, the last of whom had in their turn the parents of the Pretoni, the Lucanians, Apulians and Bruttians. The minor tribes of the Marsi, Marrucini and Vestini, were also in all probability of Sabine origin, though we have no distinct testimony to this effect [Marsae]. These various races were often indiscriminately called Sabines, or under the general name of Sabellian, which is convenient as an ethnic designation; but there is no ancient authority for this use of the word, which was first introduced by Niebuhr (vol. i. p. 91). Pliny indeed in one passage says that the Sammites were also called Sabellii (Plin. iii. 12. s. 17), and this is confirmed by Strabo (v. p. 230). Sabellus is found in Livy and other Latin writers, as an archaical form for Samnite, though never for the name of the nation (Livy. viii. 1. x. 19); and it is frequently also used, especially by the poets, simply as an equivalent for the adjective Sabine. (Virg. G. ii. 167, Aen. vii. 665; Hor. Carm. iii. 6. 37; Juv. iii. 169.)

But notwithstanding the important position of the Sabines in ancient history, the correct determination of their ethnography is of Italy, we have very little information about their own origin or affinities. Strabo calls them a very ancient race and autochthonous (v. p. 238), which may be understood as meaning that there was no account of their immigration or origin which he considered worthy of credit. He distinctly rejects as a fiction the notion that the Samnites and their immediate descendants were of Laconian origin (ib. 250); an idea which was very probably suggested only by fancied resemblances in their manners and institutions to those of Sparta (Dionys. ii. 49). But this notion, though not countenanced by any historian of authority, was taken up by the Roman poets, who frequently allude to the Lacedaemonian descent of the Sabines (Ovid. Fast. i. 260, iii. 320; Sil. Ital. vii. 8. viii. 412, &c.), and adopted also by some prose writers (Plut. Rom. 16; Hygin. ap. Serv. ad Aen. viii. 638). A much more important statement is that preserved to us by Dionysius on the authority of Xenodotus of Troesien, which represents the Sabines as an offshoot of the Umbrian race (Dionys. ii. 49). The authority of Xenodotus, however, is not worth much, and his statement as reported to us is somewhat confused; but many analogies would lead us to the same conclusion, that the Sabines and Umbrians were closely cognate races, and branches of the same original stock. We learn from the Eugubine tables that Sancus, the tutelary divinity of the Sabine nation, was an object of especial worship with the Umbrians also; the same documents prove that various other points of the Sabine religion, which are spoken of as peculiar to that nation, were in fact common to the Umbrians also (Kienze, Philol. Abhandl. p. 80). Unfortunately the Sabine language, which would have thrown much light upon the subject, is totally lost; not a single word has been preserved to us; but even the few words recorded by ancient writers, though many of them, as would naturally be the case in such a selection, words peculiar to the Sabines, yet are abundantly sufficient to show that there could be no essential difference between the language of the Sabines and their neighbours, the Umbrians on the one side, and the Oscans on the other (Kienze, l. c.; Dorian, Vorvornumus, p. 8). The general similarity between their dialect and that of the Oscans was probably the cause that they adopted with facility in the more southern regions of Italy, which they had conquered.
the language of their Ocean subjects; indeed all the extant inscriptions in that language may be considered as Sabello-Ocean, and have probably received some influence from the language of the conquerors, though we have no means of estimating its amount. The Sabines were the only people in Latium who had lost the use of their own language, and adopted the general use of Latin; which, considering the rugged and secluded character of their country, and their primitive habits of life, could hardly have been the case, had the two languages been radically distinct.

On the whole, therefore, we may fairly conclude that the Sabines were only a branch of the same great family with the Oscans, Latins, and Umbrians, but apparently more closely related to the last of the three. Their name is generally derived from that of Sabus, who is represented as a son of Sancus, the chief tutelary deity of the nation. (Cato, op. Dionys. ii. 49; Sil. Ital. viii. 482; Serv. ad Aen. viii. 638.) But another etymology given by ancient writers, is founded on the fact that they had first given devotion to the worship of the gods. (Varr. op. Fest. p. 343; Plin. iii. 12. a 17.) This last derivation in fact comes to much the same thing with the preceding one, for the name of Sabus (obviously a mythological personage) is itself connected with the Greek σαῦρος, and with the word "serum" found in the Tongue, though not known among the Latins, the Tiber, or the Liris, was of venerable and holy, just as Sancus is with the Latin "sanctus," "sancire," &c. (Donaldson, &c.)

The original abode of the Sabines was, according to Cato, in the upper valley of the Aternum, about Amaturnum, at the foot of the loftiest group of the Apennines. We cannot indeed understand literally, at any rate, his statement that they were the abode of the three old Roman city states (as quoted by Dionysius) that they proceeded from a village called Tetrica, near Amaturnum (Cato, op. Dionys. i. 14, ii. 49); though this may have been true of the particular band or clan which invaded and occupied Beate. But there is no reason to doubt the general fact that the Sabines, at the earliest period when their name appears in history, were probably a lofty mountain people, with its adjacent valleys, which, from the peculiar configuration of this part of the Apennines, would afford natural and convenient outlets to their migrations in all directions. (Aperrini.) The sending forth of these migrations, or national colonies, as they may be called, was connected with an ancient custom, though not unknown to the others. For the nations of Italy, seems to have been more particularly characteristic of the Sabines — the Ver Sacrum or "sacred spring." This consisted of dedicating, by a solemn vow, usually in time of pressure from war or famine, all the produce of the coming year, to some deity: Mamers or Mars seems to have been the one commonly selected. The children born in that year were accordingly sacrificed to the deity chosen, while the children were allowed to grow up to man's estate, and were then sent forth in a body to find for themselves new places of abode beyond the limits of their native country. (Strab. v. p. 250; Fest. s. w. Magnesia, p. 158, Sacrom, p. 321, Ver Sacrum, 327; Suet. Ag. 92; Varr. R. R. iii. 16, § 29; Liv. xxii. 9, 10.) Such colonies were related by tradition to have given origin to the nations of the Picentes, the Sammites, and the Hirpini, and in accordance with the notion of their consecration to Mars they were reported to have been guided by a woodpecker, or a wolf, the animals peculiarly connected with that deity. (Strab. v. pp. 240, 250; Fest. op. 106, 312.) We have no statements of the period at which these successive emigrations towards the E. and S. took place; all that is known of the early history of the nations to which they gave rise will be found in the respective accounts. We learn, however, that there was one circumstance with tracing that of the Sabines themselves, or the people to whom that appellation continued to be confined by the Romans.

These, when they first emerged from their upland valleys into the neighbourhood of Beate, found that city, as well as the surrounding territory, in the possession of a people called the Abricines, Latines, and who, finding themselves unable to withstand the pressure of the Sabines, withdrew, after the capture of their capital city of Lice, towards the lower valley of the Tiber, where they settled themselves in Latium, and finally became one of the constituent elements of the Latin people. (Cato, op. Dionys. i. 14, ii. 49, 49.) [Abricinenses; Latines;] Meanwhile the Sabines, gradually pressing on towards the S. and W., and occupied the whole of the hilly and rugged country which extends from Beate to the plain of the Tiber, and from the neighbourhood of Cervenum to that of Tibur (Tivoli). (Dionys. ii. 49.) The conquest by the Roman colonists of this territory was probably the work of a long time, but at the dawn of history we find the Sabines already established on the left bank of the Tiber down to within a few miles of its confluence with the Anio; and at a period little subsequent to the foundation of Rome, they pushed on their advanced posts still farther south, established themselves on the Pontine hill, at the very gates of the rising city. The history of the Sabines under Titus Tatius, of the wars of that king with Romulus, and of the settlement of the Sabines at Rome upon equal terms with the Latin inhabitants, so that the two became gradually blended into one people, has been so mixed up with fables and distorted by poetical and mythological legends, that we may well despair of recovering the truth, or extricating the real history from the maze of various and discordant traditions; but it does not lessen the representation of events. It is an unquestionable historical fact that a large part of the population of the city was of Sabine origin, and the settlement of that people on the Quirinal is attested by numerous local traditions, which neither the evidence of time nor the lapse of years can altogether cast certain no reason to doubt. (Schwegler, Röm. Gesch. vol. i. pp. 243, 478, &c.)

We cannot attempt here to discuss the various theories that have been suggested with a view to explain the real nature of the Sabine invasion, and the origin of the legends connected with them. One of the most plausible of these is that which supposes Rome to have been really conquered by the Sabines, and that it was only by a subsequent struggle that the Latin settlers on the Palatine attained an equality of rights. (Ihne, Researches into the History of the Roman Constitution, p. 44, &c.; Schwegler, vol. i. pp. 491—493.) It cannot be denied that this is the most popular of the two, and it explains many obscure points in the early history, but it can be scarcely regarded as based on such an amount of evidence as would entitle it to be received as a historical fact.

The Sabine influence struck deep into the character of the Roman people; but its effect was especially prominent in its bearing on their sacred
rites, and on their sacrificial as well as religious institutions. This is in entire accordance with the character given of the Romans by Tacitus, Suetonius, Pliny; and it is no wonder therefore that the traditions of the Romans generally ascribed to Numa, the Sabine king, the whole, or by far the greater part, of the religious institutions of their country, in the same manner as they did the military and political ones to his predecessor Romulus. Numa, indeed, became, it seems, the representative of all the Sabines, and the impersonation of the Sabine element of the Roman people; at the same time that he was so generally regarded as the founder of all religious rites and institutions, that it became customary to ascribe to him even those which were certainly not of Sabine origin, but belonged to the Latins or were derived from Alba. (Ambrose, Scirae, pp. 141—148; Schwager, F. G. vol. i. pp. 543, 544.)

Throughout these earliest traditions concerning the relations of the Sabines with Rome, Curea is the city that appears to take the most prominent part. Tatius himself was king of Curea (Dionysius. li. 36); and it was thither also that the patricians sent, after the interregnum, to seek out the wise and religious man. Numa, whose name is always a still more striking proof of the connection of the Roman Sabines with Curea was found in the name of Quirites, which came to be eventually applied to the whole Roman people, and which was commonly considered as immediately derived from that of Curea. (Liv. i. 13; Varr. L. L. vi. 68; Dionysius. i. 46; Strab. x. 288.) But this etymology is, to say the least, extremely doubtful; it is far more probable that the name of Quirites was derived from "quiris," a spear, and meant merely "spearmen" or "warriors," just as Quirinus was the "spear-god," or god of war, closely connected, though not identical with, Mars and Maris. It is certain also that this superiority of Curea (it ever really existed, ceased at a very early period. No subsequent allusion to it is found in Roman history, and the city itself was in historical times a very inconspicuous place. (CUREA.)

The close union thus established between the Romans and the Sabines who had settled themselves on the Quirinal did not secure the rising city from hostilities with the rest of the nation. Already in the reign of Ancus Marcus, who is represented as himself of Sabine descent (he was a grandson of Numa), no hostilities with the Sabines occur; but his successor Tarquinius Priscus was engaged in a war with that people which appears to have been of a formidable description. The Sabines, according to Livy, began hostilities by crossing the Anio; and after their final defeat we are told that they were deprived of Colatina and all their other cities. (Livy. i. 30; Dionysius. iii. 32, 33.) During the reign of Ancus Marcus, who is represented as himself of Sabine descent (he was a grandson of Numa), no hostilities with the Sabines occur; but his successor Tarquinius Priscus was engaged in a war with that people which appears to have been of a formidable description. The Sabines, according to Livy, began hostilities by crossing the Anio; and after their final defeat we are told that they were deprived of Colatina and all their other cities. (Livy. i. 30; Dionysius. iii. 32, 33.) Cicero also speaks of Tarquin as repulsing the Sabines from the very walls of the city. (Cic. de Rep. ii. 20.) There seems therefore no doubt that they had at this time extended their power to the right bank of the Anio, and made themselves masters of a considerable part of the territory which has always been connected with the Sabines. From this time no further mention of them occurs in the history of Rome till after the expulsion of the kings; but in B.C. 504, after the repulse of the Volsci, a Sabine war again broke out, and from this time that people appears almost as frequently among the enemies of Rome as the Volsci or the Veientes. But the renewal of hostilities was marked by one incident, which exercised a permanent effect on Roman history. The whole of one clan of the Sabines, headed by a leader named Attis Clausus, dissenting from the policy of their countrymen, migrated in a body to Rome, where they were welcomed as citizens, and gave new and powerful aid to the Cause of the Claudii. (Liv. ii. 16; Dionysius. v. 40; Vitruv. ii. 708; Tac. Ann. xi. 24; Appian, Rom. i. Fr. 11.) It is unnecessary to recapitulate in detail the accounts of the petty wars with the Sabines in the early ages of the Republic, which present few features of historical interest. They are of much the same general character as those with the Veientes and the Volsci, but for some reason or other seem to have been a much less favourite subject for popular legend and national vanity, and therefore afford few of those striking incidents and romantic episodes with which the others have been adorned. Livy indeed disposes of them for the most part in a very summary manner; but they are related in considerable detail by Dionysius, and Polybius. One incident, however, is A still more striking proof of the connection of the Roman Sabines with Curea was found in the name of Quirites, which came to be eventually applied to the whole Roman people, and which was commonly considered as immediately derived from that of Curea. (Liv. i. 13; Varr. L. L. vi. 68; Dionysius. i. 46; Strab. x. 288.) But this etymology is, to say the least, extremely doubtful; it is far more probable that the name of Quirites was derived from "quiris," a spear, and meant merely "spearmen" or "warriors," just as Quirinus was the "spear-god," or god of war, closely connected, though not identical with, Mars and Maris. It is certain also that this superiority of Curea (it ever really existed, ceased at a very early period. No subsequent allusion to it is found in Roman history, and the city itself was in historical times a very inconspicuous place. (CUREA.)

The close union thus established between the Romans and the Sabines who had settled themselves on the Quirinal did not secure the rising city from hostilities with the rest of the nation. Already in the reign of Ancus Marcus, who is represented as himself of Sabine descent (he was a grandson of Numa), no hostilities with the Sabines occur; but his successor Tarquinius Priscus was engaged in a war with that people which appears to have been of a formidable description. The Sabines, according to Livy, began hostilities by crossing the Anio; and after their final defeat we are told that they were deprived of Colatina and all their other cities. (Livy. i. 30; Dionysius. iii. 32, 33.) During the reign of Ancus Marcus, who is represented as himself of Sabine descent (he was a grandson of Numa), no hostilities with the Sabines occur; but his successor Tarquinius Priscus was engaged in a war with that people which appears to have been of a formidable description. The Sabines, according to Livy, began hostilities by crossing the Anio; and after their final defeat we are told that they were deprived of Colatina and all their other cities. (Livy. i. 30; Dionysius. iii. 32, 33.) Cicero also speaks of Tarquin as repulsing the Sabines from the very walls of the city. (Cic. de Rep. ii. 20.) There seems therefore no doubt that they had at this time extended their power to the right bank of the Anio, and made themselves masters of a considerable part of the territory which has always been connected with the Sabines. From this time no further mention of them occurs in the history of Rome till after the expulsion of the kings; but in B.C. 504, after the repulse of the Volsci, a Sabine war again broke out, and from this time that people appears almost as frequently among the enemies of Rome as the Volsci or the Veientes. But the renewal of hostilities was marked by one incident, which exercised a permanent effect on Roman history. The whole of one clan of the Sabines, headed by a leader named Attis Clausus, dissenting from the policy of their countrymen, migrated in a body to Rome, where they were welcomed as citizens, and gave new and powerful aid to the Cause of the Claudii. (Liv. ii. 16; Dionysius. v. 40; Vitruv. ii. 708; Tac. Ann. xi. 24; Appian, Rom. i. Fr. 11.) It is unnecessary to recapitulate in detail the accounts of the petty wars with the Sabines in the early ages of the Republic, which present few features of historical interest. They are of much the same general character as those with the Veientes and the Volsci, but for some reason or other seem to have been a much less favourite subject for popular legend and national vanity, and therefore afford few of those striking incidents and romantic episodes with which the others have been adorned. Livy indeed disposes of them for the most part in a very summary manner; but they are related in considerable detail by Dionysius, and Polybius. One incident, however, is
SABINI.

SABINI.

Sowers were sold as slaves; the remaining citizens were admitted to the Roman franchise, but without the right of suffrage, and their principal towns were reduced to the subordinate condition of Praefectures. (Vell. Pat. ii. 14; Festus, s. v. Praefectores; Serv. ad Aen. vii. 153.) The latter statement (as so much to refer to this period, though erroneously transferred by him to a much earlier one.) The right of suffrage was, however, granted to them about 20 years later (n. c. 268); and from this time the Sabines enjoyed the full rights of Roman citizens, and were included in the Servian tribe. (Vell. Pat. i. c.; Cic. pro Balb. 13, 62.) This occurred they were once separated from the cause of the other nations of Italy, including their own kinsmen the Samnites, Picentes, and Peligni, during the great contest of the Social War. On that occasion the Sabines, as well as the Latins and Campanians, were arrayed on behalf of Rome.

The last occasion on which the name of the Sabines is found in history is during the Second Punic War, when they came forward in a body to furnish volunteers to the army of Scipio. (Liv. xxviii. 45.) After their incorporation with the Roman state, we scarcely meet with any separate notion of them, though they continued to be regarded as among the bravest and hardiest of the chief objects of Rome. Hence Cicero calls them "forem Italicae ac robusti rei publicae." (Pro Ligur. 11.)

Under the Empire their name did not even continue to be used as a territorial designation. Their territory was included in the Fourth Region by Augustus. (Flint. iii. 12. a. 17.) It was subdivided into the recus of the people of Valeria, and is included with the rest of that province under the appellation of Picenum in the Liber Coloniarum. (Lib. Col. pp. 253, 257, &c.; P. Dist. Hist. Lang. ii. 20; Mommsen, ad Lib. Col. p. 212.) But though the name of the Sabines thus disappeared from official usage, it still continued in current popular use. Indeed it was not at all likely that a people so attached to ancient usages, and so primitive in their habits, would readily lose or abandon their old appellation. Hence it is almost the only instance in which the ancient name of a district or region of Italy has been transmitted without alteration to the present day; the province of La Sabina still forms one of the two districts into which the Sabine country is divided, and is comprised within very nearly the same limits as it was in the days of Strabo. (Rampoldi, Dis. Corog. d'Italia, e. v.)

The country of the Sabines was, as already mentioned, for the most part of a rugged and mountainous character; even at the present day it is calculated that above two-thirds of it are incapable of any kind of cultivation. But the valleys are fertile, and even luxuriant; and the sides of the hills, and lower slopes of the mountains, are well adapted for the growth both of vines and olives. The northernmost tract of their territory, including the upper valleys of the Nar and Velinus, especially the neighboring town of Foligno, and the bleak highland country, shut in on all sides by some of the highest ranges of the Apennines; and the whole broad tract which extends from the group of the Monte Velino, SE. of Beato, to the front of the mountain ranges that border the Campagna of Rome, is little more than a mass of broken and rugged mountains, of inferior elevation to the more central ranges of the Apennines, but still far from inconconsiderable. The Monte Genaro (the Mons Lucretii of Horace), which rises directly from the plain of the Campagna, attains to an elevation of 4285 English feet above the sea. But the isolated montane mass, which is known as the Monte Neve, or Monte of the snows, NE. of Rieti, which forms a conspicuous object in the view from Rome, rises to a height of above 7000 feet, while the Monte Velino, SE. of Rieti, on the confines of the Sabines and the Vestini, is not less than 8180 feet in height. The whole of the ridge, also, which separates the Sabines from the Picentes and the montane Ostiens, is of the same character. The Monti della Sibilla, in which the Nar takes its rise, attain the height of 7900 feet, while the Monte Vettore and Pizzo di Sasso, which form the continuation of the same chain towards the Gran Sasso, rise to a still greater elevation. There can be no doubt that these lofty and rugged groups of mountains are those designated by the ancients as the Mons Piscinellus, Tityrus, &c., by which the Romans interpreted the name Sabini, as the name of the Sabines, and by which the Sabines themselves interpreted it. The more westerly part of the Sabine territory slopes gradually from the lofty ranges of these central Apennines towards the valley of the Tiber, and though the latter is a still more fertile and productive country, similar to the part of Umbria, which it adjoins, the lower valley of the Velinus about Beato was also celebrated for its fertility, and even at the present day is deservedly reckoned one of the most beautiful districts in Italy.

The physical character of the land of the Sabines evidently has a strong influence upon their character and manners of the people. Highlanders and mountaineers are generally brave, hard, and frugal; and the Sabines seem to have possessed all these qualities in so high a degree that they became, as it were, the types of them among the Romans. Cicero calls them "severissimis liones Sabini," and Livy speaks of the "disciplina tetrica ac stirps veterum Sabinarum." (Cic. in Verres, 15, pro Ligur. 1; Liv. i. 18.) Cato also described the severe and frugal mode of life of the early Romans as inherited from the Sabines (ap. Serv. ad Aen. viii. 538). Their frugal manners and moral purity continued indeed, even under the Roman government, to be an object of admiration, and are often introduced by the poets of the Empire as a contrast to the luxury and dissoluteness of the capital. (Hor. Carm. iii. 6. 38 — Epod. 2. 41, Epist. ii. 1. 25; Propert. iii. 24. 47; Juv. iii. 169.) With these qualities were combined, as is not unfrequently found among secluded mountaineers, an earnest piety and strong religious feeling, together with a stern moral attachment to the religious usages and forms of worship which had been transmitted to them by their ancestors. The religion of the Sabines does not appear to have differed essentially from that of the other neighboring nations of Italy; but they had several peculiar divinities, or at least divinities unknown to the Latins or Etruscans, though some of them seem to have been imported into Etruria. Among these was a deity at the head of these stood Sancus, called also Semo Sabazios, who was the tutelary divinity of the nation, and the reputed father of their mythical progenitor, or eponymous hero Sabus. He was considered as the peculiar guardian of oaths, and was thence generally identified by the Romans with Duus Fidius; while others, for less obvious reasons, identified him with
Hercules. (Ovid. Fast. vi. 215; Sil. Ital. viii. 430; Lactant. i. 15; Augustin, Civ. Dei, xviii. 19; Ambrose. Stochius. p. 170, &c.) Among the other deities whose worship is expressively said to have been introduced at Rome by the Sabinas, we find Sol, Fevania, Mercurius Pudicitia, or Manus, as he was called by the Sabinas and their descendents. (Varr. L. L. v. 74.) Minerva was, however, certainly an Etruscan divinity also; and in like manner Vefovia, Ope, Diana, and several other deities, which are said to be of Sabine extraction, were clearly common to the Latins also, and probably formed part of the mythology of the other peoples settled in their territory; and even of this Reätz appears to have been the only one that was ever a place of much importance. Intercorrea, about 14 miles higher up the valley of the Velinus (the name of which is still preserved in Astrudoco), seems never to have been a municipal town; and it is probable that the whole upper valley of the Velinus was, municipally speaking, included in the territory of Reate, as we know was the case with the lower valley also, down to the falls of the river, which formed the limit of the territory of the Sabinas on this side; Interamma, as well as Narnia and Curculum, being included in Umbria. Falacruvium, the birthplace of Vespasian, situated near the sources of the Velinus, was certainly a more important place than Forum Novum was, for it was certainly a Sabine city (Plin. iii. 12. s. 17; Strab. v. p. 228), and was probably, next to Reate, the most considerable that they possessed. Nurnia, in the upper valley of the Nar, was the chief town of the surrounding district, but was never a place of much importance. The lower country of the Sabines, between Reate and Rome, seems to have contained several small towns which were of no great importance, though said by Strabo to be little more than villages. Among these were Forum Novum, the site of which may be fixed at Vescovio, on the banks of the Isola, and Forum Brictus, the situation of which is wholly unknown. Both these were, as the names show, Roman towns, and not ancient Sabine cities; but they were certainly the remains of the ancient Casperia, which was probably situated at Aspra, in the same neighbourhood. On the other hand Cures, the supposed metropolis of the Sabines that had settled at Rome, still retained its municipal rank, though not a place of much importance. The same was the case with Casperia, which was, as we have seen, the site of a Roman municipium, in progressing towards Rome; though Flavius inscribed the name of Nomentumium and Fidenae also among the Sabines. Besides these there were two towns of the name of Trebula, both of which must probably be placed in the southern part of the land of the Sabines. Of these Trebula Mutusca (the Mutucas of Virgil, Aen. vii. 711) is represented by Monza Lomana, about 15 miles S. of Reate, on the right-hand side of the Salarian Way; while Trebula Suffenae may perhaps be placed at S. Antonio near Stroncone, in the hills W. of Reate. Lastly, Varna, in the valley of the Anio, 4 miles above Tibur, still called Vicovaro, would appear to have been certainly a Sabine town; the whole valley of the Digenita (Liciniana), and of the basins of the Anio and Pamun Vacunae (the well-known neighbourhood of Horace's Sabine farm), being included among its dependencies. [Dignum.] The territory of the Sabinas was traversed throughout its whole extent by the Salarian Way, which was from an early period one of the great highways of Italy. This proceeded from Rome
SACASTENE.

a. 5; Sollin. 57; Rom. Anton.; Post. Tod.; Tartalap; Procop. de Aed. vi. 4; Zedahpa, Stadth. §§ 99, 100), a Phoenician town (Sil. Ital. iii. 256) on the coast of N. Africa between the Byzantines. The name, which is in Phoenician and Greek, is given to the town by the old historian Dion Phicos (vii. p. 491), received the Gracianic form ABBORTONUM; for although Pliny (l. c.) distinguishes the two towns they are undoubtedly the same place. It became afterwards a Roman colony, and was the birthplace of Flavia Domitilla, the first wife of Verus, and mother of Titus and Domitian (Tac. Hist. ii. 1). Justin, however, speaks of it (Procop. l. c.), and it remained during the middle ages one of the most frequented markets upon this coast, to which the natives of central Africa brought their grain (comp. Ibn Abd-al-Hakem, Journal Asiatique, 1844, vii. p. 358). Barth (Wanderungen, p. 277) has given an account of the extensive ruins of Sabrata, which he found to the W. of Tripoli, at Tripoli Vecchio, or Sutnar-ack-Schardja, lat. 32° 49', long. 13° 26'. (Smyth, Mediterraneum, p. 456.)

SACRIA (called by Ptolemy Zedaphra, ii. 3; 3; probably also the Sarsa of the Geogr. Rav. v. 31), a river on the W. coast of Britannia Romana, which falls into the sea near Venta Silurum, now the Severn. It was named after Burenum, a town on the coast of the Apennines, which was said still to be frequented by wild goats, an animal long since extinct throughout the continent of Italy. (Varr. R. R. ii. 1. § 5, 3. § 3.)

SACIAE. (Zetaphra), a small river of Carmania, which is mentioned by Mela in connection with two other streams, the Xanthes and Atacacis (iii. 8). It is also noticed by Pliny, who places it in the neighbourhood of Harmusa (Orems, vi. 23. a. 27). Ptolemy speaks of a town in Carmania of the same name with this river (vi. 8. § 14). [V.]

SACIUS (Sambra), a river of Belicia, which joins the Moa (Musa) at Charlovi. Caesar (a. c. 57) marched against the Nereti and their confederates from the south, and he found the enemy posted on the north side of the Sabi (B. G. ii. 16). In this battle the Belgae were defeated with great slaughter.

SABAINI, in Gallia Belgica, is placed by the Antonine Itin. on a road from Colonia Trajana (Colonia Claudia Julias and Colonia Agrippina) to Cologne (Colonia). Sabonnes is supposed to be a place named Int-Saelsi near Strasbourg, a town on the river Nier, a branch of the Meuse. But see MEDIOLABUM in Gallia, No. 3. [G. L.]

SABOCCI (Saboeuc al. Zedaphio, Ptol. iii. 5. § 20), a people of European Sarmatia, who from the termination "boki," "bank," so often occurring in the Russian and Polish local names, must be looked for in the basin of the river Zem, one of the largest affluents of the Viktula, and which drains a greater part of Galicia. (Schafarik, Slav. Alt. vol. i. p. 206.)

SABRACAE, a people who dwelt, according to Curtius, in the southern part of the Punjub, in the neighbourhood of the Inaia Pat avanz (ix. 8. § 4). They are mentioned in connection with the Prasati as forming part of the realm of Muscianus. (Arm. Hist. vi. 15; Dic. xvii. 109. § 16.)

SABRATA (Zedaphra, Ptol. iv. 3. § 41; Ptol. v. 4.
SACCASENA.
be compared with Min-nagara, a town on the Indus belonging to the same people. (Arrian, Peripl. Mar. Eryth. § 32.) [MINNAGARA.] [V.]
SACCASENA, a place in Cappadocia, probably in the neighbourhood of the modern Urgab or Erzinjan. (Herodot. iii. 95.) [L. S.]
SACCOPODES (Σακκόποδης), according to Strabo, a name given to the people of Adiabene in Assyria (xvi. p. 745). There has been a great dispute among learned men as to this name, which does not appear to be a genuine one. Bochart has suggested Sacropodes (Σακρόποδης). On the whole, however, it seems that the most probable derivation of Tschukke is the best, who reads Σακρόποδης. (Groskurd, ad Strab. vol. iii. p. 292.) [V.]
SACER MONS (θ' ἵππων βρός) was the name given to a hill about 3 miles from Rome, across the Anio and on the right of the Via Nomentana. It is mentioned only on occasion of the two secessions of the plebeians from Rome; the first of which, in a. c. 494, was terminated by the joint decree of Messalina Agrippa, and gave occasion to the election of the first tribunes of the people. (Liv. ii. 33; Dionys. vi. 45; Appian, B. C. i. 1.) In memory of this treaty and the "Lex Sacratula" which was passed there to confirm it, an altar was erected on the spot, which thenceforth always bore the name of "the Sacred Mount" of Dionys. v. 45; Appian, loc. cit. The second occasion was during the Decennvae; when the plebeians, who had at first seceded only to the Aventine, on finding that this produced no effect, withdrew to the Sacred Mount (Liv. iii. 59). Cicero, on the contrary, represents the secession on this occasion as taking place first to the Sacred Mount, and then to the Aventine, "that is, to the first spot that was discovered." (De officiis ii. 77.) Hardly any spot in the neighbourhood of Rome, not marked by any existing ruins, is so clearly identified by the descriptions of ancient writers as the Sacer Mons. Both Livy and Cicero concur in placing it 3 miles from Rome, across the Anio; and the former expressly tells us that the plebeians, on the second occasion, proceeded thither from the Via Nomentana, which place was then called Piamonte (Liv. ii. 39; Cic. Brut. 14, pro Corn. 69, as Ascon. p. 76). Now the third mile along the Via Nomentana brings us to a point just across the Anio; and on the right of the road at this point is a hill overlooking the river, in some degree isolated from the plains beyond, with which it is, however, closely connected, while its front towards the valley of the Anio is steep and almost precipitous.
On its E. side flows a small stream, descending from the Cascate dei Passe (apparently the one known in ancient times as the Rovis Ulmanus): so that the position is one of considerable strength, especially on the side towards Rome. The site is now uninhabited, and designated by no peculiar appellation. (Nibby, Dizionario di Roma, vol. iii. p. 54, 55.) [E. H. B.]
SACHALITAE (Σαχαλίται), a people upon the S. coast of Arabia Felix (Pol. vi. 7. §§ 11, 24, 25), and upon the bay called after them SACHALITAE SINUS (Σαχαλίταις κέλας). Respecting the position of this bay there was a difference of opinion among the ancient geographers. Marinus placing it towards the west, and Pliny towards the east, of the promontory Syagrus (Ras Fortahk). (Pol. i. 17. § 2, comp. vi. 7. §§ 11, 46.) Marcianus (p. 23) agrees with Pliny; and says that the bay extended from this promontory to the mouth of the Persian gulf (comp. Steph. B. s. 2. Σαχαλίταις κέλας). Arrian

SACRIPORTUS.
(Peripl. Mar. Eryth. p. 17. § 31) on the other hand agrees with Marcian, and places the bay between Canae and the promontory Syagrus. (See C. Müller, ad Arrian. l. c.) SACCOI or SACCOI MARTIALIS (Plin. iii. 1. s. 3; called by some Zaccii) (ibid. i. 4. § 11), a town of the Tarduli in Hispania Baetica, at a place near Perabed, now called Acornucena. (Morales, Antig. p. 96; Flores, Esp. Sagr. p. 147.) [T. H. D.]
SA'CORCA (Σακορκα), a town in the interior of Paphlogonia, is mentioned only by Pтолemy (v. 4. § 5). [L. S.] SACORSA (Σακόρσα), a town in the interior of Paphlogonia, is mentioned only by Pтолemy (v. 4. § 6). [L. S.]
SACRA'NI, was the name given by a tradition, probably of very ancient date, to a conquering people or tribe which invaded Latium at a period long before the historical age. Festus represents them as proceeding from Baetis, and expelling the Siculi from the Sepulcro, where Rome afterwards was built. He tells us that their name was derived from their being the offspring of a "ser sacram." (Fest. s. e. Sacra'ni, p. 321.) It hence appears probable that the Sacrani of Festus were either the same with the people called Aborigines by Dionysius (i. 16) {Aborrionum, or were at least one clan or tribe of that people. But in all its forms, this name never seems really as a national appellation. Virgil indeed alludes to the Sacra'ni as among the inhabitants of Latium in the days of Aeneas (Sacranae acies, Aen. vii. 796), but apparently as a small and obscure tribe. Servius in his commentary on the passage gives different explanations of the name of the tribe, one of which he quotes from that given by Festus, which is the most distinct statement we have upon the subject. In another passage (ad Aen. xi. 317) Servius distinguishes the Sacrani from the Aborigines, but little value can be attached to his statements on such subjects. [E. H. B.]
SACRABIA. [C. L. T. M.] SACRI PORTUS (Σαριπότους Λεων, Appian, B. C. i. 87, a place in Latium, between Signia and Praeneste, celebrated as the scene of the decisive battle between Sulla and the younger Marius, in which the latter was totally defeated, and compelled to take refuge within the walls of Praeneste, a. c. 82. (Liv. Epit. and.; Appian, B. C. i. 87; Vell. Pat. ii. 26, 28; Flor. iii. 51. § 23; Vict. Vit. iii. 69, 75; Lactan. i. 134.) The scene of the battle is universally described as "apud Sacravitum," but with no more precise distinction of the locality. The name of Sacripontus does not occur upon any other occasion, and we do not know what was the meaning of the name, whether it were a village or small town, or merely a spot so designated. But its locality may be approximately fixed by the accounts of the battle; this is described by Appian as taking place near Praeneste, and by Plutarch (Sull. 28) as near Signia. We learn moreover from Appian that Sulla having besieged and taken Setia, the younger Marius, who had in vain endeavoured to relieve it, retreated step by step before him until he arrived in the neighbourhood of Praeneste, when he halted at Sacravitum, and gave battle to his pursuer. It is therefore evident that it must have been situated in the plain below Praeneste, between that city and Signia, and probably not far from the opening between the Alban hills and the Vatican mountains, through which must have lain the line of retreat of Marius; 3 x 4
but it is impossible to fix the site with more precision. [E. H. B.]

SACRUM PR. 1. (τὸ λαός ἐπαρχηστήριος, Strab. 16. p. 37.) the SW. extremity of Iberia; according to Strabo (l. c.), the most W. point, not only of Europe but of the known world; the present Cape St. Vincent. Strabo adds that the surrounding district was called in Latin "Cunea." Strabo also says that the geographer Artemidorus, who had been there, compared the promontory with the bow of a ship, and that the name was derived from the small islands there; which, however, are not mentioned by any other writer, nor do they now exist. (Cf. Mela, ii. i.; Plin. iv. 22. a. 35. &c.)

2. (τὸ λαός ἐπαρχηστήριος, Ptole. ii. 2. § 6) the SE. point of Hibernia, now Cape Point. [T. H. D.]

SACRUM PROM. (τὸ λαός ἐπαρχηστήριος, Ptole. iii. 5. § 8), the western point of the Acchades Deco-

nemos. [E. B. J.]

SACRUM PROM., a promontory of Lycia upon the borders of Pamphylia, opposite the Chelidonea Insulae, whence the promontory is called Livy Chelidoniolum Promont. [For details, see Vol. i. p. 586, b.]

SADORA (Σαδόρη), a town of Cappadocia, situated on the great road from Corosynus and Garsabora to Mazaca. (Strab. xiv. p. 663.) [L. S.]

SAĐAME (Σάδαμε), a town in the NE. part of Thrace, on the road from Hadrianopolis to Dervelus, its distance from the latter, according to the Itinerary, being 18,000 paces. This would give as its site the pre-

sented town of Komarek, situated near the mouth of a small river which runs through a narrow valley and falls into the Black Sea at Cape Satha. But according to Reichard it was in the neighbourhood of Omar-Pucki, which is perhaps the Sarbakan of Voudoucourt. [J. R.]

SADOS (Σάδος), a small river of the Aurea Othropaenus, which fall into the Bosphorus (Ptol. vii. 2. § 3). It has been supposed by For-

biger to be the same as the present Sodovouky. Ptolemy mentions also in the same locality a town called Sada, which was, in all probability, on or near the river. [V.]

SAEPINUM, or SÆPINUM (the name is variously written both in MSS. and even inscriptions, but Saepinum is probably the most correct form: Sal-

pinus, Ptole. E. διαστάσεις: Saepinae, or Septino), a city of Samnium, in the country of the Pentri, on the E. slope of the great group of the Monte Ma-

tese, and near the sources of the Tamara (Tamarus). It seems to have been in early times one of the chief towns of the Samnites, or rather one of the few which they possessed worthy of the name. From its po-

sition in the heart of their country it was not till the Third Samnite War that it was attacked by the Roman army; but in b.c. 293 it was besieged by the consul L. Papirius Cursor, and though vigorously defended by a garrison amounting almost to an army, was the next year carried by assault. (Livy 44. 5.) From this time the name of Saepinum disappears from history, but it is found again at a later period among the municipal towns of Samnium under the Roman Empire. Its name is not indeed mentioned by Strabo, among the few surviving cities of Samnium in his day; but it received a colony under Pompeius (Livy 43. 27), and seems for a time to have recovered some degree of importance. Its name is found both in Ptolemy and Piny among the municipal towns of Samnium; and it is certain from inscriptions that it did not bear the title of a Colonia. (Plin. iii. 12. a. 17; Ptol. iii. 1. § 67; Orelli, Maur. 162. 29; Mommsen, R. N. 4999, 4934, &c.) Its name is mentioned also in the Tabula, which places it 30 M. P. from Bene-

ventum, the intermediate station being a place called Sirpium, the site of which is unknown. (Tab. Peut.)

Saepinum became an episcopal see before the fall of the Roman Empire; it had, however, fallen into great decay by the time of the Lombards, and was, according to the local history, repopulated by Romualdus, duke of Beneventum (P. D. c. 20. 30), and survived till the 9th century, when it was taken and plundered by the Saracens; after which it seems to have been abandoned by the inhabitants, who withdrew to the site occupied by the modern town of Sepino, about 2 miles from the site of the ancient city, but was repopulated by the inhabitants of the place named Aetilia, are evidently of Roman date, and, from their regularity and style of construction, ren-

er it probable that the town was entirely rebuilt at the time of the establishment of the Roman colony, very probably not on the same site with the ancient Samnite city. The existing walls, which remain in almost perfect preservation throughout their whole circuit, and which, as we learn from an inscription over one of the gates, were certainly erected by Nero (Mommsen, I. R. N. 4922), enclose a perfect square, with the angles slightly rounded off, and four gates, placed at the four cardinal points, flanked by massive square towers. The masonry is of reticulated work, the arches ugly of the gates being of massive stone. Within the enclosure are the remains of a theatre, besides the substructions and vestiges of several other buildings, and numerous fragments of an archi-

tectural character, as well as inscriptions. Of these last the most interesting is one which is still extant at the gate leading to Bovianum, and has reference to the flocks which then, as now, passed annually from this place to the pastures of Apulia to the upland pastures of Samnium, es-

pecially of the Matese; and which appear to have been then followed the same line of route: the freture or sheep-track still in use passing directly through the ruins of Altilia. (Cahren's Abrissi, vol. ii. pp. 130—135; Romarelli, vol. ii. pp. 444—448; Momms-

sen, i. 16. 175.) [T. H. D.]

SAEPONE, an inland town of Hispalis Bassa, near Corta in the Sierras de Ronda. (Plin. iii. 1. a. 3.) [T. H. D.]

SAETABICAULA (Σαταβίσακουλα, Ptole. ii. 6. a. 62), a town of the Contestani in Hispania Tarra-

conensis, probably the present Alávia in Viciosas. (Lardos, i. p. 266.)

SAETABIS, Sætabis, or Saetabi (Σαταβίδος, Strab. iii. p. 160), a town of the Contestani in His-

pania Tarraconensis. It was a Roman munic-

ipium in the jurisdiction of Cartago (Marat.

Inscr. ii. p. 1183. 6), and had the surname of Augustanorum. (Plin. iii. 3. a. 4.) It lay upon an eminence (Sil. Ital. iii. 372) to the S. of the Sacro, from which it was separated by a deep abut-

facture. (Strato. x. 2. 2. 1: Osuill. xii. 34. &c.) Now Jativa. (Cf. Lardos, i. p. 266; Marca,

Hisp. ii. 6. p. 118.) [T. H. D.]

SAETABIS (Σαταβίς, Ptol. ii. 6. 15. 14), a river S. of the Saco in the territory of the Contestani, on the E. coast of Hispania Tarraconensis. Most prob-

ably the Saco (Lardos, i. p. 294.) [T. H. D.]

SAETIANI. [SCTHIA.]

SAETTA. [SEETAE.]
SAGALASSUS. (Σαγαλαςις : Εθν. Σαγαλαςις Σαγαλασσης), an important town near the north-western frontier of the Bithynia, which Strabo (xii. p. 569) less correctly describes it as having been destroyed by Ptolemy (v. 3. § 6), errons it among the towns of Bithynia. (P. B. E. v.) Alexander the Great, having previously defeated this Bithynia, ascended a hill outside their town. (Arrian, Livy xxxviii. 15), in his account of the Cf. Manlius, describes Sagalassus as a fertile plain, abounding in every luce; he likewise characterises its importance as a stronghold of the Pisidians, and the Pisidians, as a strong fortified. Manlius did, but by ravaging its territory com- missions to come to terms, to pay a tax of 50 talents, 20,000 modimni of the same quantity of barley. Strabo was one of the chief towns of Pisidia, crossing over from the adjacent territory in the domain of Armenia, and was strongly fortified. Manlius did not mention these ruins with the site of the town. This conjecture has since been adopted by Arundell (A Visit to the Seven 1322, foll.), who describes these ruins as lying on the long terrace of a lofty mountain, the village of Aegaeon, and consisting of a Psygria and a few stone vaults in the almost inaccessible side of the mountain. A little lower above there are considerable remains of a large dike and a paved oblong area, full of space, pedestals, &c., about 200 feet long; 300 feet long and 27 wide; and below magnificent remains of a gymnasion. Above these rises a steep hill with remains on the top, which was a fortification. There is also a large theatre at the edge of the preserve. Inscriptions with Σαγαλασσης whose have no doubt notable ruins belonging to the ancient town. (Comp. Hamilton, Researches, p. 44, fol. ; Fellows, Asia Minor, p. 64, [L. S.).

SAGramus. (Σαγραμος : Σαγραμος), one of the most valuable rivers of Samos, which is mentioned in the obelisk of the group of the Apennines S. of the Lago di Fosco, and has a course of about 70 miles from thence to the Adriatic. It runs in a W. to SE. direction, passes under the walls of Anfemena as well as modern Castel di Sangro, and in this part of its course flows through a broad and level, but upland valley, bounded on both sides by lofty

785

SAGRARUCAE. [Σαγαραυκαί.] SAGARIS, a river of European Sarmatia (Ov. ex Pont. 1047), which has been assumed, from the name, to have discharged itself into the Sinus Sagarus. (Plin. lvi. 14.)

SAGANTHIL. [Σαγανθήλ.] SAGIDA (Σαγίδα, Σαγίδας, Πτολ. vii. 1. § 17), a metropolis of Central India, which is perhaps the same as the present Sohajpur, near the sources of the river Sooma.

SAGRAS (Σαγρας, Strab. vi. p. 261), a river of Bruttium, on the E. coast of the peninsula, to the S. of Caulonia, between that city and Locri. It is celebrated in history for the great battle which the Gauls, under their chief Cominius, fought against a Gaulian force, which Fr. D. iii. 5; Justin vi. 3.; Plin. iii. 10. s. 15.) The victory was ascribed by the Locrians to the direct intervention of the Dioscuri, to whom they in consequence erected altars on the banks of the river, which were apparently still extant in the time of Strabo. It was added that the news of the victory was miraculously conveyed to the Greeks assembled at Olympia the same day that the battle was fought. (Strab. l.c.; Cic. de N. D. ii. 2.) But notwithstanding the celebrity thus attached to it, the date and occasion of the battle are very uncertain; and the circumstances connected with it by Strabo and Justin would lead to opposite conclusions. (Chro. Contra.) The date assigned by Heyne is 100 B.C., while Strabo certainly seems to imply that it took place after the fall of Syria in B.C. 118. (Greeks, iv. p. 552, note.) But whatever uncertainty prevailed concerning the battle, it seems certain that the Sagrus itself was a well known stream in the days of Strabo and Pliny; both of whom in fact place it to the N. of Locri and S. of Caulonia, and as the latter city was a colony and perhaps a dependency of Coro, it is probable that the battle would be fought between this and Locri. Unfortunately the site of Caulonia cannot be determined [CAULONIA], and we are therefore quite at a loss which of the small streams flowing into the sea between Locri and the Punta di Seto should be identified with the celebrated Sagras. The Alera has been generally fixed upon by local writers, but has really no better claim than as an alternative moderni, vol. i. p. 161; Sibunburne's Trelle, vol. i. p. 340.).

SAGRUS (Σαγρας : Sangro), one of the most considerable of the rivers of Samnium, which has its sources in the lofty group of the Apennines S. of the Lago di Fosco, and has a course of about 70 miles from thence to the Adriatic. It runs in a W. to SE. direction, passes under the walls of Anfemena as well as modern Castel di Sangro, and in this part of its course flows through a broad and level, but upland valley, bounded on both sides by lofty
mountains. After passing Ausonia it turns abruptly to the NE., and pursues this course till it reaches the sea. In the lower part of its course it enters the territory of the Frontani, which it traverses in its whole breadth, flowing into the sea between Histomomus and Montorum. It indeed represents it as forming the boundary between the Frontani and the Peliagii, but this is certainly a mistake, as the Peliagii did not in fact descend to the sea-coast at all, and Oronza, one of the chief towns of the Frontani, was situated to the N. of the Saguntorum. (Strab. v. p. 249; Pol. iii. i. § 19; where the name is erroneously written Zedus.) The upper valley of the Saguntum, with its adjoining mountains, was the territory of the Samnite tribe of the Caraceni. (Pol. iii. i. § 66.)

SAGUNTIA. 1. (Zeyounia, Pol. ii. 4. § 13,) a town in the SW. part of Hispania Baetica. (Livy. xxxiv. 12; Plin. iii. 1. s. 3.) Now Xigoumos or Zygoumos, NW. from Medina Sidonia, where there are many ruins. (Moraes, Antig. p. 87; Flores, Esp. Sagr. v. p. 47.)
2. A town of the Arevacii, in Hispania Tarraconensis, SW. from Bilbilis. It was in the jurisdiction of Clunia, on the road from Emerita to Cesarautugasta, and was the scene of a battle between Sertorius and Metellus. (Plut. Sert. 21; App. B. C. 17.) The name is written Saguntum in the Isa. Ant. pp. 436 and 438, and in the Geog. Rav. iv. 43; but must not be confounded with that of a town of the Catilini. Now Nigoumos on the Henarens. (Flores, Esp. Sagr. viii. p. 18; Moraes, Antig. p. 87.)

SAGUNTUM (Zeyounia, Pol. iii. 6. § 63), also called SAGUNTUS (Mela, ii. 5; Zeyounia, B. G. i. 26; Nigoumos, in Hispania Tarraconensis, seated on an eminence on the banks of the river Pallantias, between Suco and Tarraco, and not far from the sea. Strabo (iii. p. 159) erroneously places it near the mouth of the Iberna, though it lies near 100 miles to the SW. of it. The same author states that it was founded by the sons of Sac IPas, and we find that Stephanus calls it Zedoula and Zedoulae. Livy adds that the founders were mixed with Rutuli from Ardea (Livy. xxxii. 7); whence we sometimes find the city called Ausonia Saguntum. (Sil. Ital. i. 332.) Another tradition ascribed its foundation to Hercules. (ib. 263, 505.) Saguntum lay in a very fertile district (Pol. xxxiv. 2), and attained to great wealth by means of its commerce. It was the immediate cause of the Second Punic War, from its being besieged by Hannibal when it was in the alliance of the Romans. The siege is memorable in history. The town was taken, after a desperate resistance, in B.C. 218, and all the adult males put to the sword; but how long the siege lasted is unknown (Livy. xvi. 4, 13; Cf. Sil. Ital. i. 271, seq.) Eight years afterwards Saguntum was recovered by the Romans. The Cartaginians had partly destroyed it, and had used it as a place for the custody of their hostages. (Pol. xxi. 19; Liv. xiv. 42.) The city was restored by the Romans and made a Roman colony. (Cf. Liv. xvi. 19; B. G. i. 3. s. 4.) It became famous for its manufacture of earthenware cups (calice Saguntini) (Plin. xxxiv. 12. s. 46; Mart. iv. 46, xiv. 108), and the figs grown in the neighborhood were considered very fine. (Plin. xv. 18. a. 19.) Its site is now occupied by the town of Murviel, which derives its name from the ancient fortifications (muri vetere). But little now remains of the ruins, the materials having been unsparedly used by the inhabitants for the purpose of building. The great temple of Diana stood where the convent of La Trinidad now does. Here are let in some six Roman inscriptions, the names of the families of Serga and others. At the back is a water-course, with portions of the walls of the Circus Maximus. In the suburb San Salvador, a mosaic pavement of Bacchus was discovered in 1745, which soon afterwards was let go to ruin, like that of Italicus. The famous theatre is placed on the slope above the town, to which the orchestra is turned; it was much destroyed by Sueton, who used the stones to strengthen the castle, whose long lines of wall and tower rise grandly above; the general form of the theatre is, however, easily to be made out... The local arrangements are such as are common to Roman theatres, and resemble those of Merida. They have been measured and described by Dean Marti; Pons, iv. 233, in the Exp. Sagr. viii. 151. (Ford's Handbook for Spain, p. 206.) For the coins of Saguntum see Flores, Med. ii. p. 560; Mionnets, i. p. 49, Suppl. i. p. 98. The accompanying coin of Saguntum contains on the obverse the head of Tiberius, and on the reverse the prow of a ship. (T. H. D.)

COIN OF SAGUNTUM.

SAGUTE SINUS (Polyb. ap. Plin. vi. 1), a gulf on the W. coast of Mauretania, S. of the river Lixus, which must be identified with the Eparoncus of Herodotus, or Pananos as it is also called. "Emporia," and by an elision not uncommon among the Africans assumed the form under which it appears in Polybius. (Movers, Die Phöniz. vol. ii. p. 541.)

SAGYLUM (Zeygalou), a castle situated on a steep rock in the interior of Fontus, which was one of the strongholds of the Fontan king. (Strab. xii. pp. 560, 561.)

SAILIS (Zélis, Herod. ii. 28, 59, 152, 169; Strab. xvii. p. 802; Steph. B. s. c.; Mela, i. 9. § 9; Plin. v. 10. a. 11: Eki. Zelis, fem. Zélis), the capital of the Saitol Nome in the Delta, and occasionally of Lower Aegypt also, stood, in lat. 31° 4' N., on the right bank of the Canopic arm of the Nile. The site of the ancient city is determined not only by the appellation of the modern town of Sa-el-Hedjar, which occupies a portion of its area, but also by mounds of ruin corresponding in extent to the importance of Sailis at least under the later Ptolemies. The city was artificially raised high above the level of the Delta to be out of the reach of the inundations. The Pharaohic tomb of Resthirt was discovered by all who ascended the arms of the river from the Mediterranean to Memphis. Its ruins have been very imperfectly explored, yet traces have been found of the lake on which the mysteries of Isis were performed, as well as of the temple of Neith (Athensa) and the necropolis of the Saitol kings. The wall of
unburnt brick which surrounded the principal buildings of the city was 70 feet thick, and probably therefore at least 100 feet high. It enclosed an area 2525 feet in length by 1960 in breadth. Boating was the favorite sport of two classes of men, one for the citizens generally, and the other reserved for the nobles and priests of the higher orders. In one respect the Saite Greeks differed from the other Egyptianians in their practice of interment. They buried their kings within the precincts of their temples. The tomb of Amasis attracted the attention of Herodotus (ii. 162), and Herodotus in his turn was succeeded by Alexander the Macedonian, who was the conqueror and successor of that monarch, was also buried within the walls of the temple of Neith.

Saia was one of the sacred cities of Egypt: its principal deities were Neith, who gave oracles there, and Isis. The mysteries of the latter were celebrated annually with unusual pomp on the evening of the Asos or Isis Festival (ii. 59) the third day of the great feasts in the Egyptian calendar. It was held by night; and every one intending to be present at the sacrifices was required to light a number of lamps in the open air around his house. The lamps were small wooden caskets filled with salt and oil, on which a wick floated, and it is said that the whole city was lighted. The season of the year the feast of burning lamps was celebrated Herodotus knew, but he deemed it wrong to tell (ii. 62); it was, however, probably at either the vernal or autumnal equinox, since it apparently had reference to one of the capital revolutions in the solar course. An inscription in the temple of Neith declared her revolution was in the Sun. (Plutarch, Is. et Osir. p. 354. ed. Wyttenbach; Proclus, in Timaeum, p. 30.) It ran thus: "I am the things that have been, and that are, and that will be: no one has uncovered my skirts; the fruit which I brought forth became the Sun." It is probably, accordingly, that the kindling of the lamps referred to Neith as the author of light. On the same night apparently were performed what the sacred ceremonies of the Delta. The nome festival in the Delta.

Saia was one of the supposed places of the interment of Osiris, for that is evidently the deity whom Herodotus will not name (ii. 171) when he says that there is a burial-place of Amon at Saia in the temple of Athene. The mysteries were symbolical representations of the sufferings of Osiris, especially his dismemberment, and the lamentations over his body were sung on the lake behind the temple of Neith. Portions of the lake may still be discerned near the hamlet of So-el-Hedjar.

Saia was alternately a provincial city of the first order and the capital of Lower Egypt. These changes in its rank were probably the result of political revolutions in the Delta. The name and city are said by Manetho to have derived their appellation from Saia, a king of the xviiith dynasty. The xviiith dynasty was that of Bocchoris of Saia. The xvith dynasty contained nine Saite kings; and of the xvithiith Anyt saxa, the Saite is the only monarch: with him expired the Saite dynasty, b. c. 408.

Bocchoris the Wise, the son of Tnebactus (Diodor. i. 45. § 2, 79. § 1), the Technaita of Piitarch (Is. et Osir, p. 354; comp. Athen. x. p. 418; Anian, H. A. xi. 11), and the Asyrian Pehor, was remarkable as a judge and legislator, and introduced, according to Diodorus, some important amendments into the commercial laws of Saia. He was put to death by burning, and revolving from Saia the Aethiopians. During the Aethiopian dynasty Saia seems to have retained its independence. The period of its greatest prosperity was between b. c. 697—524, under its native kings. The strength of Aegypt generally had been transferred to its southern provinces. Of the Saite monarchs of Aegypt Psammitichus and Amasis were the most powerful. Psammitichus maintained himself on the throne by his Greek mercenaries. He established at Saia the class of interpreters, caused his own sons to be educated in Greek learning, and encouraged the resort of Greeks to his capital. The intercourse between Saia and Athens especially was promoted by their worshipping the same deity — Neith-Athena: and hence there sprung up, although in a much later age, the opinion that Cercops the Saite led a colony to Athens. The establishment of the Greeks at Cyrene was indirectly fatal to the Saite dynasty. Uxiphis, Apries, or Hophra, was defeated by the Persians, and his discontented troops raised their commander Amasis of Siouph to the throne. He adored Saia with many stately buildings, and enlarged or decorated the temple of Neith; for he erected in front of it propylæa, which for their height and magnitude, and the quality of the stones employed, surpassed all similar structures in Saia. The temple was transported from the quarries of El-Mokattam near Memphis, and thence were brought the colossal figures and androcephalæ which adored the Dromos. To Saia Amasis transported from Elephantine a monolithic shrine of granite, which Herodotus especially admired (ii. 175). Though the ordinary passage from Elephantine to Saia was performed in twenty days, three years were employed in conveying this colossal mass. It was, however, never erected, and when Herodotus visited Saia was still lying on the ground in front of the temple. It measured, according to the historian, 30 feet in height, 12 feet in depth from front to back, and in breadth 21 feet. After the death of Amasis, Saia sank into comparative obscurity, and does not seem to have enjoyed the favour of the Persian, Macedonian, or Roman masters of Egypt.

Saia indeed was more conspicuous as a seat of commerce and learning, and of Greek culture generally, than as the seat of government. Nectaneus, one of its kings, has left a name for his learning (Anseu. Epigraph. ii. p. 25). Ptolemy III.'s coinage is cited by Pliny (ii. 23. § 21). Pythagoras of Samos visited Saia in the reign of Amasis (comp. Plin. xxxvi. 9. a. 14); and Solon the Athenian conversed with Socchis, a Saite priest, about the same time (Plut. Solon, 26; Herod. li. 177; Clinton, Fast. Hel. vol. ii. p. 9). At Saia, if we may credit Plato (Timæus, iii, p. 225. d. 14 B.), the island of Atlantis, and of the ancient glories of Athens some thousand years prior to Phoroneus and Niobe and Deneus, the flood. The priests of Saia appear indeed to have been anxious to ingratiate themselves with the Athenians by discovering resemblances between Attic and Egyptian institutions. Thus Diodorus (l. 28), copying from earlier narratives, says that the Saite rulers of Saia, like those of Athens were divided into ephorides, or priest-nobles; geometer, land-owners liable to military service; and crafstmen or retail traders. He adds that in each city the upper town was called Aesivata. The Greek population of Saia was governed, according to Manetho, by their own laws and magistrates, and had a separate quarter of the city assigned to them. So strong indeed was the Hellenic element in Saia that
SALAMIS. 1. (Zae. i. 5. § 3), a municipal town of Euboea, in the territory of the Turdetani, to the NW. of Pax Julia and to the SW. of Euboea. It appears from inscriptions to have had the surname of Urbe Imperatoria. (Graec. 8. 47. 10; Melos, p. 140; Strozzi, p. 16.) Salacia was celebrated for its manufacturing of fine woolen cloths. (Plink. viii. 48. a. 73; Strab. iii. p. 144, with the note of Graekurd.) Now Aderon de Sal. (Flore, Exp. Spre. xiii. p. 115, xiv. p. 241; comp. Mela, iii. i; It. Ant. pp. 417, 418, and 432. 2. A town of the Callaic Bracarii in the NW. of Hispania Tarraconensis. (It. Ant. p. 422.) Identified either with Salaminos or Fimbouvo. [T. H. D.] SALAMBoria, a town of Cappadocia, in the district of Garasuritis. (Ital. v. 6. § 14; Tab. Puni, where it is called Sabærina.) [L. S.]

SALAMOMNIA. 1. Salamomnias, a town in Coele-Syria in the district of Chalgyonitica (It. Ant. p. 197; Not. Imp.), which Roland (Palaiost. i. p. 217) identifies with Salamom (Salamoum) in the Not. Leont. Imp., and with Salamoujat in Abulfeda (Tab. Sere. p. 105). It is said still to bear the name Sejmen. (Bichter, Wallfahrts, p. 298.)

SALAMANNAS. See Salamannas, Achaæ, Pers. 880; Scyl. p. 41; It. v. 14. § 3, viii. 20. § 5; Skodanas. §§ 385, 389; Found. Mela, ii. § 5; Plin. v. 35; Horat. Carm. ii. 729; Salamans, Eutath ad II. i. 558; Salamans, Malach, Carol. c. ii. 313, ed. Bonn: Ep. Salamand, Bock, inscr. nos. 2625, 2635, 2639), a city on the E. coast of Cyprus, 18 M. from Limassol, and 24 M. from Chytrion. (Punt. Tab.) Legend assigns its foundation to the Aegeid Tener, whose fortune formed the subject of a tragedy by Sophocles, called Teiserus, and of one with a similar title by Pausanias. (Eic. de Orat. i. 58, ii. 46.) The people of Salamis showed the tomb of the archer Tener (Aristot. Ath. N. i. 8, 113), and the reigning princes at the time of the Ionic revolt were placed at the head of the Teneridae, although one of them bore the Phoenician name of Sirenum (Iram). (Herod. v. 104.) In the 6th century B.C. Salamis was already an important town, and in alliance with the Battide princes of Cyprus, though the king Evphonius refused to assist in reinstating Areus Illus upon the throne. (Herod. iv. 162.) The despot Gorgus — was unwilling to join in the Ionic revolt, but his brother Onusius shut him out of the gates, and taking the command of the united forces of Salamis and the other cities, flew to arms. The battle which crushed the independence of Cyprus was fought under the walls of Salamis, which was compelled to submit to its former lord, Gorgus. (Herod. iv. 139, 144. 106, 113;) Salamis was besieged by Anaxiateres, the successor of Cimon, but when the convention was made with the Persians the Athenians did not press the siege. (Dioc. xii. 13.) After the peace of Antalcidas the Persians had to struggle for ten years with all their forces against the indefatigable and gentle Evagoras. (Icorr. v. 169. 170, 176.) Gorgus, who was still at large, appealed to his son Nicocles, which, with every allowance for its partiality, gives an interesting picture of the struggle which the Hellenic Evagora waged against the Phoenician and Oriental influence under which Salamis and Cyprus had languished. (Comp. Grote, Hist. of Greece, vol. x. c. 19.)
SALAMIS.

Ergasias with his son Pythagoras was assassinated by a eunuch, slave of Nicoecrem (Aristot. Pol. v. 8 § 10; Diodor. xxv. 47; Theopomp. Fr. iii. ed. Didot), and was succeeded by another son of the name of Nicoecrem. The Graeco-Aegyptian fleet under Menelaus and his brother Ptolemy Soter was utterly defeated off the harbour of Salamis in a sea-fight, the greatest in all antiquity, by the Athenians under Poliorcetes, a. c. 306. (Diodor. xx. 45—53). The famous course of Laminia formed a part of the booty of Demetrius, over whom she soon obtained unbounded influence. Finally, Salamis came into the hands of Ptolemy. (Pint. Demetr. 35; Polyzen. Strateg. 5.) Under the Roman Empire the Jews were numerous in Salamis (Acta, xiii. 6), where they had until then been situated. The farming of the copper mines of the island to Herod (Joseph. Antiq. xv. 14 § 5) may have swelled the numbers who were attracted by the advantages of its harbour and trade, especially its manufactures of embroidered stuffs. (Athen. ii. p. 48.) In the memorable revolt of the Jews in the reign of Trajan this city was attacked by the Romans. (Hist. of the Jews, vol. iii. pp. 111, 112.) Its demolition was completed by an earthquake; but it was rebuilt by a Christian emperor, from whom it was named Constantia. It was then the metropolitan see of the island. Epiphanius, the chronicler of the heretical sects, was bishop of Constantin in a.d. 366. According to Herod, the new town was first visited by Alexander the Great. The ground lies low in the neighbourhood of Salamis, and the town was situated on a height of the coast to the N. of the river Pediaeas. This low land is the largest plain—Salaminia—in Cyprus, stretching inward between the two mountain ranges to the very heart of the country where the modern Turkish village of Nicosia is situated. In the Life and Epistles of St. Paul, by Cosmas and Howson (vol. i. p. 169), will be found a plan of the harbour and ruins of Salamis, from the survey made by Captain Graves. For coins of Salamis, see Eckhel, vol. iii. p. 87.

SALAMIS (Σαλαμίς, Νερ. Eth. and Adj. Salaminios, Salaminia; Adj. Σαλαμίνης, Σαλαμίνιν, Σαλαμίνια, Σαλαμίνη) was, in ancient times, an island lying between the western coast of Attica and the eastern coast of Megaris, and forming the southern boundary of the bay of Eleusis. It is separated from the coasts both of Attica and of Megaris by only a narrow channel. Its form is that of an irregular semicircle towards the west, with many small indentations along the coast. Its greatest length, from N. to S., is about 10 miles, and its width, in its broadest part, from E. to W., is a little more. Its length is correctly given by Strabo (ix. p. 393) as from 70 to 80 stadia. In ancient times it is said to have been called Phytamous (Πυθώναυς), from the pines which grew there; Sciroc and Cychereia (Χυκερεία), from the names of two heroes Sciron and Cychereus. The former was a native hero, and the latter a seer, who came from Dodona to Athens, and perished along with Erechtheus in fighting against Eumolpus. (Strab. ix. p. 393; Paus. i. 56. § 1; Philochor. op. Pint. Thas. 17.) The latter was perished perpetually in the island for Asopusus (Per. 570. 10) speaks of the δαιρα Κυχερεία. and Stephanus B. mentions a Κυκχερεια τρεγας. The island is said to have obtained the name of Salamis from the mother of Cychereus, who was also a daughter of Asopusus. (Paus. i. 55. § 2.) It was colonised at an early period by the Aeacidae of Aegina. Tolomos, the son of Aeschus, fled thither after the murder of his half-brother Phocus, and became sovereign of the island. (Paus. i. 55. § 1.) His son Ajax accompanied the Greeks with 12 Salaminian ships to the Trojan War. (Hom. II. ii. 557.) Salamis continued to be an independent state even after the beginning of the 40th Olympiad (A. C. 660), when a dispute arose for its possession between the Athenians and the Megarians. After a long struggle, it first fell into the hands of the Megarians, but was subsequently taken possession of by the Athenians through a stratagem of Solon. (Plut. Sol. 8, 9; Paus. i. 40. § 3.) Both parties appealed to the arbitration of Sparta. The Athenians and the Megarians were immediately joined by the Illyrians, who represents Ajax ranging his ships with those of the Athenians (II. ii. 558), but this verse was suspected to have been an interpolation of Solon or Pisistratus; and the Megarians cited another version of the line. The Athenians, moreover, asserted that the island had been made over to them by the Illyrians, and that the latter had no right to enter it. The Athenian fleet was composed of Telamonian Ajax, when they took up their own residence in Attica. These arguments were considered sufficient, and Salamis was adjudged to the Athenians. (Plut. Sol. 10; Strab. ix. p. 394.) It then became an Attic demus, and continued incorporated with Attica till the times of Macedonian supremacy. (Eur. ii. 318.) Its inhabitants were partially received a Macedonian garrison, after having only a short time before successfully resisted Cassander. (Diod. xvi. 69; Polyzen. Strat. iv. 11. § 2; Paus. i. 35. § 2.) It continued in the hands of the Macedonians till a. c. 322, when the Athenians, by the assistance of Aratus, purchased it from the Macedonians together with Mitylene and Sinium. Thereupon the Salaminians were expelled from the island, and their lands divided among Athenian cleruchs. (Plut. Arat. 34; Paus. ii. 8. § 6; Böckh, Inschr. vol. i. p. 148, seq.) From that time Salamis probably continued to be a dependency of Athens, like Aegina and Oropus; since the grammarians never call it a Σάλαμιν, which it had been originally, but generally Σαλαμίνς.

The old city of Salamis, the residence of the Telamonian Ajax, stood upon the southern side of the island towards Aegina (Strab. ix. p. 393), and is identified by Leake with the remains of some Hellenic walls upon the south-western coast near a small port, where is only the rivulet in the island, perhaps answering to the Bocaros or Bocaiar of Strabo (ix. p. 394; Leake, Dem. p. 169). The Bocaros is also mentioned by Lycophron (451). In another passage, Strabo (ix. p. 424) indeed speaks of a river Cephissus in Salamis; but as it occurs only in an enumeration of various rivers of this name, and immediately follows the Athenian Cephissus without any mention being made of the Eleniæian Cephissus, we ought probably to read with Leake ἐν Ελεούναι instead of ἐν Σαλαμίνιοι.

When Salamis became an Athenian demus, a new city was built at the head of a bay upon the eastern side of the island, and opposite the Attic coast. In the time of Pausanias this city also had fallen into decay. The temple of Ajax is, however, a ruinous structure and a temple of Ajax, containing a statue of the hero in ebony; also a temple of Artemis, the trophy erected in honour of the victory gained over the Persians, and a temple of Cychereus. (Paus. i. 35. § 3, 36. § 1.) Pausanias has not mentioned the
SALAMIS.

statue of Solon, which was erected in the agora, with one hand covered by his mantle. (Dem. de Fols. Leg. p. 420; Aeschin. in Tim. p. 52.) There are still some remains of the city close to the village of Ambelakia. A portion of the walls may still be traced; and many ancient fragments are found in the walls and churches both of Ambelakia and of the neighboring village of Kuliru, from the latter of which the modern name of the island is derived. The narrow rocky promontory now called Cape of St. Barbara, which forms the S.E. entrance to the bay of Ambelakia, was the Silenae (Σηλενης) of Aeschylus, afterwards called Tropaia (Τροπαία), on account of the trophy erected there in memory of the victory. (Asch. Pers. 300, with Schol.) At the extremity of this promontory lay the small island of Pyttaleia (Πυττάλεια), now called Lepsoctiali, about a mile long, and from 300 to 300 yards wide. It was here that a picked body of Persian troops was cut to pieces by Aristide during the battle of Salamis. (Herod. viii. 99; Aesch. Pers. 447, seq.; Plut. Arist. 9; Paus. i. 36. § 2, iv. 36. § 3; Strab. ix. p. 393; Plin. iv. 12. § 36; Steph. B. d. c. r.)

In Salamis there was a promontory Scharidium (Σχηρίδιον), containing a temple of the god of war, erected by Solon, because he there defeated the Megarians. (Plut. Sol. 9.) Leake identifies this site with the temple of Athena Sciras, to which Ade-
shown in the annexed plan. The Grecian fleet was drawn up in the small bay in front of the town of Salamis, and the Persian fleet opposite to them off the coast of Attica. The battle was witnessed by Xenes from the Attic coast, who had erected for himself a lofty throne on one of the projecting declivities of Mt. Aegalea in Colonos. Leake has discussed with length the particulars of the battle, but Mr. Blakely has controverted many of his views, following the authority of Aeschylius in preference to that of Herodotus. In opposition to Col. Leake and all preceding authorities, Mr. Blakely supposes, that though the hostile fleets occupied in the afternoon before the battle the position defined in the plan annexed, yet this was on the morning of the battle the Greeks were drawn up across the southern entrance of the strait, between the Cape of St. Barbara and the Attic coast, and that the Persians were in the more open sea to the south. Into the discussion of this question our limits prevent us from entering; and we must refer our readers for particulars to the essays of those writers quoted at the close of this article. There is, however, one difficulty which must not be passed over in silence. Herodotus says (vii. 76) that on the night before the battle, the Persian ships stationed about Ceos and Cynoura moved up, and beat the whole strait as far as Munychia. The only known place of that name is on the north coast of the island of Salamis, more than 40 geographical miles from Salamis, and the promontory of Cynoura, immediately N. of the bay of Marathon, and distant more than 60 geographical miles from Salamis. Both of those places, and more especially Cynoura, seem to be too distant to render the movement practicable in the time required. Accordingly many modern scholars apply the name Munychia, instead of Munychia, to the southernmost and south-easternmost of the island of Salamis, and they are so called in Kiepert's maps. But there is no authority whatever for giving those names to two promontories in the island; and it is evident from the narrative, as Mr. Grote has observed, that the names of Ceos and Cynoura must belong to places in Attica, and not in Salamis. Mr. Grote does not attempt to indicate the position of those places; but Mr. Blakely maintains that Ceos and Cynoura are respectively the well-known island and cape, and that the real difficulty is occasioned, not by their distance, but by the erroneous notion conceived by Herodotus of the operations of the Persian fleet. (Homo. Dei. Attica. p. 166 seq., and Appendix II. On the Battle of Salamis; Blakely, Excerpts on Herodotus, viii. 76, vol. ii. p. 400, seq.; Grote, Hist. of Greece, vol. v. p. 171, seq.)

THE NAME OF SALTAP.

SALAPIA (Salapia: Ech. Salapiiro; Salapius: Salpi), one of the most considerable cities of Apulia, situated on the coast of the Adriatic, but separated from the open sea by an intervening lagoon, or salt-water lake, which was known in ancient times as the Salapia Palus (Lucan, v. 377; Vib. Sec. p. 26), and is still called the Lago di Salpi. This lagoon has now only an artificial outlet to the sea through the bank of sand which separates them; but it is probable that in ancient times its communications were more free, as Salapia was certainly a sea-port and in Strabo's time served as the port both of Arpi and Canusium (Strab. vi. p. 284). At an earlier period it was an independent city, and apparently a place of considerable importance. Tradition ascribes its foundation, as well as that of the neighbouring cities of Canusium and Arpi, to Dido, of whom it is described (Vitr. L. 4. 9) that he on his way to Carthage sent a party to the Promontory of the Greek, and to a Rhodian colony under Elipias (Id. 6; Strab. xiv. p. 654). There is no trace of its having received a Greek colony in historical times, though, in common with many other cities of the Daunian Apulians, it seems to have imbied a large amount of Hellenic influence. This was probably derived from the Tarantine, and did not date from a very early period.

The name of Salapia is not mentioned in history till the Second Punic War, in which it bears a considerable part. It was evidently one of the cities of Apulia which revolted to Hannibal after the battle of Cannae (Liv. xxii. 61); and a few years after this we find it still in his hands. It was apparently a place of strength, on which account he collected there great magazines of corn, and established his winter quarters there in n. c. 214. (Id. xxiv. 20.) It remained in his hands after the fall of Arpi in the following year (Id. xxiv. 47); but in n. c. 210 it was betrayed into the power of Marcellus by Blasio, one of its citizens, who had been for some time the leader of the partisans of the people, and the Numidian garrison was put to the sword. (Id. xxvi. 38; Appian, Anab. 45—47.) Its loss seems to have been a great blow to the power of Hannibal in this part of Italy; and after the defeat of Marcellus, n. c. 208, he made an attempt to recover possession of it by stratagem; but the fraud was discovered, and the Carthaginians were forced to retire with loss. (Liv. xxvii. 1, 12; Appian, Anab. 51.) No subsequent mention of it is found till the Social War, in the second year of which, when the tide of fortune was beginning to turn in favour of Rome, it was taken by the Roman praetor C. Coecinius, and burnt to the ground (Appian, B. C. I. 51). After this time it appears to have been reduced to a state of decay, and suffered severely from malaria in consequence of the exhalations of the neighbouring lagoon. Vitrivius tells us, that at length the inhabitants applied to M. Hostilius, who caused them to remove to a more healthy situation, about 4 miles from the former site, and nearer the sea, while he at the same time opened fresh communications between the lagoon and the sea (Vitr. L. 4. 12). We have no clue to the time at which this change took place, but it could hardly have been till after the town had fallen into a declining condition. Cicero, indeed, alludes to Salapia as in his day notorious for its pestilential climate (de Leg. Agr. ii. 27); but this may be understood as relating to its territory rather than the actual town. Vitrivius is the only author who notices the change of site; but his account can be depended

* Lycophron, on the other hand, seems to assign it a Trojan origin; though the passage, as usual, is somewhat obscure. (Lycophr. Alex. 1129.)
upon, the Salapia mentioned by Piny and Ptolomy as well as Strabo, must have been the new town, and not the original city of the name. (Strab. iv. p. 205.) This valley, which extends above 60 miles in length from its entrance at Jovis to its head among the very highest mountains of the Apennines, is one of the natural inlets of the sea into the country, and narrow valley, shut in on both sides by very lofty mountains. (Strab. iv. p. 205.) This valley, which extends above 60 miles in length from its entrance at Jovis to its head among the very highest mountains of the Apennines, is one of the natural inlets of the sea into the country, and narrow valley, shut in on both sides by very lofty mountains. (Strab. iv. p. 205.)

Extensive ruins of Salapia are still visible on the extreme of the Lago di Salpi, in a tract of country now called the Saline. They are still the objects of worship to the ancient inhabitants of the city, and belong to a city of considerable size and importance, and must therefore be those of the ancient Apulian town. This is further confirmed by the circumstance that the coins of Salapia, which of course belong to the period of its independence, are frequently found on the spot. (Swinburne's Tracts, vol. i. p. 81.)

The site of the Roman town founded by M. Brutellius is said to be indicated by some remains on the seashore, near the Torre di Salpi. (Romanieli, vol. ii. p. 201.)

The lagune still called the Lago di Salpi is about 13 miles in length by about 2 in breadth. At its eastern extremity, where it communicates with the sea, is an artificial collection of salt-works, which are considered as the representatives of those noticed in the Inscriptions under the name of Salinae. It is by no means certain (though not improbable) that these ancient salt-works occupied the same site as the modern ones; and the distances given in the Inscriptions along this line of coast, being in any case corrupt and confused, afford no clue to their identification. (Ist. Ant. p. 314; Varr. Pan. 31.) It is probable that the name of Salapia itself is connected with sal, the lagune having always been well adapted for the collection of salt.

The coins of Salapia, as well as those of Arpi and Casinum, have Greek legends, and indicate the strong influence of Greek art and civilization, though apparently at a late period, none of them being of an archaic style. The magistrates' names which occur on them (Δαρους, Ἱτταρος, &c.) are, on the contrary, clearly of native origin. (Mamm.m. U. J. D. pp. 83, 83.)

COIN OF SALAPIA.

SALAPIA. 1. (Salapia, Potl. ii. 6. § 61), a town of the Bastianii, in the SE. part of Hispania Tarraconensis. According to Piny it was a Roman colony. (Colonia Salariensia, iii. 3. a. 4.) Utber (ii. pt. 1. p. 407) identifies it with Sabia, between Ubes and Bassa.

2. A town of the Oretani, in the same neighbourhood. (Potl. ii. 6. § 59.)

SALAS. [Sala.]

SALASSI (Σαλασσαί), one of the most powerful of the Alpine tribes in the N. of Italy, who occupied the great valley of the Duria or Dora Salana, now called the Val d'Aosta, from the plains of the Po to the foot of the Alpes and Pennine Alps. This country is correctly described by Strabo as a deep

SALASSI. and narrow valley, shut in on both sides by very lofty mountains. (Strab. iv. p. 205.) This valley, which extends above 60 miles in length from its entrance at Jovis to its head among the very highest mountains of the Apennines, is one of the natural inlets of the sea into the country, and narrow valley, shut in on both sides by very lofty mountains. (Strab. iv. p. 205.)
SALASSIL

36,000 persons, of whom 8000 were men of military age. The tribe of the Salassil being thus exterminated, a Roman colony was settled at Prastoria Augusta (Aosta), and a highroad made through the valley. (Dion Cass. lxi. 25; Strab. iv. p. 205; Liv. Eut. cxxv.) The name of the Salassil, however, still remained, and is recognised as a geographical distinction both by Pliny and Ptolemy, but no subsequent mention of them is found in the subsequent tribe. (Plin. iii. 17, s. 21; l. i. § 34.)

One of the main causes of the disputes between the Salassil and Romans had arisen from the gold-washings which were found in the valley, and which are said to have been extremely productive. These were worked by the Salassil themselves before the Roman invasion; but the Romans forbade the working of the mines, and they were early taken possession of them, and they were farmed out with the other revenues of the state to the publicans. But these were, as might be expected, involved in constant quarrels with the neighbouring barbarians, who sometimes cut off their supplies of water, at other times attacked them with more open violence. (Strab. iii. p. 206; Ptolemy, l. ii. § 8.)

The line of the road through the country of the Salassil, and the passes which led from Augusta Praetoria over the Pennines and Grian Alps, are described in the article ALPES [Vol. I. p. 110]. [E. E. B.]

SALASSIL. [MAURETANIA, Vol. II. p. 398, b.]

SALATARAE (Salatarae, Ptolemy, l. xi. 6, § 6), a tribe of the Bactrians who lived along the banks of the Ornus. Forbiger supposes that they are the same as the Sarpasani, noticed by Pliny (vi. 16, a. 18). [V.]

SALATITHUS (Salatithus, Ptolemy, l. iv. 6, § 5), a river on the W. coast of Africa, with a town of the same name. This river, which took its rise in Mt. Mandrass, is represented by one of the Wadges, which flows into the sea in the district occupied by the ancient Antiochos, on the coast to the left of Cape Funchal. [E. B. R.]

SALURIS, a town on the coast of Hispania Tarraconensis, mentioned in the Ora Maris of Avienus (v. 518). [T. H. D.]

SALDA, a town in the south of Lower Pannonia, on the southern bank of the Savus, and on the great highroad from Sicia to Sirmium. (Strab. I. vi. 15, § 9; Ptolemy, l. ii. § 38; tit. Anton. ii. 1; Ptolemy, l. i. § 9.) Is very probably the same as the town of Salla (Zalla) mentioned by Ptolemy (ii. 16, § 8). The site is commonly believed to be occupied by the modern Stalina. [L. S.]

SALDAE (Zalla), Strab. xvii. p. 831; Ptolemy, l. iv. 2, § 9, viii. 13, § 9; Pliny, l. i. ; Hirt. Anton. i. Ptolemy, l. i. § 9.) is very probably the same as the town of Salla (Zalla) mentioned by Ptolemy (ii. 16, § 8). The site is commonly believed to be occupied by the modern Stalina. [L. S.]

SALDAE, a town in Lower Pannonia, on the southern bank of the Savus, and on the great highroad from Sicia to Sirmium. (Strab. I. vi. 15, § 9; Ptolemy, l. ii. § 38; tit. Anton. ii. 1; Ptolemy, l. i. § 9.) Is very probably the same as the town of Salla (Zalla) mentioned by Ptolemy (ii. 16, § 8). The site is commonly believed to be occupied by the modern Stalina. [L. S.]

SALDAE (Zalla), Strab. xvii. p. 831; Ptolemy, l. iv. 2, § 9, viii. 13, § 9; Pliny, l. i. ; Hirt. Anton. i. Ptolemy, l. i. § 9.) is very probably the same as the town of Salla (Zalla) mentioned by Ptolemy (ii. 16, § 8). The site is commonly believed to be occupied by the modern Stalina. [L. S.]

In later times it was the W. limit of Mauretania Sitifensis, against Mauretania Caesariensia in its more contracted sense. It is identified with Bagarbus, the capital of the region. Later, it belonged to the regions of Navarro, the general of Ferdinand the Catholic, after two famous battles, a.d. 1510 (comp. Prescott's Ferdinand and Isabella, vol. ii. p. 457), or the C. Bongie of the French province. (Barth., Wanderungen, p. 62.) [E. E. J.]

SALDAPA, a town of Moesia (Theophyl. Simocat. i. 43), where the Roman army was engaged by the Goths under the emperor Maurice (Le Beau, Bas Empire, vol. x. pp. 248, 369). Schafarik (Slav. Ant. vol. ii. p. 158) has fixed the site at the ruins of Dianobrig on the Danube. [E. E. J.]

SALDUBA. 1. A small river in the territory of the Turufni in Hispania Baetica, probably the same called Zaloboa, (with err. lect.) by Ptolemy (ii. 4. § 7). Now Rio Verde.

2. A town on the mouth of the preceding river (Zaloboa, Ptolemy, ii. 4. § 11), of no great importance (Mela, ii. 6; Plin. iii. 1. a. 3), near the present Arbelis. [T. H. D.]

SALERNI, a town on the S. coast of Thrace, near the W. mouth of the Hebrus, and nearly equidistant from Zonae and Doriscus. It is mentioned by Hero- dotus (vii. 59) as a Samothracian colony. [J. R.]

SALEM. [JERUSALEM.]

SALENI, a people of Hispania Tarraconensis, probably of Sarmatian origin, mentioned by Ptolemy (ii. 4, § 34). They are perhaps the same as the Zalenios of Ptolemy (ii. 4. § 34). [T. H. D.]

SALENTINI or SALLENTINI (both forms seem to rest on good authority), (Salentinos), a people of Southern Italy, who inhabited a part of the peninsula which forms the SE. extremity, or as it is often called, the "heel of Italy." Their territory was thus included in the region known to the Greeks by the name of Iapygia, as well as in the district called by the Romans Calabria. Strabo remarks that the peninsula in question, which he considers as bounded by a line drawn across from Tarentum to Brundusium, was variously called Messapia, Iapygia, Calabria, and Salentina; but that some writers established a distinction between the names. (Strab. vi. p. 282.) There seems no doubt that the names were frequently applied irregularly and vaguely, but that there were in fact two distinct tribes or races inhabiting the peninsula, the Salentines and the Calabrians (Strab. vi. p. 277), of whom the latter were commonly known to the Greeks as the Messapians (CALABRIA). Both were, however, in all probability kindred races belonging to the great family of the Pelasgian stock. Tradition represented the Salentines as of Cretan origin, and, according to the habitual form of such legends, ascribed them to a Cretan colony under Idomenes after the Trojan War. (Strab. vi. p. 282; Virg. Georg. iii. 400; Ptolemy, l. ii. § 32; Vit. ap. Prot. et Virg. Ecd. vi. 31.) They appear to have inhabited the southern part of the peninsula, extending from its southern extremity (the Capo di Leuco), which was thence frequently called the Salentine promontory ("Salentinum Promontorium," Mol. ii. 4. § 8; Ptolemy, l. iii. § 13), to the neighbourhood of Tarentum. But we have no means of distinguishing accurately the limits of the two tribes, or the particular towns which belonged to each.

The name of the Salentines does not seem to have been familiarly known to the Greeks, at least in early times; as we do not hear of their name in any of the wars with the Tarantes, though from their position they must have been one of the tribes that early came into collision with the Romans. They were probably known under the general appellation of Iapygiyes, or confounded with their neighbours the Messapians. On the contrary, as soon as their name appears in Roman history, it is in a wider and more general sense than that to which it is limited by the geographers. Livy speaks of the Salentines as accepting the name of the C. L. Cornelius in N. C. 306, when the consul I. L. Volumnius was sent into their country, who defeated them in several battles, and took some of their towns. (Livy. ix. 42.)

It is almost impossible to believe that the Romans S L
had as early as this pushed their arms into the Libyan peninsula, and it is probable that the Salentines are here confounded with the Punicans, with whom, according to some accounts, they were closely connected. (Pll. iii. 11. s. 16.) But the name is used with still greater laxity shortly after, when Livy speaks of Thuria as "ubrum in Sallentum" (s. 2.), if at least, as there seems little doubt, the Tarentum present is the well-known city of Thuria in Lucania [Thuriæ].

The name of the Salentines does not again occur in history till the Fourth Samnite War, when they joined the confederacy formed by the Samnites and Tarentes against Rome; and shared in their defeat by the consul L. Aemilius Barbula in s. c. 281, as we find that general celebrating a triumph over the Tarentes, Samnites, and Salentines (Fast. Capit. ann. 473.) For some time after this the appearance of Pyrrhus in Italy drew off the attention of the Romans from more ignoble adversaries, but when that monarch had finally withdrawn from Italy, and Tarentum itself had fallen into the hands of the Romans, they were left at leisure to turn their arms against the Salentines for the recovery of their independence. In n. c. 267 war was declared against the Salentines, and both consuls were employed in their subjugation. It was not likely that they could offer much resistance, yet their final conquest was not completed till the following year, when both consuls again celebrated triumphs "de Mysiiis, Samnitis, et Sallentinis" (Fast. Comit. in Fast. Capitol. year 7.; Liv. Epit. xvi.; Florus. i. 20.; Eustroph. ii. 17.)

All the Roman writers on this occasion mention the Salentines alone; the Triumphal Fasti, however, record the name of the Messapians in conjunction with them, and it is certain that both nations were included in both the war and the conquest, for Brundisium, which is called by Florus "caput regionis," and the occupation of which was evidently the main object of the war (Zonar. l. c.), seems to have been at that period certainly a Messapian city.

The Salentines are again mentioned as revolting to Hannibal during the Second Punic War (n. c. 213), but seem to have been again reduced to subjection without difficulty. (Liv. xxv. 1.; xxvii. 56.; 41.) From this time the name of the Salentines is lost, and is not even found among the nations of Italy that took arms in the Social War. But the "Sallentinus ager" continued to be a recognised term, and the people are spoken of both by Pliny and Strabo as distinct from their neighbours the Calabri. (Strab. vi. p. 277; Plin. iii. 11. a. 18.; Ptol. iii. 1. § 13.; Moll. ii. 4.; Gell. no. 18. Am. 465.) This "regio Salentina" is even mentioned as a distinct portion of Calabria as late as the time of the Lombards. (P. Diac. Hist. Lang. ii. 21.)

The physical character and topography of the country of the Salentines are given in the article Calabria. The following towns are assigned by Pliny to the Salentines, as distinguished from the Calabrians, strictly so called: Aletium, Bara, Neretum, Uxentum, and Veretum. All these are situated in the extreme southern end of the Iapygian peninsula. The list given by Ptolemy nearly agrees with that of Pliny; but he adds Bituriae, which was considerably further N., and is reckoned a golconda of a Calabretin city (Strab. Sall. Diar.) The place he calls Banota is probably the Basta of Pliny. To these inland towns may probably be added the seaports of Callipolis, Castrum Minervae, and perhaps Hydruntum also, though the last seems to have early received a Greek colony. But it is probable that at an earlier period the territory of the Salentines was considerably more extensive. Stephanus of Byzantium speaks of a city of the name of Sallentia, from which was derived the name of the Salentines, but no mention of this is found in any other writer, and it is probably a mere mistake. [E. H. B.]

SALERNUM. (Cf. Σαλέρνο; Etr. Salernum, Etr. Salerno), a city of Campania, but situated in the territory of the Picentini, on the N. shore of the gulf of Pozzuoli, which now derives from it the name of the Gulf of Salerno. We have no account of its origin or early history; it has been supposed that it was like the neighbouring Marcina a Tyrrhenian or Pelasgic settlement [Marcina]; but it is generally supposed that its foundation is to be traced back to a settlement mentioned in history previous to the settlement of a Roman colony there. But when this was first decreed (in n. c. 197, it was not actually founded till n. c. 194), Livy speaks of the place as Castrum Salerni, whence we may infer that there was at least a fortress previously existing there (Liv. xxxvi. 29.; Tit. Liv. xxxvii. 16.; Ptol. i. 8. 1.; Strab. vi. 6. 1. 1. 14.) When the Roman colony was established, we are expressly told by Strabo, for the purpose of holding the Picentini in check, that people having actively espoused the cause of Hannibal during the Second Punic War (Strab. L.C.) Their town of Picentia being destroyed, Salernum became the chief town of the district; but it did not rise to any importance till the 10th or 11th century, when it obtained a Cicaro from the Romans, and acquired a great amount of territory. In the Social War it was taken by the Samnite general C. Papius (Appian, B. C. i. 43); but this is the only occasion on which its name is mentioned in history. Horace alludes to it as having a mild climate, on which account it had apparently been recommended to him for his health (Hor. Ep. i. 15. 1.) It continued to be a municipal town of some importance under the Roman Empire, as we learn from inscriptions retained the title of a Colony (Plin. iii. 5. 9.; Ptol. iii. 1. § 7.; Ibis. Ant.; Tab. Peut.; Mommsen, Inscr. R. N. pp. 9 — 12.) But it was not till after the Lombard conquest that it became one of the most flourishing cities in this part of Italy; so that it is associated by Pausanias with the name of Calatafimi and Neapolis, and with the towns of the "opulentissimae urbis" of Campania (P. Diac. Hist. Lang. ii. 17.). It retained this consideration down to a late period of the middle ages, and was especially renowned for its school of medicine, which, under the name of Schola Salernitana, was long the most celebrated in Europe. But it seems certain that this was destroyed, and the Arabs in the 10th or 11th century, and was not transmitted from more ancient times. Salerno is still the see of an archbishop, with a population of about 12,000 inhabitants, though greatly fallen from its mediæval grandeur.

The ancient city, as we learn from Strabo (v. p. 981.), stood on a hill at some distance from the sea, and is confirmed by local writers, who state that many ancient remains have been found on the hill which rises at the back of the modern city, but no ruins are now extant. (Romaneili, vol. iii. p. 612.) From the foot of this hill a level and marshy plain extends without interruption to the mouth of the Silarus, which now forms the boundary of the sea, and has been included in the municipal territory of Salernum, as Lucan speaks of the Silarus as skirting the cultivated lands of that city (Lucan, ii. 425.). The distance from Salernum itself to the mouth of the
SALTEMIO.

Silerus is not less than 10 miles, though erroneously given in the Tabula at only 9. (Tab. Post.) [E. B. J.]

SALETIO, in Gallia. This name occurs in the Not. Imp., in the Antonine Itin. and in the Table. Ammianus (xvi. 2) names it Salae: "Argenteum, Broecusamum, Tabernas, Salissen, &c." The remains of the town stand between the river Strassburg (Strassburg) and Tabernas; and the Table places it between Tabernas and Broecusamum (Drumach), which is north of Strassburg. The numbers are not correct in the Itin.; but there is no doubt that the place is Secta near the Rhine. A diploma of Othon the Great names it "Salise in Elisisma," in Elissa or the Ebro (D'Anville, Not. Itin.; T. E. D. [G. L.])

SALGANUS (Salvaremys, Liv. use the Gr. arc. Salganae: Vide Zaldytnus), a town upon the eastern coast of Boetia, and between Chalcis and Anthedon, is said to have derived its name from a Boetian, who served as pilot to the Persian fleet of Xerxes, and was put to death upon suspicion of treachery, because the outlet appeared to the channel of the Euboea, but the Persian commander and the king found out his mistake, erected a monument on the spot, where the town was afterwards built. (Strab. xii. p. 403; Dic. Geogr. Stat. Græc. p. 19; Steph. B. s. v.) Salganeus was considered an important place from its commanding the northern entrance to the Euboea. (Ptol. xix. 77; Liv. xxxv. 37, 46, 51.)

The remains of the town stand directly under the highest summit of Mount Messapia, in the angle where the plain terminates, and upon the side of a small port. The citadel occupied a height rising from the shore, 90 yards in length, and about 50 broad, and having a flat summit sloping from the SE. towards the sea. There are remains of walls or of the walls of the port, on the S.E. side of the height. (Leake, Northern Greece, vol. ii. p. 267.)

SALI (Salis, Potii. iii. § 29), a people of the ancient Sarmatian, whom Schafarik (Sav. Alt. vol. i. p. 302) places on the river Salis in the Baltic province of Livonia. [E. B. J.]

SALIS, a river in the territory of the Antonites, on the N. coast of Hispania Tarraconensis. (Mal. iii. 1.) Now the Sella. [T. H. D.]

SALLA, a branch of the Mosella (Mosel), mentioned by Venant. Fortun. (iii. 12. 5), which must be the Sella (Foriger, vol. iii. p. 126). The Sella joins the Mosel at Meta. [G. L.]

SALICA (Sallia, Potii. ii. § 59), a town of the Oscan in Hispania Tarraconensis. [T. E. D.]

SALICE (Taphobarnum). SALICES (Ad), a place in Moscia which the Antonine Itinerary places not far from the mouth of the Danube at 43 M. P. from Halmrast, and 63 M. P. from Tomii. The low and marshy meadows which surrounded it were the scene of the acquisitive battle for the regnum and the possession of valais. (Ann. Marc. xixi. 7. § 5; Gibbon, c. xxi.; Le Beau, Bas Empire, iv. p. 112; Greenw. Hist. of the Germans, p. 328.) [E. B. J.]

SALIENTIS (Salentibus, Iu. Ant. p. 428), a place in Galliaecia, on the road from Bracara to Asturica; variously identified with Celacis and Tregula. [G. L.]

SALINAE, in Gallia, the chief town of the Suevii or Sueci (Potli. iii. § 42), a people in the Province E. of the Rhone. An inscription in Spoon, "Deo civitatis Salin," is said to belong to this place; and another inscription has been found at Leucorium near the sources of the Pygmy: "C. Julio Valenti

SALOMNA. 883

J. F. Fahr vix. viro civitate. Salinium... Alpium maritimaramum patrono optimo." Some place Salinæ at Castellum in the diocese of Senus in the Maritime Alps, where there are salt springs, and where Spon's inscription is said to have been found. D'Anville places it at Salinae in the diocese of Frejus, near Pautud, where the Church of the Tamarit was built; and he observes that all the old towns of this country preserve their names. (D'Anville, Not. Itin.; T. E. D. [G. L.]

SALINAE (Salinae, Potil. iii. § 21), a town of the Catuvelanchii or Capelani, towards the E. coast of Britannia Romana. Camden (p. 339) identifies it with Sidnbe or Somdje, near Pottos in Bred. Not. Lat.; others have sought it in a S. of London. [T. H. D.]

SALINAE (Salainæ, Poti. iii. § 7; Pest. Tab.; Geogr. Rav. iv. 7), a town of Dacia identified with Thorda, on the Araxes in Transylvania, where there are Roman remains. (Comp. Paget, Hungary and Transylvania, vol. ii. p. 359.) [E. B. J.]

SALINAE (Mauretania, Vol. ii. § 99), a town of Odae in Dacia identified with the mouth of the Danube, a little below Agincum, on the road from this town to Murus in Lower Pannonia. (Potli. ii. § 6. § 4; It. Ant. p. 245, where it is called Vetus Salina.) On the Pers. Table we find in that spot the corrupt name Vetusalium. Its site must have been in the neighbourhood of the modern Hattus." [L. B.]

SALICANUS. [Stallicanus].

SALICLITA, in Gallia, is placed by the Antonine Itin. on the road from Genabum (Orlèans) to Lutetiae (Paris). It is Soctae, a little south of Etampes, on the Jusine, a branch of the Seine. The Itin. makes the distance the same from Genabum, and Lutetiae, which we must take to be the Vitri de Paris; but there is an error in the Itin., as D'Anville shows, in the distance from Saliclitae to Lutetiae, and he proposes to correct it. [G. L.]

SALISSO, in north Gallia, is placed by the Antonine Itin. on a road from Augusta Trevirorum (Trier) to Bingine (Bingen). The places reckoned from Augusta are Bandobrica (iii. Salsis), Salsis, and Bingine. This Bandobrica is not the name described under the article Baudobrica (Boppard). These 63 Gallic lieues exceed the real distance from Trier to Binginen considerably. The site of Salissos is uncertain. [G. L.]

SALLACUS (Sallaceus, Potii. ii. § 9), a town in the town of Laura. [T. H. D.]

SALLENTINUM. [Salletinum].

SALUMINUM. [Dalmatia].

SALMACITICA (Salmacitica, Potii. ii. § 5), in the Iu. Ant. called Salmacitio, in Polyaeus Strat. viii. 48, Salmaris; an important town of the Vettonians in Salutaris, on the S. bank of the Danube, on the road from Emerita to Germania Inferior. It is incorrectly identified with the See of Polibus (iii. 14), and the Hermendica or Helmaeuc of Livy (xxi. 5); cf. Nonius, Hup. c. 88. It is the celebrated modern town of Salamanca, where the piers of a bridge of twenty-seven arches over the Tormes, built by Trajan, are still in existence. (Cf. Milano, Dic. vii. p. 402; Flor. Exp. Geogr. xiv. p. 267.)

SALMONE, a branch of the Mosella (Mosel).

"Nec fastiditos Salmonae namro finoreos." (Austotius, Mosell. 366.)

The Salmona is the Saluse, which flows into the Mosel, near the village of Novesigae. [G. L.]

3. L. 2.
SALOME. [Σαλομή, Steph. B. s. c.]: Strab.; Ἱσραήλ, Diod. iv. 68: Euh. Σαλμώνης, Σαλωμώνης, Steph. B. The form Salamounes is preponderous a form Σαλαμώνης which probably ought to be read in Diodorus instead of Ἱσραήλ), an ancient town of Pisias in Elis, said to have been founded by Salomones, stood near Heraclidia at the sources of the Eneas or Banythicus, a branch of the Alpheius. Its site is uncertain. [Strab. viii. p. 336; Diod. L. c.; Apollod. i. 9. § 7; Steph. B. L. c.]

SALOMA. [Σαλόμα, Steph. B. l. c.]: a city of Spain near the Pillars of Hercules; perhaps in the Campus Parthicius near Carthago Nova, if the reading of Brodusen in Oppian (Cyp. iv. 222) is correct. [Cm. U.erkt. ii. pt. i. p. 402. [T. H. D.]

SALONDA (Ἀλυκία ὄρη Σαλωμόνης, Por. iii. 11. § 8): Halmyanes, Plin. iv. 11. s. 18; Mela, ii. 2. § 8): a coast-town or district of Thrace, on the Euxine, about 60 miles NW. from the entrance of the Boeoporus, probably somewhere in the neighbourhood of the modern Migeck. The eastern shallows of the Haemon here come very close to the shore, which they divide from the valley of the Helorus. The people of Salomundes were thus cut off from communication with the barbarous peoples of Thrace, and became notorious for their savage and inhuman character, which harmonised well with that of their country, the coast of which was extremely dangerous.

Anchylus (Proc. 726 ε) describes Sal瞄准des as "the rugged jaw of the sea, hostile to sailors, step-mother of ships;" and Xenophon (Anab. viii. 5. § 12, en) informs us, that in his time its people carried on the business of wreckers in a very systematic manner, the coast being marked out into portions by means of posts erected along it, and those to whom each portion was assigned, having the exclusive right to plunder all vessels and persons cast upon it. This plan, he says, was adopted to prevent the blundered which had frequently been occasioned among themselves by their previous practice of indiscriminate plunder. Strabo (vii. p. 319) describes this portion of the coast of the Euxine as "desert, rocky, destitute of harbours, and completely exposed to the north winds;" while Xenophon (L. c.) characterises the sea adjoining it as "full of aholas."

The earlier writers appear to speak of Salaimandas as a district only, but in later authors, as Apollodorus, Pliny and Mela, it is mentioned as a town.

Little is known respecting the history of this place. Herodotus (iv. 93) states that its inhabitants, with some neighbouring Thracian tribes, submitted without resistance to Darius when he was marching through their country towards the Danube. When the remnant of the Greeks who had followed Cyrus the Younger entered the service of Sesthenes, one of the expeditions in which they were employed under Xenophon was to reduce the people of Salaimandas to obedience; a task which they seem to have accomplished without much difficulty. (Anab. l. c.)

G.L.O. a tributary of the Iberus in the Tibesci, which flowed past the town of Bibilis (whence

* In this passage the poet, strangely enough, places Salaimandas in Asia Minor near the Thermodon.

JUSTIN, xiv. 3, calls the river itself Bibilis; and entered the Iberus at Allabon. (Mart. i. 49, x. 20, 103, iv. 55) Now the Xalos. [T. H. D.]

SALODURUM, in Gallia, is placed in the Antonine Itin. x. from Petinesca [Petinesca], and the distance from Salodurum to Augusta Baasaorum (Auguste Bistis) is xxii. Salodurum is Solothurn, as the Germans call it, or Solfawre, and though the distance between Basile and Solothurn is somewhat less than that in the Itin. this may be owing to the passage over the Bibilis which separate the cantons of Basile and Solfawre.

It is said that there are Roman remains at Solfawre, and an inscription of the year a. c. 219, "Vico Salodi,", has been found there. Salodurum is one of the towns of the Helvetii with a Celtic termination (sher). Oliver conjectured that Tedomy's Gamodurum (GAMODURUM) might be Salodurum. (D'Anville, Notice d.; Ubert, Gallia.) [G. L.]

SALE (Σαλές, Paus. vii. 24, § 7), or Sale (Plin. vi. 31), a small lake of Lydia at the foot of Mount Nipisias, on the site of Tantalis or Sipylus, the ancient capital of Maconia, which had probably perished during an earthquake. (Strab. l. p. 58, xii. p. 703.)

The lake was surrounded by a marsh; and the Phryties, which flowed into it as a brook, issued at the other side as a river of some importance. [L. S.]

SALOMACUM, or SALومOCCUM, is placed by the Antonine Itin. on a road from Aquae Tarbellicae (Dez) to Boudigalis (Bordeaux). Salomacum is the next place on the road to Boudigal and xii. distant. The distance and the name Sales show that Sales is Salomacum. [G. L.]

SALON, SALONAE (Σαλώνα, Σαλώνα); this latter is the more usual form, as found in Inscriptions, Orelli, Inscr. nos. 502, 3833, 4995; and on coins, Rasche, vol. iv. pt. i. p. 1557: Eth. SALOYANIVS (Σαλώνα), a town and harbour of Dalmatia, which still bears its ancient name, situated on the E. corner of the gulf into which the Adriatic breaks (Casa. di Castelli) on the N. of the river LUBER (Il Giud o). Lucian's description (viii. 104) —

"Qua maris Adriaci longas ferit unda Salonas Et tepidum in molles Zephyros excurrat Lade" — agrees with its oblong form, still traceable in the ruins, and with the course of the river. Though the public buildings and houses of ancient Salonas have been destroyed, enough remains of the wall to show the size, as well as position, of the city; and the arch of the bridge proves that the course of the river is much nged.

The city consisted of two parts, the eastern and the western; the latter stands on rather higher ground, sloping towards the N., along which the wall on that side is built. Little is known of Salonas before the time of Julius Caesar; after the fall of Dalmatium it became the chief town of Dalmatia, and the head-quarters of L. Cassius Metellus, a. c. 117. (Appian, Itur. 11.) It was besieged a second time, and opened its gates to Ca. Cosonius, a. c. 78. (Environ. vi. 4; Oros. v. 23.) When the Pompeian fleet swept the Ionian gulf from Cercyra to Salone, M. Octavius, who commanded a squadron for Pompeius, was compelled to retreat with loss from before this stronghold of
CAESAR (Curs. B. C. iii. 9) describes the site of Ga- 
binus, after being cooped up for months in the 
fortress, died here. (Anct. B. Aen. 43; Dion Cass. 
xxiii. 12.) In B.C. 39 Aquinius Pollio defeated the Par- 
theni, who had espoused the cause of Brutus and 
Caesarius, and took Salona, in commemoration of 
which his son Aquinius Gallus bore the "agnomen" 
Salonius (Comp. Virg. Aen. viii. 7; Hor. Car. i. 1. 14--16.) From the time it received a colony it 
was built on a mound, and thus the inhabitants 
power on that side the Adriatic, and was distin- 
guished for its loyalty, as was shown in the siege it 
maintained against Bato the native leader, a.d. 6. 
All the great Roman roads in Dalmatia met at this 
point, and where the country was divided into three 
"conventus," or asile towns, as many as 382 
"decuriae" were conveyed to it. (Plin. iii. 26.) 
Under the earlier emperors the town was embel- 
lished with many public buildings, the number of 
which was greatly increased by DIOCLETIAN, who, 
according to Porphyrogenitus (de Adm. Imp. 29), 
completely rebuilt the city. No great change took 
place for nearly two centuries after the death of 
that great monarch, except in the works of 
Porphy- 
rogenitus (l.c.) the "long Salone" attended to 
halve the size of Constantinople. In 425 D. 481 
Salona was taken by Odoscor, king of the Heruli, but 
was recovered from the Goths by the Gepid prince 
Mundus, the general of Justinian. Totila occupied 
it for a time. Little is known of these sieges, except 
that they were partially destroyed. (Proc. B. G. l. 
5, 7, 17.) After the invasion of Franks and Longes, 
it was from Salona that Bellerius in 544, 
and Nanes in 552, set out to rescue Italy from 
Totila and the Goths. (Comp. Gibbon, c. xxii.) 
The Avars invaded Dalmatia in 639, and, advancing 
upon Salona, pillaged and burnt the town, which 
from that time has been deserted and in ruins. (Porph. L. 8.) It seems lost in these 
years, and was from Strabo's (vii. p. 315) account, 
seems to have been the only one deserving that 
ame in the Dalmatian coast. The present state 
of the place offers many illustrations of past events; 
the following works touch very fully upon the 
fortifications and other ruins: Wilkinson, 
"Travels in Italy," ii. pp. 151--192; Neumann, 
Die Sud-Slavische Rechthistorie," 1864; Laura, 
Antiqu. Iapide Salonianae sedidit, Zara, 1850; F. Carrara, 
Topographia e Seari di Salona, Trieste, 1850. 
The fame of Salona mostly rests upon its neigh- 
bourhood having been chosen by DIOCLETIAN as 
the place of his retirement. That emperor, after 
his resignation, spent the last nine years of his life in 
the seclusion of the palace which has given its name to 
Spalato. Spalato, often erroneously called Spe- 
latro, in Illyricum Split, is a corrupt form of Salonea 
Palatium or S. Palatium. The building of the 
palace, within the precincts of which the greater 
part of the modern town is constructed, occupied 
twelve years. The stones, which was very little in 
Gaebrius, were worked up for months from the 
quarries of Tragurium. After the death of 
DIOCLETIAN, but little is known of the palace or its 
occupants. Part of it was kept by the magistrates 
of Salonea, as a state palace; and part was occupied 
by the "Gynaecium," or cloth manufactury, in 
which women only were employed,—whence the 
names "stitchers." The palace was, for months from 
the war of the West, Glycerius and Juliana Napes, the latter 
of whom was murdered here. When Salona was 
captured by the Avars, the houseless citizens fled to 
the massive structure of the palace for shelter: the 
settlement swelled by the arrival of their country- 
men became the capital of the new state. 
Salapia, and paid an annual tribute of 200 
pieces of gold to the Eastern emperors. (Const. 
Porph. l.c.) 
The palace is nearly a square, terminated at 
the four corners by a quadrangular tower. 
According to the latest and most accurate adm surrements, 
the entire edifice, including the towers, occupies 
a space of a little more than eight acres. 
(Wilkinson, Dalmatia, vol. i. pp. 114--143; Neige- 
baur, Die Sud-Slav., pp. 153--151.) The en-
tire building was composed of two principal sec- 
tions, of which the one to the S. contained two 
temples— one dedi cated to Jupiter the other to 
Aesculapius—and the private rooms of the em- 
eror. Two streets intersect each other at right 
angles, nearly in the centre of it; the principal one 
led from the Porta Aurea, the main entrance on 
the N. front, to a spacious court before the vestibule; 
the other ran in a direct line from the W. to the E. 
gate, and crossed the main street just below the 
court. What remains is not enough to explain the 
distribution of the various parts of the edifice. 
By a comparison of what existed in his time with 
the precepts of Vitruvius, Adams (Antiquities of 
DIOECLETIAN'S PALACE, 1764) has composed his inge-
nious restoration of the palace. (Comp. Gibbon, 
c. xiii.) All the gates, except the Porta Arpentina, 
were defended by two octagonal towers; the principal 
or "golden gate" still remains nearly intact. The 
temple of Jupiter is now the "Duomo," and that of 
Aesculapius is a baptistery dedicated to St. John. 
Dioecletian's palace marks an era;— columnar 
was so combined with arched architecture, that the 
arches were at first made to rest upon the enta-
blature, and afterwards were even forced imme-
dlately to spring from the abacus, in violation of 
the law of statics which requires unimpaired and 
angular pillars under the arch; at length the enta-
blature itself took the form of an arch. (Müller, 
Ancient Art, § 193.) But although this archi-
tecture offends against the rules of good taste, yet 
these remains may serve to show how directly the 
barbarian and Christian architects borrowed from 
Roman models: many of the characteristic 
forms have been looked upon as the creation of their own 
imagination. (Comp. Hope, Architecture, vol. i. 
c. viii.; Freeman, Hist. of Architecture, p. 152.) 
a plan of the palace of Dioecletian, taken from Adams, 
will be found in Ferguson's Handbook of Architec-
ture, vol. i. p. 356, accompanied by an account 
of the general arrangements of the building. (B. J. 
SALPESA, a Roman municipium in Hispania 
Baetica, SE. of Hispalis, at the ruined Fucinocasus, 
between Uerero and Coronal. (Flores, Exp. Soer. 
x. p. 17; Mimos, Suppl. i. p. 44.) (T. H. D.) 
SALPINUM (E. Salpinu), an ancient city of 
Etruria, mentioned only by Livy (v. 31, 29), who 
indicates its site near the mouth of the river 
Volturno in their war against Rome in B.C. 388. 
It is clear from the manner in which they are here 
spoken of that they were an independent people, with a 
considerable territory and a fortified city; and the 
manner in which they are associated with the powerful 
Volscans would lead to the inference that they also 
must have had a poet of considerable note. Yet 
no subsequent mention of their name is found, 
and all trace of their existence disappears. Niebuhr 
conjectures that Salpinum occupied the site of the
SALAS.

modern Orvieto, the name of which is evidently a corruption of Urbe Vetus, the form used by Paulus Diaconus in the seventh century (P. Diaec. iv. 33): there is, therefore, little doubt that the site was one of the most ancient Etruscan cities; and its proximity to Volatini renders it probable enough that it may have been Salpinium. But no reliance can be placed upon any such conclusion. (Niebuhr, vol. ii. p. 493.) [E. H. B.]

SALAS or SALSA, a river of Campania, noticed by Pliny (vi. 35). Richard imagines that this is the same stream as that called by Marcian, Catraps (p. 31, ed. Hudson), and by Polyeuct, Araps or Catraps (vi. 8. § 4); and he identifies it with the modern Skir; but this seems very doubtful. [V.]

SALSULAE, in Gallia. Mela (ii. 5) describes the Salusulae Fonte as not sending forth fresh water, but water saltier than the sea. He places the Fonte south of the lake Rotrurus, and near the shore where Alexander the Great landed (Livy. xxxiv. 10). [Ruscino.]

SALSUM FLUMEN, a tributary of the Baetis in Hispania Baetica, between Attagua and Attagua. (Hirtius, B. a. c. 7, 8.) Variously identified with the Ebro and the Ebro. [T. H. D.]

SALUTARIS [SALVEI]. [Trog. i. 12.]

SALUTAS (Σαλουτας, Strab. iii. p. 144), according to Strabo a people of Spain celebrated for their woolen manufacture. But we must probably read in this passage Σαλουτας. [T. H. D.]

SALVIUS (Σαλβιος), a town, in the Celtiberi in Hispania Tarraconensis. (Hirtius, B. a. c. 447.) Variously identified with Logremus Levatius. [T. H. D.]

SALVIA (Σαλβια, Ptol. ii. 6. § 61), a town of the Basiti in Hispania Tarraconensis. (T. H. D.)

SALSYNGUS. [Trog. i. 12.]

SALUYNS (Σαλουινς), a town, in Bhaetia, on the river Athës, in the north of Tridentum, is mentioned only by Paulus Diaconus. (Hist. Lamp. iii. 11.) [R. B.]

SALUTARIS PERYGA. [Peryga, p. 625.]

SALVA (Σαλβα, a town in the north-eastern extremity of Lower Pannonia, on the right bank of the Danube. (Ptol. ii. 16. § 4; It. Ant. pp. 266, 267.) According to the Notitia Imperii, where it is called Solva, it contained a garrison of a body of horsemen; but this place cannot be Salviana, as there is no record of the name of this. [L. S.]

SALVES (Σαλβες), SALY, SALULY, or SALLY, of Liguria, a Ligurian people in Gallia. There are other varieties in the writing of the word. The early Greeks gave the name of Ligya to these Salyes; and their territory, which was in the possession of the Massaei, when Strabo wrote, was originally called Ligystia. (Strab. iv. p. 203.) The geographer means to say that the old Greeks were not acquainted with the name of Salyes, but only with the name of the nation to which they belonged. Livy (v. 34) speaks of the Phocaeans who founded Massilia being attacked by the Salyes, for in his time the name Salies was familiar to the Romans.

SALYES. Strabo speaks of the Salyes in his description of the Alps. He makes their country extend from Antipolis to Massilia, and even a little further. They occupied the hilly country which lies inland and some distance from the sea, the country which has been occupied in ancient times with the Greeks (iv. p. 203). They extended west as far as the Rhone. The Salyes had also the country north of Massilia as far as the Druentia (Duessan), a distance of 500 stadia: but on crossing the Druentia at Cabellio or Caballio (Cassio), a man would be in the country of the Cavares (Strab. iv. p. 195), who extended from the present country of the Sarra (Sarrai). (Cavara.) Strabo adds that the Salyes occupy both plains and the mountains above the plains. In this passage (Ostius de Salies ad Hecataeum) Grottey (Trans. Strab. vol. i. p. 318) has altered Salies into Hecataeum, and so he has spoiled the meaning. Uebert has defended the true reading, though he has not yet been able to say how the Salyes were conquered by the Boar. The Boar had the Salyes extending along their border and opposite to them on the other side of the river, the Cavares opposite to them (north of the Duro). When the Salyes were sometimes distinguished from the Ligures, as when Strabo (iv. p. 178) speaks of the coast which the Massaei possess and the Salyes as far as the Ligyes to the parts towards Italy and the river Varus, the boundary of the Narbonites (Provence) and Spain, and Italy. Livy also (xxv. 85) speaks of P. Cornelius Scipio sailing along the coast of Etruria and of the Ligures, and then the coast of the Salyes till he came to Massilia. This shows that the Ligurians of Gallia, or the country west of the Var, became known to the Romans by the name of Salyes. Strabo's remark that these Salyes, when the early Greeks named Liguries, were called Cit.Desc. (Strab. i. ed. II.), is an error. The Salyes of the Greek writers mean the Ligures of the district, and how Livy or his Epitomiser has called the Salyes both Ligurians ("Transalpinae Ligures," Epit. 47) and Galli (Epit. 60). They were a mixed race of Galli and Ligures.

The Salyes were a warlike people. They had both infantry and cavalry, distributed into ten tribes. They were the first of the Transalpine nations which the Romans subdued. (Florus, iii. 2.) The Romans fought for a long time with the Ligurians east of the Var, and with the Salyes west of it, for these people being in possession of the west coast closed against the Romans the way into Spain. They plundered both sea and land, and were so formidable that the road through their land was hardly safe for a large army. After eighty years of fighting the Romans with difficulty succeeded in getting a road of 12 stadia in width allowed for the free passage of those who went on the public service.

Livy (xxxi. 10) tells us that in the Second Punic War the Insubres, Celtibrians, and Boi stirred up the Salyes and other Ligurians to join them and to fight together under Hamilcar attacked Placentia. There is no ground, as Uebert remarks, to alter the reading "Salvis," for we see no reason why the Salyes as well as other Ligurians or mixed Ligurians should not aid the enemies of Rome. Both the Ligurians and the Cisalpine Galli dreaded the arms and the encroachment of the Romans. The alliance with
SAMAICA.

Massilia first brought the Romans into the country of the Salyes; and in B.C. 154 the Oxybii and Deceates, or Deciates, who were threatening Massilia, were defeated by the consul Q. Opimianus. The Salyes or Salluvii, with their capital at Cirta, were known by the historians, and the Deceates and Oxybii, who were certainly Lipurgians, may have been two smaller tribes included under the general name of Salyes or Salluvii. [DECiates; OxybII.]

The consul M. Fulvius Flaccus in B.C. 125 defeated the Salyes, and in B.C. 123 the consul C. Sexius Calvius conquered this people and founded Aquae Sextiae (Aes) in their territory.

Potency (ii. 10. § 15) enumerates Tarascon, Glanum, Arelateum (Arelate) Colonies, Aquae Sextiae Colonies, and Eragnium as the towns of the Salyes. Tarascon, Glanum (St. Remi), Arelate, and Eragnium (Eragnium) all lie west of Aquae Sextiae (Aes) and of Marsaille; and we may conclude that the county of the Salii is the eastern half of the tract between the Var and the Rhone, and between the Durance and the Mediterranean.

The tribes east of the Salyes, the Albiciti, Suetri, Nerusi, Oxybii, and Deciates, and there may be some others [COMMOni], were perhaps sometimes included under the name of the more powerful nation of the Salyes, but their characteristics, and the circumstances that appear to be strictly correct, when he makes the Salii extend along the coast to Antipolis. The coast immediately west of the Var belonged to the Deceates and Oxybii. Pliny says "Ligurium celebritissimi ultra Alpes, Salluvium, Deceates, Oxybii" (iii. 5); the three tribes of Transepan Ligures whose names occur in the history of the Roman conquests are nearly contemporary.

In Pliny's list of the Colonies in the interior of Narbonensis east of the Rhone there is "Aquae Sextiae Sallaviorum," and we may conclude that the head-quarters of the Salyes or Salluvii were in the plain country above Aes, and thence to Aries.

Owing to their proximity to the Greeks of Massilia they would be the first of the Ligures or the mixed Galli and Liguri, who felt the effect of Greek civilization, and there can be no doubt that their race was crossed by Greek blood. Possessing the town of Arelate, at the head of the delta of the Rhone, they would have in their hands the navigation of the lower part of the river. The history of this brave and unfortunate people is swallowed up in the blood-stained mazes of Rome, and the race of the Salyes was probably nearly exterminated by the consul Calvis selling them after his conquest.

SAMAICA (Samisice, Ptol. iii. 11. § 9), is described by Potency as a στρατιωτικ of Thrace, on the borders of Macedonia and the Aegean. [J. R.]

SAMACHONITIS LACUS (Σαμαχωνιτις Λίκος al. Σαμαχωνιτις), the name given by Josephus to the small lake of the Upper Jordan, called in Scripture the "waters of Merom," where Joshua routed the army of Jabin, king of Hazor, which city, according to Josephus, was situated above the lake. [Comp. Josh. xi. 5, 7, and Judg. iv. with Josephus, Ant. v. 5. § 1.] He elsewhere describes the lake as 60 stadia long and 60 broad, extending its marshy plains to the coast. Daphne, which Pliny, Reland, and others say is probably right in altering to Dian, i.e. Dan, as Josephus immediately identifies it with the temple of the Golden Calf. (Joseph. B. J. iv. § 1; Reland, Palaest., p. 263.) The name, which is not elsewhere found, has been variously derived, but the most probable etymology would connect it in sense with the Hebrew name Merom — aegae supereuropes, deriving the word from the Arabic "samac," aţūs fillū. (Reland, L c. p. 262.) It is singular that no other notices occur of this lake in sacred or in other writings. Its modern name is Bakar-el-Relak. Pococke writes: "Josephus says that the lake is not above 2 miles broad, except at the north end, where it may be about 4. The waters are muddy and esteemed unwholesome, having something of the nature of the water of a morass." [Observations on Palestine, vol. ii. p. 73.] Dr. Robinson estimated its length at about 2 hours, or from 4 to 5 geographical miles, its breadth being 1 mile; and adds that "it is probably not less than 4 miles." It had the appearance almost of a triangle, the northern part being far the broadest; "or rather the map gives to it in some degree the shape of a pear." [Bibl. Res. vol. iii. pp. 339, 340. Biblioth. Sacr. vol. i. p. 12; Stanley, Sinai and Palestine, p. 365, n. 1.) [G. W.]

SAMAMICUS (Σαμαμίκος).

SAMARA [Σαμαρα].

SAMARIA (Σαμαριτείς, LXX., Joseph.; χερσόνεσσα, Σαμαρία, Σαμαρία, Ptol.). The district has been already described in general, under Palaestina (p. 518), where also the notice of Josephus has been cited [p. 533]. It remains to add a few words concerning its extent, its special characteristics, and its political importance. 

[On the road from Nablus to Jerusalem, or the Acra, mentioned also by Pliny, it is difficult to be definite; but it certainly lay between Nablus and Jericho, and therefore probably east of the territory of Gophna and in the same parallel of latitude. (Eusebius, Onomast. a. e. 'Apoliβίς; Reland, Palaest. p. 192.) The northern boundary of Samaria is well defined by a continuous line of hills, which, commencing with Mount Carmel on the W., runs first in a SW. direction and then almost due E. to the valley of the Jordan, bounding the great plain of Esdraelon on the S. Its southern boundary is not so distinctly marked, but was probably conterminous with the northern limits of the tribe of Benjamin. It comprehended the tribe of Ephraim, and the half of Manasseh on this side Jordan, and if it extended beyond the Jordan a little way E. as Jordan, included also some part of Issachar, that skirted these two tribes on the E. Pliny (v. 13) reckons to Samaria the towns Nespolis, formerly called Mamortha, Sebaste, and Gamala, which last is certainly erroneous. [GAMALA.] Potency names Nespolis and Thena (Ophiis, v. 16. § 8), which last is evidently identical with Thamath (Sama) of the tribe of Joseph, mentioned by Eusebius (Onomast. a. e.), and still existing in a village named Thema, 10 miles E. of Nespolis, on the descent to the Jordan. St. Jerome notes that the most precious oil was produced in Samaria (in Hosios, cap. xii.), and its fertility is attested by Josephus. (G. W.)

SAMARIA, SEBASTE (Xercuria, John. iii. 24), the Hebrew Shechem, the capital city of the kingdom of Israel, and the royal residence from the time of Omri (c. x. c. 922), of whom it is said that "he bought the hill Samaria of Shemer for two talents of silver, and built on the hill, and called the name of the city which he built after the name of Shemer, owner of the hill, Samaria." (2 Kings iv. 1.) Mr. Stanley thinks

3 L 4
SAMARIA, SEBASTE.

The village occupies only the eastern extremity of the hill, and stands at the height of about 926 feet above the sea. Its most conspicuous building is the ruined church of St. John, overlooking the brow of the eastern declivity: at the further extremity of the hill, are the remains of an ancient gateway, and near it stand 60 columns as sites, the commencement apparently of a colonnade which extended the whole length of the hill, for at some distance eastward 20 more still stand, and others, whole or in fragments, lie scattered over the whole hill, while the remains of the buildings have raised the surrounding valleys, remarkably fulfilling the prophecy of Micah (i. 6):

"I will make Samaria as an heap of the field, as plantings of a vineyard; and I will pour down the stones thereof into the valley, and I will discover the foundations thereof."

At about half its height the hill is girt about by a great wall, belt of larval granite, while similar terraces, not so well defined, may be traced above and below, which is thought may have once served as the streets of the city. (Ritter, Erdkunde Palastina, iii. pp. 661-666.) Coins of the city are quoted by Vaillant, Niris, Eckhel, and others, chiefly of the earlier emperors. (G. W. B.)

SAMBROCA.

The village occupies only the eastern extremity of the hill, and stands at the height of about 926 feet above the sea. Its most conspicuous building is the ruined church of St. John, overlooking the brow of the eastern declivity: at the further extremity of the hill, are the remains of an ancient gateway, and near it stand 60 columns as sites, the commencement apparently of a colonnade which extended the whole length of the hill, for at some distance eastward 20 more still stand, and others, whole or in fragments, lie scattered over the whole hill, while the remains of the buildings have raised the surrounding valleys, remarkably fulfilling the prophecy of Micah (i. 6):

"I will make Samaria as an heap of the field, as plantings of a vineyard; and I will pour down the stones thereof into the valley, and I will discover the foundations thereof."

At about half its height the hill is girt about by a great wall, belt of larval granite, while similar terraces, not so well defined, may be traced above and below, which is thought may have once served as the streets of the city. (Ritter, Erdkunde Palastina, iii. pp. 661-666.) Coins of the city are quoted by Vaillant, Niris, Eckhel, and others, chiefly of the earlier emperors. (G. W. B.)

The town was surrounded with a 20 stadia in length: in the middle of the town was a temple built in honour of Caesar, itself of large dimensions, and standing in a space of about one stadium square. It was colonised with 6000 veterans and others, to whom was assigned an extremely fertile district around the city. (B. J. i. 21. § 2.)

Dr. Robinson imagines that it was in this city that Philip first preached the Gospel, and that the church was founded by the apostles St. Peter and St. John (Acts, viii. 5, &c.); but considering the absence of the article in the original, supplied in the English translation, and oath writer the passage with the identical expression in St. John (iv. 5), it is more probable that the same town is intended, viz. Sychar, or Neapolis, the chief seat of the Samaritan worship. Nor does the expression in Acts (viii. 14), that "Samaria had received the word of God," militate against this view; for here also the context so strongly indicates it as well understood by the writer as remarked by Dr. Robinson that "it is sometimes difficult to distinguish whether, under the name Samaria, the city or the region is meant." (Bibl. Res. iii. p. 146.)

It is most probable, however, that the sacred writers would have used the classical name then in vogue had they had occasion to mention the city. Sabatius became from thereon with the beginning of the third century (Ulpian, quoted by Robinson, l. c. p. 148, n. 1), and it was probably at that time an episcopal see; for its bishop, Marius or Marinus, was present at the Council of Nicæa and subscribed its acts. (Le Quien, Oriens Christianus, vol. iii. col. 549—558.)

The tradition which assigns Sebaste as the place of St. John Baptism's withdrawal and martyrdom is first found in St. Jerome (Comment in Osee, i. 5), who also places there the tombs of Obadiah and Eliaha (Comment in Ab-"dian, i. 1, Episth. Paulus, c. 6), and militates against Josephus, whose statement, however, is inadmissible. (Machærub.)

The modern village which represents in its name and site the magnificent chieft, described and the present church is St. John the Baptist, 6 miles N. of Nablus, reckoned by Josephus a day's journey from Jerusalem. (Ant. xv. 11.)

SAMBROCA.

(Δαμβρόκα, Psalter. P. 6. § 20), a river of Hispania Tarraconensis, which entered the sea below the Pyrenees (Hieron. et Alba, p. i. p. 399) takes it to be the same river called Alba by Pliny (iii. 3. s. 4); the modern Ter. [T. H. D.]
SAMBULOS. [BAGISTANUS MONS.]

SAMBUS (Σάμβους), a small river which forms one of the tributaries of the Jumna. It is mentioned by Arrian in his list of Indian rivers (Inst. c. 4.).

SAMAIE or SAMOS (Σαμαῖος) or ETH. Σαμαῖος = Σαμοῦ, the most ancient city in Cephalenia, which is also the name of this island in the poems of Homer. [CEPHALLENIA.]

The city stood upon the eastern coast, and upon the channel separating Cephalenia and Rhaca. (Strab. x. p. 455.) Along with the other Cephalenean towns it joined the Athenian alliance in B.C. 431. (Thuc. ii. 30.) When M. Fulvius passed over into Cephalenia in B.C. 189, Samos at first submitted to the Romans along with the other towns of the island; but it shortly afterwards revolted, and was not taken till after a siege of four months, when all the inhabitants were sold as slaves. (Liv. xxxvii. 28, 29.) It appears from Livy's narrative that Samos had two citadels, of which the smaller was called Cytais; the larger he designates simply as the major arx. In the time of Strabo there existed only a few vestiges of the ancient city. (Strab. l.c.; comp. Plin. iv. 12. s. 19.)

Same has given its name to the modern town of Samaio, which was the site of the ancient city. It is 1400 feet above the present position and the remains of the ancient city are described by Leake. It stood at the northern extremity of a wide valley, which borders the bay, and which is overlooked to the southward by the lofty summit of Mount Aeneus ('Elato). It was built upon the north-western face of a precipitous height, which rises from the shore at the northern end of the modern town. The ruins and vestiges of the ancient walls show that the city occupied the two summits, an intermediate hollow, and their slope as far as the sea." On the northern of the two summits are the ruins of an acropolis, which seems to have been the major arx mentioned by Livy. On the southern height there is a monastery, on one side of which are some remains of a Halieon wall, and which seems to be the site of the Cytais, or smaller citadel. There are considerable remains of the town walls. The whole circuit of the city was barely two miles. (Leake, Northern Greece, vol. iii. p. 55.)

A Coin of Same.

SAM'IIA. [SAMICUM.]

SAMICUM (Σαμίκου) or ETH. Σαμίκου, a town of Triphylia in Elis, situated near the coast about half-way between the mouths of the Alpheius and the Neda, and a little north of the Anigrus. It stood upon a projecting spur of a lofty mountain, which here approaches so near the coast as to leave only a narrow pass. From its situation commanding this pass, it is probable that a city existed here from the earliest times; and it was therefore identified with the Arene of Homer (II. ii. 591, x. 723), which the poet places near the mouth of the Minyeus, a river supposed to be the same as the Anigrus (Ἀγάρης.) According to Strabo the city was originally called Samos (Σαμοῦ), from its being situated upon a hill, because this word formerly signified "heights." Samian was at first the name of the fortress, and the same name was also given to the surrounding plain. (Strab. viii. pp. 346, 347; Paus. v. 5. § 3.) Pausanias speaks (v. 6. § 1) of a city called Σαμοῦ (Samos), which he apparently distinguishes from Samia; but Samian is the only place mentioned in history. [See some remarks under MACISTUS.] Samia was occupied by the Aetolian Polyperchon against the Arcadians, and was taken by Philip, B.C. 219. (Paus. v. 6. § 1; Polyb. iv. 77, 80.) The ruins of Samia are found at Χεὶβα (Xeibae, written Χείβαια), which is only the name of the guarded pass. The walls of the town are 6 feet thick, and about 1/2 mile in circumference. They are of the second order of Hellenic masonry, and are evidently of great antiquity. The towers towards the sea belong to a later age.

Near Samia upon the coast was a celebrated temple of the Samian Poseidon, surrounded by a grove of wild olive trees, and dedicated to Poseidon Anigrus; for the latter name we ought to read Alpheus and not Anigrus, as some editors have done.

In the neighbourhood of Samia there were celebrated medicinal springs, which were said to cure cutaneous diseases. Of the two lagoons which now stretch along the coast, the larger, which extends as far as the mouth of the Alpheius, begins at the northern foot of the hill upon which Samia stands; the southern extends along the precipitous sides of the hill, which were called in antiquity the Achaean rocks. (Strab. viii. p. 347.) The river Anigrus flows into the latter of those lagoons, and from thence flows out into the sea. The lagoon is deep, being fed with subterraneous sources; in summer it is said to be very fetid, and the water extremely unhomely. Strabo relates that the waters of the lake were fetid, and its fish not eatable, which he attributes to the Centaurs washing their wounds in the Anigrus. Pausanias mentions the same circumstances; and both writers describe the efficacy of the water in curing cutaneous diseases. There were sacred to the Anigrus three caves, called the Anigrides (Ἀγάριδες, Paus.; Ἀγαρίδες, Strab.), and the other to the Atlantides: the former was the more important, and is alone mentioned by Pausanias. It was in the cave of the Anigrides that the persons who were going to use the waters first offered up their prayers to the Nymphs. (Strab. viii. p. 346, seq.) Two of these caves are still visible in the rocks; but they are now accessible only by a boat, as they are immediately above the surface of the lake. General Gordon, who visited these caverns in 1835, found in one of them water distilling from the rock, and bringing with it a pure yellow sulphur. (Leake, Morea, vol. i. p. 54, seq.; Peloponnesiana, p. 108; Boblaya, Recercheres, f6c., p. 135, seq.; Curtius, Peloponnesias, vol. ii. p. 78, seq.)

SAMINTHUS (Σαμίνθου), a town in the Argeis, on the western edge of the Argeis plain, which was taken by Agis, when he marched from Phlius into the territory of Argos in B.C. 418. (Thuc. v. 58.) Its position is uncertain. Leake, who supposes Agis to have marched over Mt. Lyceum and the adjoining hills, places it at Κύαναπεδία (Morea,
of the southern side of Mt. Tricarmon, across which is the shortest pass from the Philia into the Argive plain. (Pelaion, p. 27.)

SAMMONIUM. [SAMMONIUM.]

SAMMONIUM (S Samonnium, Pol., Strat. ; Eta. Sammonia, pl. Samonites, Samoni, Pol., Strat., etc.; Samsonis, Pol.) was the principal province or districts of Central Italy. The name was sometimes used in a more extensive, sometimes in a more restricted, sense, the Samnites being a numerous and powerful people, who consisted of several distinct tribes, while they had founded other tribes in their immediate neighbourhood, who were sometimes included under the same appellation, though they did not properly form a part of the nation. But Samnium proper, according to the more usual sense of the name (exclusive of the Frontani, but including the Irpinii), was a wholly inland district, bounded on the N. by the Marsi, Peligni, and Frontani, on the E. by Apulia, on the S. by Lucania, and on the SW. and W. by Campania and Latium.

I. General Description.

The territory thus limited was almost wholly mountainous, being filled up by the great mountain masses and ramifications of the Apennines, which in this part of their course have lost even more than elsewhere the character of a regular chain or range, and consist of irregular and broken masses, the configuration of which is not very easy to understand. But as the whole topography of Samnium depends upon the formation and arrangement of these mountain groups, it will be necessary to examine them somewhat in detail.

1. In the northern part of the district, adjoining the Marsi and Peligni, was a broken and irregular mass of a part of the sources of the Sagrum (Sarno), and extending on both sides of the valley of that river, as far as the frontiers of the Frontani. This was the land of the Caraceni, the most northerly of the Samnite tribes, whose chief city was Auscula, in the valley of the Sagrum, about 5 miles above Castel di Sarno, now the chief town of the northernmost district resembling the mountainous character, but of inferior elevation as well as extent.

It formed, together with the adjacent part of the land of the Caundini, apparently one of the smallest of the Samnite tribes, and the central part of the Casane Forni was situated at this point. Closely connected with Mount Taburnus, it was a manner dependent on it, though separated from it by the narrow valley of the Iscora, a pass which extends from Arpino to near Capua, Sarno is of very inferior elevation, but rises high and steeply from the plain of Campania, of which it forms the natural boundary. The Casane ridges nearest to Capua is the Monti Istrici, celebrated in the campaigns of Hannibal, and afterwards among the mountains which were the last to be opened up from Capua, about 20 miles long.

6. At the eastern foot of Mount Taburnus, situated Beneventum, the chief town of the Benevent, and which, from its peculiar position, was a northern key of the whole district inhabited by the Benevent. It stood in a plain or broad valley, by the junction of the Calore with its tributaries, Salentia and Seminus, so that communication was opened up from Beneventum by two routes, one by the broad valley into the interior of the Benevent. Beneventum itself is not only the most considerable of the tributaries of the Volturnus, but at the point of its junction with that river, about 20 miles long.
SAMNIUM.

Beneventum, is little if at all inferior to it in magni-
tude and volume of waters. The Calor itself rises
in the lofty group of mountains between S. Angelo
dei Lombardi and Eobi. This group, which is
sometimes designated as Monte Iripino, and is the
most elevated in this part of the Apennines, sends
down its waters to the W. in the Calor and its tribu-
tary the Sabatus; while on the E. it gives rise to the
Auufius, which flows into the Adriatic sea, after
traversing more than two-thirds of the breadth
of Italy; and on the S. the Silarus flows by a much
shorter course into the Gulf of Salerno. From this
point, which forms a kind of knot in the main chain
of the Apennines, the mountains sweep round in a
semicircle to the sea and the Adriatic.

7. From the Monte Iripino towards the E. the
whole of the upper valley of the Auufius was
included in Samnium, though the lower part of its
course lay through Apulia. The exact limit cannot
be fixed,—the confines of the Hirpini towards Apulia
on the one side, and Lucania on the other, being,
like the boundaries of Samnium in general, almost
wholly marked by nature, and not accurately defined.
It may be considered, indeed, that in general
the mountain country belonged to Samnium, and the
lower falls or hills to Apulia; but it is evident that
such a distinction is itself often arbitrary and un-
certain. In like manner, the rugged mountain chain
which extends along the right bank of the Auufius
appertains to the E. and not to Apulia; but the line
of demarcation between this and Lucania cannot
be determined with accuracy. On the other hand,
the detached volcanic mass of Mons Vultur, with
the adjacent city of Venusia, was certainly not con-
sidered to belong to Samnium.

II. HISTORY.

All ancient writers agree in representing the
Samnites as a people of Sabine origin, and not the
earliest occupants of the country they inhabited when
they first appear in history, but as having migrated
thither at a comparatively late period. (Varro. l. l.
vii. 29; Appian, Samn., Fr. 4, 5; Strab. v. p. 250;
Gest. a. c. Samnites, p. 320; A. Ger. xi. 1.) This
accord of their origin is strongly confirmed by the
evidence of their name; the Greek form of which,
Samniva, evidently contains the same root as that
of Sabini (Sasu-nitae or Suf-nitae, and Sabini or
Suf-ini); and there is reason to believe that they
themselves used a name still more closely identical.
For the Greek form "Samnivn," found on some of
the denarii struck by the Italian allies during the
Social War, cannot refer to the Sabines, nay not so
called, as that people was long before incorporated
with the Romans, and is, in all probability, the Greek
name of the Samnites. (Mommsen, Unter Ital.
Dialekt., p. 293; Friedländer, Oekische Minzn,
p. 78.) The adjective form Sabellus was also used
indifferently by the Romans as applied to the Sa-
blia, or Sabellia, as the Samnites were called.

The Samnite emigration was, according to Strabo
(v. p. 250), one of those sent forth in pursuance of
a vow, or what was called a "ver sacrum." It was,
as usual, under the special protection of Mars, and
was supposed to have been guided by a bull. (Strab.
l. c.) It is probable from this statement that the
emigrants could not have been numerous, and that
they established themselves in Samnium rather as
conquerors than settlers. The previously existing
population was apparently Ocean. Siganto tells us
that they disembarked in the land of the
Oceanis (l. c.); and this explains the circumstance
that throughout the Samnite territory the language
spoken was Ocean. (Liv. x. 20.) But the Oceans
themselves were undoubtedly a cognate tribe with
the Sabines (Italia); and whatever may have been
the circumstances of the conquest concerning
which we have no information, it seems certain
that at an early period this part of the peninsula
had completely coalesced into one people
under the name of the Samnites.

The period at which the first emigration of the
Samnites took place is wholly unknown; but it is
probable that they had not been long in possession
of their mountainous and inland abodes before they
began to feel the necessity of extending their sub-
mission over the more fertile regions that surrounded
them. Their first movements for this purpose were
probably those by which they occupied the hilly but
fertile tract of the Frenntani on the shores of the
Adriatic, and the land of the Hirpini on the S. Both
these nations are generally admitted to be of
Samnite origin. The Frenntani, indeed, were some-
times reckoned to belong to Sabellia, and it seems
though they appear to have had no political union
with them (Frenntani): the Hirpini, on the contrary,
were generally regarded as one of the compo-
nent parts of the Samnite nation; but they appear to
have been originally a separate colony, and the story
told by Strabo and others of their deriving their
name from that of a tribe that had been the leader,
evidently points to their having been the result of a
separate and subsequent migration. (Strab. v. p.
250; Serv. ad Aen. xi. 785.) The period of this
is, however, as uncertain as that of the first settle-
ment of the other Samnites: it is not till they began
to spread themselves still farther both towards the
S. and W., and press upon their neighbours in Lu-
cania and Campania, that the light of history begins
to dawn upon their movements. Even then their
chronology is not clearly fixed; but the conquest
and occupation of Campania may be placed from
about B.C. 440 to B.C. 430, and was certainly
completed by the last of these dates. (Campania.)

That of Lucania must probably be placed somewhat
later; but whatever was the cause which at this
time urged the movements of the Sabellian
tribes towards the S., they seem to have continued
steadily in operation; and within less than half a
century (B.C. 410—360) the Samnites spread
themselves through the whole of Lucania, and
almost to the southern extremity of Italy. (Lu-
cania.) The subsequent fortunes of the con-
quering race, and their contests with the cities of
Magna Graecia, do not belong to our present
subject, for the Lucanians seem to have early broken
off all political connection with their parent
nation, the Samnites, just as the latter had done with
their Sabine ancestors. This laxity in their political
ties, and want of a common bond of union, seems to
have been in great measure the source of the internal
rivalries, and was one of the causes which undoubtedly
paved the way for their final subjection under the
Roman yoke. But the Samnites seem to have re-
tained possessions, down to a much later period,
the tract of country from the Silarus to the Sarnus, which was subsequently occupied by the Picentes. (Seylac. p. 3. § 11; Niebuhr, vol. i. p. 94.) They certainly were still in possession of this district in the Second Samnite War; and it is probable that it was among the first to come into conflict with Rome that it was wrested from them, when the Romans transplanted thither a colony of Picentines, and thus finally cut off the Samnites from the sea.

On the side of Apulia the progress of the Samnites was less definite; and it does not appear that they established themselves in the permanent possession of any of the territory between the two streams. It was certainly pressing hard upon its frontier cities; and it was probably the sense of this and the fear of the Samnite arms that induced the Apulians early to court the alliance of Rome. [Apulia.]

The Samnite nation, when it first appears in Roman history, seems to have consisted of four different tribes or cantons. Of these the Frentani and the Hauptv were the most powerful; so much so indeed that it is difficult to understand how such petty tribes as the Caraceni and Caudini could rank on terms of equality with them. The Frentani are frequently considered as forming a fifth canton; but though that people was certainly of Samnite race, and must have been regarded by Seylac as forming the integral part of the Samnite people, the nation, as he describes the Samnites as occupying a considerable part of the coast of the Adriatic (Peripl. p. 5. § 15), they seem to have already ceased to form a part of their political body at the time when they first came into contact with Rome. [Frentani.]

We have no account of the nature and character of the cantons of that country; though they were perfectly different tribes. It seems to have been a mere federal league, the bounds of which were drawn closer together in time of war, when a supreme general or commander-in-chief was chosen to preside over the forces of the whole confederacy, with the title of Embratur, the Sabellian form corresponding to the Latin Imperator. (Liv. ix. 1; Niebuhr, vol. i. p. 107.) It is probable that the Samnites, who were already masters of Asculum and the upper valley of the Vulturnus, were at this time pushing forward their arms down the course of that valley, and across the mountain country from thence to the Liris, then occupied by the Volsciens, Aurunca, and other tribes, of Ascanian or Ocean origin. It was not long before the onward movements brought them into collision with the Romans, notwithstanding their recent alliance. Among the minor tribes in this part of Italy were the Sidicini, who, though situated on the very borders of Campania, had hitherto preserved their independence, and were not included in the Campanian people [Sidicini]. This petty people having been assailed by the Samnites, upon what cause or pretext we know not, and finding themselves unable to cope with such powerful neighbours, invoked the assistance of the Campanians.

The latter, notwithstanding their connection with the Samnites, readily espoused the cause of the Sidicini, but it was only to bring the danger upon their own heads; for the Samnites now turned their arms against the Campanians, and after occupying with a strong force the ridge of Mount Tifata, which immediately overlooks Capua, they descended into the plains, defeated the Campanians in a pitched battle at the very gates of Capua, and also burned the walls of the town (Liv. vii. 29). In this extremity the Campanians in their turn applied for assistance to Rome, and the senate, after some hesitation on account of their recent alliance with the Samnites, granted it (ib. 30, 31). Thus began the First Samnite War (B. C. 345), the commencement of that long struggle which was eventually to decide whether the supremacy of Italy was to rest with the Romans or the Samnites.

This first contest was, however, of short duration. In the first campaign the two consuls M. Valerius Corvus and A. Cornelius Cossus gained two decisive victories; the one at the foot of Mount Gaurus, the other near Saticula. The first of these, as Niebuhr observes (vol. iii. p. 119), was of especial importance; for it was the first trial of arms between the two great nations, and might be taken as a sort of omen of the ultimate issue of the contest. A third battle near Sessa sola, where the remains of the army that had been defeated at Mount Gaurus, after having been reinforced, again attacked Valerius, terminated in an equally decisive victory of the Romans; and from that time the war was conducted on both sides either by the Samnites (Liv. viii. 32—38; Fast. Capit.). The next year the military operations of the Romans were checked by a mutiny of their own army, of which the commons at Rome took advantage; and the city was divided by dissensions. These causes, as well as the increasing dissatisfaction of the Latins, naturally disposed the Romans to peace, and a treaty was concluded with the Samnites in the following year, B. C. 344. The account which represents that people as humiliated and suing for peace, is sufficiently refuted by the fact that the Romans abandoned the Sidicini to their fate, and left the Samnites free to carry out their aggressive designs against that unfortunate people (Liv. viii. 1, 2).

The war which terminated the First Samnite War renewed the alliance previously existing between the Romans and the Samnites. In consequence of this the latter took part in the great war with the Latins and Campanians, which almost immediately followed, not as the enemies, but as the allies, of Rome: and the Roman armies were thus enabled to reach Campania by the circuits route through the country of the Samnites and the Cilurci, and the valley of the Vulturnus (Liv. viii. 6). During the fifteen years that followed, down to the renewal of the contest between Rome and Samnium, the course of events was almost uniformly favourable to the former power. The successful termination of the war with the Latins and Campanians, and the consolidation of the Roman power on that side, had added greatly to the strength of the republic; and the latter had followed up this advantage by the reduction of several of the smaller independent tribes in the same neighbourhood—the Aussones, Sidicini, and the Frisernates, who appear on this occasion as independent of, and separate from, the
other Volscians [PRIVERNVM]. But the power of the Volscians seems to have been by this time very much broken up; and it was apparently during this interval that the Samnites had thus the opportunity for successful hostilities against that people, and wrested from them or destroyed the cities of Sorra and Fregelias in the valley of the Liris, while they threatened Fabrateria with the same fate (Liv. viii. 19, 23, x. 1). This movement, however, gave umbrage to the Romans, while the Samnites on their side resented the assertion of the power of the Sidicini, and it was evident that a fresh rupture between the two nations could not be long delayed (Id. viii. 17, 19). The attention of the Samnites was, however, drawn off for a time by the danger that threatened them from another quarter, and they joined with their kinmen the Lucanians to oppose the arms of Alexander, king of Epirus, who was advancing from Paestum into the heart of the country. Both Samnites and Lucanians were defeated by him in a pitched battle; but he subsequently turned his arms towards the south, and his death in B. C. 326 relieved the Samnites from all apprehension in that quarter. (Liv. vii. 17, 24.)

The same year (B. C. 326) witnessed the outbreak of the war with the Greeks. The occasion of this was the assistance furnished by the Samnites to the Greek cities of Paleopolis and Neapolis, against which the Romans had declared war, when the Samnites no longer (who were at this time in alliance with Samnium) threw into their cities a strong body of auxiliaries as a garrison. They did not assume the character of a war, but all the Greek cities took refuge in Paleopolis or Neapolis; for Paleopolis escaped a similar fate, only by expelling the alliance of Rome, to which it ever after steadily adhered (Liv. viii. 22—86). The Romans had about the same time secured a more important alliance in another quarter; the Lucanians and Apulians, with whom, as Livy remarks, the republic had previously had no relations, either friendly or hostile, now concluded an alliance with Rome (ib. 25). The Lucanians indeed were soon persuaded by the Tarentines to abandon it again (ib. 27), but the Apulians continued steadfast; and though it is evident that the whole nation was not united, and that many of the chief towns took part with the Samnites, while others continued to side with Rome, yet such a division between them, and the disparity of numbers, was so great, that it was impossible for the Romans to do otherwise than maintain a regular war. Hence throughout the war we find the contest divided into two portions, the Romans on the one side being engaged with the Samnites on the frontiers of Campania, and in the valley of the Vulturnus, from whence they gradually pushed on into the heart of Samnium; and on the other carrying on the war in Apulia, in support of their allies in that country, and against the hostile cities supported by the Samnites.

It is evident that the Frentani must have at this time already separated themselves from the Samnite alliance, otherwise it would have been impossible for the Romans to march their armies, as we find them repeatedly doing, along the coast of the Adriatic into Apulia. (Liv. ix. 2, 13.)

The opening operations of the war were unimportant; the Romans conquered some small towns in the valley of the Vulturnus (Liv. vii. 25); and we are told that Q. Fabius and L. Papirius gained repeated victories over the Samnites, so that they even sued for peace, but obtained only a truce for a year, and, without observing even this, resumed the contest with increased forces. (ib. 30, 36, 57.) It is evident therefore that no real impression had been made upon their power. Nor did the victory of A. Cornelius Arvina in the following year (B. C. 322), though it again induced them to sue for peace without success, produce any permanent effect; for the very next year (B. C. 321) the Samnites under the command of C. Pontius were not only able to take the field with a large army, but inflicted on the Romans one of the severest blows they had ever sustained in the celebrated pass of the Caudine Forks. [CAUDIUM.] There can be little doubt that the circumstances and the latter results of this battle are greatly disguised in the accounts transmitted to us; but, whatever may have been its true nature, it is certain that it caused no material interruption of the Roman arms, and that, after repudiating the treaty or capitulation concluded by the consuls, the Romans renewed the contest with undiminished vigour. It is impossible here to follow in detail the operations of the succeeding campaigns, which continued for seventeen years with many fluctuations of fortune. The disaster at Caudium shook the faith of many of the Roman allies, and was followed by the defection even of their own colonies of Satricum, Fregelias, and Sorra. Some years later (B. C. 315) the capture of Sactula by the Romans and of Platisela by the Samnites showed that both armies were still engaged on the very frontiers of Samnium; while the advance of the Samnites to the pass of Lautulias, and the victory which they there a second time obtained over the Romans (Liv. ix. 32, 23; Diocr. xix. 73), once more gave a shock to the power of the latter, and for a moment endangered their existence in Campania. But the Romans speedily recovered the advantage, and the victory gained by them at a place called Citna (of uncertain site) decided the submission of the revolted Campanians. (Liv. ix. 7; Diocr. xix. 76.) Their arms had meanwhile been successful in Apulia, and had ultimately effected the reduction of the whole province, so that in B. C. 316 the consul Q. Aemilius Barbula was able to carry the war into Campania, where he took the town of Nerusin. (Liv. ix. 20.) The decisive victory of the consuls of B. C. 314 had also for the first time opened the way into the heart of Samnium, and they laid siege to Boventum, the capital of the Pentri. The next year was marked by the fall of Noia, followed by that of Alina and Capua. (C. 313.) It was evident that the war was at length drawing to a close in favour of the Romans, when the outbreak of a fresh war with the Etruscans in B. C. 311 divided the attention of that people, and, by occupying a large part of their forces in another quarter, operated a powerful diversion in favour of the Samnites. To these additional enemies were added the Liths and Paeligni; yet the Romans not only made head against all these nations, but at the same time carried their victorious arms into the heart of Samnium. Boventum, the capital city of the Pentri, was twice taken and plundered, once in 311 by C. Junius, and again in 306 by T. Minucius. At the same time Sorra and Arpinum were finally added to the Roman dominion. These successive defeats at length compelled the Samnites to sue for peace, which was granted them in B. C. 304; but on what terms is very uncertain. It seems impossible to believe that the Romans, as asserted by Livy, should have restored them their ancient treaty of alliance, and it is probable that in some form consented to acknowledge the supremacy of Rome. (Liv. x. 45; Dionys. Hell. p. 2331; Nieshr, vol. iii. p. 259.)
the tract of country from the Silarus to the Sarnus, which was subsequently occupied by the Picentini. (Scula, p. 3. § 11; Niebuhr, vol. i. p. 94.) They certainly were still in possession of this district in the Second Samnite War; and it is probable that it was not till the close of their long struggles with Rome that it was wrested from them, when the Romans transplanted thither a colony of Picentines, and thus finally cut off the Sammites from the sea. On the side of Apulia the progress of the Sammites was less definite, and it does not appear that they established themselves in the permanent possession of any part of that country, though they were certainly pressing hard upon its frontier cities it was probably the sense of this and the threat of the Samnite arms that induced the Apulians to court the alliance of Rome. (Apul.)

The Samnite nation, when it first came into Roman history, seems to have consisted of several tribes or cantons. Of these the Hirpinus were the most powerful. So indeed it is difficult to understand why, as the petty tribes as the Caraceni rank on terms of equality with the Hirpinus, they are frequently considered as one canton; but though they were of the same race, and must be described as of the same language and of the same name, as he describes Hirpinus, he says he does not consider them as a subordinate part of the Hirpinus. (Scula, p. 5. § 15.)

We have no account of the political condition of the Samnian cantons in the time of the First Punic War. (Liv. x. 15. 17.) But we learn from the First Punic War that the Samnii, with the united forces of the Gauls and forces of the Carthaginians, were defeated and the Samnites were again driven into the mountains. (Liv. x. 27—30.)

We learn from the First Punic War that the Samnites were conquered by the Roman consul Embattled the fort of the war. (Gellius Latin.)

We learn from the First Punic War that the Samnites were conquered by the Roman consul Embattled the fort of the war. (Gellius Latin.)

The Samnites were defeated twice by the Roman consul Curius Dentatus, the second time in the battle of Cannae (n. c. 269), and the other at Asculum, in the battle of Volumnus (n. c. 262). All these years afterwar, the state was thus held aloof; but the statement of the Romans is not supported by the battle of Cannae (n. c. 216), in which the first to declare themselves was Hannibal, and their example was followed by the Sicilians (Liv. xxii. 61.)

It is singular that the most powerful and warlike of the Carthaginians through a great part of the war had been supported by the hands of the Carthaginians; and this was not the case with the Roman generals, as a post of the smallest importance. In n. c. 214 and again it
SAMNIIUM. 395

The battle of Sacriportus, alleging that they were the enemies of the Roman name; and he now followed this declaration by a systematic devastation which was carried on with the utmost energy of the whole nation. (Strab. l.c.)

We learn from Strabo that he fully carried out his intentions: the province was devastated, many cities being set on fire, and villages, while others were spared. (Strab. l.c.)

The province was in a state of complete desolation. The rhetoric of Strabo points to its being in his time a state of almost complete desolation.

Some attempts seem indeed to have been made under the Roman Empire to recruit the population with fresh colonists, especially by the founding of colonies at Saspinum, Tellasia, and Asserena (Lib. Colon. pp. 259, 260, &c.); but these were not attended to any great prosperity, and the whole region seems to have been very thinly populated and given up chiefly to pasturage. Beneventum alone retained its importance, and continued to be a flourishing city throughout the Roman Empire. In the division of Italy under Augustus the land of the Hirpini was separated from the rest of Samnium, and was placed in the Second Region with Apulia and Calabria, while the rest of the Samnites were included in the Fourth Region, together with the Sabines, Frentani, Peligni, &c. (Plin. iii. 11. s. 16, 12. a. 17.) At a later period this district was broken up, and Samnium and the Frentani were divided. The land of the Frentani constituted a separate province. This is the arrangement which we find in the Notitia; and it was probably introduced at an earlier period, as the Liber Coloniarum in one part gives Beneventum as a separate head of the "Civitates Regionis Samnii," including under that name the towns of the Peligni, as well as the Frentani. (Notitia Dign. ii. pp. 9, 10; Lib. Colon. p. 259.) In another part of the same document, which is undoubtedly derived from different sources, the Samnite towns are classed together under the head of Campania; but this union, if it ever really subsisted, could have been but of very brief duration. The "Provincia Samnii" is repeatedly mentioned in inscriptions of the 4th century, and was governed by an officer styled "Præses." (Mommsen, Die Lib. Col. p. 206.) The same appellation continued in use after the fall of the Roman Empire, and the name of Samnium as a separate province is found both in Cassiodorus and Paulus Diaconus. (Cassiod. Var. xi. 56; P. Diacon. Hist. Lang. ii. 20.) The only towns in it that retained any consideration in the time of the last writer were Aufidii, Asserena, and Beneventum. The last of these cities became under the Lombards the capital of an independent and powerful duchy, which long survived the fall of the Lombard kingdom in the N. of Italy. But in the revolutions of the middle ages all trace of the name and ancient limits of Samnium was lost. At the present day the language of Samnium is indeed given to a province of the kingdom of Naples; but this is merely an official designation, recently restored, to the district, which had previously been called the Contado di Molise. This and the adjoining province of the Principepato Ulrico comprise the greater part of the ancient Samnium; but the modern boundaries have no reference to the ancient divisions, and a considerable portion
But the peace thus concluded was of short duration. Little more than five years elapsed between the close of the Second Samnite War and the commencement of the Third. It might well have been thought that, after a struggle of more than twenty years' duration, the resources of the Samnites, if not their spirit, would have been exhausted; but they seem to have been actively engaged, even before the actual outbreak of hostilities, in organizing a fresh coalition against Rome. A new and formidable auxiliary had appeared in a large body of Gauls, which had recently crossed the Alps, and, uniting with their countrymen the Senones, threatened the Romans from the N. Rome was at this time engaged in war with the Etruscans and Umbrians, and, for a time, the Gauls attempted to secure the battle of the Gauls. Meanwhile the Samnites, desiring the attention of the Romans sufficiently engaged elsewhere, attacked their neighbours the Lucanians, probably with the view of restoring the power in that country of the party favourable to the Samnite alliance. The opposite party, however, called in the Roman allies, and the Romans, where a declared war against the Samnites, and thus began the Third Samnite War, n. c. 298. (Liv. x. 11.) The contest had now assumed larger dimensions; the Samnites concluded a league with the Etruscans, Umbrians, and Gauls, and for several successive campaigns the operations in Samnium were subordinate to the main effort for the British. But the territory of Samnium itself was at the same time ravaged by the Roman generals in so systematic a manner, that it is clear they had obtained a decided superiority in the field; and though the Samnites on one occasion retaliated by laying waste the Campian and Falernian plains, they were soon again driven back to their mountain fastnesses. (Liv. x. 15, 17, 20.) At the Battle of Sentinum, in n. c. 295, the united forces of the Gauls and Samnites were totally defeated by the Roman consul Q. Fabius, decided the fortune of the war. Gellius Egatius, the Samnite general, who had been the main organiser of the confederacy, was slain, and the league itself virtually broken up. (Liv. x. 27—30.) No sooner was the theatre of operations cleared for this war with unabated energy; and in n. c. 293 they raised a fresh army of 40,000 men, led by solemn sacred rites, and arrayed in a peculiar garb. These circumstances sufficiently prove the importance which they attached to this campaign, yet its results was not more successful than those which had preceded it, and the Samnite armies were again defeated by the consuls L. Papirius Cursor and Sp. Carvilius in two successive battles near Aquilonia and Comumini. (Liv. x. 38—45.) The operations of the subsequent campaigns are imperfectly known to us, from the loss of the books of Livy in which they were related: but the next year (n. c. 292) C. Pontius, the victor of the Caudine Forks, returned, after a long interval, at the head of the Samnite armies; he defeated Q. Fabius, but was in his turn defeated in a far more decisive engagement, in which it is said that 20,000 Samnites were slain, and 4000 taken prisoners, including C. Pontius himself, who was led in triumph by Fabius, and then put to death. (Orat. il. 92; Liv. Epit. xi.) It is probable that with these events the final overthrow of the Samnites power, yet their resistance was still prolonged for two years more; and it was not till n. c. 290 that they consented to lay down their arms and sue for peace. Even in that year the consuls M. Curius Dentatus could still earn the honour of a triumph, and the fame of having put an end to the Samnite wars after they had lasted for more than fifty years. (Liv. Epit. xi.; Enrat. ii. 9.)

The conclusion of the Third Samnite War is regarded by some of the Roman historians as the close of the struggle between Rome and Samnium, and not without reason, for though the name of the Fourth Samnite War is given by modern writers, the war that broke out afresh in n. c. 282, the Samnites on that occasion certainly figure rather as auxiliaries than as principals. They, however, joined the league which was formed at the instigation of the Tarentines against Rome; and bore a part in all the subsequent operations of the war. They seem afterwards, among the petty tribes of the Caraceni, but was speedily suppressed, before it had attained any more formidable character. (Zonar. viii. 7; Dionyss. xx. 9; Fr. Mai.)

We have no account of the terms on which the Samnites were received to submission by the Romans, or of their condition as subjects of the republic. But it is probable that the confederacy was preserved on the political principle that no ancient people was to break up as much as possible their national organisation and all bonds of union between them. At the same time two colonies were established as fortresses to keep them in check: one at Beneventum, in the country of the Hirpini (n. c. 283), and the other at Asculum, in the valley of the Volturnus (n. c. 264). With these provisions, however, did not suffice to secure the fidelity of the Samnites during the Second Punic War. After the battle of Cannae (n. c. 216), the Hirpini were among the first to declare themselves in favour of Hannibal, and their example is said to have been followed by all the Samnites, except the Pentriani. (Liv. x. 61.) It is singular that this tribe, long the instrument of Hannibal and of Corineus, should have thus held aloof; but the statement of Livy is confirmed by the subsequent course of the war, during which the Pentriani never seem to have taken any part, while the land of the Hirpini, and the southern provinces of Samnium bordering on Lucania, were frequently the scene of hostilities. But the Roman colonies and the city of Beneventum, at Asculum, were thus held in the hands of the Carthaginians; and the latter was through a great part of the war held by one of the Roman generals, as a post of the utmost military importance. In n. c. 214 and again in n. c. 212,
SAMNIIUM.

the land of the Hirpini was still in the hands of the Carthaginians, and became the scene of the operations of Hannibal’s lieutenant Hanno against Sempronius Grachus. In 203, it was till a.c. 200, Hannibal having been finally compelled to relinquish his hold upon Central Italy, the Hirpini (and apparently the other revolted Samnites also) renewed their submission to Rome. (Liv. xxvii. 15.)

From this time we hear no more of the Samnites in history till the great outbreak of the Italian nation. Henceforward, it was till a.c. 90, in which they once more took a prominent part. They were not indeed among the first to take up arms, but quickly followed the example of the Pisonians and Marsi; and so important an element did they constitute of the confederation, that of the two consuls chosen as the leaders of the allies, one was a Samnite, Calisius Papus Mutilus. (Diod. xxxii. 2. p. 559.) Besides Papus, several of the most distinguished of the Italian generals, Marius Egnatius, Pontius Telesinus, and Trebatius, were also of Samnite origin; and after the fall of Corfinium, the seat of government and head-quarters of the allies was transferred to the Samnite town of Boianium, from whence it was not removed. The Samnites indeed suffered severely in the second campaign of the war, being attacked by Sulla, who defeated Papus Mutilus, took Asculum and Boianium by assault, and reduced the Hirpini to submission. The other Samnites, however, still held out, and an army which had thrown itself into Nola was able to prolong its resistance against all the efforts of Sulla. Hence, when in a.c. 89, the various attempts to pass the Rubicon a was still under consideration, and the Samnites were still unsubdued, and maintained a kind of guerrilla warfare in their mountains, while the strong fortresses of Nola enabled them still to maintain their footing in Campania. (Vit. Pat. ii. 17; Liv. xxi. ii. xxxix; Diod. xxxvii. 2. p. 540; Appian, B. C. i. 53.) In this state of things the civil war which broke out between Sulla and Marius altered the nature of the contest. The Samnites warmly espoused the Marian cause, from a natural feeling of enmity towards Sulla, from whose arms they had recently suffered so severely; and they joined themselves to the struggle that ensued after the return of Sulla to Italy (a.c. 83), that they in some measure imparted to what was otherwise a mere civil war, the character of a national contest. A large number of them served in the army of the younger Marius, which was defeated by Sulla at Sacripontes (Appian, B. C. i. 87); and shortly afterwards an army, composed principally of Samnites and Lucanians, under the command of C. Pontius Telesinus, made a desperate attempt to relieve Praeneste by marching suddenly upon Rome. They were met by the army of Sulla at the very gates of the city, and the battle at the Colline gate (Nov. 1, a.c. 82), though it terminated in the complete victory of Sulla, was the scene of the greatest dangers to which Rome had ever been exposed. (Vell. Pat. ii. 27; Appian, B. C. ii. 93; Plut. Sull. 26; Lucan, ii. 135—138.) Pontius Telesinus fell in the field, and Sulla displayed his implacable hatred towards the Samnites by putting to the sword, without mercy, 8000 prisoners who had been taken. We are told by Plutarch, v. 24; (Dio Cass. 66.) He had already put to death all the Samnites whom he had taken prisoners at the battle of Sacripontes, alleging that they were the eternal enemies of the Roman name; and he now followed this declaration by a systematic devastation of their country, carried on with the express purpose of exterminating the whole nation. (Strab. l.c.)

It can hardly be believed that he fully carried out this inhuman resolution, but we learn from Strabo that more than a century afterwards the province was still in a state of the utmost desolation,—many of what had once been flourishing cities being entirely reduced to ruins. Another writer (Appian, B. C. iii. 11, s. 1) says that the inhabitants of some others had altogether ceased to exist. (Strab. l.c.)

Nor is it probable that the province ever really recovered from this state of depression. The rhetorical expressions of Florus point to its being in its decline in a state of almost complete desolation. (Flor. i. 16. § 8.) Some attempts seem indeed to have been made under the Roman Empire to recruit its population with fresh colonists, especially by Nero, who founded colonies at Asaepinum, Telea, and Assennia (Lib. Colon. pp. 259, 260, &c.); but none of these attained to any great prosperity, and the whole region seems to have been thinly populated and given up chiefly to pasturage. Beneventum alone retained its importance and capacity to be a flourishing city throughout the period of the Roman Empire. In the division of Italy under Augustus the land of the Hirpini was separated from the rest of Samnium, and was placed in the Second Region with Apulia and Calabria, while the rest of the Samnites were included in the Fourth Region, together with the Sabines,具备ant, and the Peligni. (Fl. iii. 11. s. 16, 12. a. y.) At a later period this district was broken up, and Samnium with the land of the Frontanti constituted a separate province. This is the arrangement which we find in the Notitia, and it was probably introduced at an earlier period, as the Liber Colinarium in one part gives under a separate head the " Civitates Regionis Samnii," including under the name the towns of the Peligni, as well as the Frontanti. (Notit. Dign. ii. pp. 9. 10; Lib. Colon. p. 259.) In another part of the same document, which is undoubtedly derived from different sources, the Samnite towns are classed under the head of Campania; but this union, if it ever really subsisted, could have been but of very brief duration. The " Civitates Regionis Samnii," repeatedly mentioned in inscriptions of the 4th century, and was governed by an officer styled " Praeses." (Mommsen, D. E. Lib. Col. p. 206.)

The same appellation continued in use after the fall of the Roman Empire, and the name of Samnium as a separate province is found both in Cassiodorus and Paulus Diaconus. (Cassiod. Var. xi. 86; P. Dac. Hist. Lang. ii. 20.) The only towns in it that retained any consideration in the time of the last writer were Auscena, Assennia, and Beneventum. The last of these cities became under the Lombards the capital of an independent and powerful duchy, which long survived the fall of the Lombard kingdom in the N. of Italy. But in the revolutions of the middle ages all traces of the name of Samnium and the name of Samnium was lost. At the present day the name of Samsio is indeed given to a province of the kingdom of Naples; but this is merely an official designation, recently restored, to the district, which had previously been called the Contado di Molise. This and the adjoining province of the Principato di Ulteria comprising the towns of Cerignola and Atina; it is a mere boundary, with the modern boundaries have no reference to the ancient divisions, and a considerable portion
of the Samnite territory is included in the Terra di Lacco, while a corner in the NW. is assigned to the Abretani.

Of the national character of the Samnites we learn little more than that they were extremely brave and warlike, and had inherited to a great degree the frank and simple habits of their ancestors the Sabines. We find also indications that they retained, with strong religious or superstitious feelings of the Sabines, of which a striking instance is given by Livy in the rites and ceremonies with which they consecrated the troops they levied in B.C. 393.

(Livy, x. 38.) But they had almost ceased to exist as a nation in the days of the Latin poets and writers that are preserved to us; and hence we cannot wonder that their name is seldom alluded to. They served, however, for centuries, like the Sabines, in open villages; but it is evident, from the accounts of their earliest wars with the Romans, that they possessed towns, and some of them, at least, strongly fortified. This is confirmed by the remains of walls of a very ancient style of construction, which are still preserved at Anserina and Bo- vinum, north of the Liris and east of the Tiber. (Abeken, Mittel Italien, pp. 149, 148.) But from the very nature of their country the Samnites must always have been, to a great extent, a rude and pastoral people, and had probably received only a faint tinge of civilization, through their intercourse with the Campanians and Apulians.

III. TOPOGRAPHY.

The rivers of the Samnite territory have been already noticed in connection with the mountain chains and groups in which they take their rise. From the purely inland character of the region, none of these rivers, with the exception of the Calore and its tributaries, belong wholly to Samnium, but traverse the territories of other states, and reach the sea. Thus the Sagra and Triniae, after quitting the mountains of Samnium, flow through the land of the Frontani to the Adriatic; the Tifernus separates the territory of that people from Apulia, while the Fronto and the Aulxus traverse the plains of Apulia. On the other side of the central chain, the Cagne, the Calore, the Volturnus and the tributaries of the latter, the Sabatus and Tamarus, carry down the whole of the waters of the Apenines of Samnium, which flow to the Tyrrhenian sea.

The topography of Samnium is the most obscure and confused of any part of Italy. The reason of this is obvious. From the continued wars, which had devastated the country, and the state of desolation to which it was reduced in the time of the geographers, only a few towns had survived, at least in such a state as to be deemed worthy of notice by them; and many of the names mentioned by Livy and other authors during the early wars of the Romans with the Samnites never reappeared in a later period. It is indeed probable that some of these were scarcely towns in the stricter sense of the term, but merely fortified villages or strongholds, in which the inhabitants collected their cattle and property in time of war. Those which are mentioned by the geographers as still existing under the Roman Empire, or the site of which is clearly indicated, may be briefly mentioned. AURISPA, in the upper valley of the Sagra, is the only town that can be assigned with any certainty to the Caraceni. In the upper valley of the Vulturnus was ABREXTIA, the territo-
SAMONIUM.

sented by Diodorus as the scene of the decisive victory in B.C. 314 (Diod. xix. 76); and several places of which the names are found only in Virgil and Silius Italicus,—MUCRAE, RUPEAE, BATULUM, and CELLENA (Virg. Aen. vii. 793; Sil. Ital. viii. 564), which seem to have been situated on the borders of Campania, so that it is a matter of doubt to which country they are to be assigned. The minor towns of the Hirpini have been already discussed in that article; Panna, or Panna, a name found in Strabo (v. p. 250) as that of a place still existing in his time, is probably corrupt, but we are wholly at a loss what to substitute. On the other hand, inscriptions attest the existence under the Romans led fritre of a town called Juvum, and of Juvanum, of municipal rank, which is not mentioned by any of the geographers, but is probably the one meant by the Liber Colonarium, which notices the "Isabanns aeger" among the "civitates Samni." (Lüb. Col. p. 260.) It was probably situated in the neighbourhood of Sti Maria di Piazza, a few miles to the S. of the Sarno, and on one of the four frontiers of the Marmarni. (Monti di R. N. N. p. 271.) The existence of a town named Tiferum is very doubtful [TIFERUNUS]; and that of a city of the name of Samnium, though adopted by many local writers (Romanelli, vol. ii. p. 480), certainly rests on no adequate authority.

Samnium was traversed in ancient times by several lines of highways. One of these, following nearly the same line with the modern road from Naples to Aquila, proceeded up the valley of the Volturnus from Venafrum to Aessernia, thence crossed the mountain ridge to Audfida in the valley of the Sarnus, and from thence again over another mountain pass to Sulmo in the land of the Peligni. Another route branched from it only by the narrow channel, a mile in breadth, which the Turks call the Little Boghos. Here was fought the decisive victory against the Persians, B.C. 479. The Great Boghos, which is nearly 10 miles in breadth, separates the other extremity of Samos from the comparatively low island of Icaria. The length of Samos, from E. to W., is about 25 miles. Its breadth is very variable. Strabo reckons the circuit at 600 stadia, Pliny at 87 stades, though he says that Issidorus makes it 100. These differences may be readily accounted for by omitting or including Port Vathy, which is a wild-looking bay, though a very serviceable harbour, on the north. Here the modern capital is situated; but in ancient times the bay is said to have been com­paratively deserted—perhaps, as Tournefort suggests, because it was peculierly exposed to pirates, who infested the straits and bays of an island which lay in the route of commerce between the Boeotians and Egypt. What Tournefort tells us of his travels through Samos gives us the idea of a very rugged, though picturesque and productive, island. (Possibly the Pallinurus and a branch of the Eel of Samos, on which Livy, xxxvii. 11, may have been in the bay of Vathy.)

The highest point, Mount Kerkis, the ancient Cerecoteum (Strab. x. p. 488), which is nearly always covered with snow, and reaches the height of 4725 English feet, is towards the west. A ridge, which branches off in a south-easterly direction from the main range, and entering the sea at the Propontis of Poseidium, opposite Mycale, was called Amphelus, which name seems also to have been given to the whole mountain-system (Strab. xiv. p. 637). The western extremity of the island, opposite Icaria was ancien­tly called Caustinum. Here the cliffs are very bare and lofty. A landfall, which has taken place in

Samos.

3
Samos. this part of the island, has probably given rise to the name by which it is now called (Σαμος). The position of Samos was nearly opposite the boundary-line of Caria and Ionia, and its early traditions connect it, first with Carians and Leleges, and then with Ionians. The first Ionian colony is said to have consisted of settlers from Epidaurus, who were expelled from there by the Argives. However this may be, we find Samos at an early period in the position of a powerful member of the Ionian confederacy. At this time it was highly distinguished in maritime enterprise and the science of navigation. Thucydides tells us (i. 13) that the Samians were among the first to make advances in naval construction, and that for this purpose they availed themselves of the services of Ameinocles the Corinthian shipbuilder. The story of Pliny (vii. 57), that either they or Pericles the Athenian first constructed transports for the conveyance of horses, though less entitled to literal acceptance, is well founded (Quintus). Samos was famous for the voyage of her citizen Colusus, who, "not without divine direction" (Herod. iv. 152), first penetrated through the Pillars of Hercules into the Ocean, and thus not only opened out new fields of commercial enterprise, but enlarged the geographical ideas of the Greeks by making them for the first time conscious of the whole world beyond their own. Under the despotic Polycrates, Samos was in fact the greatest Greek maritime power. This famous man, about ten years after the taking of Sardis by Cyrus, held Samos in a position of proud independence, when Lesbo and Chios had submitted to the Persians. He had 1000 bowmen in his pay; he provided for his battles twenty galleys, and marching his whole army he conquests both among the islands and the mainland. He fought successfully against the Milesians and Lesbians, and made a treaty with Amasis, king of Egypt. Whether we are to take the story in the poetical form in which it is presented to us by Herodotus, or to attribute the change to the more probable motive of self-interest, this treaty was broken off for an alliance with Cambyses. In connection with this monarch's expedition to the Nile, some Samian malcontents were so treacherously treated by Polycrates, that they sought and obtained assistance from Greece. A joint force of Lacedemonians and Corinthians besieged Polycrates in Samos for forty days; but in this struggle also he was so suddenly overtaken and surprised by the fraud of Oroetes, a neighbouring satrap, brought him to a wretched death on the mainland. The time which succeeded was full of crime and calamity for Samos. In the end, Syles, the brother of Polycrates (whose association with Cambyses is the subject of another romantic story in Herodotus), landed in Samos; he was on Samos, and became a tributary despot; but not till his native island had been so depopulated as to give rise to the proverb σαμοῖς οἰκείοισιν ἑσύχασαν. For details see the lives of POLYCRATES and SYLIS in the Dict. of Biography. It was at this period that Pythagoras, who was a native of Samos, left the island to travel in foreign countries, being partly urged to leave his home (according to Plutarch, Placit. i. 3) through discontent under the government of Polycrates, who, however, was a patron of literature, and had Aeneas many years at his court. For the chronology of this period see Clinton, Fast. Hell. vol. ii. note B. pp. 230—232.

Samos was now Persian. It was from Samos that

Datis sailed to Marathon, taking Naxos on his way. But the dominion of the Persians did not last long. When their fleet was gathered at Samos again, after the battle of Salamis, to the number of 400 sail, it was in a great measure the urgency of Samian enemies that induced the commanders of the Greek fleet at Delos to go across to the eastern side of the Aegaean. Then followed that battle in the strait, which completed the liberation of the Greeks. In the maritime confederacy which was organised soon afterwards under Athenian rule, Samos seems to have been the most powerful of the three islands which were exempted from paying tribute. It was at the instance of her citizens that the common treasure was removed from Delos to Athens. But this friendship with Athens was turned into bitter enmity in consequence of a conflict with Miletus about the territory of Priene. Samos openly revolted; and a large force was despatched from Athens against it under the command of ten generals, two of whom were Megacles and Polycrates, and pronounced in the Ceramicus the funeral oration over those who had fallen in the war which, after a resistance of nine months, reduced Samos to complete subjection.

From 439 to 412 Samos remained without fortifications and without a fleet. But about this latter date the great change in the position of the island began to take place. Under Artaxerxes I. the Persians were again successful in 407. Even till after the battle of Arginusae Samos was, more than any other place, the headquarters and base of operations for the Athenian fleet.

Our notices of the island now become more fragmentary. After the death of Alexander the Great it was for a time subject to the kings of Egypt. (Polyb. v. 35.) Subsequently, it took the part of Antiochus the Great in his war with Rome. It also acted with Mithridates against Rome; but was finally united with the province of Asia b. c. 84. After the battle of Actium, Augustus passed the winter there. Under the Roman emperors it was on the whole a station of the greatest importance, and shared in the honour of being a free state. (Plin. v. 37.) This privilege was taken away under Vespasian. (Suet. Vesp. 8.) In the division of the Empire contained in the Syndecemus we find it placed with Rhodes, Cos, Chios, &c., in the Province of the Islands. In the later division into themes, it seems to be again raised to a more exalted position. It gave its Time to a separate theme, which included a large portion of the mainland, and was divided into the two tarsus of Ephesus and Adramyttium, the governor having his residence (τηρατία) at Smyrna; and this arrangement is spoken of in such a way (Const. Porphyro. de Them. i. c.) as distinctly to connect it with the ancient Samian administration.

It would be difficult to follow the fortunes of Samos through the middle ages. (See Fialay's History of the Byzantine and Greek Empires, vol. ii. p. 112.) There are some points of considerable interest in its modern history. In 1550, after being sacked by the Ottomans, it was given by Selim to the Capitan Pacha Ochiali, who introduced colonists.
Samos, from various other places; whence the names of some of the modern villages in the island, Melitonias, Albaniontici, and Vourloites (Vourla giving the name to some islands at the entrance of the bay of Syrnya). Samos was much injured by the ravages of Moremi. In Turgot's time the largest part of the island was the property of ecclesiastics; and the number of convents and nunneries was considerable. He reckoned the population to be 12,000; now it is estimated at 50,000, nearly the whole being Christian. Samos performed a distinguished part in the War of Independence. The Turks often attempted to effect a landing; the defences constructed by the Samiote are still visible on the shore; and the Greek fleet watched no point more carefully than this important island. On the 17th of August, 1824, a curious repetition of the battle of Mycale took place. Formidable preparations for a descent on the island were made by Tahir-Pacha, who had 25,000 men. The°Greek forces, under Schomax, were strong enough to resist the attack. After an action of two hours, the Turks retreated and the island was again saved.

The island was assigned to Turkey by the treaty which fixed the limits of the new Greek state, but it continued to make struggles for its independence. Since 1835 it has formed a separate Beylik, subject to the Bey of Constantinople, and Genoese Vogores, who resides in Constantinople, with the title of "Prince of Samos," and sends a governor as his deputy. Besides these rights, the island has a separate flag, exhibiting the white Greek cross on a blue ground, with a narrow red stripe to denote independence. The port is well situated, and has a fine harbour. At the present day the beans of the carob-tree are exported to Russia, where a cheap spirit for the common people is made from them. We might suppose from the name of Mount Ampelus, that the wine of the island was celebrated in the ancient world; but such a conclusion would be in direct contradiction to the words of Strabo, who notices it as a remarkable fact, that though the wine of the surrounding islands and of the neighbouring ports of the mainland was excellent, that of Samos was inferior. Its grapes, however, under the name of αμομελίδες or έμομελίδες, are commended by Athenaeus (ziv. p. 653; see Poll. Onomast. vii. 11); and Pliny mentions (ix. 153) that the wine of Samos produced a particular sweetness. The vineyards of Samos, which were about 2000 acres, as well as those of Thrace, who found its whole basement covered with a mass of small fragments of marble, among which are portions of the red tiles with which the temple was roofed. He discovered hardly anything of interest, except an inscription with the word ραγωνίας.

The appearance of the watercourses of the Imbrasse shows that they are often washed away, 3 m. 2
and thus harmonises with the natural derivation of the word. In the plain which extends along the base of the mountains eastwards towards the city, Ross says that there are traces of ancient channels made for the purpose of irrigation. He regards the marshy spot near the city to be the Κάδαμους and the Ξελης mentioned by Athenaeus (xiii. p. 572) in connection with the expedition of Pericles. (The former place is likewise referred to by Herodotus, i. 96.) Across this plain, which is about two miles in length, there is no doubt that a Sacred Way extended from the sanctuary to the city, like that which connected Athens with Marathon. Furthermore on this line (ἐκ τῆς Ἀθηνᾶς εἰς τὸν Ποσειδόν, Aesch. Prometheus, v. 5. § 6) was the tomb of Rhadime and Leontichus, where lovers used to make their vows; and traces of funeral monuments are still seen at the extremity of the line, close to the city-wall.

The modern town of Chora, close to the pass leading through the mountains of Samos, was situated partly in the plain and partly on the slope of the hill. The western wall runs in a straight line from the mountain towards the sea, with the exception of a bend inwards near the tombs just mentioned. Here is a brackish stream (ὁ γλυκόφρον), which is the Cheseus, the third of the three streams mentioned by Pline. (See Eth. legs. 1. 13. a. Ρούμουλαία.) The southern wall does not touch the sea in all its length, and is strengthened by being raised on vaulted substructions. Here and elsewhere the ruins of Samos touch the question of the use of the arch among the Greeks. On the east side of the city the walls are very considerable, being 10 or 12 feet thick, and about 30 feet high. The mass is partly one-drangular and partly polygonal; there are round towers at intervals on the outside of the wall, and in one place are traces of a gate. In the eastern part of the city was the steep citadel of Aistyalas, which was fortified by Polycrates (Poly. Strat. l. 25. § 2), and here probably was what Suetonius calls the palace of Polykrates. (Suet. Aug. 81.) In the higher part of the town the theatre is distinctly visible; the marble seats are removed; underneath is a large cistern. The general area is covered with many fragments, many of the best having furnished materials for the modern castle of Lycurious near the shore on the SE.; and little remains of a city wall which Herodotus says was under Polykrates, the greatest of cities, Helionic or Barbarian, and which, in the time of comparative decay, is still called by Horace Concinna Samos.

Herodotus makes special mention of the harbour and of an immense tunnel which formed an aqueduct for the city. The former of these works (τὸ τρύγων) as it is now called, from being shaped like a frying-pan is below Aistyalas; and, though it is now accessible only to small craft, its famous moles remain, one extending eastwards from the castle of Lycurious, the other extending to meet it from the extremity of the east city-wall southwards. Here Ross saw subterranean passages hewn in the rock; one of which may possibly be the σπήλαιον Ρυπατόν, ἐκ τῆς αὐραμάλας φιάσμα τῷ Σαλατάς (Herod. iii. 146), constructed by Mæanderius after the death of Polykrates. The tunnel has not been clearly identified; but, from what M. Musurus told Prof. Ross, it is probable that it is where Tournemort placed it, and that it penetrated the hill from Metrothaion to Chora, and that thence the water was taken into the city by a covered channel, traces of which remain.

Main. It is clear that it cannot be in the quarry pointed out to Ross; both because the cleavage of the rock is in the wrong direction, and because water from such a height would fall like a cascade on the city.

The authorities, to which reference has been made in this article, are, Tournemort (Feyges de Levent, 1717, pp. 404—436), who has given a very copious account of the island; and Ross (Reisen auf den Griechischen Inseln des Agašierischen Meeres, vol. ii. 1843, pp. 139—153), who has examined the sites and remains of the ancient city and Herakleum more carefully than anyone else. Also Clarke, Travels, vol. ii. pp. 192—214, vol. ili. pp. 364—367. Maps of the island will be found in Tournemort and Choiseul-Gouffier; but the best delineation of it is given in three of the English Admiralty charts.

There is a small sketch of the neighbourhood of the city in Kiepert's Baltis (1841), and a larger one in Ross. In Kiepert's general map the rivers Imbraos and Cheseus are wrongly placed, and also (probably) the ridge of Ampelus. It is very questionable whether the point called Poseidonia can be where it is (doubtfully) placed in Ross's plan: the position of the little island north of the strait seems to show that this promontory ought to be further to the east. (See Strab. xiv. p. 637.) A little volume was published in London, and dedicated to James Duke of York, in 1678, entitled "A Description of the present State of Samos, Nicaria, Patmon, and Mount Athos, by Joseph Geryoneus (Τευγρυφρέας), Archbishop of Samos, now living in London, translated by one that knew the author in Constantinople." From this book it appears that Dapper has taken his facts, as far as they go, from Ross indirectly. Panofka has written a book on Samos (Res Samiorum, Berlin, 1822); and more recently (1856) Gruèn has published a work on this island and Patmos. [J. S. H.]

COIN OF SAMOS.

SAMOS, in Triphylia. [SAMIUM.] SAMOS or SAME, in Cephalinia. [SAME.]

SAMOSATA (Σαμοσάτα), a strongly fortified city of Syria, placed by Ptolemy (v. 15. § 11) and Strabo in the district of Commagena. It contained the rural residence, and was a province in the time of Strabo, surrounded by a small but very rich country, and situated at the bridge of the Euphrates. (Strab. xvi. 2. § 3., p. 749.) Its distance from the borders of Cappadocia in the vicinity of Tomis across Mount Taurus was 450 stadia. (Ib. xiv. 2. § 39, p. 664.) It was besieged and taken by Mark Antony during his campaigns in Syria. (Joseph Ant. xiv. 5. § 6.) Its strategic importance is intimated by Caesennius Pusillus, prefect of Syria under Vespasian, who, having represented that Antiochus, king of Commagene, was meditating an alliance with the Parthians to enable him to throw off the Roman yoke, warned the imperial master that Samosata, the largest city of Commagene, was situated on the Euphrates, and would therefore secure the Parthians an easy passage.
of the river and a safe asylum on the western side." The legate was therefore instructed to seize and hold possession of Samosata. (B. J. vii. 7, § 1.) This town gave birth to Lucian, and became infamous in the third century in connection with the heretical bishop " Paul of Samosata," who first broached the heresy of the simple humanity of our Lord; and was condemned in a council assembled at Antioch (A. D. 272, Euseb. H. E. vii. 37, 28). The modern name of the town is Simeis or Sineias, about 40 miles S. W. of Antioch, less than 10,000 feet from Mount Taurus, but Ptolemy could bear of no ruins there. (Observations on Syria, vol. ii. pt. 1, p. 156.)

[C. G. W.]

COIN OF SAMOSATA.

SAMOTHRACE, SAMOTHRA'CA, or SAMOTHRA'CI'A (Σαμοθράκηα; Ἐθ. Σαμόθρακης; Σαμοθράκης) in Hesiod, who uses the adjective Σαμοθρακής, and calls the inhabitants Σαμοθρακηθές. In Pliney (iv. 23) we find the form Samothracca; in the Juv. Ant. (p. 529, Wass.), Samothrace: in Livy (xlii. 25, 50, 45, 46), both Samothracea and Samothracca. Properly it is "the Thracian Samos." Thus Homer calls it sometimes Σαμοθράκης, sometimes simply Σαμοτράκης. Hence the line in Virgil (Aen. vii. 208):

"Thraciæmque Samum quaer nunc Samothraci perturbat." The lofty height of Samothrace appears in Homer in a very picturesque connection with the scenery of Troy. He describes Poseidon as gazing from this throne on the incidents of the war: and travellers in the Troad have noticed the view of Samothrace towering over Imbrus as a proof of the truthfulness of the Iliad. Bearing in mind this geographical affinity (if we may so call it) of the mountain-tops of Saecce and Ida, we shall hardly be surprised to find Scymnus Chius (678) calling Samothrace a Trojan island (επουραια). For these reasons we must refer to the Dict. of Biography and Mythology. Pelasgians are said by Herodotos (ii. 51) to have first inhabited the island, and to have introduced the mysteries. A few detached points may be mentioned which connect this island with Greek and Roman history. Its inhabitants joined Xerxes in his expedition against Greece; they were skilful in the use of the javelin; and a Samothracian ship is said to have sunk an Athenian ship, and to have been sunk in turn by an Aeginetan one, at the battle of Salamis. (Herod. viii. 90.) At that time the Samothracians possessed fortresses erected on the mainland. (Ib. vii. 108.) Philip of Macedon and his wife Olympias were both initiated in the mysteries. It would seem that such initiation was regarded as a preservation from danger. (Aristoph. Pax, 277, and Schol.) Samothrace appears also to have had the rights of asylum; for Persians took refuge there, after he was defeated by the Romans in the battle of Pydna. (Liv. xiv. 6.) Germanicus sailed to the island with the view of being initiated; but he was prevented by an omen (Tac. Ann. ii. 54.) St. Paul passed the night at anchor here on his first voyage from Asia to Europe. (Acts, xvi. 11.) In Pliney's time Samothrace was a free state (Ic). In the Synedrion we find it, with Thassos, in the province of Illyricum. (Wess. p. 640.) In the later division described by Constant. Porphyrius (De Zephyre p. 1, ed. 1856) it is in the Thracian subdivision of the first European or Thracian Theme. Samothrace appears to have no modern history.

(p. 280, ed. Gall), mentions a port, which possibly was identical with the harbour Demetrium spoken of by Livy. The ancient city (of the same name as the island) was on the north, in the place marked Palaeopolis on the chart.

The common name of the Thracian and the Ionian Samos was the occasion of speculation to Strabo and Pausanias. The latter (vii. 4, § 3) says that the Thracian island was colonised by emigrants from the other. The former (x. pp. 457, 478) mentions a theory that it might be named from the sailors of Thrace. Scymnus Chius (692) says, that aid came from Samos to Samothrace in a time of famine, and that this brought settlers from the Ionian to the Thracian island. The truth seems to be, that οἰκόποι denotes any elevated land near the sea, and that the name was therefore given to the island as well as to the others.

[CrPllhlleN: Samok.] The earlier names of Samothrace were Dardania, Electria, Melite, and Lencoria. Diodorus Siculus (v. 47) speaks of its inhabitants as Autochthons, and dwells on peculiarities of their language as connected with their religious worship. The chief interest of this island is connected with its Cabarian theology. For these reasons we must refer to the Dict. of Biography and Mythology. Pelasgians are said by Herodotos (ii. 51) to have first inhabited the island, and to have introduced the mysteries. A few detached points may be mentioned which connect this island with Greek and Roman history. Its inhabitants joined Xerxes in his expedition against Greece; they were skilful in the use of the javelin; and a Samothracian ship is said to have sunk an Athenian ship, and to have been sunk in turn by an Aeginetan one, at the battle of Salamis. (Herod. viii. 90.) At that time the Samothracians possessed fortresses erected on the mainland. (Ib. vii. 108.) Philip of Macedon and his wife Olympias were both initiated in the mysteries. It would seem that such initiation was regarded as a preservation from danger. (Aristoph. Pax, 277, and Schol.) Samothrace appears also to have had the rights of asylum; for Persians took refuge there, after he was defeated by the Romans in the battle of Pydna. (Liv. xiv. 6.) Germanicus sailed to the island with the view of being initiated; but he was prevented by an omen (Tac. Ann. ii. 54.) St. Paul passed the night at anchor here on his first voyage from Asia to Europe. (Acts, xvi. 11.) In Pliney's time Samothrace was a free state (Ic). In the Synedrion we find it, with Thassos, in the province of Illyricum. (Wess. p. 640.) In the later division described by Constant. Porphyrius (De Zephyre p. 1, ed. 1856) it is in the Thracian subdivision of the first European or Thracian Theme. Samothrace appears to have no modern history.
and no present importance. Pliny (xxvii. 67) makes mention of a gem which was found there; and in the Middle Ages its honey and goats are said to have been celebrated. No traveller seems to have explored and described this island. [J.S.H.]

SAMULOCENAE, according to the Peut. Tab., or more correctly according to inscriptions found on the site itself, was a Roman colony of some importance in the Agri Decumates of Germany. The Table erroneously places the town in Vindelicia, whence some antiquarians have regarded Samulocanae and Sunlocanne as two different places. But there can be no doubt that they are only two forms of the same name belonging to one town, the site of which is occupied by the modern Sülzheim, near Rottemburg on the Neckar, where many Roman remains, such as coins, inscriptions, and arms, have been found. (Comp. Jaumann, "Colonia Sunlocanne, f.c., Stuttgart, 1840, 8vo.; Lehmann, "Sobowien unter den Römern," p. 107, foll.) [L. S.]

SAMUS. [Samos.]

SAMS, a river of Hispania Baetica. (Geog. Rav. iv. 45.) Ancient Spanish coins indicate a town of the same name. (Florus, Med. iii. p. 142.) [T. H. D.]

SAMYDACE (Σαμυδάκης), a town on the coast of Carmania, noticed by Marcian (c. 28. Didot) and Ptolemy (vi. 8. § 7). It appears to have been placed in the month of the river Samos (Σάμος). (See also Steph. B. z. e.) It is possible, as suggested by Forbiger, that the river is the present Sadi. [V.]

SANAUS (Σανάοις), a town of Phrygia, in the neighbourhood of Laodicia. (Strab. xii. p. 576; Hieroc. p. 666.) In the acts of the Council of Chalcedon (p. 788) it is called Sanaus, and is probably mentioned by Ptolemy (v. 2. § 26) under the name of Sanus. [L. S.]

SANCTO, a place in the Agri Decumates, in the south-west of Germany, was situated on the banks of the Rhine, but is mentioned only by Ammianus Marcellinus (xxii. 5), and in such a manner that it is not easy to identify its site; it is possible, however, that the modern Schickes may correspond with it. [L. S.]

ANDA, a river on the N. coast of Hispania Tarraconensis (Plin. iv. 30. a. 34.) Probably the Miura. [T. H. D.]

SANDALIUM (Σαντάλιος), a mountain fortress of Pisidia, mentioned only by Strabo (xii. p. 169) and Stephanus B. z. e. [L. S.]

SANDANAE (Σαντάναις, Peripl. Mar. Erythrae. c. 59). There has been some question whether this is the name of a man or of a place. As the text stands in the Periplus, it would seem to be that of a ruler of the coast-district in the neighbourhood of Bombay. On the other hand, Ptolemy speaks of the santonae as a city under the title of Ancyra, although no such city is known. It seems more probable that Benfey (Ersch and Grüber, Encycl. art. Indiae) argues, with strong probability, that the reading in the Periplus is incorrect, and that Ptolemy is right in making the name of that of a people rather than of a chief. [V.]

SANDOBANAE. [ALBANIA, Vol. i. p. 89, b.]

SANDRIZETES, according to some editions of Pliny (iii. 28), the name of a tribe in Pannonia on the river Drava; but a more correct reading gives the name Andizetes, which is no doubt the same as the Andizetes (Ἄνδιζηται) mentioned by Strabo (vii. p. 314) among the tribes of Pannonia. [L. S.]

SANIANA.

2. It appears from Herodotus (vii. 123; comp. Thuc. v. 18) and the Epitomiser of Strabo (vii. p. 330, Fr. 27) that there was another town of this name in Pallenec. According to the position assigned to it in the list of Herodotus, the site must be near the modern C. Pissidii and the W. side of the island of Porto Mela. (Geogr. ii. 3. § 1) is opposed to this position of Sanie, as he places it near Canastraen Prom. (C. Paliuri). [E. B. J.]

SANGALA (Σανγγαλα), a place mentioned by Arrian to the NW. of the Malli (or Mal/in), apparently near the junction of the Hydrostes and Aecines (v. 22). There can be little doubt that it is the same place as that noticed by Ptolemy under the name of Sanga, "ξαλε Εὐδημία" (vi. 1. § 46). The position, however, of the latter is assigned with this difference, that it is placed below the junction of the Hydaspes and Aecines, whereas the former would seem to have been to the E. of the Hydrostes. Burnes has identified Sagala with the present Lakor, which is probably enough (Traversa, vol. iii. p. 89). It may be remarked, that the Εὐδημία of Ptolemy ought in all probability to be Εὐδημία, the name being derived from the well-known Bactrian king, Euthydemus. [V.]

SANGARIUS (Σανγαρίους: Sakarya or Sakari; Turkish Asgül), one of the principal rivers of Asia Minor, is mentioned as the Midas (iii. 187, xiv. 719) and in Herodotus (Theog. 344). Its name occurs in different forms as Sangrahis (Schoi. ad Apollon. Rhod. ii. 724), Sangaris (Constant. Porphyry i. 5), or Sangara (Ov. ex Porph. i. 10. 17: Plin. vi. 1; Solin 43). This river had its sources on Mount Adaves, near the town of Sangia in Phrygia, not far from the Galatian frontier (Strab. xii. p. 542), and flowed in a very tortuous course, first in an easterly, then in a northerly, and lastly again in a northern direction through Bithynia to the Euxine. In part of its course it formed the boundary between Phrygia and Bithynia; and in early times Bithynia was bounded on the east by the Sangarius. (Btyhynia.)

The Bithynian part of the river was navigable, and was celebrated from the abundance of fish found in it. Its principal tributaries were the Alander, Batheys, Thymbres, and Gallus. (Comp. Sclay, p. 34; Apollon. Rhod. ii. 724; Seymum. 334.; fol. Strab. xii. pp. 563, 567; Dinayre Perig. 811; Psal. v. 1. § 6; Steph. B. z. e.; Liv. xxxviii. 18. 3; Plut. Asdr.; Amm. Marcellinus x. 22.) [L. S.]

SANGIA (Σανγγια), a small place in the east of Phrygia, near Mount Adaves and the sources of the Sangarius. (Strab. xii. p. 543.) [L. S.]

SANIANA (Σανιανα, Const. Porph. Thees. i. p. 28, de Adae. Imp. c. 50, p. 225, Bux.), a place in
the interior of Thrace, probably the modern Emesena or Zangane.

SANGAEAE. [J. B.]

SANGAEAE (Ζαγγαεα, Arrian, Peripl. Pont. Eux. p. 12; Ζαγγαεα, Steph. B. s.e.; Zagynea, Procop. B. G. iv. 3), a tribe of Mt. Caucasus, who were found in the neighbourhood of Dioscurias in the Roman SARRAPOLIS. [E. B. J.]

SANISERA, a city in the island Balearis Minor (Plin. iii. 5. a. 11), the modern Alicante. (Cf. Verney, Ant. Bal. p. 57; Salmas. ad Sol. c. 34, p. 401.)

SANITIUM (Σανιτιον), is placed in the Alpes Maritimae by Ptolemy (iii. 1. § 43), and named as one of the towns of the Vicielliti or Vediilliti. Cemeneilum is the other town which he names [CEMENELIUM]. If Sanitium is Sesena, which is west of the Var, part of this people were east of the Var and part of them were west of it. [G. L.]

SANNL. [MACONNES.]

SANTICUM (Σαντικον, Ptol. ii. 14, § 3), a town of the Tribus Lineatae, near the entrance of the Rhone in Viennois, on the road from this place to Aquileia (It. Ant. p. 276). The exact site of the city is utterly uncertain, but conjecture has fixed upon four or five different places that might be identified with Santicum with equal probability. [L. S.]

SANTONIUS OR SANTONII (Σαντωνιος, Σαντωνίων), a people of South-western Gaul, who, in the Celta Galatia Aquitanica of Ptolemy (ii. 7, § 7), who names their capital Medicinavum. [MACEDIIANUM.] They were in the Celts of Caesar, being north of the Garumna (Garonne). The Roman poets make the quantity of the word suit their verse, as Lucan does when he says (i. 422), "et in hoste Salutem, " and Juvenal and Martial when they use the word Santoniu.

Caesar, who first mentions the Santones (B. G. i. 10), says that when the Helvetii were preparing to leave their country with their families and moveables, their intention was to make their way to the territory of the Santones, "who are not far distant from the borders of the Teutones." He gives no reason for conjecturing why the Helvetii proposed to cross the whole width of Gallia and settle themselves in a country on the coast of the Atlantic which was full of people. The position of the Santones is defined by Ptolemy, who places them between the Pictones and the Bituriges Vivisci, one of whose towns was Burigalas (Bourdeaux). Strabo (iv. 190, 308) gives the position of the Pictones still clearer when he says that the Garumna flows into the sea between the Bituriges Iocci (Vivisci) and the Santones, both of which are Celtic nations. In another passage he places the Pictones and Santones on the shores of the Atlantic, and the Pictones north of the Santones; which completes the description of their position.

Caesar never made any campaign against the Santones, or, if he did, he has said nothing about it. He got ships from the Pictones and Santones for his naval war with the Veneti (B. G. iii. 11), from which we learn that the Santones and Pictones were maritime people. When Veringentorix (a. c. 52) was stirring up the Gaul nations against Caesar, he secured the assistance of the Pictones and "all the rest of the states that border on the ocean," an expression which includes the Santones, though they are not mentioned. But the Santones sent 12,000 men to the siege of Alesia. (B. G. vii. 73.) In Pliny's enumeration of the Gallio people (iv. 38) the Santones are named Lelbrii.

The Santones gave name to that division of France before the revolution which was named, Saintonge, the chief part of which is included in the French department of Charente Inférieure. The coast of the territory of the Santones is low and marshy; the interior is generally level and fertile. D'Anville supposed that the territory of the Santones comprehended the diocese of Saintes and the small province of Aumus on the north-west.

The wormwood of this country is spoken of by various writers, Pliny (xxvii. 38), and Martial (Ep. ix. 95):

"Santonica medicata dedit milii popula virga."

Martial (xiv. 128) and Juvenal (viii. 145) mention a "unculla" with the name "Santonicius." It appears that some thick coarse woollen cloths were imported from Gaula into Italy.

Havercamp in his edition of Orosius (vi. 7) gives a coin with the name "Arrives," and on the other side the legend "Santonici," in the capital with the figure of a horse in action. He gives also another coin with the same legend; and a third with the abbreviated name "Sant." and the name of "Q. Doci" on it. [G. L.]

SANTONIUM PORTUS (Σαντωνιου θαλας). Ptolemy in his description of the coast of Celta Galatia Aquitanica (B. G. ii. 13) records that from Carriac to the mouth of the Garonne "the river Cantaia is placed north of the promontory. The Ca-rantonus of Ausonius is certainly the Charente [CANTAONIUS]; and Ptolemy's Canetelus is a different river, or, if it is the same river, he has placed it wrong. It is impossible to determine what is the santonum Portus of Ptolemy. If it is Rochelle, as some geographers maintain, and if Ptolemy's Canetelus is the Charente, he has placed his positions in wrong order. It seems very unlikely that Ptolemy should mention a river between the Garonne and Loire, and not mention the Charente. The only other large river between the Garonne and Loire is the Charente itself, which is north of Rochelle, and if Ptolemy's Canetelus is the Sèvre, the Santonum Portus might be La Rochelle. D'Anville supposes Santonum Portus to be the embouchure of the Sèvre, which opens into the sea opposite the southern extremity of the Isle d'Oléron; but he does not undertake to fix the position of the Santonum Promontorium. The latitudes of Ptolemy cannot be trusted, and his geography of Gallia is full of errors. [G. L.]

SANTONIUM PROMONTORIUM. [SANTO-

NICA PORTUS.]

SAOGE. [SAMOTHRAKE.]

SAOCORAS (Σαοκορας, Ptol. v. 18, § 3), a river of Mesopotamia, mentioned by Ptolemy, which appears to have had its source in the M. Masius near Nisibis, and to have flowed to the SW. into the Euphrates. There has been much dispute, as to what river Ptolemy intended by this name, as at present there is no stream existing which corresponds with his description. Foriger has conjectured with some reason that it is the same as the Masius of Xenophon (Anab. i. 5. § 4), which flowed about 35 parasangs to the E. of the Chaboras (Khador), and surrounded the town of Coroito: Ptolemy would seem to have confounded it with the Mygdonius. [MYGDO-

NIUS.]

[V.]

SAPAEL (Σαπαλης ή Ζαρνας), a Thracian people, occupying the southern portion of the Pan-
SAPAICA.  

gana, in the neighbourhood of Abdera. (Strab. xii. p. 549.) In this passage, however, Strabo calls them Sapea (Σαπέα), and assumes their identity with the Sinti, which in another place (s. p. 547) he calls Σάπας (Σαπάς). The name of Egnatia ran through their country, and especially through a narrow and difficult defile called by Apianus (B. C. iv. 87, 106) the pass of the Sapi, and stated by him to be 18 miles from Philippi; so that it must have been nearly midway between Neapolis and Abdera. The Sapi are mentioned, and merely mentioned, by Strabo (viii. 110) and by Plineus (iv. 11. 18). Their town is called Sapiaca (Σαπαίκα) by Steph. B. (s. a. w.). [J. E.]

SAPAICA. [SAPAIKEL.]

SAPARNUS (Σαπαρνός), a small tributary of the Indus, in the upper Pamis, noticed by Arrian (Indic. c. 4). It is probably the present Abusa.

SAPAUDIA. This name occurs in Ammianus Marcellinus (xiv. 11.), in his description of Gallia. He says of the Rhone that after flowing through the Lake of Geneva "per Sapaudia furtur et Sequana." In the Notit. Imp. we read: "in Gallia Ripens prefectus militum Barcariorum Ebroduni Sapaudiae," where Ebroduni appears to be Formavus, which is at some time the Lake of Neufchâtel. It is another passage of the Notit. there occurs: "tribunus cohortis primae Sapaudiae Flaviae Calorae," or "Calarone," which is Gresoneua [CULARO]. Thus Sapaudia extended northward into the country of the Helvetii and southward into the territory of the Allobroges. The name Sapaudia is preserved in Savoia, on Savoy, and much more limited signification; and in the country now called Savoy there is said to be a canton which bears the particular name of Savoy. (D'Anville, Notices, etc.) [G. L.]

SAPHAR. [SAPPHAR.]

SAPHE. [BEZARDA.]

SAPHRI (Σαφρή), a small village of Parthia mentioned by Jacobson (Stud. Pers. c. 12.). It may be the same place as that called by Ptolemy Σαφρων (vi. 9. § 6), which he places in Hyrcania, close to the Astabeni. Forbiger identifies it with the modern Shafri. [V.]

SAPIRTE (Plin. vii. 29. s. 33.; Σαπαίρτης Σαφραίτης, Phot. iv. 5. § 77; Σαφραίτης, Eus. B. a. w. s.), and stands in the Gulf of the west of the Persian Gulf, NE. of Myrmo, and S. of the promontory Pharos, from which sapphires were obtained according to Stephanus. Now Shafren. [V.]

SAPIS (Σαπίς, Strab. : Σαπίο, a small river of Ctesiphon Gaul, not far from the frontiers of Umbria. It rises in the Umbrian Appennines, a few miles above Sarania, flows under the walls of that town, and afterwards, pursuing a course nearly due N., crosses the Amiljan Way close to the town of Cessena (Cesena), and falls into the Adriatic about 10 miles S. of Ravenna. (Strab. v. p. 217; Plin. iii. 15. a. 20; Lucan. ii. 406; Sil. Ital. viii. 448; Tab. Peut.) It is called in the Tabulae Sabiae; and the name is written Isapis in several editions of Lucan. Dacier believes that Isapis has a different root than Sapis is the true form of the name. It is still called the Sapoio. There can be little doubt that the Sapinia Tiber, mentioned by Livy (xxi. 32., xxxii. 37), as one of the tribes or divisions of the Umbrian nation, immediately adjoining the Gaulish tribe of the Boii, derived its name from the Sapis, and must have discharged the banks of that river.[R. B. R.]

SAPPHR METROPOLIS (Σαπφηριαδήσ Μετροπόλις), placed by Ptolemy in long. 80°, lat. 14° 30'; doubtless the capital of the Sapphiriotes (Σαπφηριότατοι), whom the same geographer places near the Hellespontus (vi. 6. § 35), which Bochart identifies with the present name Asemir, which he says is on the coast of the East, and which was the limit of the children of Joktan. (Gen. x. 30.) This forster further identifies with the Mount Climax of Ptolemy, which Niebuhr judged to be the Samirra or Nakti Samara of modern Arabia, the highlands of Yemen, on the E. of which some traveller found some ruins, which he described by the name of Nakti, which he says is without doubt Ahab, or Dibya. (Forster, Geogr. of Arabia, vol. i. pp. 94, 105, 127 notes, 175, vol. ii. pp. 154, 172.) Ahab was the metropolis of the Sassanians according to the author of the Peripius ascribed to Arrian, and distant 3 days' journey eastward from Mass on the Arabian gulf; Mr. Forster remarks that the reflection and the distance correspond with the site of Dibya (vol. i. p. 166, note *). It is to be regretted that this important and well marked site has not yet been visited and explored. [G. W.]

SAPPHARIATES. [SAPPHAR.]

SAPPHEIRENE. [SAPPHEREI.]

SAPTRA PALUS (Σαπτρα Παλός). This celebrated name, which became so renowned and dwelled in Europe, is given to a tribe of Arabians Felix by the classical geographers, who do not, however, very clearly define their position in the peninsula, and indeed the country of Saracen in Ptolemy seems scarcely reconcilable with the situation assigned to the sea, which is supposed to be bounded by the Persian Gulf, consistently with Pliny, who joins them to the Nabataeoi (vi. 28. s. 33), places the Saraceni south of the Sambites, who were situated in the neighbourhood of the northern mountains of the Arabian peninsula (vi. 7. § 91); but the region Saracen he places to the west of the black mountains (μαύραι χώραι)—by which name he is supposed to designate the range of Sinai, as he couples it with the gulf of Pharan—and on the confines of Egypt (v. 17. § 8). St. Jerome also calls this district the "mons et desertam Saracerorum, quod vocatur Pharan" (Onomast. a. v. Χρυση, Choreb), in agreement with which Eusebius also places Pharan near the Saracen who inhabited the desert (as in Saphe). According to these writers their country corresponds with what is in Scripture called Midian (Exod. ii. 15., iii. 1: see Midian), which, however, they place incorrectly on the east of the Red Sea; and the people are identified with the Ishmaelites by St. Jerome (Onomast. i. c.), elsewhere with Kedar (Comment. in Isae. xliii. and in Loc. Hebr. ad soc.), with the Midianites by St. Augustine (in Namiex), with the Saracen by Ammianus Marcellinus, who, however, uses the name in a wider acceptation, and extends them from Assyria to the cataracts of the Nile (xiv. 4). Their situation is most clearly described by the author of the Peripius. They who are called Saracen inhabit the parts about the neck of Arabia Felix next to Petra, of which place they possess the desert, and occupy a large tract of desert land, bordering on Arabia Petraea and Deserta, on Palestine and Persia, and consequently on the before-mentioned Arabia Felix. (Marcian. apud Geog. Min. vol. i. p. 16, Hudson.) The fact seems to be that this name, like that of Scitites (with whom, as we have seen, the Saracen are sometimes identified), was used either in a larger or more restricted sense for various
SARACEN.

As their nomadic and migratory habits were described by the latter, so their predatory propensities, according to the most probable interpretation of the name, was by the former, for the Arabic verb Saraba, according to lexicographers, signifies "to plunder." (Bochart, Geog. Soc. lib. iv. cap. 2, pp. 213, 214.) The derivation of the name Saracen from the verb Saraba has been questioned by many, all critics as historically erroneous; and the fact that the name was in use many centuries before Mohammed, at once negates the theory that it was adopted by him or his followers, in order to remove the stigma of servile origin from Hagar the bondwoman. (Reland, Paletsemis, p. 67.) This author maintains that, according to the genealogy of Abraham, the name is not to be derived from the Aramean Sabra, = "ornament;" and as unhappily the Greek alphabet cannot discriminate between Σαραβα and σκις, and the name does not occur in the native authors, there is nothing to determine the etymology. Mr. Forster, in defence of Bochart's severe sentence, "Qui ad Saram referunt, nugas agunt," (Cochran, Common of York, p. 24, 1694) defends the etymology derived from Sarah, and shows that the country of Edom, or the mountains and territory bordering on the Saracena of classic authors, are called "the country, mountains, &c. of Sarah" by the Jews; and he maintains that, as this tract derived its name of Edom and Idumea from the patriarch Esau, so did it of Sarah from Sarah the wife of Abraham, the acknowledged mother of the race. (Geog. of Arabia, vol. ii. pp. 17-19.) His attempt to identify the Saraceni with the Amalekites is not so successful; for however difficult it may be to account for the appearance of the latter in the Bephidim (Exod. xvii. 1, 8; Rephidim), which was the common name of the mountains fixed beyond doubt in the south of the promised land, in the hill-country immediately north of the wilderness of Paran, near to Kadesh (Num. xxii. 29); and it is impossible to understand "the valley" in xiv. 25, and "the hill" in xiv. 45, of Horeb, as Mr. Forster does, since the whole context implies a position far to the east of Sinai. The country is marked by the following stations: Tabora, 3 days' journey from "the Mount of the Lord" (2 Sam. xiii. 3); Kibroth-hattaavah, Hazereth, the wilderness of Paran (xii. 34, 35, xii. 16, opposite xxiii. 16-18). It must indeed be admitted that the name of the Amalekites is occasionally used, in a much wider acceptation than in the text quoted, by the inhabitants of the Sciamtinae, in the modern times; and of Bedouins = "deserti incolae," in modern times; particularly as it does not appear that the name was ever adopted by the Arabs themselves, who would not have been slow to appropriate an honourable appellation, which would identify them with the great patriarch. That their predatory character is nothing more than the descent from the desperate expelitum of the emperor Decius in order to repress their encroachments. He is said to have brought lions and leopards from Africa and turned them loose on the borders of Arabia and Palestine, as far as the Circiusian Castrum, that they might breed and propagate against the Saraceni. (Chron. A.T. in a.m. 5750, Olymp. 257, Ind. xiv. = A.D. 251.) This strong fortress, called by Procopius Cariacum (Καραγινος καρπος), the most remote of the Roman garrisons, which was fortified by Dioneliot (Annal. Marc. xxiii. 5), was situated on the angle formed by the confines of the Arab, Persian, and Greek (Xenophon). It is still called Karkeis, so that it is clear that, in the time of Procopius, the name of Saracen was given to the Arab tribes from Egypt to the Euphrates. Consistent with this view, he calls Zenobia's husband Odonathes, "king of the Saracens in those parts" (Bell. Pers. ii. 5. p. 288); and Belisarius' Arab Kabodes, and the latter was called "the Araba and the Ararat" (Apollonius), he likewise calls Saracens (ii. 16, p. 306). That Roman general describes them (c. 19, p. 312) as incapable of building fortifications, but adept at plunder, which character again justifies the etymology above preferred; while it is clear from these and other passages that the use of the name had become established among the general name, and precisely equivalent to Arab (see Martin, Hist. Rom. p. 261), and was accordingly adopted and applied indifferently to all the followers of Mohammed by the writers of the middle ages. [G.W.]

SARALA. [SARDINIA.]

SARALUM or SARALUS (Σαραλος), a town of the Tormion, Galatia, on the east of the river Halye. (Toch. Pers.; Pthib. vi. p. 9, 4.)

SARAMENE (Σαραμενη), a district of Pontus, on the bay of Amiusa. (Strab. xii. p. 547; comp. Pontus.) [L.S.]

SARANGA (Σαραγγα), a small place on the coast of Gedrosia between the Indus and the Arabia. It was visited by Nearcias in his coast voyage to Persia (Arrian, Ind. x. 12). It has been conjectured by Mülller (Geogr. Græc. Min. I. c., ed. Paris) that it is the same as the Παραγγελα (vi. 21, § 2). [V.]

SARANGAE. [DRAGANIA.]

SARANGES (Σαραγγης), a small tributary of the Hydratas (Περιδας), mentioned by Arrian (Ind. xiii. 1, 15, 21). It is called "the island of the Saraceni, the bed of which leads from Minagra into Georgia over the Caspian Sea. (Curtz, Jour. Geog. Soc. vol. iii. p. 84.) [E.B.J.]

SARAPARAE (Σαραπαραι), Strab. xi. p. 500; Zaporawn, Procop. B. G. iv. 14), a strong position in Iberia, upon the river Phasis, identified with Schadapasis, in the country of the Sciamtinae, which leads from Minagra into Georgia over the Caspian Sea. (Curtz, Jour. Geog. Soc. vol. iii. p. 84.)

SARAPANA (Σαραπανα), Strab. xi. p. 531; Plin. vi. 16. a. 13), a Thracian people, dwelling beyond Armenia near the Gursal and Medi, according to Strabo, who describes them as a savage, lawless, and mountainous people, who scaled and cut off heads (Apocryphal Acts, v. 16), according to the analogy of the book of Judges, the latter is said by Strabo to be the meaning of their name, which is confirmed by the fact that in the Persian sar means "head" and pura "division." (Anquetil, Sur les rac. Lyngiennes de la Pers., in Mem. de l'Acad. de Paris, in Mem. de l'Acad. d. Sciences, vol. xxxi. p. 419, quoted in Kramer's Strab. vol. ii. p. 500; comp. Grockurdt's Strab. vol. ii. p. 581.)

SARAPIOS PORTUS. [NICOPOLIS DRIMOS.

SARAPIS INS. (Σαραπιδος νησος), an island off the South Coast of Arabia, mentioned by the author of the Peripius ascribed to Arrian (Geogr. Græc. Min. vol. i. p. 19, Hadram) as situated 3000 stadia east
of the seven islands of Zonidia, which are identified with the islands of Karrrhia Maris. The island of Sarais is therefore correctly placed by D'Anville at Monemvasia. It is described in the Periplus as about 120 stadia distant from the coast, and about 200 stadia wide. It had three villages, and was inhabited by the sacred caste of the Ichthyophagi. They spoke Arabic, and wore girdles of cocoa leaves. The island produced a variety and abundance of tortoises, and was a favourite station for the merchant vessels of Caeraeo at Sarais. [G. W.]

SARAVYS, a river of Gallia, a branch of the Maeutta (Mosel). The Iliss, place the Ponte Saravi on the Saravis, on a road from Divodurum (Metz) to Argenteumont (Strasbourg). [PONCE SARAVY]

The Saravis is mentioned in the poem of Asiniae on the Mosella (v. 367):

"Naviger undiosa dudum me mole Saravus
Totae veste vocat, hoc gum qui di-tulit aemnem,
Phoca sub Augusta ut volveret ostia muris."

The Saravis is the Sarave, which joins the Mosel on the right bank a few miles above Augusta Treviri (Trier). In an inscription the river is named Sarava. [G.L.]

SARBUAC (Sapianus), Ptol. iii. 5. § 29), a town of Samos, upon an affluent of the Tanais, probably a Graecised form of the Slavonic Srbeč. (Schaaf: It., vol. i. pp. 512, 514.) [E.B.J.]

SARABALE. [Saq.]

SARDENIUS, a southern branch of Mount Taurus on the frontiers of Pisidia and Pamphylia, extending almost to Phrygia; it is also connected with Mount Climax on the frontiers between Mylasa and Pisidie Proper. (Pomp. Mela, i. 14; Plin. v. 36.) [L.S.]

SARDENE (Zapida), a mountain of Lydia, on the northern bank of the Hermus, in the neighbourhood of Cyrene; at its foot was the town of Neontelea. (Hom. Ep. i. 3; Vit. Hom. 9.) [L.S.]

SARDIES (Zapido or Zapido; Kth. Zapnua), the ancient capital of the kingdom of Lydia, was situated at the northern foot of Mount Tmolus, on a fertile plain between this mountain and the river Hermus, from which it was about 20 stadia distant. (Arrian, Anab. i. 17.) The small river Pactolus, a tributary of the Hermus, flowed through the agora of Sardes. (Herod. ii. 146.) This city was of more recent origin, as Strabo (xiv. p. 625) remarks, than the Trojan times, but was nevertheless very ancient, and had a very strong acropolis on a precipitous height. The town is first mentioned by Aeschylus (Pers. 45); and Herodotus (i. 84) relates that it was fortified by a king Meles, who, according to the Chronicle of Eusebius, preceded Candaules. The city itself was, at least at first, built in a rude manner, and the houses were covered with dry reeds, in consequence of which it was repeatedly destroyed by fire; but the acropolis, which some of the ancient geographers identified with the Homeric Hyde (Strab. xii. p. 636; comp. Plin. v. 30; Enst. ed Dion. Per. 850), was built upon an almost inaccessible rock, surrounded with a triple wall. In the reign of Arsys, Sardes was taken by the Cimmerians, but they were unable to gain possession of the citadel. The city attained its greatest prosperity in the reign of the last Lydian king, Croesus. After the overthrow of the Lydian monarchy, Sardes became the residence of the Persian satraps of Western Asia. (Herod. v. 33; Paus. iii. 9. § 3.) On the revolt of the Ionians, excited by Arisagras
SARDINIA.

(iii. 1. s.c.). Sardes is named as one of the Seven Churches, whence it is clear that at that time its inhabitants had adopted Christianity. From Pliny (v. 30) we learn that Sardes was the capital of a conventus: during the first centuries of the Christian era we hear of more than one council held there; and it continued to be a wealthy city down to the end of the Byzantine empire. (Eunap. p. 154; Hieron. patriarch at Sardis in 449; Evagrius, in 11th century; and 2 centuries later it was almost entirely destroyed by Tamerlane. (Anna Comm. p. 323; M. Ducas, p. 39.) Sardes is now little more than a village, still bearing the name of Sort, which is situated in the midst of the ruins of the ancient city. These ruins, though extending over a large space, are not of any great consequence; they consist of the remains of a stadium, a theatre, and the triple walls of the acropolis, with lofty towers.

The fertile plain of Sardes bore the name of Sardiana or Zappheo vellus, and near the city was the celebrated tomb of Alyattes. Sardes was believed to be the native place of the Spartan poet Alcaeus. The evidence of the geographers, historians, and oriental historians, particularly Diodorus and the historian Eunapius were natives of Sardes. (Chandler, Travels in Asia Minor, p. 306, fol.; Leake, Asia Minor, p. 342, fol.; Richter, Wallfahrten, p. 511, fol.; Prokesch, Denkbarkeiten, vol. iii. p. 31, fol.)

[S. L.]

SARDINIA (ν Ζαφέω: Εκθ. Ζαφέων, Sardes; Sardia), one of the most fertile and most important islands in the Mediterranean sea, situated to the S. of Corsica (from which it was separated only by a narrow strait, now called the Strait of Bonifacio) and NW. of Sicily. Its most southern extremity, Cape Spartivento, is distant only 120 geo. miles from Cape Serrat in Africa.

I. GENERAL DESCRIPTION.

It was a disputed point in ancient times whether Sicily or Sardinia was the largest. Herodotus calls Sardinia "the largest of islands" (ἡ μεγαλύτερος αρχαίων μεγαλύτερος, L. 170, ἡ μεγαλύτερος, v. 106), but in passages where it is not certain that the expression is to be understood in the strict sense, he is likely, however, distinctly calls Sardina the largest of all the islands in the Mediterranean, assigning to Sicily only the second rank (Seyl. p. 56, § 113); and Timaeus seems to have adopted the same view (ap. Strab. xiv. p. 654). But the general opinion was the other way: the comic poet Alexis already enumerated the seven great islands, as they were called, placing Sicily first and Sardinia second (Alex. ep. Cons. Porphy. de Prov. ii. § 10); and this view is followed by Scymnus Ciusus, as well as by the later geographers. (S-ynam. Ch. p. 223; Strab. ii. p. 128; Plin. iii. 7. s. 13, 8. s. 14; Diod. v. 17.). Diodorus, however, justly remarks, that it is very nearly equal to Sicily in magnitude (Diod. v. 16); and this opinion, which was adopted by Cleverius (Sicil. Ant. p. 478), continued to prevail down to a very recent period. But modern researches have proved that Sardinia is actually the larger of the two, though the difference is but trifling. (Smyth's Sardinia, p. 66.) Its general form is that of an oblong parallelogram, above 140 geo. miles in its greatest length, by about 14 geo. miles in its breadth, and from 50 to 70 in the W. coast, and 175 on the W. are therefore very fair approximations (Plin. iii. 7. s. 13), while those of Strabo, who calls the island 920 miles in length by 96 in breadth, are considerably overstated. (Strab. v. p. 294.)

Sardinia is a much more fertile and less mountainous island than Corsica. It is, however, traversed throughout its whole length from N. to S. by a chain of mountains which commence at the headland called Capo Lungo Sardo, and extend along the eastern side of the island, as well as across the western side, which forms the SE. extremity of the island. This range, which is composed of granitic and other primary rocks, is undoubtedly a continuation, in a geological sense, of the mountains of Corsica, and produces a rugged and difficult country forming much the wildest and most uninvaded part of Sardinia. The mountain summits, however, bear no trace of the same elevation as those of Corsica; the highest point, called Monte Gennargentu, rising only to 5976 feet, while the Monte di Sta l'Uunoria, in the same neighbourhood, rises to 4040 feet, and the peak of Limbara (the most northerly group of the chain) to 5686 feet; but the general elevation of the range rarely exceeds 9000 feet (Smyth, p. 67.) In the extreme W. and N. of the island there is a series of detached and detached groups of mountains; the most considerable of which is that in the SW., which extends from Cape Spartivento to Cape della Frazza on the Gulf of Oristano, and the highest summits of which attain to an elevation of nearly 4000 feet. In the extreme NW. of the island is another isolated range of less extent, called the Monti della Nurra, extending from the Cape della Cuccia to the Cape del Falcone. Both these groups are, like the mountains in the E. of the island, composed of primary rocks; but N. of the river Piso, and extending from thence to the N. coast of the island beyond Stessera, is an extensive volcanic tract, occupied in considerable part by a range of extinct volcanoes, one of which, the Monte Uricus, rises to an elevation of 3430 feet. There is no trace of any volcanic action having taken place within the historical period, but extensive tracts are still covered with broad streams and fields of lava. Notwithstanding the great number of mountains, Sardinia possesses several plains of considerable extent. The largest of these is that called the Campidano, which extends from the Gulf of Cagliari to that of Oristano, thus separating entirely the range of mountains in the SW. from those in the E. of the island; it is a tract of great fertility. A similar plain, though of less extent, stretches across from the neighbourhood of Alghero to that of Porto Torres, thus isolating the chain of the Monti della Nurra; while several smaller ones are found in other parts of the island. The general character of Sardinia is therefore well summed up by Strabo, when he says, "the greater part of it is a rugged and wild country, but a large part contains much fertile land, rich in vineyards, and, above all, most especially in corn." (Strab. v. p. 294.)

The great disadvantage of Sardinia, in ancient as well as modern times, was the insalubrity of its climate. This is repeatedly alluded to by ancient writers, and appears to have obtained among the Romans an almost proverbial notoriety. Mela calls it "sola quam alioque nostris, quae intempestue in pene pestilentes." Strabo gives much the same account, and Martial alludes to it as the most deadly climate he can mention. (Strab. v. p. 295; Mel. ii. 7. § 19; Pans. x. 17. § 11; Martial, iv. 60. 6.)
SARDINIA.

The statements of ancient writers concerning the origin of the population of Sardinia are extremely various and conflicting, and agree only in representing it as of a very mixed kind, and proceeding from many different sources. According to Pausanias, who has given these traditions in the greatest detail, its first inhabitants were the Libyans, who crossed over under the command of Sardus, the son of a native hero or divinity, who was identified by the Greeks with Hercules. (Paus. x. 17. § 2.) This Sardus was supposed to have given name to the island, which was previously called, or at least known to the Greeks, by that of Ichneuo (Ἰχνεοῦ), from the resemblance of its external form to the print of a man's foot. (Paus. l. c. § 1; Sil. Ital. xii. 385—360; Paus. i. c. Hist. Anim. Μικρ. 104.) Timaeus, according to Pliny, called it Sandalfiota from the same circumstance (Plin. iii. 12. a. 17); but it is clear that neither of these names was ever in general use. The fact that the earliest population came from Africa is intrinsically probable enough, though little value can be attached to such traditions. Pausanias indeed expressly tells us (l. c. § 7) that the population of the mountain districts (the people whom he calls Illyrienses) resembled the Libyans both in their physical characters and their habits of life. The next settlers, according to Pausanias, were a Greek colony under Aristanes, to whom some writers ascribe one of Caralis; and these were followed by a body of Iberians under a leader named Norax, who founded the city called Nora in the SW. part of the island. Next to these came a body of Greeks from Thespiae and Attica, under the command of Iolans, who founded a colony at Olbia in the N.E. corner of the island. After this came a body of Trojans, a part of those who had escaped from the destruction of their city, and established themselves in the southern part of the island. It was not till long afterwards that they were expelled from thence by a fresh body of Libyans, who drove them up into the more rugged and inaccessible parts of the island, where they retained down to a late period the same name of Illyrienses (Berosus, Paus. x. 17. §§ 3—7; Sil. Ital. 360—365). The existence of mountain tribes of this name is a well attested fact, as they are mentioned by Livy as well as by the geographers; and it is probable that the casual resemblance of name gave occasion to the fable of their Trojan origin. [Iliienses.] The Iloi or Ioleenses, on the other hand, had lost their name in the time of Strabo, and were called according to him, Dios- ghriones (Ἀγριεχριόνες, v. p. 225), a name which is, however, not found in any other ancient author. Another tribe, whose name is found in historical times, is that of the Balari, who, according to Pan-
in the island. (Id. xix. 1.) The chronology of Justin does not claim much confidence; but it seems probable that in this instance it is not far from correct, and that we may place the Carthaginian conquest about 266. But the Romans were take
place much earlier, as the Ionian Greeks still looked upon the island as open to colonisation in the reign of Darius Hystaspias.

Of the details and circumstances of the Carthaginian conquest we have no account; but we are told in general terms that they made themselves masters of the country, and became masters of the rugged mountain districts which were held by the Illissae and Const. (Paus. x. 17. § 9; Poly. i. 10.) They founded many towns, and from their superior civilisation struck such deep root into the country, that even in the time of Cicero the manners, character, and institutions of the Sardinians were still essentially Punic. It even appears that a considerable part of the population was of Punic origin, though this was doubtless confined to the towns and the more settled districts in their immediate neighbourhood. (Cic. pro Scarr. §§ 15, 49, 45.) But notwithstanding these clear evidences of the extent of the Carthaginian influence, we have scarcely any account of the long period of two centuries which elapsed between Sardinia's annexation to Carthage and the foundation of the islands of Sardinia. An isolated notice occurs in n. c. 379 of a great revolt in Sardinia, the inhabitants of which took advantage of a pestilence that had afflicted the Carthaginians, and made a vigorous effort to shake off their yoke, but without success. (Diod. xv. 24.) We learn from the next year that Carthage was able to export large quantities of corn, with which it supplied the fleets and armies of Carthage. (Diod. xiv. 63, 77.) The story current among the Greeks, of the Carthaginians having systematically discouraged agriculture in the island (Psued. Arist. de Afrub. 104), is therefore, in all probability, without foundation. During the First Punic War (n. c. 259) L. Cornelius Scipio, after the conquest of Aleria in Corsica, directed his course to Sardinia, where he defeated the Carthaginian fleet near Olbia, but did not venture to attack that city. (Zonar. viii. 11.) Having, however, received reinforcements from Rome, he landed in the island, totally defeated the Carthaginian general Hamo, and took the city of Olbia as well as several minor towns. The next year C. Sulpicius followed up this advantage, and ravaged the greater part of the island, apparently with little opposition. (Zonar. viii. 11, 12; Poly. i. 24; Oros. iv. 7, 8; Flor. ii. 2. § 16; Val. Max. v. 1. § 2.)

No real footing was, however, gained by the Romans in Sardinia during the First Punic War; and the peace which put a close to that contest left the island subject to Carthage as before. But a few years afterwards the Carthaginian mercenaries in Sardinia followed the example of their brethren in Africa, and raised the standard of revolt; they were indeed overpowered by the natives, and driven out of the island by Svinthius, governor of the province. The Sardinians undertook to restore them, and threatened the Carthaginians with war if they attempted the restoration of their own dominion in Sardinia. The latter were exhausted with the long and fierce contest with their mercenary troops in Africa, and were in no condition to resist. They consequently submitted to the demands of the Romans, and agreed by treaty to abandon all claims to Sardinia, n. c. 238. (Pol. i. 79, 88; Appian, Pan. 5; Liv. xxii. 1.) But the Carthaginians could cede no more than they possessed, and the whole island was at this time in the hands of the natives. Its subjugation was not effected by the Romans till the second of the Punic campaigns; and though in n. c. 235 T. Manlius Torquatus triumphed over the Sardinians, and is said to have reduced the whole island to subjection (Enut. iii. 3; Oros. iv. 13; Vell. Pat. ii. 38; Fast. Capit.) it is clear that this statement must be understood with considerable limitation, as the events of the following years, Sp. Carvillius and Postumio Mardo, were still able to earn the distinction of a triumph "de Sardia." (Fast. Capit.) The conquest of the island was now considered complete; and it was reduced to the condition of a province, to which a praetor was annually sent. Corsica was soon after annexed to his jurisdiction. But it is certain that the wider mountain tribes of the interior, though they may have given nominal submission, were not really subdued, and continued long after to molest the settled parts of the island by their depredations, as well as to find employment for the arms of the praetor by occasional outbreaks of a more serious description.

During the Second Punic War, Sardinia was naturally watched over with consternation by the Romans. The Carthaginians should attempt to regain possession of what they had so long held. But the war which broke out there in n. c. 215, under a native chief named Hampsicora, is attributed by the Roman writers themselves in great measure to the severity of taxation and the exactions of their governors. T. Manlius Torquatus, who had already triumphed over the Sardinians, was appointed to quell this insurrection. He defeated the Sardinians under Hioetus, the son of Hampsicora, in the neighbourhood of Corbus; but the arrival of a Carthaginian force under Hasdrubal gave fresh spirit to the insurgents, and the combined armies advanced to the very gates of Caralis. Here, however, they were met by Torquatus in a pitched battle and totally defeated. Hasdrubal was taken prisoner, Hioetus slain in the battle, and Hampsicora in despair put an end to his own life. The remains of the defeated army took refuge in the fortress of Corbus; but this was soon reduced by Manlius, and the other towns of Sardinia one after the other made their submission. (Liv. xxii. 38, 40, 41.)

From this time we hear no more of any general wars in Sardinia; and the large supplies of corn which the island began to furnish to Rome and to the armies in Italy (Liv. xxv. 32, xxvi. 24) sufficiently prove that a considerable part of it at least was in the peaceful possession of the Roman authorities. The mountain tribes were, however, still unsubdued; and in n. c. 181 the Illissae and Balare broke out into a fresh insurrection, which assumed so formidable a character that the consul Tib. Sempronius Grausus was expressly sent to Sardinia to carry on the war. He defeated the insurgents with heavy loss, and followed up his victory with such vigour that he forced the Sardinians to the sword or took prisoners not less than 80,000 persons. (Liv. xli. 19, 34, xli. 6, 12, 17, 28.) The number of captives brought to Rome on this occasion was so great that it is said to have given rise to the proverb of 'Sardi venales' for anything that was cheap and worthless. (Vict. Fir. ii. 85.) Another serious outbreak occurred in Sardinia about a. n. c. 114, to repress which M. Castrilli Magnus was
SARDINIA.

sent as praetor to the island, and after two years of
continuous warfare he earned the distinction of a
triumphe, a sufficient proof of the formidable char-
acter of the insurrection. (Epitrop. iv. 25; Ruf.
Fest. 4.) This is the last time we hear of any war
of importance in Sardinia; but even in the time of
Sallust the conquered natives were in the habit of plus,
during the inhabitants of the more fertile districts,
and the Roman praetors in vain endeavoured to
check their depredations. (Strab. v. p. 225.)

The administration of the province was entrusted
throughout the period of the Republic to a praetor
or praetor-priest. Its general system was the same as
that of the other provinces; but Sardinia was in some
respects one of the least favoured of all. In the
time of Cicero it did not contain a single free or
allied city (civitas foederata) (Cic. pro Sosier. §
44): the whole province was regarded as conquered
land, and hence the inhabitants in all cases paid
the tenth part of their corn in kind, as well as a
steptaxum or annual contribution in money. (Cic.
pro Sosier. Bact. B. i. 41; Strab. v. 225.) From the
great fertility of the island in corn, the former contribution became one of the most important resources of
the Roman state, and before the close of the Republic we
find Sardinia, Sicily, and Africa alluded to as the
"tria frumentaria subsidia repubelic." (Cic. pro
Leg. Mass. 12; Var. R. R. ii. Pr. § 3; Valerius
Maximus, l. xii.) "Arbusa, corona nostre nutrices,"
vi. 6. § 1.) For this reason, as
soon as Pompeius was appointed to the command
against the pirates, one of the first cares was to
protect the coasts of these three provinces. (Cic. L. c.)

Among the eminent persons who at different times
filled the office of praetor or praetor-priest in Sardinia,
may be mentioned the elder Cato in B. c. 198 (Liv.
xxii. A. 8, 37); Q. Antonius Balbus, who was
appointed by Marius to the government of the island,
but was defeated and killed by L. Philippus, the leg-
ate of Sulla, a. c. 83 (Liv. Epit. xxvi); M. Atius
Balbus, the grandfather of Augustus, who was
praetor in a. c. 62, and struck a coin with the head
of Sardus Pater, which is remarkable as the only one
ever known as the "inverted or suppressed head." (Hann.
Dict. Vol. I. p. 455; and M. Asmellis Scourus, who
was praetor in a. c. 53, and was accused by the
Sardinians of oppression and peculation in his govern-
ment, but was defended by Cicero in an oration of
which some fragments are still extant, which throw
an important light on the condition and adminis-
tration of the island. (Cic. pro Sosier. ed. Orell.;
Asconc. ed. Scour.)

In a. c. 46 the island was visited by Caesar on
his return from Africa, and the Siculitani severely
punished the support they had given to Nasidius,
the admiral of Pompey. (Hirt. B. Afr. 98.) The
citizens of Caralis, on the contrary, had shown their
friendship to the cause of Caesar by expelling M. Cotta,
who had been left by Pompey in charge of the is-
land. (Cass. B. C. i. 30.) Sardinia was afterwards
occupied by Menodorus, the lieutenant of Sextus
Pompeius, and was one of the provinces which was
assigned to the latter by the treaty of Misenum,
B. c. 59; but it was subsequently betrayed by Meno-
dorus himself into the hands of the enemy, as can be
seen from Cass. xxvii. 50, 36, 45; Appian, B. C. v.
56, 66, 73, 80.) It was probably for some services rendered
on one or other of these occasions that the citizens
of Caralis were rewarded by obtaining the rights of
Roman citizens, a privilege apparently conferred on
them by Augustus. (C. Caralitani civium Roma-
norum," Plin. iii. 7. a. 13.) This was in the days of
Pliny the only privileged town in the island; but
it was subsequently admitted that it had been planted in the extreme N.
at a place called Tarvis Libyaonis. (Plin. l. c.)

Two other colonies were established in the island at
a later period (probably under Hadrian), one at
Ursinarium, the other at Coriana. (Ital. Ur.),
iii. 3. § 2; Zamb. de Col. p. 410.)

Under the Roman Empire we hear but little of
Sardinia, which continued to be noted chiefly for
its abundant supply of corn, and for the extreme un-
healthiness of its climate. In addition to the last
disadvantage, it suffered severely, as already men-
tioned, from the perpetual incursions of the wild
mountain tribes, whose depredations the Roman go-

governors were unable to repress. (Strab. v. p. 225.)

With the view of checking these marauders, it was
determined in the reign of Tiberius to establish in the
island a body of 4000 Jews and Egyptians, who,
it was observed, would be little less if they should
perish from the climate. (Tac. Ann. ii. 85.) We
have no data as to the success of this great
enterprise; but it would seem that all the inhabitants of
the island were gradually brought under the Roman
government, as at the present day even the wildst
mountaineers of the interior speak a dialect of purely
Latin origin. (De la Marmora, Voy. en Sard. vol. i.
p. 198, 202.) It is clear also from the number of
the Jewish remains of the time of the Roman em-
peror, that, besides the remains of them still existing, and the
ruins of aquaducts and other ancient buildings still extant,
that the island must have enjoyed a considerable
degree of prosperity under the Roman Empire,
and that exertions were repeatedly made for its
improvement. At the same time it was frequently
chosen as a place of exile for political offenders, and
nobles who had given umbrage to the emperor. (Tac.
xiv. 62, xvi. 9, 17; Dion Cass. ixi. 37; Martial.
vi. 32.) Its great importance to Rome down to the
latest period of the Empire, as one of the principal
sources from which the capital was supplied with
corn, is attested by many writers, so that when at
length it was occupied by the Vandals it seemed,
to many, as if the life-blood of the city had been cut
off. (Prudent. ad. Symmach. ii. 942; Salvinio. de Prud. vi.

During the greater part of the Roman Empire Sardinia
continued to be united with Corsica into one
province; this was one of those assigned to the
senate in the division under Augustus (Dion Cass.
iii. 19); it was therefore under the jurisdiction of
a magistracy styled proconsul; but occasionally a
special governor was sent thither by the emperor for
the repression of the plundering natives. (Id. lv.
28; Orell. Inscrib. 74, 2377.) After the time of
Constantine, Sardinia and Corsica formed two sep-
ate provinces, and each had its own governor, who
bore the title of Praetor, and was dependent on the
Vicarius Urbis Romanus. (Nat. Digim. ii. p. 64; Bick-
ering, ed. loc.; Ruf. Fest. 4.) It was not till a. d.
456 that Sardinia was wrested from the Roman Empire by
Geneeric, king of the Vandals; and though recovered
for a time by Marcellianus, it soon fell again into the
hands of the barbarians, to whom it continued
subject till the fall of the Vandals' empire in Af-
rica, when Cyrilus recovered possession of the
island for Justinian, a. d. 534. (Procop. B. V. i. 6,
10, 11, ii. 5.) It was again conquered by the
Gothic king Totila in a. d. 551 (Id. B. G. ii. 24),
but was recovered by Narses after the death of
that monarch, and seems from this period to have

SARDINIA.
remained a dependency of the Byzantine Empire down to a late period. But in the 8th century, after having suffered severely from the incursions of the Saracens, it passed for the most part into the hands of that people, though the popes continued to assert a nominal sovereignty over the island.

III. TOPOGRAPHY.

The principal physical features of Sardinia have been already described. Of the numerous ranges, or rather groups, of mountains in the island, the only ancient name that has been preserved to us is that of the Insani Montes (Liv. xxx. 39; Claudian. B. G. 513; v. Mauromacro 6m, Ptol.), and even of these it is not easy to determine the position with any degree of accuracy; the name seems to have been applied to the whole range of mountains in the N. and NE. of the island, which seem to have been regarded (though erroneously) as more elevated than those farther S., so that the unhealthiness of the southern part of the island was popularly attributed to the shutting out of the bracing north winds by this range of lofty mountains. (Cass. 513—515; Pliny, x. 133; Euseb. Hist. eccl. ii. 21; Orosius, iv. 15.) The majority of the rivers in the island, opposite to Corsica, was the promontory of Erbebatium (Thebebatvm Æxov, Ptol.), now called the Punta del Falcone, or Lungo Sardo. The NW. point, forming the western boundary of an extensive bay, now called the Golfo d'Alghero, is the Punta di Alghero, the Heraclea Insula (Heraclea Æxov) of Ptolemy and Pliny, and one of the most considerable of the smaller islands which surround 'Sardinia. This headland forms the N. extremity of the ridge of mountains called Monti della Nura; the S. end of the same range forms a bold headland, now called Capo della Cuccia, immediately adjoining the Mediterranean, and from the top of which the Portus of Ptolemy (Neuowatos Æxov), now called Porto Conte. The Hermasium Prom. (Equaum Æxov) of the same author is evidently the Capo di Muraggia, about 12 miles N. of the river Temo; the Coracides Portus (Coracides Æxov), which he places between that river and Tharros, is probably the small promontory called by the name of Porto di S. Cesareo. Crassus (Paghia Æxov) must be Capo Al- tano, from whence the coast trends to the SE. as far as the Capo di Temido, the extreme S. point of the whole island, which must be the one called Ober-
about 18 miles from its mouth; Usellis, about 15 miles to the S. of the preceding; Valeria, to the SE. of Usellis; and Gubulez Vetus and Nova, both of which were situated between the rivers Tyanus and Tenna.

The names of several more towns uncertain. 1. On the W. coast, were Tellium (Plut.), which must have been near the Capo Negroso: Osaea or Hoscasa (Id.) at Filumontorio, a few miles W. of Neapolis; and Othoea (Ins. Ant.) apparently the modern Oristano, near the mouth of the river Tyanus. 2. On the S. coast, Pataseum (Plut.) may probably be placed at Menascoros, a few miles N. of Sulci; Bitis (Plut.) at S. Isidore di Tesalada; and Tegula (Ins. Ant.) at the Capo di Tesalada, the extreme S. point of the island. 3. On the E. coast, Feronia (Plut.) must have been near or at Pouessa, 23 miles S. of Neapolis, and is apparently the same place called in the Itinerares Pterus. It is more mentioned in the same Itinerary were probably more stations or villages. 4. On the N. coast, besides the two considerable towns of Tiliba and Turris Libya, Sardica, Patamey places two towns, which he calls Juliiola (probably the same with the Vinioda of the Itinerary, still called Torre Vignola) and Plinium, which may probably be placed at Acci, the small town near the town of the interior are for the most part very uncertain, the positions given by Ptolemy, as well as distances in the itineraries, varying so much as to afford us in reality but little assistance; and of the names given by Ptolemy, Eryximum, Herawan, Macopisa, Saraloeies or Sarala, and Less, not one is mentioned in the itineraries. The Aegaeus of the same probably the Apoikia di Rosato; the small town near the sea of the upper valley of the Tyanus: the Aegaeus Hypaitanae are those of Forcunamessus, and the Aegaeus Neapolitanae the Bagni di Saracena. There remain considerable ruins of a Roman town at a place called Castro on the road from Tumminia (Obia) to Oristano. These are supposed to mark the site of a place called in the Itineraries Lupa- dones, probably a corruption of Lupo or Lupudonia. In the SW. portion of the island, also, between Neapolis and Sulci, are considerable Roman remains at a place called Astas, probably the Metalla of the Itineraries. (Ins. Ant. p. 84.)

The Itineraries give several lines of road through the island (Ins. Ant. pp. 78—85.), one of these proceeded from Tiliba, at the N. extremity of the island, which was the usual place of landing from Corsica, along the whole length of the E. coast to Caralis. It did not accurately follow the line of coast, though it seldom departed far from it, but struck somewhat inland from Tiliba to Othoea, and from thence with some exceptions followed the line of coast. A more circuitous, but probably more frequented, route was that which led from Tiliba to Turris Libyasis, and thence along the W. coast of the island by Bosa, Cornua, and Tharros to Othoea (Oristano), from which one branch led direct across the island through the plain of the Campidano to Caralis, while another followed nearly the line of the coast by Neapolis to Sulci, and from thence round the southern extremity of the island by Tegulla and Nurax to Caralis. Besides these, two other cross lines of road through the interior are given: the one from Othoea to Caralis direct, through the mountain country of the interior, and the other crossing the same wild tract from Othoea direct to Othoea. Very few of the stations on these lines of road can be identified, and the names themselves are otherwise wholly unknown. The reader will find them fully discussed and examined by De la Marmora (Voy. de Sardegna, vol. ii. pp. 418—457), who has thrown much light on this obscure subject; but the results must ever remain in manuscript.

We learn from the geographers that even under the Roman Empire several of the wild tribes in the interior of the island retained their distinctive apppellations; but these are very variously given, and were probably subject to much fluctuation. Thus Strabo gives the names of four mountain tribes, whom he calls Parasi, Sarahes, Balares, and Aconi. (Strab. v. p. 225), all of which, with the exception of the Balari, are otherwise entirely unknown. Pliny mentions only three, the Ilianti, Balari, and Corona, which he calls "celeribiri in esse populorum" (Plin. iii. 19. a. 17), and which are in fact all three well known names. The existence of the Ilianti under the Empire is also distinctly attested by Pannasius (x. 17. § 7); yet neither their name nor that of the Balari is noticed by Ptolemy, though he gives those of no less than eighteen tribes as existing in his time. These are, beginning at the N. point of the island and proceeding from N. to S., "the Tulliatis and Corsi, the Corsonnes; then the Cossites and Cossites, then to the Scipian and Lucanienses; then to the Assarantes; after them the Cornenses (called also Aschelettes); then the Bracenses; next to whom follow the Cesiatis and Coracenses; after them the Sca putani and Sicanienses; next to these the Neapolitani and Venetini, and forthest to the S. the Siculitani and Noritani." (Plut. iii. 5. § 6). Of these the Corsi are otherwise well known, pp. 906 sq.; the four last names, as well as the Tulliatis and Cornenses, are evidently derived from the names of towns, and are probably the inhabitants of districts municipally dependent upon them, rather than tribes in the proper sense of the term. The other names are wholly unknown. After the fall of the Western Empire we find for the first time the name of Sarbarcinii (Bersabaryni, Procop. B. V. i. 13) applied to the mountaineers of the interior. This, which appears to be merely a corruption of "Barbari vicini," was retained throughout the middle ages, and is still preserved in the name of Baribaryus, given to the wild mountain tract which extends from the old place of Colpoltip to the sources of the Tabraka. These mountaineers were not converted to Christianity till the close of the sixth century, and even at the present day retain many curious traces of pagaism in their customs and superstitious usages. (De la Marmora, vol. i. p. 50.)

IV. NATURAL PRODUCTIONS, ETC.

The chief produce of Sardinia in ancient times was, as already mentioned, its corn, which it produced in large quantities for exportation even before the period of the Roman conquest. Its mountain tracts were also well adapted for pastureage, and the native tribes subsisted mainly on the produce of their flocks and herds (Diod. v. 13), while they clothed themselves with the skins, whence they were sometimes called "pelleti Saddi." The island also possessed mines both of silver and iron, of which the first are said to have been considerable. (Solin. 4. § 4.) They were undoubtedly worked by the Romans, as we learn from existing traces, and from the remains of mills given to a place on the W. coast of the island, between Neapolis and Sulci. (Ins.
SARDINIA.

Ant. p. 84; De la Marmora, vol. ii. p. 453.) It had also extensive fisheries, especially of tuna; and of the murex, or shell-fish which produced the purple dye (Suid. s. v.). But its most peculiar natural productions were the wild sheep, or moufflon, called by the Greeks μουφλόν (Ovis Ammon Linn.), which is still found in large herds in the more unfrequented parts of the island (Strab. v. p. 223; Paus. x. 17. § 13; Aelian, H. A. xvi. 34), and a herb, called Herba Sardos, the bitterness of which was said to produce a kind of convulsive grind on the countenances of those that tasted it, which was generally considered as the origin of the phrase, a Sardonic smile (Suid. Sardonicus; Ἰάδαννιος γλάστος, Paus. x. 17. § 13; Suid. s. v. Ζαπιδέας; Serv. ad Virg. Ec. vii. 41; Solin. 4. § 4.) But the etymology and origin of this phrase are exceedingly dubious, and the peculiar herb alluded to by the ancients cannot be now identified. The bitterness of the Sardinian honey (Hor. A. P. 375), which was supposed to result from the same herb, is, however, a fact still observable at the present day. (Smyth's Sardinia, p. 104.) Pausanias mentions that the island was free from wolves, as well as from vipers and other venomous serpents, an advantage that it still enjoys (Paus. x. 17. § 12; Solin. 4. § 3; De la Marmora, vol. i. pp. 173, 177); but it contained a venomous spider, apparently a kind of tarantula, called Solifuga, which was peculiar to the island. (Solin. l. c.)

The population of Sardinia seem to have enjoyed a very evil reputation among the Romans. The harsh expressions of Cicero (pro Scoeur. 9. §§ 15, 42, &c.) must, indeed, be received with considerable allowance, as it was his object in those passages to depreciate the value of their testimony; but the proverbial expression of "Sardin venales" was generally understood as applying to the worthlessness of the individuals, as well as to the cheapness and abundance of slaves from that country. (Cic. ad Fam. vii. 24.) The pastors, even in the days of Augustus, seem to have been continually making inroads into the mountain territories for the purpose of carrying off slaves (Strab. v. p. 253); but these mountainiers, according to Strabo and Diodorus, lived in caves and holes in the ground, and were unacquainted with agriculture (Strab. l. c.; Diod. iv. 30), it is no wonder that they did not make useful slaves.

Of the antiquities found in Sardinia, by far the most remarkable are the singular structures called by the inhabitants Nuraghi or Nuraggia, which are almost entirely peculiar to the island. They are a kind of towers, in the form of a truncated cone, strongly built of massive stones, arranged in layers, but not of such massive blocks, or fitted with such skill and care, as those of the Cyclopean structures of Greece or Italy. The interior is occupied by one or more vaulted chambers, the upper cone (where there are two, one over the other, as is frequently the case) being approached by a winding stair or ramp, constructed in the thickness of the walls. In some cases there is a more extensive basement, or solid substruction, containing several lateral chambers, all constructed in the same manner, with rudely pointed vaultings, showing no knowledge of the principle of the arch. The number of these singular structures scattered over the island is prodigious; above 1200 have been noticed and recorded, and in many cases as many as twenty or thirty are found in the same neighbourhood: they are naturally found in very different degrees of preservation, and many varieties of arrangement and construction are observed among them; but their purpose and destination are still unknown. Nor can we determine to what people they are to be ascribed. They are certainly more ancient than either the Roman or Carthaginian dominion in the island, and are evidently the structures alluded to by the author of the treatise de Mirabilibus, which he describes as ἱδων, or vaulted chambers, the construction of which he ascribes to Ilians. (Psued. Arist. de Mirab. 104.) Diodorus also speaks of great works constructed by Daddalus for Minerva Pachydracma, the same as the class of monuments. (Diod. iv. 30.) Both traditions are valuable at least as evidence of their reputed high antiquity; but whether they are to be ascribed to the Phoenicians or to the native inhabitants of the island, is a point on which it is very difficult to form an opinion. They are fully described by De la Marmora in his Voyage en Sardaigne, vol. ii. (from which the annexed figure is taken), and more briefly by Capt. Smyth (Sardinia, pp. 4 - 7) and Valéry (Voy. en Sardaigne).

The work of De la Marmora, above cited, contains a most complete and accurate account of all the antiquities of Sardinia, as well as the natural history, physical geography, and present state of the island. Its authority has been generally followed throughout the preceding article, in the determination of ancient names and localities. The works of Captain Smyth (Present State of Sardinia, 2 vols. Svo. London, 1828), Valéry (Voyage en Corse et en Sardaigne, 2 vols. Svo. Paris, 1836), and Tyndale (Island of Sardinia, 3 vols. Svo. London, 1849), though of much interest, are of inferior value.

[S. E. B.]
SARDONES. [SARDONES.]

SARDONYX (Σαρδονίχη), a mountain or chain of mountains in Ἰερουσαλήμ, noticed by Polyclemy (vii. 1. §§ 20 and 65). It would seem to have been part of the range now known by the name of the Vincennes Mountains. Lassen, in his map, has identified them with the Pales Mountains on the right bank of the Narmada (Nerodaba), and Forbiger supposes them to be the Sīlpura Mountains, a continuation of the same chain. [V.]

SARDONIUM OR SARDONIUM MARE (Σαρδονίους Μάρα, Strab., Pol., but Σαρδονίους Ναύς, Herod. i. 166), was the name given by the ancients to the part of the Mediterranean sea adjoining the island of Sardis, on the W. and S. Like all similar appellations it was used with considerable vagueness and latitude; there being no natural limit to separate it from the other parts of the Mediterranean. Estiatoriotes seems to have applied the name to the whole of the sea westward of Sardis to the coast of Spain (op. Pius ii. iii. 5. 10), so as to include all the whole of what was termed by other authors the MARE HIPPODAM, or BALEARIC; but this extension does not seem to have been generally adopted. It was, on the other hand, clearly distinguished from the Tyrrenian sea, which lay to the E. of the two great islands of Sardinia and Corsica, between them and Italy, and from the Libyan sea (Mare Libyicum), from which it was separated by a narrow strait formed by the island of Sardinia. The Ligurian promontory of Sicily, and the opposite point (Capsa Bax) on the coast of Africa. (Pol. i. 43; Strab. ii. pp. 105, 122; Agathem. ii. 14; Dionys. Per. 12.) Polyeus, however, gives the name of the Libyan sea to that, so as to restrict that of Sardonium Mare to the part of it that lay to the east of the Ligurian promontory of Sicily, and the opposite point (Capsa Bax) on the coast of Africa. (Pol. iii. 3. § 1.) Strabo speaks of the Sardinian sea as the deepest part of the Mediterranean; its greatest depth was said by Posidonius to be not less than 1000 fathoms. (Strab. ii. pp. 50, 54.) It is in fact quite unfathomed, and the above estimate is obviously an overestimate. [E. E. B.]

SAREPTA (Σαρεπτα), the "Zarephath" or, a "city of Sidon," of the Old Testament (1 Kings, xvi. 9. 10; comp. St. Luke, iv. 26), apparently at the most extreme north (Oudem. 20), celebrated in the history of Elijah the prophet. It is said by Josephus to be not far from Tyre and Sidon, lying between the two. (Ant. viii. 13. § 2.) Pline places it between Tyre and Gerarchon, on the road to Sidon (v. 19. § 17). In the Itinerarium Hierosolymitanum the name does not occur, but it is described by a periphrasis and placed viii. st. r. from Sidon (p. 583). The Arabian geographer Sheik Ibn Idris, quoted by Belzand, places Zareaphond 20 miles from Tyre, 16 from Sidon. (Pashkenian. p. 953.) It was formerly celebrated for its wine, and is supposed to be of very ancient origin, but not under the name of Tyrian, which he converses with that of Tripoli and Beirut. (v. 17.) Several of the later Latin poets have also sung the praises of the "dulcis Bacchi delectatio" (e.g. Sareptae serata, quae Gaza creata, quemque of the first syllable being common (ap. Eneid. p. 984). The place is noticed by modern travellers. Dr. Robinson found "a large village bearing the name Sarephon," five hours north of Tyre, three south of Sidon, near the sea-shore, where is a small town called El-Khadiy (E. St. quiver), which he imagined to mark the site of a Christian chapel mentioned by travelers in the middle ages. (Bibl. Res. vol. ii. pp. 412, 413.)

SAREPTA. [SAREPTA.]

SARGON'S DESERT (Σαργόνας ξένος οί), a vast tract of Cappadocia, on the coast of Commagene on the border of Persia, crossed by Polyclemy (v. 6. § 13), the three terraces of Pamm, Samatoga, Guatama, Sabalassua, Ariastrua, and Maroga. (Strab. xii. pp. 534, 537; Pisc. v. i. 75.)

SARGINTIA (Σαργίντια, Dion Cass. v. i. 48; Estiatori, Testa. Chal. ii. 61; Sargintia, id., Chal. vi. 53), a river of Dacia, upon which was the royal palace of Decebalus. This river was identified with the Necul or Scraga, a tributary of the Morava; since we know that Scylaxianians was the residence of Decebalus. (Sareptia, Uberti, vol. iii. pt. ii. p. 603.)

SARIPI MONTES (Σαρίμπιοι ηλικών), a range of mountains, extending, according to Pocler, between Margianna and Arianna, and the valley of several small streams. They are probably the same now called the Hauran. (Manser, v. 2. 61; supposing them to be the same as the Sarepta as Dion. Perip. v. 1099), but this is considered of probability.

SARMALIUS (It. Ant. p. 203) or SARMAIL (Σαρμαιλία, Pol. iv. 4. § 8), a town in Greece, on the road from Ancys to Tavira or Tavix, a populous city which is said to have been founded by the Persians. [E. E. B.]

SARMATIA (Σαρματία: Est. Sarmata), a name of a country in Europe and Asia. It is of Greek and Latin forms of the word Sarmata. That Sarm has the same root as Sarmatae or Serbi, Servi, Sciri, Seri, be, not only the name for the same population, but for a common species that upon not unreasonable grounds. The name seems to have first reached the Greeks through the Scythians of the lower Danube and Dan, and applied it to a non-Scythian population. When this non-Scythian population used it, and whether it was limited to them by the Scyths, is uncertain. It was a name, an appellation, also used by the Romans, etc. It seems to have been given to Sarmatian populations. It was, probably, the same as the Sarmatians themselves understood it, and that the word bears generally, just like Galli, Gracchi, or any other.

More important than the origin of the name of the questions concerning (1) the area, (2) the racial composition. Our chief answer on this point is Polyclemy; Strabo's notices are written and fragmentary. The area given by Strabo to the Sarmatians is as far as the Berezina even to the Don, the Tyrnyutas being the most western of the non-Germanic countries of the south, and the Baturis being the eastern, as on the Danube, German (vii. 299). Of a few non-Germanic nations, such as the Jazogri, Hemmacci, and Sciri, a brief notice is given, without, however, any special statement as to their Sarmatian or non-Sarmatian affiliations. In Asia, the country of the Sarmatians is called the plains of the Sarmata, as opposed to the mountains of Cascaus. The two nations also given to the Sarmatae by Strabo are the Sarmatae, not only Sarmatian, but Scyths in Europe as well.

Pline's notices are as incidental as Strabo's as nearly as brief,—the development of Germany and
SARMATIA.

Also inordinate. He carries it as far as of the Bastarnae.

any of Tacitus is bounded on the east

Probably, this is the case. In the German,

and also in the Slavonic languages, the word

Ferrugund, Vergunt, Virgunda, Virgundia, and

Vrslamia, mean hill-range, forest, elevated tract.

Pescini) Then, in the direction of Budzick and

Bassi, Behankije, Petchnakije, Peina-víllir (in

Norse), Bisnem and Bassi, (Zenus, Die Deutschen, etc.

s. v. Pecinaci and Cumanici). The Pitzinaks were

Scythians, who cannot be shown to be of recent

origin in Europe. They may, then, have been the

actual descendants of the Pescini; though this is

not necessary, for they may have been a small

people who, on reaching the country of the Pesc-

ini, took the name; in such a case being Pecin-

i in the way that an Englishman is a Briton, i. e. not

at all. The difference between the Pescini and

Bastarnae was nominal. Perhaps the latter were

Moldavian rather than Bessarabian. The Atmoni

and Siames of Strabo were Bastarnae.

The geography of the minor nations is more

obscure, the arrangement of Ptolemy being some-

what artificial. He traces them in two parallel

columns, from north to south, beginning, in both

cases with the country of the Veneti, and taking

the eastern bank of the Vistula first. The first

name on this list is that of the Gythones, south of

the Venedi. It is not to be understood by this

that the Venedi lay between the Gythones and the

Baltic, so as to make the latter an inland people, but

simply that the Venedi of the parts about Memel

lay north of the Gythones of the parts about

Elbing. Neither can this people be separated from

the Guttones and Aesti, i. e. the populations of the

amber country, or East Prussia.

The Finni succeed (ТВОРА ETS E A T T ВОРО). It is

not likely that these Finns (if Finns of Finland) can

have laid due south of East Prussia; though not

impossible. They were, probably, on the east.

The Bulanes (Sulones ?), with the Purgun-

diones to the south, and the Avareni at the head

of the Vistula, bring us to the Dacian frontier.

The details here are all conjectural. Zeus has

identified the Bulanes with the Borani of Zosimus,

who, along with the Goths, the Carpi, and the

Urgundis, attacked the empire under Gallus. In

Nestor a population called Sul-ici occupies a locality

between the Dnieper and Don: but this is too far

east. In Livonia, Henry the Lett gives pro-

minence to the nation of the Solones, a likelier iden-

tification.

For Bulanes (supposing this to be the truer

reading) the word Polyan gives us the most plau-

sible signification. Nestor uses it frequently. It is

Pole, primarily meaning occupant of plains.

Wherever, then, there were plains they might be

Polyan; and Nestor actually mentions two divi-

sions of them; the Lekha, or Pole of the Vistula,

and the Polyan of the Dnieper.

The Purgundiones of Ptolemy have always

been a cruza geographic. Name for name, they

are so like Burgundiones as to have suggested

the idea of a migration from Poland to Burgundy.

Then there are the Urgundis and the Burgundis

of the writers (see Zeus, s. e. Borani, Ur-

gundis), with whom the Ptolemaean population is

probably, identical. The writer who is unwilling to

assume migrations unnecessarily will ask whether

the several Burgundics may not be explained on the

principle suggested by the word Polyan, i. e.

whether the word may not be the name of more

one locality of the same physical conditions.

Probably, this is the case. In the German,

and also in the Slavonic languages, the word

Ferrugund, Vergunt, Virgunda, Virgundia, and

Vrslamia, mean hill-range, forest, elevated tract.
SARMATIA.

Of these there might be any amount,—their occurrence in different and distant parts by no means implying migrations.

The Avarians may be placed in Gallicia.

Are these the Arames of Caesar? The Aranes of Caesar were on the eastern confines of the Hercynian forest (Bell. Gall. vi. 24, 25), discontinuous with the Daet, a fact which, taken along with the physical conditions of the country, gives us Western Gallicia, or Anatomia Silicia, for the Aranes, a network both in Belgium and Burgundy, then the Arames, (compare with Ares), then the Saboki, then the Plovachs, and then the Besii, along the Carpathian Mountains. Gallicia, with parts of Volynia, and Podolia give us ample room for these obscure, and otherwise unnamed, populations.

The populations of the second column lie to the east of those just enumerated, beginning again with the Venoedi (vel v الواقع Oderora vellae), Volks, Grodos, with parts of Minsak, Volynia, Podolia, and Kiev give us an area over which we have six names to distribute. Its southern boundary are the Pacesusian mountains (Bukhovina). (1.)

The Galindii.—These are carried too far east, i.e. if we are right in identifying them with the Tokani people of the Galindii, 1 and Ceomina of the middle ages, who are East Prussians on the Spiridov Lacs.

(2.) The Sodert.—These again, seem to be the Subi-vrites (the termination is non-radical in several Prussian names) conterminous with the Galindii, but to the north-east of them. Their district is called Suborwes, (1)

(3.) The Stavani—Concerning these, we have the starting statement, that they extend as far as the Alamuni (ως ὄροι των Ἀλαμώνων). Is not 'Alameun an erroneous name developed out of some form of Polauna. The extension of either the Stavani to Cassenius, or of the Alami to Prussia, is out of the question.

(4.) The Jelvlini—Zonen has allowed himself (e. v. Jenosepi) to hold that the true form of this word is Torjvlini, and to identify this with a name that appears in as many forms as to make almost any conjecture extraneous. Jenosepi, Jelvlini, Jencinii, Jescinii, Gotznelini, Getznelini, Jencei, Jenosei, Jenosei, Jescinis, Jelvlini, Jelvlini, or Jenosei, are among these forms.

The area of the population, which was one of the most powerful branches of the Lithuanian stock in the 14th century, was part of Grodos, Minsak, and Podolia, a locality that certainly exists the Jelvlini.

(5.) The Costoboci in Podolia.

(6.) The Tarusciastic.—This is a name from the Taras.—perh. Tarsus, a province of the ancient Tarasiac, Zos.-sienepata, i.e. zos.-sienepata. It was applied, perhaps, to the Tarasii at the northern frontier of Dacia in general.

The third, beginning also with the Venoedi, begins in line of the River from Volos and Coridoni towards Subos and then strikes inland, each with a name to itself. Immediately on the Venoedi.

*Note: The word for word, this is the Volos and Venos of the middle ages—a form which appears as often as it should. It was German, i.e. applied to the Franks to certain Slavonic population. It was also known in German, being Wohland. Few nations stand out more presently for the name Wohland of the Carlowingian period. In the west, to the exact of Prussia, sand land of Pomerania, from which the Oxer division is near, they were in Mecklenburg, rather than in the Öder or Estomi, like the Velines of Teuton. Yet, however, the names are these. Two synonyms for these western Oxer and Oxerus are Litt.-isti (Latnica). This we know for certain. A probable synonym for the Oxer was also some form of Littis. The Littis was also in both the Oxer and Littis, and Lettland, adding to this that we meet with (Adam of Bremen) places in the north of Poltynius, the Littis. The exact expression is a double appearance of a pair of names, which is safe, however, to place the Oxer in Lettland, i.e. the southern part of Littis, or in parts of Littismus. Proper and Courland, mention Paghbergen in the north of the Velines—"

(2.) The Osti (Ossii), probably third in the Oxer. It should be added, however, there were wages, appears frequently in the inscription as Ostiti, as a name for the occupants of Oxen, who may have been known early in the medieval history.

(3.) The Sia, and Cirmesites of the Oxen. The name of many explanations. It may be the word for forest = Cardo. It may be the word (or K-r), which appears in a great number of words,—Corvi (Karwian), Corvi (or Karv)—in (K-r), etc. The forms (K-r) are Cevosian (Courland) approach it, but the influence is instead of north. It more probably is almost certainly shows that we have passed the country of the Slavonians and Littis, that of the Estonians, Ingrams, and Leisi. Then, to the east—"

(4.) The Kevostites.—Here the Kevostites common Flan root as before. Any part of a new formment of Nowgorod of Ossacian seems to be the same, the present finest of betwixt to the Oxenian division of the name (the Oxen is non-radical). Then—"

(5, 6, 7, 8, 9, 10, 11, etc.) The Scii. of whom the Agathyni, then the Arex, Arx, Arxites, south of whom the Slavonians and north far as the Oxenian mountains. The Civi and Nato, sons of whom the Oxen and south of the Oxen, as far as the Starni. Between the Alami and Scii the Karyones and Sargiti. At the head of the Tamisi the Ophones and Tamisis.

There are few points in this list which are not, The bend of the Oxen (Oxen) would be of Ophones in Estistami. The bend reached the Oxenian mountains, and the Oxenian rather than the OxenianFRCL extended far beyond both Europas and Ossaccia. The Oxenian bear name from Nestor.—the Oxen, on the Oxen, Sula.—a word that may merely mean a name is a name that reappears in Cassenius.—The Oxen was the Oxen (Oxen) i.e., a branch of the Oxenian, except the present time of a tract on the Oxen. The Oxen may have been the tribes on (pomal) the such compounds being common in Sarimi,—Pa-labi (or the Erb), Pa-marnia (or the Erb). The whole geography, however, is indefinite at present.
SARMATIA.

SARMATIA. 917
his text imply more mountains than really exist.
All his mountains were, probably, spurs of the Carpathians, just as in Sarmatian Asiaica they were of Caucasus.

TOWNS.—See SCYTHIA.

II. SARMATIA ASIATICA.

The boundaries are—the Tanais, from its sources to its mouth, European Sarmatia from the sources of the Tanais northwards, the Maeotis and Cimmerian Bosporus, the Euxine as far as the river Corax, the range of Caucasus, the Caspian as far as the river Soana, the Volga as far as its bend (Scythia being on the east of that river) and on the north an Unknown Land. Without knowing the point at which this terra incognita begins, it is impossible to give the northern limits of Sarmatia Asiatica. It is included, however, in the governments of Caucasus, Circassia, Astrakhan, Don Kosaks, Saratov, Simbirsk, Kazan, Viatka, Koustron, Vladimir (?), Ni&zhni Novgorod, Riazan (?), Tchernov, and Penza; all the governments, in short, on the water system of the Volga; a view which makes the watershed between the rivers that empty themselves into the White Sea and the rivers that fall into the Caspian and Euxine a convenient provisional boundary.

For the obscure geography of Asiatic Sarmatia, the bend of the Tanais is our best starting point. To the north of it dwelt the Perierbidi, a great nation; to the south the Iaxamatae, the former in Don Kosak, Voronezh, and Tambow, Saratov, the latter in Astrakhan. North of the Perierbidi came the Assai, the Swardenii, the Zacatas, the Hippopoghi Sarmatia, the Modocae, the Royal Sarmatians, the Hyperborean Sarmatians, the unknown. In Kazan and Simbirsk we may place the Cucenides, and on the east of the Volga the Ptitheohiphi and Materi. The Ny彅triae wage must be at the mouth of the Volga. If so, the order in which the names have been given is from north to south, and the Ptitheohiphi are in Eastern Kazan, the Materi in Saratov.

The remaining populations are all (or nearly all) in the governments of Caucasus and Circassia, in the northern spurs of the Caucasus range. They are the Siraceni, the Pessisi, the Thymetaeae, the Turambaeae, the Asturici, the Aritchi, the Zichei, the Copompei, the Meiteli, the Agoritae, the Melanchelae, the Sappontrei, the Scymitaeae, the Amazones, the Sunani, the Scacae, the Oriniel, the Vali, the Servi, the Tuci, the Diduri, the Vodeae, the Olongae, the Ionideae, the Gergi. The Achataei, Kerketi, Benichi, Suancoloths, and Sarraei are truly Caucasian, and belong to the geography of the mountain range rather than the Sarmatian plains and steppes—for such they are in physical geography, and such view a view of Strabo, so far as he noticed Sarmatia at all.

It is difficult to determine the source of Ptolemy's information, difficult to say in what language we are to seek for the meaning of his names. The real populations, as they actually existed, were not very different from those of the Herodotean Scythia.

The Herodotean names are wanting: Scythians, probably, Scythian,—the northern populations to which they applied being Ugrian. Are the names native? For the parts due north of Caucasus they may be so; indeed it is possible that the greater number of them may be due to a Caucasian source. At the present time, when we are fairly supplied with

3 x 3
SARMATIA.

Of these there might be any amount,—their occurrence in different and distant parts by no means implying migrations.

The Avareni may be placed in Gallicia.

South of them come the Ombrones, and the Anarto-phracti. Are these the Amentes of Caesar? The Amentes of Caesar were on the eastern confines of the Hercynian forest (Bell. Gall. vi. 24, 25), conterminous with the Goths, a fact which, taken along with the physical conditions of the country, gives a Western Gallicia, or Austrian Silesia, for the Anarto-phracti. Then come the Burgiones, then the Sclavii (compare with Avars), then the Sabotae, the Frigites, and then the Bassi, along the Patagonian Mountains. Gallicia, with parts of and Podolis give us ample room for the and otherwise unnamed, populations.

The populations of the second of east of those just enumerated, i.e., with the Venedi (les voix Obres), Groodoi, with parts of Minak, and Kiew give us an area over names to distribute. Its soil is moreover Romanized.

(1.) The Galindae—east, i.e., if we are right with the Galindites of the Getae, not the Alani middle ages, who are Itingi. It is along the Lakei.

(2.) The Sodriences are its physical companion and physical companions upon varying Prussian names. The Galindites, with a view to but to the north of the Danube, sometimes to called Sodriences. This remains more than a natural.

(3.) The starting point of the Vistula was no ethnological to the Alani for it was an incursion. The western half of Poland was the part of Germany, remained so in the time of the Romans, whom the Marcus, the leader of Lucan, was chastised and drove beyond the seas, a march through Moesia. This, too, the Via Drusiana, upon the Via Drusiana nature is oftentimes in contact.—Jayyges, Roman, Geto, &c., who though (almost certainly) having their ethnological affinity, are not, nevertheless, Romanian, but, on the contrary, populations of less or less of an independent district of the Thracian, who, in contact with the Geti, Daci, Moesians, Thracians, &c., have been found in the districts south of the Danube must be looked upon as intrusive and young soil on which they are found.

On the other hand, it must be remembered that the Sarmatian were emancipated from the Danubian and divided from each other by the whole extent of Roman provinces of Dacia, the tribes of the east being the parts between the Danube and the Don, the area of those of the west being between the Danube and the Timiris.

The former are with the Syntii—kings of Pontus, &c., &c., whence, more than the M. Crassus triumphed. His armies, however, against the Sarmatians, were only succeeded in the campaigns by which M. Lucullus was the whole of the Tanais-Danubian and Moesia, east of Viminacium, was first in 72 B.C. The point at which the Don and Syntii met (72 B.C.) would more especially come in contact of the conquered; point, where those of Pannonia, Illyricum, and Moesia joined, and the pre-eminently Sarmatian division of the whole between the Danube and the Tanais by which the pre-eminently Sarmatian is opposed to the latter.
the Marcomanni may have been Sarmatae, under another name. This is not only compatible with an undoubtedly German origin of the name Marcomanni (Marchmen), but is a probable interpretation. As was the term, it might be, and very possibly applied to a non-German population. The Marcomanni, for example, was one held by Germans for the Romans; the other held by the Romans for the Germans. The former was called a German, the latter a Roman. In the Ukraine, the former men of the latter race, as Germans, the Romans would call them the Germans. But a considerable number of the Romans would have been more or less of a Sarmatian origin. The Jazyges and Quadi are (as usual) important members of the confederacy.

A.D. 270. Aurelian resigns the province of Dacia to the Romans, and withdraws the scene of many a Sarmatian inroad from the field of observations—the attacks of the Barbarians upon each other being unrecorded. Both before and after this event, however, Sarmatian inroads along the whole line of the Danube, were frequent. Sarmatians, too, as well as Dacii (Getae) were comprehended under the general name of Goth on the borders of Thrace, Dacia, and Moesia. Add to this that the name of Vandal is now becoming conspicuous, and that under the name of Vandal history we have a great deal that is Sarmatian.

The most important effect of the cession of Dacia was to do away with the great block of Roman, Romanising, or Romansed territory which lay between the Sarmatians of Pannonia and the Sarmatians of Scythia. It brought the latter within the range of the former, both being, then, the frontiers of Moesia. Add to this the fact of a great change in the nomenclature being effected. The German portion of the Marcomanni (Thervingians and Grutungos) has occupied parts of Dacia. The members of this section of the German nation, and only known to the Sarmatians as Vandals. Again, the Hun power is developing itself; so that great material, as well as nominal, changes are in the process of development. Finally, when the point from which the Sarmatians come to be viewed has become Greek and Constantinopolitan, rather than Latin and Roman, the names Slavoni and Servi will take prominence. However, there is a great slaughter of the Sarmatians by Carus, on his way eastwards. Then there is the war, under Constantine, of the Sarmatian horsemen.
SARMATIA.

data both as to the names by which the populations of the parts in question designate themselves, as well as those by which they are designated by their neighbours, there are no satisfactory identifications. Nevertheless, the names of the Sarmatian tribes may arrive at by a certain amount of assumption; but it is doubtful whether this is legitimate. In the names, for instance, beginning with As- (As-boci, &c.) we may see the Slavonic for trans; in those with pot the Slavonic od — both of which are common in the geographical terminology of the Russians, &c. But these names, as are the generalities of the other coincidences.

In Siberia, for instance, a Samoyed tribe is named Motorai: name for name, this may be Materi; whether, however, it denotes the same population is another question.

Are the Sarmatians of Ptolemy natural divisions? Subject to an hypothesis, which will be just stated in the present article, but which will be exhibited in full in Scythia, the Sarmatians of Ptolemy are objectionable, both for what it contains and what it omits. The whole of the Asiatic Sarmatia is, more or less, arbitrary. It seems to be a development of the area of the Herodotean Sarmatiae. In the north it comprised Pinn or Ugrian, in the south Cimmeria, &c. And even the Alans, the Alani were Scythian, as were several other tribes. It is therefore no ethnological term. Neither are its boundaries natural, if we look at the physical conditions of the country. It was defined upon varying and different principles, — sometimes with a view to physical, sometimes to ethnological, sometimes to personal geography. It contains more than a natural Sarmatia.

On the other hand, the Vistula was no ethnological line of demarcation. The western half of Poland was Sarmatian, in respect to its climate, surface, and the manners of its inhabitants. The Lygii, however, having been made part of Germany, remained so in the eyes of Ptolemy. That the populations on each side of the Lower Vistula, i.e. of West and East Ponsia, were the same, is certain; it is certain, at least, that they were so at the beginning of the historical period, and all inference leads us to hold that they were so before. The Vistula, however, like the Rhine, was a good natural boundary.

The Jazyges Metanastes were most probably Sarmatian. Pliny calls them Jazyges Sarmatiae (iv. 25); the name Metanastes being generally interpreted removed. It is, however, quite as likely to be some native adjunct misunderstood, and adapted to the Greek language.

The other Jazyges (i.e. of the Masocita) suggested the doctrine of a migration. Yet, if the current interpretation is right, there might be any amount of Jazyges in any part of Sarmatia. It is the Slavonic for language, and, by extension, for the people who speak a language: — "a po Ouje rjeje, gde wcestey w Woglu, jasay swoj Muroma, i Cseremisi swoj jasay, e Mordwa swoj jasay;" — translated, "On the Oka river, where it falls into the Volga, a particular people, the Muroma, and the Tcheremís, a particular people, the Mordva, and a peculiar people." (Zanes, s. v. Ojifoun.) Hence it has at least a Slavonic gloss. On the other hand, it has a meaning in the Magyar language, where Jassay = bowman, a fact which has induced many scholars to believe that there were Magyars in Hungary before the great Magyar invasion, indeed before the Hun. Be this as it may, the district of the Jazyge Masoca is called the Jassy group district at the present moment.

More than one of the Dacian populations were Sarmatian,—the difference between Dacica, the name of the Roman province, and Dacia, the name of an independent and hostile population, being merely political. Indeed, if we look to the distribution of the Sarmatiae, their south-eastern limit must have the parts about Tormo. [See Sarmatiae.] Here, however, they were intrusive.

ETHNOLOGY. — The doctrine upon this point is everywhere and the present notice is inserted in the article on Scythia. It is to the effect that, in its proper application, Sarmatia meant one, many, or all of the north-eastern members of the Slavonic family, probably, with some members of the Lithuanic, included.

HISTORY. — The early Sarmatian history is Scythian as well [Scythia], and it is not until Pannonia becomes Roman province that we find the Sarmatian tribes become prominent in history, and, even then, the distribution of the several wars and alliances between the several nations who came under the general denomination is obscure. In doing this there is much that in a notice like the present may be eliminated. The relations of the Greeks and earlier inhabitants of Asia with the Romans, with the Sarmatians, the Alani, the Gete as well, the relations of the latter being with the provinces of Pannonia, with the Marcomanni, and Quadi, &c. Both are neighbours to a tribe of Jazyges.

The great Mithridatic Empire, or, at any rate, the Mithridatic Confederacy, contained Sarmatian elements that were the descendants of the Herodotean Sarmatiae. Members of this division it must have been whom the Marcus, brother of Lucius Lucullus, chastised and drove beyond the Danube, in his march through Moesia. Those, too, it was with whom the Cis-Danubian nations in general were oftentimes in contact.—Jazyges, Botolanii, Costoboci, &c., who though (almost certainly) Sarmatian in their ethnological affinities, are not so so called. Sarmatian, but, on the contrary, populations with more or less of an independent history of their own. Thirdly, the Sarmatians, who, in conjunction with the Getes, Daci, Moesians, Thraceans, &c., may have been found in the districts south of the Danube, must be looked upon as intrusive and foreign to the soil on which Jazyges was found.

On the other hand, it must be remembered that the Sarmatiae eo somine fall into two divisions, divided from each other by the whole extent of the Roman province of Dacia, the area of those of the east being the parts between the Danube and the Dora, the area of those of the west being the parts between the Danube and the Thracian. The relations of the former are with the Scythians, Botolanii, the kings of Pontus, &c., over whom, some years later, M. Crassus triumphed. His actions, however, as well as those of M. Lucullus, so far as they were against the Sarmatiae, were only accidental details in the campaigns by which Moesia was reduced. The whole of the Trans-Danubian frontier of Moesia, Trans-Danubia, and the Roman province of Dacia was formed by the Danube.

The point at which the Romans and Sarmatians would more especially come in contact was the country about Sirmium, where the three provinces of Pannonia, Illyricum, and Moesia joined, and where the pre-eminently Sarmatian districts of the nations between the Danube and the Jassy were northwards—pre-eminently Sarmatian as opposed to the Dacians,
SARMATIA.

on one side, and the Quadi, &c., of the Regnum Vannianum, on the other. In the general Pannonian and Dalmatian outbreak of A. D. 6, the Sarmatians of these parts took a share (Vell. Pat. ii. 110), as they, doubtlessly, did in the immediately previous war of the Marcomanni (see Marcomannen). The Marcomanni, Quadi, Jaazyes, and western Daci, and Sarmatiae being generally united, and, to all appearances, the members of a definite confederacy.

The Regnum Vannianum gives us the continuation of the history of these populations (A. D. 19—50). It is broken up; Veuvisus (?) of the Seni himself discards the Marcomannen, the southern part of the territory of Rome, made kings of the parts between the Marus and Casus (Moravia) instead. To the Vannian confederacy (a Bona-sta) the Sarmatiae and Jaazyes supply the cavalry, the occupants of the Banat itself the infantry (Tac. Aen. xii. 29).

For A. D. 35, we find an interesting notice in Tacitus, which gives definite to the Sarmatiae Asiaeatis of Pomponius. It is to the effect that, in a war with Parthia, Pharasmanes entered into an alliance with the Albanians of the coast of the Caspian and the Sarmatiae Scectnachi (? Baresaces). (Tac. Ann. vi. 33.)

A. D. 69. Two pregnant sentences tell us the state of the Sarmatian frontier at the accession of the Marcomanni (88 a.d.): "... Sarmatiae gentes; nobilissimus cladius mutuis Daecus" (Hist. i. 2). The Suevi (who here mean the Quadi and Marcomanni) and Sarmatiae (foot and horse) are united. Daedia is paving the way to its final subjection. The Jaazyes seem to fall off from the alliance; insomuch as they offer their services to Daedia. The Suevi, who are now Italic, equally faithful to Rome. (Hist. iii. 5.) In the following year it is Sarmatiae and Daci who act together, threatening the fortresses of Moesia and Pannonia (iv. 54).

An invasion of Moesia by the Roxolani took place A. D. 69. This is a detail in the history of the Eastern branch of the Sarmatae, the remains of Daedia now draws near. When this has taken place, the character of the Sarmatian area becomes peculiar. It consists of an independent strip of land between the Roman Provinces and Quado-Marcomannic kingdom (Bacat); its political relations fluctuating. When Tacitus wrote the Germania, the Goths had paid tribute to both the Quadi and Sarmatiae; a fact which we owe to the Sarmatiae to the choice, and also a line of separation. The text of Tacitus is ambiguous: "Partem tributum Sarmatae, partem Quadi, ut alesiusignis imponunt." (Germ. 43). Were the Sarmatiae and Quadi, or the Quadi alone, of a different family from that of the Goths? This is doubtful. The difference itself, however, is manifest.

These were Sarmatiae amongst the subjects as well as the allies of Decapolis; their share in the Daedia War (A. D. 106) being details of that event. They were left, however, in possession of a large portion of their country, i. e. the parts between the Vallum Romanum and the frontier of the Suevi, Quadi, or occupants of Regnum Vannianum; the relations of this to the Roman and non-Roman areas in its neighbourhood being analogous to that of the Decumanus Agri, between the Rhine and Upper Danube.

In the Marcomannic War (under M. Antoninus) the Sarmatiae are as prominent as any members of the confederacy: indeed it is probable that some of the Marcomanni may have been Sarmatiae, under another name. This is not only compatible with the undoubted German origin of the name Marcomannen (Marchmenn), but is a probable interpretation of it. German as was the term, it might be, and very likely was, adopted from a non-Germanic relation. There were two Marches: one held by Germans for Rome and against the Sarmatiae, the other held by the Sarmatiae for themselves. The former would be a March, the other an Urkraeine. In the eyes of the Germans, however, the men of the latter would just as much be Marchmen as themselves. What the Germans in the Roman sense regarded as a neighbouring population the Romans would call it also. We shall soon hear of certain Borderers, Marchmenn, or men of the Urkraeine, under the name of Limigantes (a semi-barbarous form from Limes); but they will not be, on the strength of their Latin names, Latins. The Solitudines Sarmatiae of the Roman maps was more or less of a Sarmatian March. The Jaazyes and Quadi (as usual) important members of the confederacy.

A. D. 270. Aurelian resigns the province of Daedia to the Barbariae; a fact which withdraws the scene of many a Sarmatian invad from the field of observation,—the attacks of the Barbariae upon each other being unrecorded. Both before and after, under Diocletian, the Sarmatiae were along the whole line of the Danube, frequent. Sarmatiae, too, as well as Daci (Casses) were comprehended under the general name of Goth in the reigns of Decius, Claudius, &c. Add to this that the name of Vandalia is now becoming conspicuous, and that under the name of Vandal history we have great events.

The most important event of the cessation of Daedia was to do away with the great block of Roman, Romanising, or Romanised territory which lay between the Sarmatiae of Pannonia and the Sarmatiae of Scythia. It brought the latter within the range of the former, both being, then, the frontiers of Moesia. Add to this the fact of a great change in the nominal structure of the Sarmatae, a portion of the Marcomannian (Thervings and Grutungs) has occupied parts of Daedia. The members of this section of the German name would only know the Sarmatiae as Vandals. Again, the Huns power is developing itself; so that great material, as well as nominal, changes are in the process of development. Finally, when the point from which the Sarmatae come to be viewed has become Greek and Constantineopolis, rather than Latin and Roman, the names Slavoni and Servi will take prominence. However, there is a great slaughter of the Sarmatae by Carus, on his way eastwards. Then there is the war, under Constantine, of the Sarmatae of the Border,—the Sarmatae limitanei,—a Sarmatae War. [See Limigantes.] The authors who tell us of this are the writers of the Historia Augusta and Ammianus; after whose time the name is either rarely mentioned, or, if mentioned, mentioned on the authority of older writers. The history is specific to certain divisions of the Sarmatian population. This was, in its several divisions, hostile to Rome, and, for a time, still, there were Sarmatian conquests, and colonies effectuated by the transplantation of Sarmatiae. One lay so far east as Gaul.

"Arvaque Sarmomatis super metas coloni." (Aeschn. Mosella)
SARMATICA INSULA.

appplies to one of these. There were more of them. The general rule, however, is, that some particular division of the name takes historical prominence, and that the general name of Sarmatia, as well as the particular Sarmatia of the parts between Dacia and Pannonia, and those between Scythia and Persia, disappears. [See VANDAL; TRAIANA-

SARMATICA INSULA, an island at that mouth of the Danube called Kallontos (καλλόντος στόμα). (Plin. iv. 24. s. 24.) [T. H. D.]

SARMATIACEAE PORTAE (al Σαρματιακά πόρτες, Pol. v. 9. §§ 11, 15), a narrow pass of the Caucasus, whence it is also called Caucasicus Portae. (Plin. vi. 11. s. 12, 15. s. 15.) From its vicinity to the mouth of a sea, on the east side called by some of the ancients Portae Caspiæ (Sest. Novo, 19), Claustra Caspiæ (Tac. H. i. 6), and Via Caspia (Id. Ann. vi. 33); but Pliny (l. c.) notes this as an error; and the proper Portae Caspiæ were in the Taurus (Förbiger, Geogr. vol. ii. p. 47, note 92). The Sarmatiae Portae formed the only road between Sar-

SARMATICI MONTES (Σαρματικά μέντες), a range of mountains, situated very distinctly (v. 1), rising in M. Coronea, flowed in a westerly direction into the Caspian. Professor Wilson considers that it must be either the Atrax or the Gerousa. [V.]

SARRNIA or SARMIA, is named in the Maritime Ion. among the islands of the Ocean between Gallia and Britannia. Supposed to be Guernsey. [G. L.]

SARNUS (Σαρνίους; Saros), a river of Cam-

SARMATICUM MARE (Σαρματικός θάλα

SARMATICA, a town of Ariana, mentioned by Ammianus (xxiii. 6). It is probably the same as the Sarmagana of Ptolemy (vi. 17. § 4), as both he and Ammianus place it next to Bitata, in the same province. [V.]

SARMEGETHUSA (Σαρμηγέθουσα, Pol. iii. 8. §§ 9; Σαρμηγέθουσα, Dion Cass. ivii. 8), one of the borders of Thracia, and the residence of the Dacian kings (βασιλεύς, Pol. l. c.) It is called Sarmetegesta in the Tabula Peut., and Sarmetoegesta by the Geogr. Rav. (iv. 7). It is incontestab-

SARMATIA, a town of Arizia, mentioned by Ammianus (xxiii. 6). It is probably the same as the Sarmagana of Ptolemy (vi. 17. § 4), as both he and Ammianus place it next to Bitata, in the same province. [V.]

SARMAGHUSA (Σαρμαχούσα, Pol. iii. 8. §§ 9; Σαρμηγέθουσα, Dion Cass. ivii. 8), one of the borders of Thracia, and the residence of the Dacian kings (βασιλεύς, Pol. l. c.) It is called Sarmetegesta in the Tabula Peut., and Sarmetoegesta by the Geogr. Rav. (iv. 7). It is incontestably the same place as that called Σαρμετειχαν καισάους by Dion Cassius (ivii. 10; ivii. 8), which it lies on the river Sangita (18. c. 14); a situation which is also testified by ruins and inscriptions. A later period a Roman colony was founded here by Trajan, after he had expelled and killed Decembalus king of the Dacians; as is testified by its name of Colonia Ulpi Traiana Augusta and may be inferred from Ulpius (Digs. 50. tit. 15. l. 1.), from whom we also learn that it possessed the Jus Italicum. It was the head-quarters of the Legio xiii. Gemina (Dion Cass. ivii. 33), and at first probably there was only a Roman encampment here (Id. ivii. 9; Aurel. Vict. Cass. xiii. 4). Hadrian conferred an aqueduct upon it, as appears from an inscription (Gruter, p. 177. 3; Orelli, No. 912), and it is probable therefore that they have retained the colony, on account of its numerous Roman inhabitants, when he resolved to abandon the rest of Dacia to the barbarians. From an inscription to Trajan and his sister Marciana, there would appear to have been baths here (Orell. 791). Sarmetegusthais occupied the site of the present Varselidi (called also Gradiskie), on the river Sorel or Stare, about 5 German miles, which course in its Ferrus, or Vulcan Pass. (Comp. Inscr. Gruter. p. 272; Orelli, Nos. 831, 9324, 3434, 3441, 3527, 3686, 4558; Zamace. Asa. pp. 40, 74; Marsili, Dissab. tab. 24, 55. &c.; Uberti, iii. 2. p. 616, seq.; Zumpt, in Rhet. Mus. 1845. p. 253—259.—[T. H. D.]

SABON.

No trace is found in ancient authors of a town of the name of Sarsus; but it is mentioned by the Geographer of Ravenna (iv. 33), and seems, therefore, to have grown up soon after the fall of the Roman Empire. [E. H. B.]

SABON. [SABRON.]

SABRON. [SABRONICUS SINUS.]

SABRONICUS SINUS (Σαμωρίνα κόλπος, Άσσος, Geogr. v. 317; Strab. viii. pp. 335, 339, 374, 380; Σαμωρίνα κόλπος, Strab. viii. p. 333; Σαμωρινός κόλπος, Strab. viii. pp. 335, 369; Σαμωρίνα θάλασσα, Strab. viii. p. 335; Σαμωρινή, Strab. viii. p. 335; Σαμωρινή, Strab. viii. p. 335; Gulf of Samos), a gulf of the Aegean sea, extending from the promontories of Sunium in Attica and Scyllum in Troezen up to the isthmus of Corinth. The length of the gulf, according to Sclavus (p. 20, Hudson), is 740 stadia. It washes the coasts of Attica, Megara, Corinth, Epidaurus and Troezen, and contains the islands of Argina and Samia. It was said to have derived its name from Saron, a king of Troezen, who was drowned while hunting in a lagoon upon the Troezenian coast called Phoeboeae and afterwards Saron. (Paus. ii. 30. 7; Eum. M. p. 708. 52; Leake, Morea, vol. ii. p. 448.) A Troezenian river Saron is also mentioned (Eustath. of Thessalon. MS. p. 131) as being alike likewise the Gulf of Samos. (Steph. B. s. v.) Some derived the name of the gulf from Σαρών, "an oak." (Plin. iv. 5. 18.)

SARPEDON (Σαρπέδων ὁ Σαρπεδώνιος ἔας), a promontory on the coast of Cilicia, 80 stadia to the west of the mouth of the Calycadnus, and 120 stadia from the place where the river Megander and Antiochus the Great this promontory and Cape Calycadnus were made the frontier between the kingdom of Syria and the free countries of Asia Minor. (Strab. xiv. p. 670; Ptol. v. 8. § 3; Appian, Syr. 39; Pomp. Mela, i. 13; Liv. xxxvi. 38; Plin. v. 22; Suidas, Mar. Omn. § 163.) It now bears the name of Lissos-el-Kalhe. (Leake, Asia Minor, 231.)

SARPEDONIUM PROM. (Σαρπεδώνιου βρόχων, Herod. vii. 58), the NW. extremity of the gulf of Melas, and due north of the eastern end of the island of Imброс, now Cape Panos. [J. R.]

SARASTES. [SARSUS.]

SARBRUM, in Gallia, is placed by the Table of the Saias (Geogr. Antiquate, No. 5) and Vesuna (Perigeeus). It is supposed to be Charismus, but the real distances do not agree with the numbers in the table. [G. L.]

SARS, a river on the W. coast of Hispania Tarraconensis, between the Provin. Neronii and the Minus. (Mela, iii. 1.) Incontestably the modern Sar, which does not reach the sea, but falls into the ancient Ullis at Turris Aquatica (Torres de Estecio). (Comp. Florus, Exp. Socr. xiv. p. 41.) [T. H. D.]

SAR'SINA (Sera, Strab. Euh. Sarissina; Sarissina), a city of Umbria, situated in the Apennines, on the left bank of the river Sepis (Sarisa), about 16 miles above Cassena. It seems to have been in very early times a powerful and important city, as given Comana (Geogr. Antiquate, No. 5) and Vesuna (Perigeeus), who were one of the most considerable of the Umbrian tribes. Indeed some authors speak of them as if they were not included in the Umbrian nation at all, but formed a separate tribe with an independent national character. Thus Polybius, in enumerating the forces of the Italian nations, speaks of the Umbrians and Sarissinates, and Plautus, in one passage, makes a similar distinction. (Pol. ii. 24; Plaut. Mostell. ii. 3. 83.) The Fasti Capitoline, also, in recording the conquest of the Sarissinates, speak of the two consuls as triumphing "de Sarissinatibus," without any mention of the Umbrians; but the Epitome of Livy, in relating the same event, classes them generally among the Umbrians. (Liv. Epit. xix.; Fast. Capit.) The probable conclusion is that they were a tribe of the Umbrian race; but with a separate political organisation. We have no particulars of the war which ended in their subjection, which did not take place till the time of the Umbrians; they were one of the last of the Italian states that submitted to the Roman yoke. From this time Sarissina was certainly included in Umbria in the Roman sense of the term, and became an ordinary municipal town, apparently not of much importance. (Strab. v. p. 227; Plin. iii. 14. 19.) If derived its chief celebrity from its being the birthplace of the celebrated comic poet Platus, who was born there about the a. c. 254. very shortly after the Roman conquest. (Hieron. Chron. ad Ol. 145; Fest. a. e. Probus, p. 238.) Its territory contained extensive mountain pastures, — whence it is called Sillius Italica "dives lactis" (Sil. Ital. viii. 461), — as well as forests, which abounded in durnce, so much that it was often prized by the Etruscan nobility. Various inscriptions attest the municipal rank of Sarissina under the Roman Empire (Orell. Inscr. 4404; Gruter, Inscr. p. 522; p. 1095. 2); but its name is not again found in history. In the middle ages it sunk into complete decay, but was revived in the 15th century, and is now a small town of 3000 inhabitants, which retains the ancient name. [E. H. B.]

SARTA (Σάρτα, Herod. vii. 122; Steph. B. s. v.), a maritime town on the Singitic gulph between Singus and Ampelus Prom; now Kardiali. (Leake, North Greece, vol. iii. p. 154.) [E. B. J.]

SARBEUNA (Σαρβευνα), a town of Cappadocia, in the district Chamosa or Chamanese, on the northeastern slope of Mount Pius, celebrated for hot springs (Ptol. v. 6. § 12; Tab. Pest., where it is called Araseana, whence Aquae Arasanae; I. Ant. p. 202, where its name is Sacoena). It is by some believed to be the modern Basiyum. [L. S.]

SARUNETES, the name of an Alpine people (Plin. iii. 20. 24) in the valley near the sources of the Rhine. There seems to doubt concerning the correctness of the name of the city and it may be preserved in Sargoma, which is north of Cher, and between Cher and the Lake of Constans. In a passage of Caesar (B. G. iv. 10) he mentions the Nantuates as a people in the upper part of the Rhine, above the Helvetii. The name Nantuates [NANTUATES] is corrupt; and it is possible that the name Sarunetes should be placed in its place. [G. L.]

SARUS (Σάρος), one of the principal rivers in the south-east of Asia Minor, having its sources in Mount Taurus in Cappadocia. It first flows in a south-eastern direction through Cappadocia by the town of Comana; it then passes through Cilicia in a south-western direction, and, after flowing by the town of Adana, empties itself into the sea about 3 miles of the mouth of Taurus, after dividing itself into several branches. (Liv. xxxiii. 41.) According to Xenophon (Anab. i. 4. § 1) its breadth at its mouth was 5 peltrea or 300 feet; and Procopius (de Aedif. v. 4.) says it was a navigable river. (Comp. Strab. xii. p. 535; Ptol. v. 8. § 4; Appian, Syr. 4; Plin. vi. 3; Eustath. ad Dion. Per. 667, who erroneously calls it
Sarzala.) The modern name of the Sarza is Sliema or Sliema.

[1. S.]

SAMI'VA (Zedurnu), a town of Cappadocia, 24 Roman miles to the south of Naxianus; the place contained the first church to which Gregory of Na-xianus refers at the end of the 4th cent.: it was then a most populous and miserable town. (Ib. Ant. p. 144; It. Hieroc. p. 577; Hieroc. p. 700, with Weselings's note.) Some look for its site near the modern Baboma. [L. S.]

SASO (Zeró, Prot. iii. 13. § 47; Zerov, Strab. vi. p. 381), a small, rocky island, lying off the coast of Grecian Ilyria, N. of the Aecocranian promontory, and possessing a landing-place which served as a station for pirates. (Comp. Polym. vi. 110; Mela, ii. 7; Plin. iii. 96. a. 30; Iliou. Ant. p. 489.) It is still called Sassa, Sassone, or Sasso. [T. H. D.]

SASP'TRES, or SASP'TRI (Za-erpu, Za-erpe, Herod. i. 104, iv. 37, 40, v. 79: Apoll. Rhod. ii. 387, 1942; Stephan. B. s. v.: cf. Amm. Mar. xii. 8. § 31), a Scythian people, dwelling to the east of the river Meander. According to Ptolemy, Herodotus and Stephanus (I. c.) they were an inland people, but Appollinus places them on the sea-coast. They belonged to the 18th satrapy of the Persian kingdom (Herod. iii. 94), and were armed in the same manner as the Colchians, that is, with wooden helmets, small shields of untanned hide, bracelets, and swords. (Ib. vi. 79.) The Persian scholars, Appolus and Porphyrius, say that the Sapes are identical with the eastern Iberians, respecting whom the Greeks invented so many fables. (Rennell, Geogr. of the Coast, p. 503; Ritter, Erdkunde, ii. p. 923; Bahr, ad Herod. i. 104.) [T. H. D.]

SATOSULA, a town of Latium, situated in the neighbourhood of Tibur, of which city it was a dependency. It is mentioned only by Livy (vii. 19), as one of the towns taken from the Tiburtini in a. c. 354, and was probably always a small place. The site has been identified by Gell and Nibby with the ruins of an ancient town, at the foot of the hill of Sipilius, between 7 and 8 miles from Tivoli (Tibur). The ruins in question, consisting of a line of walls of polygonal construction, surrounding a hill of small extent, unquestionably indicate the site of an ancient town, but as we know that the Tiburtine territory contained several other towns besides Empulum and Sosilia, the only two whose names are known to us, the identification of the latter is wholly arbitrary. (Gell, Top. of Rome, p. 394; Nibby, Dissert., vol. iii. p. 63.) [E. H. B.]

SATYRAE (Satyré, It. Hieroc. vii. 7. § 17), a place in Achaea, on the left bank of the Nir, probably near the present Kori, or else somewhat more to the S., near the half-destroyed village of Ambwota. [T. H. D.]

SÁTALÁ (Zátrala), an important town of Armenia Minor, as may be inferred from the numerous routes which branched off from whence to Pontus and Cappadocia. Its distance from Cessana was 325 miles, and 124 or 135 from Trapezus. The town was situated in a valley surrounded by mountains, a little to the north of the Euphrates, and was of importance, being the key to the mountain passes leading into Pontus; whence we find that in later times the Legio xv. Apollinaris was stationed there. In the time of Justinian its walls had fallen into decay, but that emperor restored them. (Prot. i. 15. § 9, v. 7, § 3, v. 17. § 41; Dion Cass. lxxxvii. 18; Procop. de An. iv. 31; It. Ant. pp. 181, 183, 306, 307; Litt. Sot. p. 161.) The site of this town has not yet been discovered with certainty, though ruins found in various parts of the country have been identified with it by conjecture. (Tournere, Voyages, Letter 21, c. 2, p. 17; Rennell, Asia Minor, ii. p. 219; Cramer, Asia Minor, ii. p. 153, fol.)

SÁTARCHA, a Scythian people on the E. coast of the Tauric Chersonesus, who dwelt in caves and holes in the ground, and in order to avoid the rigour of winter, even clothed their faces, leaving only two small holes for their eyes. (Mel. i. 1.) They were unacquainted with the use of gold and silver, and carried on their trade by means of barter. They are mentioned by Pliny under the name of Scythi Satarchae. (Hist. Nat. i. 48, 49.) According to Ptolemy, there was a town in the Tauric peninsula called Satarche (Σαταρκη), which the scholiast (ad loc.) says was subsequently called Mataracha (Ματαράχη); but the account of the Satarchae living in caverns seems inconsistent with the idea of their having a town. Yet Valerius Flaccus also mentions a town—perhaps a district—called Satarchaeus, which, from his expression, it appears was a distant but multiform country. We may conclude to have been rich in herds of cattle. (Argo n. 145.) The same poet describes the Satarchae as a yellow-haired race. (Ib.) [T. H. D.]

SATICULA. (Σατικολία, Diód. : Eös. Zevam-αριν, Stepb. B.: Saticulianus, Liv.; but Saticulius, Virg.), a town of Samium, nearly on the frontiers of Cappadocia. It is first mentioned at the outbreak of the First Samnite War (a. c. 343), when the consul Cornilius established his camp there, apparently to watch the movements of the Samnites in that quarter, and from thence subsequently advancing into their territory, was drawn into a defile, where he narrowly escaped the loss of his whole army, but was victorious in a battle about three miles to the S. (Liv. vii. 38, 34.) After this campaign in a. c. 315, during the Second Samnite War, it was besieged by the Roman dictator L. Aemilius, and was considered of sufficient importance to engage a Roman army for nearly a year, when it was taken by Q. Fabius. The Samnites made a vigorous attempt to relieve it, but without effect, and it fell into the hands of the Romans. (Id. ii. 21, 22; Diod. xix. 72.) From this time it continued in their power; and after the close of the war it was one of the places which they determined to occupy with a colony, which was established there in a. c. 313. (Vell. Pat. i. 14; Fest. a. v. Saticula, p. 540, M.) Livy does not notice the establishment of a colony there on this occasion, but speaks of a colony in Procii, It. (loc. cit.) as a "colonia Latina," which distinguished themselves in the Second Punic War by their zeal and fidelity. (Liv. xxvii. 10.) It is remarkable, however, that a few years before the name of Saticula is found among the towns that had revolted to Hannibal, and were recovered by Fabius in a. c. 215. (Liv. xxi. 39.)

But it appears that all the MSS. have "Anticula" (Aesch. Ask., ad loc.); and though this name is otherwise quite unknown, it is certainly not safe to alter
SATURCUM.

923

It, when, by so doing, we involve ourselves in a great historical difficulty; for the revolt of one of the Latin colonies is in itself most improbable, and was certainly not an event to be passed over with such slight notice. The territory of Satricum ("Satricum") is again noticed during the same war in conjunction with that of Trebula (Liv. xxiii. 14); but from the end of the Second Punic War all trace of it disappears. The name is not found in any of the geographers, and its site is extremely uncertain. But the passages in Livy (ix. 21, 22) seem to point to its being an area from which certain towns may very well have been placed. Provincia near Sas Agasa dei Goti; while the description of the march of Marcellus in n. c. 216, shows clearly that it must have been situated S. of the Vulturnus, and probably in the valley at the back of Mount Tibatin, between that ridge and the underfalls of Mount Taburnus. It may be added that such a position would be a very natural one for the Roman consul to occupy at the first outbreak of the Samnite wars, from its proximity to Capua. [E. H. B.]

SATURCUM. [DASSAREM, Vol. I. p. 756, a.]

SATNOEIS (Satnoeis: Tuscula or Tusculum), a small river in the southern part of Trosa, having its sources in Mount Ida, and flowing in a western direction through Mount Aetna and the slopes of Mount Etna, to the Aegean. It owes its celebrity entirely to the Homeric poems. (I. vi. 34, xiv. 445, xxi. 87; Strab. viii. 395, 605, 606, who states that at a later time it was called Samoileus.) [L. S.]

SATRAS (Xerpes, Herod. vii. 110—112), a Thracian people who occupied a portion of the range of the Pangaean, between the Nestus and the Scythium. Very probably it is the same as that of modern Thrace, and the ancient Slav tribe who had always preserved their freedom; for a fact for which he accounts by the nature of their country, a mountainous region, covered with forests and snow — and by their great bravery. They alone of the Thracians did not follow in the train of Xerxes, when marching towards Greece. The Satræs were in possession of the Roman consul to occupy at the first outbreak of the Samnite wars, from its proximity to Capua. [E. H. B.]

SATURINUS (Zehre, Herod. vii. 110—112), a Thracian people who occupied a portion of the range of the Pangaean, between the Nestus and the Scythium. Very probably it is the same as that of modern Thrace, and the ancient Slav tribe who had always preserved their freedom; for a fact for which he accounts by the nature of their country, a mountainous region, covered with forests and snow — and by their great bravery. They alone of the Thracians did not follow in the train of Xerxes, when marching towards Greece. The Satræs were in possession of the Roman consul to occupy at the first outbreak of the Samnite wars, from its proximity to Capua. [E. H. B.]

the towns the recovery of which by the Volscians is ascribed to Coriolanus. (Liv. iii. 39.) It seems to have continued in their power from this time till the Gaulish invasion, as in n. c. 386 it was made the head-quarters of the Volscians and their allies on the outbreak of a war with Rome, and, after their defeat by Camillus, was assaulted and taken by that general. (Id. vi. 7, 8.) It would appear that it must on this occasion have for the first time received a Roman colony, as a few years later (n. c. 381) it is styled a "colonia populi Romani." In that year it was attacked by the Volscians in concert with the Samnites, and, after an obstinate defence, was carried by assault, and the garrison put to the sword. (Id. vii. 22.) It is subsequently mentioned on two occasions as affording shelter to the Volscian armies after their defeat by the Romans (id. vii. 32, 33): after the last of these (n. c. 377) it was burnt by the Latin, who considered themselves betrayed by their Volscian allies. (Id. 33.) It was not till n. c. 348 that the city was rebuilt by the Antiiates, who established a colony there; but two years later it was again taken by the Romans under M. Valerius Corvinus. The garrison, to the number of 4,000 men, were made prisoners, and the city burnt and destroyed, with the exception of a temple of the Matres Matutae (Capit.) A few years later it was the scene of a victory of the Romans, under C. Plantius, over the Antiiates (id. viii. 1), and seems to have been soon after restored, and received a fresh colony, as it was certainly again inhabited at the commencement of the Second Samnite War. In n. c. 230, after the disaster of the Caminian Forks, the Satricans revolted from Rome and attached themselves to those of Paestum (Capit.) But they were soon punished for their defection, their city being taken by the consul Papius, and the Samnite garrison put to the sword. (Liv. ix. 12, 14; Oros. iii. 15.) From this time it seems to have continued subject to Rome; but its name disappears from history, and it probably sunk rapidly into decay. It is interestingly mentioned during the Second Punic War (n. c. 206) on occasion of a prodigy which occurred in the temple of Mater Matutae, already noticed (Liv. xxviii. 11); but it seems certain that it ceased to exist before the close of the Republic. Cicero indeed alludes incidentally to the name in a manner that shows that the site at least was well known to him. (C. G. Liv. xiv. 43.) But Pliny reckons it among the celebrated towns of Latium, of which, in his days, no vestige remained (Plin. iii. 5. a. 9); and none of the other geographers allude to its name. The site, like that of most of the Latin cities which disappeared at an early period, is a matter of much doubt; but several passages in Livy tend to prove that it must have been situated between Antium and Ursium, and its site has been fixed with much probability by Nibby at the farm of Casale, now called Conca, about half way between Asacio and Velletia. The site is an isolated hill of tufo, of somewhat quadrangular form, and about 2,000 feet in height, with precipitous sides, and presents portions of the ancient walls, constructed in much the same style as those of Albano and Dionysinae, and in the list of the thirty cities of the Latin League. (Diod. v. Fr. 3; Dionys. v. 61.) But when it first appears in history it is as a Volscian town, apparently a dependency of Antium. It had, however, been wrested from that people by the Romans at the same time with Cordii, Pullus, &c.; and hence it is one of

[EE]
SAVARI. [SAVARIA.] SAVON. [SAVOIA.]

SAVARI (Zadar, Phot. iii. 5. § 22), a people in the N. of European Sarmatia, between the rivers Don and Dniester. (Phot. iii. 5. § 22, p. 128) They are mentioned by the Greek Historians as a powerful Slavonian race which dwelt on the rivers Dona, Sem, and Sula, and possessed the towns Teckierovique and Ljubetsch, both of which are mentioned by Constantine Porphyrogenitus (de Administr. Imp. c. 9). The name of the Sjowar does not occur in history after the year 1024, though their land and castles are frequently mentioned subsequently in Byzantine annals. (Ib. p. 129.)

SAVARIA. [Saravaria.] SAUCONNA. [Saracen.]

SAVIA (Savia, Phot. ii. 6. § 56), a town of the Peloponnese in Hispamania Tarracensis, the site of which is undetermined. (T. H. D.)

SATURNIA (Saturia; Saturnia), an ancient city of Etruria, situated in the valley of the Albinean (Ad Etruria), about 24 miles from its mouth. There is no doubt that it was an ancient Etruscan city; and as Pliny tells us that it was previously called Aturia (iii. 5. a. 8), it is probable that this was its Etruscan name, and that it first received that of Saturnia at the time of the Roman colony. But no mention of it is found in history during the period of Etruscan independence: and there is certainly no ground for the supposition of Müller that it was one of the twelve cities of the Etruscan League. (Müller, Etur. vol. i p. 330.) Dionysius indeed mentions it as one of the cities founded by the Pelasgiians, and subsequently taken from them by the Tyrrhonians. (Strab. xi. p. 494.) But, though this is strong evidence for the antiquity of the city, there is no proof that it was ever a place of importance under the Etruscans: and it even seems probable that before the close of their rule, Saturnia had sunk into the condition of a subordinate town, and a mere dependency of Calateria. At least it is remarkable that Livy, in speaking of the establishment of the Roman colony there, says that it was settled " in agro Calaterano." (Liv. xxxii. 55.) The foundation of this colony, which was established in a. c. 183, is the only historical fact recorded to us concerning Saturnia; it was a "colonia civium," and therefore would naturally retain its colonial rank even at a late period. Pliny, however, calls it a "colonia sine turribus," but Polyepon gives it the rank of a colony, and it is mentioned as such in an inscription of Imperial times. (Plin. iii. 5. a. 8; Phot. i. 3 § 49; Gruter. Inscrip. p. 1093. 8.) It is probable therefore that it received a fresh colony under the Roman Empire, though we have no account of the circumstance. But it seems not to have been of any importance, and the existence of towns which belong to this period are of little interest.

The modern town of Saturnia, which retains the ancient site as well as name, is but a very poor place; but its medieval walls are based on those of the ancient city, and the circuit of the latter may be distinctly traced. It occupied the summit of a conical hill, surrounded by steep cliffs, about 3 miles in circuit. Considerable portions of the walls remain in several places: these are constructed of polygonal masonry, resembling that of Cosa, but built of travertine; they are supposed by Micali to belong to the Roman colony, though other writers would assign them to the Pelasgiians, the earliest inhabitants of Etruria. (Micali, Mem. Inst. Pop. Ital., vol. i. pp. 152, 210; Dennis, Etur. vol. ii. pp. 308-310.) Numerous tombs are also found in the neighbourhood of the town, but which more resemble the cromleachs of northern Europe than the more regular sepulchres of other Etruscan cities. (Dennis, I. c. pp. 314-316.)

[Corinthian Bocephus, 90 stadia S. of Achilles. It was in honour of a king of Bocephus, whom Dubois de Montpérin identifies with Satyrus I., who reigned a. c. 407-393. (Voyage autour du Cayseus, v. p. 48.) The same authority (id. p. 36) identifies the mound with the hill Kourkoua. [T. H. D.]

SATHIROM INSULAE (Zaratìpou ronu), Phot. vii. 2. § 30), a group of three Indian islands, lying E. of the Chersonesus Aures, in the same degree of latitude as its southern point. They were said to be inhabited by a race of men having tails like Satyrs; that is, probably, by apes resembling men. Perhaps the Anamamba islands. (T. H. D.)

SATURRA PROMONTORIUM (Zaratìpou ronu, Phot. vii. 3. § 2), a promontory on the coast of Sinas (China), forming the southern extremity of the bay Tiberias, and placed by Ptolemy directly under the equator. It is probably the present Cape St. James. (Forbiger, Geogr. ii. p. 477, note 5.)

SAVA. [MATHATIIT.] SAVARI (Zadar, Phot. iii. 5. § 22), a people in the N. of European Sarmatia, between the rivers Don and Dniester. (Phot. iii. I. p. 82) They are mentioned by the Sjowar, a powerful Sla

SAULOS PARTHAYNISA (Σαουλος Παρθανισα), this curious mixed name which has passed into treaties of geography from the editions of Isidorus in the Geographia Graecia Minoris of Hudson and Müller, appears to have rested on a bad reading of the Greek text. The amended text of the passage in question is in Παρθανισα καθ ετελειν (Isidor. Slav. Part. c. 12), which is probably correct (see Geog. Graec. ed. Müller, Paris, 1856.) [V.]

SAUCINIA (Zaurania), a town of unknown site in Puntus Poloneusicus, is mentioned only by Ptolemy. (Phot. iii. 2. § 2.)

SAVIA. [Savaria.] SAUCONNA. [Saracen.]

SAVIA (Savia, Phot. ii. 6. § 56), a town of the Peloponnese in Hispamania Tarracensis, the site of which is undetermined. (T. H. D.)

SAVARI. [Saravaria.] SAUCONNA. [Saracen.]

SAVIA (Savia, Phot. ii. 6. § 56), a town of the Peloponnese in Hispamania Tarracensis, the site of which is undetermined. (T. H. D.)

SAVA. [MATHATIIT.] SAVARI (Zadar, Phot. iii. 5. § 22), a people in the N. of European Sarmatia, between the rivers Don and Dniester. (Phot. iii. 5. § 22, p. 128) They are mentioned by the Greek Historians as a powerful Sla
SAUROMATAE.

turns (Plin. iii. 5. a. 9), and was crossed by the Appian Way, a few miles from its mouth, by a bridge called the Pons Campanus, from its forming the frontier of that country. [E. H. B.]

SAUROMATAE (Sauromatæ), probably the form which the root Sarmat- took in the languages from which the information of the Greeks of the parts about Obiopiola was derived. It is the only form found in Herodotus, who knows nothing of the later name Sarmatae. When this latter term, however, came into use, Sauromatae, especially with the Roman writers, became archaic and poetical, or exotic. This is the case in the line —

" Ultra Sauromataes, fugere hinc libet," &c. (Juv. Sat. ii. 1), and elsewhere.

The Greeks of the Black Sea would take the name from either the Scythians or the Getae: and it is probably to the language of the latter, that the form belonged. Hence, it is a form of Sarmatæ, taken from one of the eastern dialects of Dacia by the Greeks; possibly being passed through a Scythian medium as well as adapted to Sauromatae, which is from the western parts of the Dacian area, and adopted by the Romans. Its first and most convenient application is to the Asiatic branch of the Sarmatians. These may be called Sauromatae as well, as they are by Ptolemy. On the contrary, it is rare, even in a Greek author, to apply Sauromatae to the Sarmatians of the Pontic western frontier. The evidence as to the identity of the words is superabundant. Besides the internal probability, there is the statement of Pliny — "Sarmatæ, Græcis Sauromatae" (iv. 25).

With the writers of the Augustan age the use of the two forms fluctuates. It is exceptional, however, for a Greek to write Sauromatae, or a Roman Sauromatae. Exceptional, however, as it is, the change is frequent. Diodorus writes Sauromatae (ii. 44), speaking of the Asiatic branch; Strabo writes Sauromatae under the same circumstances; also when following Greek authorities. For the western tribes he writes Sarmatae.

Ovid uses the term that best suits his metre, giving Sarmatae the preference, castoris poribus.

"Sarmaticæ major Geticaeaeus frequentia gentes." (Trost. v. 7. 13.)

"Jam didici Getico Sarmaetisque loqui." (Ibid. v. 12. 58.)

"Stridula Sauromates naustria bubulcus agit." (Ibid. iii. 12. 30.)

The Sauromatae of Herodotus were the occupants of a Adger, a word evidently used in a technical sense, and perhaps the term by which his informants translated the Scythian or Sarmatian equivalents to our word March; or it may mean street. The Bushkir country is probably divided into four streets, roads, or voves, according to the countries to which they lead. The number of these Adgers were two; the first being that of the Sauromatae, bounded on the south and west by the Tanais and Maeotis, and extending northwards fifteen days' journey. The country was treeless. The second Adger was that of the Budini, following this. This was a wooded country. There was no necessity for connecting the Budini with Sarmatae, on the strength of both being occupants of an Adger. All that comes out of the text of Herodotus is, that the Sauromatae near Obiopiola knew of a Adger of the Sauromatae and a Adger of the Budini. The former seems to have been the north-eastern part of the Don Kosak country, with a portion of Saratov (iv. 21).

When Darius invaded Scythia, the Sauromatae, Gelechi, and Budini acted together, and in opposition to the Aehyrs, Neuri, Androphagi, and Tauri; the former agreeing to help the Scythians, the latter to leave them to their fate. This suggests the probability that, politically, the Adgers were confederate districts (Herod. iv. 119).

The language of the Sauromatae was Scythian with selectisms, a statement which leads to the strange story of the Amazons (iv. 110-116), with whom the Sauromatae were especially connected (iv. 117). The women amongst them remained unmarried until they had slain an enemy.

The account of Hippocrates is substantially that of Herodotus, except that he especially calls the Sauromatae European and Scythian; though, at the same time, different from other nations. He makes the number of enemies that the virgins must slay before they can marry, three.

For further details, see Sarmatia. [R. G. L.]

SAVUS (Σαυς or Σαυδος: Sace), a great and navigable tributary of the Danube; it has its sources in the Carnian Alps (Plin. iii. 28; Journ. de Reb. Get. 56.), and, flowing in an eastern direction almost parallel with the more northern Dravus, reaches the Danzas at Styraenum. A portion of its upper course forms the boundary between Noricum and Pannonia, but the whole of the lower part of the river belongs to the southern part of Pannonia, and some of the most important towns of that country, as Siscia, Servium, and Sirmium, were situated on its banks. (Strab. iv. 207, vii. 4. 314; Appian. 22; Plut. i. 16. § 1, iii. 9. § 1; Justin. xxii. 3, 8, 16; Claud. de Natur. Stilich. ii. 192.)

[S. L.]

SAXA RUBRA (Prima Porta), a village and station on the Flaminian Way, 9 miles from Rome. It evidently derived its name from the redness of the tufo rocks, which is still conspicuous in the neighbourhood of Prima Porta. Cicero wrote "Ad Rubres" in the Tabula, while Martial calls the place simply "Rubrae;" and this form is found also in the Jerusalem Itinerary. (Martial, iv. 64. 15; Itin. Hier. p. 612.) But the proper form of it seems to have been Saxa Rubra, which is used both by Livy and Cicero. The former mentions it during the wars of the Romans with the Venetienses, in connection with the operations on the Cremers (Livy. ii. 49); and Cicero notices it as a place in the immediate vicinity of Rome, where M. Antonius halted before entering the city. (Cic. Phil. ii. 31.) It was there also that Antonius, the general of Vespasian, arrived on his march upon Rome, when he learnt the successes of the Vitelliana and the death of Sabinius. (Tac. Hist. iii. 9.) The road also (n. c. 32) it was the point to which Maxentius advanced to meet Constantine previous to the battle at the Milvian bridge. (Vit. Cass. 40. § 23.)

We learn from Martial (l. c.), that a village had grown up on the spot, as would naturally be the case with a station so immediately in the neighbourhood of the city.

On a hill on the right of the Via Flaminia, a little beyond Prima Porta, are considerable ruins, which are believed to be those of the villa of Livius, known by the name of "Ad Gallinas," which was
SAXETANUM.

situated 9 miles from Rome, on the Via Flaminia. (Plin. xxv. 30. s. 40; Suet. Gall. 1.) [E. H. B.]

SAXETANUM, a place in Hispania Baetica (Juv. Sat. xvi. 405), called Sex (2αξ) by Ptolemy (ii. 4. § 7), Hecxi by Mela (ii. 6), and by Pliny (iii. 3) Sexti Firmum Julianum. It is the Ετρογίαν ἄσβος of Strabo (iii. p. 156). On the same see Casaubon (ed Strab. i. p. 50), and Tuschuck (ed Melos, vol. ii. p. 2. p. 447). It was renowned for its salt-fish. (Strab. iii. p. 156; Athen. iii. p. 121; Plut. Cim. 9.) It is also called in Attic. Apoll. rivers, and most probably Μοτυλί. (Cf. Flores, Exp. Socr. xii. p. 101.)

[S. T. H. D.]

SA'XOINES (Σάξοινες; Saxones), a German tribe, which, though it acted a very prominent part about the beginning and during the early part of the middle ages, yet is not even mentioned in ancient history previous to A. M. 267. In that year, we are told by Eutropius (vii. 13; comp. Oros. vii. 25), the Saxons and Franks infested the coasts of Armorica and Belgica, the protection of which was intrusted to Carausius. The fact that Pliny and Tacitus do not mention them in the country in which we afterwards find them, does not prove that they did not exist there in the time of those writers. For the invasion of the country of the Cimbri, the Chauci, the Sarmatians, the Sclavones, and the Suebi, we cannot find the Saxones, are mentioned by those writers only under the general appellation of the Cimbri, without noticing any special tribes under separate names. Ptolemy (ii. 11. § 11; comp. Steph. B. a. v.) is the first authority describing the habitations of the Saxons, and according to him they occupied the narrow neck of the Cimbrian Chersonese, between the river Albin (Εξαβίνα) and Chalene (Τραβες), that is, the country now called Holstein. Their neighbours on the south of the Albin were the Chauci, in the east the Scordones, and in the north the Singulones, Angli, and other smaller tribes of the peninsula. But beside this portion of the continent, the Saxons also occupied three islands, called "Saxon islands," off the coast of Holstein (Σάξοινα θρόνοι, Ptol. ii. 11. § 31), one of which was no doubt the modern Heligoland; the two others must either be supposed to have been swallowed up by the sea, or be identified with the islands of Dycksmuland and Fielchowel, which are nearer the coast than Heligoland.

The name Saxones is commonly derived from Sok or Sokka, a battle-knife, but others connect it with scax (earth) or senc, according to which Saxons would describe the people as living in fixed seats or habitations, as opposed to the free or wandering Franks. The former, however, is the more probable origin of the name; for the living in fixed habitations was certainly not a characteristic mark of the ancient Saxons.

They appear to have gradually spread along the north-western coast of Germany, and to have gained possession of a large extent of country, which the Ravenna Geographer (iv. 17, 18, 23) calls by the name of Saxonia, but which was certainly not inhabited by Saxons. In the 2d. d. 371 the Saxons, in one of their usual ravaging excursions on the coasts of Gaul, were surrounded and cut to pieces by the Roman army under Valentinian (Oros. vii. 32; Amm. Marc. xxviiii. 2, 5; comp. xxvii. 4, xxvii. 8; Zosim. iii. 1, 6); and about the middle of the fifth century a band of Saxons led by Hengist and Horsa crossed over into Britain, which had been completely given up by the Romans, and now fell into the hands of the roving Saxons, who in con-

SAXONIUM INSULAE. [Saxones.]

SCAL'DAVa, a town in Moesia Inferior, between Novae and Trnaminum. Ins. Ant. p. 232. It is called Scaldea (Σκάλδεια) by Procopius (De Aed. iv. 11). Variously identified with Ratasa and Rastischeck. [T. H. D.]

SCALABIS, a town of Lusitania, on the road from Olisipo to Emerita and Bracara. Ins. Ant. pp. 430, 421. Pliny (iv. 21. s. 35) calls it a Roman colony, with the surname Praesidium Julium, and this name is found in "Civitas Julia Scalabicia" of Lusitania. It is undoubtedly the same place which Ptolemy (ii. 5. § 7) erroneously calls Ἐκιλητικος, which is probably a corruption of Ἐκιλητις κολ. (κωλαινα) The modern Santarem. (Cf. Wesseling, ad Ins. L. c.; Isidor. de Vitr. iii. c. 44; Flores, Exp. Socr. xii. p. 69.) [T. H. D.]

SCALAS, a town in Cappadocia Galatia. Caesar (B. G. vi. 33), the first writer who mentions the Scaldi, says, when he was pursuing Ambiorix, that he determined to go "as far as the Scaldi which flows into the Mosus (Μούσαι) and the extremity of the Arduenna" (Αρδουναι). All the MSS. quoted by Schneider (B. G. vi. 35) have the reading Scalades, "Scalades," and other tritivaring variations, except one MS. which has "Sambim"; so that, as Schneider concludes, we cannot doubt that Caesar wrote "Scaldea" in this passage. Pliny (iv. 17) describes the Scaldi as the boundary between the Gallic and Germanic nations, and says nothing of its union with the Mosus. A Scalae ad Sequamam Belgica; and " a Scalde induscitus " of Feni in Scalabis, Teziandr chorito nominamus. Some geographers suppose that the Tabula of Ptolemy is the Schelde. [TABUDA.]

The passage of Caesar is most easily explained by supposing that he knew nothing of the lower course of the Schelde, and only reported what he heard. It is possible that the East Schelde was once the chief outlet of the Schelde, and it may have had some communication with the channels about the islands between the East Schelde and the lower course of the Mosus, which communication no longer exists. There is at least no reason for taking, in place of "Scaldia" or "Scaldem," the reading "Sabin" (Σάβινο), from the Greek version of the Testament of Solomon.

The Schelde rises in France, in the department of Aisne. Below Antwerp it enters the sea by two estuaries, the Hond or West Schelde and the East Schelde. [G. L.]

SCAMANDER (Σαμανδρας; Menderes Su, or the river of Burnabachia), a famous little stream in the plain of Troy, which according to Homer (Il. xx. 74) was called thus by the gods and Scamander by men; though it probably owed the
SCANDIA. [ILLYRICUM, Vol. II. p. 36, b.]

SCANDERBIUM. [Cos.]

SCANDIA. [Cythera.]

SCANDIA (Zealand) or SCANDINAVIA.

Until about the reign of Augustus the countries north of the Cimbrian Chersonesus were unknown to the ancients, unless we assume with some modern writers that the island of Thule, of which Pytheas speaks, was the western part of what is now sometimes called Scandinavia, the western part of Norway and Sweden. The first ancient writer who alludes to these parts of Europe, Pomp. Mela, in the reign of Claudius, states (iii. 3) that north of the Albis there was an immense bay, full of large and small islands, between which the sea flowed in narrow channels. No name of any of these islands is mentioned, and Mela only states that they were inhabited by the Hermiones, the northernmost of the German tribes. In another passage (iii. 6) the same geographer speaks of an island in the Sinus Codanus, which, according to the common reading, is called Codanonia, or Canandaviva, for which some have emended Scandinavia. This island is described by him as lying in that sea both in size and fertility. But to say the least it is very different as to whether he alludes to the island afterwards called Scandia or Scandinavia, especially as Mela describes his island as inhabited by the Teutones. The first writer who mentions Scandia and Scandinavia is Pliny, who, in one passage (iv. 27), likewise speaks of the Sinus Codanus and its numerous islands, and adds that the largest of these islands was called Scandinavia; its size, he continues, is unknown, but it is inhabited by 500 pagi of Helleveiones, who regard their island as a distinct part of the world (alter terrarum orbis). In another passage (iii. 30) he mentions several islands to the east of Britain, to one of which he gives the name of Scandia. From the mention of pagi which speaks in this latter passage we might be inclined to infer that he regarded Scandinavia and Scandia as two different islands; but this appearance may arise from the fact that in each of the passages referred to he followed different authorities, who called the same island by the two names Scandia and Scandinavia. Ptolemy (ii. 11. 9) speaks of a group of four islands on the east of the Cimbrian Chersonesus, which he calls the Scandiae Insulae (Zealandiae Insulae), and of which the largest and most eastern one is called Scandia, extending as far as the mouth of the Vistula. In all these accounts there is the fundamental mistake of regarding Scandinavia as an island, for in reality it was a group of islands which is connected on the northeast with the rest of Europe. Pliny speaks of an immense mountain, Svero, in Scandinavia, which may possibly be Mount Kjolen, which divides Sweden from Norway, and a southern branch of which still bears the name of Sver-Rogen. The different tribes mentioned by Ptolemy as inhabiting Scandia are the Chausini (Chausaur), Phovnones (Saudron), Phriatini (Saudron), Votini, Dauciones (Saudron), and Levomi (Saudron). At a later time, Jornandes (De Reb. Got. p. 61, &c.) enumerates no less than twenty-eight different tribes in Scandinavia. Tacitus does not indeed mention Scandinia, but the Sithones and Sinones (whence the modern name Sweden) must unquestionably be conceived as the core of this northern part of the German tribes and as inhabiting Scandinia (Gothia). It is well known that according to Jornandes the Goths, and according to Paulus Diaconus (v. 2) the

SCAMANDRIA.

name Xanthus to the yellow or brownish colour of its water (comp. IL vi. 4, xxxi. 8). Notwithstanding this distinct declaration of the poet that the two names belonged to the same river, Pliny (v. 33) mentions the Xanthus and Scamander as two distinct rivers, and describes the former as flowing into the Portus Achaiæorum, after having joined the Simoës. In regard to the colour of the water, it was believed that the stream received its name from a deep which drank of it. (Aristot. Hist. Anim. iii. 12; Aslian, Hist. Anim. vili. 21; Plin. ii. 106; Vitruv. viii. 13, 14.) Homer (IL xvi. 147, &c.) states that the river had two sources close to the city of Ilion, one sending forth hot water and the other cold, and that near these springs the Trojan women used to wash their clothes. Strabo (xiii. p. 609) remarks that in his time no hot spring existed in those districts; he further asserts that the river had only one source; that this was far away from Troy in Mount Ida; and lastly that the notion of its rising near Troy arose from the circumstance of its flowing for some time under ground and reappearing in the neighbourhood of Ilion. Homer describes the Scamander as a river (IL iv. 73, xii. 15, xvi. 148), and states that the Simoës flowed into the Scamander, which after the junction still retained the name of Scamander (IL v. 774, xxi. 124; comp. Plin. ii. 106; Herod. v. 65; Strab. xili. p. 595). Although Homer describes the river as large and deep, Herodotus (vii. 42) states that its waters were not sufficient to afford a supply for Troy. The Scamander after being joined by the Simoës has still a course of about 20 stadia eastward, before it reaches the sea, on the east of Cape Sigeum, the modern Kuma Kala. Ptolemy (v. 2, § 3), and apparently Pomp. Mela (L. 18), assign to each river its own mouth, the Simoës discharging itself into the sea at a point north of the mouth of the Scamander. To account for these discrepancies, it must be assumed that even at that time the physical changes in the aspect of the country arising from the muddy deposits of the Scamander had produced these effects, or else that Ptolemy mistook a canal for the Scamander. Even in the time of Strabo the Scamander reached the sea only at those seasons when it was covered in, but at other times it was a lake in marshes and sand. It was from this circumstance, that, even before its junction with the Simeus, a canal was dug, which flowed in a western direction into the sea, south of Sigeum, so that the two rivers joined each other only at times when their waters were high. Pliny, who calls the Scamander a navigable river, is in all probability thinking of the same canal, which is still navigable for small barges. The point at which the two rivers reach the sea is now greatly changed, for owing to the deposits at the mouth, the coast has made great advances into the sea, and the Portus Achaiæorum, probably a considerable bay, has altogether disappeared. (Comp. Leake, Asia Minor, p. 289, fol., and the various works and treatises on the site and plain of old Troy.) [L. S.]

SCAMANDRIA, a small town of Myasia, no doubt situated on the river Scamander in the plain of Troy (Plin. v. 33; Hieroc. p. 662, where it is called Scamandros). Leake (Asia Minor, p. 276) conjectures that it stood on a hill rising beyond Buysebes. A temple of Serapis was preserved in the museum at Paris (Choiseul-Gouffier, Voyage Pittoresque, tom. ii. p. 288.) [L. S.]

SCAMBO'NIDAE. [Athenae, p. 309, a.]
SCANDIA.

Longobardi, originally came from Scandinavia. It deserves to be noticed that the southern part of the supposed island of Scandia, the modern Sweden, still bears the name Scania, Scose, or Schonen. Pliny (viii. 16) mentions a peculiar animal called alchis, and resembling the alic, which was found only in Scandinavia. For further discussions about the various tribes of Scandinavia, which all the ancients treat as a part of Germania Magna, see Wilhelm, Germania, p. 343, &c.; Zeuss, Die Deutschen, fce. pp. 77, 136, &c.

[4. 5. 6. 7. § 8.]

SCANDINAVIA. [ Scandinia.]

SCAPTE HYLE (Σκαπτής), Sit. Chim. 4, de Exilio, p. 605; Marcellin. Vit. Thucyd. § 19), or the "wood," situated on the confines of Macedon and Thessaly, in the ancient district of Mt. Pangaeum, to which Thucydides was exiled, and where he composed his great legacy for all ages — the history of the war in which he had served as general.

[E. B. J.]

SCAPTA (Εκθ. Σκαπτής, Scapetiae: Passerum), an ancient city of Latium, which appears to have been a town at a very early period. Its name is found in Dionysius among the thirty cities of the Latin League (Dion. v. 61); and it therefore seems probable that it was at that time a considerable, or at all events an independent, town. No mention of it is subsequently found in history, but after the great Latin War it was included in one of the new Roman tribes created on that occasion. To which it gave the name of Scapiata. (Fest. s. e. Scapta, p. 343; Liv. viii. 17.) No subsequent mention is found of the town, and it is only noticed by Piny among the "clara oppida" of Latium, which in his time had utterly disappeared (Plin. iii. 5. 9). Silius Italicus also alludes to the "Scapta rubens," but in a passage from which no inference can be derived. (Silv. iv. 332.) The Scapetiaes noticed by Sosius (Aug. 40) and elsewhere were the members of the Scapian tribe. There is no real clue to its position; that derived from the passage of Festus, from which it has been commonly inferred that it was in the neighbourhood of Pedum, being of no value. The words "quem Pudini insoblevat," found in all the commentary on the words of that author, are in fact merely a supplement of Uniusus, found on an inference from Livy (viii. 14, 17), which is by no means conclusive. (See Miller's note.) But supposing that we are justified in placing Scapia in this neighbourhood, the site suggested by Nibby, on the hill now occupied by a farm or castrum called Passerum, is at least probable enough; the position is a strong one, on the point of one of those narrow ridges with precipitous sides between two ravines, which abound in this part of the Caspagna. It is about 3 miles NW. of Galli-<region>co, the presumed site of Pedum; and the existence of an ancient town on the spot is attested by the fragments of ancient walls, the large, roughly-<region>ewn masses of which form the foundations of more recent buildings. Its situation closely resembles that of Gallocano itself, as well as that of Zagarola, about 3 miles further S. (where there are also indications of ancient habitation); and the identification of any of the three can be little more than conjectural. (Nibby, Déserts, vol. iii. pp. 70, 71.)

[E. H. B.]

SCARPHIE.

SCARBARANTIA (Σκαρβαντία, Plut. ii. 15. § 5), a town on the western bank of Lake Pelso in Upper Pannonia, on the road leading from Carnunum to Sabaria. (Plin. iii. 27; It. Ant. pp. 333, 361, 262, 266; Tab. Peut.) According to the Strabo and inscriptions found at the place, it was a municipium with the surname of Flavia Augusta. Hence it appears that the reading in Pliny, "Scarabantia Julia," is not correct, and that we must read either Scarbantia Flavia, or Scarbantia et Julia. Its site is now occupied by the town of Odensey, in匈arian Moravia. On the map of the Bollandists, i. p. 168; Schölowiens, Antiquitates Sabericae, p. 31; Orsell, Inscription. n. 4992.)

[L. S.]

SCARBIA, a town in Bhaetia, between Far-temum and Veliddena, on the road leading from Augusta Vindelicorum into Italy, occupied the site of the modern Schiavista. (Tabula Peutingeriana.)

[4. 5. 6. 7. § 8.]

SCARDO'NA (Σκαρδόνα, Plut. ii. 17. § 5), a town in Prop. B. G. i. 7, 16, iv. 23; Plin. iii. 26; Geogr. Rev. v. 14; Sardiana, Strab. vii. p. 315; Sardone, Pest. Tab.), a town in the territory of the Liburni on the Titius, 12 M. F. from where its river meets the sea. From the circumstance of its having been one of the three "conventus" of Dalmatia, it must have been a place of considerable importance, and as a depot for the goods which were transported by the Titius to the inland Dalmatians. (Strab. l.c.) The modern Scardona in Illyric Schard or Scardia, retains the name of the old city, though it does not occupy the site, which was probably further to the W. (Wilkinson, Dalmatia, vol. i. p. 191.) Problem (v. 17. § 5) has another of the same name off the Libyan coast,—perhaps the rocky, variously-shaped island of Fago.

[E. B. J.]

SCARDUS, SCODRUS, SCORDUS MONS (s. Σκαρδόνα, Σκόδρων, Σκόρδονα, Prop. xvii. 8; Plut. ii. 16. § 1), the desolate heights which are mentioned incidentally by Livy (xxii. 20, xlv. 31) as lying in the way from Synamra to Soudra, and as giving rise to the Orinas. They seem to have comprehended the great summits on either side of the Drilo, where its course is from E. to W. (Leake, Northern Greece, vol. iii. p. 477.) In Kiepert's map (Europäisches Turkien) Scardus (Schar-Depe) extends from the Ljublaria to Shales; over this there is a "col" from Kaulandoke to Priusdon not less than 15,000 feet in elevation of the highest peak. According to the nomenclature of Grisebach, Scardus reaches from the Ljublaria at its NE. extremity to the SW. and S. as far as the Kiszowie of Derev; S. of that point finds commences in a continuation of the same axis.

[E. B. J.]

SCARTRUNGA, a river of Pannonia, mentioned only by Jornandes (de Reb. Got. 52), which it is impossible to identify with the vague, mauer in which it is spoken of.

[4. 5. 6. 7. § 8.]

SCARPE (Σκάρπος), in Boeotia. [Etnon.] Scarpie or Scarpehea (Σκάρπος, Σκαρπεγρ), a town of the Locri Epicnemid, mentioned by Homer. (II. ii. 532.) According to Strabo, it was situated on the road from Sparta to Corinth, and a little less from some other place of which the name is lost, probably Nisaee. (Strab. i. p. 426.) It appears from Pausanias that it lay on the direct road from Eleatis to Thermopylae by Thronium (viii. 15. § 3), and likewise from Livy, who states that Quintus Flaminius marched from Eleatis to Thronium and
SCARPHONIA. Scarphonia to Heraclea (xxxiii. 3). Hence the town may be placed between the modern villages of 'Laphoria,' and of the northern coast of the island on the west (p. 178.) Scarphonia is said by Strabo to have been destroyed by an inundation of the sea caused by an earthquake (i. p. 60), but it must have been afterwards rebuilt, as it is mentioned by subsequent writers down to a late period. (Plin. iv. 7. 12; Phot. iii. 15. § 11; Hieroc. p. 643; Geog. Ev. iv. 10; Conat. Pospe. p. 51, etc.) Scarphonia is also mentioned by Lycurgus 1147; Appian, Syr. 19; Paus. ii. 29. § 3, x. 1. § 2.

SCARPHONIA or SCARPHONNA, in Gallia, is placed in the Antonine Itin. and in the Table on a road between Tullium (Touj) and Diodurum (Metz). The two authorities agree in placing it at the distance of x. from Tullium; but the Itin. makes the distance from Scarphonia to Diodurum xii., and the Table makes it xiii. The larger number comes nearer to the truth, for the place is Charpygum, on the Mosel. An inscription has been found at Charpygum, which as follows: "Maximi virum curandum. Sabell. V. S. P. M. Scarp. Civit. Lenci." Scarphonia was in the territory of the Lisci. (Lavr.27) Joannes Campanus mentions it in the glossary of Gallia near Scarphonia in A.D. 366, in the reign of Valentinian and Valens. (Amm. Marc. xxvii. 2; D'Anville, Notices, &c.; Uebi, Galliene, p. 506.) [G.L.]

SCENAE (Σεναί). 1. A town of Mosopotamia on a canal from the Eufrates, and on the borders of Babylonia, 18 schoeni from Seleucia, and 25 days' journey from the sea, on the canal opposite to Zeugma. (Strab. xvi. p. 748.) It belonged to the peaceful and nautical tribe of the Scenitae, and therefore, though called by Strabo διδακτος λαος, was probably only a city of tents, as, indeed, its name implies.

2. SCENAE MANDRAE, a place in Middle Egypt, on the right bank of the Nile, between Aphrodisias and Babylon, a little SE. of Memphis. (Itin. Ant. p. 160.) It had a Roman garrison, and in later times became the see of a Christian bishop. (Not. Imp.; comp. Wesseling, ad Itin. l. c.)

3. SCENAE VETERANORUM, a place in Lower Egypt, on an arm of the Nile, and on the road from Helipolis to Vicus Josephum. (Itin. Ant. p. 165, 169.)

SCENITAE (Σενιται), a general name for various Arab tribes in Phyn, often distinguished by some other appellation. Thus, towards the lower part of the Eufrates, beyond the "Attali latrones, Arabum gens," he places the Scenitae (vi. 26), whom he mentions again more fully (c. 28). "Nomades inde infestatores Chaldaseorum Scenitae, ut diximus cladulent, et ipsi vagi, sed a tabernaculis cognominati, quae ciliticis metantur, ubi libitut. Deinde Nabataei, &c."

Then again below the confluence of the Eufrates and Tigiris he places the Nomades Scenitae on the right bank of the river, the Chaldaei on the left. He speaks also of the Scenitae Sabaei. (p. 26) These names are the same as the old names of application of many various tribes of Arabia, Syria, and Mosopotamia (see Index, a. r.); but Plutony assigns them a definite seat near the mountains which stretch along the north of the peninsula, north of the Thadites (αι Oedite) and Saraceni (vi. 7. § 21); and in this vicinity, towards the Red Sea, is the town which he places the Scenitae Arabes, which posterity called Scenae (xxxiiii. 6.) [Saraceni] The remark of Bochart is therefore borne out by authorities: "Ubi Scenitae Eratostenes, ibi Saracenes pontus Preocordes et Marcianus. Saracenimi nimium a Scenitae hoc ab hybridi sui genus differt, quod Scenitare assassins et retinutae." (Geogr. Soc. iv. 2. p. 219.)

SCEPSIS (Σεψίς : Σκεψίς), a town in the SE. of Myasia, on the river Aeseus, 150 stadia to the SE. of Alexandria Troas, and not far from Dicte, one of the highest points of Mount Ida. It was apparently a place of the highest antiquity; for it was believed to have been founded immediately after the time of the Trojan War, and Demetrius, a native of the place, considered it to have been the capital of the dominions of Aeneas. (Strab. xiii. p. 607.) The same author stated that the inhabitants were transferred by Scamandrius, the son of Hector, and Ascans, the son of Aeneas, to another site, lower down the Aeseus, about 50 stadia from the old place, and that there a new town of the name of Scæpsis was founded. The old town after this was distinguished from the new one by the name of Palaeoçepsi. For two generations the princes of the house of Aeneas maintained themselves in the new town; but the form of government then became an oligarchy. During this period, colonies from Miletus joined the Scæpsiens, and instituted a different form of government; the descendants of the royal family, however, still continued to enjoy the royal title and some other distinctions. (Strab. l. a. comp. xiii. p. 603; xiv. p. 635; Plin. v. 2; Steph. B. a. v.) In the time of Xenophon (Hell. iii. 1. § 15), Scæpsis belonged to Mantis, a Dardanian princess; and after her death it was seized by the Persians, and its inhabitants were massacred by Darius, but Decyllidas, who had obtained admission into the town under some pretext, expelled Meidias, and restored the sovereign power to the citizens. After this we hear no more of Scæpsis until the time of the Macedonian supremacy, when Antigonus transferred its inhabitants to Alexandria Troas, on the account of their constant quarrels with the town of Cebren in their neighbourhood. Lydmaschus afterwards allowed them to return to their ancient home, which at a later time became subject to the kings of Pergamum. (Strab. xiii. p. 597.) This new city became an important seat of learning and philosophy, and is celebrated in the history of its works of Aristotle. Strabo (xiii. p. 508) relates that Phereclus of Scæpsis was the pupil of Theophrastus, and later carried the library of Theophrastus, which also contained that of Aristotle. After Nestus' death the library came into the hands of persons who, not knowing its value, and being unwilling to give it up to the library which the Pergamene kings were collecting, concealed these literary treasures in a pit, where they were exposed to injury from damp and worms. At length, however, they were rescued from this place and sold to Apollion of Teos. The books, in a very mutilated condition, were conveyed to Athens, and thence they were carried by Sulla to Rome. It is singular that Soicytus (p. 36) enumerates Scæpsiens among the Aeolians; and, indeed, it is evident from ancient documents that this town was at one time a considerable distance from the sea. The town of Palæoçepsi seems to have been abandoned entirely, for in Pliny's time (v. 38) not a vestige of it existed, while Scæpsis is mentioned by Hierocles (p. 664) and the ecclesiastical notices of bishops. In the neighbourhood of Scæpsis there are extensive silver mines. It was the birthplace of Demetrius and Mestrodus. The former, who bestowed much labour on the topography of Troas, spoke of...
a district, Corybisa, near Sais, of which otherwise nothing is known. Extensive ruins of Scaepis are believed to exist on an eminence near the village of El-timay. These ruins are about 3 miles in circumference, and 8 gates can be traced in its walls. (Forschung, Handb. d. alt. Geogr. vol. ii. p. 147.)

SCHENKIA (Σχενκία), Strab. xvii. pp. 860, 865), a large town-like village of Lower Egypt, situated on the great canal which connected Alexandria with the Canopic arm of the Nile, near Andropolis. At Schenkia was the general custom-house for goods, ascending or descending the river, and also the station for the splendid vessels in which the prefects visited the upper country; likewise it is singular that it is not mentioned, as Oxyrhynchus has described Strabo. Mannert (x. pt. i. p. 601) seeks it on the lake of Aboukir; whilst Reichardt, from the similarity of the name, takes it to have been the modern Dejeda.

SCHERIA. [Corinthia.]

SCHINUSSA, a small island in the Aegean sea, off the western coast of Naxos. (Plin. iv. 12. a. 68.)

SCHISTE (= φυσική χιστος), the name of the road leading from Delphi to Central Greece, was more particularly applied to the spot where the road divided into two, and which was called τρείς κλέων, reckoning the road to Delphi as one of the three. Of the other two roads, the NE. led to Delphi; the Sth. led towards Thespiae and Leocrateia, the other to Ambrussum and Stiria. At the spot where these three roads met was the tomb of Laurus and his servant, whom he here slain by Oedipus. It must have stood at the entrance of the Σημείο Δέρματος, or opening between the mountains Ciryakia and Paramea, which leads to Delphi. The road from this point becomes very steep and rugged towards Delphi, as Prasinos has described it. (Asis. Byz. Ο. Τ. 753; Envir. Phoc. 38; Pan. ix. 2. § 4, x. 5. § 3; Leake, Northern Greece, vol. ii. p. 105.)

SCHOENUS (Σχοήνος), the name of several towns, from the reeds or rushes growing in their neighborhood. 1. (usually Σχοήνος), a town in Boeotia, near the Homerus (U. ii. 309, 310), and placed by Stabio upon a river of the same name in the territory of Thebes, upon the road to Antedon, and at a distance of 50 stadia from Thebes. (Strab. ix. p. 408; Eustath. ad loc.; Steph. B. s. v.; Nicander, Theor. 887; Plin. iv. 7. a. 12.) This river is probably the stream flowing into the lakes of Hylace, from the valley of Mopsia, and which, near its mouth is covered with rushes. Nicander is clearly wrong, who makes (L.c.) the Schoenus flow into the lake Copais. (Urich. Reisen, p. 258; Leake, Northern Greece, vol. ii. p. 320.) Schoenus was the birthplace of the celebrated Alastata, the daughter of Schoenus (Pana. viii. 35. § 10); and hence Statius alludes to Schoenus as the epitaph of "Alastatisa." (Stat. Theb. vii. 267.)

2. A town in the centre of Arcadia near Methydrium, which was said to have derived its name from the Boeotian Schoenus. (Pana. viii. 35. § 10; Steph. B. s. v.; Leake, Peloponnese, p. 240.)

3. A harbour in the Corinthia. [Cornithia, p. 5.]

4. A river near Maroneia in Thrace, mentioned only by Mela (ii. 2. § 6).

SCHOENUS, a bay on the west coast of Caria, on the south-east of the Chidian Chersonesus, and opposite the island of Smyra. (Pomp. Mela, i. 16; Plin. v. 29.) It should be observed, however, that this description of the bay of Schoenus is only conjectural, and based upon the order in which Pliny mentions the places in that locality. [L. S.]

SCIA (Σχεία; Eth. Σχετεία), a small town in Euboea (Steph. B. s. v. Σχεία), probably in the territory of Eretia, since Prasinos (iv. 2. § 3) mentions Sebium a district belonging to Eretria.

SCILIA. [Megalopolis, p. 309. b.]

SCIATHUS. [Phocis, p. 595. a.]

SCIATHUS (Σκαιθης; Eth. Σκιαθιος; Σκιάς), a small island in the Aegean sea, N. of Euboea, and a little E. of the Magnesian coast of Thessaly, is described by Pliny as 15 miles in circumference (iv. 12. a. 23). It is said to have been originally colonized by the Thracians from Thrace, which were succeeded by Chalcidians from Euboea. (Scylax. Ch. 584.) It possessed two towns, one of which was also called Sciathus, but the name of the other is unknown. (Scylax, p. 23, Hudson; Strab. ix. p. 436; Ptol. iii. 13. § 47.) It is frequently mentioned in the history of the invasion of Greece by the Persian and Greekians and has been stationed near its coasts. (Herod. vii. 176, 179, 183, 185, viii. 7.) It afterwards became one of the subject allies of Athens, but was so insignificant that it had to pay only the small tribute of 200 drachmas yearly. (Frans. Elen. Epigr. 52.) The town of Sciathus was destroyed by the last Philip of Macedon 260 after the battle of Chaeroneia. (Frans. Elen. Epigr. 52.) The large town of Sciathus lies in the SE. part of the island, and possesses an excellent harbour. The inhabitants have only been settled here since 1829, previous to which time their town stood in the NE. part of the island upon a hill projecting into the sea, and accessible only upon one side, as more secure against the pirates who frequented that coast. The town of Sciathus occupies the site of the ancient city, but the latter was not the homonymous capital of the island, which occupied the site of the old town in the NE. part of the island, as appears from an inscription found there by Leake. The ancient city in the SE. of the island, upon which this modern town now stands, is probably the second city mentioned by Hecaterus (vi. 21), from whom we learn that it was, as well as Laka, a colony of Sicyon, and was one of the places to which the surviving inhabitants of that city retired, after its destruction by the Corontians. It does not appear from his expressions whether these towns were then first founded by the fugitives, or had been previously settled as regular colonies; but the latter supposition is much the more probable. It is singular that no subsequent trace is found of Sciathus; its name is never again mentioned in history, nor alluded to by the geographers, with the exception of Stephanus of Byzantium.
SCILLUS.
(z. v.), who calls it merely a "city of Italy." We have therefore no clue to its position; for even its situation on the Tyrrenian sea is a mere inference from the manner in which it is mentioned by Herodotus (v. 7. 162) as situated at the Gulf of Policastro, extensive remains of an ancient city, which are generally considered, and apparently not without reason, as indicating the site of Scidrus. They are said to consist of the remains of a theatre and other public buildings of the ancient walls, and constructions around the port (Ael. Ant. cap. 11. § 11. Pompaullii, vol. i. p. 377.) This last is a remarkable landlocked basin, though of small extent; and it is singular that, even if the town had ceased to exist, no allusion should be found to the existence of this secure port, on a coast almost wholly destitute of natural harbours. But the high mountains which shut it in and debi it (from v. 6. § 5. seq. Strab. viii. p. 544. 587; Plut. de Exil. p. 809.) There are no remains to identify Scillus, but there can be no doubt that it stood in the woody vale, in which is a small village called Rasas, and through which a river falling into the Alpheius nearly opposite the Cladesus. (Loecks, &c. vol. ii. p. 213. seq. Ptol. v. 8. n. 9; Böblay, Reckersche, &c. 1504. p. 8. § 83.)

SCICILIANO (z. s. v.)

SCIRCUS.

SCIIRI.

Scincamusgus to Oeculum is 27 miles. (See Grokard's note on the passage, Transl. Strabo. i. p. 309.) Pliny also (ii. 108) makes Italy extend to the Alps at Scincamusgus, and then he gives the breadth of Gallia from the west to the Rhine, and Illiberis. (See the notes and emendations in Har- dian's edition.) It appears then that Scincamusgus was at the foot of the Alps on the Italian side; and if the position of Oeculum were certain, we might probably determine that of Scincamusgus, which must be on the line of the passage over the Alps by the Most Genus. It was a great wonder Bouche and Harduin to suppose that Scincamusgus was the same as Segusio or Sora. D'Anville guesses that Scincamusgus may be a place which he calls "Chamal de Sigonius, at the entrance of the Col de Castries, which leads from the valley of Scasone (Coeans) into that of Pre-selas." As usual, he relies on the resemblance of the ancient Gallic name to modern names, which is often useful evidence; for "magus" in Scincamusgus is merely a common Gallic name for town. D'Anville also supposes that this position of Scincamusgus is confirmed by the site of Oeculum, as he has fixed it. [OECULUM.]

SCIIRIDUM. [SALAMIS.]

SCIIRI, or SCIRRI, a population variously placed by various authors. The most usual place which they say is Pliny (iv. 13. s. 97), who fixes them in Euninia, i. e. in the parts to the NE. of the extreme frontier of what he and his contemporaries call Germania, i.e. East Prussia, Courland, Livonia, Esthonia, and part of Finnland, "quidam haec habitari ad Vis- tualiam usque fluvium a Sarmatia, Venetis, Sciris, &c. tradunt." No other author either mentions the Hirii or places the Sciri thus far north.

The most interesting note of them is in the so-called Olibian inscription (Böckl, Inscrip. no. 2058), wherein they are mentioned as dangerous neighbours to the town of Obia along with the Galatae, the Thissamatae, the Scythae, and the Saurodariae (Zens, Die Deutschen, &c. s. v. Galateae); and, doubtless, the neighbouring town of Oeculum was their true locality.
SCIRITIS.

The evidence of Jornandes makes them Alans ("Sciri et Satagari et osteri Alanorum," "De Get. 49"), evidence which is important, since Persia, the notary of the Alans, was the tribe of their grandfather. They are made by Sidonius (Com. viii. 392) part of Attila's army, by Jornandes subjects of Odoscer, by Procopius members of the Got and Alan alliance. They were, almost certainly, a Scythian tribe of Khersonos, who, during the period of the Greek settlements harassed Olbia, and, during the Baratons, which invaded the other barbarian tribes of the Lower Danube against Rome. Of these, the chief confederates were the Heruli and Turcilli: with whom they found their way as far west as Bavaria. The present country of Styrria (Styria mark) — the March of the Sici or Sciri, the change from Sc to St being justified by the Bavarian Count Vilius, and by the Pannonian of the 10th century being made a Comes de Steiro in another.

Add to this the existence of a Necus Scirorum in Bavaria. (See Zos., a. 1. Sici.)

The Sciri of the later writers were probably a portion of the Scythians of the parts between the Danube and Juns, under a newer and more specific title. The explanation of Varrus along with an inroad of Ulthia, king of the Huns, seems to have broken up the name and nation. Someones saw the remnants of them labouring as slaves in the mines of Mount Olympus in Bithynia (ix. 5). [R. O. L.]

SCIRITIS (π Σειρίτης: Etd. Σπερίτης, fam. Σερίτης), a rugged and barren mountainous district, in the north of Laconia, between the upper Euroros on the west and the Oenus on the east, and extending north of the highest ridge of the mountains, which were the natural boundary between Laconia and Arcadia. The name probably expressed the wild and rugged nature of the country, for the word signifies hard and rugged (ἐκεπογ, ἐκεπός, ἐκεπός, ἐκεπος, ἐκεπος, ἐκεπος, ἐκεπος). It was bounded by the Maeonian kingdom on the north, and by the Pamphylians on the west, and was originally part of Arcadia, but was conquered at an early period, and its inhabitants reduced to the condition of Lacedaemonian Perioeci. (Steph. B. s. v. Ξερος; Thuc. v. 33.) According to Xenophon they were subjected to Sparta even before the time of Lycurgus. (De Rep. Lac. c. 12.) They were "incised" (ἐνετοι) by the Eretrians, who either starved them, or made them for their bravery; and their contingent, called the Σερίτης ἄλχος, 600 in number, usually occupied the extreme left of the Lacedaemonian wing. (Thuc. v. 67, 68.) They were frequently placed in the post of danger, and sometimes remained with the king as a body of reserve. (Xen. Cyr. vi. 2. § 1. Hell. v. 9. § 16. E. v. 9. § 39.) The first invasion of Laconia by the Thebans the Sciritae, together with the Perioeci of Caryae and Sellasia, revolted from Sparta, in consequence of which their country was subsequently ravaged by the Lacedaemonians. (Xen. Hell. vii. 24. § 1.) The only town in the Scirits appears to be written Scirous and Oenus called Ram by Xenophon. The former is the only place in the district mentioned in historical times. [Orus.] Scirus may perhaps have been the same as Scirionum (Σερίτης), in the district of Aegystia. (Paus. viii. 27. § 4; Steph. B. s. v.)

The road from Sparta to Teges, which is the same as the present road from Sparta to Triopoli, led to the Scirae. (Labea, vol. iii. p. 28; Bohays, Recherches, 3. p. 75; Ross, Eneas. Sciron, p. 178; Curtius, Peloponesae, vol. ii. p. 263.)

SCIRIONIA SAXA. [Megara, p. 316, b.]

SCIRIEL. [Sciri.]

SCIRITANIA. [Princip.]

SCIRTONUM. [Sciri.]

SCIRTONS. [Sciri.]

SCIRTON, a station on the Egyptian road, between Ad Deir and El-Kebir (Probus) and Castra and Ptolemais. The name is no doubt connected with that of the Scironum (Σερίτησ), whom Ptolemy (iii. 17. § 8) couples with the Dassareoi Piritas as Illirian tribes near Macedonia. [E. B. J.]

SCIRTONES. [Sciriana.]

SCIRTONUM. [Sciri.]

SCITAIAN. [Sciri.]

SCITTOON. [Sciri.]

SCITTONIUM. [Sciri.]

SCITUS. [Sciri.]

SCITTI. [Sciri.]

SCODURA (π Τέρσα, Proil. ii. 16. (17.) § 18; Τερσα, Hieroc. p. 356; Ekt. Testmarines, Liv. xiv. 31. 2; Strabo, vi. 4. § 15; Illyricum (Montenegrine), the capital of the Labaeus, seated at the southern extremity of the lake Laebeus, between two rivers, the Cluausus on the E., and the Barbanna on the W. (Liv. xiv. 31.) and at a distance of 17 miles from the sea-coast (Pllm. iii. 22. a. 26.) It was a very. strong place, and in Sicius, king of the Illyrians, attempted to defend it against the Romans, n. c. 168, but was defeated in a battle under the walls. Pliny erroneously places it on the Drilo (L. c.) At a later period it became the chief city of the province of Praesidiae. It is the present Scurra, which is also the name of the lake Labetis. (Wilkinson, Dacieeno and Monte- negro, vol. ii. p. 476.) [T. E. D.]

SCOLLUS, a mountain between Elis and Achaea, now called Sandamericoticho, 3533 feet high, from which the river Larissas rises, that forms the temporary boundary between Achaea and Elis. Strabo describes it as adjacent to Mount Lampeia, which was connected with the range of Erynnus. (Strab. viii. 341.) Strabo also identifies it with the "Hyllus" of the other poets. (H. i. 617; Strab. viii. p. 387; Leake, Morea, vol. ii. pp. 184, 230; Peloponesia, p. 203.)

SCOLITI. [Scolita.]

SCOLUS (Σκολός), a town of Chalcis near Olympus, mentioned together with Spartolus, in the treaty between Athens and Sparta in the tenth year of the Peloponnesian War. [E. B. J.]

SCOLUS (Σκολός; Etd. Σκολός, Σκολός), a town of Boeotia, mentioned by Homer (I. ii. 49?), and described by Strabo as a village of the Parasopias below Cithaeron (ix. p. 408). Persissus, in his description of the route from Platea to Thebes, says that the town was, instead of crossing the Asopas, to follow that river for about 40 stadia, he would arrive at the ruins of Scolus, where there was an unfinished temple of Demeter and Kore (ix. 4. § 4). Mardonius in his march from Tanagra to Platea passed through Scolus. (Herod. ix. 15.) When the Lacedaemonians were preparing to invade Boeotia, n. c. 377, the Thebans threw up an increase on the front of Scolus, which partly extended from Mt. Cithaeron to the Asopas. (Xen. Hell. v. 4. § 49, Aerest. 2.) Strabo says that...
SCOMBIRIA. Scolus was so disagreeable and rugged (ρυγώδης) that it gave rise to the proverb, "never let us go to Scolus, nor follow any one there" (ix, p. 408). Leake places Scolus just below the projection of Citium, on a little rocky table-land, overlooking the town, and the remains of the town still depend on a convent in the Eleutherian, called St. Melas. (Northern Greece, vol. ii. p. 330.)

SCOMBRA'RIA (Σεμβρατία, Strabo, iii. p. 159), an island on the S. coast of Spain, in front of the bay which formed the harbour of Cartago Nova, and 24 stadia, or 3 miles, distant from the coast.

It is referred to its name from the serpent, tanny-fish, or mackerel, which were found in large quantities, and from which the Romans prepared their garum. (Pline. xxxi. 8. a. 43.) It was also called Herculis Insula. Now Islote. [T. H. D.]

SCOMBRA'SIA. [SATURBI PONIB.]

SCOMBRO'SUS, SCOM'MUS (Σεμβρόσως, al. Σεμβρόσως, Thuc. ii. 10: Aesch. Mestr. i. 13; Scopius, Pline. iv. 17: Eust. Xen. Rhod.,) an only-lying mountain of the chain of Haemus, or that cluster of great summits between Ghistanitell and Sofia, which sends tributaries to all the great rivers of the Northern Europe Turkey. As the most central point, and nearly equidistant from the Euxine, the Aegean, the Adriatic, and the Danube, it is probably the Haemus (xii. 31.), to which Philip, son of Demetrius, king of Macedonia, made a fruitless excursion with the expectation of being held by thence on either the Adriatic and the Euxine (Black Sea), the Danube and the Alps. (Leake, Northern Greece, vol. iii. p. 474.) [E. B. J.]

SCOM'MUS. [Soomamus.]

SCOM'BIUS (Σεμβρήβιος), the eastern tributary of the Sangarius of Galatia, which according to Procopius (de Aed. v. 4) joined the Sangarius, 10 miles east of the town of Julipolis. Pline (v. 43) calls it Scopina, and according to Procopius this river frequently overflew the country, which is perhaps alluded to in the Jerusalem itinerary (p. 574), where a station called Hyrcanoptamum (i.e. Υφρανταμος) is mentioned about 13 miles to the east of Julipolis. The modern name of the river is Aladus. (Comp. Leake, Asia Minor, p. 79; Eckhel, Doctr. Num. iii. p. 101.)

SCOFELUS. [Halounkeb.]

SCOP'LI. [Scopi.]

SCOP'LIUS (Σεμβρίου), a headland on the west coast of Caria, to the west of Myndus, and opposite the island of Cos. (Ptole. v. 2. § 10.) Strabo (xiv. p. 658) mentions two headlands in the same vicinity, Astypalaea and Zephyrium, one of which possibly may be the same as Scopi. [L. S.]

SCORBIDCI (Σεμβριδσία), a powerful Celtic tribe, in the southern part of Lower Pannonia, between the rivers Savia, Drava, and Danubia. They and the Boii were overpowered by the Dacians. (Strab. vii. pp. 292, 313.) Some call them an Ilyrian tribe, because, living on the borders of Illyricum, they were much mixed up with them. They were in the end greatly reduced by their struggles with the Dacians and the Triballi, so that when the Romans under Posthumus went against them they were easily subdued. (Appian, H. R. 3; Liv. xii. 23; Justin, xxxii. 3; Pline. iii. 28; Ptol. ii. 16. § 3.) In Pannonia they seem to have gradually become assimilated to the Pannonians, whence in later times they disappear from history as a distinct nation or tribe.

SCORDUS. [SCORDIS.]

SCORDUS MONS. [SCARDER.]

SCOTANE. [CLETOR, p. 635, a.]

SCOTT. The Scoti were the ancient inhabitants of Hibernia, as appears from notices in some of the Latin writers. (Clausilius, de IV. Cons. Hon. 33, 34; C. Val. de Land. Sub. i. 251; Oros. i. 2.) For several centuries Ireland was considered as the land of the Scoti, and the name of Scotia was equivalent to that of Hibernia. (Isid. Orig. xiv. 6; Beda, i. 1, ii. 4; Geogr. Rav. i. 3, v. 32; Alfred the Great, op. Oros. p. 30, &c.) We have no accounts respecting the subdivisions of the Scoti; but perhaps they are to be sought in the five tribes of the Irish counties, as Munster, Leinster, Ulster, Connaught. Annamius mentions the Scoti, in conjunction with the Atta-cotti, as committing formidable devastations (xxvii. 8. § 4). According to St. Jerome (adv. Jovin. v. 2. 301, ed. Mart,) they had their wives in common; a custom which Dion Cassius represents as also prevailing among the kindred race in Caledonia (xxvi. 12). At a later period the names of Scotia and Scoti vanish entirely from Ireland, and become the appellations of the neighbouring Caledonia and its inhabitants. This was effected through a migration of the Scoti into Caledonia, who settled to the N. of the Clyde; but at what time this happened, cannot be ascertained. Beda (l. 1) states that it took place under a leader called Ceallach. The new settlement was waged with the surrounding Picts, and even against the Anglo-Saxons, but at first with little success. (Id. i. 24, iv. 36.) Ultimately, however, in the year 859, under king Keneth, they succeeded in subduing the Picts (Fordun, Scot. Hist. ap. Gall, i. 659, seq.), and the whole country of Strathclyde and the Nethers of Scotia obtained the name of Scotland. (Comp. Zonas, Die Deutschen u. die Nachbarstammen, p. 568; Gibbon, vol. iii. p. 268, and notes, ed. Smith.) [T. H. D.]

SCOTTAS. [Laconia, p. 113, b.]

SCOTUA (Pent. Tab.; Scotus, Pline. iv. 17. a. 19: Ech. Scotussasii, Pline. iv. 17. a. 18), a station on the road from Heraclea Sintica to Philippi, which was passed round the N. of the lake Cerecinites, answering to the place where the Syrmon was crossed just above the lake. (Leake, Northern Greece, vol. iii. p. 227.) [E. B. J.]

SCOTUS (Σεμβρούσα or Σεμβρία; Ech. Σεμβρούσιον or Σεμβρία), an ancient town of Pelasgiots in Lycia, lying between Caria and Phrygia, and on both the sides of the frontier of Phrygia. Scotus is not mentioned in Homer, but according to some accounts the oracle of Dodona in Epeirus originally came from this place. (Strab, vii. p. 323.) In b. c. 394 the Scotussae joined the other Thessalians in opposing the march of Agisius through their country. (Xen. Hell, iv. 3. § 3.) In b. c. 367 Scotus was treacherously seized by Alexander, tyrant of the neighbouring town of Pharsae. (Diod. xv. 75.) In the territory of Scotus were the hills called Cyanopephala, which are memorable as the scene of two battles, one fought in b. c. 364, between the Thebans and Alexander of Pharsae, in which Pelo-pidias was slain, and the other, of still greater consternation, fought in b. c. 297, in which Philip of Macedonia was defeated by the Roman consul Flaminius. (Plut. Pelop. 32; Strab. ix. p. 441; Polyb. xviii. 3. seq.; Liv. xxxiii. 6. seq.) In b. c. 191 Scotus surrendered to Antioco, but was recovered shortly afterwards, along with Pharsae and Pharsae, by the consul Atilius. (Liv. xxxvii. 9. 14.) The ruins of Scotos stand at

303
SCULTENA.

Scutut. The city was about two or three miles in circumference; but of the walls only a few courses of stones are preserved. The acropolis stood at the south-western end of the site, below which, on the east and north, the ground is covered with foundations of buildings, heaps of stones, and fragments of tiles and pottery. (Leake, Northern Greece, vol. iv. p. 434, seq.)

SCULTENA (Σκούτενα, Strab.: Παμαρι, a town of the southern tributaries of the Padoius. (Plin. iii. 16. s. 50; P. Daci. Hist. Lang. iv. 47.) It crosses the Asenitian Way about 5 miles E. of Mutina (Modena), and falls into the Po a little below Bondeno, being the last of the tributaries of that river which now flows into its main stream. In the lower part of the basin, it is more extensive, and one of the principal of the southern tributaries of the Po. (Steph. B. a. e.) This is perhaps the same as the Scutieno in the Jerusalem itinerary of the 6th cent. when it is placed between Erses and Falis, at the distance of 15 miles from either. (Cramer, Ancient Greece, vol. i. p. 226.)

SCULYCE (Σκόλυκε, an ancient Pelasgian town of Myola, on the coast of the Proponia, est of Cypria. (Steph. B. a. e.) In this place and the neighbouring Placia, the Pelasgiains, according to Strabo (xii. 18), had preserved their ancient language down to this time. Scylyx (p. 10. a. 17) speaks of both as still existing. These towns seem never to have been of any importance, and to have decayed at an early period. (L.S.)

SCYLACIUM or SCYLLETIUM (Σκύλαιον, Steph. B. Strab.: Σκύληλες, Ptol.: Σκυλεληθαρία, Strab.: Σκύληλατια), on the coast of Bruttium, situated on the shores of an extensive bay, to which it gave the name of Scylietia Sinus. (Strab. vi. p. 261.) It is this bay, still known as the Golf of Squillace, which indents the coast of Bruttium on the E. as deeply as that of Hipponion or Turina (the Gulf of St. Eufemia) does W. where it is between the comparatively narrow isthmus between them. (Strab. l.c.; Plin. iii. 10. a. 15.) (BRUTTIUM.) According to a tradition generally received in ancient times, Scylaceum was founded by an Athenian colony, a part of the followers who had accompanied Meneleus to the Trojan War. (Strab. i. c.; Plin. l. c.; Serv. ad Aen. ii. 72.) It was probably stablished under the complete authority of Constantinople, though after the memorable victory in which, under its walls, Basil, the "Slayer of the Bulgarians," in the beginning of the eleventh century, avenged the defeat he had suffered from Samuel, king of Bulgaria, twenty-one years before, in the person of Mt. Hæma, this city surrendered to Byzantium. (Cavaceppi, i. 69.) In the reign of Michael Palæologus it was wrested from the emperor by the Servians, and became the residence of the Kral (Cantacuzenos, p. 778.). Finally, under Sultan Bayezid, Scupi, or the "Bride of Bëmil," received a colony of Ottoman Turks (Chalcedonides, p. 81.). (Leake, Northern Greece, vol. iv. p. 432; [E. C. H.])

SCUGGUM (Σκούγγυμ, a town in the north of Germany, in the territory of the Helvoeones, between the Vindus and the Vistula, the exact site of which is unknown. (Ptol. ii. 11. § 27; comp. Wilhel. Germannica, p. 238.)

[LS]

SCYDRA (Σκύδρα, Eth. Σκύδραπος), a town of Samithia in Macedonia, which Ptolemy places between Tyria and Mesta. (Steph. B. a. e.; Ptol. ii. 13. § 39; Plin. iv. 10. a. 17.) It was perhaps the same as the station Scurio in the Jerusalem itinerary (p. 604), which later it seems to be near Edessa and Falis, at the distance of 15 miles from either. (Cramer, Ancient Greece, vol. i. p. 226.)

SCYLACE (Σκύλας, an ancient Pelasgian town of Myola, on the coast of the Proponia, est of Cypria. (Steph. B. a. e.) In this place and the neighbouring Placia, the Pelasgiains, according to Strabo (xii. 18), had preserved their ancient language down to this time. Scyllas (p. 10. a. 17) speaks of both as still existing. These towns seem never to have been of any importance, and to have decayed at an early period. (L.S.)

SCYLACIUM or SCYLLETIUM (Σκύλαιον, Steph. B. Strab.: Σκύληλες, Ptol.: Σκυλεληθαρία, Strab.: Σκύληλατια), on the coast of Bruttium, situated on the shores of an extensive bay, to which it gave the name of Scylietia Sinus. (Strab. vi. p. 261.) It is this bay, still known as the Golf of Squillace, which indents the coast of Bruttium on the E. as deeply as that of Hipponion or Turina (the Gulf of St. Eufemia) does W. where it is between the comparatively narrow isthmus between them. (Strab. l.c.; Plin. iii. 10. a. 15.) (BRUTTIUM.) According to a tradition generally received in ancient times, Scylaceum was founded by an Athenian colony, a part of the followers who had accompanied Meneleus to the Trojan War. (Strab. l.c.; Plin. l.c.; Serv. ad Aen. ii. 72.) It was probably stablished under the complete authority of Constantinople, though after the memorable victory in which, under its walls, Basil, the "Slayer of the Bulgarians," in the beginning of the eleventh century, avenged the defeat he had suffered from Samuel, king of Bulgaria, twenty-one years before, in the person of Mt. Hæma, this city surrendered to Byzantium. (Cavaceppi, i. 69.) In the reign of Michael Palæologus it was wrested from the emperor by the Servians, and became the residence of the Kral (Cantacuzenos, p. 778.). Finally, under Sultan Bayezid, Scupi, or the "Bride of Bëmil," received a colony of Ottoman Turks (Chalcedonides, p. 81.). (Leake, Northern Greece, vol. iv. p. 432; [E. C. H.])

SCUGGUM (Σκούγγυμ, a town in the north of Germany, in the territory of the Helvoeones, between the Vindus and the Vistula, the exact site of which is unknown. (Ptol. ii. 11. § 27; comp. Wilhel. Germannica, p. 238.)

[LS]
SCYLAEX. In B.C. 324 the Romans, at the instigation of C. Gracchus, sent a colony to Scylacium, which appears to have assumed the name of Minervium or Colonia Minervia. (Vell. Pat. i. 15; Mommsen, "Röm. Geschichte," Wissenschaften, 1849, pp. 49–51.) The name is written by Velleius "Scolatiunum;" and the form "Scolasiaum" is found also in an inscription of the reign of Antoninus Pius, which makes it appear that the place must have received a fresh colony under Nerva. (Orvil Jauv. 136; Mommsen, L.c.) Scylacium appears to have been a considerable town after it received the Roman colony, and continued such throughout the Roman Empire. (Mel. ii. 4. § 8; Plin. iii. 10. a. 15; Potii. iii. 1. § 11.) Towards the close of this period it was distinguished as the birthplace of Cassiodorus, who has left us a detailed but rhetorical description of the beauty of its situation, and fertility of its soil.

The modern city of Squillace is a poor place, with only about 4000 inhabitants, though retaining its episcopal see. It stands upon a hill about 3 miles from the sea, a position according with the description given by Cassiodorus of the ancient city, but it is probable that this occupied a site nearer the sea, whose considerable ruins are seen still above, though they have not been described by any modern traveller.

The Scylliticus Sinus (Σκυλλικός κόλασ), or Golf of Squillace, was always regarded as dangerous to mariners; hence Virgil calls it "naviragum Scylacum." (Aem. iii. 553.) There is no natural port throughout whose whole length it is safe, and still bears an evil reputation for shipwrecks. The name is found in Aristot. as well as Antiochus of Syracuse, but would seem to have been borrowed to Thucydides; at least it is difficult to explain otherwise the peculiar manner in which he speaks of the Perissinean gulf, while relating the voyage of Gylianus along the E. coast of Bruttium. (Thuc. vi. 104; Arrius. AR. Phot. vol. ii. 10; Anti. Strab. vi. 254.)

[1.E. H. B.]

SCYLAX (Σκύλαξ), the chief tributary of the Iris in Pontus; it had its sources in the east of Galatia, and flowing in a north-western direction, emptied itself into the Iris near Eupatoria or Magnopolis. (Strab. xii. p. 547.) Its modern name is Tschalaks. (Hamil, Researches, ii. p. 365. 374.)

SCYLACIAE (Τυχβ. Prov. Geogr. Rev. iv. 6, v. 19), a town of Thrace, on the Euxine, where the long wall, erected by the emperor Anastasius Dicorus for the defence of Constantinople, terminated. This wall commenced at Selymbria, on the Propontis, and was carried across a narrow part of Thrace, at the distance of about 40 miles from Constantinople, its length being 2 days' journey (Procop. de Aed. iv. 9; Gibbon, Decline and Fall, c. 40.)

[J. R.]

SCYLLEAEUM (ζυλλαυειν: Scylla), a promontory, and town or fortress, on the W. coast of Brutum, about 15 miles N. of Rhegium, and almost exactly at the entrance of the Sicilian strait. The promontory is well described by Strabo (vi. p. 257) as a projecting rocky headland, jutting out boldly into the sea, and united to the mainland by a narrow neck or isthmus, so as to form two small but well sheltered bays, one on each side. There can be no doubt that it was the Sangua of Homer, by which name it was called by so many fables, and which was represented by Homer and other poets as

the abode of the monster Scylla. (Hom. Od. xii. 73, &c., 235, &c.: Biogr. Dict. art. SCYLLA.) But the dangers of the rock of Scylla were far more fabulous than those of its neighbour Charybdis, and it is difficult to believe that, even with the aid of navigation, it could have offered any obstacle more formidable than a hundred other headlands whose names are unknown to fame. (Senec. Ep. 79; Smyth's Sicily, p. 107.) At a later period Anaxiades, the despot of Rhegium, being struck with the natural strength of the position, fortified the rock, and established a naval station there, for the purpose of checking the incursions of the Tyrrhenian pirates. (Strab. vi. p. 257.) In consequence of this a small town grew up on the spot; and hence Pliny speaks of an "oppidum Scyllumaeum;" but it was probably always a small place, and other writers speak only of the promontory. (Plin. iii. 6. a. 10; Mel. ii. 4. § 10; Potii. iii. 1. § 10.) By the present day the rock is still occupied by a fort, which is a post of considerable strength, while a small town stretches down the slopes towards the two bays. The distance from the castle to the opposite point of the Sicilian coast, marked by the Torre del Faro, is stated by Capt. Smyth at 6047 yards, or rather less than 3 miles, and is, of course, an after-wards conversion, so that its width between the Punta del Pescato (Casyns Prom.) and the nearest point of Sicily does not exceed 3971 yards. (Smyth's Sicily, p. 108.)

SCYLLAEUM (Σκύλλαεια), a promontory of Troezena, and the most easterly point of the Peloponnesus, is also called Scylla. Thucydides says in his history of Troezena, the daughter of Nisus, who, after betraying Megara and Nisaea to Minos, was thrown by the latter into the sea, and was washed ashore on this promontory. Scyllaeum formed, along with the opposite promontory of Sunium in Attica, the entrance to the Saronic gulf. It is now called Karo-Skyl; but as Panassias, in the paraphr. from Scyllaeum to Herodoteus, Scyllaeum first, and then Bucephalis, with three adjacent islands, it is necessary, as Leake has observed, to divide the extremity now known as Karo-Skyl into two parts; the bold round promontory to the N. being the true Scyllaeum, and the acute cape a mile to the S. of it, Bucephalis, since the three islands are adjacent to the latter. (Clay. ii. 2; Schott, Illustr. Hudson; Strab. viii. p. 373; Thuc. v. 55; Plin. iv. 5. a. 9; Mela. ii. 3; Leake, Morea, vol. ii, p. 469, Peloponnesius, p. 282; Bolyai, Recherches, p. 59; Curtius, Peloponnesus, vol. ii, p. 452.)

SCYLLETICUS SINUS. [SCYLLACIUM.]

SCYRAS (Σκύρα). SCYRUS (Σκύρος; Eθ. Σκυρός: Skyrós), an island in the Aegaean sea, and one of the northern Sporades, was so called from its ruggedness. It lay east of Euboea, and contained a town of the same name (Strab. ix. p. 436; Scylax, p. 33; Potii. iii. 13. § 47), and a river called Cephisus. (Strab. ix. p. 424.) Scyrus is frequently mentioned in the stories of the mythical period. Here Thetis concealed her son Achilles in woman's attire among the daughters of Lycomedes, in order to save him from the fate which awaited him under the walls of Troy. (Apollod. il. 13. § 8; Paus. i. 22. § 6; Strab. ix. p. 436.) It was here also that Pyrrhus, the son of Deidamia by Achilles, was brought up, and was afterward recognized by Telemachus, son of Odysseus, in the Trojan War. (Hom. II. xix. 356; Od. xii. 507; Soph. Phil. 288, etc.) According to another tradi-
tion Scyros was conquered by Achilles (Hom. II. 1. 665; Paus. i. 22. § 6); and this conquest was connected in the Attic legends with the death of Thucydides. After the victory of the Scyrians, he had been driven out of Athens he retired to Scyros, where he was first hospitably received by Lycomedes, but was afterwards treacherously hurled into the sea from one of the rocks in the island. It was to revenge his death that Pelena sent Achilles to conquer the island. (Plut. Thes. 35; Paus. i. 22. § 6; Philostr. Heroic. 19.) Scyros is said to have been originally inhabited by Pelaegians, Carian, and Dolopians; and we know from Thucydides that the island was still inhabited by Dolopians, when it was conquered by Cimon against the Persian war (Nicolaus Damaesc. ap. Steph. B. e.; Scymn. Ch. 880, seq.; Thuc. i. 98; Diod. xi. 60.) In m. c. 476 an oracle had directed the Athenians to bring home the bones of Theseus; but it was not till m. c. 44, that the island was conquered, and the bones conveyed to Athens, where they were preserved in the Theæum. Cimon expelled the Dolopians from the island, and peopled it with Athenian settlers. (Thuc. Diod. Ëloc. 2; Plut. Thes. 35, Cies. 8; on the date of the conquest of Scyros, which Clinton erroneously places in m. c. 476.) The island is described by Polybius (vol. i. p. 468 seq.) From this time Scyros was subject to Athens, and was regarded even at a later period, along with Lemnos and Imbros, as a possession to which the Athenians had special claims. Thus the peace of Antalcidas, which declared the independence of all the Greek states, nevertheless allowed the Athenians to enjoy all their possessions in these isles; (Xen. Hell. iv. 8. § 15, v. 1. § 31;) and though the Macedonians subsequently obtained possession of these islands, the Romans compelled Philip, in the peace concluded in m. c. 196, to restore them to the Athenians. (Liv. xlviii. 30.) The soil of Scyros was unproductive (Dem. s. Callip. p. 1238; Eustath. ad Hom. II. ii. p. 732; Suidas, s. v. Ἀχιλλεύς;) but it was celebrated for its breed of cattle, and for its quarries of variegated marble. (Strab. ix. p. 437; Athen. i. p. 28, xii. p. 540; Zenob. ii. 18; Plin. xxxvi. 16. a. 26.)

Scyros is divided into two parts by a narrow isthmus, of which the southern half consists of high rugged mountains. The northern is not so mountainous. The modern town of St. George, on the eastern side of the island, stands upon the site of the ancient town. It covers the northern and western sides of a high rocky peak, which to the eastward falls steeply to the sea; and hence Homer correctly describes the ancient city as the lofty Scyros (Ilios alveania, H. i. 664). The Hellenic walls are still traceable in places; but the city was barely 3 miles in circumference. On the isthmus south of Scyros a deep bay still retains the name of Achilli (Ἀχιλλίς), which doubtless is the site of the Achilleion, or sanctuary of Achilles, mentioned by Eustathius (ad Hom. ii. 662). Athens was the divinity chiefly worshipped at Scyros. Her temple stood on a rock close to the town. (Stat. Achill. i. 385, ii. 21.) Tournafort says that he saw some remains of columns and cornices of white marble, close by a forsaken chapel, on the left hand going into the fort of St. George; these are probably remains of the temple of Athena. (Tournafort, Voyage, vol. i. p. 334, trans.; Leake, Northern Greece, iii. 106, seq.; Findlay, Reisz, vol. ii. p. 66; Ross, Wonders of Greece and Crete, vol. ii. p. 32, seq.)

SCYTHIA.

SCYRUS (Σκύρος), a tributary of the Alpheus, in southern Arcadia. (Megapolis, p. 399, b.)

SCYTHIA (Σκύθων, σκύθες; Eth. Zkúyov, Zkúyoi), or in Greek Zkúyoi, for the southern half of Northern Europe, and in Western and Central Asia. Its limits varied with the differences of date, place, and opportunities of information, on the part of its geographers. Indeed, to a great extent, the history of Scythia is the history of a name. It is obvious that the term came from the Greeks, from the Romans; in this respect, the barbarous Scyths, which, in form at least, an Roman rather than Greek. But whence did the Greeks get it? for it is by no means either significant in their tongue, or a Greek word at all. They took it from one or more of the populations intermediate between themselves and the Scythian; these being Thracians, Sarmatians, and Geteans. Probably the three used it; in any case, it seems to have been used by the neighbours of the Greeks of Olbipolis, and by the Thracians on the frontiers of the Greeks of Macedonia. This is in favour of its having been a term common to all the forms of speech between Macedonia and the Bosphorus. Scyth-, then, is a Sarmatian, Thracian, and Getic term in respect to the western Scythians, a term which varies in its origin? The presumption as well as the evidence is in favour of its having been so. There is the express evidence of Herodotus (iv. 6) that the population which the Greeks called Scythians called themselves Scoloti. There is the fact that the Persian equivalent to Scyths was Sakae. Thirdly, though the word at any rate seems to have been derived from the Scythic myths there is no such eponymous as Scytha or Scythe, which would scarcely have been the case had the name been native. Scyk-, then, was a word like German or Alamand, as applied to the Dacians, a word strange to the language of the population designated by it, but not strange to the language of the neighbouring countries. To whom was it applied? To the tribes who called themselves Scoloti.

What was the extent of the term? Did it apply not only to the Scoloti, but to the whole of the class to which the Scoloti belonged? It is safe to say that, at first, at least, there were many neighbours of the Scoloti, whom the Greeks called Scyths. The number, however, increased as the term became general. Did the name denote any populations of a different family from the Scoloti? Rarely, at first; afterwards, frequently. If the populations designated by their neighbours as Scythian, called themselves by some other name, what was that name? Scoloti applied only to a part of them. The word had a bearing on the language to which they spoke? if so, what it was, and in what tongue? Both these points will be noticed in the sequel, the questions involved in them being at present premature, though by no means unimportant.

The knowledge of the Scythian family dates from the beginning of Greek literature.
SCYTHIA.

a point upon which Strabo enlarges (vii. 3, §§ 7, 8). They are Hamaxobii (ἡμαξοβίων ὀλίγοι ἰατροί), and ἱατροί. Asclepius mentions them as ἰατροί. The apparent simplicity of their milk-drinking habits got them the name of mild and inoffensive creatures with Ephorus (Strab. vii. p. 302), who contrasts them with the cannibal Sarmatians. There was also an apparent confusion arising out of the likeness of Νάουξες to Νήμων (from νήμων = law). The Promethus of Asclepius is bound to one of the rocks of Caucasus, on the distant border of the east.

Such are the Scythes of Asclepius and Hesiod. The writers of the interval, who knew them as the invaders of Asia, and as historical agents, must have had a very different notion of them. Fragmentary allusions to the evils inflicted during their inroads are to be found in Callinus, Archilochus, &c. The notice of them, however, belongs to the criticism of the idea.

Plutarch, Damussian Scythen of Herodotus:

Scoloti: Scythen of Hippocrates—Much of the Herodotean history is simple legend. The strange story of an intermarriage of the females who, whilst their husbands were in Asia, were left behind with the slaves, and of the rebellion therein originating, is unimportant. The description of them, on the part of the returning masters, of the thrives with which the backs of the rebels had been previously but too familiar, belongs to the Herodotean Scythenians (iv. 1—6). So do the myths concerning the origin of the nation, in four number, which may be designated as follows.

1. The Account of the Scythenians themselves.

This is the effect that Targitius, the son of ξενος by a daughter of the river Borysthenes, was the father of Leipzexes, Arpoxazex, and Colazex. In their reign, there fell from heaven a yoke, an αξε (ἑξεμάκρον), a plough-share, and a cup, all of gold. The two elder failed in taking them up; for they burnt when they approached them. But the younger did not fail; and an oracle, according to him, From Leipzexes descended the Augeasites (Ἄγεαεῖς); from Arpoxazex the Catari and Trapiae; from Colazex the Paratai. The general name for all is "Scoloti, whom the Greeks call Scythea." This was exactly 1000 years before the invasion of Darius. The gold was sacred; the country large. It extended as far north as the cold frozen shores (snow) prevented things from being seen. The number of the kingdom was three, the greatest of which had charge of the gold. Of this legend, the elements seem partly Scythenian, and partly due to the country in which the Scythenians settled.

The descent from the Borysthenes belongs to this latter class. The story of the sons of Targitius is found, in its main features, amongst the present Tartars. In Targitius more than one commentator has found the root ῥυκ. The threefold division reminds us to the Great, Middle, and Little Hordes of the Kirghiz; and it must be observed that the words greatest and middle (μεγαλύτερος and μεδιάς) are found in the Herodotean account. They may be more technical than the old text of the text. In the account there is no Eponymous, no Scytora, or even Scolota. There is also the statement that the Scythenians are the youngest of all nations. This they might be, as immigrants.

2. The Account of the Pontic Greeks.—This is to the effect that Agathiymus, Gelenus, and S-vthas (the youngest) were the sons of Hercules and Echidna, the place where they met being the Hylena. The son that could draw the bow was to rule. This was Scolota, owing to manœuvres of his mother. He stayed in the land: the others went out. The cup appears here as a sign of mild and inoffensive conceptions with Ephorus (Strab. vii. p. 302), who contrasts them with the cannibal Sarmatians. There was also an apparent confusion arising out of the likeness of Νάουξες to Νήμων (from νήμων = law). The Promethus of Asclepius is bound to one of the rocks of Caucasus, on the distant border of the east.

This is historical rather than mythological. The Massagetae press the Scythenians upon the Cimmeri, the latter flying before them into Asia. This connects the history of the parts about the Bospors with Media. The inference from the distribution of the signs of Cimmerian occupation confirms this socalled Scythenian the burial-places of the Cimmeri on the Taurus; there was the Cimmerian Bospors, and between them, with Cimmerian walls, Scythenia (Σκυθεία). This is strong evidence in favour of Scythenian extension and Cimmerian preoccupancy.

4. The Account of Aristocles of Proconnesus.—This is a speculation rather than either a legend or a piece of history. Aristocles (Μνα, Ἱστορία τῆς Μικραίας Ἑλληνικῆς Literaturē, vol. ii. 469, seq.) visited the country of the Issedones. North of these lay the Arimaspis; north of the Arimaspis the Monophthalmi; north of the Monophthalmi the Gold-guarding Griffins (Ἰχνοτάπεια χρυσόφοδοι Αἰγίδοι); and north of these, the Hyperborei. The Hyperborei made no movements; but the Griffins were a people of the plains. The Monophthalmi the Arimaspis, the Arimaspis the Issedones, the Issedones the Scythenians, the Scythenians the Cimmerians, the Cimmerians having to leave their land; but they, as we learn elsewhere, attack the Medes. (Herod. iv. 5—16.) No one had ever been further north than Aristocles, an unsafe authority. The information of Herodotus himself is chiefly of the Cilician and the Greeks of the Borysthenes. He mentions, however, conversations with the steward of one of the Scythenian kings.

The Emporium of the Borysthenes was central to the Scythia of the sea-coast. In the direction of the Hypanis, i.e. west and north-west, the order of the population was as follows: the Callipidae and Alexones (Ἄλκατοι Ἰσαποι), sowers of corn and consumers of corn; to the north of whom lay the Scythea Argoteus, not only sowers of corn, but siders of it; to the north of these the Neuri; to the north of the Neuri either a desert or a terra incognita (iv. 17, 18.) The physical geography helps us here. The nearer we approach the most fertile province of modern Russia, Podolit, where we place the Scythea Artoe, the more the Scythenian character becomes agricultural. The Hellenic Scythea (Callipidae and Alexones) belong more to Kherson. That the Hellenic Scythea were either a mixed race, or Scythicised Greeks, is unlikely. The doctrine of the present writer is as follows: seeing that they appear in two localities (viz. the Government of Kherson and Caucasus); seeing that in each of these the populations of the later and more historical periods are Alani (Ptolomy's form for those of Kherson is Alani); seeing that even the Alani of Caucasus are by one writer at least called Ἀλκατον Αλανίων; seeing that the root of Kheron might have two plurals, one in -e and one in -e, he ends in seeing in the Scythea Scythenians the same name as the Alans of the Alani name. Neither does he doubt about Gelonti being the same word,—forms like Chauni and Huan, Arpi and Carpi being found for these parts. At any rate, the locality for the Callipidae and Alexones suite that of Ptolomy's Alani, whilst that of the Scythean Greeks and Gelonti of Caucasus suite that of the Alans of the fourth and fifth centuries.

SCYTHIA.
SCYTHIA.

The Scythian affinities of the Neuri are implied rather than categorically stated; indeed, in another part there is the special statement that the Tyrs rises out of a great lake which separates the Scythis and Neuri. [\text{Neuri}: παύναντα κύριον τοῦ Νέ- ρου \text{Tyrs}]. This, however, must not be made to prove too much; since the Scythis that were conterminous with the Neuri were known by no special name, but simply by the descriptive term \text{Scythis Arotarae}. \text{[Examparab; Nkuri.]} In Sibylline geography \text{Nurys} = \text{marak}. Hence Neuri means marac. There are none of these more Neuri than one, e. g. on the Nurys of the headwaters of the \text{Dnieper}, i. e. of \text{Pisok}. A fact in favour of the Neuri being Scythian is the following.

The occupants of \text{Pontus}, when its history commences, which is as late as the 13th century, are of the same stock with the Scythis, i. e. Comanian \text{Turks}. Not to be there is no evidence of their introduction being recent, but the name \text{Omanii (Lygii Omanii)} appears about the same parts in Ptolemy.

East of the Borysthenes the Agricultural Scythis occupy the country as far as the Panticapes, 3 days distant. Northwards they extend 11 days up the Borysthenes, where they are succeeded by a desert; the desert by the Androphagi, a nation peculiar and whom means \text{Scythian} (c. 19). Above the Androphagi is a desert.

The bend of the \text{Dnieper} complicates the geography here. It is safe, however, to make \text{Estersovost} the chief Georgi area, and to add to it parts of \text{Kiev}, \text{Kherson}, and \text{Poltava}, the agricultural conditions increasing as we move northwards. The swampy \text{mud} the first is, probably, a March or political frontier, as old the Svevi used to have between themselves and neighbours; at least, there is nothing in the conditions of the soil to make it a natural one. It is described as \text{mud} \text{walled}. The other is \text{blue mud}, a distinction, apparently, of some walks. Not to be natural, however, it must be interpreted forest rather than steps. \text{Kras} and \text{Taherevo} give us the area of the Androphagi; \text{Kras} having a slight amount of separate evidence in favour of its having been "by no means Scythian" (c. 18).

The \text{Hylaen}, or wooded district of the Lower \text{Dnieper}, seems to have been common ground to the \text{Scythis} and \text{Scythian Nomades}; or, he has as it was uninhabited. The latter extends 14 days eastward, i. e. over \text{Taurida}, part of \text{Estersovost}, and \text{Don Kozak}, to the \text{Gerrhus}.

The \text{Palaces (to kalckianu Borachia)} succeed; their occupants being the Royal Scythis, the best and most numerous of the names, who look upon the others as their slaves. They extend, southwards, into the \text{Ovros} (\text{Theorpo}), and, eastwards, as far as the ditch dug by the offspring of the blind slaves (the statement that the Scythis blinded their slaves on account of the milk being one of the elements of the strange Servile legend previously noticed), and the Mæsiotic Emperior called \text{Kromni}.

North of the Royal Scythis lie the Melanchlimai (a probable translation \text{Karakoelak} = \text{black bones}), a different nation and not Scythian (c. 20), with marshes, and either a desert or a terra incognita above them. This distinction is, almost certainly, real. At the present moment a population, to all appearances aboriginal, and neither Slavonic nor Scythian (but \text{Ugrian or Finn}), occupies parts of \text{Pessa} and \text{Tambow}, having, originally, extended farther west and further south. To the north the forest districts attain their maximum development. \text{[Malanchlimai.]} The Royal Scythis may have occupied the country of \text{Voroskai}.

East of the Tanais it was no longer Scythia, but the \text{Adjes} of the \text{Sauromatae}. \text{[See Sauromata; Budi; Geloni; Thymagetai; Iuburka.]} The want of definite boundaries makes it difficult to say whither the \text{Ucraesi} and beyond. They extend to the east lay other Scythis, who, having roved few years, have left them; the soil was level and deep, beyond it rough and stony, with mountains beyond. These are occupied by a nation of Bnad-heads, flat-nosed and bearded, Scythis in dress, peculiar in language, collectors of a substance called \text{scyries} from a tree called \text{vorsik} (c. 23). Their flocks and herds are few; their women so simple that no one injures them, &c. \text{[Agranov; Irskho; Hypermonik; Arimasp.]} In the parts about the mountains of the Azgippai tribe was carried on by means of seven interpreters. Let this be the caravan trade of \text{Orenburg}, near its terminus on the \text{Volga}, and we shall find that seven's about the number of languages that could sit at its present mouth and be brought together as a fair of the central \text{Orenburg}. For the Scythis Russian takes the language of the Sauromatae; for the Scythian that of the modern Tartars.

To these we may add four Ugrian forms of speech,—the \text{Taurus}, the \text{Mordvin}, the \text{Tahermass}, and the \text{Voitok}, with the two forms of speech akin to the \text{Ostik} and \text{Perian} to choose the fifth from. The \text{Tahermess} of \text{Taurida} is a different race to the \text{Tatars} and \text{Turks} of the present time,—Turk and Ugrian.

The chief river of the \text{Herodotes Scythia} was the \text{Ister (Danube)}, with its five mouths; and the \text{Tyrs (Dniester)}, the \text{Hypanes (Bay)}, the \text{Borysthenes (Dnieper)}, the \text{Panticapae} (see \text{v. s.}), the \text{Hyparcia} (see \text{Scythia}), the \text{Gerrhus} (see \text{v. s.}), an island near the mouth of the \text{Dnieper} (in the rivers of the present \text{Dniester Principality}) being the \text{Poratae} (Scythia, in Greek \text{Poratae}, the \text{Tiarantos}, the \text{Avanos}, the \text{Parapis}, and the \text{Odessis} (c. 47, 48). To these, from the country of the \text{Agathucris}, the \text{Mara} (c. 49), or modern \text{Moros} of \text{Transilvania}. The difference between the ancient and modern names of rivers is nowhere greater than here,—the \text{Mara} being the only name now in use which represents the original one; unless we choose to hold that, word for word, \text{Saltus} = \text{Araxes}. \text{Word for word}, indeed, \text{Napax is Dnieper}; but then the rivers are different. This creates a grave difficulty in the determination of the language to which the names of the \text{Scythis} rivers should be referred. Yet the question is important, inasmuch as, in the names, as they come down to us, we have so many glosses of some language or other. Upon the whole, however, the circumstances under which they reached \text{Herodotes} suggest the notion that they are Scythis: e. g. the express statement that \text{Porata is a Scythian form}. Again; \text{Hypanes is, word for word, the name of which the word of which the name is known both \text{Asia} and \text{Europe} is best explained by supposing it to be Scythis. On the other hand, they are as little significant in the language which, amongst those present existing, best explains the \text{untranslatable} Scythian glosses, as they are in the \text{Slavonic}, \text{Latin}, or \text{Greek}.

The physical geography of \text{Herodotes Scythia} was a steppe, with occasional districts (chiefly along
SCYTHIA.

the course of the rivers and at their head-waters) of a more practicable character.

MOUNTAINS.—These were the eastern continuation of the Carpathians, and the hills of the Crimea or Tauris. These were but imperfectly known to Herodotus.

LAKES. [See Examparius and Bucner.] TOWNS, exclusively Greek colonies. [See Olbios. Phocis. Panticapaeum.]

Beyond the Sauromatae (s. e.) lay "other Scythians, who, having revolted from the Royal, reached this country," i.e. some part of Osmurb (c. 22). Thirdly, there were the Sacae, whom we may call the Scythians of the Persian frontier. Their occupancy was the parts conterminous with Bactria, and it was under Darius, the son of Hystaspes, that they, along with the Bactrians, joined in the invasion of Greece. Their dress was other than Bactrian, consisting of a pointed turban, a bonnet, leggings, native bow, daggers, and the axe called evedepos— a word which is necessarily technical. These were Scythes Amyrigii, truly, however, Scythes, inasmuch as the Persians called all the Scythians by the name Sacae. Under the reign of Cyrus they were independent. Under Darius, they, along with the Caspil, formed the 15th satrapy (iii. 93). This connects them with their frontiers on the west, rather than on the east.

There is no difficulty, however, in fixing them. From Asteroabed to Balc they extended along the northern frontier of Persia, in the area, and probably as the ancestors, of the present Turkomans and Uzbeks. The name Amyrigii will be noticed in the sequel.

The Scæae, if not separated from the "other Scythians" by the greater part of Independent Turky, were, at any rate, a population that presented itself to the informants of Herodotus under a different aspect. The Sacae were what the Persians found on their northern frontier. The eastern Scythes were the Scythians beyond the Sauromatæ, as they appeared to the occupants of the parts about the Tauri.

It is not difficult to see the effect of these three points of view upon future geographers. With Scythians in Transcaucasia, Scythes in Osmurb, with Scyths (even though called Scaes) in Khoresm and Turkomania, and with a terra incognita between, the name cannot fail to take upon itself an inordinate amount of generality. The three isolated areas will be connected; and the historical or ethnological unity will give way to a geographical. At present, however, there is a true unity over the whole of Scythia in the way both of

PHYSIOGNOMY AND MANNERS.—The physical conformation of the Scythians is not only mentioned individually by Herodotus, but in a more special manner by Hippocrates: "The Scythian wisest is widely different from the rest of mankind, and is like to nothing but itself, even as the Egyptian. Their bodies are thick and fleshly, and their limbs loose, without tons, and their bellies the smoothest (γυώρ), softest (γυώρ), mostest (γυώρ) of all the Scythian races (μιχαλεσκόνετα) for it is not possible for the belly to be dried in such a country, both from the soil and climate, but on account of the fat and the smoothness of their flesh, they are all like each other, the men like the men, the women like the women." (Hippocr. de Aere, &c. pp. 291, 292.) Coming as this notice does from a physiognomist, it has commanded considerable attention; it has, however, no pretensions to be called a description, though this has often been done. In the hands of later writers its leading features become exaggerated, until at length the description of a Scythian becomes an abstract caricature. We may see this by reference to Ammianus Marcellinus and Jornandes, in their accounts of the Huns. The real fact inferred from the text of Hippocrates is, that the Scythians had a peculiar physiognomy, a physiognomy which the modern ethnologist finds in the population of Northern and Central Asia, as opposed to those of Persia, Caucasus, Western and Southern Europe.

Their general habitation was essentially nomadic, pastoral, and migratory; the commonest epithets or descriptive appellations being ἄρματος, θερπομένου, ἄραμος, and the like.

Concerning their Religion, we have something more than a mere cursory notice (iv. 59). (i.) Tabiti (Tasitv): This was the Scythian name for Horus, the nearest equivalent to the Greek Herakles (Pasta), the divinity whom they most especially worshipped. (ii.) Papeus: "Most properly, in my mind, is Zeus thus called." So writes Herodotus, thinking of the idolatry of the Phrygians and other nations. (iii.) Apis: This is the name for earth: as (iv.) Osodoys (Ovβoν) is for Apollo, and (v.) Aretmas is for Aretmaeus, and (vi.) Thammas for Poseidon, the God of the Royal Scythes most especially. To Osodoys we have the following remarkable inscription (Gust. Inscip. Anton. p. 56. 2; see Zenus, s. v. Skythen): ΘΕΑ. ΧΑΛΑΘΟΪΧΗΤΑ (? ΧΑΛΑ- ΧΡΑ) ΚΑΙ ΑΡΩΛΙΝΟΙ. ΟΙΣΑΥΡΩΝ. ΜΠΩΡΑ. Μ. ΟΤΟΠΙΟΝ. ΠΑΟΛΑΜΟΝ. ΝΕΧΑΡΚΟΤ. ΑΝΕΩ (see). Here the connection is with the Persian god Mitras.

The Scotoi sacrificed to all their gods, but to Mars the most especially; for, besides the deities which have been mentioned under their several Scythian names, Mars and Heracles were objects of particular adoration. The Scythian Venus, too, was the Аρμοταρος (Armutaros). To Arpe, however, they sacrificed most especially, and there was for there was a place of worship to him in every συνος (mark the use of this word, which is applied to the divisions of the Persian empire as well), where horses, sheep, and captives were sacrificed, and where the emblem of the god was an iron sword,—even as it was with the Aains of Ammianus and the Huns of Priscus.

Human beings were sacrificed, but no swine. Neither were swine eaten, nor were they tolerated in the country. This is noticed, because in many of the nations of Northern Asia, e. g. the Wodiaks and others, the hog, even now, is held in abomination, and that by Pagan tribes intimiizetured with Mahometanism.

Notwithstanding the praises of the earlier poets, the wars of the "just and illustrious" Scythians were of a piece with the worship of their war-god. They scalped their enemies, and they used their skulls as drinking cups (cc. 64—65). Once a year the monarch of each nation filled a vast vat with wine and appropriated it to the warriors who had killed most enemies during the year. Those whose hands were untainted got none, and were disgraced; those who had killed many took a double allowance (c. 66). Their soothsayers, amongst other superstitions, practised rhabdomancy, amongst whom the Euxarees...
SCYTHIA.

(Σκύθοι) are the most famous. They got their art from the APROPHESEIS, as they got their aliment. During the Scythian invasion of Asia, a portion of the conquerors plundered the temple of the APROPHESEIS Urania in Ascalon, for which sacrilege they and their children were afflicted with σατυρία τοῖς ἄστροις, the names of the sufferers being Καλλικράτης (l. 105, 106). The nature of this σατυρία τοῖς ἄστροις has yet to be historically explained.

The ascendant and regal relations are curious. When the king sals he calls his priests, who tell him that his aliment comes from some one having fore-sworn himself in the greatest oath a Scythian can take. This is "by the heart of the king." Take it falsely, and the king will sicken. Upon sickening, however, they might give him other ones that were false. This is denied. Other priests are sent for. If their vaticinations confirm the earlier ones, death and confiscation are the fate of the perjurer. Otherwise, a third set is called. If these agree in the condemnation of the first, a load of faggots, drawn by bullocks, is brought in, the bolts are dropped on their heads, and they are thrown into a gallop, the flames catch the wind, the men are burnt to death, and the bullocks scoored, singed, or burnt to death also. The sons of the offending perjurer are killed, their daughters left uncurtained.

Bier oaths were made over a mixture of wine and blood. The awesomers to them punctured themselves, let their blood fall into a vat of wine, drank the mixture, and dipped in it their daggers, arrows, javelins, and σθαρα. The fealty exhibited in their burials was of the same kind. The tombs of the kings were on the Eurus. Thither they were brought to be buried, whether they were the sons of the king or the son of the son. They were entombed with sacrifices both of beasts and men, Hippophanes, Anthropotheias, and Suttes—all these characterized the funeral rites of the Scythians ἀνακτοροι τοῖς ἐκτυρίας.

LANGUAGE.—The specimens of this fall into two divisions, the Proper and the Common Names. The former are the names of the specific localities and individuals in one way or the other, they are numerous; at least they appear so at first. But we rarely are sure that the fact itself coincides with the first presumptions. The names of the rivers have been noticed. Of those of the gods, none have been definitely traced to any known language in respect to their meaning. Neither have they been traced to any known mythology as Proper Names. Next come the names of certain kings and other historical individuals, none of which have given any very satisfactory place for the old Scythian.

With the Common Names (and under the class of Common Names we may place such Proper Names as are capable of being translated) the results improve, though only slightly. Of these terms the chief are the following:

(i.) Καλλικράτης.—Sacred name Ἡπατίος, the name of a well-head. [See s. v.] (ii.) Οἰάγρατς.— khởiος, a name applied by the Scythians to the Ascanians. Here ὄγις, man, wáρα is hill. (iv. 110). (iii.) Τενέρετα.—Mater Maxim. It is not from the Kings, but from Pliny (v. 7). (iv.) Αἰματέρα...

SCYTHIA.

HISTORY.—The Herodotean view of the Scyths is incomplete without a notice of the historical period of his account; not that the two parts are, by any means, on the same level in the way of trustworthy information. The geography and descriptions are from contemporary sources. The history is more or less traditional. Taking it, however, as we find it, it falls into two divisions:—1. The Invasion of Asia by the Scyths; and 2, The Invasion of Scythia by Darius.

1. Invasion of Asia by the Scyths.—In the reigns of Cyaxares king of Media and of Selcotes, king of Lydia, the Scyths invade Asia, boldly and directly. They had previously invaded the country of the Cummerians, whom they had driven from their land, and there they had thrown southwards. The Scyths pressed the Cimmerians, the Massagetae the Scythsians. Chain of cause and effect of this kind are most keenly loved by historians. It is only, however, in the obscure portions of history that they can pass unchallenged.

The Cimmerians take Sardis during the last years of Cyaxares' reign. (a. c. 624) They are expelled by Alyattes, his successor. (Hercod. L. 16.) It seems that the Cimmerians were followed up by their ejectors; insomuch as five years afterwards (a. c. 624) the Scyths themselves are in Media; Cyaxares, who was engaged upon the siege of Nineveh (Ninus), being called back to oppose them. It is defeated; and the Scyths occupy Asia for 28 years, Cyaxares surviving their departure. From Media they direct their course towards Egypt; from the invasion of which they are diverted by Pasimtichus. Their attack upon the temple of Venus Urania, in Ascalon, during their passage through Palestine, along with its mysterious￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡￡€
SCYTHIA. 941

story of the Servile War of Whips belongs to this period.

When the approach of Darius becomes threatening, the Gekoni, Budini, and Sauromatæ join with the Scythians. Gorobaz, the father of Androplagi, Melanchnaeni, and Tauri reserving themselves for the defence of their own territory if attacked (iv. 119). To the three constituents of the confederacy there are three kings, Scopasias, Ianthrusus, and Taxis, each with an allotted district to defend. This was done by destroying the great bridge which the dracens and flocks of horses and cows had corroded (we can scarcely translate ὄξωσις by poisoning) the wells. The points whereon attack was anticipated were the frontiers of the Danube and the Don. These they laid waste, having sent their own wives and children northwards. The first brunt of the war fell upon the Budini, whose Wooden City was burnt. Darius then moved southward and westward, pressing the other two divisions upon the countries of the Melanchnaeni, Neuri, and Agathyrsi. The latter warn the Medes against encroaching on the frontier. Ianthrusus answers enigmatically to a defiance of Darius. Scopasias tampers with the Ionians who have the custody of the bridge over the Danube. The Medes suffer from disease and despondency to retreat before Darius. The Scythians reach the passage before them, and require the Ionians to give it up. And now appears, for the first time, the great name of Miltiades, who is one of the commanders of the guard of the bridge. He advises that the Scythians should be conciliated, Darius weakened. A half-measure is adopted by which both are brought to the Medes. The Medes trust the Ionians, and the Medes escape into Thrace—so ending the Scythian invasion of Darius. (Herod. iv. 120—142.)

Criticism of the Herodotean Account.—The notices of Herodotus upon the Scythians, though full, are excursive rather than systematic. Part of their history appears as Lydian, part as Scythian Proper. There is much legend in his accounts; but the chief obscurities are in the geography. Even here the details are irregular. One notice arises out of the name Scythe, another out of the geography of their rivers, a third out of the sketch of Taurus. [See TAURIS AND TAUBESCHTIAE.] In this we hear that Scythia is bounded first by the Agathyrsi, next by the Neuri, then by the Androplagi, and lastly by the Melanchnaeni. The area is four-cornered; the longest sides being the prolongations along the coast and towards the interior. From the Ister to the Borysthenes is 10 days: 10 days more to the Maeotis; from the coast to the Melanchnaeni, 20 days;—20 stades to each day's journey. If this measurement be exact, it would bring Thrace, Tauris, RThese, &c., within the Scythian area, which is going too far. The days' journeys inland were probably shorter than those along the coast.

The Agathyrsi were in Transoxiana, on the Maros. The evidence, or want of evidence, as far as the text of Herodotus goes, is the same as it is with the Bactrians. The passages were written by Scylax, Scytæs Aratæs, i.e., the generic name was with them specific. Hence any Scythians whatever with a specific name must have been contrasted with them; and this seems to have been the case with the Agathyrsi. [Hunz., p. 1097.] Assuming, however, the Agathyrsi to have been Scythian, and to have lain on the Maros, we carry the Herodotean Scythian as far west as the Thessal; nor can we exclude them from any part of Wallachia and Moldavia. Yet these are only known to Herodotus as the country of the Scythenes. The frontier, then, between the Scytheæ and Getæ is difficult to draw. Herodotus has not named the Danubian settlements of the Danube; yet such there must have been. Upon the whole, we may look upon the Danubian Principalties as a tract scarcely known to Herodotus, and make it Scythian, or Getic, or mixed, according to the evidence of other writers, as applicable at the time under consideration. It was probably Getic in the East, Sarmatian in the West, and Scythian in respect to certain districts occupied by intrusive populations.

Thucydides mentions the Getæ and Scythians but once (ii. 96), and that together. The great alliance that Sitalces, king of Thrace, effects against Perdiccas of Macedon includes the Getæ beyond Mount Haemus, and, in the direction of the Buzine, the Getæ who were contending destines forth in the Scythians, and whose armour was Scythian (ὑισαρικαί). They were each archers and horsemen (ἱππορωτέρων); whereas the Di and the mountaineers of Rhodope wore daggers. According to Ovid (Trist. v. 7. 19.), the occupant of the level country do so too:—

"Dextera non semnis fixo dare vulnera cultro,
Quen virtutam latere barbaria omnis habet."

THE SCYTHIANS OF THE MACEDONIAN PERIOD.

—Passing over the notices of Xemophon, which apply to Thrace Proper rather than to the parts north of Mount Haemus, and which tell us nothing concerning the country facing the Danube, passing, also, over the notices of a war in which Philip king of Macedon was engaged against Athens, and in which he crossed Mount Haemus into the country of the Triballi, where he received a wound, —we come to the passage of the Danube by Alexander. In the face of an enemy, and without a bridge, did the future conqueror of Persia cross the river, defeat the Getæ on its northern bank, and return. (Arrian, Anab. i. 2—7.) This was an invasion of Scythia in a geographical sense only; still it was a passage of the Danube. The Getæ of Alexander may have been descendants of the Siggynes of Herodotus. They were not, eo nomine, Scythians. When Alexander was on the Danube the famous embassy of the Galatae reached him. They had heard of his fame, and came to visit him. They were men of enormous stature, and feared only that the heavens should fall. This disappointed Alexander, who expected that they would fear him. Much has been written concerning the embassy as if it came from Gaul. Yet this is by no means necessary. Wherever there is a House or Galata in modern geography, there may have been a Galatian locality in ancient; just as, wherever there is a Kerma, or Caramans, there may have been a German one, and that without any connection with the Galli or Germani of the West. The roots Қ-қ and Қ-қ-қ, are simply significant geographical terms in the Scythian and Turk tongues, tongues to which the Getic and Scythian may most probably be referred.

Such is the present writer's opinion respecting the origin of the statements that carry certain Galatæ as far as the Lower Danube, and make the Basterae, and even the occupants of the Tanais, Germans—not to mention the Caramanians of Asia Minor and Caramanians of Persia. In the present
instance, however, the statement of Strabo is very specific. It is to the effect that the ambassadors to Alexander were sent from the Apsars (vii. p. 301), and that Ptolemy was the authority. Nevertheless, Ptolemy may have written Pahlavas, and such Galatae may have been the Galatae of the Olbian Inscription. [See əsəfrə and Scιh.]

The next Macedonian who crossed the Danube was Lyaismasus, who crossed it only to re-cross it in his retreat, and who owed his life to the generosity of a Getic prince Drumichates. This was about B.C. 312.

Our next authorities (fragmentary and insufficient) for the descendants of the Herodotic Scythians are the occupants of the Greek towns of the Euxine. Even these to the south of the Danube, Gallias, Apollonia, &c., had some Scythis in the neighborhood, sometimes as protectors against other barbarians, sometimes as protectors of Greeks against Greeks, as was the case during the Scythian and Thracian wars of Lyaismasus. The chief frontiers, however, were Getas. Between Olbia, to the north of the Danube (=Obhiopolis of Herodotus), and the Scythian towns of the neighborhood, the relations are illustrated by the inscription already noticed. (Bien, Jass. Græc. no. 3058.) It records a vote of public gratitude to Protagenes, and indicates the troubles in which he helped his fellow-citizens. The chief of those arise from the pressure of the barbarians around, by name Sandaristes, Thissematos, Sothros, and of the Galatae and Scythians. The date of this inscription is uncertain; but we may see the import of the observations on the word Galatae when we find the assumption that they were Gauls of Gallia used as an instrument of criticism. The date of the above inscription is not specified; the terror inspired by the Gauls, even to other barbarians, seems to suit the second century B.C. better than the first century B.C., and "Galatae, Getoi, and Scythes, Dict. of Greece, vol. xii. p. 644, note.) What, however, if the Galatae of Wallachia were as little Galli as the Germanians of Persia are Germans, or as Galatae is the same as Calais? The present writer wholly disconnects them, and ignores the whole system of hypothetical migrations by which the identity is supposed.

A second Olbia in respect to its Helleno-Scythic relations, was Bosporus, or Panticapaeum, a Greek settlement which lasted from B.C. 480 till the reign of Mithridates. [Pantikapaeum.]

From Bosporus there was a great trade with Athens in corn, hides, and Scythian slaves,—Scythes, as the name of a slave, occurring early as in the time of Theogunis, and earlier in the Athenian drama than those of Darius and Geta (Dacian and Getic) which belong to the New Comedy,—Scythes and Scythians being found in the Old. The political relations were those of independent municipalities; sometimes sovereign, sometimes protected. The archons of Bosporus paid tribute to the Scyths. Sometimes their neighborhood, when they were powerful and united, took it, when the Scythians were weak and disunited. Under this latter category came the details of the division of the Maecotas, viz., Sind, Torst, Dandari, Thetas, &c. Of these, Parysades I., (a Scythian rather than a Greek name) was king, being only archon of his name. But the existence of Bosporus frontier, the Scythians took a part; nor were there wanting examples of Scythian manners even in the case of the Panticapaeum potestates. Eumelus lost his life by being thrown out of a four-wheeled wagon and fur with the horses on the Danube (vii. p. 301). Scythians of the Mythological Period, etc. — The Scythians pressed on Parysides IV., who called in Mithridates, who was conquered by Rome. The name now becomes rare occurrence, subordinated to that of the Sarmatae, Daci, Thracians, &c. In fact, instead of being the nearest neighbors of Scythes, Rome were now the most distant enemies of Rome.

In the confederation of the Dacian Boeotides, is the reign of Augustus, there were Scythian elements. So there were in the wars against the Thracian Euxiporius and the Bozalani. So there were in the wars conducted by J. Quintus in the reign of Vespasian, as shown by the following inscription, EXQUIISITAE AETERNAE MAGISTRATI POTESTATIS RESTITUTUM FILIOS DACORUM. [See Scythians.

SCYTHERIUM QUOCUO REGIS A CHRIEONIS QUÆ EST ULTRA BOSTHRETUM ERITISERUM SUMMUM. (Grunt. p. 453; Böckh, vol. ii. pt. 1. p. 82; Zues, a. v. Scythes.)

Though the history of the Scythians, so sanguine as fragmentary, the history of more than one Scythian population under a change of name is both present and important. In the article HUMAY are reasons given for believing that the descendants of the Herodotean Agathystes, of Scythian blood, were no unimportant element in the Dacian nationality.

After the foundation of Constantinople the Scythian name, with specific histories and names, Huns, Avars, &c. The continuity of the history of the name of the Herodotean Scythians within the Herodotean area is of great importance; as is the explanation of names like Galatas and Germani; and also is the consideration of the sources whereas the nomenclature and information of the different authorities is derived. It is important, however, when we find one name disappearing from history, and another appearing, there is (according to, at least, the current criticism) a presumption in favor of a change of population. Sometimes this presumption is heightened into what is called a proof; yet the presumption itself is unreal. For once real change of name refers to as actual change of population there are no changes, the change has been merely one in respect to the sources whereas the information was derived, and the channels through which it came. This is what occurs when the same country of DEMETRIOCLOIDES is called Germany by an Englishman, Alemagna in France, Zama in Italy. This we know to be nominal. We ought at least to ask whether it is not a real change in ancient history—and that not once or twice, but always—before we assume hypothetic movements and migrations.

Now in the case of Scythia we can see our way to great nominal and but slight real changes. We see the sources of information changed from Greek to Roman, and the channels from Getic and Macedonian to Dacian.

If so, the occupants of HUNGARIA, the Principalities, and South-western Russia under the Caesars may be the descendants of the occupants of the same districts in the time of Herodotus. That there are some differences is not only likely but admitted,—differences in the way of admixture of blood, modification of names, differences of the kind that time always effects, even in a stationary condition of nations. It is only denied that
SCYTHIA. 943

any wholesale change can be proved, or even reasonably supposed. Who can be shown to have eliminated any definite Scythian population from any definite Scythian domain? With the Greeks and Romans the negative evidence is nearly conclusive to the fact that no such elimination ever took place. That the Barbarians might have displaced each other is admitted; but there is no trustworthy evidence to their having done so in any single instance. All opinions in favour of such changes rest upon either unconfirmed statements of uncertain writers, or the supposed necessity of accounting for the appearance and change of certain names by means of certain appearance and changes of population.

The bearings of this will appear in the notices of the Ethnology of Scythia. They appear also under Huns.

Of the Sacae, so nomesae, the history is obscure. In one sense, indeed, it is a nonentity. There is no classical historian of the Sacae. How far the ethnologist can infer them is a question which will be treated in the sequel.

Of the history of the populations akin to the Sarmatians and Paeones is important, but that is in the history of the Massagetae, Parthi, &c., a history full of critical preliminaries and points of inference rather than testimony.

The Scythia of all the authors between Herodotus and Ptolemy means merely the country of the Scythes, the Scythes being such northern nations as, without being, so nomesae, Sarmatians, were Hamaishii and Hermenaei, excelling in their mares and travelling in tents, the wilder being their most genuine characteristic. These it was which determined the views of even Strabo, whose extension of Germania and Galatia (already noticed) left him no room for a Scythes or even a Sarmatia; Sarmatia, which is to Ptolemy as Germania was to Strabo; for the Sarmatia of Ptolemy leaves no room in Europe for a Scythes; indeed, it cuts deeply into Asiatic Scythia, the only

SCYTHIA OF PTOLEMY.—The Scythes of Ptolemy is exclusively Asiatic, falling into 1. The Scythes within the Imaus. 2. The Scythes beyond the Imaus.

This is a geographical division, not an ethnological one. Scythes Alani are especially recognized as a population of European Sarmatia.

As Ptolemy's Sarmatia seems to have been formed out of an extension of the area of the Herodotean Sacae, his Scythes seems to have grown out of the eastern Scythes of the Herodotean Scythes, 1. the Scythes of Overbury. It did not grow out of the country of the Sacae, inasmuch as they are mentioned separately; even as the Jazygae of the Thelas were separated from the Sarmatians. The continuator, however, of the Herodotean account must make the Sacae Scythes. They may be disposed of first.

The Sacae of Ptolemy were bounded by the Sogdiana and Jaxartes, the Sacae from the east, the Sarmatia from the west, and the Serae on the east. They were nomads, without towns, and resident in woods and caves. The mountain-range of the Comedi (Karpathos Αμφρα) was in their country; so was the Stone Tower (Alphan Πύργος). The populations were: 1, 2. The Caratae and Comari along the Jaxartes. 3. The Comades, on the Comedus and Scythes. 4. The Massagetae along the range of the Asianites (Σατρακέτας). 5. In the interjacent country, the Grynesae Scythes; and, 6. the Tornae; south of whom, along the Imaus, 7, the Sytae. (Ptol. vi. 13.)

SCYTHIA INTRA IMAUS.—Bound on the S. and E. by Sogdiana, Margiana, and the Saca; on the W. by the Caspian and Sarmatia Asiatica; on the N. by a terra incognita; and on the E. by the northern prolongation of the Imaus. (Ptol. vi. 14.)

Rivera.—The Rhymus, the Daix, the Jaxartes, the Iastae, and the Potymetus.

Mountains.—The southern part of the Montes Hyperborei, the Montes Alani (observe the reappearance of this name), the Montes Rhymnici, the Mons Norosus, the MM. Aspilii, Tapiry, Sybei, Anarei, all W. of the Imaus.

Populations.—The Alani Scythes (on the confines of the terra incognita), the Sambeni, the Alanori, S. of whom the Sastiani, and Massaei, and Sybei; and (along the Imaus) the Tectosages and (on the eastern head-waters of the Rha) the Rhobocii, S. of whom the Asmani; and then the Paniardi, S. of whom, along the river, the district called Canodippas, S. of which the Ceraxi; then the Orgaei, after whom, as far as the sea (i.e. the Caspian, in this chapter called Hycansia), the Rhymn, with the Asiatae on the E. of them, succeeded by the Moniaci, and then the Jaxartae, a great nation along the river of the same name; then S. of the Sastiani, the Mologeni and Sarmnites, as far as the MM. Rhymnici. Then, S. of the Moniaci and MM. Alani, the Zaratae and Sasanee; and further W. and as far as the MM. Rhymnici, the Tybiacae, succeeded by the Tabemi, S. of the Zaratae, and the Iastei and Machetegi along the Mons Norosus; S. of whom the Norobesi and Norosae, and the Cachaga Scythes along the Jaxartae. On the W. of the MM. Aspilii, the Aspilii Scythes; on the E. the Galectopagi Scythes; E. of the MM. Tapiri and the Suebi, the Tapirae; and above the MM. Aspilii and the Mons Asacatanse, the Scythes Anarei, and the Asacatanse and Ariacae along the Jaxartae, S. of whom the Namastae; then the Sariacae, and, along the Oclus, the Rhibyi, with their town Davaea.

SCYTHIA EXTRAS IMAUS was bounded by Scythes intra Imaus, the Saca, the Terra Incognita, and the Serae. It contained the western part of MM. Aspilii, Casi and Emnius, with the source of the river Ochridus (Ptol. vi. 15.)

Its Populations were the Abi Scythes, the Hippophagi Scythes, the Chatae Scythes, the Charnnusae Scythes; the designation Scythus being applied to each.

Districts.—The Auxacitiae, the Casia (Karisia Καρία), the Achaeae (Αχαεα).

Towns.—Auxazia, Isulon, Scytha, Chatranae, Scotia.

The remarks that applied to the Sarmatia Asiatica of Ptolemy apply here. Few names can be safely identified. Neither is it safe to say through what languages the information came. Some words suggest a Persian, some a Turkic source, some are Mongol. Then the source of the river, the extent and the range of Pamer was unduly prolonged northwards is evident [IMAUS]; this being an error of the geographer. The courses, however, of the Oclus and Jaxartes may themselves have changed.

The prolongation of the Pamer range being carried in a northern and north-eastern direction, so as to include not only the drainage of the Jaxartes, but that of the Balkhash Lake as well, gives us the line of the Imaus; the terra incognita to the
SCYTHIA.

N. being supposed to begin with the watershed of the Irinik, Obi, and other rivers falling into the Arctic Ocean. Within the limits thus described we may place the Nor-cabi and Nor-assi, on the eastern edge, i. e. in the parts where at the present moment the lakes distinguished by the name Nor occur. It should be added, however, that the syllable is generally considered to be a Kasian horm. In Persian itself. With every earlier writer it means a number of populations connected by certain ethnological characteristics. These were physical and moral—physical, as when Hippocrates describes the Scythian phisiognomy; moral, as when their nomadic habits, as Hamaxobii and Hippomolgi, are put forward as distinctive of them. Of languages whose languages is taken; though (by Herodotus at least) it is by no means overlooked. The division between Scythian and non-Scythian is always kept in view by him. Of the non-Scythian populations, the Sarmatians were one; hence the ethnology of Scythia involves that of Sarmatia, both being here treated together.

In respect to them, there is no little discrepancy of opinion amongst modern investigators. The first question respecting them, however, has been answered unanimously.

As they were represented by any of the existing divisions of mankind, or are they extinct? It is not likely that such vast families as each is admitted to have been has died out. Assuming, then, the presence of the Scythians, and that the most ingenious diviners of the Sarmatian and the Scythian, in what family or class as they to be found? The Scythe were of the Turk, the Sarmatia of the Slavono-Lithuanian stock.

The evidence of this, along with an exposition of the chief differences of opinion, will now be given. Scythia being dealt with first. Premising that Turk was the Turcoman, the Independent Tartars, the Uzbeks, the Turks of Chinese Tartary, and even the Yakuts of the Lena, along with several other tribes of less importance, we may examine the prior probabilities of the Scythe having been, in this extended sense, Turks.

The two nations of Scythia and western Russia, &c., at the beginning of the proper historical period, is a presumption in favour of their being so. Of these the best to begin with are the Cumanians (12th century) of Volodymyra. That they were Turk and we know from special statements, and from samples of their language compared with that of the Kirghiz of Independent Tartary, is no proof of their being new comers, however much the doctrine of their recent emigration may have been gratuitously assumed. The Usces were what the Cumanians were; and before the Usces, the Patsinskis (10th century) of Bessebraba and the Dzungarian principalities were what the Usces were. Earlier than the Patsinskis the Chazars, who reckoned the parts about the Ballassik, give us the Scythia within the Imana. It coincides chiefly with Independent Tartary, with the addition of a small portion of Mongolia and southern Siberia. Its conditions are generally Scythian. In the upper part, however, of the Jaxartes, the district are agricultural in present; in the lower, the Aral is a Turk, part of the population being Nomades, part industrial and agricultural.

SCYTHIA.

The Scythian of the Byzantine Authors.—This means not only Hunns, Avars, Alans, and Sarmatians, but even Germans, Goths, and Vandals.

It is used, however, but rarely. It really existed only in books of geography. Every division of the Scythian name was known under its specific designation.

Ethnology.—If any name of antiquity be an ethnological, rather than a geographical, term, that name is Scythia. Poloniy alone applies it as geographical. The form of the word is Scythian. With every earlier writer it means a number of populations connected by certain ethnological characteristics. These were physical and moral—physical, as when Hippocrates describes the Scythian phisiognomy; moral, as when their nomadic habits, as Hamaxobii and Hippomolgi, are put forward as distinctive of them. Of languages whose languages is taken; though (by Herodotus at least) it is by no means overlooked. The division between Scythian and non-Scythian is always kept in view by him. Of the non-Scythian populations, the Sarmatians were one; hence the ethnology of Scythia involves that of Sarmatia, both being here treated together.

In respect to them, there is no little discrepancy of opinion amongst modern investigators. The first question respecting them, however, has been answered unanimously.

As they were represented by any of the existing divisions of mankind, or are they extinct? It is not likely that such vast families as each is admitted to have been has died out. Assuming, then, the presence of the Scythians, and that the most ingenious diviners of the Sarmatian and the Scythian, in what family or class as they to be found? The Scythe were of the Turk, the Sarmatian of the Slavono-Lithuanian stock.

The evidence of this, along with an exposition of the chief differences of opinion, will now be given. Scythia being dealt with first. Premising that Turk was the Turcoman, the Independent Tartars, the Uzbeks, the Turks of Chinese Tartary, and even the Yakuts of the Lena, along with several other tribes of less importance, we may examine the prior probabilities of the Scythe having been, in this extended sense, Turks.

The two nations of Scythia and western Russia, &c., at the beginning of the proper historical period, is a presumption in favour of their being so. Of these the best to begin with are the Cumanians (12th century) of Volodymyra. That they were Turk we know from special statements, and from samples of their language compared with that of the Kirghiz of Independent Tartary, is no proof of their being new comers, however much the doctrine of their recent emigration may have been gratuitously assumed. The Usces were what the Cumanians were; and before the Usces, the Patsinskis (10th century) of Bessebraba and the Dzungarian principalities were what the Usces were. Earlier than the Patsinskis the Chazars, who reckoned the parts about the Ballassik, give us the Scythia within the Imana. It coincides chiefly with Independent Tartary, with the addition of a small portion of Mongolia and southern Siberia. Its conditions are generally Scythian. In the upper part, however, of the Jaxartes, the district are agricultural in present; in the lower, the Aral is a Turk, part of the population being Nomades, part industrial and agricultural.

The Scythian of the Byzantine Authors.—This means not only Hunns, Avars, Alans, and Sarmatians, but even Germans, Goths, and Vandals.
SCYTHIA.

Avars, the Alani the Huns. [HUNNII; AVARES].
The migrations that make the latter, at least, recent occupants being entirely hypothetical. The evidence of the Huns being in the same category as the Avars, and the Avars being Turk, is conclusive. The same applies to the Alani—a population which brings us to the period of the later classes.
The conditions of the population which should, at one and the same time, front Persia and send an offset round the Caspian into Southern Russia, &c., are best satisfied by the present exclusively Turk area of Independent Tartary.

Passing from the presumptuous to the special evidence, we find that the few facts of which we are in possession all point in the same direction.

Physical Appearance.—This is that of the Kirghis and Uzbeks exactly, though not that of the Ottomans of Rumelia, who are of mixed blood. Allowing for the change effected by Mahomet, the same remark applies to their

Mongols, which are those of the Kirghis and Turcomans.

—The Scythian glosses have not been satisfactorily explained, i.e. Tenerinda, Arimasp, and Exampseus have yet to receive a derivation that any one but the inventor of it will admit. The ői- or ői-, however, in ői-pata is exactly the er, aer, = m, &c., a term found through all the Turk dialects. It should be added, however, that it is Latin and Keltic as well (e.g. fear, gayr). Still it is Turk, and that uneque real.

The evidence, then, of the Scythe being Turk consists in a series of small particulars agreeing with the a priori probabilities rather than in any definite point of evidence. Add to this the fact that no other class gives us the same result with an equally small amount of hypothesis in the way of migration and change. This will be seen in a review of the opposite doctrines, all of which imply an unnecessary amount of unproven changes.

The Mongol Hypothesis.—This is Niebuhr’s, developed in his Researches into the History of the Scythians, &c.; and also Neumann’s, in his Hellenen und Scythelande. It accounts for the manners and physical appearance of both Scythian and Turk, but for nothing else. It violates the rule against the unnecessary multiplication of causes, by bringing from a distant area, like Mongolism, what lies nearer, i.e. in Tartary. With Niebuhr the doctrine of fresh migrations to account for the Turks of the Byzantine period, and of the extirpation of the older Scythians, takes its maximum development, the least allowance being made for changes of name. "This" (the time of Lyasmachus) "is the last mention of the Scythian nation in the region of the Iber; and, at this time, there could only be a remnant of it in Budzack" (p. 63).

The Finn Hypothesis.—This is got at by making the Scythians what the Huns were, and the Huns what the Magyars were—the Magyars being Finn. It is based on a fact that the Magyars speak a language had to the Greek and the Hungarian, and fails to account for the difference between the Scythians and the nations to their north.

The Ciscaucasian Hypothesis.—This assumes an extension of the more limited area of the northern occupants of Caucasus in the direction of Russia and Hungary. Such an extension is, in itself, probable. It fails, however, to explain any one fact in the descriptions of Scythia, though valid for some of the older populations.

The Indo-European Hypothesis.—This doctrine takes many forms, and rests on many bases. The

-"..." in words like Massa, get-sa, &c., is supposed to = Goths = German. Then there are certain names which are Scythian and Persian, the Persian being Indo-European. In the extreme form of this hypothesis the Scaces = Sazon, and the Yuchu of the Chinese authors = Goths.

If the Scythians were intruders from Independent Tartary, where did they displace? Not the Sarmatians, who were themselves intruders. The earlier occupants were in part congeners of the Northern Caucasians. They were chiefly, however, Ugrians or Finns; congeners of the Mundins, Taheremens, and Tashwashes of Penna, Savatar, Kazan, &c.; Dacia, Thrace, and Sarmatia being the original occupancies of the Sarmatians.

If so, the ethnographical history of the Herodotean Scythia runs thus:—there was an original occupancy of Ugrians; there was an intrusion from the NE. by the Scythians of Independent Tartary, and there was intrusion from the SW. by the Sarmatians of Dacia. The duration of the Scythian or Turk occupancy was from the times anterior to Herodotus to the extinction of the Cimmerian Scythian in the 14th century. Of internal changes there was plenty; but of any second migration from Asia (with the exception of that of the Avars) there is no evidence.

Such is the history of the Scythea. The sacred square of the arrow-headed alphabets having led him to the opinion that there was at least one invasion of Persia analogous to the Magyar invasion of Hungary, i.e. effected by members of the Ugrian stock, probably from Orenburg or Kazan. With them the root m-rd = m. History gives us no time when the horizon of the Persian frontier, the Sacae, were not pressing southwards. Sacastene (= Segestan) was one of their occupancies; Carmania probably another. The Parthians were of the Scythian stock; and it is difficult to believe that, word for word, Persia is not the same as Parthia.

The history, however, of the Turk stock is one thing: the history of the Scythe is another, and it is submitted, however, that the two should be connected. This being done, the doctrine of the recent diffusion of the Turks is a doctrine that applies only to the name only. There were Turk invasions of Hungary, Turk invasions of Persia, Turk invasions of China, Assyrfa, Asia Minor, and even north-eastern Africa, from the earliest period of history. And there were Sarmatian invasions in the opposite direction, invasions which have ended in making Scythia Slavonic, and which (in the mind of the present writer) began by making parts of Asia Medicean. Let this be taken for an exaggeration of the Turk influence in the world’s history, let it be remembered that it is only a question of date, and that the present view only claims for the Turk occupancy of the place that it is historical that they are known to have had in the historical period. With the exception of the Mongol invasions of the 13th century and the Magyar occupancy of Hungary, every conquest in Southern Asia and Europe, from the North, has been effected by members of the stock under notice. [SARMATIA, VENEDI; FINNI; SITONES; TURCICA.] [R. G. L]
SEBETHUS.

SEBASTIA (Σεβαστία), a town in the south of Pontus, on the north bank of the Upper Halys. As it was near the frontier, Pliny (vi. 3) regards it as not belonging to Pontus, but to Colopene in Cappadocia. (Ptol. v. 6. § 10; Hierocl. p. 702; Il. Ant. pp. 204, 205.) The town existed as a small place before the dominion of the Romans in those parts, but its ancient name is unknown. Pompée increased the site to make it the seat of Magnesia. (Strab. xii. p. 568.) The name Sebastia must have been given to it before the time of Pliny, being the first to use it. During the imperial period it appears to have risen to considerable importance, so that in the later division of the Empire it was made the capital of Armenia Minor. The identity of Sebastia with the modern Sioua is established partly by the resemblance of the names, and partly by the agreement of the site of Siusa with the description of Gregory of Nyssa, who states that the town was situated in the valley of the Halys. A small stream, however, flowed through the town, and fell into a neighbouring lake, WooCommerce, which coasts reached with the Halys. (Orat. i. 6. XL. Mart. p. 501, Orat. ii. p. 510; comp. Basil. M. Epist. viii.) In the time of the Byzantine empire Sebastia is mentioned as a large and flourishing town of Cappadocia (Nicet. An. p. 76; Ducas, p. 81); while Stephanus B. (s. v.) and some uncials refer to it as Armenia. (Gomme. Lit. Rec. i. 24; Theodoret. II. Eccl. 14.) In the Itinerary its name appears in the form of Sounitsa, and in Abelius it is actually written Siusa. The emperor Justinian restored its decayed walls. (Procop. de Aed. iii. 4.) The town of Sioua is still large and populous, and in its vicinity seems, though not very important, remains of antiquity are seen. (Fontanier, Voyages en Orient, i. p. 179, fig.) [L. S.]

SEBASTOPOLOTIS (Σεβαστοπολις).—with the town in Pontus Cappadocicus (Ptol. v. 6. § 7), which, according to the Antonine Itinerary (p. 205), was situated on a route leading from Tavium to Sebastia, and was connected by a road with Caesarea (p. 214). Pliny (vi. 3) places it in the district of Colope, and mentions other authorities in its favor as a small town. (Hierocl. 700; N. Hier. 21; Gregor. Nyssen. in Mor. p. 202.) The site of this place is still uncertain, some identifying the town with Cabira, which is impossible, unless we assume Sebastopolis to be the same town as Sebastia, and others believing that it occupied the site of the modern Turkol or Turkal. [L. S.]

SEBASTOLIBOS (Σεβαστολιβος), a town of unknown site (Ptol. v. 6. § 9), though, from the place it occupies in the list of Potismi, it must have been situated in the south of Thracia. [L. S.]

3. About Sebastia on the east coast of the Euine see Dioscorides, and about that in Myra, see MIRAXA. [L. S.]

SEBETUM (Σεβετος), a town situated either in the southeastern part of Noricum, or in the east of Thracia, on the road from Aquincum to Vindobona (Il. Ant. p. 280), seems to be the modern Sacka. (Comp. Muchtar, Noricum, p. 250.) [L. S.]

SEBENNYTS (Σεβεννύτης), a town of the Cesteliani in Hispanic Tapaecon. There is a coin of it in Sestini (p. 164). [T. H. D.]

SEBENYSTUS (Σεβενύστος), Ptol. iv. 5. § 50; Steph. B. s. a.; Σεβενυστιτος, Strab. viii. p. 802; Etli. Σεβενυστος, the chief town of the Sebennytic nome in the Egyptian Delta, situated at the Sebennytic arm of the Nile, nearly due E. of Saïs, in lat. 31° 10'. The modern hamlet of Sebennë, where some ruins have been discovered, occupies a portion of its site. Sebennystus was anciently a place of some importance, and standing on a peninsula, between a lake (Σεβεννύστος: Burlos) and the Nile, was favourably situated for trade and intercourse with Lower Aegypt and Mesopotamia. From the aspects of the country, however, the elevation of the alluvial soil have nearly obliterated its site. (Guamplonius, L'Egypte, vol. ii. p. 191, seq.) [W. B. D.]

SEBETHUS (Σιμων οι Μακεδωνες), a small river of Campania, flowing into the Bay of Naples, immediately to the E. of the city of Naples. It is alluded to by several ancient writers in connexion with that city (Stat. Silv. i. 2. 263; Colum. x. 134;
SEBINUS LACUS. SEGASAMUNCULUM.

Vib. Sequest. p. 18), and is generally considered to be the same with the stream which now falls into the sea a little to the E. of Naples, and is commonly called the Fiume della Maddalena. This rivulet, which rises in a fountain or basin called La Bola, about 5 miles from Naples, is now a verytrilling stream, but may have been more considerable in ancient times. The expressions of poets, however, are not to be taken literally, and none of the geographers deem the Sebastes worthy of mention. Virgil, however, alludes to a nymph Sebista, and an inscription attests the local worship of the river-god, who had a chapel (sedile) erected to his honor on the bay of Neapolis. (Gruter, It. p. 94. 9.) [E. H. B.]

SEBINUS LACUS (Lago d' Iseo), a large lake in the N. of Italy, at the foot of the Alps, formed by the waters of the river Ollina (Oglio), which after flowing through the land of the Camuni (the Val Camonica), are arrested at exit from the mountains and form the extensive lake in question. It is not less than 18 miles in length by 5 or 3 in breadth, so that it is inferior in magnitude only to the three great lakes of Northern Italy; but its name is mentioned only by Pliny (ii. 103. a. 106, iii. 19. a. 23), and seems to have been little known in antiquity, as indeed is the case with the Lago d' Iseo at the present day. It is probable that it derives its name from Iesus, the name of the site of the modern Iseo, at its SE. extremity, but no mention of this name is found in ancient writers. (Clover, It. p. 412.) [E. H. B.]

SEBRIDÁE (Σεβρίδαι, Plut. iv. 7. § 33), or SOROBIDÁE (Σορόβιδαι, Plut. iv. 7. § 29), an Aethiopian race, situated between the Astaboras (Ticinum) and the Red Sea. They probably correspond to the modern Somayir, or the people of the "maritime tract." There is some likelihood that the Sembrutae, Sebridae, and Soroabidae are but various names, or corrupted forms of the name of one tribe of Aethiopians dwelling between the upper arms of the Nile and the Red Sea. [W. B. D.]

SEBURRI (Σεβούρος and Σεβυρού, Plut. ii. 6. § 43) was on the coast of North Africa, in the province of Numidia, on both banks of the Minus, probably a subdivision of the Callisais Barchai. [T. H. D.]

SECELA or SECELLA. [ZKIAL.] SECRELLA, called by the Geogr. Rav. (iv. 42) and in a Cod. Paris. of the Itam. Ant. (p. 988) Secræa, a town of the Lactini in Hispania Tarraconensis, and was in the two provinces of Numidia and Janucaria to Tarracon. Variously identified with S. Perè de Segrada, Arbucies, and San Seloni (proper Santa Coloma Secriva). The last identification seems the most probable. [T. H. D.]

SECCIA (Secchia), a river of Gallia Cispadana, one of the southern tributaries of the Po, which crosses the Via Anniae a few miles W. of Modena. It rises by the name of Secchia, in the Apennines, and was known by Pliny the Galbarius; but the name of Seccia, corresponding to its modern appellation of Secchia, is found in the Jerusalem Itinerary, which marks a station called Pont Secinis, at a distance of 5 miles from Mutina. (Itam. Hier. p. 606.) The same bridge is called in an inscription which records its roadway 3. R. 54, in the Vetus Latina. (Murat Inscr. p. 460. 5; Orell. Inscr. 1002.) The Secchia is a considerable stream, having the character, like most of its neighbours, of a mountain torrent. [E. H. B.]

SECOANUS (Σεκοανός, Steph. s. v.), a river of the Massaliots, according to one reading, but according to another reading, a city of the Massaliots, "from which comes the ethnic name Secani, as Artemidorus says in his first book." Nothing can be made of this fragment further than this; the name Secanus belonged both to the basin of the Rhone and of the Saône. (G. L. S.)

SECO or SICOR (Σκόρος ή Σκοριά λαυρ), a port which Ptolemy (ii. 7. § 2) places on the west coast of Gallia, between the Pectonium or Pictonum Promontory and the mouth of the Ligeris (Loire). The name also occurs in Marcianus. The latitudes of Ptolemy cannot be trusted, and we have no other means of fixing the place except by a guess. Accordingly Strabo tells us that Secor is the "port of the Sabinae" (Ollineus; and other conjectures have been made. [G. L.]

SEDALACUS. [Sidozoccus.] SEDETA'NI. [EDITANI.]

SEDIBONIATES, are placed by Pline in Aquitania (iv. c. 19). He says, "Aquitani, unde nomen provinciae, Sediboniates. Monx in oppidum contribuunt Concordi in opere, et in curia Suebiorum Cesaris. (Begirbonien.) We have no means of judging of the position of the Sediboniates except from what Pline says, who seems to place them near the Beigriones and Convenses. (COSVERAE.) [G. L.]

SEDUNI, a people in the valley of the Upper Rhone, whom Caesar (B. G. iii. 1. 7) mentions: "Nuntiatae Arvenses, sed unam ac braciam in the mentioned in the trophy of the Alps (Plin. iii. 20) in the same order. They are east of the Veragri, and in the Valais. Their chief town had the same name as the people. The French call it Sion, and the Germans name it Stitten, which is the ancient name, for it was called Sedunum in the middle ages. An Inscription has been found at Sedunum, "Citius Sedurnorum Patrono." Stitten is on the right bank of the Rhone, and crossed by a stream called Sione. The town-hall is said to contain several Roman inscriptions. [Nuncat. Octodur.] [G. L.]

SEDUSII, a German tribe mentioned by Caesar (B. G. i. 17) among the warriors of Ariovistus. No particulars are stated about them, and as they are not spoken of by any subsequent writer, it is impossible to say to what part of Germany they belonged. Some regard them as the same as the Edones mentioned by Tacitus (Germ. 40), and others identify them with the Phundusii whom Ptolemy (ii. 11. § 12) places in the Cimbrian Berones; but there are no agreements in his name, or any faint resemblance of names. [L. S.]

SEGALLAUNI (Σεγαλλαυνοι, Plut. ii. 10. § 11). Ptolemy places them west of the Allobroges, and be named as their town Valencia Colonia (Valence), near the Rhone. Pliny (iii. 4) names them Segellaunii, and places them between the Voucante and the Allobroges in the province of Aisauris. (Murat. Inscr. p. 460. 5; Orell. Inscr. 1002.) The city of Valencia is identified with the S. Maria di Ribaredonda, Comeno, and Balaurumae. [T. H. D.]

SEGASAMUNCULUM (Σεγασαμυνκολμ, Plut. ii. 6. § 53), a town of the Antigonus in Hispania Tarraconensis. (Itam. Ant. p. 394.) Variously identified with S. Maria de Ribaredonda, Comeno, and Balaurumae. [T. R. D.]

3 p 2
SEGEDA AUGERINA.

An important town of Hispania Baetica, between the Baetis and the coast. (Pbin. iii. 1. 3.) Commonly supposed to be S. Joa de lla Forca near Jaen. [T.R.H.]

SEGELLO (Tum.) (Ital. p. 473), called also SEGELLOCM, B. p. 478), a town in Britannia Romana, on the road from LIndum to Eboracum, according to Cassius (p. 582) Littleborough in Notitia

[1.I.D.]

SEGELLOMAMA (Zeyrerdnsa, Strab. iii. p. 162), or SEGELLOMAMIA (Hist. Ant. pp. 394, 441), was a town in Segestae in Sicily, the residence of the inhabitants (Plin. iii. 3. 4. a), a city of the Marcoh or Turmogidi in hispania Tarresina, on the road from Tarraco to Asturica, now known as Segesta to the W. of Busiencia. (Flores, Exeget. p. 419, ex. p. 59). [T.H.D.]

SEGESTA in Sicily, is placed in the Table between Guerra (n. 286) and Aspendemon in Cima (n. 287), and the distance of Segesta from each place is stated xii. The site of Segesta is not certain. Some trace of a place named Segestesocruera. [G.L.]

SEGESTA (Zeyrerdns: Ekh. Zeyrerdns), Segestae (Ekd. Zeyrerdns), a city of Sicily in the N. of the island, 6 miles distant from the sea and 54 W. of Panormum. Its name is always written in the Attic and other contemporary Greek works SEGESTAE (Zeyrerdns: Ekh. Zeyrerdns), Thuc. 427, and it had been been frequently asserted that it was first attached to Segesta by the Romans, for the purpose of guarding the illomen of the name of Evzester (Strab. p. 530). This is quite incorrect, for the one of the times Evzester was called by the inhabitants themselves Segesta. Though this form seems to have been so named by the Greeks into Evzester. The original name of Segesta is entirely obscure. The ancient writers among the Greeks and authors by the Romans, on the names and history of Segesta, do not discuss its foundation to a second T. On several occasions from the destruction of their city, and the nation was reunified or re-established by the Romans, who in consequence claimed a kindred with the Segestae. Tertullian seems to have been the first to call it a barbarian tribe in the second century after Christ, as described in the first generation; and not another nor another before the time of Evzester, as a distinct people, already united in the part of Sicily when the Egyptians of the island appear. [Euhemerus.]

A city, not now extant, according to a recent controversy, in which Segesta owed its name to a man of the name of Dios, who had been the ancestors of the latter. S. ub. p. 372; C. C. A. p. 404; G. p. 404 of the prehistory of the Segestae, which we have seen has been the subject of the Segestae. The Annals of Segesta, written at the time of the Sicilian expedition to Sicily, show that the town was then in the possession of a Roman tenement, and it was always considered a part of the state of the Athenians. [Euhemerus.]

Ever be the origin of the tradition, this has a doubt on the one hand that the city was occupied by people distinct from the Segestae, and on the other it is to be expected that the allies of the Athenians at the time of the Sicilian expedition, distinctly called the Segestaeans; and the history of the Greek cities of Sicily was evidently recorded with sufficient accuracy for us to rely upon his authority we can not pronounce any people to be non-existent. (L. 448.) Besides, from the time they began to be known, from a very early period, in such close relations with the Greek cities of Sicily, and at least relations both of hostility and alliance with the Hellenic states, wholly different from the Sicelians in the island. The early influence of culture is shown also by their coins, which inscribed with Greek characters, and bear an unquestionable impress of Greek art.

The first historical notice of the Segesta transmitted to us represents them as already settled early as in B.C. 580) in hostilities with the Segestae, which would appear to prove that they had already extended their territories so far as come into contact with the Greeks. [L. 448, 449.] The use of the Latin name is probably a sign of the close relations between Calcidic and the Segestaeans under Snettisham, the Segestaeans obtained the advantage over their adversaries. [L. 449.] To make the Greek or the Sicelians, it appears to be the Selemites, who to the Segestaeans seem to have been engaged in a series of perpetual disputes. It was described with the name of a city to which on the Segesta, and appeared to have been another, the Segestaeans took advantage of the first Sicilian expedition to Sicily under Leocrates (B.C. 434), and concluded a treaty of alliance with Athens. [L. 449, 450.] This, however, seems to have had to be a mistake, and shortly after, hostilities arising in a more serious war between the Segestaeans and the Syracusans, the Segestaeans were called by the Syracusans their own advantage, and were able to press their cause both by land and sea. In this year the Segestaeans, having in vain applied for assistance to the Athenians, who were, with their usual difficulty, persuaded to extricate their cause. The Segestaeans, and Carthage, were in return to the Athenians, who were, without any difficulty, persuaded to extricate their cause. The Segestaeans, and Carthage, were in return to the Athenians, who were, without any difficulty, persuaded to extricate their cause.
SEGESTA.
arms against Syracusae, and the contest between Segesta and Selinus was almost forgotten in the more important struggle between those two great powers. In the summer of n. c. 415 an Athenian fleet proceeding along the coast, took the small town of Hyccara, on the coast, near Segesta, and made it over to its ally the Samians (Thuc. vi. 62; Diod. xiii. 6). The latter people are again mentioned on no less than one occasion as sending auxiliary troops to assist their Athenian allies (Thuc. vii. 57; Diod. xiii. 7): but no other notice occurs of them. The final defeat of the Athenians at the Segestans again exposed the towns of their neighbours the Selinus and the Segestans, with them, they again had recourse to the Carthaginians, who determined to espouse their cause, and sent them, in the first instance, an auxiliary force of 5000 Africans and 800 Campian mercenaries, which sufficed to ensure them the victory over their rivals, n. c. 410. (Diod. xiii. 43, 44.) But this was followed the next year by a more effective force under Hannibal, who landed at Lilybaeum, and, proceeding direct to Selinus, took and destroyed the city. (Ib. 54–58.) This was followed by the destruction of Himera; and the Carthaginian power now became firmly established in the western portion of Sicily. Segesta, surrounded on all sides by this formidable neighbour, naturally took the position of a dependent ally of Carthage. It was one of the few cities that remained faithful to this alliance even in B. C. 397, when the great expedition of Dionysius to the W. of Sicily and the siege of Motya seemed altogether to shake the power of Carthage. Dionysius in consequence laid siege to Segesta, and pressed it with the utmost vigour; but on the approach of an army under Mililco, who was able to defend his efforts, until the landing of Mililco with a formidable Carthaginian force changed the aspect of affairs, and compelled Dionysius to raise the siege. (Id. xiv. 48, 53–55.) From this time we hear little more of Segesta till the time of Agathocles, under whom it suffered a great calamity. The strongest evidence of the transactions connected with the return from Africa (n. c. 307), and being received into the city as a friend and ally, suddenly turned upon the inhabitants on a pretence of disaffection, and put the whole of the citizens (said to amount to 10,000 in number) to the sword, plundered their wealth, and sold the women and children into slavery. He then changed the name of the city to Diceneopolis, and assigned it as a residence to the fugitives and deserters that had gathered around him. (Diod. xx. 71.)

It is probable that Segesta never altogether recovered this blow; but it soon resumed its original name, and again appears in history as an independent city. Thus it is mentioned in n. c. 276, as one of the cities which Pliny says had his experience in the matter of the Carthaginians; and it was probably on this occasion that the city was taken and plundered by them, as alluded to by Cicero (Ferr. iv. 33): a circumstance of which we have no other account. It continued subject to the Carthage till the First Punic War. In the first year of that war (n. c. 264) it was attacked by the consul Appius Claudius, but without success (Diod. xiii. 3. p. 501); but shortly after the inhabitants put the Carthaginian garrison to the sword, and declared for the alliance of Rome. (Ib. 5. p. 502; Zonar. viii. 9.) They were in a consequent besieged by a Carthaginian force, and were at one time reduced to great straits, but were relieved by the arrival of Dullius, after his naval victory, B. C. 260. (Pol. i. 24.) Segesta seems to have been one of the first of the Sicilian cities to set the example of defection from Carthage; on which account, as well as the length of time they were unimportant, the inhabitants were treated with great distinction by the Romans. They were exempted from all public burdens, and even as late as the time of Cicero continued to be "sitio fodere immunes ac liberi." (Cic. Ver. iii. 6, iv. 33.) After the destruction of Carthage, Scipio Africanus restored to the Segestans a statue of Diana, which had been carried off by the Carthaginians, probably when they obtained possession of the city after the departure of Pyrrhus. (Cic. Ver. iv. 33.) During the Servile War also, in B. C. 102, the territory of Segesta is again mentioned as one of those where the insurrection broke out with the greatest fury. (Diod. xxxvi. 5, Exc. Photop. 584.) But with the exception of two of these insurrections, we hear little of it under the Roman government. It seems to have been still a considerable town in the time of Cicero, and had a port or emporium of its own on the bay about 6 miles distant (τὸ τῶν Αἰγε- τῶν ἡσυχαῖον, Strab. vi. pp. 256, 272: Σεγεσταίων ἡσυχαίον, Plut. iii. 4. § 4). This emporium seems to have grown up in the days of Strabo to be a more important place than Segesta itself: but the continued existence of the ancient city is attested both by Pliny and Ptolomy; and we learn from the former that the inhabitants, though they no longer retained their position of nominal independence, enjoyed the privileges of the Latin citizenship. (Strab. c. ; Plin. iii. 8. a. 14; Plut. iii. 4. § 15.) It seems, however, to have been abandoned before the time of Tacitus, and is probably the ruin called Segesta, which is seen about 6 miles distant, occupies nearly, if not precisely, the same site as the ancient city. (Tac. Hist. v. 47.)

The site of the ancient city is still marked by the ruins of a temple and theatre, the former of which is one of the most perfect and striking ruins in Sicily. It stands on a hill, about 3 miles NW. of Castelamma, in a very barren and open situation. It is of the Doric order, with six columns in front and fourteen on each side. The temple is entirely in excellent state; the only damage, forming a parallelogram of 162 feet by 66. From the columns not being fluted, they have rather a heavy aspect; but if due allowance is made for this circumstance, the architecture is on the whole a light order of Doric; and it is probable, therefore, that the temple is not of very early date. From the absence of fluting, as well as other details of the architecture, there can be no doubt that it never was finished,—the work probably being interrupted by some political catastrophe. This temple appears to have stood, as was often the case, outside the walls of the city, at a short distance to the W. of it. The latter occupied the summit of a hill of small extent, at the foot of which flows, in a deep valley or ravine, the river that gave name to the First of the Punic Wars. The name of Segesta, a confluence of the Fiume di S. Bartolomeo, which flows about 5 miles E. of Segesta. The latter is probably the ancient Crimia or Crimia, celebrated for the great victory of Timoleon over the Carthaginians, while the Gaggera must probably be the stream called by Diodorus (xxi. 71) the Bescundar
Two other streams are mentioned by Aelian (V. H. ii. 32) in connection with Segesta, the Telmessus and the Porphax; but we are wholly at a loss to determine them. Some vestiges of the ancient walls may still be traced; but almost the only ruins which remain within the circuit of the ancient city are those of the theatre. These have been lately cleared out, and exhibit the praecinctio and sixteen rows of seats, great part in good preservation. The general form and arrangement are purely Greek, and the building rests at the back on the steep rocky slope of the hill, out of which a considerable part of it has been excavated. It is turned towards the N. and commands a fine view of the broad bay of Castell 'a Mare. (For a more detailed account of the antiquities of Segesta, see Swinburne's Traveele, vol. ii. pp. 231—233; Snyth's Sicily, pp. 67, 68; and especially Serra di Falco, Anichilia della Sicilia, vol. i. pt. ii.)

Ancient writers mention the existence in the territory of Segesta of thermal springs or waters, which seem to have enjoyed considerable reputation (v.g. Segesta feri Agyssia, Strab. vi. p. 275; Segesta Leon. v. Xylogoss, Diod. iv. 23). These are apparently the sulphurous springs of a spring called Calamositi, about a mile to the N. of the site of the ancient city. (Passiv. Sic. vii. 4.) They are mentioned in the Itinerary as "Aquae Segestanenses sive Pincanenses" (Itin. Ant. p. 91); but the origin of the latter name is wholly unknown.

The coins of Segesta have the figure of a dog on the reverse, which evidently alludes to the fable of the river-god Crimirus, the mythical parent of Segestus, having assumed that form. (Serv. ad Aen. i. 550, v. 30; Eckhel, vol. i. 234.) The older coins (as already observed) uniformly write the name SEGESTA, as on the one annexed; those of later date, which are of copper only, bear the legend ESTIATION (Eckhel, l. c. p. 286). [E. H. B.]

COIN OF SEGESTA.

SEGESTA (Setrri), a town on the coast of Liguria, mentioned by Pliny, in describing the coast of that country from Genoa to the Maestrata. (Plin. iii. 5. a. 7.) He calls it Segesta Tigniliorum; so that it seems to have belonged to a tribe of the name of the Tignilli, and a town named Tignilla is mentioned by him just before. Segesta is commonly identified with Setra (called Setra di Levante to distinguish it from another place of the name), a considerable town about 30 miles from Genoa, while Tignilla is probably represented by Treguso, a village about 2 miles further inland, where there are considerable Roman remains. Some of the MSS. of Pliny, indeed, have "Tignilla intus, et Segesta Tigniliorum," which would seem to point clearly to this position of the two places. (Sillig, ad loc.) It is probable, also, that the Itinerary of the Itineraries (Itin. Ant. p. 298) is identical with the Tignilla of Pliny. [E. H. B.]

SEGESTA, or SEGESTICA. [Sicilia.]

SEGIDA (Zeyda, Strabo iii. p. 165). 1. A town of the Arenci in Hispania Tarraconensis. According to Appian, who calls it Zeyda (vi. 44), it belonged to the tribe of the Belli, and was 40 stadia in circumference. Stephano B. (a. e.) calls it Zeyda, and makes it a town of the Celtiberians, of whom indeed the Arenci and Belli were only subordinate tribes. Segida was the occasion of the first Celtiberian War (Appian, l. c.), and was probably the same place called Segestica by Livy (XV. 27).

2. A town of Hispania Baetica, with the surname Restituta Julia. (Plin. iii. i. 2. 5.) [T. H. D.]

SEGISA (Zyra, Pltol. ii. 6. § 61), a town of the Bastitani in Hispania Tarraconensis, perhaps the modern Segisias. [T. H. D.]

SEGISAMA and SEGISAMA JULIA (Zy-rasa Iuwala, Pltol. ii. 6. § 59), a town of his-pania Tarraconensis. We find the inhabitants mentioned by Pliny as Segisamajuliones (iii. 3. a. 4.). Potenio ascribes the town to the Vacteria, but Pliny to the Tarmogodi, whence we may probably conclude that it lay on the borders of both those tribes. The latter author expressly distinguishes it from Segisana. [T. H. D.]

SEGISAMO. [SEGESAMA.]

SEGISAMUNCLUM. [SEGESAMUNCLUM.]

SEGNI, a German tribe in Belgium, mentioned by Caesar (B. G. vi. 32) with the Condusi, and placed between the Eburones and the Treviri. It is B. G. ii. 4 Caesar speaks of the Condusi, Eburones, Caersei, and Faesinini, "qui uno nomine Germani appellatur," but he does not name the Segni in that passage. There is still a place named Sasi or Signes near Condras, on the borders of Namur; and this may indicate the position of the Segni. [G. L.]

SEGOBOIDUM in Gallia, placed in the Table on a road from Andouanatum (Langres) to Vesontio (Besançon). The Itin. gives the same road, but D'Anville supposes Segobadum to be Segondum, which is on the Somme, and in the direction between Bessans and Langres. [G. L.]

SEGOBRIIGA (Zeyderpaia, Pltol. ii. 6. § 58). 1. The capital of the Celtiberi in Hispania Tarraconensis. (Plin. iii. 3. a. 4.) It lay SW. of Caesar- augusta, and in the jurisdiction of Cartago Nova. (Plin. l. c.) The surrounding district was inhabited by several tribes. (Id. xxxvi. 22. a. 45.) It must have been in the neighbourhood of Priego, where, near Pennascales, considerable ruins are still to be found. (Florenc. Esp. Sagr. vii. p. 61.) For coins see Sestini, i. p. 193. (Cl. Strab. iii. p. 163; Front. Strateg. iii. 10. 6.)

COIN OF SEGEBRIGA.

SEGOBIRIGA. [Marsilia, p. 290.]
SEGODUNUM. Ptolemy (ii. 7. § 21) calls Segodunum the chief town of the Ruteni [Ruteni], a Gallic people west of the Rhine, in the Aquitania of Ptolemy. In some editions of Ptolemy the reading is Segodunon or Ercodunon. In one modern name is Segodunum, which is probably a corrupt form; and it has the mark of a chief town. It was afterwards called Civitas Rutenerorum, whence the modern name Rodex, on the Aegeron, in the department of Aveyron, of which it is the chief town.

SEGODUNUM (Zerydovivos), a town of southern Germany, probably in the county of the Würm-murdert, is, according to some, the modern Würzburg. (Ptol. ii. 11. § 29; comp. Wilhelm, Germanien, p. 206.)

SEGONTIA. 1. A town of the Celtiberi in Hispania Tarraconensis, 16 miles from Caesariangusta. (Itin. Ant. pp. 437, 439.) Most probably identical with the Seguntia of Livy (xxxv. 19). The modern name Ercé is not likely to belong to the town. (G.L.)

2. (Zerywia Inaputa, Ptol. ii. 6. § 66,) a town of the Barduli in Hispania Tarraconensis. [T. H. D.]

SEGONTACI, a people in the S. part of Britannia, in Hampshire. (Camden, pp. 84, 146; Caes. B. G. v. 21; Orelli, Inscr. 2013.) [T. H. D.]

SEGONIUM, a city in the NW. part of Britannia, to which there was a Roman colony. (Itin. Ant. p. 488.) It is the modern Caerwernoc, the little river by which is still called Segonti. (Camden, p. 798.) It is called Segontio by the Geogr. Rav. (v. 81.) [T. H. D.]

SEGORA, in Gallia, appears in the Table on a road from Portus Namnetum (Nantes) to Limnum, or Limina (Posidoniae). D'Avrille supposes that Segora is Strassorge, which is on the road from Nantes to Poitiers. (G.L.)

SEGOSA, in Gallia, is placed by the Antonine Itin on a road from Aquis Tarbellaeis (Daz) to Bburgis (Bordeaux). The first station from Aquis Tarbellicae is Mosconnium, or Mostomium, the site of which is unknown. The next is Segosa, which D'Avrille places on the road from Bordeaux to Narbonne. But he observes that the distance, 28 Gallic leagues, between Aquae and Segosa is less than the distance in the Itin. [G.L.]

SEGOVELLONI. [SEGELAUNI.]

SEGOVIA (Zerywida, Ptol. ii. 6. § 56). 1. A town of the Aravic in Hispania Tarraconensis, on the road from Emerita to Caesariangusta. (Itin. Ant. p. 435; Plin. iii. 3. 4; Flor. iii. 22.) It still exists under the ancient name. For coins see Flores (Med. ii. p. 577), Monnet (i. p. 51, and Suppl. i. p. 104), and Sestini (p. 196).

2. A town of Hispania Baetica, on the river Sil-licoon-c. (Hirt. B. A. 57.) In the neighbourhood of Segesta, modern Perabas. [T. H. D.]

SEGUSSIANI (Zerywunos or Zerywida), a Gallic people. When Caesar (a. c. 58) was leading against the Helvetii the troops which he had raised in North Italy, he crossed the Alps and reached the territory of the Allobroges. From the territory of the Allobroges he crossed the Rhone into the country of the Segussiani: "Hi sunt extra Provinciae transe Rhenum primi, " (Ptol. i. 10.) He therefore places them in the angle between the Rhone and the Saône, for he was following the Helvetii, who had not yet crossed the Saône. In another place (vii. 64) he speaks of the Aedui and Segussiani as bordering on the Provence, and the Segussiani were dependents of the Aedui (vii. 75). Strabo (iv. p. 188) places the Seguasi between the Rhodanus and the Dubia (Doux), on which D'Avrille remarks that he ought to have placed them between the Rhone and the Loire. But part of the Seguasi at least were west of the Rhone in Caesar's time, as he plainly tells us, and therefore some of them must have crossed between the Rhone and the Doulo, though this is a very inaccurate way of fixing their position, for the Doulo ran through the territory of the Seguasi. Lugdunum was in the country of the Seguasi. [LUGODUNUM.] Pliny gives to the Seguasi the name of Liberi (v. 19).

In Cicero's oration Pro P. Quinctio (c. 25), a Gallic people named Sebagnus, Sebagnios, with several other variations, is mentioned. The reading " Sebagnusio " is a correction of Lambinus. Baier (Orelli Cicero, 2nd ed.) has written " Seguani" in this passage of Cicero on his own authority; but there is no name Seguani in Gallia. It is probable that the true reading is " Seguani." Poetius (ii. 6. § 14) names Seguani (Rossius) as a name of the Roman Segusianorum as the towns of the Seguani, which shows that the Seguani in his time extended to the Loire (Rodumpum); and the greater part of their territory was probably west of the Rhone and Saône. Mionnet, quoted by Ukert (Gallien, p. 320), has a medal which he supposes to belong to the Seguani.

SEGUSSIO (Zerydovivos); Eth. Zerywunais, Seguassio (Suse), a city of Gallia Transpadana, situated at the foot of the Cottian Alps, in the valley of the Duria (Dura Riparia), at the distance of 33 miles from Augusta Turinorum (Turin). It was the capital of the Gallian king or chiefman Cottius, from whom the Alpes Cottiae derived their name (Rossius), and who became at the reign of Augustus, a tributary or dependent ally of the Roman Empire. Hence, when the other Alpine tribes were reduced to subjection by Augustus, Cottius retained the government of his territories, with the title of Praefectus, and was able to transmit them to his son, M. Julius Cottius, upon whom the emperor Claudius even conferred the title of Augustus. It was not till after the death of the younger Cottius, in the reign of Nero, that this district was incorporated into the Roman Empire, and Segusio became a Roman municipal town. (Strab. iv. pp. 179, 204; Plin. iii. 20. a. 24; Amm. Marc. xv. 10.)

It was probably from an early period the chief town in this part of the Alps and the capital of the surrounding district. It is situated just at the junction of the road leading from the Montgenèvre down the valley of the Dora with that which crosses the Mont Cenis; both these passages were among the natural passes of the Alps, and were doubtless in use from a very early period, though the latter seems to have been constantly neglected by the Romans. The road also that was in most frequent use in the latter ages of the Republic and the early days of the Empire to arrive at the pass of the Cottian Alps or Mont Genèvre, was not that by Segusio up the valley of the Dora, but one which ascended the valley of Fènesvilles to Ooarium (Uxena), and from thence crossed the Col de Santierre to Scintavium on the foot of the actual pass of the Genèvre. This was the route taken by Caesar in a. c. 58, and appears to have still been the one most usual in the days of Strabo (Caes. B. G. i. 10; Strab. iv. p. 179); but at a later period the road by Segusio seems to have come into general use, and is that given in the Itineraries. (Itin. Ant. pp. 341.)
357.) Of Segusio as a municipal town we hear little; but it is mentioned as such both by Pliny and Ptolemy, and its continued existence is proved by inscriptions as well as the itineraries; and we learn that it continued to be a considerable town, and a military post of importance, as commanding the passes of the Alps, until long after the fall of the Western Empire. (Plin. iii. 17. s. 21; Ptol. iii. 1. § 11; Orell. Ins. 1090. p. 3803; Ann. Marc. xv. 10; Flum. Hier. p. 556; P. Disc. Hist. Long. iii. 8; Greg. Tur. iv. 39.)

Ammianus tells us that the tomb of Cottius was still visible at Segusio in his time, and was the object of much honour and veneration among the inhabitants (Ann. iv. c. 3). A triumphal arch erected by him in honour of Augustus is still extant at Suse; it commemorates the names of the "Cottianae civitates" which were subject to his rule, and which were fourteen in number, though Pliny speaks of the "Cottianae civitates xii." (Plin. iii. 20. s. 84; Orell. Ins. 626.) All these are, however, mere obscure mountain tribes, and the names of most of them entirely unknown. His dominions extended, according to Strabo, across the Rhone as far as Ioannaeum in the land of the Catarians (Strab. iv. p. 179); and this is confirmed by the inscription which enumerates the Catarians and Medalli among the tribes subject to his authority. These are probably the two omitted by Pliny. Oceum, in the valley of the Chasoeus, was comprised in the territory of Cottius, while its limits towards the Taurini was marked by the station Ad Fines, placed by the itineraries on the road to Augusta Vosorum. But the distances given in the itineraries are incorrect, and at variance with one another. Ad Fines probably may be placed at or near Ariguisma, 13 miles from Turin, and 20 from Suse. The mountain tribes called by Pliny the "Cottianae civitates" formed part of the Roman government, at first received only the Latin franchise (Plin. iv. c. 3), but as Segusio became a Roman municipium, it must have received the full franchise. [E. H. B.]

SEGUSTERO, a name which occurs in the Antonine Itin. and in the Table, is a town of Gallia Narbonensis, and the name is preserved in Sistene, the seat town of an arrondissement in the department of Bas-Rhône. In the 2nd book of the Domesday Book of the Kings of France, 3000 acres have been found at Sistereon. The name is in the N.C. Prov. Galliae is Civitas Segestonum. It was afterwards called Scustus, and Sistereon, where the modern name comes. (D. Anv. v. 25. c. 4. [G. L.]

Sev. A. (Crise. LXX.) Sistereon, Scustus, Scustg., Scust, a name which came to the west from Sis, corresponding to "the town of Sis," "town of Sis." (Gustus, Gustus, etc.) Mount Sisar was not far from Sis and his posterity (Gustus, 8. 9.) Sisar, 8. 4., is the ancestor of which they were not (Sisar, 8. 4.) Its general situation is in Divonna (1. 2) between Sisar and Knossus. The district must have been extensive, for in their retreat, these are of us to be seen. (1. 2.) The Iberians, however, were Sisar; many say (c. 3. 1.) Theiberians occupied the lands of Sisar near the Bosporus; there the last of Sisar succeeded them, when they were stopped them from their sea in 12. 22: comp. Gen. xiv. 22. Sisar is also the same as "Sisar, Sisar, Scustus, Sistereon, etc." (In specijicum, "the town of Sisar") (2. 1.) The name belonging to the "town of Sisar" in some modern maps, but without sufficient authority for its use. Mr. Wilson confines the name to the eastern side of the Araves, from a little north of Peira to the coast of Abakos, which ranges his name Anna-Sara (Land of the Bible, vol. i. pp. 258. 590. 10.) But since Cades was in their, it seems that the name must have extended much more widely on both sides the Araves. Mr. Ralston gives us a paper on the coast of Cades, which of course, the more he thinks, he last came to, in the 4th. 44., where the Israelites were next to the Amalekites. (William's Holy Land, p. 465.) [5.]

SEIRAE. [Prophec.]

SELACHUSA, an island lying of the Lycus in the eastern part of Spisaecus, mentioned only by Eusebius (iv. 12. s. 87.)

SELEH. [Petrus]

SELABINDA (Xepoleotus, Ptol. i. 4. 17.) a town on the coast of Hispam Barca and Abdera. (Plin. iii. 1. c. 3.) Ptolemy (Geo. iii. pp. 6) identifies it with Selinunte, a city on coast of Ucritis (ii. p. 491), it is, however, in the same land in which is the Tanagra. (I. E. S.)

SELAS. [Mesembria, p. 354, h.]

SELEASIA. [Selaia.]

SELEMNUS. [Achaia, p. 13. c. 10.]

SELENITIS or SELENITIS (Selinites) a district in the south-west part of Creta, extending along the coast, but also some distance as well, and was formerly part of the reversion of the temple of Artemis. These two lakes, which were connected with each other, were extremely rich in fish, formed part of the revenues of the temple of Artemis, though they were on several occasions wrong (Strab. xiv. p. 643; Plin. v. 31.) The same as lakes, derived from Selene, the moon-goddess, probably arose from their connection with the great goddess of Ephesus. (C. C. Traill in Asia Minor, vol. i. p. 12.)

SELEUCIA or SELEUCIA, two towns in Phœnicia, one called Seleukos (Seleucia) situated near the coast of the south, another called Seleucos, situated in the land of Cassius, placed by Ptolemy in long. 7° 30' to 34° 45'. The Belus was a tributary of it, running into it from the W., and since it was marked, Selene was exactly in the same line. Falsus, it must have been due E. of it. There, ancient Falsos, lies two hours of ad Gallis, on the coast. Selene ad Belus looks for 1° 10' to the E., according to Strabo, reckoning that places Falsos in long. 5° 5' to 34° 45'. Modern conjectures have identified it with Sherg or Dersorj, which is placed 30 miles of Antioch. (Ptol. v. 15. § 16.; Ptolemy, vol. ii. p. 13.) Pliny mentions it as somewhere between the east and west (4. 1.) In the inscriptions of Syria: "consecratio praefecto jam dictum e. (i. e. Spart., Citas, ad Ephesum, et quas ad Belis fecerat," etc. (Ptol. i. 9. § 19.)

2. PHOELA (Seleucia Hosion: Ed. Schmir, a maritime city of Syria, placed by Ptolemy at 58º 56', 43º 56', between Ephesus and Athens, in the ins. 35º 56', between Ephesus and Athens, in the end. 58º 56', between Edessa and Athens, in the 4. 1.) Strabo, calls it "Rivius Patera" (Thebes ou ber. ma. a strong city, called by Ptolem. (Strab. vii. 2.) Its position is fully described by Ptolemy.
SELEUCIA.

SELEUCIA. 938

situata on the sea between Cicilia and over against a large mountain called Cory-
the base of which was washed on its W. 
the sea, towards the E. it dominated the 

of Antioch and Selucia. Selucia lay on 
this mountain, separated from it by a des-
ted valley. The city extended to the sea,
broken ground, but was surrounded for 
by precipitous and abrupt rocks. On the 
the sea lay the factory (τάμπορια) and 
the level ground, strongly fortified. The 
low (εἰσόντα) of the city was likewise strongly 
with fine walls, and temples, and buildings. It 
approaches on the sea side, by an artificial 
road, (καταηγωγή), distributed in frequent and 
and slopes (cuttings—πυγκιλια) and curves 
(σκάλατσιμα). The embouchure of the Orontes 
far distant—40 stadia, according to Strabo 
750). It was built by Seleucus Nicator 
B. 280), and was of great importance, in a 
view, during the wars, but by a desc 
Tolemais. It was taken by Polyc 
son his expedition into Syria, and held by 
ian garrison until the time of Antiochus 
who, at the instigation of Apollonius, 
ian, resolved to recover it from Polyc 
720), in order to remove the 
of an Egyptian garrison, and to dare the 
ed to obviate the danger which it threatened 
ations in Coele-Syria, being, as it was, a 
city, and well nigh, so to speak, the proper 
the Syrian power. Having sent the fleet 
to, under the admiral Diogenetus, he himself 
his army from Apamea, and encamped 
Hippodrome, 5 stadia from the city. in 
to obviate the danger which it threatened 
the interior, comprehending in its circumfe 
4 miles, which is filled with ruins of 
its scattered citadel on the summit of a 
hill, the gate of Antioch on the SE. of the 
with its pilasters and towers, near which is a double 
row of marble columns; large remains of two 
temples, one of which was of the Corinthian order; 
the amphitheatre, near which Antiochus encamped, 
before his assault upon the city, with twenty-four 
tiers of benches still to be traced; the numerous rocky 
excavations of the new city are remarkable; they are 
always of good workmanship, now broken and 
scattered about in all directions, all attest the ancient 
importance of the city, and the fidelity of the 
historian who has described it. Most remarkable 
all in this view is the important engineering work, 
to which Polylbion alludes as the only communica 
tion between the city and sea, fully carried out by 
Col. Chesney, as the most striking of the interesting 
remains of Selucia. It is a very extensive excava 
tion, cut through the solid rock from the NE. 
extremity of the town almost to the sea, part of 
which is a deep hollow way, and the remainder 
regular tunnels, between 20 and 30 feet wide, and 
as many high, executed with great skill and con 
siderable labour. From its eastern to its western 
extent is a total length of 1088 yards, the 
great part of which is traversed by an aqueduct 
carried along the face of the rock, considerably above 
the level of the road. Its termination is rough and 
very imperfect, about 30 feet above the level of the 
sea; and while the bottom of the rest of the excava 
tion is tolerably regular, in its present state it is 
covered by large masses of rock lying across it at intervals: 
which would imply either that it was never com 
pleted, or that it was finished in this part with 
masonry, which may have been carried off for 
building purposes. It is, perhaps, in this part that 
the stairs mentioned by Polylbion may have been 
situated, in order to form a communication between 
the city and the sea. There can be no doubt whatever that 
this excavation was the passage mentioned by him as the sole 
communication between the city and the sea; and 
it is strange that any question should have arisen 
concerning its design. A rough plan of the site is 
given by Pococke (p. 183); but a much more
SELEUCIA.

Carefully executed plan, with drawings and sections of the tunnels, &c., has lately been published by Capt. Allen, who surveyed the site of the harbour, but not of the town, in 1850. (The Dead Sea, cxc., Map at end of vol. i., and vol. ii. pp. 206-230.) [G.W.]

COIN OF SELEUCIA IN STIL.

SELEUCIA or SELEUCIA (Seleucia). 1. A town near the northern frontier of Pisidia, surmounted Sidera (§ 2605, Potl. v. 5. § 4; Hieroc. p. 672), probably on or adjacent to the route works its vicinity. There are some coins of this place with the image of the Asiatic divinity Men, who was worshipped at Antioch, and bearing the inscription Κλαυ- διος-κεραυνωτης, which might lead to the idea that the place was restored by the emperor Claudius. (Sestini, Mon. Vet. p. 96.) Its site is now occupied by the town of Euphradion.

3. A town in Pamphylia between Side and the mouth of the river Eymonedon, at a distance of 80 stadia from Side, and at some distance from the sea. (Stadiak. Mar. Mag. § 216.)

4. An important town of Cilicia, in a fertile plain on the western bank of the Calycadnus, a few miles above its mouth, was founded by Seleucus I., surmounted Eicatosis. A town or towns, however, had previously existed on the spot under the names of Olbia and Hyrias, and Seleucia seems to have only extended and united them in one town under the name Seleucia. The inhabitants of the neighboring Holmi were at the same time transferred to the new town, which was well built, and in a style very different from that of other Cilician towns. In its circumference it was about 1000 English yards. (Philostr. c. 1.; Strab. xiv. p. 670.) In situation, climate, and the richness of its productions, it rivaled the neighboring Tarasus, and it was much frequented on account of the annual celebration of the Olympics and on account of the oracle of Apollo. (Zosim. l. 57; Basil. Vita S. Theod. c. p. 275, Orat. xxvii. p. 148.) Pliny (v. 27) states that it was named Trachestia; and some ecclesiastical historians, speaking of a council held there, call the town simply Trachia (Sossom. iv. 16; Socrat. ii. 39; comp. Potl. v. 8. § 5; Amm. Marc. xiv. 35; Oros. vii. 12.) The town still exists under the name of Seleucia, and its ancient remains are scattered over a large extent of ground on the west side of the Calycadnus. The chief remains are those of a theatre, in the front of which there are considerable ruins, with porticoes and other large buildings: farther on are the ruins of a temple, which had been converted into a Christian church, and several large Corinthian columns. Ancient Seleucia, which appears to have remained a free city ever since the reign of Augustus, remained in the same condition even after a great portion of Cilicia was given to Archelaus of Cappadocia, whence both imperial and autonomous coins of the place are found. Seleucia was the birthplace of several men of eminence, such as the peripatetic Athenaeus and Xenarchus, who flourished in the reign of Augustus, and the sophist Alexander, who taught at Antioch, and was private secretary to its emperor M. Aurelius (Phil. Hist. 26. Sopha. ii. 5.) According to some authorities, lastly, the emperor Trajan died at Seleucia (Eutrop. viii. 2, 16; Oros. i. 61.), though others state that he died at Seleucea.

SELEUCIA.

4. Seleucia in Caria [Terra] [L. S.]

SELEUCIA or SELEUCIA (Seleucia, Polyb. v. 48; Strab. xii. p. 521; Potl. v. 18. § 6), a large city near the site of the town of the Tigris, from which to distinguish it from several other towns of the same name, is generally known in history by the title of Seleucia Antioch on the Tigris. (Strab. xvi. p. 738; Appian, Syr. 57.) It was built by Seleucus Nicator (Strab. l. c.; Plin. vi. 26. s. 30; Tacit. Ann. i. 42; Joseph. Antiq. xvi. 3. § 8; Amm. Mar. xxii. 30), and appears to have been placed near the junction of the Tigris and the Euphrates, which was carried across Mesopotamia from the Euphrates to the Tigris, and which bore the name of Nahr Malcha (the royal river). (Plin. l. c., and Isid. Chur. i. 5.) Potlerus states that the artificial river divided it into two parts (v. 18. § 8). On the other hand, Theophylactus states that both rivers, the Tigris and Euphrates, surrounded it like a rampart —by the latter, in all probability, meaning the Nahr Malcha (v. 6). It was situated about 40 miles NE. of Babylon (according to Strabo, 300 stadia, and to the Tab. Peutingeri, 44 M.P.). In form, its original structure is said to have resembled an eagle with its wings outspread. (Plin. l. c.) It was the seat of the Seleucid kings of Babylonia, and was one of the most important cities of the Seleucid empire. It was placed in a district of great fertility, and is said, in its best days, to have had a population of 600,000 persons. (Plin. l. c.) Strabo adds, that it was even larger than Antioch Syria,—at this time the probably the greatest commercial entrepôt in the East, with the exception of Alexandria (xvi. p. 730). Even so late as the period of its destruction its population is still stated to have amounted to half a million. (Eutrop. v. 8; comp. Oros. viii. 5.) To its commercial importance it doubtless owed the free character of its local government, which appears to have been independent of that of the central government, and the freedom and of independent government was, however, of longer duration. (Plin. l. c.; Tacit. Ann. i. 42.)

Seleucia owed its ruin to the war of the Romans with the Parthians and other eastern nations. It is first noticed in that between Cassander and Orodos (Dion. Cass. xii. 30); but it would seem
that Crassus did not himself reach Seleucia. On the advance of Trajan from Asia Minor, Seleucia was taken by Erucius Claurus and Julius Alexander, and partially burnt to the ground (Dion. Cass. lxxvi. 30); and a few years later it was still more completely destroyed by Cassius, the general of Lucius Verus, during the war with Volgeses. (Dion. Cass. lxxxii. 2; Eutrop. v. 8; Capitol. Verus, c. 8.) When Severus, during the Parthian War, descended the Euphrates, he appears to have found Seleucia and Babylonia equally abandoned and desolate. (Dion. Cass. lxxvi. 9.) Still later, in his expedition to the Euphrates, his report about Seleucia was that it was a ravaged town, and a variety of trees, among which the storax was much valued from its yielding a strong perfume. Seleucia was also celebrated for an ointment prepared from the iris root. (Strab. l.c.; Plin. iii. xii. 55, xxi. 19; comp. Liv. xxxv. 13.) Sir C. Fellow (Asia Minor, p. 171, foll.) thinks that he has discovered the ruins of Seleucia about 10 miles to the north-east of the village of Boogik. They are seen on a lofty promontory “now presenting magnificent wrecks of grandeur.” “I rode,” says Sir Charles, “at least 8 miles through a part of the city, which was one pile of temples, theatres, and buildings, lying with each other in splendour. ... The material of these ruins had suffered much from the ebb and flood of time; in a much wider sense than that which accompanies them, the entire area is a sort of ruinous marble,” the ruins are so thickly strown, that little cultivation is practicable; but in the areas of theatres, cellas of temples, and any space where a plough can be used, the wheat is springing up. The general style of the temple is Corinthian, but not so florid as in less ancient times. The tombs are scattered for a mile from the town, and are of many kinds, some cut in chambers in face of the rock, others sarcophagi of the heaviest form: they have had inscriptions, and the ornaments are almost all martial; several seats remain among the tombs. I can scarcely guess the number of temples or columned buildings in the town, but I certainly traced fifty or sixty. ... Although apparently unnecessary for defence, the town has had strong walls, partly built with large stones in the Cyclopean mode... I never conceived so high an idea of the works of the ancients as from my visit to this place, standing as it does in a situation, as it were, above the world.” It is to be regretted that it was impossible by means of inscriptions or coins in identifying this place with the ancient Selge more satisfactorily. (Comp. Von Hammer, in the Wiener Jahrbücher, vol. cxi. p. 92.)

[C. G. W.]

SELEUCIS (Seleucia), a district of Syria, mentioned by Pliny, containing the cities of Gaperus, Gindarus, and Imma (v. 15. § 15). Strabo calls it the best of all the districts: it was also called Tetrapolis, on account of its four most important cities, for it had many. These four were, Antioch, Seleucia in Pieria, Apamea, and Laodicea (xvi. p. 749). It also comprehended, according to Strabo, four districts which are said to have been a very small area in a much wider sense than that which accompanies them, the entire area is a sort of ruinous marble.”

[C. G. W.]

SELE (Seleucia), a district of Syria, mentioned by Pliny, containing the cities of Gaperus, Gindarus, and Imma (v. 15. § 15). Strabo calls it the best of all the districts: it was also called Tetrapolis, on account of its four most important cities, for it had many. These four were, Antioch, Seleucia in Pieria, Apamea, and Laodicea (xvi. p. 749). It also comprehended, according to Strabo, four districts which are said to have been a very small area in a much wider sense than that which accompanies them, the entire area is a sort of ruinous marble.”

[COCH]
SELGONAE.

SELGONAE (Σαλοναί, Plut. ii. 3. § 8), a people on the SW. coast of Britannia barbaria, in the E. part of Gallia Narbonensis and in Dumfries-shire. Camden (p. 1194) derives the name of Selgovae from them. [T. H. D.]

SELINEUS (Σέληνος) 1. A village in the north of Laconia, described by Pausanias as 20 stadia from Geronthrea: but as Pausanias seems not to have visited this part of Laconia, the distances may not be correct. Leka, therefore, places Selinus at the village of Kosmas, which lies further north of Geronthrea than 20 stadia, but where there are remains of its fortifications. (Paus. iii. 32. § 8; Pau. iv. 13. § 23; Leka, Peloponnesios, p. 363; Boblaye, Recherches, Φ. p. 97; Curtius, Peloponnesos, vol. ii. p. 304.)

2. A river in the Triphylian Elis, near Scillus. [SCILLIA.]

3. A river in Achaea. [ACHAIA, p. 18. b. No. 6.]

SCILLIA (Σκιλλία): Ekh, Σκαλλίους, Selinunte; En. at Torre dei Polci, one of the most important of the Greek colonies in Sicily, situated on the SW. coast of that island, at the mouth of the small river of the same name, and 4 miles W. of that of the Hypsas (Belice). It was founded, as we learn from Thucydides, by a colony from the Sicilian city of Megara, or Megara Hyblaea, under the conduct of a few scattered Chalcidians, and in 635 B.C., 10 years after the settlement of that city, with the addition of a fresh body of colonists from the parent city of Megara in Greece. (Thuc. vi. 4. vii. 57; Scymn. Ch. 292; Strab. vi. p. 272.) The date of its foundation cannot be precisely fixed, as Thucydides indicates it is only by reference to that of the Sicilian Megara. The city itself is not accurately known, but it may be placed about n. c. 628. Diodorus indeed would place it 22 years earlier, or n. c. 650, and Hieronymus still further back, n. c. 654; but the date given by Thucydides, which is probably entitled to the most confidence, is incompatible with this earlier epoch. (Thuc. vi. 4; Diod. xiii. 59; Hieron. Chron.) SELINUS (Σέλινος, Σέλινον, Selinunte; En. at Torre dei Polci, Fast. hell. vol. i. p. 208.) The name is supposed to have been derived from the quantities of wild parsley (σκαλλί τος) which grew on the spot; and for the same reason a leaf of this parsley was adopted as the symbol of their coins.

Selinus was the most westerly of the Greek colonies in Sicily, and for this reason was early brought into contact and collision with the Carthaginians and the barbarians in the W. and NW. of the island. The former people, however, do not at first seem to have offered any obstacle to their progress; but as early as n. c. 580 we find the Selinuntines engaged in hostilities with the people of Segesta (a non-Hellenic city), whose territory bordered on their own. (Diod. v. 31.) The arrival of a body of emigrants from Rhodes and Cnidus who subsequently founded Lipara, and who lent their assistance to the Segestans, for a time secured the victory to that people; but disputes and hostilities seem to have been of frequent occurrence between the two cities, and it is probable that in n. c. 454, when Diodorus speaks of the Selinuntines being at war with the Lipoccia (xi. 86), that the Selinuntines and Lacons were two separate people really meant. [Lilytakum.] The river Mazara, which at that time appears to have formed the boundary between the two states, was only about 15 miles W. of Selinus; and it is certain that at a somewhat later period the territory of Selinus extended to its banks, and that that city had a fort and emporion at its mouth. (Diod. xiii. 54.) (On the other side its territory certainly extended as far as the Halycus or Salso, at the mouth of which it had afterwards terminated. (Herod. v. 46.) It is evident that the Selinuntines had early acquired great power and prosperity; and we have very little information as to its history. We learn, however, that, like most of the Sicilian cities, it had passed from an oligarchy to a despotism, and about a.g. 510 was subject to a despotic named Pelaganes, from whom the citizens were freed by the ansaeus king Thrasybulus. (Paus. iii. 32. § 8; Curtius, Peloponnesos, vol. ii. p. 304.)

SELINEUS. In n. c. 416, a renewal of the old disputes between Selinus and Segesta became the occasion of the great Athenian expedition to Sicily. The Selinuntines, not being in successful communication with Syracuse, and thus for a time obtained the complete advantage over their enemies, whom they were able to blockade both by sea and land; but in this extremity the Segestans had recourse to the assistance of Athens. (Thuc. vi. 6; Diod. xii. 82.) Though the Athenians do not appear to have taken any measures for the immediate relief of Segesta, it is probable that the Selinuntines and Syracuse withdrew their forces at once, as we hear no more of their operations against Segesta. Nor does Selinus bear any important part in the war of which it was the immediate occasion. Nicia indeed proposed, when the expedition first arrived in Sicily (n. c. 415), that they should proceed to Segesta and compel that city to submit on moderate terms (Thuc. vi. 47); but this advice being overruled, the efforts of the armament were directed against Syracuse, and the Selinuntines in consequence bore but a secondary part in the subsequent operations. They are, however, mentioned on several occasions as furnishing auxiliaries to the Syracusians; and it is certain that the support of the Syracusans landed in the spring of 413, having been driven over to the coast of Africa by a tempest. (Thuc. viii. 50, 58; Diod. xiii. 12.)

The defeat of the Athenian armament left the Segestans apparently at the mercy of their rivals; but in vain attempted to disarm the hostility of the
Selinus. By ceasing without further contest the frontier district which had been the original subject of dispute. But the Selinuntines were not satisfied with this concession, and continued to press them with fresh aggressions, for protection against which they could now do nothing. As far as their arms was, after some hesitation, accorded them, and a small force sent over at once, with the assistance of which the Segestans were able to defeat the Selinuntines in a battle. (Diod. xiii. 45, 44.) But not content with this, the Carthaginians in the following spring (B.c. 409) sent over a vast army amounting, according to the lowest estimate, to 100,000 men, with which Hannibal (the grandson of Hamilcar that was killed at Himera) landed at Lilybaeum, and from thence marched direct to Selinus. The Selinuntines were wholly unprepared to resist such a force; so little indeed had they expected it that the fortifications of their city were in many places out of repair, and the auxiliary force which had been promised by Syracusian league and Gela was not yet ready, and did not arrive in time. The Selinuntines, indeed, defended themselves with the courage of despair, and even after the walls were carried, continued the contest from house to house; but the overwhelming numbers of the enemy rendered all resistance hopeless; and after a siege of only three days, under the command of Dionysius and the greater part of the defenders put to the sword. Of the citizens of Selinus we are told that 16,000 were slain, 5000 made prisoners, and 2600 under the command of Empedon escaped to Agrigentum. (Diod. xiii. 54-59.) Shortly after Hannibal destroyed the walls of the city, but gave permission to the inhabitants of the town to remain on the site and occupy it, as tributaries of Carthage, an arrangement which was confirmed by the treaty subsequently concluded between Dionysius and the Carthaginians, in B.c. 405. (Id. xiii. 59, 114.) In the interval a considerable number of the survivors and fugitives had been brought together by Hermocrates, and established within its walls. (Id. 63.)

There can be no doubt that a considerable part of the citizens of Selinus availed themselves of this permission, and that the city continued to subsist under the Carthaginian dominion; but a fatal blow had been given to its prosperity, which it undoubtedly never recovered. The Selinuntines are again mentioned in the treaty of hannibal as the friend of Dionysius during his war with Carthage (Diod. iv. 47); but both the city and territory were again given up to the Carthaginians by the peace of 383 (Id. xv. 17); and though Dionysius recovered possession of it by arms shortly before his death (Id. xv. 75), it is probable that it soon again lapsed to the dominion of Carthage. This was established as the eastern boundary of the Carthaginian dominion in Sicily by the treaty of 383, seems to have generally continued to be so recognised, notwithstanding temporary interruptions; and was again fixed as their limit by the treaty with Aplacheces in B.c. 514. (Id. xix. 71.) This last treaty expressly stipulated that Selinus, as well as Hercules and Himera, should continue subject to Carthage, as before. In B.c. 276, however, during the expedition of Pyrrhus to Sicily, the Selinuntines voluntarily submitted to that monarch, after the capture of Heraclea. (Id. xxi. 10. Exc. H. p. 498.) During the First Punic War we find Selinus subject to Carthage, and its territory was repeatedly the theatre of military operations between the contending powers. (Id. xiii. 1, 21; Pol. i. 39.) But before the close of the war (about B.c. 250), when the Carthaginians were beginning to contract their operations, and to confine themselves to the defence of their few posts as possible, they removed all the inhabitants of Selinus to Lilybaeum and destroyed the city. (Diod. xxiv. 1. Exc. H. p. 506.)

It seems certain that it was never rebuilt. Pliny indeed, mentions its name ('Selinus oppidum,' ii. 8. a. 14), as if it was still existing as a town in his time, but Strabo distinctly states it with the cities which were wholly extinct; and Pliny, though he mentions the river Selinus, has no notice of a town of the name. (Strab. p. 272; Pol. iii. 4. § 5.) The Thermae Selinitianae, which derived their name from the ancient city, and seem to have been much frequented in the time of the Romans, were situated at a considerable distance from Selinus, being not uninhabited as those now existing at Sciacca; they are sulphureous springs, still much valued for their medical properties, and dedicated, like most thermal waters in Sicily, to St. Calogero. At a later period they were called the Aquae Labodes or Larodes, under which name they appear in the Itineraries. (Aen. Ant. p. 89; Tbab. Putei.) The present name is that of the Tiberium, and the greater part of the city, or the suburbs of it, was destroyed by Agrigentum, and 46 from Lilybaeum; distances which agree well with the position of Sciacca. This is distant about 20 miles to the E. of the ruins of Selinus.

The site of the ancient city is now wholly desolate, with the exception of a solitary guardhouse, and on the ground is found the name of Dionysius, and shrubs and low brushwood; but the remains of the walls can be distinctly traced throughout a great part of their circuit. They occupied the summit of a low hill, directly abutting on the sea, and bounded on the W. by the marshy valley through which flows the river Madonna, the ancient Selinus; on the E. by a smaller valley or depression, also traversed by a small stream. There is a small hill which separates it from a hill of similar character, where the remains of the principal temples are still visible. The space enclosed by the existing walls is of small extent, so that it is probable the city in the days of its greatness must have covered a considerable area without them; and it has been supposed by some writers that the present site is that which was occupied by Hermocrates when he restored the city after its destruction by the Carthaginians. (Diod. xiii. 63.) No trace is, however, found of a more extensive circuit, though the remains of two lines of walls, evidently connected with the port, are found in the small valley E. of the city. Within the area surrounded by the walls are the remains of three temples, all of the Doric order, and of an ancient style; none of them are standing, but the foundations of them are still entire, together with numerous portions of columns and other architectural fragments, sufficient to enable us to restore the plan and design of all three without difficulty. The largest of them (marked C. on the plan) is 280 feet long by 85 feet broad, and has 6 columns in front and 18 in length, a very unusual proportion. All these are hexastyle and peripteral. Besides these three temples there is a small temple or Aedicular (marked B.), of a different plan, but also of the Doric order. No other remains of buildings, beyond mere fragments and foundations, can be traced within the
walls; but the outlines of two large edifices, built of squared stones and in a massive style, are distinctly traceable outside the walls, near the NE. and NW. angles of the city, though we have no clue to their nature or purpose.

But much the most remarkable of the ruins at

Selinus are those of three temples on the hill to the E., which do not appear to have been included in the city, but, as was often the case, were built on this neighbouring eminence, so as to front the city itself. All these temples are considerably larger than any of the three above described; and the most northerly of them is one of the largest which we have any remains. It had 8 columns in front and 17 in the sides, and was of the kind called pseudo-dipteral. Its length was 155 feet, and its breadth 162, so that it was actually longer than the great temple of Jupiter Olympius at Agrigentum, though not equal to it in breadth. From the columns being only partially fluted, as well as from other signs, it is clear that it never was completed; but all the more important parts of the structure were finished, and it must have certainly been one of the most imposing fabrics in antiquity. Only three of the columns are now standing; but the whole area is filled up with a heap of fallen masses, portions of columns, capitals, &c., and other huge architectural fragments, all of the most massive character, and forming, as observed by Swinburne, "one of the most gigantic and sublime ruins imaginable." The two other temples in the same area, but the ruins have fallen with such regularity that the portions of almost every column lie on the ground as they have fallen; and it is not only easy to restore the plan and design of the two edifices, but it appears as if they could be rebuilt with little difficulty. These temples, though greatly inferior to their gigantic neighbour, were still larger than that at Segesta, and even exceed the great temple of Neptune at Paestum, so that the three, when standing, must have presented a spectacle unrivalled in antiquity. All these buildings may be safely referred to a period anterior to the Carthaginian conquest (B.C. 409), though the three temples last described appear to have been of them of later date than those within the walls of the city. This is proved, among other circumstances, by the sculptured metopes, several of which have been discovered and extricated from among the fallen fragments. Of these sculptures, those which belonged to the temples within the walls, present a very peculiar and archaic style of art, and are universally recognised as among the earliest extant specimens of Greek sculpture. (They are figured by Miller, Denkmäler, pl. 4, 5, as well as in many other works, and casts of them are in the British Museum.) These, on the contrary, which have been found among the ruins of the temple marked E. on the opposite hill, are of a later and more advanced style, though still retaining considerable remains of the stiffness of the earliest art. Besides the interest attached to these Selinuntine metopes from their important bearing on the history of Greek sculpture, the remains of these temples are of value as affording the most unequivocal testimony to the use of painting, both for the architectural decoration of the temples, and as applied to the sculptures with which they were in very close and detailed accord; and the ruins at Selinus is given in the Duke of Serra di Falco’s Antichità Siciliane, vol. ii., from which the preceding plan is derived. A more general description of them will be found in Swinburne’s Travels vol. ii. pp. 243—245; Smyth’s Sicily, pp. 219—231; and other works on Sicily in general.

The coins of Selinus are numerous and varied. The earliest, as already mentioned, bear merely the figure of a parsley-leaf on the obverse. Those of somewhat later date (including the one figured below) represent a figure sacrificing on an altar,
which, as consecrated to Asclepius, as indicated by the cock which stands below it. The subject of this type evidently refers to a story related by Diogenes Laertius (viii. 2, § 11) that the Selinun-
tines were afflicted with a pestilence from the mar
yshy character of the lands adjoining the neigh-
bouring river, but that this was cured by works of
drainage, suggested by Epemeoeis. The figure
standing on the coin is the river-god Selinus, which
was thus made conducive to the salubrity of the
city.

[ E. H. B. ]

COIN OF SELINUS

Selinus (Σελίνου: Ekd. Σελίνοιτις or Σε-
lunotis: Selenit). a port-town on the west coast of
Cilicia, at the mouth of a small river of the same
name, which is now called Seleucis (Scylax, p. 40;
Lit. xxxvi. 30; Strabo. vii. 629; Plut. v. § 2;
vi. 17. § 42; Plin. v. 92.) This town is memorable in
history as the place where, in a.d. 117, the
emperor Trajan is said by some authors to have died
(Dion Cass. liv. § 33). After this event the place for
a time bore the name of Trajanopolis; but its bishops
afterwards are called bishops of Selinus. (Hieroc. p.
709.) Basil of Seleucia (Vita S. Theodosii, ii. 17)
describes the place as reduced to a state of insignifi-
cance in his time, though it had once been a great
commercial town. (Comp. Studiacm. Mar. Mag. §§
623, 304; Ducan, viii. 260; Chron. Paschale, p. 253.)
Selinus was situated on a precipitous rock, sur-
ronded on almost every side by the sea, by which
position it was rendered almost impenetrable. The
whole of the rock, however, was not included in
the ancient line of fortifications; inside the walls
there still are many traces of houses, but on the
outside, and between the foot of the hill and the
river, the remains of some large buildings are yet
standing, which appear to be a mausoleum, an agora,
a theatre, an aqueduct, and some tombs (Beaufort,
Karamanian, p. 186, fol.).

Respecting the small river Selinus, flowing in
Pergamum, see Pergamum, p. 575. [L. S.]

Sella'sia (Σελλασία, Xen. Polya. Diol.; Σε-
lasía, Steph. B, Hzch. s. v.; the latter is perhaps
the correct form, and may come from σελας; the
name is connected by Hesychius with Artemis
Selasia: Ekd. Σελλασία), a town of
Laconia, situated in the valley of the Oenus,
on the road leading from Teges and Argos, and one of
the bulwarks of Sparta against an invading
army. Its distance from Sparta is nowhere men-
tioned; but from the description which Polybius
gives of the celebrated battle fought in its neigh-
bourhood between Antigonus and Cleomenes, it is
probable that the plain of Krematói was the site
of the battle. We learn from Polybius that this
battle took place in a narrow opening of the vale of
the Oenus, between two hills named Evas and
Olympus, and that the river Gorgylos flowed across
the plain into the Evneus. South of the Kham of

Krematói is a small plain, the only one in the valley
of the Oenus, about ten minutes in width and a
quarter of an hour in length, at the end of which
the rocks again approach so close as barely to leave
room for the passage of the river. The mountain,
which bounds this plain on the east, is Olympus, a
continuation of the mountain of Teges. On its east
very steep on the left bank of the Oenus. The
mountain on the western side is Evas, now Túlaoe,
which, though not so steep, is still inaccessible to
cavalry. Towards the north the plain is shut in by
a mountain, over which the road leads to Teges,
and towards the south by a still higher mountain.
The Oenus, which flows near the eastern edge of
the plain, can be crossed at any point without diffi-
culty. It receives on its right side a small brook,
the Gorgylos, which descends from a ravine on the
northern side of Mt. Evas. On the summit of the
hill, more than 2800 feet above the sea, which
shuts in the plain on the south, and over which the
road leads to Sparta, are the ruins of Sellasia, described
below.

The battle of Sellasia, of which Polybius gives a
detailed account, requires a few words of explanation.
In b.c. 221, Cleomenes, the Spartan king, ex-
pecting that Antigonus, the Macedonian king, and
the Achaeans, would invade Laconia, fortified the
other passess which led into the country, and took
up his own position on the mountain meniscus, in
the plain in the plain of Sellasia, since the roads to
Sparta from Argos and Teges united at this point.
His army amounted to 20,000 men, and consisted of
Lacedaemonians, Perieoci, allies, and mercenaries.
His left wing, containing the Perieoci and allies,
was stationed on Mt. Evas under the command of his
brother Eucleidas; his right wing, consisting of
Lacedaemonians and mercenaries, encamped upon
Mt. Olympus under his own command; while his
cavalry and a part of the mercenaries occupied the
small plain between the hills. The whole line was
protected by a ditch and a palisade. Antigonus
marched into Laconia from Argos with an army of
80,000 men, but found Cleomenes so strongly in-
trenched in his position that he did not dare to
attack him, but encamped behind the small stream
Gorgylos. At length, after several days’ hesitation,
both sides determined to join battle. Antigonus
placed 5000 Macedonian peltasts, with the greatest
part of his auxiliary troops, on his right wing to
oppose Eucleidas; his cavalry with 1000 Achaeans
and the same number of Megalopolitans in the small
plain; while he himself with the Macedonian pha-
lanx and 3000 mercenaries occupied the left wing,
in order to attack Cleomenes and the Lacedaemonians
on Mt. Olympus. The battle began on the side of
Mt. Evas. Eucleidas committed the error of awaiting
the attack of the enemy upon the brow of the hill,
instead of awaiting himself on his superior position
to charge down upon them; but while his wing was
climbing the hill they were attacked upon the rear
by some light troops of Cleomenes, who were sta-
tioned in the centre with the Lacedaemonian cavalry.
At this critical moment, Philopoemen, who was in
the centre with the Megalopolitan horse, diverted
the attack of the light infantry by charging without
orders the Lacedaemonian centre. The left wing
of the Macedonians then renewed their attack, de-
feated the left wing of the Lacedaemonians, and
drove them over the steep precipices on the opposite
side of Mt. Evas. Cleomenes, perceiving that the
only hope of retrieving the day was by the defeat
of the Macedonians opposed to him, led his men out of the intrenchments and charged the Macedonian phalanx. The Lacoelemenians fought with great bravery; but after many vain attempts to break through the impenetrable mass of the phalanx, they were entirely defeated, and of 6000 men only 200 are said to have escaped from the field of battle. Cleomenes, perceiving all was lost, escaped with a few horsemen to Sparta, and from thence proceeded to Gythium, where he embarked for Egypt. Antigonus, thus master of the passes, marched directly to Sellasia, which he plundered and destroyed, and then to Sparta, which submitted to him after a slight resistance. (Polyb. ii. 65—70; Plut. Cleom. 27, 28, Philipp. 6; Paus. ii. 9 § 2, iii. 10 § 7, iv. 29 § 9, vii. 7 § 4, viii. 49 § 5.)

SELASIA.

PLAN OF THE BATTLE OF SELASIA.

a a a. Troops of Cleomenes.
b b b. Troops of Antigonus.
A A A. Road to Tegae.
B B B. Road to Argos.
C C C. Road to Megalopolis.
D D D. Road to Sparta.

In the preceding account of the battle we have followed the excellent description of Ross. (Relics in Peloponnese, p. 181.) The French Commission had previously supposed the plain of Krematif to be the site of the battle of Sellasia (Boblaye, Recherches, &c. p. 73;) and the same opinion has been adopted by Curtius. (Peloponnese, vol. ii. p. 260.) Leake, however, places Sellasia to the SE., near the monastery of the Forty Saints ("Argos Zapiav.), and supposes the battle to have been fought in the pass to the eastward of the monastery. The ruins near the Kham of Krematif he maintains to be those of Caryae. (Leake, Morea, vol. ii. p. 529, Peloponnese, p. 341, seq.) But Ross informs us that in the narrow pass NE. of the monastery of the Forty Saints there is barely room for a loaded mule to pass; and we know moreover that Sellasia was situated on the high road from Sparta to Tegae and Argos, which must have led through the plain of Krematif. (vird the Account, Paus. iii. 10 § 7; Plut. Cleom. 23; Xen. Hell. vi. 5 § 57; Diod. xiv. 64; Liv. xxxiv. 28.)

On leaving the plain of Krematif, the road southwards ascends the mountain, and at the distance of a quarter of an hour leaves a small ruin on the left, called by the peasants Palaeoguida (§ Palaeoguida). The remains of the walls are Hellenic, but they are of very small extent, and the place was probably either a dependency of Sellasia or one to which the inhabitants of the latter fled for refuge at one of the periods when their city was destroyed.

The ruins of Sellasia lie 1/2 miles beyond Palaeoguida upon the summit of the mountain. The city was about 1/2 miles in circumference, as appear
from the foundations of the walls. The latter were from 10 to 11 feet thick, and consist of irregular but very small stones. The northern and smaller half of the city was separated by a wall from the southern half, which was on lower ground.

From its position Selymbria was always exposed to the attacks of an invading army. On the site of the Selymbria of Homer in Z. 316 Selymbria was plundered and burnt (Hes. Hell. v. 5. § 27); and because the inhabitants at that time, together with several others of the Perioci, went over to the enemy, the town was again taken and destroyed four years later by the Lacedaemonians themselves, assisted by some auxiliaries sent by the younger Dionysius. (Xen. Hell. vii. 4. § 12.) It had suffered the same fate a third time after the defeat of Cleomenes, as has already been related. It appears to have been never rebuilt, and was in ruins in the time of Pausanius (iii. 10. § 7).

SELETTES (Σάλληται). 1. A river in Elis, mentioned by Homer, upon which Ephrya stood. [Ephrya, No. 2.]

2. A river in Arcadia, on which Strabo also places a town Ephrya. [Ephrya, No. 3.]

SELETTAE (Plin. iv. 11. x. 18, init.), a people of Thrace, whose country was called Selettica (Σαλλητική, Ptol. iii. 11. § 8). It was north of the Haemus, between that range of mountains and the Panyas. [J. R.]

SELETTICA. [Selettar.]

SELLI or HELL, an ancient tribe in Epeirus, in whose country, called Hallopa, the oracle of Dodona was situated. [Dodona, p. 782, a.]

SELLIUM (Σαλλιόν, Ptol. ii. 5. § 7), a place in Lusitania, lying N. of Scalabis (Ibn. Ant. p. 421). Identified with Cecco or Secco. [T. H. D.]

SELLUS, according to Avienus (Ora Marit. 507), a high mountain in Hispania barcensis, on which the city of Lebedonias once stood. Uberti (ii. pt. n. 484) identifies it with C. Salam. [T. H. D.]

SELYMBRIA (Σέλυμπρια, Heral. vii. 53; Σελυμπρια, Xen. Anab. vii. 2. § 15, &c.; Strab. vii. p. 319; Ptol. iii. 11. § 6; Σελυμπρια, Dem. de Rhod. lib. i. p. 198, Beisac), a Thracian town on the Propontis, 20 miles E. and N. of Byzantium, which was in Constantiolopolis (Ibn. Hier. p. 570, where it is called Salambembia), near the southern end of the wall, built by Anastasius Dicurus for the protection of his capital. (Procop. de Aed. iv. 9; see Yugosl.

According to Strabo (i. c.), its name signifies “the town of Selys,” from which it has been inferred that Selys was the name of its founder, or of the leader of the colony from Messara, which founded it at an earlier period than the establishment of Byzantium, another colony of the same Greek state. (Scymn. 714.) In honour of Eudoxias, the wife of the emperor Arcadius, its name was changed to Eudoxiaiopolis (Hierod. p. 633), which it still retains; but the modern name, Silion, shows that it subsequently resumed its original designation.

Respecting the history of Selymbria, only detached and fragmentary notices occur in the Greek writers. In Latin authors, it is merely named (Mela. ii. 2. § 6; Plin. iv. 11. x. 18, xxix. 1. n. 1; in the latter passage it is in fourth b. short); but the modern name, Silion, a disciple of Hippocrates). It was here that Xenophon met Medonidas, the envoy of Southees (Anab. vii. 2. § 28), whose forces afterwards encamped in its neighbourhood (ib. 5. § 15). When

ALEBIADES was commanding for the Athenians in the Propontis (a. c. 410), the people of Selymbria refused to admit his army into the town, but gave him money, probably in order to induce him to abstain from forcing an entrance. (Xen. Hell. i. 1. § 21.) Some time after this, however, he gained possession of the place through the treachery of some of the town people, and having levied a contribution upon its inhabitants, left a garrison in it. (Ib. 3. § 10; Pint. Alex. 30.) Selymbria is mentioned by Demosthenes (I. c.) in a. c. 351, as in alliance with the Athenians; and it was no doubt at that time a member of the Byzantine confederacy. According to a letter of Philip, quoted in the oration of Demosthenes (p. 251, E.), it was blockaded by him about a. c. 343; but Professor Newman states

that this mention of Selymbria is one of the numerous proofs that the documents inserted in that speech are not authentic. (Class. Mus. vol. i. pp. 183, 154.)

SEMBRITAE. [Attica, p. 330, b.]

SEMA 'NA SILVA (Σεμάναια Σίλβα), one of the mountainous forests in Greece, on the south of Mount Malibuca (Ptol. ii. 1. § 7), is perhaps only a part of the Haemus mountain or of the Thuringer Wald. (Zones, Die Deutschen, p. 8; Wilhelm, Germanien, p. 38, &c.)

SEMANTHINI (Σεμανθίνωο, Ptol. vii. 3. § 4), a people dwelling in the land of the Sinus of E. of the Semantheine mountains, which derived their name from them. [T. H. D.]

SEMANTHINI MONTES (ν Σεμανθίνων Μοντεσ), Ptol. vii. 2. § 8), a mountain chain in the country of the Sinus (Chiusa), which, according to Ptolemy, extended from the sources of the Aspithra in a NW. direction as far as those of the Serus. It is probably the chain which separates the Chusan province of the Sinus from the districts of Messene and

Messene. [T. H. D.]

SEMBRITAE (Σεμβρίτας, Strab. xvi. pp. 770—786; Sembririana, Ptol. vii. 30. a. 35), a people inhabiting the district of Teneis in Aethopia, although they seem to have been of Aegyptian origin. The first mention of the Sembritae occurs in Eratosthenes (cap. 41. § 9), who says that the town occupied an island above Merot; that their name implies “immigrants,” that they descended from the Aegyptian war-caste, who, in the reign of Pharaoh, lived in the Nile, and that they were governed by a queen, although they were also dependent on the sovereigns of Merot. Artemidorus, also quoted by Strabo (xvi. p. 770), says on the contrary, that they were the ruling order in Merot; these accounts, however, may be reconciled by the supposition that Eratosthenes and Artemidorus described them at different periods. If the Sembritae were the Aegyptian refugees, they were also the Automoloi (Ἀυτωμολοι) noticed by Herodotus (ii. 90). Pliny (i. c.) speaks of four islands of the Sembritae, each containing one or more villages; but the modern name, Silvo, shows that they subsequently resumed its original designation.

Respecting the history of Selymbria, only detached and fragmentary notices occur in the Greek writers. In Latin authors, it is merely named (Mela. ii. 2. § 6; Plin. iv. 11. x. 18, xxi. 1. n. 1; in the latter passage it is in fourth b. short); but the modern name, Silvo, a disciple of Hippocrates). It was here that Xenophon met Medonidas, the envoy of Southees (Anab. vii. 2. § 28), whose forces afterwards encamped in its neighbourhood (ib. 5. § 15). When

VOL. II.
SENA

SENIAMIDIS MONS.

Sapes (Sabah), on the left bank, 17 days' journey above Meron, and Daron again on the Arabian side. Without being able to define the position of this tribe, or to state their relations to the Anthropians of Meron, we shall perhaps not err in placing them on the Blue Nile (Aethiop), and in the neighbourhood of Auzume. The geographers (Heeren, &c.) who describe the Sembratae as dwelling near the White Nile, have forgotten both their vicinity to Arabia—i.e. the eastern portion of Meron—and the characteristics of the region in which the Aetas and Astabores respectively water. The White Nile flows through lagoons and morasses unsuited for towns and permanent settlements; while the Blue Nile has always had on its banks a numerous population, dwelling in large villages and towns. Along the Blue Nile ran the principal highways of the trade of Egypt with Southern Aethiopia, while the White Nile led off to the uncivilised and scattered tribes of the Libyans. The Sembratae, if seated on the latter river, would probably have eluded observation altogether; whereas on the former they would be as well known to the caravans and their guides as any other of the Aethiopian races. Moreover, the mesopotamian districts suited to towns lie to the east of Asyut; and it would have been a mere matter of retreat to the refugees from Egypt in search of a new habitation. (See Cooley's Claudius Ptolemy and the Nile, pp. 7—97.) The present Senua corresponds nearly with the territory of the Sembratae. [W.B.D.]

SEMIAMIDIS MONS (Σεμιαμιδίδις βρόχος), a remarkable circular mountain on the N. side of the Persian Gulf, forms the western limit of Carmania. It is noticed both by Arrian (Peripl. M. E. p. 20, ed. Huhn.) and by Marcian (Periplus M. Ext. c. 27, ed. Müller, 1855), who states that it was opposite to Mt. Passabo, in Arabia, and that those two mountains, with their premonitory, form the straits at the entrance of the gulf of Persia. Ptolemy speaks of it, and states that it was also called Strongylos, probably from its form (vii. 8. § 11). Its modern name appears to be Ellawm. [Vincent, Voyage of Naucratis, p. 319—321.]

SEMNONES (Σεμνώνες or Σεμνονες), or perhaps more correctly Semnones, are described as the most ancient and illustrious among the Suevi in the north of Germany. They dwell between the Altbach and the Rhine, are represented as people on the west of the Cherusci, on the south by the Silingi, on the east by the Manimi and Burgundiones, and on the north-west by the Longobardi. (Tac. Germ. 59; Pol. ii. 11. §§ 15, 17; Vell. Pat. ii. 106.) Their country accordingly extended from the hills of Lasand in the south, as far as Potsdam in the north, and in it they formed 100 communities (pagi), which gave them such strength that they regarded themselves as the head of the Suevi. Their country contained an ancient forest (Semonum Silva), baulked by awful superstition and sacrificial rites; at stated seasons deputies from all the kindred tribes met in it, and commenced their proceedings with a human sacrifice. No one, moreover, could enter the forest except he was bound in chains, a mark of humiliation in the presence of the god; and if any one stumbled he was not permitted to rise, but had to crawl along. As to the history of the Semnones, we learn from Tacitus (Ann. ii. 45) and Strabo (vii. p. 390) that in the time of Augustus they were united with the Marcomanni under Marobudus. In the Monnecum Ancyranum the Semnones, are mentioned among the German tribes which sought the friendship of the emperor and the Romans. They appear to have been governed by kings, one of whom bore the name of Marusius, and reigned in the time of Domitian. (Dion Cass. lvii. 5, comp. lxxii. 20.) After the reign of M. Aurelius they are no longer mentioned in history, from which circumstance some have unnecessarily inferred that the Semnones were not a distinct tribe, but only a general name for several kindred tribes. As to the Silva Semnonum, it is probable that it existed between the rivers Ester and Sperus, where three large places have been discovered, which were evidently intended as a sort of altars. (Kruze, Deutsche Alterth. vol. i. part 2, p. 132; Zetes, Die Deutschen, p. 130.) [L.S.]

SENA (Σήνα), Pol. Σήνα, Strab. Ed. Semnonis), called also for distinction's sake SENA GALICA (Σεναγαλίκα, Pol. Σινιαγάλικα), a city of Umbris, but situated in the district known as the Gallicus Ager, on the coast of the Adriatic, at the mouth of a small river of the same name. The district in which it was situated had previously belonged to the Gallici Semnones, and there can be no doubt that both the river and town derived their name from that of the Semnones. Polybius speaks of a secure retreat to the refugees from Egypt in search of a new habitation. (See Cooley's Claudius Ptolemy and the Nile, pp. 7—97.) The present Senua corresponds nearly with the territory of the Sembratae. [W.B.D.]

The Geographer of Ravana has Senegallia, thus approaching still more closely to the modern form of Siniguglia. The city is mentioned as still in existence during the Gothic Wars, after which it is thought that the Lombards (Procop. B. G. iv. 23; P. Dac. Hist. Lang. ii. 22); it was for some time also one of the cities of the Pentapolis under the archers of Ravana, but fell into decay in the middle ages, and is alluded to by Dante in the 14th century as raging rapidly to extinction. (Dante, Par. xvi. 75.) It, however, revived again, and is now a flourishing town, with a considerable trade, but has no ancient remains.
SENA.

The river Sena, alluded to by Silius Italicus and Lucan, must be the small stream now called the Nivole or Nègoia, which falls into the Nervia near Sisteron. (Sili. Ital. viii. 458; Lucan, ii. 407.)

SENA (Salvia, Ptol.: Eth. Senoria: Siena), a city of Etruria, sometimes called Sena Julia, to distinguish it from the city of the same name on the Adriatic. It was situated nearly in the heart of Etruria, about 38 miles E. of Volterra and 40 S. of Florence. There is no reason whatever to suppose that there was an Etruscan city on the site, and no allusion to its existence occurs before the establishment of the Roman colony. Even the date of this is not accurately known; but it is probable from the epistle of Julius that it was founded either by Caesar himself or by the Triumvirate in his honour. It is singular that its name is not found in the Liber Coloniarum; but its colonial rank is attested by Pliny, who calls it "colonia Senensis," as well as by Tacitus. (Plin. iii. 5. s; Tac. Hist. iv. 45.) It is subsequently mentioned by Polybius, as well as in the Tabula, which places it on a line of road from Florentia to Clusium. (Polyb. iii. 1. § 49; Tab. Pest.) But it seems never to have been a place of much importance in ancient times, and it was not till the middle ages that it rose to be one of the first cities of Tuscany. It has no remains of antiquity. (Dennis's Etruria, vol. ii. p. 135.)

SENA INSULA, in Gallia. On this island, which is opposite to the coast of the Osanili, was an oracle of a Gallic goddess. Nine virgins named Galloienses (Coro Germanus) had the custody of the oracle. They could raise storms by their voices, change themselves into beasts, heal diseases, and foretell the future, but they were only propitiators to seamen who came to consult them. (Mela, iii. 6.) This is the island of Sein, incorrectly called on the maps île des Saintes, which is at the entrance of the bay of Douvresenans, and separated from a point of land on the coast of Brittany (Pointe Ria) by a narrow channel. D'Anville supposes that this may be the island which Strabo places opposite the mouth of the Loire. This island was inhabited only by women who were possessed by Dionysus. They allowed no man to enter their island; but so far from keeping their virginity, they used to visit the men of the district, and dandled them from every side. The narrative is not very different. Strabo names his island that of the Numites, as Croekur (Strab. Transl. i. p. 198) has it; but the name is Samnitus in the common texts of Strabo. This seems to be the same island that Dionysius speaks of (Peregr. 571) as being visited by the women of the Amnites for the purpose of performing the rites of Bacchus. D'Anville further thinks that Pliny (iv. 16) may be speaking of Sena when he mentions after the islands which are near to Britain, Siambia, or Amniss, as some MSS. have it, and Azantus, which is evidently Uxantus or Ursanum. Sina, as the Maritime Itin. names it, is mentioned there with Uxantus. [G. L.]

SENIA (Sevia, Ptol. li. 16. (17.) § 5) was a Roman colony founded by Julius Cæsar ("Colonia Senensia," Tac. Hist. iv. 45), and on the road from Aquileia to Sicilia. (Itin. Ant. p. 273.) It was a harbour. (Comp. Plin. iii. 21. s. 25; Geogr. Rev. iv. 31; Tab. Pest.) Variously identified with Zeng or Senaa. [T. H. D.]

SENONAGUS, in Gallia Marbonensis, is mentioned in the Table, and placed north of Arenico (Arignum), on a road along the east side of the Rhone. Some geographers guess that it may be near the Pont St. Esprit. [G. L.]

SENONES (Senau, however, Steph. B. s. a.), a people (ii. 17) names the Italian Senones or Senones. The Roman poets make the penultima short:—

"Ut Braccatorem poeni Senonumque minorum."

(Juv. viii. 534.)

An absurd explanation of the name is quoted by Festus (in Sena) and by Servius (ad Aen. viii. 565). The Senones were a great nation, who bordered on the Belgias. (Cass. B. G. ii. 2.) They were north-west of the Aedui and bordered on them. Their capital was Agedinicum (Senus), on the right bank of the Yonne, which is a branch of the Sena. (Procli ii. 8. § 12.) The Senones are in the Lugdunensia of Polieney and Pliny. Besides Agedinicum there were in the country of the Senones, Arissiodurum (Auxerre) and Malodunum (Mohen) on the Seine not far from Paris, which shows that their territory extended from the neighbourhood of Paris along the Seine and along the Yonne to the borders of the small nation of the Mandubii (Manduari), whose town was Auxesia, and to the borders of the Lingones. The railroad from Paris to Dijon, which passes through the country of the Senones, is named Joigny, St. Florentin, Tonnerre on the Armançon, a branch of the Yonne, runs through the country of the Senones. Between St. Florentin and Joigny, which is about half-way between St. Florentin and Tonnerre, extends a vast plain, level as the sea, fertile, and in summer covered with wheat. A large part of the Senones country extends over this plain. In seems to have comprehended the dioceses of Sena and Auxerre. Besides Malodunum and Agedinicum, Caesar mentions Vellamodunum as a town of the Senones (vii. 11), on the side towards the Carnutes.

The Senones were at first well disposed to Caesar (B. G. ii. 3), probably through fear of their neighbours, the Belgae and the German people north of the Marne. Caesar had given them Carvannes for a king, but the Senones expelled him (v. 54); and when the Roman proconsul ordered the senate of the Senones to come to him, they refused. In the spring of B. C. 53 Caesar summoned the states of Gallia to a meeting, but the Senones, Carnutes, and Treviri would not come (vi. 3), upon which he transferred the meeting of the states to Trier. Tacitus says that the Parisii bordered on the Senones, and "within the memory of their fathers they had united their state with that of the Senones;" but he does not explain the nature of this union. He marched from Lutetia (Paris) into the country of the Senones, which presents no difficulties for an army. The Senones yielded in spite of Aeco, who was the leader in the revolt; and Caesar took with him Carvannes and the cavalry of the Senones, in which force it is probable that they were strong; as their country is well adapted for grazing and corn. At the close of the year Caesar whipped Aeco to death, and quartered six of his legions at Sena for the winter (vi. 44). In B. C. 52 the Senones sent 12,000 men with the rest of the Parisii and the Carnutes and the Alesia (vii. 75). The Senones seem to have given Caesar no more trouble; but in B. C. 51 Drappes, a Senon, at the head of a number of desperate men, was threatening the Provence. Drappes was caught and starved himself to death. (B. G. viii. 30. 44.) [G. L.]

SENONES (Sewonæ), a nation of Gaulish origin, which was settled in Italy, on the coast of the Adriatic, extending from the river Arna (Arno),
a few miles N. of Aenona, to the Utia (Monteas). (Liv. v. 35.) The history of their migration from Tarentum to Gaeta, their settlement in Italy, and their wars with the Romans, which ended in the extermination of the whole nation, are fully related under the article Gallia Cisalpina (pp. 936—
938). After the conquest of the Samnites, and their expulsion from their lands on the Adriatic, two
colonies were founded in their territory, the one at
Senise, and the other at Splitri; but it is said in the
remainder of their lands was portioned out
among the Roman citizens by an agrarian law of
the tribune C. Flamininus. This district, which still
retained the name of the "Gallicum ager," was after-
wards considered as a part of Umbria, and included
for all administrative purposes under that appella-
tion. Its topography will therefore be most con-
veniently given in the article Umbria. [E. H. B.]

SENTICCE (Szentéki, Ptol. ii. 6. § 50), a town of the
Vaccas in Hainpaia Terracumæasia, variously
identified with Lose, Zenonas, Calvaria de
Medias, and Zenone. [T. H. D.]

SENTIDAS (Zardes, Ptol. iv. 5. § 21), a people in
the S. of Marmaria. [T. H. D.]

SENTINUS (Zervar in, Zerbar in, Sentinat in,
Santina in, Sentino), a city of Umbria, on the E.
slope of the Apennines, but near the central ridge of
those mountains, and not far from the sources of the
Arno. This city is celebrated in history as the scene of
a great battle fought in the Third Samnite War, n. c. 395,
when the allied forces of the Samnites and Gauls were defeated by the Roman consul Q.
Fabius. Gallius Egnatius, the Samnite general, was slain in the battle; while the Roman consul P. Decius
followed the example of his father, and devoted him-
self for the safety of the Roman army. (Livy. x. 27—
30; Ptol. ii. 19.) The scene of this decisive vic-
tory, one of the most memorable in the Roman annals,
is placed by Livy "in Sentinatis agro;" but we have
no more precise clue to its position, nor do the details
of the battle give us any assistance. Sentinum itself
seems to have been a strong town, as in the Persian
War it was besieged by Octavian himself without success; the town was afterward taken by surprise
by his lieutenant, Salviodienus Rufus, by whom it was
plundered and burnt to the ground. (Dion Cass.
xviii. 13.) It was subsequently revived, by receiving
a body of colonists, under the Titus Varus (Lib. Col.
p. 358), but did not obtain the title of a Colonia, and
continued under the Roman Empire to be a town of
municipal rank. (Pil. iii. 14. a. 19; Strabo. vi.
p. 327; Ptol. iii. 1. § 53; Orell. Iac. 3661, 4949.)
Its site is marked by the village still called Sentino,
on the river of the same name (a small stream falling
into the Emsa), a few miles below the modern town of
Sasso Ferretto. [E. H. B.]

SENIUS (Adria or Zalerius, Ptol. vii. 3. § 2), a
river in the land of the Tanae (Chesa) which ran into
the See of Adria, and formed the boundary between
Nepi (Nepi nepos), S. of Ambustus, and Rabana.
Probably the modern Sejorman or Scuonag. (Comp.
Ferigier, Geogr. ii. p. 478.) [T. H. D.]

SENIUS (Ziner, Ptol. ii. 2. § 4), a river on the
W. coast of Hibernia, in the territory of the Aetern.
Camillem identifies it with the Skaneem. [T. H. D.]

SEPULAS (Sepulcas, Ptol. iv. 5. § 20), a promontory of Messenia,
opposite the island of Schathos, and forming the S.
extremity of Thessaly. It is now called C. St. George.
It is celebrated in mythology as the spot where
Peleus laid in wait for Thetis, and from whence he
carried off the goddess (Eurip. Androm. 1256), and
in history as the scene of the great shipwreck of
the fleet of Xerxes. (Herod. vii. 113, 188; Strabo.
v. 6. § 40.) The ruins of the Rh. appears at a later period standing near the Sacred Lake (Host. xvi.
Plin. iv. 9. a. 16; Mela, ii. 3; Loc. Barletta,
Greco, vol. iv. p. 382.)

SEPONTIA PARAMICA (Zeronias, Ptol. ii. 6. § 50), a town of the Vaeccae in His-
pania Terracumæasia lying to the W. of Locrioga
(or the modern Locera). [T. H. D.]

SEPPIAS (Sperens, al. Zerpes), a promontory in the
town of Upper Gallies, not men-
tioned under this name in Scripture, but frequently
by Josephus. It was garrisoned by Antigonus, in
his war with Herod the Great, until the latter took
it, early in his Galilean campaign (Ant. xiv. 13.
§ 4.) It seems to have been a place of arms, and to
have been occasionally the royal residence, for it
occasionally occurs as the spot where the presidency of Varus, the robber-chief Judas, son
of Eusebion, seized the palace of Sepphoris, and
carried off the arms and treasure which it contained
(xvii. 12. § 5). It was subsequently taken
and burned by Varus (§ 9). Herod the tetrarch (A-
tiphas) afterwards rebuilt and fortified it, and made
it one of his strongholds (xviii. 2. § 1); although, according to the statement of Josephus the son of Pius, he still maintained the
superiority of his newly founded city Tiberias; and
it was not until Nero had assigned Tiberias to
Agrippa the Younger that Sepphoris established its
supremacy, and became the royal residence and
repository of the archives. It is termed the strongest
of Tiberias, and was early taken by Galles, the
general of Cestius. (B. j. ii. 18. § 11.) It main-
tained its allegiance to the Romans after the general
revolt of Galles (Lib. iii. 2. § 4, 4. § 1), but did not
break with the Jewish leaders. (Vita, 8. 9.) Its
early importance as a Jewish town, attested by the
fact that it was one of the five cities in which
John the Baptist was first preached, is suddenly
obscured by the capture of the city by Titus, and
its destruction by the Romans (B. j. i. 8. § 5),
and was further confirmed by the
destruction of Jerusalem, after which catastrophe it
became for some years the seat of the great Sambe-
drim, until it was transferred to Tiberias. (Robinson,
Bibl. Res. vol. iii. p. 202.) It was subsequently
called Dios completion, which is its more common
appellation in the ecclesiastical annals; while Epi-
phanes and S. Jerome recognize both names. A
revolt of the Jewish inhabitants, in the reign of
Constantinus (A. D. 339), led to the destruction
of the city by Constantinus Gallus Caesar. (Socrates.
H. E. ii. 33; Socomoni, H. E. iv. 7.) This town,
was once the most considerable city of Galles, was
situated according to S. Jerome 10 miles west of
the S. of the Acropolis and near the Greek.
Gazaica, Comment. in Lib. Iud. 4.) It was much
celebrated in the history of the Crusaders, for its
fountain being the name Sepherich, distant about 3
miles to the north of Nazareth, retaining no vestiges of its
site, but only a small church in Hesperus with a ruined
tower and church, both of the middle age; the
latter professing to mark the site of the birthplace
SEPTIM AQUAE. (Orell. Isacr. 1026; Gruter, Isacr. p. 308. 3.) It is placed by the Itinerary of Antoninus on that branch of the Flaminian Way which, quitting the main high road at Nuceria, crossed the Apennines to Proliquesium and thence descended the valley of the Potentia by Septempeda and Treis to Anxium and Anona. (Itin. Ant. p. 312.) It early became an episcopal see, and derives its modern name of San Severino from one of its bishops who flourished in the middle ages. It still retains its rank as an episcopal city, and is the capital of the surrounding city, though it has not more than 300 inhabitants. (Rampoldi, Dizio. Corvog. vol. iii. p. 887.) [E. H. B.]

SEPUCHRUM EURIPIDIS (Amm. Marc. xxvii. 4. 8; comp. Gall. xv. 20; Plut. Lycurg. 36; Vitr. viii. 9; Pline. xxix. 19; Itin. Hierosol., the remarkable monument erected to Euripides in Macedonias, at the narrow gorge of Aulon or Arthaus (Besikta or Rumiti Beshgea), where the mountains close upon the road. The ancients (Vitrivius, l. c.; Plin. l. c.) placed it at the confluence of two streams, of which the water of one was poisonous, the other so sweet and health-giving that travellers were wont to drink a draught of the one and many meals by its currents. In the Jerusalem Itinerary, a document as late as the 13th century, it occurs as a station between Penanell and Apollonia. (Comp. Clarke's Travels, vol. viii. pp. 9—13.) [E. B. J.]

SEQUANA (Sospetrus, Szeppatur, Ptol. ii. 8. § 2), the Seine, one of the large rivers of Gallia. The Seine rises in the highlands south of Langres, but in the department of Côte d'Or, and flows in a northwest direction past Chartillon-sur-Seine, Troyes, Noyon, Paris, Mantes, Elbeuf, Rouen, and Le Havre. It enters the Atlantic below Le Havre. The course of the Seine is about 470 miles, and the area of its basin is about 26,000 English square miles, which is only one half of the area of the basin of the Leine. The chief branches of the Seine which join it on the right bank are the Aube, the Marne, and the Oise; on the left bank, the Yonne, the Loing, and the Eure. None of the hills which bound the basin of the Seine, or are contained within it, have a great elevation, and a large part of the country included within this basin is level. (Ossian. ii. 1.) The course of the Sequana and the Matronas (Marea) the boundary between the Celteis and the Belgae. Strabo (iv. p. 192) says that the Sequana rises in the Alps, a statement which we must not altogether impute to an erroneous notion of the position of the river's source, though his knowledge of Gallia was in many respects inaccurate, but to the fact that he extended the name of Alps far beyond the proper limits of those mountains. But his inaccuracy is proved by his saying that the Sequana flows parallel to the Rhine, and through the country of the Sequani. He is more correct in fixing its outlet in the country of the Caleti and the Leovii. The Seine was navigated in the time of Strabo and much earlier. [Gallia Transalpina, Vol. I.]

The Matrona, as Anonius names it (Mosella, v. 462),—

"Matrona non Gallus Belgasque interasta fines,"—

joins the Seine a few miles above Paris; it is the largest of the affluent of the Sequana. Ammianus Marcellinus (xxv. 11) says that the

S Q 3
Caesar fixes the position of the Sequani. Their territory extended to the Rhine. (B. G. i. 1.) The Juris separated them on the east from the Helvetii; and the narrow pass between the Juris and the Rhone at Fort Téuges was in the possession of the Sequani (B. G. i. 6, 8). The southern boundary of their territory from Fort Téuges was the Rhône; but they did not possess all the country in the angle between the Rhône and the Saône, for part of it was held by the Allobroges (B. G. i. 13), and part by the Sequani (B. G. i. 10) and by the Ambarni, who were dependent on the Aedui (B. G. i. 11). When Caesar describes the march of the Helvetii from Fort Téuges to the Saône, he says that the Helvetii first passed through the territory of the Sequani, and then entered the territory of the Aedui, which they plundered. But they had not yet reached the Saône, as Caesar's narrative shows, and it is clear from this passage (B. G. i. 11) and those already cited, that the Sequani took part in the campaign between the Rhône and Saône did not belong to the Sequani, for the line of march of the Helvetii from Fort Téuges to the Saône would probably bring them to the Saône at a point not much lower than Mâcon. The western boundary of the Sequani was the Arar, also called the Sauconna, a name which appears to be the same as the name of the Sequani. Their neighbors on the west side of the Saône were the Arverni, with whom the Sequani had disputes about the river tolls (Strab. iv. p. 192). On the north their neighbors were the Lencii and Lingeses. Strabo (iv. p. 186) describes the Arar and Dubias (Domus) as flowing through the country of the Sequani. D'Anville has an argument to show that the part of the dioceses of Mâcon and Mâcon which is east of the Saône belonged to the old territory of the Sequani, which may be true; but the towns Mâcon (Mâcon) and Cabillonum (Chalon) were on the west side of the Saône and in the territory of the Aedui (B. G. vii. 90).

In another passage besides that already referred to, Caesar shows that the Sequani extended to the Rhine, for in describing the course of this river from south to north, he says that it passes by the territory of the Helvetii, Sequani, Mediomatrici and Trinovantes. (B. G. iv. 10.)

The Sequani belonged to the division of Belgics under the Empire (Plin. iv. 17; Ptol. ii. 9. § 21). The territory of the Sequani contained much good land, some of the best in Gallia. Their chief town was Vesontio (Besançon) on the Doubs, and they had other towns also. They fed hogs, and their hams and bacon were exported to Rome as Strabo (iv. p. 192) says; and Varro (de R.R. ii. 4) may mean to say the same, when he speaks of Gallic bacon. The Sequani had kings, sometimes at least; for Gallic kings were not perpetual. (B. G. i. 3.) Before Caesar went into Gallia, the Arverni and Aedui had been the two most powerful peoples. The Sequani were in league with the Arverni, who occupied the centre of all Gallia, but hostile to their neighbours the Aedui. To maintain themselves against the Aedui, the Arverni and Sequani hired Germans to come over the Rhine. The Germans came in great numbers, and in Caesar's time it was computed that there were 130,000 of them in Gallia. This is the first historical notice of a permanent settlement of Germans in these parts. The Sequani with the assistance of their allies defeated and humbled the Aedui, but they gained nothing by this victory. Ariovistus, the king of these German mercenaries, took from the Sequani a third part of their lands, and was threatening to take a second third, when Caesar drove the Germans into the Rhine, after defeating them near that river. If the Germans were all destroyed or driven away from the territory of the Sequani by Caesar, they took to the Rhine, which belonged to the Sequani, the Upper Alps, has been German for many centuries.

In B. C. 52, the Sequani were among the nations who sent their contingent to attack Caesar before Alesia. (G. L.)

SERA (Ajax), Ptol. i. 11. § 1, 17, § 5, vi. 13. § 16, 5, viii. 24. § 8, the capital of the country of Cersus, and one of the chief commercial towns of the Serae. It was the remotest point of Eastern Asia and the eastern part of which the ancients had any commerce, or of which they possessed any knowledge. It was situated on the mountain Otterocorua at the eastern source of the Sarta. Manuet (p. 501) describes it either with Samaus in the province of Samaus, or with Samaus in the province of Samaus; according to Herenn (Judea, i. 2. p. 668) it is Pella itself.

SERAICA (Seraica), Ptol. v. 9. § 28, a town in the S. of Asiatia Sarmatica. (T. B. D.)

SERANUSA, perhaps more correctly Seramina, a town of the interior of Pontus Polemosiaon, or one again, for the country on the west bank of the Rhine, which belonged to the Sequani, the Upper Alps, has been German for many centuries.

In B. C. 52, the Sequani were among the nations who sent their contingent to attack Caesar before Alesia. (G. L.)

SERA (Ajax), Ptol. i. 11. § 1, 17, § 5, vi. 13. § 16, 5, viii. 24. § 8, the capital of the country of Cersus, and one of the chief commercial towns of the Serae. It was the remotest point of Eastern Asia from which the ancients had any commerce, or of which they possessed any knowledge. It was situated on the mountain Otterocorua at the eastern source of the Sarta. Manuet (p. 501) describes it either with Samaus in the province of Samaus, or with Samaus in the province of Samaus; according to Herenn (Judea, i. 2. p. 668) it is Pella itself.

SERAPIUM (H. Ant. p. 170; Sermia, Tab. Peut.), a large village seated near the junction of the canal of the Ptolemies with the Biter Lakes, east of the Delta. Serapium was 18 miles distant from ABAX (50 from Olymus) in the province of the Sinope. Its temple of Serapias, and its position on the canal that connected the Nile with the Red Sea, rendered it a place of considerable traffic. It was probably founded, or at least enlarged, by the Ptolemies after Philadelphia (a. C. 274) had extended the canal to the Biter Lakes.

SERBES (Σερβοί, τα Σερβοί, Ptol. iv. 2. § 7), a small river on the N. coast of Mauritania, which fell into the sea to the S. of Rassouan; either the present Massemás, or, more probably, the Isser.

SERBI or SIRBI (Σερμόνοι or Σερμόνοι, Ptol. v. 9. § 21), a people in Asiatia Sarmatica, according to PTOLEMY (I. c.) between the Germanians and the river Esaus, above the Dedani and below the Vaul. Pliny, however (vi. 7. a. 7), places them on the E. shore of the Messeta, between the Vaul and the Arrechi. (Comp. Schafaric, Siam. Alterl. p. 155.)

SERBONIS LACUS. (Σερβονία Λᾶκος.)

SERDICIA or SARDICIA (Σαρδική, Ptol. iii. 11. § 19), the first of these forms is the more usual with the Romans, the latter with the Greeks. A considerable town of Upper Moesia, which in earlier times was regarded as belonging to Thracia (Ptol. Le.), but which in the third century was attributed...
to Dacia Inferior, and made its capital. (Theodorot. Hist. Ecol. ii. 4.) It lay in a fruitful plain, at the spot where the sources of the Oescus united, and on the high-road from Naissus to Philippopolis, between Meldia and Barbarakes. (Hist. Ant. i. 195; Hist. Hierosol. p. 567.) From the time of Aurelian it has borne on its coins the name of Upiana. It probably became, when Dacia was relinquished, the name of that Dacian town was transferred to it, and its inhabitants, perhaps, located there. The emperor Maximian was born in its neighbourhood. (Eutrop. x. 14, 22.) It was destroyed by Attila (Priscus, de Legat. p. 49), but shortly afterwards restored. In the middle ages it occurs under the name of Tridentina (Tudorâs, Nicph. Chron. A. M. 3.7. 184; Aposp. Geogr. in Hudson, iv. p. 43), which was perhaps its original Thracian appellation, and which is still retained in the dialect of the inhabitants. (See Wesseling, ed Hist. Ant. l. c.) Its extensive ruins lii. to the S. of Sophia. (Comp. Procop. de Aed. iv. i. p. 207, 4. p. 223; Hierocli, p. 654; Amm. Mar. xxii. 16; Geop. iv. p. 840. 2; Orelli, nos. 3105, 5013.) The Geogr. Rev. (iv. 7) incorrectly writes the name Servica, since it was derived from the Thracian tribe of the Serdi. It is called by Athanasius (Apoll. contra Arianos, p. 154) Σερία πόλις. [T. H. D.]

SERENA, a town in Lower Pannonia, on the road between the Danube, on the mountain, and the road from Tarsus to Murza. (Hist. Hierosol. p. 565; Geogr. Rev. iv. 19, where it is called Serani; Tab. Pest., where its name is Serina.) It is thought to have occupied the site of the modern Mousalavia. [L. S.]

SERES. [SERICA.]

SERETIUM (Σερετιον, Dion Cass. liv. 12), a fortified town of Dalmatia, which with Rhasitium was captured by Germanicus in the year 14 A.D. 7. [E. B. J.]

SERGUNTIA (Σεργουντα, Strab. iii. p. 163), a small town of the Arevacii on the Durus, in Hispania Tarraconensis. Ukert (ii. p. i. p. 455) takes it to have been the Σεργούντα of Stephanus B. (c. v.) [T. H. D.]

SEREA (Σερεα), Ptol. ii. 4. § 12. A town of the Tardetiani in Baetica, with the church of the Holy Fama Julia. (Pllin. iii. 1. a. 3.) It lay E. of the mouth of the Ana, and N. of the Bassit. [T. H. D.]

SERIA'NE, a city of Syria mentioned in the Itinerary of Antoninus as xviii. M. P. distant from Andronus, which was xxviii. M. from Calcis, cxxxvii. M. from Dolichos, now Dios. (Hist. Ant. pp. 194, 195.) Manett refers it to the name of Stephanus B. (c. v.) [T. H. D.]

SERIA (Σερια), Ptol. vii. 2. § 1, 3, 5, § 1, 14. 22. §§ 1, 5, 27. § 2. &c.), a tract of country in the E. part of Asia, inhabited by the people called Seres. According to the description of Ptolemy, it was bounded on the W. by Syria extra Imaam, on the N. E. by an unknown land, on the E. by the Sinas, and on the S. by India. Pliny on the contrary (vi. 13. a. 15) seems to extend it on the E. as far as the coast of Arabia, as he mentions Oceanus Sericus, and in another place (vi. 17. a. 20) speaks of a promontory and bay. Modern opinions vary respecting its site; but the best geographers, as Rennell, D'Anville, and Heeren, concur in placing it at the NW. angle of the present empire of China. (See Yates, Testimonium Antiq. p. 232, note.) The name of Serica, as a country, was not known before the first century of our era, though there are earlier accounts of the people called Seres. It seems highly improbable, however, that they were known to Hecataeus, and the passage on which that assumption is founded occurs only in one MS. of Photius. They are first mentioned by Ctesias (p. 371, n. 22, ed. Bähr) ; but according to Mela (iii. 7) they were in his time known to all the world by means of their commerce. On the northern borders of their territories were the more eastern branch of the Ushtu, and Auzacii (the Atiai), which stretched as far as here from Scythia. In the interior of the country were the Montes Assimiri, the western part of the Da-Ursi chain; and towards the southern borders the Caesi Montes (now Khara, in the desert of Gobi), together with a southern branch called Thiaurus, which trended towards the river Bactrius (Boeng-Ao), and on the farther side of that river lay the Ottoecorcas, the most eastern branch of the Emodi branch, called by Ptolemy (vi. 16. § 5) η Σεριαν ποταμος. Among the rivers of the country, the same author (vi. § 8) names it, in its northern part, the Oechardes (probably the Selengas); and, in the S., the Bautes or Bactrius (Boeng-Ao), which flowed towards the land of the Bactrians. (Ptol., however, speaks of several other rivers, which seem to have been coast ones, as the Paitaras, Cambari, Lanois, and Atianos, as well as the promontory of Chrysae and the bay of Cyrenae. Serica enjoyed a serene and excellent climate, and possessed an abundance of cattle, trees, and fruits of all kinds (Amm. Mar. xxxiii. 6. § 64; Plin. iv. 41.), and was covered with a thick growth of silk, with which the inhabitants carried on a very profitable and most extensive commerce (Strab. xv p. 693; Arist. Hist. Nat. v. 19; Virg. Georg. ii. 121; Plin. and Amm. ii. cc. &c.). Pliny records (xii. 22. a. 26), that a Greek woman of Cos, named Pamphila, first invented the expedient of splitting these substantial silken stuffs, and of manufacturing those very fine and delicately colored silks which are described under the name of Cos vestes. Both Serica and its inhabitants are thought to have derived their name from their staple product, since, as we learn from Hesychius (ν. Σεριας), the insect, from the web of which the brilliant stuff called holoserikon was prepared, was named Ser (Σερ). (Comp. Klaproth, Sur les Noms de la Chine in the Mem. rel. à l'Asie, iii. p. 264; and Tabulac. Hist. de l'Asie, pp. 57 and 68.) It has been doubted, however, from the apparent improbability that any people should call themselves Seres, or silkworms, whether the name of Seres was ever really borne by any nation; and it has been conjectured that it was merely a mercantile appellation by which the name of the silk district was known. (Latham, in Class. Asia, vol. i. p. 43.) Lassenius (Ind. Asia, i. p. 321) has produced from the Mahabharata, ii. 50, as the real names of the Seres, those of Caka, Tukhara, and Kanka, who are represented as bringing just the same goods to market as are ascribed by Pliny (xxxiv. 14. a. 41) to the Seres, namely, wool, skins, and silk. Yet, though it may be allowed to be improbable that they should have called themselves "Silkworms," yet it seems hardly less so that such an appellation should have been given them by foreigners, and that they should have been known by it and no other for a third time.
SERICA.

period of several centuries. On the other hand, may it not be possible that the product was called after the people, instead of the people after the product? We are not without examples of an analogous procedure; not without the instance, the name of the phase, or pheasant, from the river Phasia; of our own word corriente, anciently and properly Cornisita, from the place whence that small species of grape was originally brought, &c. However this may be, we may refer the reader who is desirous of a further account of the origin and manufacture of silk, to an excellent and comprehensive work in the Terentianus Major, published by Mr. Yates (part i. p. 160, &c.), where he will find all the passages in ancient authors that bear upon the subject carefully collected and discussed.

Besides its staple article, Serica also produced a vast quantity of precious stones of every kind (Expos. tot. Monst., ap. Hudson, iii. p. 1, &c.), as well as iron, which was esteemed of a better quality even than the Parthian (Pli. viii.) and skins (Petr. M. Erythr. p. 22; Amm. l. c.).

According to Pausanias (vi. 22. § 2) the Seres were a mixture of Scythians and Indians. They are mentioned by Strabo (xv. p. 701), but only in a cursory manner. It appears from Mela (iii. 7) and from Pliny (vi. 17. 54), compared with Eustathius, Tzetzes, and Ammianus Marcellinus (l. c.), that they were a just and gentle people, loving tranquility and comfort. Although addicted to commerce, they were completely isolated from the rest of the world, and carefully avoided all intercourse with strangers. From these habits, they were obliged to carry on their commercial transactions in a very singular manner. They inscribed the goods upon the ships in which they were packed, and then deposited them in a solitary building called the Stone Tower; perhaps the same place mentioned by Ptolemy (vi. 15. § 3) under the name of Hormathon, situated in a valley on the upper course of the Jazartes, and in the Scythian district of Casia. The Scythian merchants then approached, and depositing the goods, retired. After their departure, the Seres examined the sum deposited, and if they thought it sufficient took it away, leaving the goods; but if not enough was found, they removed the latter instead of the money. In the description of this mode of traffic we still recognise the characteristics of the modern Chinese. The Parthians also traded with the Seres, and it was probably through the former that the Romans at a later period procured most of their silk stuffs; though the Parthians passed them off as Assyrian goods, which seems to have been believed by the Romans (Pli. vi. 22. s. 25). After the overthrow of the Parthian empire by the Persians, the silk trade naturally fell into the hands of the latter. (Vopisc, Asial. c. 45; Procop. B. Pers. l. 20, &c.) With regard to their persons, the Seres are described as being of unusual size, with blue eyes, red hair, and a rough voice (Pli. vii. 22. s. 24), almost totally unacquainted with diseases and bodily infirmities (Expos. tot. Monst., l. c.), and consequently reaching a very advanced age (Lact. c. 14; Strab. xv. p. 701; Lucian, Macrob. 5). They were armed with bows and arrows (Hor. Od. i. 29. 9; Charic. vi. 3). Ptolemy (ll. c.) enumerates several distinct tribes of them, as the Annibi, in the extreme N., on the mountains named after them; the Zisyges, between them and the Ascanian mountains; the Dannae, to the S. of these; and still further S. down to the river Oechardes, the Palaie; the Oechardes, which dwelt about the river of the same name; and the Garamene and Nabamene, to the E. of the Annibi. To the S. of these again was the district of Arimines, near the mountains of the same name, and still further in the same direction the Issedones; to the E. of whom were the Thraxi. To the S. of the Issedones were the Asparncas, and S. of the Thraxi the Ethaguri. Lastly, on the extreme southern borders were seated the Batas and the Ottocoraces,—the latter, who must doubtless be identified with the old Atbracian tribe by the sides of the like-named mountain. To the southern district must also be ascribed the Sasaeta mentioned in Arrian's Peripil. M. Erythr. (p. 37), small men with broad foreheads and flat noses, and, from the description of them, evidently a Mongol race. They migrated yearly with their wives and children to the borders of the Sinas, in order to celebrate their family festivals there; and when they had returned to the interior of their country, the reeds which they left behind them, and which had served them for straw, were carefully gathered up by the Sinas, in order to prepare it for the Malabathron, a species of osmum which they sold in India. (Comp. Eger, Erdauende, ii. p. 179, v. 443, 2nd ed.; Bohn); Hultsch, Erdauende, ii. p. 207, v. 494). According to Ammianus (l. c.) the towns of Serica were few in number, but large and wealthy. Ptolemy, in the places cited at the head of this article, names fifteen of them, of which the most important seem to have been, Seres, the capital of the nation; Issedon; Throna, on the E. declivity of the Arimis mountains, and on the easternmost source of the same; and a few others, of which the names are not given, but somewhat to the NW. of the preceding town; Asparoca, on the left bank of the Ascanus, not far from its western source; and Ottocorra.

[7. B. D.]

SERIMUM (Σηρύμων, Ptol. iii. 3. § 28), a town in the Baurusienses, in the interior of Euxine, not far from the Caucasus.

SERPHOS or SERPHUS (Σηρφος; Εὐρησ: Σηρφος), an island in the Aegaean sea, and one of the Cyclades, lying between Cythnos and Siphnos. According to Pliny (iv. 12. 22) it is 12 miles in circumference. It possessed a town of the same name, with a harbour. (Sclav. p. 22; Ptol. iii. 15. § 31.) It is celebrated in mythology as the place where Danaus and Penus were driven to shore in the chest in which they had been exposed by Acrisius, where Perses was brought up, and where he afterwards turned the inhabitants into stones with stone the Gorgon's head. (Apollod. ii. 4. § 3; Pind. Pyth. xi. 72, xii. 18; Strab. x. p. 487; Or. Met. v. 242.) Seriphos was colonised by Lesbians from Athens, and is said to be one of the few islands which refused submission to Xerxes. (Herod. viii. 46, 48.) By subsequent writers Seriphos is almost always mentioned with contempt on account of its poverty and insignificance (Aristoph. Acharn. 543; Plat. Rep. l. p. 323; Plat. de Eusul. 7. p. 602; Cic. de Nat. Deor. i. 31, de Sensct. 3.) and it was for this reason employed by the Roman emperors for punishment of state criminals. (Tact. Amm. ii. 85, iv. 21; Juiv. vi. 564, x. 170; Senec. ad Consul. 6.) It is curious that the ancient writers make no mention of the iron and copper mines of Seriphos, which were, however, worked in antiquity, as is evident from existing traces, and which, one might have supposed, would have bestowed some prosperity upon the island.
SERMO.

But though the ancient writers are silent about the mines, they are careful to relate that the frogs of Serphos differ from the rest of their fraternity by being dumb. (Plin. viii. 35. a. 83; Arist. Mix. Anac. 70; Arist. Hist. An. iii. 37; Sidonius, a. a. Bdeβεγρις και Εὐφέρας.) The modern town stands upon the site of the ancient city, on the eastern side of the island, and contains upwards of 2000 inhabitants. It is built upon a steep rock, about 800 feet above the sea. There are only a few remains of the ancient city. (Boeß, Reisen auf den Griech. Inseln, vol. i. p. 134, seq.; Frieder, Reisen, etc. vol. ii. p. 106, seq.)

COIN OF SERPHOS.

SERMO, a town of the Celtsiberi in Hispania Tarraconensis. (Itin. Ant. p. 447.) Variously identified with Muel and Mezalocha. [T. H. D.]

SERMYLE (Σερμύλη, Herod. vii. 123; Thuc. v. 18; Sermula, Scyl. p. 6; Hector of Ephesus, B. S. 420; Bickel, Hesperia, vol. i. p. 304; Sermu, Hesych.,) a town of Chaidsicidae, between Galepsus and Mesyberna, which gave its name to the Torosanic gulf, which was also called Sermulicus Sinus (εκλός Σερμυλίκης, Scal. l. c.). The modern Ormilia, between Methymna and Derma, is identified from its name, which differs little from the ancient form, with the site of Sermyle. (Leake, Northern Greece, vol. iii. p. 155.) [E. B. J.]

Sermulicus Sinus. [Sermyle.]

SEROTA, a town on the frontier between Upper and Lower Pannonia, on the right bank of the river Dravaus. (It. Ant. p. 190; It. Hieros. p. 562; Geog. Rev. iv. 19, where it is called Sirore, while the Table calls it Sirota.) It is possible that this town may have belonged to the tribe of the Seretese mentioned by Pliny (iii. 28) as inhabiting a part of Pannonia. The town of Serota is commonly identified with the modern Verces or Veronza. [L. S.]

SERPA, a place in Hispania Bascia, on the Anas, and in the territory of the Tardetani. (Itin. Ant. p. 426.) It still bears its ancient name. See Rossi, Itin. Ant. iv. p. 194. [T. H. D.]

SERBAPOLIS (Σερβαπόλης, κάμη, Ptol. v. 6, § 4), a village on the coast of Cilicia, lying between Mallus and Aspas (Apas).

SERAPILLI, a tribe mentioned by Pliny (iii. 28), as dwelling on the river Dravaus in Pannonia. The resemblance of name has induced some geographers to assume that they dwelt about the modern town of Plečak; but this is a mistake.

SERETES. [Sereta.]

SERBHAE. [Serbus.]

SERHEUM or SERRHUM (Σέρρης, Dem. p. 85, 85, E.; Σέρφης, Herod. vii. 59; Steph. B. s. e.), a promontory and town on the southern coast of Thrace, now Cape Maksir. It lay to the west of Maroneia, and opposite to the island of Samothrace. It is repeatedly mentioned by Demosthenes (pp. 85, 114, 133, R.), as having been taken by Philip, contrary to his engagements with the Athenians; and Livy (xxxi. 16) states that it was one of the Thracian towns captured by Philip V. in the year B. C. 300. (Plin. iv. 11. a. 18; Mela, it. 2.) According to Stephanus Byz. (l. c.) a town on the island of Samothrace bore the same name. [T. R.]

SERRI, a people of the Asiatic Sarmatians, on the Enzine. (Plin. vi. 5. s. 5.) Mela (i. 19) places them between the Melanchaseni and Sirnaces. [T. H. D.]

SERRIUM. [Serrherm.]

SERVIODURUM, a town in the north-east of Vindelicia on the Danube, on the road from Regium to Boiotodurum, near Augustana Castra. (Tab. Pest.; Not. Imp.) It must have occupied the site of the modern Scribunum, or some place in the neighbourhood, such as Tezobury, where ancient remains still exist. [L. S.]

SERVITIUM, a town in the southern part of Upper Pannonia, on the river Dravaus, on the road from Siscia to Sirmium. (It. Ant. p. 268; Geog. Rev. iv. 19, where it is called Serbium; Tab. Pest.) Its site has been identified with several modern places; but the most probable conjecture is that it occupied the place of the modern Sivorovcei, the point at which the roads leading from Sirmium and Siscia to Salonem met. [L. S.]

SESAMUS (Σεσαμούς), a small river on the coast of Paphлагonia, flowing into the Euxine near the town of Amastis, whence in later times the river itself was called Sisamius, and Sisamidae, by Polyenus, Pers. i. 5; Marcian, p. 71; Amastrius. [L. S.]

SESARETHUS. [Taulantii.]

ESATAE. [Serica.]

SESERIENAE (Σεσεριεναι, Peripl. M. Eryth. p. 30), a group of islands opposite to the S. coast of India intra Gangan, and probably in the Sinus Colchicus — where Polycrates (vii. 1. § 10) places a town with the somewhat similar name of Seteritis. It must have been in the neighbourhood of Taprobane, since the Periplus mentions the Abydianos νισος as close to the Seserienae, whilst Polycrates (vii. 4. § 11) places the same island amongst a number of others lying before Taprobane, many of which must undoubtedly have belonged to the Seserienae. [E. B. B.]

SESSITES (Sessio), a river of Gallia Transpadana, and one of the most important of the northern tributaries of the Padus. It flows beneath the walls of Vernonias (Vercellis), and joins the Padus about 16 miles below that city. Its name is noticed only by Pliny (iii. 16. a. 20) and the Geographer of Ravenna (iv. 36), who writes the name Sisida. [E. B. B.]

SESTIARIAE ARAE (called by Polycrates Σεστιαρίας Αράς Bsevullen ξερος, ii. 5. § 3), the W. promontory of the N. coast of Galligalia in Hispania Tarraconensis. It had three altars dedicated to Augustus, whence its name. (Plin. iv. 20. a. 34; Mela, iii. 1.) It is the present Cabo Villamor (Flores, Exp. Socr. xx. p. 44; Sestini, Med. Geop. p. 103.) [T. H. D.]

SESTIARI AFRIC (Africanus, Phil. iv. 1. § 7), a headland on the N. coast of Mauritania Tingitana, between capes Rusaddir and Abyla. It is probably the same that is called Cannarium Promontorium in the Itin. Ant. (p. 11), lying at a distance of 50 miles from Rusaddir, or the present Cabo Quidalis. [T. H. D.]

SESTINUM. (Eub. Sestinum: Sestino,) a town in the interior of Umbria, mentioned only by Pliny, who enumerates the Sestinates among the towns of that region (Plin. iii. 14. a. 19; Gruter, Inscr. p. 108. 7), but which still retains its ancient name. It is situated among the Apennines, at the source of the river Foglia (Pisaurus). [E. B. B.]
of the Peloponnesian War (a. c. 404), Sestus, with most of the other possessions of Athens in the same quarter, fell into the hands of the Lacedaemonians and their Persian allies. During the war which soon afterwards broke out between Sparta and Persia, Sestus adhered to the former, and refused to obey the command of Pharnabazus to expel the Lacedaemonian garrison; in consequence of which it was blockaded by Gonon (a. c. 394), but without much result, as it appears. (Xen. Hell. iv. 8. § 23) Sestus and the other towns on the coast of Thrace, along the southern side of Antialcidas (a. c. 387), Sestus regained its independence, though only for a time, and perhaps in name merely; for on the next occasion when it is mentioned, it is as belonging to the Persian satrap, Ariobarzanes, from whom Coynus, a Thracian king, was endeavouring to take it by arms (a. c. 362? ). He was, however, compelled to raise the siege, probably by the united forces of Timotheus and Agislaus (Xen. Ages. ii. 26; Nep. Timoth. 1); the latter authority states that Ariobarzanes, in return for the services of Timotheus in this war, gave Sestus and another town to the Athenians, from whom it is said to have soon afterwards revolted, when it submitted to Coynus. But his successor, Ceneleptus, surrendered. (Xen. Hell. iv. 8. § 24.)

After this time it was for a long period of time the usual point of departure for those crossing over from Europe to Asia; but subsequently the Romans selected Callipolis as the harbour for that purpose, and thus in the decay of Sestus, which, though never a very large town, was in earlier times a place of great importance. According to Theopompus (ap. Strab. l. c.), it was a well-fortified town, and connected with its port by a wall 200 feet in length (σενεφα \\

Sestus derives its chief celebrity from two circumstances,—the one poetical the other historical. The former is its connection with the romantic story of Hero and Leander, too well known to render it necessary to do more than merely refer to it in this place (Ov. Her. xviii. 127; Stat. Silv. i. 3. 37, &c.); the latter is the formation of (a. c. 480) of the bridge of boats across the Hellespont, for the passage of the army of Xerxes into Europe; the western end of which was a bridge was a little to the south of Sestus (Herod. vii. 33). After the battle of Mycale, the Athenians seized the opportunity of recovering the Chersonesus, and with that object laid siege to Sestus, into which a great many Persians had hastily returned to the garrison, and which was very insufficiently prepared for defence. Notwithstanding this, the garrison held out bravely during many months; and it was not till the spring of (a. c. 478) that it was so much reduced by famine as to have become mutinous. The governor, Artayctes, and other Persians, then fled from the town in the night; and on this being discovered, the inhabitants opened their gates to the Athenians. (Herod. ii. 113, seq.; Thuc. i. 89.) It remained in their possession till after the battle of Aegospotami, and used to be called by them the corn-crest of the Pireneans, from its giving them the command of the trade of the Euxine. (Arist. Erec. iii. 10. § 7.) At the close

---

* Lord Byron, in a note referring to his feet of swimming across from Sestus to Abydos, says:— "The whole distance from the place whence we started to our landing on the other side, including the length we were carried by the current, was computed by those on board the frigate at upwards of 4 English miles, though the actual breadth is barely one." This corresponds remarkably well with the measurements given by Strabo, as above.
SETACOTUM. 971

li. p. 591; comp. Sestini, Geog. Num. p. 585.) It is commonly supposed to have occupied the site of the modern Sitas Radek. [L.S.]

SETANTHII (Zerstor, Ptol. ii. 2. § 3), a tribe probably belonging to the Brigantes on the W. coast of Britannia Romana, and possessing a harbour (Zetianus lymne, Ptol. l. c.), commonly thought to have been at the mouth of the river Ribble. Reichard, however, places it on the S. coast of the Solway Frith, while Camden (p. 793) would read, with one of the MSS. of Ptolemy, "Scetantium Portus," in the 73d week of the Librum. [T. H. D.]

SETANTORUM PORTUS. [SETANTHII.]

SETELIA (Zerelia or Zerelia Stockum, Ptol. ii. 3. § 2), an estuary on the W. coast of Britannia Romana, opposite the isle of Mona, into which the Des discharged itself. [T. H. D.]

SETELSIS (Zetisalis or Zelatis, Ptol. ii. 6. § 72), a town of the Jaccetani in Hispania Tarraconensis, now Solanum. See a site in Sestini, p. 189. [T. H. D.]

SETHERIES, a river of Asiae Sarmatia, on the E. coast of the Pontus Euxinus, and in the territory of the Sindi. (Plin. vi. 5. a. 5.) [T. H. D.]

SETIA (Zetia; Eub. Setinum; Sesae), an ancient city of Latium, situated on the S. slope of the Velocian rock, and on the Via Latina, looking over the Pontine Marshes. It is probable that it was originally a Latin city, as its name is found in the list given by Dionysius of the thirty cities of the Latin League. (Dionys. v. 61.) But it must have fallen into the hands of the Velocians, at the time their power was at its height. No mention of it is, however, found during the wars of the Farnesian with the Longobardi, when a Roman colony was established there in the year 592, and recruited with an additional body of colonists a few years afterwards. (Veil. Pat. i. 14; Liv. vi. 30.) At this time Setia must have been the most advanced point of the Roman dominion in this direction, and immediately adjoined the territory of the Frisiones, who were still an independent and powerful people. [Prievkijn.] This exposed the new colonists to the incursions of that people, who, in B. C. 342, laid waste their territory, as well as that of Norba. (Liv. vii. 42, viii. 1.) The Frisiones were, however, severely punished for this aggression, and from this time the Setini seem to have enjoyed tranquillity. But it is remarkable that a few years later L. Annus of Setia appears as one of the leaders of the Latins in their great war against Rome, B. C. 340. (Liv. viii. 8.) Setia was a Colonia Latina, and was one of those which, during the pressure of the Second Punic War (B. C. 209), declared its inability to furnish any further supplies of men or money. (Liv. xxvii. 9.) It was, at a later period of the war, seized and held for this by the Carthaginians, and much heavier contributions. (Id. xxix. 15.) From its strong and somewhat secluded position, Setia was selected as the place where the Carthaginian hostages, given at the close of the war, were detained in custody, and in B. C. 198 became in consequence the scene of a very dangerous conspiracy among the aforesaid hostages. The Ostera Madinius, which was suppressed by the energy of the proctor L. Cornelius Merula. (Id. xxxii. 26.) From this time we hear no more of Setia till the Civil Wars of Marius and Sulla, when it was taken by the latter after a regular siege, B. C. 82. (Appian, B. C. i. 87.) It appears therefore to have been at this period a strong fortress, an advantage which it owed to its position on a hill as well as to its fortifications, the remains of which are still visible. Under the Empire Setia seems to have continued to be a flourishing municipal town, but was chiefly celebrated for its wine, which in the days of Martial and Juvenal seems to have esteemed one of the choicest and most valuable kinds: according to Pliny it was Augustus who first brought it into vogue. (Plin. xiv. 6. a. 8; Martial, x. 36. 6, xiii. 112; Juuv. x. 27; Strab. v. pp. 234, 237; Sil. Ital. viii. 379.) But it is probable that Setia received a colony under the Triumvirates; and it is probable that it subsequently bore the title of a Colonia, though it is not mentioned as such by Pliny. (Pllin. iii. 5. a. 9; Lib. Colon. p. 237; Orell. Inscrip. 2246; Zumpt, de Colon. p. 338.)

The position of Setia on a lofty hill, looking down upon the Pontine Marshes and the Appian Way, is alluded to by several writers (Strab. v. p. 237; Martial, x. 74. 11, xiii. 112), among others in a fragment of Lucullus (ap. A. Gall. xvi. 9), in whose time it is probable that the highroad of the extreme hilliness of which he complains, passed by Setia itself. It was, however, about 5 miles distant from the Appian Way, on the left hand. There can be no doubt that the modern village occupies the same site with the ancient one, as extensive remains of its walls are still visible. They are constructed of large polygonal or rudely squared blocks of limestone, in the same style as those of Norba and Corea. The substructions of several edifices (probably temples) of a similar style of construction, also remain, as well as a considerable ruin of an amphitheatrum. (Wace, M. Röm. Kam. p. 53; Dodwell's Peloponnesian Remains, pp. 115-120.)

SETIA (Zetia, Ptol. ii. 4. § 9). 1. A town of the Turduli in Hispania Baetica, between the Baetis and Mount Illipae. 2. A town of the Vescanes in Hispania Tarraconensis. (Ptol. ii. 6. § 673.)

SETIDIA (Zetisia, Ptol. ii. 4. § 12), a town of the Turdetani in the W. of Hispania Baetica. [T. H. D.]

SETIDAVA (Zeridava), a town in the northeast of ancient Germany, on the north of the sources of the Vistula, so that it belonged either to the Omant or to the Burgundiones. (Ptol. ii. 11. § 26.) Its exact site is not known, though it is commonly assumed to have occupied the place of the modern by锌o in the south of Osmen. (Wilhelm, Germanyen, p. 253.)

SETISACUM (Zerisacum, Ptol. ii. 6. § 52), a town of the Murbog in the N. of Hispania Tarraconensis. [T. H. D.]

SETIUS MONS or FROM. [Blascum; Feucti Jugo.]

SETOTRIALLACTA (Zerotriallacta, Ptol. ii. 6. § 56), a town of the Areovici in Hispania Tarraconensis. [T. H. D.]

SETOVIA (Zerovia, Appian, Illyr. 27), a town of Dalmatia, situated in a well-wooded valley, which was besieged by Octavius in the campaign of B. C. 34. It has been identified with Sigum, situated in the rich valley of the Celtermin, and bounded on the right and left by mountains. [E. B. J.]

SETUCATOM (Zetucatov, or Zetucato), a town in the south of Germany between the upper part of the Danube and the Silva Gabreta, perhaps belonging to the territory of the Narici (Ptol. ii. 11 § 80); but its site is quite unknown. [L. S.]
SETULIA (Σετούλα), a town of the Quadri, in the south-east of Germany, apparently near the sources of the river Acha, a tributary of the Danube, in the Carpathian mountains. (Ptol. ii. 11. § 29.) Its identification is only matter of conjecture. [L.S.]

SEVACES (Σεβάκι), a tribe in the western part of Noricum, is mentioned only by Ptolemy (ii. 14. § 2). [L.S.]

SEVERUS MURUS. [Vallum.]

SEVERUS MONS, a mountain of Central Italy mentioned only by Virgil (Aen. vii. 718), who places it in the snows that associate it with the Mons Tetricha. It therefore evidently belonged to the lofty central ranges of the Apennines, in that part of Italy, but cannot be identified with more accuracy. [Apenninus.] [E.H.B.]

SEUMARA or SEUSAMORA (Σευμάρα and Σευσαμόρα), Strab. xl. p. 501), a town in the Caucasian Iberia. [T.H.D.]

SEVO, a lofty mountain in the extreme north of ancient Germany, in the island of Scandia, in the territory of the Ingaveones. It was believed to equal in extent and magnitude the Ripa Montes. (Plin. iv. 27; Solin. 20.) There can be no doubt that this mountain is the same as Mount Kifdon which ancient writers, especially Strabo, mention on the north of the road between Lydia and Bethoron, and give the name as Mount Cypreus, in honour of the Apostle, and in commemoration of the miracle wrought by him. S. Jerome in his commentaries limits the name to the district about Joppa, Lydda, and Iamnia (ad Jes. xxiii. 1tr.) Eusebius calls the district Sarona (Zaporos), and extends it from Joppa to Caesarea of (Palestine); others, on the contrary, confine it to the coast north of Caesarea, as far as Carmel. (Omn. sec. voc.) The width of the plain about Jaffa is little less than 16 miles, and the luxuriance of its soil is still attested by the numerous wild flowers with which it is carpeted in the spring—roses, illies, tulips, narcissus, anemones, carnations, and a thousand others, no less than by the abundant vegetation and increase where the land is cultivated as garden or corn land. (Ritter, Palestina, loc. vol. iii. part i. pp. 25, 586–588.) Reland has shown that the classical name for this fruitful district was Σαρων, which Strabo joins with Carmel, as then in the power of the pirates that had Joppa for their port (xvi. 2. § 28, p. 759). Reland suggests that Eusebius auct. is mistaken in this synonym, which also appears also in Josephus (who does not use the Scripture name) in connection with Carmel, is a manner that clearly points to the district described by Strabo under the same name. In one passage the name is used in the plural (Αρων και τα καινα τα ου ὄνειρα, Acts xiv. 13. § 3); in the parallel passage it is singular (το το Αρων καινα ζωή). (B. H. iv. 5. § 9.) The very probable interpretation of Reland therefore is this, that the word is simply a translation of Saron or Sarona, for according to the Etymologicum Magnum Ζαρωνίτης αλ Καλενίς ὄψεις (ad voc. Ζαρωνίτης). [G.W.]

SHALISHA (LXX. Άγ. Ζαλίσσα, Vat. Ζαλίσι, Ζαλίσα), a district of Palestine, in or near Mount Ephraim (1 Sam. iv. 4), in which was probably situated Baal Shisha. (LXX. Ζαλίσα; [G.W.])

SHARON (Σαρώνη; Eth. Σαρώνη). 1. Part of the great western plain of Palestine, distinguished for its fertility, mentioned by the prophet Isaiah with "the glory of Lebanon, and the excellency of Carmel and Sharon." (Isaiah, xxxv. 2.) "The rose of Sharon" is used proverbially in the Caxides (Isaiah, xxii. 5), to remind us that the name did not occur in either of these passages in the LXX., but in the latter is translated by ἄρχων τοῦ χαινίου, by which appellative Symmachus translates it in the former passage, while Theodotion and Aquila retain the proper name. Its richness as a pastoral land is intimated in 1 Chronicles (xxvii. 29), where we read that "Shihel the Sharonite" was overseer of David's "herds that fed in Sharon." It doubtless derived its name from a village mentioned only in the New Testament (Acts, ix. 35) in connection with Lydda, in a manner that intimates its vicinity to that town. Its site has not been recovered in modern times, but it occurred to the reader, on the spot, that it may possibly be represented by the village of Shunem, a few miles from the coast of Caesarea, as far as Carmel. (Omn. sec. voc.) The width of the plain about Jaffa is little less than 16 miles, and the luxuriance of its soil is still attested by the numerous wild flowers with which it is carpeted in the spring—roses, illies, tulips, narcissus, anemones, carnations, and a thousand others, no less than by the abundant vegetation and increase where the land is cultivated as garden or corn land. (Ritter, Palestina, loc. vol. iii. part i. pp. 25, 586–588.) Reland has shown that the classical name for this fruitful district was Σαρων, which Strabo joins with Carmel, as then in the power of the pirates that had Joppa for their port (xvi. 2. § 28, p. 759). Reland suggests that Eusebius auct. is mistaken in this synonym, which also appears also in Josephus (who does not use the Scripture name) in connection with Carmel, is a manner that clearly points to the district described by Strabo under the same name. In one passage the name is used in the plural (Αρων και τα καινα τα ου ὄνειρα, Acts xiv. 13. § 3); in the parallel passage it is singular (το το Αρων καινα ζωή). (B. H. iv. 5. § 9.) The very probable interpretation of Reland therefore is this, that the word is simply a translation of Saron or Sarona, for according to the Etymologicum Magnum Ζαρωνίτης αλ Καλενίς ὄψεις (ad voc. Ζαρωνίτης). [G.W.]

SEX. [Saxetanum.]

SEXANTAPRISTA (Σεξανταπριστά), Procop. de Aed. iv. 11. § 307), a town of Moesia Inferior, on the Danube, on the great high-road between Tri- mana and Tarsus. (Procop. Aed. ii. p. 198.) It is according to the Notit. Imp. (where it is called Sexagintaaprista), the 5th cohort of the Ist Legio Ital., together with a squadron of cavalry, lay in garrison here. Some identify it with Rustachak, whilst others place it further to the E., near Lipnik. [T.H.D.]

SEXTANTIO, in Gallia Narbonensis. The true name of this place is preserved in an inscription found at Nemausus (Nîmes), and published by Ménard. The name is written Sextatio in the Antonine Itin.; and Sostantio in the Jerusalem Itin. The remains of Sextantio are supposed to be those which are about 3 miles north of Montpellier, on the banks of the Leus (Louch). [G.L.]

SHAALABBIN (Σαλαλάβιν, LXX.), a city of the district of Ramleh, of the line of the town of Salab (Σαλάβη), and mentioned in the LXX. (not in the Hebrew) as one of the cities in which the Amorites continued to dwell, after the occupation of Canaan by the Israelites (sax. 48). This last fact identifies it with the Shaalbin (LXX. Σαλαλήν) of the book of Judges (i. 53), which is also joined with Ajalon, and of which the same fact is related. It is there placed in Mount Heres (see above). Eusebius mentions a village named Salaba (Σαλάβη), in the borders of the district of Salabe (Oremotass. a. e.), which could not be in Dan; but S. Jerome (Comment. in Ezech. xlviii.) mentions three towns in the tribe of Dan, Aikau, Selebi and Emaeus. It is joined with Makas and Beth-amemesh in 1 Kings iv. 9, which also indicates a site of Dan (Josh. xix. 42). Eusebius mentions a village named Selbhi, containing all the radicals of the Scripture name, and probably identical with Selebi of Josephus, as the modern Yafu is with Ajalon and 'Amarda with Emmasus. Its place is not definitely fixed. (Robinson, Bibl. Res. vol. iii. 2nd appendix, p. 120.)
country between Tabor and the sea of Tiberias (Onomast. *v.*). But as the name is here introduced in connection with Lebanon and Carmel,—Bashan being also introduced,—and as no other notice of a Galilean Sharon is to be met with, it seems more reasonable to refer the notice in Isaiah to the plain of Sharon on the west coast.

3. There was certainly another Sharon beyond Jordan, apparently near the region of Gilead, for the children of Abitali, of the tribe of Gad, are said to have "dwelt in Gilead in Bashan, and in the towns, and in the villages, on the ground of Bashan." (1 Chron. vii. 8). It is possible that "the herds that fed in Sharon," under charge of David's chief herdsmen, Shitrai the Sharonite, may have pastured in this trans-Jordanic district, not in the plain of the Mediterrenean. Reland indeed maintains that the mention of the suburbs of Sharon in connection with the Gadites, is no proof of the existence of a trans-Jordanic Sharon, for that, as the tribe of Gad was specially addicted to pastoral pursuits, they may have pastured their flocks in the suburbs of the towns of other and distant tribes. But this hypothesis seems much more forced than the very natural theory of a second Sharon in the tribe of Gad properly so called. (Palaeoletica, pp. 370, 371, 968.) [G. W.]

SHAHEEH (translated by the LXX. ἱέραμα) (translated by the LXX. ἱέραμα) (translated by the LXX. ἱέραμα), the original seat of that very ancient people the Emims, with whom were associated by Chedabonac, king of Elam. (Gen. vii. 6.) It is no doubt passed with the other possessions of the Emims to the Moabites (Deut. ii. 9—11), and is probably identical with the Kirithaim (LXX. Κηρίθαιμ) of Jeremiah (xxvii. 23) and Essekil (xxv. 9). [G. W.]

SIBAIÉ. [SIBAIÉ.]

SIBEEL. [SIBEEL.]

SIBLEM. [SIBLEM.]

SIBLOH. [SIBLOH.]

SITTITIM (LXX. ἱερατεύων εἰς ἱερατεύων), the last station of the Israelites before crossing the Jordan, described to be by Jordan in the plains of Moab. Abel-shittim was at one extremity of their vast encampment, as Beth-jeesoth was at the other. (Num. xxv. 1, xxvii. 40.) It was from thence that Joshua sent the spies to reconnoitre Jericho (Josh. ii. 1), and from thence that they marched to their miraculous passage of the Jordan (iii. 1). In Micah vi. 5 it is mentioned in connection with Gilgal, being the last encampment on the east of Jordan, as Gilgal was the first on the west. Here the LXX. render ἱερατεύων εἰς ἱερατεύων the word ἱερατεύων. [G. W.]

SHUHEEN (LXX. Σούφιν; Eth. Σοφαρνα, Σοφαρνα, Σοφαρνα), a village of Palestine celebrated as the birthplace of Abigail (1 Kings, i, 3), and for the miracle of Elaiah. (2 Kings, iv. 1.) It was situated in Issachar (Josh. xix. 18; LXX. ἱερατεύων), near Gilboa, to the north; for when Saul and the Israelites were encamped in Gilboa, the Philistines pitched in Shunem, so that he had to pass through their lines to come to Endor. (1 Sam. xxviii. 4.)

Ensehis mentions a village named Sanim, in the borders of Sebae, in the district of Acrabates, which cannot be identical with this. But the Subem (Ξαφαρνας) of the same author, which he places v. M. P. south of Mount Tabor, corresponds very well with the site of the modern village of Suleim, which still marks the site of ancient Shunem. It is a miserable village, situated above the plain of Edresael, on the road between Jericho and Sichem, in the 3½ hour north of Suleim, ancient Jerseel, on the steep slope of the western spur of Little Hermon (Ed-Dely). [G. W.]

SHUR (Σοῦρ, LXXX.), a place repeatedly mentioned to describe the western extremity of the borders of the possession of Ishmael (Gen. xvi. 18), of the Amalakites only (1 Sam. xv. 7.), of the Goethrites, Gezrites, and Amalekites (Ex. xvii. 8), in all which passages it is placed "over against," "before," and on the way to Egypt. Hagar's well, afterwards called Beer-lahai-roi, is mentioned as Kadesh and Bered, was "in the way to Shur." (Gen. vii. 7, 14.) The name is still found in the south of Palestine. [Mazikheh (Beer-lahai-roi) lies on the great road from Beersheba to Hebron, overlooking the river at Hebron, is its present name,—a grand chain of mountains running north and south, a little east of the longitude of Sies, lying, as Shur did, before Egypt. (Gen. vii. 7.) It lies at the south-west extremity of the plain of Paran, as Kadesh does at its utmost north-east extremity. (Bowland, in William's Holy City, vol. i. appendix No. 1. pp. 465, 466.) [G. W.]

SHUSHAN. [SHUSHAN.]

SIAGUL (Σιάγος, Ptol. iv. § 9), the most easterly town of Zeugitana, only 3 miles from the coast, and to which Putput served as a harbour. Shaw (Travels, ch. 2) identifies it with some ruins at the village of Kasaei-Asses, from two inscriptions which he found in (xv. viii. 9), in all the words Cib Siagitan; but which he must have read incorrectly, since the town would have been called Siagutilans. According to Maffei (Mus. Veron. p. 457. 2) there is also an inscription with the words Civ. Siagitan near Tarrus in Africa; which Orelli (i. p. 334) refers either to Signa in Numidia or to Signa in Mauritania Caesariensis. [T. H. D.]

SIANTICUM. [SIANTICUM.]

SIATA, an island on the Gallic coast, which is mentioned in the Maritime Itin., after Vindisile, or Belle Isle. D'Anville conjectures Siata to be the Isle de Houat, which is off the coast of the department of Morbihan, and between Belle Isle and the mainland. [G. I.]

SIATUTANDA (Σιατούτανδα), is mentioned by Ptolemy (ii. 11. § 27) as a town of Germany; but had probably no existence at all, the geographer imagining that in the words of Tacitus (Anna. iv. 73), "ad sue tutas dergeselia reblquis" the name of some town was contained. Notwithstanding this evident origin of the name, some modern geographers still persist in assuming a town Statutanda. [L.S.]

SI'BAE (Σιβα, Arrian, Ind. c. 5; Diod. xvii. 96; Strab. xv. p. 688), a nation of the Pamphil. below
the junction of the Hydaspes and Axioses, encountered by Alexander in his attempt to invade India. They are described as a rude, warlike people, armed only with clubs for defensive weapons. The Greeks noticed this use of the club, and that the people were in the habit of brandishing the representation of a club on the backs of their cattle, and that they were clothed in the skins of wild animals. From these facts they inferred that they must be descendants of Herodians. There can be doubt that they are the same race as are called Sobii in Curtius (vi. 8. 27), the same, or a tribe related to them, and sometimes called Signagi or Signapch, still exists in that country, who use the club, and wear the skins of goats for clothing. (Ritter, vii. p. 279, v. p. 467; Bohlen, Alt-Indiens, i. p. 208.) It is possible that they have derived their name from the god Siva. [V.]

SIBARIA, a town of the Vettones in Hispamia Tarraconensis, N. of Salmantica, and on the road from Emerita to Caesaripugna. (It. Ant. p. 434.) Variously identified with Santia, Funea de Sabinis, Potasmenda, and Zamocna. [T. H. D.]

SIBDA (Σίβδα), Sibda, Sitwargi, a place in Caria, and one of the six towns which were given by Alexander the Great to Ada, a daughter of king Hecatomnus of Halicarnassus, and thus became a part of the new kingdom. (Steph. Byz. s. a.; Plin. vi. 29.) Its exact site cannot be ascertained. [L. S.]

SIBERENA (Σιβηρενά), Sibereina, a town of Bruttium situated in the mountains about 15 miles NW. of Cratum. The name is mentioned only by Stephanus of Byzantium (s. v.), who calls it an Oceanetic city, but it is probable that it is the same place which is now called Sivina Severina, an appellation which is not found in Pausanias' work. (Paus. iii. 19. 5; Steph. Byz. s. v.)

SIBERIS (Σίβερις), a river of Galatia, a tributary of the Sangarius; it flowed in a southwest direction, and joined the main river near the little town of Syrene, not far from Juliopolis. (Procop. de Aed. v. 4.) Procopius also mentions that this river frequently overflowed its banks, a fact which is perhaps alluded to in the name of a station called Hyron Potamon, about 13 miles east of Juliopolis (It. Hieros. p. 574); though it is possible also that the name may be misspelt for Hieron Potamon, which is only another name for the Hiera of Pliny (v. 43), and unquestionably identical with the Siberis which now bears the name of Kirim. [L. S.]

SIBIUZATES, an Aquitanian people, who submitted to P. Crassus, Caesar's legatus in b. c. 56. (B. G. iii. 27.) There are many varieties in the manuscript readings of this name. It is merely by conjuncture founded on resemblance of names, that they have been placed among the two tribes, Subes and Sobii, on the Aedon, between Aegae Trabaliae (Dean) and Bagoynes. [G. L.]

SIBYLLADES, one of the Aquitanian tribes mentioned by Pliny (iv. 19). D'Anville conjectures that the name is preserved in that of the Vallis Subola, mentioned by Fredegarius. He argues that they may be the same people as the Sibonii (see above). Those who submitted to P. Crassus, because Caesar speaks of a few of the remotest Aquitanian tribes which did not submit to the Roman general, trusting to the approaching winter season (B. G. iii. 27); from which remark we may infer that these remotest tribes were in the valleys of the Pyrenees. "The people of the valley of Soule might derive this advantage from their situation, which is shut in between Low Navarre and the high part of Navarre." (D'Anville.) [G. L.]

SICAMBRI, SICAMBRI, SYGAMBRI, SYGAMBRI, or SYCAMBRI (Σικαμάβροι, Σιγαμάβροι, or Σιγαμάβροι), a powerful German tribe, occupying in the time of Caesar the eastern bank of the Rhine, and extending from the Sieg to the Lippe. It is generally assumed that this tribe derived its name from the little river Sieg, which falls into the Rhine. The Sieg is also called Segga, Segaha, but is not mentioned by any ancient writer; this assumption, however, is at least only a probable conjecture, though it must be admitted that in the time of Caesar they inhabited the country north and south of the Sieg, and to the north of the Ubi. (Caes. B. G. iv. 16, foll., vi. 35; Sueton. vi. 29, 30; Dion Cass. xxxix. 46, xl. 28, lv. 30, 32, 33, 36.) When the Usipetes and Teneti were defeated by Caesar, the remnants of these tribes took refuge in the country of the Sicambri, who took them under their protection. Caesar then demanded their surrender; and this being refused, he built his famous bridge across the Rhine to strike terror into the Germans. The Sicambri, however, did not fail to show their sympathy with the German allies. The Usipetes and Teneteri, quits their own country and withdrew into forests and uninhabited districts, which neither Caesar neither might nor could follow them. A few years later, b. c. 51, during the war against the Eburones, we find Sicambri fighting against the army of Caesar on the left bank of the Rhine, and near the Rhine. The Romans, Caesar's arrival, who was to break the power of the Usipetes and Teneteri, defeated their own country, and withdrew across the Rhine. In b. c. 16 the Sicambri, with the Usipetes and Teneteri, again invaded Gallia Belgica, and M. Lollius, who had provoked the barbarians, sustained a serious defeat. A similar attack which was made a few years later, was repelled by Drusus, who pursued the Germans into their own country. After the withdrawal of the Romans, the Sicambri formed a confederacy among their countrymen against the common enemy, and as the Catti who had received the country of the Ubi and the Rhine, refused to join them, the Sicambri made war upon them; and as they left the town occupied by the Romans, Drusus penetrated through it into the interior of Germany. After the death of Drusus, Tiberius undertook the completion of his plans against Germany. None of the tribes offered a more vigorous resistance than the Sicambri; but in the end they were obliged to submit, and 40,000 Sicambri and Suevi were transplanted into Gaul, where as subjects of Rome they received settlement between the lower course of the Meuse and the Rhine. In that country they subsequently formed an important part of the nation or confederacy of the Franks. Those Sigambri who were not transplanted into Gaul seem to have withdrawn into the hills of Main Batico, and for a long time they are not mentioned in history; they reappear in the time of Tulenus (ii. 11. § 8), when they are spoken of as neighbors of the Bructeri Milesians. The Sicambri are described as bold, brave, and cruel, and we hear nothing of towns in their country; they seem in fact to have lived in villages and isolated farms. (Caes. B. G. iv. 19; comp. Tac. Anna. ii. 26, iv. 47, xii. 39; Suet. Aug. 21, Tit. 9; Eutrop. vii. 9; Oros. vi. 21; Horat. Carma. iv. 2. 36. 14.
51; Or. Amor. i. 14. 49; Venant. Fort. de Charib. 
Roga, vi. 4; Gregor. Turon. ii. 31; Propoc. Bell. Goth. 
i. 12; Lydus, de Magist. i. 50, iii. 36; Zenos, Die 
Deutschen, p. 89, foll.; Wilhelm, Germanien, p. 149, 
foll.; [L. E.]

SICANI. [SICILY.]

SICCA VENERIA (Zizina or Iæa Oedipus), Ptol. iv. 3. § 30, viii. 2. § 9], a considerable town of 
Numidia on the river Sagradas, and on the road from 
Carthage to Hippo Regius, and from Musti to Cirta. 
(Iblis. Ant. p. 41, 45.) It was built on a hill, and, 
according to Pliny (v. 3. s. 9), was a Roman colon.

We learn from Valernus Maximus (ii. 6. § 15) that it 
derived its surname from a temple of Venus which 
existed there, in which, agreeably to a Phoenician 
custom, the maidens of the town, including even 
those of good family, publicly prostituted themselves, 
in order to collect a marriage portion; a circumstance 
which shows that the town was originally a Phoeni-
cean settlement, devoted to the worship of Sicani 
(Comp. Sall. Jug. 56; Polyb. i. 66, 67.) Shaw 
(Travels, p. 87) takes it to be the modern Keff, 
where a statue of Venus has been found, and an 
inscription, with the words Ordo Sicescannot. 
(Comp. Donati, Suppl. Theor. Murat. ii. 266. 6; Orelli, 
Inscr. no. 3735.)

SICHEL. [ZIEGLA.]

SICHEM. [NEAR PLAUS.]

SICILIA (Zizina; Eth. Ziza, Zizitza, Siciliana; Sicily), one of the largest and most important 
lands in the Mediterranean. It was indeed gene-
really reckoned the largest of all; though some ancient 
writers considered Sardinia as exceeding it in size, 
view which, according to the researches of modern 
geographers, turns out to be correct. [SARDINIA.] I. GENERAL DESCRIPTION.

The general form of Sicily is that of a triangle, 
having its shortest side or base turned to the E., 
and separated at its NE. angle from the adjoining 
coast of Italy only by a narrow strait, called in 
ancient times the Ethia, the mouth of the Strait of 
Sicily, but now more commonly known as the Straits of Messina. It was generally believed in antiquity that 
Sicily had once been joined to the continent of 
Italy, and severed from it by some natural conval-
(Stраб. vi. p. 258; Plin. iii. 8. s. 14; Virg. 
Aen. iii. 414.) But though this is probably true 
in a geological sense, it is certain that the separation 
must have taken place at a very early period, not 
only long before the historical age, but before the 
first dawn of tradition. On the other side, the W. ex-
trmity of Sicily stretches out far towards the coast 
of Africa, so that the westernmost point of the island, 
the headland of Lilybaeum, is separated only by an 
interval of 80 geogr. miles from the Heraean Promontory, or Cape Dorea.

The general triangular form of Sicily was early 
recognised, and is described by all the ancient geo-
ographers. The three promontories that may be 
considered as forming the angles of the triangle, viz. 
Cape Pelor to the NE., Cape Pachynus to the SS., 
and Lilybaeum on the W., were also generally known 
and described by Strab. vi. pp. 266, 269; Plin. iii. 
8. s. 14; Plit. iii. 4; Mal. ii. 714.). Its 
dimensions are variously given: Strabo, on the 
authority of Posidonius, estimates the side from Pelo-
rus to Lilybaeum, which he reckons the longest, at 
1700 stadia (or 170 geogr. miles), and that from 
Pachynus to Pelorus, the shortest of the three, at 
1530 stadia. Pliny on the contrary reckons 186 

Roman miles (149 geogr.) from Pelorus to Pachy-

SICILIA. 975 

nus, 200 M.P. (160 geogr. miles) from Pachynus 
to Lilybaeum, and 170 M.P. (136 geogr.) from 
Lilybaeum to Pelorus; thus making the northern 
side the shortest instead of the longest. But Strabo's 
views of the proportion of the three sides are 
entirely correct; and his distances but little exceed 
the truth, if some allowance be made for the wind-
ings of the coast. Later geographers, from the 
time of Ptolemy onwards, erroneously conceived 
the position of Sicily as tending a great deal more to 
the SW. than it really does, at the same time that 
they gave it a much more elongated form; but this 
error was perpetuated by modern geographers 
until the time of D'Anville, and was indeed not 
altogether removed till the publication of the valu-
able coast survey of the island by Captain Smyth. 
(See the map published by Magni in 1630, and 
that of D'Anville in his Analyse Geographique de l'Italie, Paris 1744.)

A considerable part of Sicily is of a mountainous character. A range of mountains, which are geo-

logically of the same character as those in the southern 
portion of Bruttium (the group of Apromonte), 
and may be considered almost as a continuation of 
the same chain, interrupted only by the intervening 
strait, rises near Cape Pelorus, and extends at first 
in a SW. direction to the headland of Taurum-

min (Taurumien) from whence it turns nearly 
due W. and continues to hold this course, running 
parallel with the N. coast of the island till it rises 
into the elevated group of the Monte Madonina, 
a little to the S. of Cyfalis (Cephaloetium.) From 
these it breaks up into more irregular masses of 
limestone mountains, which form the central 
part of the W. portion of the island, while their 
arms extending down to the sea encircle the Bay of 
Pelorum, as well as the more extensive Gulf of 
Castellamare, with bold and almost isolated 
headlands. The detached mass of MOUNT ERYX (Monte 
di S. Giuliano) rises near Tropea almost at the W. 
extremity of the island, but with this exception the 
W. and SW. coast is formed of limestone, and 
beyond the site of Selinus, is comparatively low and 
shelving, and presents no bold features. Another 
range or mass of mountains branches off from that 
of the Monte Madonina near Polizei, and trends in 
a SE. direction through the heart of the island, 
forming the huge hills, rather than mountains, on 
one of which Enna was built, and which extend 
from thence to the neighborhood of Piazza and 
Aidone. The whole of the SE. corner of the island 
is occupied by a mass of limestone hills, never rising 
to the dignity nor assuming the forms of moun-
tains, but forming a kind of table-land, with a 
general but very gradual slope towards the S. and 
SE. broken up, however, when viewed in detail, 
into very irregular masses, being traversed by deep 
valleys and ravines, and presenting steep escarpments 
of limestone rock, so as to constitute a rugged and 
difficult country.

None of the mountains above described attain to 
any great elevation. The loftiest group, that of 
the Monte Madonina, does not exceed the aver-
age height of the range which extends from 
thence to Cape Pelorus, is little, if at all, above 
3000 feet high. Monte S. Giuliano, the ancient 
Eryx, erroneously considered in ancient times as 
the highest mountain in Sicily after Aetna [ERYX], is 
in reality only 2184 feet in height (Smyth's Sicily, 
p. 242). The ancient appellations given to these
mountains seem to have been somewhat vague and fluctuating; but we may assign the name of NER
TUNUROS Mons to the chain which rises at Cape Poletus, and extends from thence to the neighbour-
hood of Taurochomens; while that of Mons NER
TUNUS seems to have been applied in a more general
sense to the whole northern range extending from
near Taurochomens to the neighbourhood of Panor-
mus; and the HERAKI MONTES of Dionysius can be
no others than a part of the same range. (See the
respective articles.) But incomparably the most
impressive and most striking physical feature of the whole island, is the
great volcanic mountain of AETNA, which rises on
the E. coast of the island, and attains an elevation
of 10,874 feet, while its base is not less than 90
miles in circumference. It is wholly detached from
the mountains and hills which surround it, being
bounded on the N. by the river Acetines or Alocs-
feros, and the valley through which it flows, and on
the W. and S. by the Symmastus, while on the E.
its streams of lava descend completely into the sea,
and constitute the line of coast for a distance of
near 30 miles. The rivers already mentioned con-
stitute (with trifling exceptions) the limits of the
volcanic district of Aetna, but volcanic formations
of much broader extent, including beds of lava, scoriae, &c., are
scattered over a considerable extent of the SE.
portion of the island, extending from the neighbourhood
of Palaegonia to that of Palazzolo, and even to
Syracuse. These indeed belong to a much more
ancient epoch of volcanic action, and can never
have been in operation since the existence of man
upon the island. The extensive action of volcanic
fire in these islands, however, as is evidenced by the
ancients, and is noticed by several writers. The
apparent connection between Aetna and the volcanoes
of the Aeolian Islands is mentioned by Strabo, and
the same author justly appeals to the crater of the
Palaeus, and to the numerous thermal springs through-
out the island, as proofs that the subterranean
agents, at one time settled in the Etnian peninsula,
and from thence passed over into Sicily, may
be safely received as historical. There is every prob-
ability also that they were not a people distinct in
their origin from the races whom we subsequently
find in that part of Italy, but were closely connected
with the Etruscans and their kindred tribes. In-
deed, the names of Nessus and Travas are con-
dered by many philologists of common origin.
There seems, therefore, little doubt that the Sicels,
or Siculi, may be regarded as one of the branches of
the great Pelasgic race, which we find in the earliest
times occupying the southern portion of Italy; and
this kindred origin will account for the facility with
which we find the Sicels subsequently adopting the
language and civilization of the Greek colonists in
the island, at the same time that there remain
abundant traces of their common descent with the
people of Italy.

But the Sicels, who occupied in the historical
period the greater part of the interior of the island,
were not, according to the Greek writers, its earliest
inhabitants. Thucydides indeed assigns that title
to the Phoenicians and Etruscans, who had
previously to that period been settled in the
southern part of Italy (Thuc. v. 2); and Dionysius,
without assigning any date, agrees in representing
them as the latest comers among the
native population of the island (Diod. v. 6). The
first notices of Sicely alude to the existence of race
of gigantic men, of savage manners, under the
names of Leontyges and Cyclopes; but these fabulous tales, preserved only by the early poets in a manner that renders it impossible to separate truth from falsehood, are justly discarded by Thucydides as unworthy of serious consideration (Thuc. vi. 2). It may suffice to remark, that Homer (of course, the earliest authority on the subject) says nothing directly to prove that he conceived either the Cyclopes or Leontyges as dwelling in Sicily; and this is in both cases a mere inference of later writers, or of some tradition now unknown to us. Homer indeed, in one passage, mentions (but not in connection with either of these savage races), "the island of Thrinakia" (Odys. xii. 127), and this was generally identified with Sicily, though there is certainly nothing in the Odyssey that would naturally lead to such a conclusion. But it was a tradition generally received that Sicily had previously been called Tar- nachria, from its triangular form and the three promontories that formed its extremities (Thuc. vi. 2; Diod. v. 2; Strab. vi. p. 255), and this name was connected with the Homeric Thrinakia. It is obvious that such a name could only have been given by Greek navigators, and argues a considerable extension of their knowledge of its shores. It could not, therefore, have been (as supposed even by Thucydides) the original or native name of the island, nor could it have been in use even among the Greeks at a very early period. But we cannot disregard the general testimony of ancient writers, that this was the earliest appellation by which Sicily was known to the Greeks.

Another people whom Thucydides, apparently with good reason, regards as more ancient than the Sicels, were the Sicani, whom we find in historical times occupying the western and north-western parts of the island, whither, according to their own tradition, they had been driven by the invading Sicels, when these crossed the strait, though another tradition ascribed their removal to the terror and devastation caused by the eruptions of Etna (Thuc. vi. 2; Diod. v. 6). The Sicani claimed the honour of being autochthonous, or the original inhabitants of the island, and this view was followed by Timaeus; but Thucydides, as well as Philistus, adopted another tradition, according to which they were of Iberian extraction (Thuc. i. c.; Diod. i. c.). What the actual truth is, as regards the question of their exact ethnical origin, we are unfortunately wholly ignorant; but the view is in itself probable enough, and notwithstanding the close resemblance of name, it is certain that throughout the historical period the Sicani and Siculi are uniformly treated as distinct races. Hence it is improbable that they were merely tribes of a kindred origin, as we should otherwise have been led to infer from the fact that the two names are evidently only two forms of the same appellation.

A third race which is found in Sicily within the historical period, and which is regarded by ancient writers as distinct from the two preceding ones, is that of Elymni, who inhabited the extreme north-western corner of the island, about Eryx and Segesta. Tradition ascribed to them a Trojan origin (Thuc. vi. 2; Dionys. l. 62), and though this story is probably worth no more than the numerous similar tales of Trojan settlements on the coast of Italy, there must probably have been some foundation for regarding them as a distinct people from their neighbours, the Sicani. Both Thucydides and Sclax specially mention them as such (Thuc. i. c.; Sclav. p. 4, § 13); but at a later period, they seem to have gradually disappeared or been merged into the surrounding tribes, and their name is not again found in history.

Such were the indigenous races by which Sicily was peopled when its coasts were first visited, and colonies established there, by the Phoenicians and the Greeks. Of the colonies of the former people we have little information, but we are told in general by Thucydides that they occupied numerous points around the coasts of the island, establishing themselves in preference, as was their wont, on projecting headlands or small islands adjoining the shore. (Thuc. vi. 2). But these settlements were apparently, for the most part, mere trading stations, and as the Greeks came to establish themselves permanently and in still increasing numbers in Sicily, the Phoenicians gradually withdrew to the NW. corner of the island, where they retained three permanent settlements, Motya, Panormus, and Soloeis or Soluntum. Here they were supported by the alliance of the neighbouring Elymni, and had also the advantage of the proximity of Carthage, upon which they all became eventually dependent. (Thuc. i. c.)

The settlement of the Greek colonies in Sicily began about the middle of the seventh century B.C., and was continued for above a century and a half. Their dates and origin are known to us with much more certainty than those which took place during the corresponding period in the south of Italy. The earliest were established on the E. coast of the island, where the Chalcidian colony of Naxos was founded in the 9th century B.C. (c. 755, and the 7th century B.C. (c. 750). These settlements, one by one, were followed by others, and in the 6th century B.C. (c. 734), by a body of Corinthian settlers under Archias. Thus the division between the Chalcidian and Doric colonies in Sicily, which bears so prominent a part in their political history, became marked from the very outset. The Chalcidians were the first to extend their settlements, having founded within a few years of the parent colony (about c. 720) the two cities of Leontini and Casaracca, both of them destined to bear an important part in the affairs of Sicily. About the same time, or shortly after (probably about c. 728), a fresh body of colonists from Megara founded the city of the same name, called, for distinction's sake, Megara Hyssu- lana, on the E. coast, between Syracuse and Catana. The first colony on the S. coast of the island was that of Gela, founded in c. 690, by a body of emigrants from Rhodes and Crete; it was, therefore, a Doric colony. On the other hand, the Chalcidians founded, at what precise period we know not, the colony of Zancle (afterwards called Messana), in a position of the utmost importance, as commanding the Sicilian Straits. The rapid rise and prosperity of these first settlements are shown by their having become in their turn the parents of other cities, which soon vied with them, and, in some cases, surpassed them in importance. Thus we find Syracuse extending its power by establishing in succession the colonies of Acrai in B.C. 654, Carthage in B.C. 644, and Camarina in B.C. 599. Of these, the last alone rose to be a flourishing city and the rival of the neighbouring Gela. The latter city in its turn founded the colony of Agrigentum, in B.C. 580, which, though one of the latest of the Greek colonies in the island, was destined to become one of the most powerful and flourishing of them all. Still further to the W., the colony of Selinus, planted as early as B.C. 693, by a body of settlers from the Hyblaean Megara, reinforced with emigrants from the parent city in Greece, rose to a state of power...
and prosperity far surpassing that of either of its mother cities. Selinus was the most westerly of the Greek colonies, and immediately bordered on the territory of the Elymii and the Phoenician or Carthaginian settlements. On the N. coast of the island, the only independent Greek colony was Himera, founded about B.C. 648 by the Zancines; Myale, another colony of the same people, having apparently continued, from its proximity, to be a mere dependency of Selinus. To the above number of Greek colonies must be added Calypolis and Enobos, both of them colonies of Naxos, but which never seem to have attained to consideration, and do not appear from history at an early period. *

Our accounts of the early history of these numerous Greek colonies in Sicily are unfortunately very scanty and fragmentary. We learn in general terms that they rose to considerable power and importance, and enjoyed a high degree of wealth and prosperity, owing as well to the fertility and natural advantages of the island, as to their foreign commerce. It is evident also that at an early period they extended their dominion over a considerable part of the adjoining countries, so that each city had its colonies, not only of considerable extent, and comprising a subject population of native origin. At the same time the Sicels of the interior, in the central and northern parts of the island, and the Sicani and Elymi in the W., maintained their independence, though they seem to have given but little trouble to their Greek neighbours. During the sixth century B.C. the two most powerful cities in the island appear to have been Agrigentum and Gela. Syracuse not having yet attained to that preponderance which it subsequently enjoyed. Agrigentum, though one of the latest of the Greek colonies in Sicily, seems to have risen rapidly to prosperity, and under the able, though tyrannical government of the despot Phalaris (B.C. 570—554) became apparently for a time the most powerful city in the island. But we know very little about his real history, and with the exception of a few scattered and isolated notices we have hardly any account of the affairs of the Greek cities before B.C. 500. At or before that period we find that a political change had taken place in most of these communities, and that their governments, which had often been tyrannical, had passed into the hands of despots or tyrants, who ruled with uncontrolled power. Such were Panatenes at Leontini, Cleander at Gela, Terillus at Himera, and Sycyles at Zancle (Arist. Pol. v. 12; Herod. vi. 23, vii. 154). Of these Cleander seems to have been the most able, and laid the foundation of a power which enabled his brother and successor Hippocrates to extend his dominion over a great part of the island. Callipolis, Leontini, Naxos, Zancle, and Camarina successively fell under the arms of Hippocrates, and Syracuse itself only escaped subjection by the intervention of the Corinthians (Herod. vii. 154). But what Hippocrates had failed to effect was accomplished by Gelon, who succeeded him as despot of Gela, and by interposing in the civil dissensions of the Syracusans ultimately succeeded in making himself master of that city also, B.C. 485. From this time Gelon neglected his former government of Gela, and directed all his efforts to the aggrandizement of his new acquisition. He destroyed Camarina, and removed all the inhabitants to Syracuse, together with a large part of those of Gela itself, and all the principal citizens of Megara Hyblaea and Enobos (Herod. vii. 156).

Syracuse was thus raised to the rank of the first city of Sicily, in which it retained for many centuries afterwards. A few years before (B.C. 488), there had established himself in the possession of the sovereign power at Agrigentum, and subsequently extended his dominion over Himera also, from whence he expelled Terillus, B.C. 481. About the same time also Anaxilas, despot of Rhegium, on the other side of the straits, had established a footing in Sicily, where he became master of Zancle, to which he gave the name of Messana, by which it was ever afterwards known [Messana]. All three rulers appear to have been men of ability and enlightened and liberal views, and the cities under their immediate government apparently made great progress in power and prosperity. Gelon especially, notwithstanding the almost unpardonable enormities of which he was accused, is not without some reason considered as one of the greatest benefactors of Sicily, and no other Greek state could boast, as was sufficiently shown by the embassy sent to him from Sparta and Athens to invoke his assistance against the threatened invasion of Xerxes (Herod. vii. 145, 157). But his attention was called off to a danger more immediately at hand. Terillus, the expelled despot of Himera, had called in the assistance of the Carthaginians, and contemporaneously with the battle of Himera a descent of a Carthaginian fleet was made under a general named Hamilcar, who laid siege to Himera, B.C. 480. Theron, however, was able to maintain possession of that city until the arrival of Gelon with an army of 50,000 foot and 5000 horse to his relief, with which, though vastly inferior to the Carthaginian forces, he attacked and totally defeated the army of Hamilcar. This great victory, which was a precursor of the battle of Salamis, raised Gelon to the highest pitch of reputation, and became not less celebrated among the Sicilian Greeks than those of Salamis and Platea among their continental brethren. The vast number of prisoners taken at Himera and distributed as slaves among the cities of Sicily added greatly to their wealth, and the colonization of these cities by many of them to erect great public works, which continued to adorn them down to a late period (Diod. xii. 25).

Gelon did not long survive his great victory at Himera: but he transmitted his power unimpaired to his brother Hieron. The latter, indeed, though greatly inferior to Gelon in character, was in some respects even superior to him in power: and the great naval victory by which he relieved the Carthaginians in Italy from the attacks of the Carthaginians and Tyrrhenians (B.C. 474) earned him a well-merited reputation throughout the Greek world. At the same time the rule of Hieron was extremely oppressive to the Chaebelic cities of Sicily, the power of which he broke by expelling all the citizens of Naxos and Catana, whom he compelled to remove to Leontini, while he repeopled Catana with a large body of new inhabitants, at the same time that he changed its name to Acraea. Theron had continued to reign at Agrigentum until his death in B.C. 472, but his son Thrasydæus, who succeeded him, quickly incurred the enmity of the citizens, who were enabled by the assistance of Hieron to expel him.
SICILIA.

and were thus restored to at least nominal freedom. A similar revolution occurred a few years later at Syracuse, where, on the death of Hieron (n. c. 467), the power passed into the hands of Thrasylus, whose violent and tyrannical proceedings quickly excited an insurrection among the Syracusans. This became the signal for a general revolt of all the cities of Sicily, which united their forces with those of the Syracusans, and succeeded in expelling Thrasylus from his strongholds of Ortygia and Acharnida (Diod. xi. 67, 68), and thus driving him from Sicily.

The fall of the Gelenian dynasty at Syracuse (n. c. 466) became for a time the occasion of violent internal dissensions in most of the Sicilian cities, which in many cases broke out into actual warfare. But after a few years these were terminated by a general congress and compromise, n. c. 461; the exiles were allowed to return to their respective cities: Camarina, which had been destroyed by Gelon, was repeopled and became once more a flourishing city; while Selinunte was restored to its original Chalcidice citizens, and resumed its ancient name (Diod. xi. 76). The tranquillity thus re-established was of unusual permanence and duration; and the half century that followed was a period of the greatest prosperity for all the Greek cities in the island, and was doubtless that when they attained (with the exception of Syracuse) their highest degree of opulence and power. This is distinctly stated by Diodorus (i. c.) and is remarkably confirmed by the still existing monuments,—all the greatest architectural works being referable to this period. Of the form of government established in the Sicilian cities at this time we have little information, but it seems certain that a democratic constitution was in almost all instances substituted for the original oligarchies.

But prosperous as this period (n. c. 461—409) undoubtedly was, it was by no means one of unbroken tranquillity. It was disturbed in the first instance by the ambitious schemes of Ducezias, a Sicilian chief, who endeavoured to organise all the Sicels of the interior into one confederacy, which should shake loose the hand of the Greek cities. He at the same time founded a new city, to which he gave the name of Palice, near the sacred fountain of the Palici. But these attempts of Ducezias, remarkable as the only instance in the whole history of the island in which we find the Sicels attempting to establish a political power of their own, were frustrated by his defeat and banishment by the Syracusans in n. c. 451; and though he once more returned to Sicily and endeavoured to establish himself on the N. coast of the island, his projects were interrupted by his death, n. c. 446. (Diod. xi. 88, 90—92, xii. 8, 29.) He found no successor; and the Sicels of the interior ceased to be formidable to the Greek cities. Many of their towns were actually reduced to subjection by the Syracusans, while others retained their independent position; but the operation of Hellenic influences was gradually diffusing itself throughout the whole island.

The next important event in the history of Sicily is the great Athenian expedition in n. c. 415. Already, at an earlier period, soon after the outbreak of the Peloponnesian War, the Athenians had inter- vented in the affairs of Sicily, and, in n. c. 437, had sent a squadron under Laches and Charcoeades to support the Ionic or Chalcidice cities in the island, which were threatened by their more powerful Doric neighbours. But the operations of these commanders, as well as of Eurydemus and Sophocles, who followed them in n. c. 425 with a large force, were of an unimportant character, and in n. c. 424 a general pacification of the Greek cities in Sicily was brought about by a congress held at Gela (Hdt. iv. 85, 65). But the peace thus concluded did not remain long unbroken. The Syracusans took advantage of the intestine dissensions at Leontini to expel the democratic party from that city; while the Selinuntines were engaged in war with their non-Hellenic neighbours the Segestans, whom they pressed so hard that the latter were forced to apply for assistance to Athens. The Leontine exiles were also used for aid in the same quarter, and the Athenians, who were at this time at the height of their power, sent out an expedition on the largest scale, nominally for the protection of their allies in Sicily, but in reality, as Thucydides observes, in hopes of making themselves masters of the whole island (Thuc. vi. 48). It is impossible here to relate in detail the proceedings of that celebrated expedition, which will be more fully noticed in the article SYRACUSAE, and are admirably related in Grote’s History of Greece, vol. viii. ch. 56—60. Its failure may be attributed in great measure to the delays and inactivity of Nicias, who lingered at Catana, instead of proceeding at once to besiege Syracuse itself, and thus gave the Syracusans time to strengthen and enlarge their fortifications, at the same time that they revivified the courage of their allies. The siege of Syracuse was not actually commenced till the spring of 414 n. c., and it was continued till the month of September. 413 n. c., with the most unremittting exertions on both sides. The Syracusans were supported by the chief Doric cities in the island, with the exception of Agrigentum, which stood aloof from the contest, as well as by a portion of the Sicel tribes: but the greater part of those barbarians, as well as the Chalcidice cities of Naxos and Catana and the Segestans, furnished assistance to the Athenians (Thuc. vii. 57, 58).

The total defeat of the Athenian armament (by far the most formidable that had been seen in Sicily since that of the Carthaginians under Hamilcar), seemed to give an irresistible predominance to the Doric cities in the island, and to Syracuse especially. But it was not long before they again found themselves threatened by a still more powerful invader. The Selinuntines immediately took advantage of the failure of the Athenians to renew their attacks upon their neighbours of Segesta, and the latter, feeling their inability to cope with them, now applied for protection to Carthage. It is remarkable that we hear nothing of Carthaginian intervention in the affairs of Sicily from the time of the battle of Himera until this occasion, and they seem to have abandoned all ambitious projects connected with the island, though they still maintained a footing there by means of their subject or dependent towns of Panormus, Motya, and Soluntum. But they now determined to avail themselves of the opportunity offered them, and sent an armament to Sicily, which seemed like that of the Athenians, calculated not so much for the relief of Segesta as for the conquest of the whole island. Hannibal, the grandson of Hamilcar, who had been slain at Himera, landed at Lilybaeum, in n. c. 409, with an army estimated at 100,000 men, and marching straight upon Selinus, laid siege to once to the city. Selinus was at this

SICILIA.

time, next to Agrigentum and Syracuse, probably the most flourishing city in Sicily, but it was wholly unprepared for defence, and was taken after a siege of only a few days, the inhabitants put to the sword or made prisoners, and the walls and public buildings razed to the ground (Diod. xili. 54—55).

From thence Hannibal turned his arms against Himera, which was able to protract its resistance somewhat longer, but eventually fell also into his power, when in order to avenge himself for his grandfather's defeat, and in order to save the people of Carthage from the sword, and so utterly destroy the city that it was never again inhabited (Id. xili. 59—63).

After these exploits Hannibal returned to Carthage with his fleet and army. But his successes had now awakened the ambition of the Carthaginian people, who determined upon a second invasion of Sicily, and in B.c. 406 sent thither an army still larger than the preceding, under the command of Hannibal. Agrigentum, at this time the very highest point of its power and opulence, was on this occasion the first object of the Carthaginian arms, and though the citizens had made every preparation for defence, and in fact were enabled to prolong their resistance for a period of eight months the last of which they surrendered by famine to surrender. The greater part of the inhabitants evacuated the city, which shared the fate of Selinus and Himera (Diod. xili. 81, 91).

Three of the principal Greek cities in Sicily had thus already fallen, and in the spring of B.c. 405, Himilco, who had succeeded Hannibal in the command, advanced to the attack of Gela. Meanwhile the other Greek cities, upon which the other cities had in a great degree relied for their protection, had been in great measure paralysed by internal dissensions; and Dionysius now availed himself of these to raise himself to the possession of despotic power. But his first operations were not more successful than those of the generals he replaced, and after an ineffectual attempt to relieve Gela, with the Carthaginians, of both that city and Camarina to their fate, the inhabitants of both emigrating to Leontini. Dionysius was able to fortify himself in the supreme power at Syracuse, and hastened to conclude peace with Himilco upon terms which left the Carthaginians undisputed masters of nearly half of Sicily. In addition to their former possessions, Selinus, Himera, and Agrigentum were to be subject to Carthage, while the inhabitants of Gela and Camarina were to be allowed to return to their native cities on condition of becoming tributary to Carthage (Diod. xili. 114.)

From this time Dionysius reigned with undisputed authority at Syracuse for a period of 38 years (B.c. 405—367), and was able at his death to transmit his power unimpaired to his son. But though he raised Syracuse to a state of great power and prosperity, and extended his dominion over a large part of Sicily, as well as of the adjoining part of Italy, his reign was marked by great and sudden changes of fortune. Though he had dexterously managed the Carthaginian invasion, and established his power at Syracuse, he had no sooner consolidated his own authority than he began to turn his thoughts to the expulsion of the Carthaginians from the island. His arms were, however, directed in the first instance against the Chalcide cities of Sicily, Naxos, Catana, and Leontini, all of which successively fell into his power, while he extended his dominion over a great part of the Sicilian communities of the interior. It was intended to effect these conquests, as well as to raise a preparation for war, by enlarging and improving the fortifications of the cities, including in a numerous fleet, that he proceeded to destroy Carthage, B.c. 397. His first successes were equally sudden: almost all the cities that had been added to the Carthaginian dominions were in his favour, and he carried his victories as far as the extreme W. point of Sicily, where Messana was taken by Dionysius, but advanced as far as the coast of the island to Messana, which he was assaulted and utterly destroyed. Dionysius was compelled to abate himself up within the Syracusan, where he was closely besieged, but a sudden pestilence that broke out in the Carthaginian camp reduced them in their tenacity which Himilco was glad to conclude a capitulation and retire to Africa (Diod. xiv. 76—79). Hostilities with Carthage were renewed two years later, when the peace concluded in the following year (B.c. 392) seems to have left matters in much the same state as before. In B.c. 383 war again broke out between Dionysius and the Carthaginians, who having two great battles, with alternate success on both sides, a fresh treaty was concluded by which the river Halycon was established as the boundary between them. The East was, however, though often infringed, continued to be the scene of several successive treaties, and may be considered as forming from henceforth the permanent frontier between the Carthaginians and the power in Sicily (Diod. xv. 17).

(For a more detailed account of the rise of Dionysius and his wars with the Carthaginians, see article DIONYSIUS in the Riggen. Dict. Vol. iv. The same events are fully narrated by Livy in vol. x. ch. 81, 83, and vol. xi. ch. 83.)

Several important towns in Sicily came into origin from the reign of the elder Dionysius, and were probably the scene of some of the earliest Greek colonies. Among these were Taormina, Naxos, which had been finally destroyed by him; Tyndaris, founded by the Syracusans on the N. coast of the island, with a body of Messenian exiles; and Lillà, which was one of the chief towns of the island.

The power of Syracuse over the eastern half of Sicily appeared to be consolidated by the elder Dionysius, but it was suddenly destroyed by a want of security, and the city was for a time almost in disorder. Only ten years after the death of his father (B.c. 357), Dion landed in Sicily with a force of only a few hundred mercenaries, and after a short resistance, was allowed to remain in possession of the city. Dionysius himself was now no longer in the island, but the island-cities of Oreus and...
his garrison, and still secured him a footing in Sicily. It was not till after a long blockade that his son Apollocrates was compelled to surrender it into the hands of Dion, who thus became master of Syracuse, n. c. 356. But the garrison of Dion was far from restoring liberty to Sicily, or even to the Syracusans: the despotic proceedings of Dion excited universal discontent, and he was at length assassinated by Callippos, one of his own officers, n. c. 353. The period that followed was one of great confusion, but with which we are very imperfectly acquainted. Syracuse was hemmed in by the Ionians, on one side from which the younger Dionysus found means to effect his return, and became once more master of Ortygia. But the rest of the city was still held by a leader named Hierocles, who called in the assistance of the Carthaginians. Ortygia was now besieged both by sea and land by a Carthaginian fleet and army. It was in this state of things that a party at Syracuse, equally opposed to Hierocles and to Dionysus, had recourse to the parent city of Corinth, and a small force of 1200 soldiers was sent to their assistance under Timoleon, n. c. 344. His successes were rapid and brilliant; and within less than two months from his landing in Sicily, he found himself unexpectedly in the possession of Ortygia, which was voluntarily surrendered to him by the Syracusans. But the Carthaginians were, however, still masters of the rest of the city; but mistrust and disunion enfeebled their defence: the Carthaginian general Hamilcar suddenly withdrew his forces, and Timoleon easily wrested the city from the hands of Hierocles, n. c. 343.

Hierocles was now restored to liberty and a democratic form of government; and the same change was quickly extended to the other Greek cities of Sicily. These had thrown off the yoke of Syracuse during the disturbed period through which they had recently passed, but had, with few exceptions, fallen into the hands of local despots, who had established themselves in the possession of absolute power. Such were, Hierocles himself at Acragas, Minimerci at Catana, and Hippon at Messana, while minor despots, also of Greek origin, had obtained in like manner the chief power in the Sicilian cities of Apollonia, Centuripia and Agrigum. Timoleon now turned his arms in succession against all these petty rulers, and overthrew them one after another, restoring the city in each case to its possession of independent and free self-government. Meanwhile the Greeks had been threatened with a more general danger from a fresh Carthaginian invasion; but the total defeat of their generals Haadrusb and Hamilcar at the river Crimnus (n. c. 340), one of the most brilliant and decisive victories ever gained by the Greeks over the Carthaginians, put an end to all fears from that quarter; and the alliance that followed once more established the Halycus as the boundary between the two nations (Diod. xvi. 17).

The restoration of the Sicilian Greeks to liberty by Timoleon, was followed by a period of great prosperity. Many of the cities had suffered severely, either from the exactions of their despotic rulers, or from the treachery of their subjects, who had taken place, but these were now recruited with fresh colonists from Corinth, and other cities of Greece, who poured into the island in vast numbers; the exiles were everywhere restored, and a fresh impulse seemed to be given to the development of Hellenic influences in the island. Unfortunately this period of reviving prosperity was of short duration. Only twenty three years after the battle of the Crimnus, a despotism was again established at Syracuse by Agathocles (n. c. 317), an adventurer who raised himself to power by very much the same means as the elder Dionysus, but who proved in every way more able, and while he even surpassed him in saun- guinary and unsparing severity. The reign of Agathocles (n. c. 317—289) was undoubtedly a period that exercised the most disastrous influence over Sicily; it was occupied in great part with internal dissensions and civil wars, as well as by long continued struggles between the Greek cities and the Carthaginians. Like Dionysus, Agathocles had, in the first instance, made use of Carthaginian support, to establish himself in the possession of despotic power, but as he gradually extended his aggressions, and reduced one Greek city after another under his authority, he in his turn came into fresh collision with Carthage. In n. c. 310, he was defeated at the river Himera, by the joint forces of Hierocles, a Carthaginian general Hamilcar, in so decisive a battle that it seemed to extinguish all his hopes; his allies and dependent cities quickly threw off his yoke, and Syracuse itself was once more blockaded by a Carthaginian fleet. In this extremity Aga- thocles adopted the daring resolution of transporting his army to Africa, and opening the gates of Carthage. During his absence (which was protracted for nearly four years, n. c. 310—307) Hamilcar had brought a large part of Sicily under the dominion of Carthage, but was foiled in all his attempts upon Syracuse, and at length was himself taken prisoner in a night attack, and put to death. The Agrigentians, who had been his ally, mentioned for a long period, but whose city appears to have been revived under Timoleon, and now again appears as one of the most considerable in Sicily, made a fruitless attempt to raise the banner of freedom and independence, while the Syracusee exiles Deinocrates, at the head of a large army of exiles and mercenaries, maintained a sort of independent position, also from Carthaginian influence. But Agathocles, on his return from Africa, concluded peace with Car- thage, and entered into a compromise with Deinocrates, while he established his own power at Syra- cuse by a fearful massacre of all that were opposed to him. For the last twelve years of his reign (n. c. 301—289), his dominion seems to have been firmly established over Syracuse and a great part of Sicily, so that he was at liberty to follow out his ambitious schemes in the south of Italy and elsewhere.

After the death of Agathocles (n. c. 289), Sicily seems to have fallen into a state of great confusion; Syracuse apparently still retained its predominant position among the Greek cities, under a despot named Hierocles; but Agrigentum, which had also fallen into the hands of a despot named Phintias, was raised to a position that almost enabled it to dispute the supremacy. Phintias extended his dominion over several other cities, and having made himself master of Gela, utterly destroyed it, in order to found and peopled a new city at the mouth of the river Himera, which he named the name of Phintias. This was the last Greek city founded in Sicily. Meanwhile the Carthaginians were becoming more and more preponderant in the island, and the Greeks were at length led to invoke the assistance of Phyrhus, king of Epirus, who was at this time carrying on war in Italy against the Romans. He readily listened to their overtures, and landed in
the island in the autumn of n. c. 378. Phileas was at this time dead, and Hieon had not long before been expelled from Syracuse. Pyrrhus therefore had no Greek enemies to contend with, and was able to turn all his efforts against the Carthaginians. His successes were at first rapid and decisive; he wrested one town after another from the dominion of Carthage, took Panormus, which had long been the metropolis of their Sicilian possessions, and had never before fallen into the hands of the enemy. He then proceeded by yea done the same on Messana; he besieged and dissensions now arose between him and his Sicilian allies, and after little more than two years he was fain to return to Italy (n. c. 276), abandoning all his projects upon Sicily (Diod. Sic. xxii. 10, pp. 497—499).

The departure of Pyrrhus left the Sicilian Greeks without a leader, but Hieron, who was chosen general by the Syracusans, proved himself worthy of the occasion. Meanwhile a new and formidable enemy had arisen in the Mamertines, a band of Campanian mercenaries, who had possessed themselves by treachery of the important city of Messana, and from this base they carried their arms over a considerable part of Sicily, and were considered masters of all its principal towns. Hieron waged war with them for a considerable period, and at length obtained so decisive a victory over them, in the immediate neighbourhood of Messana, that the city itself must have fallen, had it not been saved by the intervention of the Carthaginian general Hamilcar. Hieron was now raised to the supreme power carried over Syracusian territory, even assumed the title of king, n. c. 270. A few years after this we find him joining his arms with the Carthaginians, in effect the expulsion of the Mamertines, an object which they would doubtless have accomplished had not that people appealed to the protection of Rome. The Romans, who had recently completed the conquest of Italy, gladly seized the pretext for interfering in the affairs of Sicily, and espoused the cause of the Mamertines. Thus began the First Punic War, n. c. 264.

It is impossible here to relate in detail the events of that long-protracted struggle, during which Sicily became for twenty-three years the field of battle between the Romans and Carthaginians. Hieron, who had found himself at the beginning engaged in active hostilities with Rome, after sustaining several defeats, and losing many of his subject towns, wisely withdrew from the contest, and concluded in n. c. 263 a separate peace with Rome, by which he retained possession in full sovereignty of Syracuse and its territory, including the dependent towns of Acrae, Helorus, Netum, Nascara, and Leontini, together with Tanagrum (Diod. xxiv. 10, 592). From this time to the death of Hiero II the Carthaginians maintained the faithful ally of the Romans, and retained the sovereign power at Syracuse undisturbed. In the rest of Sicily all trace of independent action on the part of the several Greek cities disappears: Agrigentum was indeed the only one of these cities in the island which appears to have retained any considerable importance; it was taken by the Roman consuls till after a long and obstinate siege, n. c. 262, and was severely punished for its protracted resistance, the inhabitants being sold as slaves. Agrigentum indeed at a later period fell again into the hands of the Carthaginians, n. c. 255, but on the other hand the Romans made themselves masters of Panormus, for a long time the capital of the Carthaginian dominion in the island, which was therewith occupied by a strong Roman garrison, and never again fell into the hands of its former masters. For several years before the conclusion of the war, the possessions of the Carthaginians in Sicily were confined to the mountain of Eryx, occupied by Hamilcar Barca, and to the two strongly fortified seaports of Lilybaeum and Drepanum, the former of which defied all the attacks of the Romans, the latter of which was taken by Agrigentum, and used as a base of operations against any threatened invasion from Africa; but he was soon recalled to oppose Hamilcar in Italy, and for some years Sicily bore but an unimportant part in the war. A great change, however, occurred in the fourth year of the war (n. c. 215), in consequence of the defection of Hieronymus, the great ally and protector of Hieron at Syracuse, who abandoned the alliance of Rome, and to which Hieron had continued constant throughout his long reign, and espoused the Carthaginian cause. Hieronymus indeed was soon after assassinated, but the Carthaginian party at Syracuse, headed by Hippocrates and Epicycles, still maintained the ascendency, and Marcellus, who had been sent hastily to Sicily to put down the threatened revolt, was compelled to form the siege of Syracuse, n. c. 214. But so vigorous was the resistance offered to him that he soon found himself obliged to convert the siege into a blockade, nor was it till the autumn of n. c. 213 that the city finally fell into his hands. Meanwhile the war had extended itself to all parts of Sicily: many cities of the Roman province had followed the example of Syracuse, and joined the alliance of Carthage, while that power spared no exertions for their support. Even after the fall of Syracuse, the war was still continued; the Carthaginian general Mutius, who had made himself master of Agrigentum, carried on a desultory warfare from thence, and extended his ravages over the whole island. It was not till Mutius had been succeeded in the command of the Carthaginian enterprise by Hiero II, that Agrigentum was able to recover the revoked cities to submission, and thus accomplished the final conquest of Sicily, n. c. 210 (Livy xxiv. 40; xxvii. 5).

From this time the whole of Sicily became united as a Roman province, and its administration was more and more subjected to that of the other provinces. But its lot was anything but a fortunate one. Its great natural fertility, and especially its productive-
SICILIA. 983

spectaculous, who bought up large tracts of land, which they cultivated solely by means of slaves, so that the free population of the island became materially diminished. The more mountainous portions of the island were given up to shepherds and herdsmen, and likewise slaves, and accustomed to habits of rapine and plunder, in which they were encouraged by their masters. At the same time the number of wealthy proprietors, and the extensive export trade of wines of the towns, maintained a delusive appearance of prosperity. It was not till the outbreak of the Servile War in B.C. 135 that the full extent of these evils became apparent, but the frightful state of things then revealed sufficiently shows that the causes which had produced it must have been long at work. That great outbreak, which commenced with a local insurrection of the slaves of a great proprietor at Enna, named Damophonius, and was headed by a Syrian slave of the name of Eunus, quickly spread throughout the whole island, so that the slaves are said to have mustered 200,000 armed men. With this formidable force they defeated in succession the armies of several Roman praetors, so that in A.D. 134, it was thought necessary to send against them, and the province was divided into districts; but it was not till the year A.D. 132 that their strongholds of Tauromentium and Enna were taken by the consul P. Rufilius. (Diod. xxxiv. 58, 59, 63. Univ. Hist. 3, 4.) The insurrection was now fully quelled, but the state of Sicily had undergone a severe shock, and the settlement of its affairs was confided to P. Rufilius, together with ten commissioners, who laid down a code of laws and rules for its internal government which continued to be observed in the days of Cicero (Cic. Verr. ii. 16).

But the outbreak of the second Servile War, under Salvius and Athenion, less than three years after the termination of the former one (A.D. 103), and the fact that the slaves were again able to maintain the contest against three successive consuls till they were finally vanquished by M. Aquilius, in A.D. 100, sufficiently proves that the evils in the state of society had been imperfectly remedied by Rufilius; nor can we believe that the condition of the island was in reality altogether so flourishing as it is represented by Cicero during the interval which elapsed between this Servile War and the praetorship of Verres (A.D. 75). But the great natural resources of Sicily and its important position as the granary of Rome undoubtedly enabled it to recover with rapidity from all its disasters. The elder Cato had called it the store-room (cella penaria) of the Roman state, and Cicero observes that in the great Social War (A.D. 90–88) it supplied the Roman armies not only with food, but with clothing and arms also (Cic. Verr. ii. 92). But the praetorship of Verres (A.D. 75–70) indicted a calamity upon Sicily scarcely inferior to the Servile wars that had so recently devastated it. The rhetorical expressions of Cicero must not indeed be always understood literally; but with every allowance for exaggeration, there can no doubt that the evils resulting from such a government as that of Verres were enormous; and Sicily was just in such a state as to suffer from them most severely. The orations of Cicero against Verres convey to us much curious and valuable information as to the condition of Sicily under the Roman republic as well as to the administration and system of government of the Roman provinces generally. Sicily at that time formed but one province, under the government of a praetor or praetor praeconsule, one of whom resided at Syracuse, the other at Lilybæum. This anomaly (for such it appears to have been) probably arose from the different parts of the island having been reduced into the form of a province at different periods. The island contained in all above sixty towns which enjoyed municipal rights: of these, three only, Messana, Tauromentium, and Netum, were allied cities (civitates federatae), and thus enjoyed a position of nominal independence; five were exempt from all fiscal burdens and from the ordinary jurisdiction of the Roman magistrates (civitates immunes et liberæ): the rest were in the ordinary position of provincial towns, but retained their own magistrates and municipal rights, as well as the possession of their respective territories, subject to the payment of a tenth of their produce to the Roman state. These towns which were paid in kind, were habitually farmed out, according to principles and regulations laid down in the first instance by Hieron, king of Syracuse, and which therefore continued to be known as the Lex Hieronica. For judicial purposes, the island appears to have been divided into districts or communes, but the number of them is not stated; those of Syracuse, Agrigentum, Lilybæum, and Panormus are the only ones mentioned.

Sicily took little part in the Civil War between Caesar and Pompey. It was at first held by M. Cato on behalf of the latter, but abandoned by him when Pompey himself had quitted Italy, and was then occupied by Curio, as praetor-praetor, with four legions (Cæs. B. G. i. 50). Pompey visited it previously to his African war, and it was from Lilybæum that he crossed over with his army into Africa (Hirt. B. Afr. i. 1.) After the death of Caesar, it fell into the hands of Sextus Pompeius, whose powerful fleet enabled him to defy all the efforts of Octavian to recover it, and was at length secured to him by the peace of Misenum, A.D. 99, together with Sardinia and Corsica. But Octavian soon renewed his attempts to dispossess him, and though he sustained repeated defeats at sea, and lost a great part of his fleet by a storm, the energy and ability of Agrippa enabled him to triumph over all obstacles; and the final defeat of his fleet at Naulo- chus compelled Pompeius to abandon Sicily, and take refuge in the east (Appian, B. C. ii. 722; Dión. xxiv. i. 17). Strabo (viii. 1. 4.) has no doubt that the island suffered severely from this contest, and from the rapacity or exactations of Sextus Pompeius: Strabo distinctly ascribes its decayed condition in his time principally to this cause (Strab. vi. pp. 270, 272). Augustus made some attempts to relieve it by sending colonies to a few cities, among which were Tauromentium, Catana, Syracuse, Tharros, and Thapsus (Strab. v. p. 272; Plin. iii. 8. a. 14); but the effect thus produced was comparatively small, and Strabo describes the whole island as in his time, with few exceptions, in a state of decay, many of its ancient cities having altogether disappeared, while others were in a declining condition, and the interior was for the most part given up to pasturage, and inhabited only by herdsmen (Strab. i. 6. 6).

Augustus appears to have greatly remodelled the internal administration of Sicily: so that the condition of most of the towns had undergone a change between the time of Cicero and that of Pliny. Caesar had indeed proposed to give Latin rights to all the Sicilians, and M. Antonius even brought
forward a law to admit them without distinction to the Roman franchise (Cic. ad Att. xiv. 3), but neither of these measures was accomplished; and we learn from Pliny that Messana "was in his day the only city in the island of which the inhabitants possessed the Roman citizenship; three others, Centuripia, Netum, and Segesta enjoyed the Jus Latii, while all the others (except the colonies already mentioned) were in the ordinary condition of "civitates romanorum foederatae.""

We hear very little of Sicily under the Empire; but it is probable that it never really recovered from the state of decay into which it had fallen in Strabo's time. Almost the only mention of it in history is that of an outbreak of slaves and banditti in the reign of Gallienus which seems to have resembled on a smaller scale the Servile wars that had formerly devastated it (Trot. Poll. Gallien., 4). The increasing importance of the supply of corn from Africa and Egypt renders it probable that that from Sicily had fallen off, and the small number of remains of the imperial period still existing in the island, though so many are preserved from a much earlier date, seems to prove that it could not then be reckoned with as a flourishing city as a part of the Empire, also, we find very few names of towns in the Itineraries, the lines of road being carried through stations or "mansio" others, wholly unknown, a sufficient proof that the neighbouring towns had fallen into decay. (Hist. Ant. pp. 86-98.) In the division of the provinces under Augustus, Sicily was assigned to the senate, and was governed by a proconsul, then by a legate of Rome under the times of the Roman Empire, also, was governed by a magistrature named a Consularis, subject to the authority of the Vicarius Urbis Romae. (Notit. Dign. ii. p. 64; and Böcking, ad loc.)

Its insular position must have for a considerable time preserved Sicily from the ravages of the barbarians who were the chief enemies of the close of the Western Empire. Alaric indeed attempted to cross over the straits, but was foiled by a tempest. (Hist. Miscell. xiii. p. 535.) But Genserici, being master of a powerful fleet, made himself master of the whole island, which was held by the Vandals for a time, but subsequently passed into the hands of the Goths, and continued attached to the Gothic kingdom of the Ostrogoths, which was conquered by Justinian in A.D. 535. It was then united to the Eastern Empire, and continued to be governed as a dependency by the Byzantine emperors till the ninth century, when it fell into the hands of the Saracens or Arabs. That people first landed at Mazara, in the W. of the island in A.D. 827, and made themselves masters of Agrigentum; but their progress was vigorously resisted. They took Messana in 831, and Panormus in 835, but it was not till 878 that Syracuse, the last fortress in the island, fell into their hands. The island continued in the possession of the Saracens till the middle of the eleventh century, when it was partially recovered by the Byzantine emperor, but the last of the Saracens was driven out by the Normans. But in 1061 the Norman Roger Guiscard invaded Sicily on his own account, and, after a long struggle, wholly reduced the island under his dominion. It has since remained attached, with brief exceptions, to the crown of Naples, the monarch of which bears the title of King of the Two Sicilies.

The extant remains of antiquity in Sicily fully confirm the inference which we should draw from the statements of ancient historians, as to the prosperity and opulence of the island under the Greeks, and its comparatively decayed condition under the Romans. The ruins of the latter period are few, and for the most part unimportant, the exceptions being confined to the three or four cities which we know to have received Roman coloniae: while the temples, theatres, and other edifices from the Greek period are numerous and of the most striking character. No city of Greece, with the exception of Syracuse and Agrigentum, can compare with them. We see here by the remains that we have described that the Hanic or barbarian origin had been to a great extent effaced before the island passed under the dominion of Rome. The names of Sicilian cities mentioned by Cicero in his Verrine orations are so purely Greek where they belong to cities of Sicilian origin, such as Centuripia and Aegyrium, or even to places, such as Novara, Salinum, and Lilybaeum, as are those of Syracuse or Agrigentum. In like manner we find coins with Greek legends struck by numerous cities which undoubtedly never received a Greek colony, such as Alcamus, Menestum, and many others. It is probable indeed that during the Roman Republic the language of the whole island (at least the written and cultivated language) was Greek, which must have been more or less mixed with Latin under the Empire, as the Sicilian dialect of the present day is one of purely Latin origin, and differs but slightly from that of the south of Italy. Of the language of the ancient Sicels we have no trace at all, and it is highly probable that it was never used as a written language.

III. TOPOGRAPHY.

The general description of the physical features of Sicily has been already given. But it will be necessary here to describe its coasts in somewhat more detail. The E. coast extending from Cape Pelorus to Pachynus, consists of three portions of a very different character. From Pelorus to Tarrnitum it forms a continuation of the coast of Calabria, and is bordered by the chain of mountains called the Mess Neptunius, the slopes of which descend steeply to the sea, forming a very uniform line of coast, furrowed by numerous small torrents. Two of the small headlands between these valleys appear to have borne the names of Drepum (Pint.) and Argennum (Pel.), but their identification is quite uncertain. S. of Taormina, from the mouth of the Aetides to that of the Synaethus, the whole coast is formed by beds of lava and other volcanic matters, which have flowed down from Etna. Off this coast, about midway between Acium and Catana are some rocky islets of volcanic origin, called by Pliny the Cyclopaei, but the assumption of Scopoli; the name of Portus Ulyssis is given by the same author to a port in this island, but it is impossible so say which of the many small sheltered coves on this line of coast he means to designate. S. of the Synaethus the coast is much varied, being indented by several deep bays and inlets, separated by projecting rocky headlands. The principal of these is the bay of Messara (Gius Magareum) so called from the Greek city of that name; it was bounded on the N. by the Xiphias.
SICILIA.

promontory, now Capo di Sta Croce (Hephaestus
asperriss, Strab. vi. p. 267), within which was the
Xiphionian Porta (Aspis Epeirocis, Scyl. p. 4),
evidently the harbour of Augusta, one of the
finest natural harbours in the island. Between this
and Syracuse is the remarkable peninsular promon-
tory of Trapani (Magira), while immediately S.
of Syracuse occurs the remarkable landlocked bay
called the Great Harbour of that city, and the rocky
headland of Plemmirium which bounds it on the
S. From this point to Cape Pachynus no ancient
names have been preserved to us of the headlands
or harbours. From Cape Pachynus to the site of
Gela, the coast is low but rocky. Along this line
must be placed the port of Ulysses (Fortu Odissea)
mentioned by Cicero, and the promontory of Ptolomen,
both apparently in the immediate neighbour-
hood of Cape Pachynus [Pachynus]. The
Buca promontory (Bolbro Bapa) of Ptolemy, which
he places further W., is wholly unknown, as is also
the port of Canace of the same author (Kauos
lAmpa, Ptol. i. 4. § 7). The remainder of the S.
is almost barren, as the port of Altibe (Alibi) is
mentioned on the whole a very uniform character; it has few
or no natural ports, and no remarkable headlands.
It is bounded for the most part by hills of clay or
soft limestone, generally sloping gradually to the
sea, but sometimes forming cliffs of no great eleva-
tion. The celebrated promontory of Lgilatrum
is a low rocky point, and its famous port, though
secure, is small. So is the promontory of Argathus, with the adjacent
low islands, on one of which the city Motya
was built; while the more considerable isles of the
Aegates lay a few miles further to the W., and
the promontory of Thamiris adjoining the city of
the same name formed the NW. point of Sicily. It
is remarkable that no ancient name is preserved for us for the deep gulf of Castellamare which occurs on the
coast between Trapani and Polermo, though it is one of the most remarkable features of the N.
coast of Sicily; nor are the two striking headlands that bound the Bay of Polermo itself known to us
by their ancient names. The bold and insulated headland of Motya is the site of the ancient
Ekster. The northern coast of Sicily is low and
varied, formed by offshoots and ridges of the northern
chain of mountains descending abruptly to the
sea; hence it was always a rugged and difficult line of
communication. But none of the rocky headlands that interrupt it are mentioned to us by their ancient
times, till we come to that of Mylas adjoining the
town of the same name (Milenio), and the Pela-
chian Promontory (Ptol. iii. 4. § 2), appar-
tently the Capo di Ruscocino within a few miles
of Cape Pelorus.

From the triangular form of Sicily and the con-
figuration of the mountain chains which traverse it, it is
evident that it could not have any rivers of import-
ance with the exception of the most
mountain torrents, swelling with great rapidity after violent storms or during the winter rains, but
nearly, if not wholly, dry during the summer months.
The most important rivers of the island are: 1. The
Symachthus (Simeto or Giarretrax), which rises in the
northern chain of mountains (the Monte Nebrodes),
and flows to the S. and SE. round the foot of Aetna,
falling into the sea about 6 miles S. of Catania. It re-
ceives a number of tributaries, one of which is certainly
the ancient Chrysaor, that flowed near the
city of Assorus, while the Admiral of Stephanus can
be no other than the northern or main branch of
the Symachthus itself. The Cymmonorus (Kuadromos)
of Polybius, which appears to have been in the
neighborhood of Centurip, must probably be the
branch now called Fiume Salo, which joins the
Simeto just below Centurip. 2. The Aciranea or
Alison (F. Cassarum), which rises very near the
S. of Simeto, but flows along the northern front of
Aetna, and falls into the sea just below Taormi-
num. 3. The Himera (F. Salo), the most consi-
derable of two rivers which bore the same name,
rising in the Monte Madonina (Mons Nebrodes)
only about 15 miles from the N. coast, and flowing
due S.; so that it traverses nearly the whole breadth of
Sicily, and falls into the sea at Alisea (Philibius).
4. The Halycus (Pliatius), so long the boundary
between the Carchaginian and Greek territories in
the island, is also a considerable stream; it rises not
far from the Himera, but flows to the SW., and
enters the sea between Agrigentum and Selinus,
close to the site of Heraclea Milora. 5. The
Hypasa (Bellis), falling into the sea on the S. coast, a
few miles E. of Lipari, therefore probably the
draws its waters from the upper parts of the
S. of Etna, which flows under the walls of Syracuse and falls
into the great harbour of that city. It is unlike
most of the rivers of Sicily, being a full clear stream,
supplied from subterranean sources. The same
character belongs still more strongly to its tributary
the Cyane, which has a considerable volume of
water, though its whole course does not exceed two
miles in length.

The minor rivers of Sicily which are mentioned
either in history or by the geographers are numer-
ous, but in many cases are very difficult to identify.
Beginning at Cape Pachynus and proceeding along
the coast westward, we find: 1, the Motychana
(Meritynus, Ptol. iii. 4. § 7), evidently so called
from its flowing to the SW., and therefore prob-
elly the stream now called Fiume di Sicily; 2, the
Himilius of Pliny, probably the Fiume di
Ragnusa, very near the preceding; 3, the Hippar-
idae; and 4, the Oamus, two small streams which flowed
under the walls of Camarina, now called the F. di
Camarana and Fraccoria; 5, the Gela or Gelas,
Kk=—-
in the north of the city of Gela, and
therefore the Fiume di Terracina; 6, the Aegat-
ias, a small stream flowing under the walls of Agri-
gentum, to which it gave name, and receiving a
tributary called the Hypias (Drago), which must
not be confounded with the more important river of
the same name already mentioned; 7, the Camicus,
probably the Fiume delle Cose, about 10 miles W.
of Girgenti; 8, the Sellinus, flowing by the city of
that name; now the Modiana; 9, the Mazara
or Mazari, flowing by the town of the same name,
and still called Fiume di Mazara. Besides these
Ptolemy mentions the laburus and Soecas or Soseus,
two names otherwise wholly unknown, and which
cannot be placed with any approach to certainty.
Equally uncertain is the position of the river which is placed by Pliny in the same part of Sicily
with the Mazara and Hypias; but there is great
confusion in his enumeration as well as that of
Ptolemy. It is generally identified with the Dirillo,
but this is situated in quite a different part of Sicily.
The Aciarius of Ptolemy, which he places between
Lilybaeum and Selinus, may be the Fiume di Mar-
solo.

Along the N. coast, proceeding from Lilybaeum
to Cape Pelorus, we meet with a number of small
streams, having for the most part a short torrent-
The Greek colonies and their offshoots or dependences have been already mentioned in relating the history of their settlement; but the names of all the towns so far as they can be ascertained will be here enumerated in geographical order, without reference to their origin, omitting only the places mentioned in the Itineraries, which were probably mere villages situated. 1. Beginning from Cape Pelorus and proceeding along the S. coast towards Cape Pachynus, were: Mesaria, Taubornemion, Naxos, Azure, Catana and Syracusa. Tottolim, destroyed at an early period, as well as Megara Hyblaera, were situated between Catana and Syracusa. The Chalcide colonies of Callipolis and Euboea, both of which disappeared at an early period, must have been situated on or near the E. coast of the island, and to the N. of Syracusa, but we have no further clue to their situation. S. of Syracusa, between it and Cape Pachynus, was Helorus, at the mouth of the river of the same name. 2. W. of Cape Pachynus, proceeding along the S. coast, were Camarina, Gel, Phintias, Agrigentum, Hieraclia, Molos, Thermes Selinuntar, Selinun, Mazara, and Camarina. Near the mouth of the river of Camirus, Canna, and Inticum, the two former dependences of Agrigentum, the latter of Selinus, must be placed on or near the S. coast of the island. 3. N. of Lilybaeum was Motta, which ceased to exist at a comparatively early period, and Desparum (Trapani) at the NW. angle of the island. Between this and Pachynus, were Eryx at the foot of the mountain of the same name, and a short distance from the coast, the Emporium of Syracusa, Hrycarra, and Catana. Proceeding eastward from Pachynus, along the N. coast of the island, were Soluntum, Thermes, Himera, Chalcis, Sciro, Alarza, Calacta, Agathyrma, Alontium, Tyndaris, and Mylas. The towns in the interior are more difficult to enumerate; with regard to some of them indeed we are at a loss to determine, even in what region of the island they were situated. For the purpose of enumeration it will be convenient to divide the island into three portions: the first comprising the western half of Sicily as far as the river Himera, and a line drawn from its sources to the N. coast; the second half, the NE. and SE. portions, being separated by the same river, in the middle of the west of the island to the sea. 1. In the western district were Segesta and Halicarce, the most westerly of the inland cities; Entella, on the river Hypsa, about midway between the two seas; Ierta and Macella, both of which may probably be placed in the mountainous district between Enelda and Pandomus; Triccale, near Calatafimella, in the mountains inland from the Therms Selinuntar; Sikeria, of very uncertain site, but probably situated in the same part of Sicily; Herbericcia, in the neighbourhood of Agrigentum; Petra, near the sources of the W. branch of the Himera in the Modicaca mountains; and Enotium (Gemyti), at the head of the Fiume Grande, the E. branch of the same river. Paropus must apparently be placed on the northern declivity of the same mountains, but further to the W. A little to the E. of the Himera and as nearly as possible in the centre of the island, was situated the fortress of Enna (Castro Giovannini), so that the boundary line between the NE. and NW. regions may be conveniently drawn from thence. 2. In the NE. region were: Amorgus and Aegyum.
NE. of Enna, but W. of the valley of the Simmata; CHINTENOA (Cenotiba), nearly due E. of Enna; ADRAMPE (Aderma), on the E. bank of the Simmata, at the foot of Mount Astina; HYBRA MAJOR (which must not be confounded with the city of the same name near Syracuse), and ASTINA, previously called INEREA, both situated on the southern slope of the same mountain. N. of Agry- rium, on the southern slopes of the Monte Nebrodes were situated HERBETA, CAPITUM, and probably also GALLARIA: while on the northern declivities of the same mountains, fronting the sea, but at some distance inland, were placed APOLLONIA (probably Poliaca), AMMETRASUS (Mistretto), ABACANUM, a few miles inland from Tindaria, and NOA, probably Noara. Three other towns, IMACHARA, ICHELIA, and TEBIS, may probably be assigned to this same region of Sicily, though their exact position cannot be determined. 3. In the SE. portion of Sicily, S. of the Simmata and its tributary the Chrysa or Dittalea, were situated ERETEGON, MORGANTIA, LENTONTIA, and HYBE: as well as MENAMON and HEREBASS: but of all these names Leontia (Leontia) and Menammon (Menone) are best distinguished by any thing like certainty. In the hills W. of Syracuse were ACRAE (Palamoello), BIBUS (S. Gic. di Bibo), and CACOMUS (Cauro); and W. of these again, in the direction towards Gela, must be placed the Herica Hybea, as well as ECHELIA, in the neighbourhood of Gum Michele. SW. of Syracuse, in the interior, were NEREDES or N. (Nota Vicina), and MOTICA (Medeco), both of which are well known. The Syracusean colony of CARMENAE must probably have been situated in the same district but its site has never been identified.

After going through this long list of Sicilian towns, there remain the following, noticed either by Cicero or Pliny, as municipal towns, to the position of which we have no means of even approximating. The ACCIREN (Cic.), TARCHITI (Cic.), TYSRACENS (Plin.), ACASTEI (Plin.), EFINI (Id.), herbulesanae (Id.), Semelitanan (Id.), TALENARIS (Id.). Many of the above names are probably corrupt and merely false readings, but we are at a loss what to substitute. On the other hand, the existence of a town called MUTTASTRATUM or MYLLASTRATUM is attested by both Cicero and Pliny, and there seems no sufficient reason for rejecting it as identical with Ammetrasus, as has been done by many modern geographers, though its site is wholly uncertain. Equally unknown are the following names given by Pliny among the inland towns of the island: ALETA (Aletus), HYDRA or LUZIA (Tepa or Audia), PATY- ORUS (Harpaeos), Cotypa or Cotypa (Kotyros or Kotyros), Legumi or Letumi (Altivos or Altivos), ANCERIS (Ancersis), INA or ENSA (Ensa or Osa), and ELETHEUM (Elechus). It would be a waste of time to discuss these names, most of which are probably in their present form corrupt, and are all of them otherwise wholly unknown. On the other hand the existence of NACOMA, mentioned by Stephans of Byzantium, but not noticed by any other writer, is confirmed by the coins.

The topography of Sicily is still very imperfectly known. The ruins of its more celebrated cities are indeed well known, and have often been described; especially in the valuable work of the Duke of Serra di Falco (Antichita della Sicilia, 5 vols. 1834—1839), as well as in the well-known travels of Swinburne, Sir B. Hoare, &c. (Swinburne's Travels in the Two Sicilies, 2 vols. 4to. Lond. 1783; Sir B. Hoare's Classical Tour through Italy and Sicily, 2 vols. 8vo. Lond. 1819; St. Non, Voyage Pittoresque de Naples et de la Sicily, 5 vols. fol. Paris, 1781; Biscari, Principe di, Viaggio per la Antichita della Sicilia, 8vo. Palermo, 1817, &c.); but the island has never been thoroughly explored by an antiquarian traveller, like those to whom we are indebted for our knowledge of Greece and Asia Minor. The valuable work of Cluverius (Sicilia Antiqua, fol. Lond. Bat. 1619) must here, as well as for Italy, be made the foundation of all subsequent researches. But much valuable information is found in the more ancient work of Fazello, a Sicilian monk of the sixteenth century, as well as of his commentator Amico, and in the Topographical Dictionary of the latter author. (Thomas Fazelli de Rebus Siciliae Décades Duo, first edit. in fol. Panormi, 1558, republished with copious notes by Amico, 3 vols. fol. Catanae, 1749—1753; Amico, Lexicon Topographicum Sicilium, 3 vols. 4to. Catanae, 1759). Much, however, still remains to be done. Many localities indicated by Fazello in the sixteenth century as presenting ancient remains have never (so far as we are aware) been visited by any one. The good map of the island exists, which can be trusted for topographical details, and there can be little doubt that a minute and careful examination of the whole country, such as has been made of the neighboring island of Sardinia by the Chev. De la Mar- mora, would well reward the labours of the explorer. In the ruins described by Sir B. Hoare as existing in the neighbourhood of St. Croce, or those situated near Vindicasari, a few miles N. of Cape Pachynus and commonly ascribed to Imachera, have never been examined in detail, nor has any clue been obtained to their identification.

The Itineraries give several lines of route through the island, but many of the stations mentioned are wholly uncertain, and were probably never more than obscure villages or mere solitary posthouses. The first line of route (Itin. Ant. pp. 86—89) proceeds from Messana along the E. coast by Tauromenium and Ascutum to Catana, and from thence strikes inland across the centre of the island to Agrigentum; the course of this inland route is wholly uncertain and the names of the three stations upon it, Capito- tiana, Galas, and Pulcher, are not mentioned in any ancient author, and are entirely unknown. From Agrigentum it followed the line of coast to Lilybaeum; the stations given are Cena [Camer], Allava, Ad Aquas (i. e. the Aegae Labodes or Thermae Selinuntiae), Ad fluvium Lanarium, and Mazarra; all except the 3rd and 5th of very uncertain site. A second route (Itin. Ant. pp. 89, 90) proceeds in the inverse direction from Lilybaeum to Agrigentum, and thence by a southern line, through Calviania, Hybla, and Acrata (Palamoc) to Syracuse, and from thence as before along the E. coast to Messana. A third line follows the N. coast of the island from Lilybaeum by Panormus to Messana. The stations on this line are better known and can for the most part be determined: they are: Drepana, Aegaeae Segestancum (near Segesta), Parthenium (Parthenon), Hyscaris (Muro di Caroni), Panormus, Soluntum, Thermes, Cephalodion, Hales (Alaeza), Calacce, Agatium, (Agathyrum), Tindaria, and Messana. A fourth route (Itin. Ant. p. 93) crossed the interior of the island from Thermes, where it branched off from the preceding, passing through Enna, Agrigentum, Centaria and Astina to Catana. A fifth gave us a line
SICILIBA.

of strictly maritime route around the southern ex-
tremity of the island from Agrigentum to Syracusae;
but with the exception of Pintia, which is probably
Phintias (Alicata), none of the stations can be
identified. Lastly, a line of road was in use which
crossed the island from Agrigentum direct to Pa-
normus (Itis. Ant. p. 96), but none of its stations
are known and we are therefore unable to determine
even its general course. The other routes given in
the Itinerary of Antonius are only unimportant
variations of the preceding ones. The Tabula gives
only the one general line around the island (crossing,
however, from Calvisiana on the S. coast direct to
Syracuse), and the cross line already mentioned from
Thermes to Catana. All discussion of distances
along the above routes must be rejected as useless,
until the routes themselves can be more accurately
determined, which is extremely difficult in so hilly
and broken a country as the greater part of the
interior of Sicily. The similarity of names, which
in Italy is so often a sure guide where all other in-
dications are wanting, is of far less assistance in
Sicily during the long period of Arabic dominion in
which this island has thrown the nomenclature of the island into great
confusion.

[E. H. B.]

COIN OF SICILIA.

SICILIBA or SICILIBRA (in the Geogr. Rav.
Siciliba, iii. 5), a place in Africa Propris (Itis. Ant.
pp. 25, 45), variously identified with Basilbath
and Buowuch Alouina.

[T. H. D.]

SICINUS (Zizyius; Eth. Zuzvunis; Sicinos), a
small island in the Ascanian sea, one of the Sporades,
lying between Plogandros and Ios, and containing a
town of the same name. (Scylax, p. 19; Strah.
x. p. 484; Ptol. iii. 15. § 31.) It is said to have been
originally called Oenos from its cultivation of the
vine, but to have been named Sicinos after a son of
These and Oenos. (Steph. B. z.e.; Apoll. Rhod.
i. 623; Schol. ad loc.; Plin. iv. 12. n. 28; Eutym.
M. p. 712. 49.) It now is still the chief production
of the island. It was probably colonized by Ionians.
Like most of the other Grecian islands, it submitted to
Xerxes (Herod. viii. 4), but it afterwards formed
part of the Athenian maritime empire. There are
some remains of the ancient city situated upon a lofty
and rugged mountain, on whose summit stands the
church of S. Maria. There is also still extant an
ancient temple of the Pythian Apollo, now converted
into the church Episkopos (ἕτερα ἐπισκόπος). It
stands in a depression between the main range of
mountains, and the summit lying too to the left, upon
which the ruins of the ancient city stand. We
learn from an inscription found there by Ross that
it was the temple of the Pythian Apollo. (Ross,
Relics, vol. ii. p. 151, seq.)

SICOR. [SICOR.

SICORIS (Zizoroi, Dion Cass. xii. 20), a tri-
butary river of the Iberus in Hispania Tarraconensis.
It rose in the Pyrenees in the territory of the Cer-
retani, and separated the countries of the Bergetes
and Lacoetani. It flowed past Illera, and according
to Vibius Severus (p. 224, ed. Bipont) bore
the name of that town. A little afterwards it received
the Cinga, and then flowed into the Iberus near
Oagetosa. (Casse. B. C. i. 40, 48; Plin. iii. 3. 4; Lucan.
v. 13, seq.) Anamius describes it as flowing
immediately ("turrentem," Epod. xix. 39). Now the
Sopra.

T. H. B.

SICULI (Zizuloi), is the name given by ancient
writers to an ancient race or people that formed one
of the elements in the primitive population of Italy,
and as well as Sicily. But the accounts given of
them are very confused and uncertain. We find the
Siculi mentioned: 1. as among the early inhabitants
of Latium; 2. in the extreme S. of Italy; 3 in
Sicily; 4. on the shores of the Adriatic. It will be
convenient to examine these notices separately.

1. The Siculi are represented by Dionysius as
the earliest inhabitants of the country subsequently
called Latium (i. 9), as well as of the southern part
of Etruria; they were an indigenous race, i.e. one
that has inhabited the same place from an early
time. They held the whole country till they were expelled
from it by the people whom he calls Aborigines,
descending from the mountains of Central Italy
(ABORIGINES), who made war upon them, in con-
junction with the Pelasgiads; and after a long pro-
tracted struggle, wrested from them one town after
another (Id. i. 9, 16). Among the cities that are
singled out, mentioned by him as having been
successively occupied by the Siculi, are Tibur, where a part
of the city was still called in the days of Dionysius
Zizuloi, Ficulae, Antemnae, and Tellus, as well
as Palerii and Fescennium, in the country after-
wards called Etruria (Id. i. 16, 20, 21). The
Siculi being thus finally expelled from their pos-
sessions in Italy, were believed to have migrated in a body to the southern extremity of
the peninsula, from whence they crossed over the strait, and established themselves in the island of Sicily,
to which they gave the name it has ever since borne. [SICILIA.] (Id. i. 22.) Dionysius is the
only author who has left us a detailed account of
the migration and expulsion of the Siculi; but they
are mentioned by Pliny among the races which may
have been successively occupied Latium (Plin. iii. 5. 9); and this seems to have been an established
and received tradition.

2. We find the Siculi frequently mentioned in
the southernmost portion of the Italian peninsula,
where they appear in close connection with the
Oenotrians, Morgentes, and Italy, all of them kindred tribes, which there are good reasons for assigning to the Pelasgic
race. [OENOTHRIA.] It is probable, as suggested by
Strabo, that the Siculi, more than once, mentioned
by Homer (Odys. xx. 383, xxiv. 211, &c.), were the
inhabitants of the coast of Italy opposite to
Athica; and the traditions of the Epigraphic Le-
ontes, of Polybius, spoke of the people in whose territory they settled, and with whom they first found themselves engaged in war. (Polyb. xii. 5, 6.) Numerous traditions also, reported by
Dionysius (i. 22, 73) from Antiocusses, Hela-
nicus, and others, concur in bringing the Siculi and
their eponymous leader Siculus (Zizuloi) into close
connection with Italus and the Itali; and this
is confirmed by the linguistic relation which may fairly
be supposed to exist among Zizuloi and Itali (Nieb. vu. i. p. 47) though this is not close
enough to be in itself conclusive. So far as
our scanty knowledge goes, therefore, we must conclude that the two shores of the Sicilian strait were at one period peopled by the same tribe, who were known to the Greeks by the name of Sicels or Siculi; and that this tribe was probably a branch of the Oenotrian or Pelasgic race. The legends which connected these Siculi with those who were expelled from Latium seem to have been a late invention, as we must infer from the chronology that Sicels, like the Pelasgians, who is represented by Antiochus as taking refuge with Morges, king of Italy, was called a fugitive from Rome. (Dionys. i. 73.)

3. The Siculi or Siculi were the people who occupied the greater part of the island of Sicily when the Greek colonies were first established there, and continued throughout the period of the Greek domination to occupy the greater part of the interior, especially the more rugged and mountainous tracts of the island. [SICILIA.] The more westerly portions were, however, occupied by a people called Sicani, whom the Greek writers uniformly distinguish from the Siculi, notwithstanding the resemblance of the two names. These indeed would seem to have been a branch or an original race, and the name of the Sicani has been used by Greek writers using them as such; so that Virgil more than once employs the name of Sicani, where he can only mean the ancient Latin people called by Dionysius Siculi. (Verg. Aen. viii. 795, ix. 317.)

4. The traces of the Siculi on the western shores of the Adriatic are more uncertain. Pliny indeed tells us distinctly that the Siculi or Sicani were founded by the Siculi (Plink. iii. 13. a. 18); but it is by no means improbable that this is a mere confusion, as we know that the latter city at least was really founded by Sicilian Greeks, as late as the time of Dionysius of Syracuse [ANCORA]. When, however, he tells us that a considerable part of this coast of Italy was held by the Sicilians and Liburnians, before it was conquered by the Umbrians (I. 14. a. 19), it seems probable that he must have some other authority for this statement; Pliny is, however, the only author who mentions the Siculi in this part of Italy.

From these statements it is very difficult to arrive at any definite conclusion with regard to the ethnographic peculiarities of the Siculi. On the one hand, we have the notices of them in Southern Italy, as already observed, seem to bring them into close connection with the Itali and other Oenotrian tribes, and would lead us to assign them to a Pelasgic stock; but on the other it must be admitted that Dionysius distinctly separates them from the Pelasgi in Latium, and represents them as expelled from that country by the Pelasgi, in conjunction with the so-called Aborigines. Hence the opinions of modern scholars have been divided: Niebuhr distinctly receives the Siculi as a Pelasgic race, and as forming the Pelasgic or Greek element of the Latin people; the same view is adopted by O. Müller (Etrusker, pp. 10—16, &c.) and by Alken (Nicht Italen, p. 9); while Tischbein, in his Italianische Mythologie, iv. 274, followed by Forger and others, regards the Siculi as a Gaulish or Celtic race, who had gradually wandered southwards through the peninsula of Italy, till they finally crossed over and established themselves in the island of Sicily. This last hypothesis is, however, purely conjectural. We have at least some foundation for supposing the Siculi as well as the Oenotrians to be of Pelasgic origin; if this be rejected, we are wholly in the dark as to their origin or affinities.

[SICULI]

SICULUM MARE (σικελικός πέλαγος, Vol. Strab. 901.), was the name given in ancient times to that portion of the Mediterranean sea which bathed the eastern shores of Sicily. But like all similar appellations, the name was used in a somewhat vague and fluctuating manner, so that it is difficult to fix its precise geographical limits. Thus Strabo describes it as extending along the eastern shore of Sicily, from the Straits to Cape Pachira, with the southern shore of Italy as far as Locri, and again to the eastward as far as Crete and the Peloponnesus; and as filling the Corinthian Gulf, and extending northwards to the Iapygian promontory and the mouth of the Ionian gulf. (Strab. ii. p. 123.) It is clear, therefore, that he included under the name the whole of the sea between the Peloponnesus and Sicily, which is more commonly known as the Ionian sea [IONIUM MARE], but was termed by later writers the Adriatic [ADRIATICUM MARE]. Polybius, who in one passage employs the name of Ionian sea in this more extensive sense, elsewhere uses that of the Sicilian sea in the same general manner as Strabo, since he speaks of the island of Cephallenia as lying towards the Ionian sea (v. 3); and even describes the Ambracian gulf as an inlet or arm of the Sicilian sea (iv. 63, v. 5). Eratosthenes also, it would appear from Pliny, applied the name of Siculum Mare to the whole extent from Sicily to Crete. (Plin. iii. 5. a. 10.) The usage of Pliny himself is obscure; but Mela distinguishes the Ionian sea from the Ionian gulf, applying the former name to the western part of the Ionian sea, nearest to Sicily, and the latter to its more easterly portion, nearest to Greece. (Mel. ii. 4. § 1.) But this distinction does not seem to have been generally adopted or continued long in use. Indeed the name of the Sicilian sea seems to have fallen much into disuse. Ptolemy speaks of Sicily itself as bounded on the N. by a more common sea, on the S. by the African, and on the E. by the Adriatic; thus omitting the Sicilian sea altogether (Ptol. iii. 4. § 1); and this seems to have continued under the Roman Empire to be the received nomenclature.

Strabo tells us that the Sicilian sea was the same which had previously been called the Anconian (Strab. ii. p. 185, v. p. 268); but it is certain that name was never applied in the more extended sense in which he uses the Sicilian sea, but was confined to the portion more immediately adjoining the southern coasts of Italy, from Sicily to the Iapygian promontory. It is in this sense that it is employed by Pliny, as well as by Polybius, whom he cites as his authority. (Plin. v. 2. 142, &c.)

SICULUM (σικελικός, Ptol. ii. 16. § 4; Plin. iii. 22; Sicilia, Pest. Tax.), a town of Dalmatia, to the E. of Tragurium, on the road to Salona, where Claudius is said to have quartered the veterans. (Plin. L.c.) From its position it cannot be Sibensico, with which it has been identified, but may be represented by the vestiges of a Roman station to the N.W. of Castel Vettori, on the R. of Italian, which is known with a dedicatory inscription to M. Julianus Philippus has been lately found, as well as much pottery and Roman tiles. (Wilkinson, Dalmatia, vol. i. p. 176.)

SICYON (σύκιον, also ΣΥΚΙΟΝ, Becker, Anm. p. 555: Eth. SYKIONES: the territory SYKIONOS: Varnhild.)

I. Situation. Sicyon was an important city of the Peloponnesus, situated upon a table-height of no great elevation, at the distance of about 2 miles from the
Corinthian gulf. Strabo (viii. p. 383) correctly describes it as occupying a strong hill distant 20 stadia from the sea, though he adds that others made the distance 12 stadia, which may, however, have reference to the lower town built at the foot of the table-height. Upon this height the modern village of Vastiatholos now stands. It is defended on every side by a natural wall of precipices, which can be ascended only by one or two narrow passages from the plain. A river flows upon either side of the hill, the one on the eastern side being the Ascopus, and that on the western side the Helisson. When Sicyon was at the height of its power, the city consisted of three parts, the Acropolis on the hill of Vastiatholos, the lower town at its foot, and a port-town upon the coast. The port-town was well fortified. (Sicel. vii. 3. § 2; Polyb. v. 87; Paus. ii. 12. § 2; Strab. l.c.)

II. History. — Sicyon was one of the most ancient cities of Greece, and is said to have existed under the name of Argosia (Aýgouio, Paus. ii. 5. § 6) or Aegiali (Aýgouia). (Strab. viii. p. 382) long before the arrival of Pelops in Greece. It was also called Naonis (Naon Í), which was apparently its ascendant name, and under which it is celebrated as the "dwelling-place of the blessed," and as the spot where Prometheus instituted the Hellenic sacrifices and deceived Zeus. (Steph. B. s. v. Naouía; Strab. viii. p. 382; Callim. Fr. 125, p. 835, ed. Reiske; Herod. i. 535.) Its name Sicyon (Σίκυων) has reference to its being one of the earliest seats of the workers in metal. (Steph. B. s. v. Naouía.) Its name Aegialeia was derived from a mythical authocheus Aegialeus, and points to the time when it was the chief city upon the southern coast of the Corinthian gulf, the whole of which was also called Aegialeia. Its later name of Sicyon was said to have been derived from an Athenian of this name, who became king of the city, and who is represented as a son of either Marathon or Metion. (Paus. ii. 6. § 5.) This legend points to the fact that the early inhabitants of Sicyon were Ionians. Aegialeus is said, in some traditions, to have been the son of Inachus, the first king of Argos, and a brother of Phorcides. Aegialeus was probably the hero of the successors of Aegialeus is given, among whom one of the most celebrated was the Argive Adrastus, who, being expelled from his own dominions, fled to Polybous, then king of Sicyon, and afterwards succeeded him on the throne. (Euseb. Chron. p. 11. seq.; August. Civ. Dei, xviii. 2.; Paus. ii. 6. §§ 6, 7.) Homer indeed calls Adrastus first king of Sicyon (Hom. II. ii. 579); and we know that in historical times this hero was worshipped in the city. (Herod. v. 67.) Sicyon was subsequently conquered by Agamemnon, who, however, left Hippolytus on the throne; but Sicyon became a tributary city to Corinth. (Paus. ii. 6. §§ 6, 7; Hom. II. ii. 572, xxii. 299.) Hippolytus was the grandson of Phætous, who was a son of Heracles; and the consequence of this connection, the inhabitants were not expelled or reduced to subjection upon the conquest of the city by the Dorians under Phæleus, the son of Teomenus; for while the Dorian conquerors, as in all other Doric states, were divided into three tribes under the names of Hyllais, Pamphyllis, and Dymanaius, the original Sicyonians were formed into a fourth tribe, under the name of Aegialeis, which possessed the same political rights as the other three. (Paus. ii. 6. § 7; Strab. viii. p. 389; Herod. v. 68.) Sicyon was now a Dorian state; and from this time its real history begins. It was at first dependent upon Argos (Paus. i. c.), which was for some time the most powerful state in the Peloponnesus; Sparta being second to it. In the First Messenian War the Sicyonians fought on the side of the Messenians along with the Argives and Arcadians. (Paus. iv. 11. § 1.) In the Second Messenian War, about a. c. 674, Sicyon became subject to the tyranny of the Orthagorides, who governed the city for more than 100 years, and whose rule is praised by Aristotle (Pol. v. 9. § 21) for its mildness. The family of the Orthagorides belonged to the non-Dorian tribe, and the continuance of their power is to be accounted for by the fact of their being supported by the original population against the Dorian conquerors. Orthagoras, the founder of the dynasty, is said to have been originally a cook. ( Aristot. i. c.; Hellsd. op. Phot. cod. 279, p. 530; Livan. vol. iii. p. 251, ed. Reiske.) In other accounts Andreas is mentioned as the first of the Sicyonian tyrants (Herod. v. 126; Diod. Fragm. P. F. 14.); and it is probable that he is the same person as Orthagoras, as the two names do not occur in the same author. He was succeeded by his son Myron, who gained a chariot victory at Olympia in b.c. 648; Myron by Aristonymus; and Aristonymus by Cleisthenes. (Herod. vi. 126; Paus. ii. 8. § 1, vi. 19. § 1.) The latter was celebrated for his wealth and magnificence, and was also distinguished by his hatred against Argos, and his systematic endeavours to depress and dishonour the Dorian tribes. He changed the ancient and venerable names of the three Dorian tribes into the insulting names of Hyate, Oneata, and Chreootae, from the three Greek words signifying the sow, the ass, and the pig; while he declared the superiority of his own tribe by giving it the designation of Athraki, or lords of the people. Cleisthenes appears to have continued despot till his death, which may be placed about b.c. 560. The dynasty perished with him. He left no son; but his daughter Agariste, whom so many suitors wooed, was married to the Athenian Myctaleus, of the great family of the Alcmæonidæ, and was the mother of the great Pericles. And thus began the Athenian democracy after the expulsions of the Pisistratides. The names given to the tribes by Cleisthenes continued in use for sixty years after the death of the tyrant, when by mutual agreement the ancient names were restored. (Herod. vi. 126 —131; Grote, Hist. of Greece, vol. iii. p. 45, seq.; Dict. of B. s. v. Cleisthenes.)

A Dorian reaction appears now to have taken place, for during a long time afterwards the Sicyonians were the steady allies of the Spartans. In the invasion of Greece by Xerxes (a. c. 480), the Sicyonians sent a squadron of 15 ships to Salamis (Herod. viii. 43), and a body of 3000 hoplites to Platæa. (Herod. ix. 28.) In the interval between the Persian and Peloponnesian wars the territory was twice invaded and laid waste by the Athenians, first under Tolmides in b.c. 456 (Thuc. i. 108; Paus. i. 27. § 5), and a second time under Pericles, a. c. 454 (Thuc. i. 111; Diod. xi. 88). A few years later (a. c. 445) the Sicyonians supported the Megarians in their revolt from Athens. (Thuc. i. 114.) In the Peloponnesian War they sided with Sparta, and sent contingent of ships to the Peloponnesian fleet. (Thuc. ii. 90, 83.) In a. c. 454 the Sicyonians assisted Brasidas in his operations against the Athenians in the Megarid
SICYON.

soon disappeared; but the city continued to remain upon its lofty site, which was better adapted than most mountain heights in Greece for a permanent population, since it contained a good supply of water and cultivable land. Pausanias (i.c.) represents the lower town as the original city of Asclepius; but Col. Leake justly remarks, it is monstrous to conclude that the first establishment was made upon the hill Vasipliti, which, by its strength and its secure distance from the sea, possesses attributes similar to those of the other chief cities of Greece. Indeed, Pausanias himself confirms the antiquity of the occupation of the hill of Vasipliti, by describing all the most ancient monuments of the Sicyonians as standing upon it. (Leake, Morea, vol. iii. p. 367.)

After Demetrius quitteft Sicyon, it again became subject to a succession of tyrants, who quickly displaced one another. Cleon was succeeded in the tyranny by Euthydemus and Timocleides; but they were expelled by the people, who placed Cleonias, the father of Aratus, as the head of the government. Cleonias was soon succeeded by Amanes, who seized the tyranny, n. c. 264. Amanes was murdered in his turn, and was succeeded by his father Paseas; but he again was murdered by Nicoles, who had held the sovereign power only four months, when the young Aratus surprised the citadel of Sicyon, and delivered his native city from the tyrant, n. c. 251. (Paus. ii. 8. §§ 1—3; Plut. Arat. 3.) Through the influence of Aratus, Sicyon now joined the Achaean League, and was one of the most important cities of the confederacy. (Paus. ii. 8. § 8; Plut. Arat. 9; Polyb. ii. 43.) In consequence of its being a member of the league, its territory was devastated, both by Cleomenes, n. c. 233 (Plut. Arat. 41, Cleom. 19; Polyb. ii. 52), and by the Aetolians, n. c. 221. (Polyb. iv. 13.) In the Roman wars in Greece, Sicyon was favoured by Attalus, who bestowed handsome presents upon it. (Polyb. xvii. 16; Liv. xxxii. 40.) The conquest of Corinth by the Romans, n. c. 146, was to the advantage of Sicyon, for it obtained the greater part of the neighbouring territory and the administration of the ionian gus. (Paus. ii. 2. § 5.) But even before Corinth was rebuilt, Sicyon again declined, and lost its importance, and appears to have been only in name a part of the commonwealth of the end of the Republic. (Gis. de att. i. 19, 20, i.) After the restoration of Corinth, it still further declined, and its ruin was completed by an earthquake, which destroyed a great part of the city, so that Pausanias found it almost depopulated (li. 7. § 1). The city, however, still continued to exist in the sixth century of the Christian era; for Hierocles (p. 646, Wess.) mentions New Sicyon (Νέα Σή- κονδρα) among the chief cities of Achaea. The maritime town was probably Old Sicyon. Under the Byzantine empire Sicyon was called Hellas, and the inhabitants Helladici, probably in contradistinction to the surrounding Slavonic inhabitants. (Dioc. Ω ν Ά ν ο ν, Συλίαι; των Ό ν ο ν ή ο ν των πολεμάσιον Ι δοκύντων Μικρόν, p. 68, Bonn.) The name Vasipliti (ά βασίπλητον) is reference to the ruins of the temples and other public buildings.

III. Art, &c.—Sicyon is more renowned in the artistic than in the political history of Greece. For a long time it was one of the chief seats of Grecian art, and was celebrated alike for its painters and sculptors. According to one tradition painting was invented at Sicyon, where Telephemus was the first to practise the monogram, or drawing in outline
SICYON.

(Plin. xxxv. 3. s. 15); and the city long remained the home of painting ("dix illa fuit patria picture,") (Plin. xxxvi. 11. s. 40). Sicyon gave its name to one of the great schools of painting, which was founded by Eupompos, and which produced Pamphilus and Apelles. (Plin. xxxv. 10. s. 36.) Sicyon was likewise the earliest school of statuary in Greece, which was introduced into the city by Dipoenus and Scyllis from Crete about a.c. 560 (Plin. xxxv. 4); but its earliest native statuary of celebrity was Canachus. Lycaippus was also a native of Sicyon. (Dict. of Biogr. s. ev.) The city was thus rich in works of art; let its theatre, the noble paintings, which the Sicyonians had been obliged to give in pledge on account of their debts, were removed to Rome in the sabbatical of M. Scaurus, to adorn his theatre. (Plin. xxxvi. 11. s. 40.)

Sicyon was likewise celebrated for the taste and skill displayed in the various articles of dress made by its inhabitants, among which we find mention of a particular kind of shoes, which was much prized in all parts of Greece. (Athen. iv. p. 155; Pollyn. vii. 93; Hesych. s. ev. Zvymyvica; Author. od Heron. iv. 3, de Orest. i. 54; Lucret. iv. 1121; Fest. s. ev. Sicyon.)

IV. Topography of the City.—Few cities in Greece were more finely situated than Sicyon. The hill on which it stood commands a most splendid view. Towards the west is seen the plain so celebrated for its fertility; towards the east the prospect is bounded by the lofty hill of the Acrocorinthus; while in front lies the sea, with the noble mountains of Parnassus, Helicon, and Cithaeron rising from the opposite coast, the whole forming a charming prospect, which cannot have been without influence in cultivating the love for the fine arts, for which the city was distinguished. The hill of Sicyon is a tabular summit of a triangular shape, and is divided into an upper and a lower level by a low ridge of rocks stretching right across it, and forming an abrupt separation between the two levels. The upper level, which occupies the southern point of the triangle, and is about a third of the whole, was the Acropolis in the time of Pausanias (5 vev Aevówel, ii. 7. § 5).

MAP OF THE SITE OF SICTON (from Leake).

Pausanias came to Sicyon from Corinth. After crossing the Asopus, he noticed the Olympium on the right, and a little farther on the left of the road the tomb of Euripides of Athens, in one part. After passing some other sepulchral masses, he entered the city by the Corinthian gate, viz. a fountain pouring down from two immense rocks, which was therefore called lisse, lisse (lisse), or the dropping fountain. In some has now disappeared in consequence of building on of the rocks. Upon entering the city he first crossed the ledge of rocks dividing in two from the lower level, and passed into the agora. Here he noticed temples of Tyche and Athena, of which there are still seen traces. His route was then followed by us as found, in conformity with the description of the Sicyonians, in the ledge of rocks separating the two levels. On the stage of the theatre stood a statue of a man with a shield, said to have been of Aratus. Near the theatre was the temple of Juno, from which a road led past the little temple of Artemis Limnæa to the Agora. At the entrance of the Agora was the temple of Pallas to Pisa, and in the Agora the temple of Zeus, which appears to have been the chief sanctuary of Sicyon. The festival of Apollo at Sicyon was celebrated in the ninth Nemean ode of Pindar at Aratus, when he delivered his name city in a tyrant, gave as the watchword Aratus. In the temple of Peithus (xvii. 16) a brazen statue of Aglauros Eia, 10 cubits high, stood in the Agora in the temple of Apollo; but this statue is not named by Pausanias, and had therefore probably disappeared. (Paus. ii. 7. §§ 2, 3.) The temple of Peithus was a sanctuary especially of the Roman emperors, and formerly was a first temple of tyrant Clisthenus. Before it stood the temple of Aglauros, and near it was a statue of the Athenian Poseidon, and statues of Zeus, Helius, and of Artemis Patros, the former resembling the mid, the latter a column. In the Agora was the council-house (Baranérwemw), and a temple of Cleisthenes out of the spoils of Chalcis, with a brazen statue of Zeus, the god of Zeus, a gabled statue of Artemis, a raised temple of Apollo Lycurgos, and statues of the daughters of Perseus, Hermes, and of Hermes Agoraos. (Paus. ii. 6, 7.) The Poesie Sitou, or painted statue, was placed in the Agora, but is not mentioned by Pausanias. It was adorned with numerous paintings, which is the subject of a work of Poelen. (Athen. v.) Pausanias then proceeded to the Gymnasium, which he describes as not far from the Agora. The Gymnasium contained a marble statue of Zeus by Scopas; and in another part a temple of Heracles, named Paeon. From a road led to two large inclosures, sacred to Heracles and Apollo, both of which were several centuries old and buildings. From the Gymnasium Pausanias went past the temple of Aesculapius, the Thracian temple of Alexandria, named Thracian temple of Athena, built by Poseidon, as a mythical king of Sicyon, but which had been fired by lightning, and of which nothing remains, but the altar: this temple may perhaps have
the one sacred to Athena Colocasia, mentioned by Athenaeus (iii. p. 72). There were two adjoining temples, one sacred to Artemis and Apollo, built by Epeius, and the other sacred to Hera, erected by Adrastus, who was himself worshipped by the people of Sicyon (Herod. v. 68; Pind. Nem. ix. 20). There can be little doubt that these ancient temples stood in the original Acropolis of Sicyon; and indeed Pausanias elsewhere (ii. 5. § 6) expressly states that the ancient Acropolis occupied the site of the temple of Athena. We may place these temples near the northern edge of the hill upon the site of the modern village of Vasilika; and accordingly the

remarkable opening in the rocks near the village may be regarded as the position of the Sacred Gate, leading into the ancient Acropolis. (Leake, _Morea_, vol. iii. p. 372.)

In descending from the Heraeum, on the road to the plain, was a temple of Demeter; and close to the Heraeum were the ruins of the temple of Apollo Carneius and Hera Prodomia, of which the latter was founded by Phalces, the son of Temenus. (Paus. ii. 11. §§ 1, 2.)

The walls of Sicyon followed the edge of the whole hill, and may still be traced in many parts. The direction of the ancient streets may also still be

---

PLAN OF THE RUINS OF SICYON (from the French Commission).

4. Probable site of the Gymnasium. v

VOL. II.
followed by the existing foundations of the houses; they run with mathematical precision from NE. to SW., and from NW. to SE., following the rule of Vitruvius. Few of the ruins rise above the ground; but there is a Roman building better preserved, and containing several chambers, which lies near the ridge separating the two levels of the hill. Leake supposes that this building was probably the praetorium of the Roman governor during the period between the destruction of the city, inflicted by Mummus, and his restoration by Julius Caesar, when Sicyon was the capital of the surrounding country; but more recent observers are inclined to think that the ruins are those of baths. West of this building are the theatre and the stadium; and the modern road which leads from Fasaliki to Stythamus runs between this Roman building and the theatre and then through a spacious stadium. The theatre was cut out of the rock, separating the two levels of the hill, as already described; its total diameter was about 400 feet, and that of the orchestra 100. Each wing was supported by a mass of masonry, penetrated by an arched passage. To the NW. of the theatre are the remains of the stadium, of which the two long sides, including the seats at the circular end, is about 680 feet. Col. Leake remarks that "the stadium resembles that of Messene, in having had seats which were not continued through the whole length of the sides. About 80 feet of the rectilinear extremity had no seats; and this part, instead of being excavated out of the hill like the rest, is formed of foundations, standing supported at the end by a wall of polygonal masonry, which still exists." There are also, in various parts of the hill, remains of several subterranean aqueducts, which supplied the town with water. The opening of one of them is seen on the SE. side of the theatre; and there is another opening now walled up W. of the modern village. The tyrant Nicocles escaped through these subterranean passages when Sicyon was taken by Aratus. (Plut. Ath. 9.)

V. Topography of the Sicyonia. — The territory of Sicyon was very small, and, in fact, was little more than the valley of the Asopus. In the upper part of its course the valley of the Asopus is confined between mountains, but near the sea it opens out into a plain, which is called Sicyonia. ("Ασυοντα" Strabo, viii. p. 388, ix. p. 408; Paus. ii. 1. § 1.) This plain was celebrated for its fertility (μύρα φρονίμων καὶ τῶν Ζωοῦντων νεώτερων, Lucian, Iasor. c. 18), and was especially adapted for the cultivation of the olive. ("Sicyonia, baca," Virg. Georg. ii. 319; Or. Ep. ex Post. iv. 15. 10; Strab. iv. 503.) The neighbouring sea supplied an abundance of excellent fish. (Athens i. p. 27.) It was separated from the Corinthia on the E. by the river Nemea, and from the territory of Pellene on the W. by the Sythas; and on the S. it was bounded by the territories of Phlius and Cleonea. At one time the territory of Sicyon must have extended even beyond the Sythas, since Gortyna or Domoula, which lay W. of this river, is described by Pausanias as belonging to the Sicyonians. (Pil- lewe, p. 571, a.) Between the Helissos and the Sythas was probably the river Selloeis, with the neighbouring village of Ephyrna, mentioned by Strabo (viii. p. 338). ("Ephyra, No. 5.) Sixty stadia S. of Sicyon, and near the frontier of Phlius, was the "Sicyonian town," the most important under the Roman emperors, and in the ultimate division of the province it became the metropolis of Pamphylia Prima. (Herod.}

SIDE.

was too narrow for carriages, was not the direct road from Sicyon to Phlius. The direct road was through the right of the Asopus; and the circumvallation through Titane to the left of that river. Between these two roads, at the distance of 20 stadia from Sicyon, was a sacred grove, containing a temple of the Eumenides. (Paus. ii. 11. § 3, seq.) East of Sicyon was Epicena, on the river Nemea. ("Eph.") in the same direction was the fortress Drebalus (Δρεμ. De Sicyonio Topographia, Regiomont. 1839; Leake, Morea, vol. iii. p. 351, seq.; Boblate, Recherches, c. p. 30, seq.; Ross, Reims en le Peloponnes, p. 59, seq.; Curtius, Peloponnes, vol. ii. p. 482, seq.; Beulé, Études sur la Peloponnes, p. 345, seq.)

COIN OF SICYON.

SIDAE (Σίδαι), a place in Boeotia, celebrated for its pomegranates. Hence the Boeotians called this fruit σίδας, though the more usual name was ολίβος. As the Athenians are said to have contended with the Boeotians for the possession of the place, it must have been upon the borders of Attica, but its exact site is unknown. (Athens iv. pp. 654, 651.)

SIDE (Σίδη), a town with a good harbour on the coast of Pamphylia, 50 stadia to the west of the river Melas, and 350 stadia of Attica. (Stad. Mar. Mag. § 214, foll.) The town was founded by Cumaeans in Aetolia. (Cyclus, Perip. p. 40; Strab. xiv. p. 667, comp. 654, Sicyon s. a.c.; Pomp. Mela, i. 15.) Arran (Arran. 26) who admits the Cumaman origin of the place, relates a tradition current at Side itself, according to which the Sidetae were the most ancient colonists sent out from Cumae, but soon after their establishment in their new home forgot the Greek language, and formed a peculiar idiom for themselves, which was not understood even by the neighbouring barbarians. When Alexander appeared before Side, it surrendered and received a Macedonian garrison. In the time of Antiochus the Great, a naval engagement took place off Side between the fleet of Antiochus, commanded by Hannibal, and that of the Rhodians, in which a considerable part of the Sidetae, since Gortyna or Domoula, which lay W. of this river, is described by Pausanias as belonging to the Sicyonians. At one time the territory of Sicyon must have extended even beyond the Sythas, since Gortyna or Domoula, which lay W. of this river, is described by Pausanias as belonging to the Sicyonians. (Pil- lewe, p. 571, a.) Between the Helissos and the Sythas was probably the river Selloeis, with the neighbouring village of Ephyrna, mentioned by Strabo (viii. p. 338). ("Ephyra, No. 5.) Sixty stadia S. of Sicyon, and near the frontier of Phlius, was the "Sicyonian town," the most important under the Roman emperors, and in the ultimate division of the province it became the metropolis of Pamphylia Prima. (Herod.}
SIDE. 995

SIDE (Σίδης, Σίδηρον, Σήνα), a German tribe on the coast of the Baltic, between the mouth of the river Sveba and that of the Vistula. (Ptol. ii. 11. § 14.) It is possible that Sibini (Σίδηρον) is only a corrupt form of the name of this same tribe. (Zeuss, Die Deutches, p. 154.) [L. S.]

SIDE (Σίδης), a town or townlets on the coast of Cappadocia, having its sources in Mount Parraydis, and flowing through the district of Sidene into the Euxine; at its mouth was the town of Side or Polemonium (Plin. vi. 4), from which the river is now called Poulemam Chai. (Comp. Hamilton, Researches, i. p. 370.) [L. S.]

SIDERIS, a river of Hycrania, mentioned by Pliny (vi. 16. s. 18), which flowed into the Caspian Sea. It cannot be determined which; whether he refers, but he states from the Caspian sea was called the Hycranian.

SIDERUS (Σίδηρος), according to Sceylax (p. 39) a promontory and a port-town on the coast of Lycia. The same place seems to be meant in Stephanus B. (v. c. Σίδηρος), when he calls Siderus a town and harbour. Col. Lyd. Leake (Asia Minor, p. 201), has shown that the town of Siderus is in all probability no other than Olympia, on the south of Phaselis. [L. S.]

SIDICINI (Σίδικινοι), a people of Central Italy bordering on the Samnite and Campanian. In the time of the geographers they had disappeared as a people, or become merged in their respective nation; and the Samnites or Campanians (Strab. v. p. 237), but at an earlier period they appear as a wholly independent people. Their chief city was Teanum, on the E. slope of the volcanic mountain group of Roccos Montana: but they had at one time extended their power considerably further to the N. and up the valley of the Liris, as the territory of Fregellae is said to have been under their dominion before they were dispossessed of it by the Volscians (Liv. viii. 29). It is clear however that this extension of their limits was of short duration, or at all events had ceased before they first appear in history. Strabo tells us expressly that they were an Ocean tribe (c. c.), and this is confirmed by the coins of Teanum still extant, which have Oceanic inscriptions. The S. was closely allied to the neighbouring tribes of the Campanians on the S. and the Aurunci and Ausones on the W. Hence Virgil associates the inhabitants of the Sidicinian plains (Sidicina sequens, ‘Aem. vii. 727) with the Aurunci and the inhabitants of Calis. The last city is assigned by Silius Italicus to the Sidicini, but this is erroneous, as he has assigned it to the Samnites. (Sil. Ital. viii. 511.) The name of the Sidicini is first mentioned in history in s. c. 343, when they were attacked by the Samnites, who had been long pressing upon their neighbours the Volscians. Unable to contend with these formidable assailants, the Sidicini had recourse to the Campanians, who sent an army to their assistance, but were easily defeated (Liv. vii. 36), and in their turn threatened by the whole power of the Samnites, invoked the assistance of Rome. During the war which followed (the First Samnite War), we lose sight altogether of the Sidicini, but by the treaty which put an end to it (in n. c. 341) it was particularly stipulated that the Samnites should be entitled to liberty and possession of a small tract of land on the sea, being people (Id. vii. 1. 8). Thus abandoned by the Romans to their fate the Sidicini had recourse to the Latins (who were now openly shaking off their connection with Rome) and the Campanians; and the Samnites were a second time drawn off from

SIDICINI (Σίδικινοι), a people of Central Italy bordering on the Sammites and Campanians. The S. was closely allied to the neighbouring tribes of the Campanians on the S. and the Aurunci and Ausones on the W. Hence Virgil associates the inhabitants of the Sidicinian plains (‘Sidicina sequens,’ ‘Aem. vii. 727) with the Aurunci and the inhabitants of Calis. The last city is assigned by Silius Italicus to the Sidicini, but this is erroneous, as he has assigned it to the Samnites. (Sil. Ital. viii. 511.) The name of the Sidicini is first mentioned in history in s. c. 343, when they were attacked by the Samnites, who had been long pressing upon their neighbours the Volscians. Unable to contend with these formidable assailants, the Sidicini had recourse to the Campanians, who sent an army to their assistance, but were easily defeated (Liv. vii. 36), and in their turn threatened by the whole power of the Samnites, invoked the assistance of Rome. During the war which followed (the First Samnite War), we lose sight altogether of the Sidicini, but by the treaty which put an end to it (in n. c. 341) it was particularly stipulated that the Samnites should be entitled to liberty and possession of a small tract of land on the sea, being people (Id. vii. 1. 8). Thus abandoned by the Romans to their fate the Sidicini had recourse to the Latins (who were now openly shaking off their connection with Rome) and the Campanians; and the Samnites were a second time drawn off from

332
their special attack on this petty people to oppose a more powerful coalition (ib. 2, 4, 5). It is clear that the Sidicini took part as allies of the Latins and Campanians in the war that followed; but we have no account of the terms they obtained in the general settlement of the peace in B.C. 338. It is certain, however, that they retained their independence, as immediately afterwards we find them engaging in a war on their own account with their neighbours the Aurunci. The Romans supposed the defence of the latter people, but before they were able to take the field, the Aurunci were compelled to abandon their ancient city, which was destroyed by the Sidicini, and withdrew to Susenna. (Liv. viii. 15.) The Ausonians of Cales had on this occasion been induced to make common cause with the Sidicini, but their combined forces were easily defeated by the Roman consuls. Cales soon after fell into the hands of the Romans; but though the territory of the Sidicini was overrun by the consuls of B.C. 332, who established their winter-quarters there to watch the movements of the Samnites, their city of Teanum still held out (ib. 16, 17). Nor do we know at what time it fell into the power of the Romans, or on what terms the Sidicini were ultimately received to submission. But it is probable that this took place soon after, when we are told that the consul Decius Mus advanced to attack the Samnites "per Sidicinium agrum" in a manner that certainly implies the district to have been at that time friendly, if not subject, to Rome (Liv. x. 14).

After this the name of the Sidicini never appears in history as that of a people, but their territory (the "Sidicinium ager") is mentioned during the Second Punic War, when it was traversed and ravaged by Hannibal on his march from Capua to Rome (Liv. xxvi. 9). The Sidicini seem to have gradually come to be regarded as a mere portion of the Campanian people, in common with the Ausonians of Cales and the Aurunci of Susenna, and the name still occurs occasionally as a municipal designation equivalent to the city of Teanum. (Strabo, iv. 2, 2; Cluver Phil. ii. 41.) Strabo speaks of them in his time as an extinct tribe of Ocean race; and under the Roman Empire the only trace of them preserved was in the epipheth of Sidicinium, which still continued to be applied to the city of Teanum. (Strab. v. p. 237; Plin. iii. 9; Psal. iii. 1. 68; Sil. Ital. 531, xii. 534.)

SIDIDONE (αδεδιδονη or αδυδονη, Arrian, Ind. e. 37), a small place on the coast of Campania, noticed by Arrian in Nearchus's voyage. Kämpflhorne thinks that it is represented by a small fishing village called Mogon; but Müller suggests, what seems more probable, that it is the present Vomano. (Geog. Graec. Minor, p. 339, ed. Müller, Paris, 1855.)

SIDLOGUS or SIDOLEUCUS, in Gallia, is mentioned by Ammianus Marcellinus when he is speaking of Julian's march from Augustodunum to Autissiodurum. Sidolocum is supposed to be Souldes (Chora.)

SIDON (Σιδών; Eth. Σιδώνας), a very ancient and important maritime city of Phoenicia, which, according to Josephus, derived its origin and name from Sidon, the firstborn son of Canaan (Gen. x. 15; Joseph, Ant. i. 6, § 2), and is mentioned by Moses as the northern extremity of the Canaanish settlements, as Gaza was the southernmost (Gen. x. 19); and in the blessing of Jacob it is said of Zelulion "his border shall be unto Sidon" (xlix. 13). At the time of the Exod. of the children of Israel, it was already distinguished by an apellation of "the Great" (Josh. x. 24), and was in the extreme west, which was drawn from Mount Hor in Num. xxxvi. 47 to the sea of Sidon, where it is mentioned in the list of the tribe of Asher, as also in "the strong city" (Josh. xix. 28, 29). It was one of the cities from which the Israelites did not drive out inhabitants. (Judg. i. 31.)

As the origin of this ancient city, in race and manufactures, has been ascribed to Sidonia, it only remains in this place to name its geographical position and relations with other states, either to serve, illustrate, or illumine, its history.

It is stated by Josephus to have been a journey from the site of Dam, abdomenum (Ant. v. 3, § 1). Strabo places it 400 stades from Byblos, 200 N. of Tyre, and describes it as a town on a fair haven of the continent. It has attempted to settle the question between cities, but remarks that while Sidon is celebrated by the poets (of whom Homer does much as name Tyre), the Sidonians hold for their city a more honour to Tyre, etc., § 25, 31, etc. dotsa's account of the origin of the name given under Phoenicia (p. 607, b.), viz. to be in accordance with that of the historian Justin follows it, but gives a different etymology of the name: "Conditus urbe, quam a Sidon apud Sidonius appellantur, nam placuit Phoeniciis vocari;" but this is an error corrected by Xan and Gennadius (Lecr. c. e. Ἰούδα, who says Ἰούδα, "to hunt or smite" greek, kteis, indiscriminately, so that the town must have taken its name from the occupation of the inhab." fishers, and not from the abundance of sea fish. Ritter refers to the parallel case of Bed; the sea of Tiberias. (Erdkunde, Syria, etc. Pliny, who mentions it as "artifices viviique Rostociam parum," places it between Tyre and Vik (v. 19). It lay xxxi. n. p. from Byblos, xxiv. from Tyre. Itinerary of Antoninus (p. 149). But the modern Hierosolymitanum reckons it xxviii. in placing Haldia and Parthian between Scolymax mentions the closed harbour of Scolym Sea, ed. Hudson), which is described by a later writer, Achille Ter. A. D. 500), who represents Sidon as closed: Assyrian sea, itself the metropolis of Phoenicians, whose citizens were the seamen. Theba. A double harbour shelters the wide, but where the bay is veered against the hand side, a second mouth has been formed, which the water again enters, opening may be a harbour as of the harbour at this inner basin, the vessels could lie securely in the winter, while the outer one served for summer. (Cited by Rodel, Landsch. p. 101.) Inner port Rodel conjectures, with great probability, is the closed port of Scolymax, and to be identified with the ancient harbour described by Strabo, where he says there was one closed and one open harbour, called the Egyptian. The best site is given by Ptolemy. "It was always" says, "on a rising ground, defended by the north and west. The present city is now..."
SIDONES.

The north side of the hill. The old city seems to have extended further east, as may be judged from the foundations of a thick wall, that extends from the sea to the east; on the south it was probably bounded by a rivulet, the large bed of which might serve for a natural fossa; as another might which is on the north side. If the city extended so far, as some seem to think it did, and that it stretched to the east as far as the high hill, which is about three quarters of a mile from the present town. On the north side of the town, there are great ruins of a fine fort, the walls of which were built with very large stones, 12 feet in length, which is the thickness of the wall; and some are 11 feet broad, and 5 deep. The harbour is now choked up... This harbour seems to be the minor port mentioned by Strabo (xvi. p. 756) for the winter; the outer one probably being to the north in the open sea between Sidon and Tyre (P), where the shipping rides in safety during the summer season." (Observations on Palestine, p. 86.) The sepulchral grots are cut in the rock at the foot of the hills; and some of them are adorned with pilasters, and handsomely painted.

The territory of the Sidonians was originally confined towards the north by the proximity of the hostile Gibbites, extended southwards to the tribe of Zebulon, and Mount Carmel; but was afterwards limited in this direction also by the growing power of their rivals the Tyrians. (Ritter, l. c. p. 43, &c.)

SIGEUM.

Sigeum (Σιγεύμ), a small town of Ionia, being the capital of the district of the same name in Strabo (vii. p. 306) under the name of Ζηωνεσ as a branch of the Bastarnae. (L. S.)

SIDONIA. (Σιδωνία.)

Sidus (Σιδύς). Σιδωνιάτα κόμη, Hesych.: Εθ. Σιδωνιατος, a village in the Corinthia, on the Saronic gulf, between Crammyon and Schoenous. It was taken by the Lacedaemonians along with Crammyon in the Corinthian War, but was recovered by the Peloponnesians. (Xen. Hell. iv. 4, § 13, iv. 5, § 19.) It probably stood in the plain of Susidi. (Scylax; Stephan. B. s. v.; Plin. iv. 7. s. 11; Bollay, Recercches, &c. p. 35; Leake, Peloponnesia, p. 397; Curtius, Peloponnesos, vol. ii. p. 555.)

SIDUSSA (Σιδουσά), a small town of Ionia, being the capital of the district of the same name in Thucyd. viii. 24; Stephan. B. s. v.) Pliny (v. 38) erroneously describes it as an island off the coast of Erythraea. It is probable that the place also bore the name of Sidus (Σιδύς), as Stephanus B. (s. v.) mentions it as a town in this territory of Erythraea.

DYMA (Σιόμα: Εθ. Σιόμας), a town of Lycia, on the southern slope of Mount Cragus, to the north-west of the mouth of the Xanthus. (Plin. v. 28; Stephan. B. s. v.; Ptol. v. 3. § 5; Hierocles, p. 684; Codrusus, p. 344.) The ruins of this city, on a lofty height of Mount Cragus, have first been discovered and described by Sir H. Rawlinson (Lycia, pp. 151, foll.) They are at the village of Torsoorom Ηίσαδ, and consist chiefly of splendidly built tombs, abounding in Greek inscriptions. The town itself appears to have been very small, and the theatre, agora, and temples, are of diminutive size, but of great beauty. (L. S.)

SIELEIDIA. (Ταύροπολε.)

SIGA (Σίγα), Ptol. iv. 2. § 2, a commercial town of Mauritania Caesariensis, seated near the mouth of a river of the same name in a large bay. The mouth of the river formed the port of the city, at a distance of 3 miles from it (Sigenisia Portus, Itin. Anti. p. 13), opposite to the island of Acras, on the highroad, and near Chita, the residence of Stylyx. (Strab. xvii. p. 829; Plin. v. 2. a. 1.) In Strabo's time it was in ruins, but must have been subsequently restored, since it is mentioned in the Itinerary (p. 12) as a Roman municipium. (Comp. Ptol. l. c.; Mela, i. 5; Scylax, 51, 52.) According to Shaw (Travels, p. 12), who, however, did not visit the place, it is supposed to have been the present Tacumbrida; others identify it with the Tessuclus of the Arabs, at the mouth of the Tafna, near Rasum. (T. H. D.)

SIGA (Σίγα), Ptol. iv. 2. § 2, a river of Mauritania Caesariensis, falling into a bay of the sea opposite to the island of Acraa (now Caracolite). Scylax (p. 51) calls it Σιγανος. Probably the present Tafna.

SIGEUM (Σιγεύμ or Σιγεύδα Άσης), a promontory in Troas, forming the north-western extremity of Asia Minor, at the entrance of the Hellespont, and opposite the town of Eileauns, in the Thracian Chersonese. Near it the naval camp of the Greeks was said to have been formed during the Trojan War. (Herod. vii. 313; Strab. xiii. pp. 595, 603; Pomp. Mela, i. 18; Plin. v. 33; Ptol. v. 2. § 3; Serv. ad Aen. ii. 312.) This promontory is now called Tenisheh.

Near the promontory was situated the town of Sigeum, which is said to have been an Aeolian colony, founded under the guidance of Archelaus and Mytilene; it stood on the Priamian Troy in building this new place. But some years later the Athenians sent troops under Phrynios and expelled the Mytileneans; and this act of violence led to a war between the two cities, which lasted for a long time, and was conducted with varying success. Pittacus, the wise Mytilenean, is said to have slain Phrynios in single combat. The poet Alcaeus also was engaged in one of the actions. The dispute was at length referred to Periander, of Corinth, who decided in favour of the Athenians. (Strab. xii. p. 599; Herod. v. 95; Stephan. B. s. v.; Diog. Laërt. i. 74.) Henceforth we find the Pisistratides in possession of Sigeum, and Hippias, after being expelled from Athens, is known to have retired there with his family. (Herod. viii. 55.) The site of Sigeum was destroyed by the inhabitants of Ilium soon after the overthrow of the Persian empire, so that in Strabo's time it no longer existed. (Strab. xiii. p. 600; Plin. v. 33.) A hill near Sigeum, forming a part of the promontory, was believed in antiquity to contain the remains of Achilles, which was looked upon with such veneration that the name of a small town seems to have risen around it, under the name of Achilles (Achilleum). This tomoh, which was visited by Alexander the Great, Julius

3 s 3
Caesar, and Germanicus, is still visible in the form of a mound or tumulus.

SIGMAN (Σιγμαν), a river in Galilæa. Ptolemy (ii. 7. § 3) places the mouth of the Sigman between the Atria (Aedow) and the Goruse; and between the Sigman and the Gorusse he places Curiantius, a town on the north of Marcellus (Porphyry, who has the same Sigmanus, gives two distances between the mouth of the Aedow and that of the Sigman, one of which is 500 and the other 450 stadia. We cannot trust either the latitudes of Ptolemy or the distances of Marcellus along this coast. There is no river between the Aedow and the Goruse that is mentioned by any of the ancient geographers.

The place, marked by the ancient coins and inscriptions, is called Byblis (σημαν), which flows into the Bessus of Arcachon. But Gosselin supposes the Sigman to be the Messina, which is about half-way between the Aedow and the Bessus of Arcachon.

SIGNIA (Σιγνία), called also Sigmis, is an ancient city of Latium, situated on a lofty hill at the NW. extremity of the Volscian mountains, looking down upon the valley of the Sacco. It is represented by ancient authors as a Roman colony founded by Tarquinius Superbus, at the same time with Circeii.

(Liv. i. 55; Dionys. iv. 63.) No trace of it is found before this; its name does not figure among the cities of the Latin League or those of which the foundation is expressly stated or told by Dionysius (L.c.), that it originated at first in a fortuitous settlement of some Roman troops encamped in the neighbourhood, which was afterwards enlarged and strengthened by Tarquin, certainly points to the fact of its being a new town, and not, like so many of the Roman colonies, a new settlement in a province that had been conquered. It is said on the expulsion of Tarquin, into the hands of the Roman Republic, as it was attacked in a.c. 497 by Sextus Tarquinius, who in vain endeavored to make himself master of it (Dionys. v. 59). A few years later, it received a fresh colony, to recruit its exhausted population (Liv. ii. 21). From this time it appears to have continued a dependency of Rome, and never, so far as the documents written in the period commonly is, though that people held all the neighbouring mountain country. Signia must indeed, from its strong and commanding position, overlooking all the valley of the Trevisus and the broad plain between it and Praeneste, have been a point of the utmost importance to the Romans and Latines, especially as securing their communications with their allies the Hernienses.

In a.c. 346 the Signians shared in the general defection of the Latins (Liv. viii. 13); but we have no account of the part they took in the war that followed, or of the terms on which they were received to submission. We know only that Signia became again (as it had probably been before) a Colony of Rome, and is mentioned although during the first Punic War. On that occasion it was one of those which continued faithful to Rome at the most trying period of the war (Liv. xxvii. 10), and must therefore have been still in a flourishing condition.

On account of its strong and secluded position we find it selected as one of the places where the Carthaginian hostages were deposited for safety (Id. xxxii. 26); but this is the last mention of it that occurs in history, except that the battle of Saccropotus is described by Plutarch as taking place near Signia (Plut. Scip. 28). That decisive action was fought in the plain between Signia and Praeneste (Saccropotus). It, however, certainly continued during the later ages of the Republic and under the Empire to be a considerable municipal town. It received a fresh body of colonists under the Triumvirs, but it is doubtful whether it retained the rank of a Colonia. Pliny does not reckon it as such, and though it is termed "Colonia Signina" in some inscriptions of the 1st century A.D. (Suet. v. p. 237; Plin. iii. 5. a. 9; Sil. Ital. viii. 378; Lüb. Colon. p. 237; Zumpt, de Col. p. 338; Gruter, Insam. p. 490. 5 &c.) Signia was chiefly noted under the Roman Empire for its wine, which, though harsh and astrigent, was valued for its medical qualities, and seems to have been extensively used at Rome (Suet. Calig. 237; Plin. xiv. 6. a. 8; Athen. i. p. 27; Sil. Ital. i. c.; Martial. xiii. 116; Gela. de Medic. iv. 5). Its territory produced also pears of a celebrated quality (Juv. xi. 73; Plin. xv. 15. a. 16; Colum. v. 10. § 18; Macrobr. Sat. ii. 15), as well as excellent vegetables, which were sent in large quantities to Rome (Colum. x. 181). These last were grown on a hill near the city, called by Columella Mons Lepius, apparently one of the underfalls of the Volscian mountains; but there is no authority for appending the name (as modern writers have frequently done) to the whole of that mass of mountains [Lepius Mons]. Signia also gave name to a particular kind of cement known as "opus Signinum," and it is known to have existed at the time of Martial, who speaks of the taste of the water (Plin. xxxv. 12. a. 46; Colum. i. & § 13, viii. 15. § 3; Vitruv. viii. 7. § 14).

The modern town of Signai (a poor place, with about 3500 inhabitants) occupies a part only of the site of the ancient city. The latter embraced within the circuit of its walls the whole summit of the hill (Colum. x. 181). These last were grown on a hill near the city, called by Columella Mons Lepius, apparently one of the underfalls of the Volscian mountains; with which it is connected only by a narrow neck or isthmus. The line of the ancient walls may be traced throughout its whole extent: they are constructed of large masses of stone (the hard limestone of which the hill itself consists), of polygonal or roughly squared form, and afford certainly one of the most remarkable specimens of the system of walling at that time in use. At the entrances were gates, either at the Ponticus, or Pelasgicus, of which striking instances are found also in other cities in this part of Latium. The city had in all five gates, two of which still retain their primitive construction; and one of these, known as the Porta Superba, presents a remarkable instance of the rudest and most massive Cycloidal construction. The archivolt is formed of single masses of stone not less than 15 feet in length, laid across from one impost to the other. This gate has been repeatedly figured; another, less celebrated but scarcely less remarkable, is found on the SE. side of the town, and is constructed in a style precisely similar. The age of these walls and gates has been a subject of much controversy; on the one hand, they have existed a city remains and mass of ruins in history, except that the battle of Saccropotus is described by Plutarch as taking place near Signia (Plut. Scip. 28). That decisive action was fought in the plain between Signia and Praeneste (Saccropotus). It, however, certainly continued during

The annexed figure is taken from that given by Abeken (Mittel Italien, pl. 2).
the description of the remains themselves, see the *Annali dell’ Instituto Archeologico* for 1829, pp. 78—87, 357—360; *Classical Museum*, vol. ii. pp. 167—170; Abeken, *Mittel Italien*, p. 140, etc.) The only other remains within the circuit of the walls are a temple (now converted into the church of *S. Pietro*) of Roman date, and built of regularly squared blocks of tufa; and nearly adjoining it a circular reservoir for water, of considerable size and lined with the "opus signinum." (*Annali*, i. c. p. 82.) Several inscriptions of imperial date are also preserved in the modern town. [E. H. B.]

**GATE OF SIGNIA.**

SIGIRIANE (ἡ Σιγιριά, Strab. xii. p. 595), a district of Media Atropatene, near the Caspian Gates. Ptolemy calls it *Σηριανα* (vii. 2. § 6). [V.]

SIGRIUM (Σιγριον), the westernmost promontory of the island of Lesbos, which now bears the name of *Sigri* (Strab. xiii. pp. 616, 618.) Stephanus B. (s. v.) calls Sigrium a harbour of Lesbos. [L. S.]

SIGULONES (Σίγουλονες), a German tribe mentioned by Ptolemy (ii. 11. § 11) as inhabiting the Cimbrian Chersonesus, to the north of the Saxonites, but is otherwise unknown. [L. S.]

SIGYNNE (Σιγυνός, Herod. v. 9; Σιγυνος, Apoll. Rhod. iv. 320; Orph. Arg. 759; Σιγυνος, Strab. xii. p. 520.) The only name of any Trans-Danubian population, other than Scythian, known to Herodotus was that of the Sigynnes, whom he seems to have described as the Thracians described to either himself or his informants. The Thracian notion of one of these Sigynnes was that he wore a Median dress, and considered himself a descendant of the Medes; though how this could be was more than Herodotus could say. "Anything, however, is possible in a long space of time." The horses of the Sigynnes were undervalued — ponies, indeed, rather than horses. They were flattened and long-haired; their coat being five fingers deep. They were too weak to carry a man on their back; but not too weak for harness. In chariots they were light and quick; and in the drawing of chariots the Sigynnes took great delight.

We must look on Sigynnes as a general and collective name for a large assemblage of populations; insomuch as their country is said to extend as far westwards as the Heneti on the Adriatic. Say that it reached what was afterwards the frontier of Pannonia. On the north it must really have been bounded by some of the Scythian districts. In the language of the Ligyans above Massilia, the word *Sigynna* means a merchant, or retail-dealer, or carrier. In Cyprus they call spaces by the name *Sigyama*. The resemblance of this word to the name *Zigemna*—*Gipsy* has often been noticed. Word for word, it may be the same. It may also have been applied to the gipsies with the meaning it has in Ligyan. It does not, however, follow that the Sigynnes were gipsies. [G. W.]

**SILA (Σίλλα)**

1. The torrent more usually known as "the River of Egypt," the southern boundary of the Promised Land, identified by the LXX. with Rhinocorura, the modern *Wady-ed-Arish*. [RHNOCORURA.] (Joshua, xiii. 3; 1 Chron. xiii. 5; Jeremiah, ii. 18.) In the first cited passage, the LXX. read ἄνδρα δοῦλου τῆς κατὰ ποταμοῦ *Αλεξάνδρου*; in the second, ἄνδρα ἀρσενικοῦ *Αλεξάνδρου*, and only in the last is a proper name retained, and there it is changed to Γιούρ. St. Jerome (*Onomaest. s. v.*), following Eusebius, describes it as before Egypt, and speaks of a village of the name between Aelia and Eleutheropolis, which it is difficult to imagine that they could have identified with the Sibor above named. St. Jerome says that he has said more on the subject in *libris Herodoto-Callistiani quaestionum*, but the passage is not to be found there. In his "Epistulam Paulae" he writes, "veniam ad Aegypti flumen Sior, qui inter pretatur turbidus" (p. 677); but he here probably means the Nile, which is sometimes supposed to be called Sibor, as in the passage of Jeremiah above referred to. The village named by Eusebius and St. Jerome doubtless marked the site of the city of the tribe of Judah, situated in the mountains, and written *Zior* in the authorised version, but *gipsy* in the original (Joshua, xvi. 54), and in the LXX. *Σιλα*, (al. *Zepal*).

2. SIHOR or SIHOR LIBNATH (LXX. Σίχωρ Λήναθα), perhaps to be taken as two names, as by the LXX., Eusebius, and St. Jerome, who name "Sior in tribuo Asir," without the addition of Libnath. It is mentioned only in the border of Asher. (Joshua, xi. 26.) The various notices concerning the place or places are stated by Bonnerius (*Comment. in loc.*), but none are satisfactory, and the site or sites have still to be recovered. [G. W.]

SILA is the name given in ancient times to a part of the Apennines in the S. of Bruttium, which were clothed with dense forests, and furnished abundance of pitch, as well as timber for ship-building. Strabo tells us it was 700 stadia (700 geog. miles) in length, and places its commencement in the neighbourhood of Locri. (Strab. vi. p. 261.) It is evident, therefore, that he, as well as Pliny (iii. s. 10), who notices it in connection with Rhegium and Locri, assigned the name to the southernmost group of the Apennines (the range of *Aspromonte*), S. of the isthmus which separates the Terinese and Scytlc Gulf. At the present day the name of *Sila* is given only to the detached and outlying mountain group N. of that isthmus, and E. of Cosenza (*Consentia*.) It is probable that the name, which evidently means only "the forest," and is connected with the Latin *silva*, and the Greek *silan*, was originally applied in a more general sense to all the forest-covered mountains of this part of Calabria, though now restricted to the group in question. [E. H. B.]
SILACEÆA. 

SILACEÆA, a place in Lower Pannonia, on the south of Lake Peisae. (It. Ant. p. 335, where it appears in the ablat. form Silaceae). Its exact situation and circumstances are not mentioned. [L. ins.]

SILANA, a town in the NW. of Tuscany, near the frontiers of Aethamnia, mentioned along with Gomphi and Tricca by Livy. Leake conjectures that it occupied the site of Požăna, near which are several squared blocks of ancient workmanship. (Liv. xxxvi. 13; Leake, Northern Greece, vol. iv. p. 329.)

SILARUS (Σιλάρος, Potl.; Σιλάρος, Strab.; Sele), a considerable river of Southern Italy, flowing into the gulf of Poisiona, and forming the boundary between Campania and Lucania. It rises in the mountains near Tevra, on the confines of the Hirpini, and not far from the sources of the Ausus; thence flows for some distance in a southerly direction to the sea, and just before reaching the sea, a short distance above the mouth of the river, it divides into two branches (Σιλάρος Καλοντικος Σολεον), a considerable stream, which joins it from the SE.; it then turns to the SW. and pursues that direction to the sea, which it enters about 5 miles to the N. of the city of Paestum. About 5 miles from its mouth it receives another important tributary in the Calore (Calora), which joins it from the S. Between the mouth of the river and the town of Sila, which is the place where the Silaurus rises the mountain group of Mount Alburnus, mentioned by Virgil in connection with that river. The "luii Silari" of the same author are evidently the same with the extensive woods which still clothe the valley of the Sele from its confluence with the Tisagro to within a few miles of the sea. (Vitruvius, lib. ii. 8, 10.) The Silaurus and the Strabo and Pliny recognized boundary between Campania (including under that name the land of the Picentini and Lucania; but this applies only to its course near its mouth, as Eburi (Ebuon), though situated to the N. of it, is included by Pliny among the towns of Lucania. (Strab. v. p. 251, vi. p. 252; Plin. iii. 5. se. 9, 10, 11. a. 15; Potl. iii. 1, 8; Mel. ii. 4; Suet. Julius, 30.) A peculiarity of its waters, mentioned by several ancient writers, is that they had the power of petrifying stones, leaves, and other substances immersed in them. (Strab. v. p. 251; Plin. ii. 103. a. 106; Sil. Ital. vii. 852.)

The name is written by Lucas and Columella Sileus. The same form is found in Vibius Severus, indicating an approach to the modern name of Sele. (Lucan, ii. 426; Colum. x. 136; Vib. Seq. p. 18.) [E. H. B.]

SILAS (Σιλας, Arrian, Ind. c. 6; Strab. xv. p. 703; Diod. ii. 37), a river of the Upper Pamfyl, the story of which, as told by ancient writers, is clearly related to the watering of the Tarsus and others, the water of this river was so light that nothing could swim in it. Lassen, who has examined this story with his usual acuteness, has shown from the Makabhrata that there was a stream in the northern part of India called the Sila, the water of which was endowed with a highly petrifying power, from which circumstance the river obtained its name. The story of the river Sila is a fragment of a strange tradition. (Zeitschr. f. Kunde des Morgenlandsa, ii. p. 63.) It may be remarked that the name occurs differently written. Thus Diodorus writes Σιλας πωσαυδς; Antigonus Σιλας υργην. (Mirab. a. 161.) Pliny evidently refers to the same story, but calls the river Sede in his quotation from Ciceron (xiii. 2. a. 18). [V.]

SILBIUM (Σιλβιος; Eich. Silvianus), a small town of Phrygia, on the east of Apsame and Celcanea; and beyond the source of the Macedon (Psil. v. 2. § 25; Plin. v. 29). In the Byzasus, which is the name of the river, there are several rivers of the same name, such as Siluvia (Hieroc. p. 667), Silsbas (Cinnamus, vi. 15), or Sublum and Silbasa (Origen. Christ. p. 809). This place, which was the seat of a bishop, belonged to the convent of Apsame. Modern travellers seek its site in the neighbourhood of Semideba. (Kiepert, in Prus's Führer, p. 270; Linschinger, p. 37.) Sili or SILI (Σιλής or Σιλι, Strab. xv. p. 77,) a tribe of Attalians, who used the horns of the oryx, a species of gazelle, as weapons. Some have considered this to be the same as the Athenian Σιλης of Agathaichides, p. 42. (Comp. Diodor. iii. 8.) [T. H. D.]

SILENCE FLUMEN, a river in Hesperia Baetica, in the neighbourhood of Cordoba, or more correctly the Guadajos, or one of its tributaries. (Hist. B. A. 57.)

SILINDIUM (Σιλιννίου), a small town of Tres at the foot of Mount Ida, is mentioned only by Stephano B. (e. w.) on the authority of Demetrias of Scepsos. [L. S.] SILENGA (Σιλεγγα), a tribe of Getae, which was on the south of the Semnones, between the western slopes of Mons Aisciburgius and the river Albus. (Potl. iii. 11. § 16.) It is generally supposed that this name is the one from which the modern Silace or Schlesies is formed. (Latham, Tacit. Germ. p. 136; Palacky, Gesch. von Böhmen, vol. i. p. 385.)

SILIS (Sele), a small river of Veneza, in the N. of Italy, which rises in the mountains above Treviri (Tartresium), and flows into the lagunes at Altinum (Altino). It is still called the Sele. (Plin. iii. 18. a. 22.) [E. H. B.]

SILLA (Σιλλα, Iaid. Charax, § 2, ed. Müller, 1835), a river of Apollonia, a district of Aavys, which, according to Iudius, flows through the centre of the town of Artemis. [Artemis.] There can be little doubt that this is the river now called the Diaplais. It is also, in all probability, the same as that called by Steph. B. (e. v. Aavys) the Delias. Forger imagines that the Diobus of Ammiannus (xxii. 6), the Durus of Zosimus (ii. 25), and the Gorges of Pausanias (i. 25. § 11) refer to the same. It is however, more likely that the first of these streams is the same as that elsewhere called the Zabatas. [V.]

SILO or SHILOH (Σιλόος; Ech. Echnebath), a town of Palestine, in the tribe of Ephraim, in the mountain region according to Josephus (Ant. v. 1), where the ark and the tabernacle were first established by Joshua on the settlement of the land by the tribes of Israel. There also were assembled the national convocations for the division of the land and the transaction of other public business affecting the whole Union. (Joshua, xviii. 1, 10, xix. 1, xxii. 6.) There Samuel ministered before the Lord is the end of the days of Eli the high-priest (1 Sam. i. 1) until the disastrous battle of Aphaek, from which period the decline of Shiloh must be dated (ch. iv.) until its desolation became proverbial in Israel. (Psal. xxiv. 60; Jeremiah, vii. 12, xxvii. 6, 9.) Its situation is very particularly described in the book of Judges (xxii. 19), as "on the north side of Bethel, on the east side of the highway that goeth up from Bethel to Shechem, and on the south of Lebonah."
SILSOAM.

St. Jerome places it xii. M. P. from Neapolis (＝Shechem＝Nablus), in the toparchy of Acraebatena. (Onomast. a. v.) Its ruins were shown, and the remains of the altar among them, in his day. (Comment. in Sophon. i. 14, Epitaph. Paulus.) From these notes the site is easily identified with the modern Silwan, on the east of the Nablus road, about four hours south of that town, situated over against a village called EL-LATI. It is likewise evident the name also to a Khan on the road-side. Silwan is merely a heap of ruins lying on a hill of moderate elevation at the south-eastern extremity of a valley through which passes the great north road from Judaea to Galilee. "Among the ruins of modern houses are traces of buildings of greater antiquity, and at some distance, towards the east, is a well of good water, and in the valleys many tombs excavated in the rock." (Robinson, Bibl. Res. vol. iii. pp. 86—89.) Among the tombs of Silwan, if Belzoni's conjecture is correct, is to be sought the very slender authority on which the pagans rested their assertion that their demigod Silenus was buried in the town. The site of this temple is from the Syrian and the topography of the tell. [Silwan] is evidently the chief deity being found on the coins of Flavia Neapolis, certainly lends contenance to his ingenious hypothesis that the false originated in the imaginary correspondence between this name and the town of Ephraim. (Palaeastina, p. 1017.) But the error which he has copied from Benjamin of Tudela, of placing the tomb of Samuel in Silwan, is obviously attributable to a lapse of memory on the part of that writer, as no one has ever identified Silwan with the modern Nebi Samwil. The error is corrected by Asher. (Itinerary of R. Benjamin of Tudela, ed. A. Asher, vol. i. p. 78, vol. ii. p. 95.)

[Jerusalem, p. 28 b.]

SULPIT, a town in Hispania Baetica, N. of the Isleta, and apparently in the Sivra Morena. (Liv. xxviii. 12.) Probably Linarens. [T. H. D.]

SULISILIS (Not. Imp.). A fort situated on the right bank of the Nile, between Ombos and Apollinopolis Magna in Upper Aegypt. The original name of this place is nearly preserved in the modern Sukilisilis. The site of this fort is the bed of the mountain now called Gebel Saleh, or "hill of the claim," and was one of the posts which commanded the passage of the river. For at this spot the Arabian and Libyan hills approach each other so nearly that the Nile, contracted to about half its ordinary width, seems to flow between two perpendicular walls of sand. Silisilis was one of the principal seats for the worship of the Nile itself, and Hamamet II. consecrated a temple to it, where it was worshipped under the emblem of a crocodile and the appellation of Hapimou. The stone quarries of Silisilis were also celebrated for their durable and beautiful stone, of which the great temples and monuments of the Thebais were for the most part built. (Wilkinson, Mod. Egypt and Thebes, vol. ii. p. 283.)

[W. B. D.]

SILVANECTES. This name occurs in the Notitia of the Provinces of Gallia, where the chief town is called Civitas Silvanectum. In the Notit. Imp. the Silvanectes are placed in Belgica Secunda, but the name there denotes a town, according to the unwritten history of that province, the residence of the names of their people. It appears almost certain that the Subanetics of Potemien (ii. 9. § 11) is the same name as Silvanectes or Silvanecti. Potemien places the Subanetics east of the Seine, and makes Ratomagus their capital. But this Ratomagus is conjectured to be the same as the Augustomagus of the Itin. and of the Table, which is Senlis [Augustomagus].

Pliny (iv. c. 17) mentions the Ulanetani in Gallia Belgica: "Sussiones liberi, Ulanetani liberi, Tungri." It is possible that this too may be a corrupted form of Silvanecti, for the modern name Senlis confirms the form Silvanecta, and the name of the Ulanetani is otherwise unknown. [G. L.]

SILVIA, a place in Illyria, on the road from Sirmium to Salona. (Itin. Ant. p. 289.) It is probably the same town as the Salvia of Ptolemy (Sallav.) It is identified with Karpis by La pici. [T. H. D.]

SILVITUM (Sylviato; Eth. Silvius). A town of Apulia in the interior of the country. It is noticed by Strabo (vi. p. 283) as the frontier town of the Pescatelli, and its name is noticed by Pliny among the municipal towns of Apulia (Plin. iii. 11. a. 16). But at a much earlier period it is mentioned by Diodorus as an Apulian town, which was wrested from the Samnites by the Romans (Diod. xz. 80). Our only clue to its position is derived from the Itineraries, which place it 20 miles from Venusia, on the branch of the Appian Way which led direct to Tarentum. This distance coincides with the site of a town (now destroyed) called Gurnacnune, situated about midway between Spina-zalolo and Poggio Orsino, and nearly due E. of Venus (Prattiali, Via Appia, iv. p. 476; Romanelli, vol. ii p. 188.).

[E. H. B.]

SILVURA, an island of Britain, separated only by a narrow strait from the coast of the Dumnonii, who inhabited the most SW. point of Britannia. (Solin. c. 22.) It is probably the same island which Sulpicius Severus (ii. 51) calls Silvina, and seems to mean the Scilly Islands.

SILVURES (Silvres, Pltol. ii. 3. § 24), a powerful and warlike people in the W. part of Britannia Roma, whose territory was bounded on the B. by the estuary of the Sabrina. The important towns of Isca and Venta belonged to them. Tacitus (Agr. 11) calls them descendants of the Iberi of Spain, and states that the country is covered with woods and mountains. Batavus (Assia Minor, p. 188; Spratt and Forbes, Travels in Lycia, vol. i. p. 227; vol. ii. pp. 16, 274.) Although subdued by the Romans, they caused them continual alarm; and they were the only people of Britain who, at a later period, maintained their independence against the Saxons. (Bedae, Hist. Eccl. i. 13, seq. cf. Tae. Ann. xii. 2; Plin. iv. 16. a. 30.)

[T. H. D.]

SIME'NA (Simene; Eth. Simene), a town on the coast of Lycia, 60 stadia from Aperia (Plin. v. 27; Step. B. s. v.; Stadtkam. Mar. Mag. §§ 239, 240, where it is called Somena, Simene; comp. Leake Asia Minor, p. 188; Spratt and Forbes, Travels in Lycia, vol. i. p. 227; vol. ii. pp. 26, 274.)

[S. E.]

SIMENI. [Icet.]

SIMION. [Palaestina, p. 529, b.]

SIMITTU (Ziitou revenue, Pltol. iv. 3. § 92), called by Pliny (v. 4. § 4) Simittanen Oppidum, a Roman colony in the interior of Numidia, on the road from Cirta to Carthage, 7 miles to the W. of Bulla Regia. (Itin. Ant. p. 43.) There were some mineral waters 5 miles E. of the town (P.) It lies to the N. of the present Ain Semil, on the Qued-el-Bull, 2 leagues to the W. of Bull. [T. H. D.]

SIMOIS (Ziitou), a small river of Troas, having its source in Mount Ida, or more accurately in Mount
Carysma, which passed by Ilium, joined the Scamander below that city. This river is frequently spoken of in the Iliad, and described as a rapid mountain torrent. (I. iv. 475, v. 774, xii. 32, xxi. 308; comp. Aschyl. Agam. 699; Strab. xiii. p. 597; Ptol. v. 2. § 3; Steph. B. s. v.; Pomp. Mela, i. 18; Plin. v. 35; and Scamander.) Its present name is Dsum-\breve{c}ek, and at present its course is so altered that it is no longer a tributary of the Scamander, but flows directly into the Halyspect. [L. S.] SIMUNDU. [TAPROBANE.]

SIMYLLA (Σιμυλλα, Ptol. vii. 1. § 6), a commercial entrepôt on the western coast of Hindostan, in the district called Αραχαί Λακωνίας. It is noticed in the Periplus by the name of Αραχαία, and was probably at or near Basses, a little N. of Bomsari. (V. J.)

SIMYRA (Σιμύρα), a maritime city of Phocis, mentioned by Pliny in connection with Marathus and Antaraus, N. of Tripolis, Orthosia, and the river Eleutherus (v. 30). It is placed by Ptolemy between the mouth of the Eleutherus and Orthosia, and, if the figures are trusted, 10° west of the former. It is also mentioned by Orthosia with Orthosia (i.e. e. 34° 40'), but 40' east of it, which would seem either to imply an ignorance of the coast, or to intimate that Simyra lay at some distance from the shore, and that the Eleutherus ran southward to the sea. Strabo says that it was occupied by the Aradians, together with the neighbors of Simyra. (v. 34. p. 755,) apparently placing it north of the Eleutherus. In addition to what has been said under Marathus, and in confirmation of the identification there attempted, the following may be cited from Shaw, and will serve to illustrate the situation of Simyra: "The ancient Marathus may be fixed at some ruins near the Serpents Fountain, which make, with Ros-seelde and Tortose, almost an equilateral triangle. About 5 miles from the river Akher, and 24 to the SSE. of Tortosa, there are other considerable ruins known by the name of Simyra, with several rich plantations of mulberry and other fruit trees growing in and round about them. These, from the very name and situation, can be no other than the remains of the ancient Simyra. But Osiris or Pliny (v. 20) places Simyra a city of CoeleSyria, and acquaints us that Mount Libanus ended there to the northward; but as Simara lies in the Jeme (i.e. of the great plain). 2 leagues distant from the mountain, this circumstance will better fall in with Arcs, where Mount Libanus is remarkably broken off and discontinued." (Travels, pp. 268, 269.) The ruins of Arcs are 5 miles E. of Simara, and 2 leagues WSW. of Arcs is the Nahr-el-Berd, the Cold River, which Shaw and others identify with the Eleutherus. It is manifest how irreconcilable all this is with Ptolemy and other ancient geographers. [Ptolemy: ORTHOSIA; MARATHUS.] [G. W.]

SINA. [SENA.]

SINAE (Σιναί, Ptol. viii. 3, &c.), the ancient nation of the Chinese, whose land is first described by Ptolemy (L.c.) and Marcianus (p. 29, seq.), but in an unsatisfactory manner. Indeed, the whole knowledge of it possessed by the Greeks and Romans rested on the reports of individual merchants who had succeeded in gaining admissence among a people who then, as in most times, distanced the Greeks as much as possible from the rest of the world. For the assumption which Duguides sought to establish, that a political alliance was formed between Rome and China, and that the emperor M. Aurelius Antoninus sent a formal embassy thither in the year 166, rests solely on the name of Tan-Tun, which that writer discovered in some ancient Chinese annals, and must therefore be regarded with great suspicion. (See Bohlen, das Allt Indie, i. p. 71.) According to the description of Ptolemy, the country of the Sinai extended very far to the S. of the river Abydos, a great part of Africa by an unknown land, so that the Indian Ocean formed a large Mediterranean sea. He does not venture to define its eastern boundary, but finishes his account of the known earth with the 180th degree of latitude, without, however, denying that there were tracts of unknown land still farther to the E. But Cosmas Indicopleustes (ap. Montfaucon, N. Coll. Paterae, ii. p. 337), who calls the country of the Sinæ Têqāλa, was the first who laid down its correct boundary by the ocean on the E. On the N. it was bounded by Serica, and on the S. and W. by India extra Garam, from which it was divided by the river Aspathra (probably the Bâmâpa-Râm) and the Semanthene mountains. Thus it embraced the island of Ceylon, and met the Lybénia in the north. Further India, as Tongquale, Cochae-China, Camboje, &c. Ptolemy mentions several large bays and promontories on the coast. At the extreme N. of the Indian Ocean, where the land of the Sinæ abutted on Further India, was the great gulf (of Sinæ), which on the coast of the Sinæ was connected with the Cape of Good Hope (probably Cape Bojóboje), and on the side of India by another large promontory (perhaps Cape Bojémosia). To the S. of South Cape, and between it and the Cape of the Satyra (Αριστόπερος Λαμπρός), Ptolemy and Marcianus (p. 30) place another large bay called Theriodes (Θεριοδας κάλαβος) ; and to the S. of the Cape of Satyra, again, and between it and the mouth of the river Coelia, was the east lagoon of the Sinæ (Σιναῖος κάλαβος). These vague and incorrect accounts do not permit us to decide with any confidence respecting the places indicated by Ptolemy; but it has been conjectured that the Cape of the Satyra may have been Cape St. James, the Theriodes Sinæ the bay between it and the mouth of the river Coelia, the Cape of Good Hope, and the Sinæ the gulf of Tongquale. Among the mountains of the country Ptolemy names only the Montes Semanthini (Σεμανθινοί θρός), which formed its NW. boundary. Among the rivers indicated are the Aspithra (Αριστόπερος), rising in the mountains just mentioned, to which we have already alluded; the Ambastus (Αμπαστός), probably the Comboga, which fell into the Great Bay between the towns of Brahman and Rabbanas; the Senos or Sanlos (Σανός or Σαλός) more to the S.; and further still in the same direction the Cottarías (Κοτταρίας), which emptied itself into the bay of the Sinæ to the N. of the town of Cattigara. The last may perhaps be the St Râng, which discharges itself at the latter respecting the name of the river. Taking all these names in their literal sense, we have no information, though Ptolemy mentions several subdivisions of them; as in the N. the Semanthini, on the like named mountains; S. of them the Acedara, with a town called Acedra, and again to the S. the Aspathra, on the Aspathra, and having a city of the same name as the river. In the latter respect, as also, in the name on the river Ambastus, were the Ambastrii. Lastly, in a still more southern district between the bay of Theriodes and that of the Sinæ, were the Asthoipes

SINAL

Ichtihyophagi and the Sinæ Ichtihyophagi. Among the 8 cities mentioned by Ptolemy, namely, Brahma, Ribana, Cattigara, Acandra, Aspitha, Cocconagra, Surata, and Thanes or Sinæ, the last was undoubtedly the most important, and was regarded by him and others as the capital of the nation. It has been conjectured to be Thessa, in the region of Chema, or even Namitis itself. It may be remarked that the Sinæ were anciently called Thima (Sestia); though it is said that this form of their name only arose from the Arabic pronunciation of Sinæa. (See Sickler, ii. p. 518; Gesenius, Heb. Lex. p. 786.) The new city of Suse, of great importance was Cattigara, which both Ptolemy and Modena regarded as the chief place of trade. [CATTIGARA.]—[T.H.D.]

SINAI (Sinai or Sore), the celebrated mountain of the Arabia Petraea. It, however, lent its name to the whole peninsula in which it was situated, which must therefore first be described. It is formed by the bifurcation of the Red Sea at its northern extremity, and is bounded by the Heropolitana Sinus (or Sea of Suez) on the west, and the Sogdian Sinus (the Gulf of Akaba) on the east, ending in the Posidium Promontorium (Ras Mohammed). At the northern extremity of the Sea of Suez stood Arsinoe (Suez), and Aelana (Abana), at the extremity of the gulf that bears its name. The caravan road of the great trade route, which joins these two towns, traverses a high table-land of desert, received the name of the Wilderness of the Wandering, part of ancient Idumea. To the south of this road, the plateau of chalk formation is continued to Jebel Tih, the μελισσα τήθη of Ptolemy, extending from the eastern to the western gulf, in a line slightly curved to the south, and bounded in that direction by a belt of sandstone, consisting of the remains of disused lakes. The name of the Wilderness of the Wandering, gained by this district of primitive granite formation, which extends quite to the southern cape, and runs into the Gulf of Akaba on the east, but is separated by a narrow strip of alluvial soil called El-Ka'da from the Sea of Suez. The northern part of the Tih is called the Wilderness of Paran (Numb. xii. 16, xiii. 3, xxxii. 8, &c.), in which the Israelites abode or wandered during great part of the forty years; although Eusebius and St. Jerome, as will be presently seen, identify this last with the wilderness of Sinai. This wilderness of Sinai is commonly supposed to be connected, in name and situation, with Mount Sinai; but as the Israelites entered on the wilderness of Sinai and leaving their encampment by the Red Sea, the next station to Elin (Exod. xvi. 1; Numb. xxxii. 10, 11), and traversed it between Elin and Raphidim, where they had apparently left it (Exod. xvii. 1)—for Dophkah and Alaia are inserted between the two in Numbers xxxii. 12—14—and yet had not arrived at Mount Sinai (Exod. xxi. 1), it must be questioned whether the identification made by Eusebius and St. Jerome, who distinguish between the deserts of Sin and Sinai, yet appear to extend the former too far eastward. "The desert of Sin," they say, "extends between the Red Sea and the desert of Sinai; for they came from the desert of Sin to Raphidim, and thence to the desert of Sinai, near Mount Sina, where Moses received the dispensation of the Law; but this desert is the same as that of Kadesh according to the Hebrew, but not according to the LXX." The confusion indicated by this last remark may be explained by the observations, 1st, that Zin, which is a synonym for the wilderness of Kadesh " (Numb. xxx. 1, xxxii. 38), is identical in Greek with the Sin (i. e. Xis); the S representing both the ψ (tessale) of the ψ and the σ (samech) of the Σ; and, 2nd, that instead of making Sin identical with Kadesh, as it is in the Hebrew, the LXX. read so as to make "the desert of Paran," with which they identify with "the desert of Kadesh," an intermediate station between Sin and Mount Hor (Numb. xxxiii. 36, in LXX.).

The wilderness of Sin, then, must be fixed to the northwest part of the granitic district of the peninsula between Suez and the Red Sea, while Zin is north of Esen Girem between it and the northern part of the traditional Horeb, the southern extremity in fact of Wady Mânia, or the Arabah, north of Akaba.

With respect to Sinai, it is difficult to decide between the rival claims of the two mountains, which, in modern as in ancient times, have been regarded as the Mountain of the Law. The one is Serbal above-mentioned, situated towards the NW. of the granitic district, towering with its five sharp-pointed granite peaks above the fruitful and agreeable oasis of Wady Pharam, still marked by extensive ruins of the churches, convents, and buildings of the old episcopal town of Paranim; the other between 50 and 40 miles south-east of Serbal, in the heart of the granitic district, where native traditions, of whatever value, have affected the names of the mountains and valleys names connected with the inspired narrative of the giving of the Law, and where the scenery is entirely in unison with the events recorded. Emerging from the steep and narrow valley Nabada Hanna, whose precipitous sides rise to the perpendicular height of 1000 feet, into the wide plain called Wady Mânia, the northern base of the traditional Horeb, Ruseggler describes the scene as grand in the extreme. "Bare granite mountains, whose summits reach to a height of more than 7000 Paris feet above the level of the sea; wonderful, I might say fabulous, forms encompass a plain more than a mile in length, in the background of which lies the town of St. Catharine, W. the foot of Jebel Mânia, between the holy Horeb on the west, and Ebeslimi on the east." In this valley, then, formed at the base of Horeb by what may be called a junction of the Wady-ar-Rakkah and Wady-sheikh-Sheikh, but which, according to Ruseggler's express testimony, bears in this place the native name of Wady Mânia, must the men of Israel have encamped before Jebel Mânia, whose rugged northern termination, projected boldly into the plain, bears the distinctive name of Ras Sannaf. Jebel Mânia rises to the height of 9596 Paris feet above the sea, but is far from being the highest of the group. Towering high above it, on the south, is seen the summit of Horeb, having an elevation of 7097 Paris feet, and south of that again, Jebel om-Semer, the highest of this remarkable group, which attains an altitude of 8300 Paris feet. Over against Jebel Mânia on the north, and confining the valley in that direction, is the spur of a mountain which retains its name, Jebel Sena, a memorial of Samuel's appellation of the Mountain of the Law. To attempt anything like a full discussion of the questions at issue between the advocates of the conflicting traditions or hypotheses, would be as inconsistent with the character of such an article as this, as with the limits which must be assigned it: a very few remarks...
must suffice. There seems, then, to be no question that the site of Horæb was traditionally known to the Israelites for many centuries after the Exod. (1 Kings ii. 33), so that it is improbable that it was subsequently lost, since its proximity to Eleah and Elon Geber, which were long in their possess. would serve to ensure the perpetuity of the tradition. It is worthy of remark that Josephus nowhere uses the name Horæb, but in the passage pertinent to that above cited from the 1st book of Kings he calls it Horæa. For, according to his history, substan- tiation of this fact is indicated by the two names, learnedly maintained by Dr. Lepsius, who holds Horæb to be an Amauretic appellative equivalent in signification with Sana, both signifying “earth made dry by draining of the water,” which earth he finds in the heay mounds of alluvial deposit in the bed of Wady Feiran, at the foot of Serbal, his Sinai. Buxtorf, however, cites rabbinical authorities for another etymology of Sinai, derived from the nature of the rock in the vicinity. (See Shaw’s Results, 414 p. 443, and note 7.) Josephus does not in any way identify the site; but Eusebius and St. Jerome have been erroneously understood to describe Serbal mountain, when they say that Pharan was south of Arabia, next to the desert of the Serabin, through which the children of Israel journeyed when they departed from Sinai (Onomast. a. v. Pharan); for they obviously confound the city of Pharan with the wilderness mentioned in Numbers (xvi. 18, xvi. 3); and the description is as vague as to prove only their uncertainty as to the position of the city Pharan, (which they place 3 days east of Aila,) at least of the state wants of all connection between this and the desert of Zin, which is Paran; and in this, as in other passages, on which much reliance has been placed in this discussion, it is clear that they are not writing from any local knowledge, but simply drawing deductions from the Scripture narratives (see e. g. Onomast. a. v. Serbin), which we are perhaps equally competent to do. The earliest Chris- tian writer, then, who can be quoted as a witness to the true site of the “Mountain of the Law” is Cosmas Indicopleustes (circ. a. d. 530), who un- doubtedly describes Mount Horæb, in the Sinaitic (dessert 2, as near to Pharan, about 6 miles distant, and the Pharan mountain, the birthplace of the eponymous annais, whose ruins are near the foot of Mount Serbin, have been noticed above. This then is direct historical testimony in favour of a hypothesis first started by Bunsen in modern times, advocated by Dr. Leinaus, and adopted by Mr. Forster and others. But then it appears to be the only clear historical witness to me, and must therefore be compared with that in favour of the existing tradition, which, as it is accepted in its main features by Dr. Robinson and Wilson, Böslar, Mr. Stanley, and other eminent scholars, is obviously not unworthy of regard. That the present convent of St. Catherine was ori- ginally vowed by the emperor Justinian (about a. d. 540) as a cement of the faith, and it is equally difficult to imagine that, at so short a distance, after the journey of Cosmas, the remin- brance of the true Sinai could have been lost, and that the emperor or the monks would have acquiesced in what they knew to be a fictitious site; for the mountain had long been regarded with veneration by the Jews, who, however, had erected no monastery before this time, but dwelt in the mountains and valeys about the beach in which God appeared to Moses (Ex. xxiv. 16, ver. 33. 34, 35. Procopius, De Aedificiis Justiniani, § 36.) and when their monasteries are mentioned in the geographical one may be added. If Bunsen’s or Procopius’s statement of the erection of Justinian’s monastery to be understood. In the latter argument in favour of the existing tradition, a geographical one may be added. If Bunsen’s interpretation is true of Serbal, cannot be Sinai? For occasion could there be for the people to go from Rehoboam, and journey to Sinai? If both were at the very base of the mount? (Ex. xxi. 2.) Dr. Lepsius feels the difficulty, and says:—to remove it by demonstrating that the narrative is not to be implicitly trusted. The fact mentioned in connection with Rehoboam is not a palpable difficulty. (Exod. xxi. 1—4.) No choice of difficulties is it safer to adopt that does least violence to the sacred text. By far the strongest argument in favour of an identity of Serbal with Sinai is to be found in the story of the mountain and in the surrounding valleys, not that anything can be certainly determined by these mysterious records, while the art of deciphering them is still in its infancy. The various respecting them cannot here be discussed, as containing what are referred to at the end of this dissertation. It is an interesting fact of Cosmas Indicopleustes, that the Israelites have been instructed in written characters in the book of Genesis, were practised in a quiet school in the desert, for very as "from whence it comes to pass," he proceeds, you may see in the desert of Mount Sinai, all the stations of the Hebrews, all the v. those parts, which have rolled down from the tains, engraved with Hebrew inscriptions, is a term, who journeyed in those parts, text.; v. saying that they were written things. The prisms (Egypt.) of such an one, of such in such a year, and such a month,—as are written in our hieroglyphics. For they have acquired the art, practised it by multiplication so that all these places are full of Hebrew inscriptions, preserved even unto this time, as seen the unlearned, as I think; and may we and can visit those places and see them, or they enquire and learn concerning it that I have the truth." (Cosmas Indicopleustes, de Nost. v. apud Montanensia, Collect. Nuncium Patriar. p. 505.) On this it may suffice to remark, that it certainly is in fact in history, and ular to our enlarged Hebrew,—i.e. neither Par- nan Chaebn,—still the Jews in Cosmas’s era could decipher them. We know that they were the most part similar to the ancient Ax (the Hamathite or Hadathite) character, which the whole region in the south of the Ax- penideum itself. 1s. then, Mrs. Bensusen’s very peculiar conjecture of the identity of the rock-hewn inscription of Sinai Church and
SINDA SARMATICA. 1005

copied by Abdenakhman from the southern coast of Arabia, preserved and translated by Schultens, be correct, it will follow that the old Adite character was decipherable even two centuries later than the date assigned to Cosmas, who could scarcely have failed to discover the Christian origin of these inscriptions, if they had been really Christian. Indeed it may well be questioned whether any Christians could have been sufficiently conversant with this ancient character to use it as freely as it is used on the rocks of the peninsula. Certainly if the hypo-
thetical process of progressive development of the place of pilgrimage by the pagan tribes of Arabia, and so having acquired a sanctity in the very earliest times, could be established, the fact might furnish a clue to the future investigation of this deeply interesting subject, and, as Ritter has sug-
gested, might serve to remove some difficulties in the Sacred Narrative. Now the journal of Antoninus Piacentinus does in fact supply so precisely what was wanting, that it is singular that his statement has attracted so little notice in connection with the Sinaic inscriptions; which, however, he does not expressly mention or even allude to. But what we do learn from him is not unimportant, viz., that be-
fore the time of the Mohammadans, the people of the peninsula, as the Mohammedans call them, the peninsula of Mount Sinai was a principal seat of the idolatrous superstition of the Arabians; and that a feast was held there in honour of their miraculous idol, which was resorted to by Ishmaelites, as he calls them, from all parts; the memorial of which feast seems still to be preserved by the Bedawin. (Burckhardt, Syria, p. 32, and p. 41, where it is said that the eastern commerce of Greece and Rome, conducted by the Arabs of Yemen and Hadramout, must have brought their merchants and sailors to the vicinity of this ancient sanctuary at Arasine or at Elana, the pilgrimage becomes almost a matter of course; and the practice which we know prevailed in their own country of graving their names on an iron pen in the rock for ever, was naturally adopted by them, and imitated by the Christian pilgrims in after times. Undue stress has been laid on the frequency of the inscriptions about Serbal, contrasted with their rarity about Gebel Misr; but it should be remembered that they are executed almost entirely in the soft rock, whereas those on the granite on and around Serbal, which but scarcely found in the interior, where the hard, primitive rock did not encourage the scribbling propensities of the travellers, as the softer tablets in the more western part, where the blocks of trap-stone (which are also largely interpersed with the granite, and which present a black surface without, but are lemon-coloured within) were studiously selected for the inscriptions, which, in consequence, come out with the effect of a rubricated book or illuminated manu-
script, the black surface throwing out in relief the lemon-coloured inscriptions.

This account of the peninsula must not be con-
cluded without a brief notice of the very remarkable temple of Serbal el-Chidem, and the stones which are found in such numbers, not only in the temple, but in other western parts of the peninsula, where large masses of copper, mixed with a quantity of iron ore, were and still are found in certain strata of the sandstone rocks along the skirts of the prime-
val chain, and which gave to the whole district the name still found in the hieroglyphics, ḫaqat, "the copper land," which was under the particular pro-
tection of the goddess Hathor, Mistress of Maphat. The temple, dedicated to her, stands on a lofty sand-
stone ledge, and is entirely filled with lofty stelae, many of them like obelisks with inscriptions on both sides; so crowded with them in fact, that its walls seem only made to circumscribe the steleas, although there are several erected outside it, and on the adja-
cent hills. The monuments belong, apparently, to various dynasties, but Dr. Lepsius has only specially mentioned three, all of the twelfth. The massive 

SINDAI.

The chief authorities for this article, besides those referred to in the text, are Niebuhr (Voyage en Arabe, vol. i. pp. 181—204); Seetzen (Reisen, vol. iii. pp. 55—121). For the physical history and description of the peninsula, Russegger is by far the fullest and most trustworthy authority (Reisen, vol. iii. pp. 22—38). Dr. Robinson has investigated the history and geography of the peninsula with unusual diligence (Travels, vol. i. §§ 3, 4, pp. 87— 

341); and Dr. Wilson has added some important observations in the way of additional information or correction of his predecessor (Lands of the Bible, vol. i. chapters vi.—viii. pp. 160—275). Lepsius's Tower from Théba to the Peninsula of Sinai (Letters p. 37—39, 54—55), which has been translated by C. H. Cotrell (London, 1846), applies for Serbal as the true Mountain of the Law; and his history has been maintained with great learning and industry by Mr. John Hogg (Remarks on Mount Serbal, &c. in Transactions of the Royal Society of Literature, 1849). The graphic description of the country from Mr. A. P. Stanley's pen is the latest contribution to the general history of the peninsula (Sinaí and Palestine, 1856). The decipher-
ment of the inscriptions has been attempted by the learned Orientalists of Germany, Gesenius, Rödiger, Beer, and others (Ch. Bunsen, Christianity and Manhh-kind, vol. iii. pp. 231—334); and Mr. Forster has published a vindication of his views against the strictures of Mr. G. Rawlinson on the origin of the Voice of Israel from the Rocks of Sinai, 1851; The Israelitish Authorship of the Sinaic Inscrip-
tions, 1856).

G. W.]

SINCHI, a sub-division of the Sarmatian tribe of the Tauri. (Amm. Mar. xxii. 8. § 33.) [T. H. D.]

SINDA (Σίνδα : Eīk. Sindai), a town which seems to have been situated on the western frontier of Pashdia, in the neighbourhood of Cibyra and the river Cautarius (Liv. xxxviii. 15; Strabo, xii. p. 570, xii. p. 630). Stephansi B. (a. v. Xvfiíi, who speaks of Sinda as a town of Lycia, is probably alluding to the same place. (Comp. Hecatol. p. 680; Polyc. Excerpt. de Leg. 30.) Some writers have conjoined Sinda with Isinda, which is more surprising, as Livy mentions the two as different towns in the same chapter. (Lycia, loc. cit., p. 152.)

L. S.

SINDA SARMATICA (Σίνδα Σαρματία), Ptol. v. 9. § 8), a town or village in Asiatic Sarmatia, in the territory of the Sindi, with an adjoining harbour (Σινδακάς Λιμής, Ptol. 14), 180 stadia E. of the mouth of the Bospornus. Cimmerus at Corcondamus, and, according to Arrian (Per. P. Eux. p. 19), 800
must suffice. There seems, then, to be no question that the site of Horæb was traditionally known to the Israelites for many centuries after the Exodus (1 Kings, xiv. 8); and if so, it is improbable that it was subsequently lost, since its proximity to Elath and Ezion-geber, which were long in their possession, would serve to ensure the perpetuity of the tradition. It is worthy of remark that Josè nowhere uses the name Horæb, but in the parallel to that above cited from the 1st Kings, as uniformly throughout his history, he is in the habit of substituting 7οραοι 7οραοι, so far confirming the identity of locality indicated by the two names maintained by Dr. Lepsius, who held an Amalekite appellative equivalent with 7οι, both signifying "sea" or "shores, or "draining off the water," which characterizes the large mounds of alluvial deposits at the mouth of the Carmel. (P. 681.)

But the investigation of the site has not been the exclusive concern of our author, for he also made a thorough search for the remains of the rock in the vicinity of Wady el-Mutt, and he reports that this was the place (Polyæn. viii. 55.) to which he had a fair chance of referring the large mound of alluvial deposits at the mouth of the Carmel. (P. 681.)

Under the name Sinod(on) we have, it is true, a customary custom which they, through which they are the grave of a deceased person as they have been despoiled of many enemies whom they have been in the name of the same is variously written, and may be considered to be a Hindoo colony. (Th. H. D.)

The name of SINDOCANDA (Sindocanda, Pol. vii. 4. § 3), a city in the middle of the W. coast of Tapprobane, belonging to the people called Sandacandas. Hence it has been conjectured, either that the name of the town should be changed into Sandocandas, or that the people should be called Sandocandas. (Th. H. D.)

SINDOMANA (Sindomana, Strab. xiv. p. 701), a town on the lower course of the Indus, and in the neighbourhood of the island of Patanale. (Comp. Arrian, Anab. vi. 15; Diod. xvii. 108; Curtius, ix. 8, 13, 17.)

SINDUS (Sinde, Herod. vii. 133; Steph. B. s. n.), a maritime town of Mygdonia in Macedonia, between Thermus (Thessalonica) and Chalastra. (E. B. J.)

SINGA (Singa, Pol. v. 15. § 10), a city of the Syrian province of Commagene, to the N. of Dolicha, and situated on the river Singa (76. § 9), now the Seneja, which had its source in Mount Piera and flowed to the N.W. till it fell into the Euphrates to the S. of Samos. (Th. H. D.)

SINGAMES (Singyass, Anian, Per. P. Eum. p. 10), a navigable river of Colchis, which entered the Pontus Euxinus 210 stadia N. of the Cobus, and 120 stadia S.E. from the Tanuraus. (Plin. vi. 4. 4.) Now the Osinyvern. (Th. H. D.)
of the Bosporus, and divided with Byzantium the
exclusive tanny fisheries in that sea. In the time
Soter, Sinope was governed by a prince,
whom the Egyptian king sent an

the situation of Sinope in the follow-
It is built on a peninsula, which
out into the sea. The isthmus which
connects the peninsula with the mainland is not
more than 2 stadia in breadth, and is entirely
harassed by the city, which comes up close to it, but
the remainder of the peninsula stretches out towards
the sea. It is quite flat and of easy access from the
town; but on the side of the sea it is precipitous
all around, and dangerous for vessels, and presents
very few spots fit for landing. This de-
scription is confirmed by Strabo (xii. p. 545), for he
says that the city was built on the neck of the
peninsula; but he adds, that the latter was girt all
around with rocks hollowed out in the form of
basins. At high water these basins were filled,
and rendered the shore inaccessible, especially as
the rocks were everywhere so pointed that it was
impossible to walk on them with bare feet. The
Sinopians defended themselves bravely against
Mithridates, and the timely aid of the Rhodians in
the end enabled them to compel the aggressor to
raise the siege. Pharmaces, the successor of
Mithridates IV., was more successful. He attacked
the city unexpectedly, and finding its inhabitants
unprepared, easily overpowered it, as Strabo
states. This time Sinope became the chief town, and the
residence of the kings of Pontus. (Strab. l. c.;
Polyb. xxiv. 10.) Mithridates, surnamed Euergetes
the successor of Pharmaces, was assassinated at
Sinope in B.C. 120 (Strab. x. p. 477). His son,
Mithridates the Great, was born and educated at
Sinope, and did much to strengthen his
birthplace: he formed a harbour on each side of
the isthmus, built naval arsenals, and constructed
admirable reservoirs for the tanny fisheries.
After his death at Cyzicus, the king intrusted the
command of the garrison of Sinope to Bessus,
who acted as a cruel tyrant; and Sinope, pressed both
from within and from without, was at last taken
by Lucullus, after a brave resistance. (Strab. l. c.;
Plut. Lucull. 18; Appian, Bell. Mithr. 83;
Menmon, in Phot. Cod. p. 338, ed. Bakker.) Lu-
cullus treated the Sinopians themselves mildly,
having put the Pontian garrison to the sword; and
he left them in possession of all their works of art,
which embellished the city, with the exception of
the statue of Antylus, a work of Sthenes, and the
sphere of Billarus. (Strab. Plut. l. c.; Cic. pro Log.
Mem. 8.) Lucullus restored the city to its ancient
freedom and independence. But when Pharmaces,
the son of Mithridates, had been routed at Zela,
Cassar took Sinope under his protection, and estab-
ished Roman colonies there, as we must infer
from coins bearing the inscription S. C. Ad Cor. B.C.
86.) Sinope. In the time of Strabo Sinope was still
a large, splendid, and well fortified city; for he
describes it as surrounded by strong walls, and
adorned with fine porticoes, squares, gymnasium, and
other public edifices. Its commerce indeed declined,
yet the tanny fisheries formed an inexhaustible
source of revenue, which maintained the city in a tolerable state of prosperity. It possessed extensive suburbs, and numerous villas in its vicinity (Strab. l. c.; Plin. vi. 2). From Pliny's letter's (x. 91), it appears that the latter man Sinope suffered some important losses from the want of a good supply of water, which Pliny endeavoured to remedy by a grant from the emperor Trajan to build an aqueduct conveying water from a distance of 16 miles. In the time of Arrian and Marcian, Sinope still continued to be a flourishing town. In the middle ages it belonged to the empire of Trebizond, and fell into the hands of the Turks in A. D. 1470, in the reign of Mohammed II. Sinope is also remarkable as the birthplace of several men of eminence, such as Diogenes the Cynic, Barten, the historian of Persia, and Diphilus, the comic poet.

Near Sinope was a small island, called Scopelus, around which large vessels were obliged to sail, before they entered the harbour; but art and craft might pass between it and the land, by which means a circuit of 40 stadia was avoided (Marcian, p. 73, &c.). The celebrated Sinopian cinnabar (Sinopis munci,就没有 or没有 γυς) was not a product of the district of Sinope, but was designated by this name only because it formed one of the chief articles of commerce in Sinope (Strabo, vii. 3. 4; 7. 5. 43, p. 457, fol.). The imperial coins of Sinope that are known, extend from Augustus to Gallienus. (Seidini, Num. Vet. p. 63; Basche, Lex. Num. iv. 2. p. 1105, fol.).

Sinope, now called Sineh, is still a town of some importance, but it contains only few remains of its former greatness. The wall across the lighthouse has been built up with fragments of ancient architecture, such as columns, architraves, &c., and the same is found in several other parts of the modern town; but no distinct ruins of its temples, porticoes, or even of the great aqueduct, are to be seen. (Hamilton, Researches, vol. i. p. 306, &c.) [L. S.]

SINOPRIA (Sinopio, Strab. xii. p. 555), a town on the coast of Armenia Minor, but a circumstance which gave rise to a pun of the historian Theophanes who wrote the name Sinopha. The place is no doubt the same as the one called Sinaeora by Appian (Mithrid. 101), by Ammianus Marcellinus (xvii. 7) Synhormum, by Ptolemy (v. 7. 2) Sinhora or Sinera, and in the Antonine Itinerary (p. 308) Sinervas. The name, according to the authority of the historian, seems to show that the form Sinoria, which Strabo gives, is the correct one. The town was a fortress built by Mithridates on the frontier between Greater and Lesser Armenia; but assuming that all the different names mentioned above are only varieties or corruptions of one, it is not easy to fix the exact site of the town, for Ptolemy and the Antonine Itinerary place it to the south-west of Satala, on the road from this town to Melitene, and on the Eufrates, while the Table, calling it Sinara, places it 79 miles to the north-east of Satala, on the frontiers of Pontus; but there can be no doubt that the Sinara of the Table is altogether a different place from Sinoria, and the site of the latter place must be sought on the banks of the Eufrates between Satala and Melitene, whence some identify it with Murad Chai and others with Semi Beli. [L. S.]

SINOTUM. [Synodem.] SINOS (Sino, Ptol. iii. 8. § 3), a people in the S. of Dacia. [T. H. D.]

SINTI (Thuc. ii. 98; Steph. B. a. c.; Liv. xlii. 31), a Thracian tribe who occupied the district lying between the ridge called Cercine and the right W. bank of the Strymon, in the upper part of the course of that river, which was called from these Sintici (Strabo, Ptol. iii. 15. § 38). Wann was the name of the four provinces situated in the Roman conquest, Sintici was associated with Bithia in the First Macedonia, of which Amphipolis was the capital (Liv. xiv. 29). It contained the three towns HERACLEA, PAROBECOPOLIS, TRISTOLIS. [E. B.]

SINTIES. [Lemnon.] SINOUESSA (Sinovessa or Sibovessa; Ed. La- pserdes, Sinusensae; Monodromae, a city of Lusium, in the more extended sense of the name, situated on the Tyrrhenian sea, about 6 miles N. of the mouth of the Vulturuma. It was on the line of the Via Appia, and was the last place where the great highroad touched on the sea-coast. (Strab. v. p. 283.) It is certain that Sinouessa was not as an ecclesiastic city; indeed there is no trace of the existence of an Italian at the spot before the Roman colony. Some authors, indeed, mention an obscure tradition that there had previously been a Greek city on the spot which was called Sinope; but little value can be attached to this statement. (Liv. x. 21; Plin. iii. 3. a. s.) It is certain that if it ever existed, it had wholly disappeared before Strabo's time. (Strabo, vii. 3. 4, p. 457, fol.) The territory of the Roman colony was chiefly for the purpose of securing the neighbouring fertile tract of country from the ravages of the Samnites, who had already repeatedly overrun the district. But for this very reason the plebeians at Rome hesitated to give their names, and there was some difficulty found in carrying out the colony, which was, however, settled in the following year, p. c. 296. (Liv. x. 21; Gaius Pat. 1. 14.) Sinouessa seems to have rapidly risen into a place of importance; but its territory was severely ravaged by Hannibal in B. C. 217, whose cavalry carried their devastations up to the very gates of the town. (Liv. xxii. 13, 14.) It subsequently endeavoured, in common with Minturnae and other colonies of the same age, to make its independence felt, especially by the fact of furnishing military levies; but this was overruled, while there was an enemy with an army in Italy. (Id. xxvii. 38.) At a later period (p. c. 191) they again attempted, but with equal ill success, to procure a similar exemption from the naval service. (Id. xxxvii. 3.) Its position on the Appia gave it an important place on the commercial and military road to the prosperity of Sinouessa; for the same reason it is frequently incidentally mentioned by Cicero, and we learn that Caesar halted there for a night on his way from Brundusium to Rome, in B. C. 49. (Cic. ad Att. ix. 15, 16, xiv. 8, ad Fam. xii. 20.) It is noticed also by Horace on his journey to Brundusium as the place where he met with his friends Varins and Virgil. (Sat. i. 5. 40.) The fertility of its territory, and especially of the neighbouring ridge of the Mons Massicus, so celebrated for its wines, must also have tended to promote the prosperity of Sinouessa, but we hear little of it under the Roman Empire. It received a body of military colonists, apparently under the Tribunus (Liv. Col. p. 237), but did not retain the rank of a Colonia, see...
SINUS AD GRADUS.

is termed by Pliny as well as the Liber Coloniarum only an "oppidum," or ordinary municipal town. (Plin. iii. 5. a. 9; Lüb. Col. i. c.) It was the furthest town in Latium, as that term was understood in the days of Strabo and Pliny, or "Latium adjec- tum," as the latter author terms it; and its territory extended to the river Sims, which formed the limit between Latium and Campania. (Strab. v. p. 419, 231, 233; Plin. iii. 5. a. 9; Mel. ii. 4. § 9.) At an earlier period indeed Polybius reckoned it a town of Campania, and Polybius follows the same classification, as he makes the Liris the southern limit of Latium (Pol. iii. 91; Polt. iii. i. § 6); but the division adopted by Strabo and Pliny is through the most correct. The itineraries all notice Sinussa as a still existing town on the Appian Way, and place it 9 miles from Minturnae, which is, however, considerably below the truth. (Itin. Anton. p. 108; Itin. Hier. p. 611; Tab. Peut.) The period of its destruction is unknown.

The ruins of Sinussa are still visible on the sea-coast just below the hill of Montedragone, which forms the last underfall or extremity of the long ridge of Monte Musciano. The most important are those of an aqueduct, and of an edifice which appears to have been a triumphal arch; but the whole plain is covered with fragments of ancient buildings. (Oliver. Ital. p. 1080; Romaniell, vol. iii. p. 486.)

At a short distance from Sinussa were the baths or thermal springs called Aquae Sinussinenses, which appear to have enjoyed a great reputation among the Romans. Pliny tells us they were esteemed a remedy for barrenness in women and for insanity in men. They are already mentioned by Livy, and are called by Varro the baths of Sinussa, though their fame was eclipsed at a later period by those of Baiae and other fashinable watering-places, they still continued in use under the Empire, and were resorted to among others by the emperor Claudius. (Liv. xxii. 13; Tac. Ann. xii. 66; Plin. xxx. 2. a. 4.) It was there, also, that the infamous Tigidillius was put to death with his own hand, (Tác. Hist. i. 72; Plut. Oth. ii.) The mild and warm climate of Sinussa is extolled by some writers as contributing to the effect of the waters (Tac. Ann. xii. 66); hence it is called "Sinussa tepida" by Silius Italicus, and "molis Sinussa" by Martial. (Sil. Ital. viii. 233; Mart. viii. 42.) The site of the water-now called Bouge, and the remains of Roman buildings still exist there. (E. H. B.)

SINUS AD GRADUS OR AD GRADUS. [Fossa Mariana.]

SION, M. ( asia), originally the name of a particular fortress or hill of Jerusalem, but often in the poetical and prophetic books extended to the whole city, especially to the temple, for a remarkable situation. It seems proper has been always assumed by later writers to be the SW. hill of Jerusalem, and this has been taken for granted in the article on Jerusalem [Jerusalem, p. 18]. The counter hypothesis of a later writer, however, maintained with great learning, demands some notice under this head. M. Strabo tells us that the original or proper name of the city of David, from which David had expelled the Jebusites, is demonstrable, from the contents of the second passage above referred to, that the temple was in no sense in the city of David; for, after the completion of the temple, it is said in that and the parallel passage (2 Chron. v. 2, 5, 7) that Solomon and the assembled Israelites brought up the ark of the Lord out of the city of David, which is Sion, into the temple which he had prepared for it on what Scripture calls Mount Moriah (2 Chron. iii. 1). Again, in 2 Samuel, v. 6—9, we have the account of David's wresting "the stronghold of Sion, the same is the city of David," out of the hands of the Jebusites; after which "David dwelt in the fort, and called it the city of David." Josephus and other writers of the same events, states that David "laid siege to Jerusalem, and took the lower city by assault, while the citadel still held out." (Ant. viii. 3. § 2) This citadel is clearly identified with the upper city, both in this passage and in his more detailed description of the city, where he says that the hill upon which Mount Zion rises, the upper city was not as large or as strong as the lower city, and on account of its strength was called by King David the fortress ( favourites). (Bell. Jud. v. 4. § 1.) We are thus led to a conclusion directly opposite to that arrived at by Mr. Truph, who says that "the accounts in the books of Samuel and Chronicles represent David as taking the stronghold of Sion first
and the Jebusite city afterwards; Josephus represents him as taking the lower city first, and afterwards the citadel. There can be no doubt, therefore, that in Josephus's view, Sion was the lower city, and the Jebusite city the citadel; "for a comparison of the 7th with the 9th verse in 2 Sam. v., and of the 5th with the 7th verse in 1 Chron. xi. can leave no doubt that the immediate verses in both passages relate to the particulars of occupation of Sion, which particulars are narrated by Josephus of the occupation of the upper city, here called by him by the identical name used by the sacred writer, of "a castle in which David dwelt; therefore they called it the city of David;" and this προσωπον of Josephus is admitted by Mr. Thurne to be the upper city (p. 56, note 2). That the name Sion was subsequently used in a much wider acceptation, and applied particularly to the sanctuary, is certain; and the fact is easily explained. The tent or tabernacle erected by David for the reception of the ark was certainly on Mount Zion, and in the city of David (2 Sam. vi. 13; 1 Chron. xv. 1, 29), and therefore in all the larger compositions, of the Psalms of David, the conclusion of his history, and the commencement of Solomon's reign, Sion was properly identified with the sanctuary. What could be more natural than that, when the ark was transferred to the newly-consecrated temple on the contiguous hill, which was actually united to its former resting-place by an artificial embankment, the signification of the name was expanded so as to comprehend the Temple Mount, and continue the propriety and applicability of the received phraseology of David's and Asaph's Psalms to the new and permanent abode of the most sacred emblem of the Hebrew worship? But to attempt to found a topographical argument on the figurative and frequently elliptical expressions of the Psalms, is an exercise so remote as to be unworthy of the subject. But there is no doubt, in order not to perplex the topography of Jerusalem by the use of ecclesiastical and devotional terminology that Josephus has wholly abstained from the use of the name Sion.

G. W.

SIPH or ZIPH (LXX, Alex. Ziph, Vat. Ζιφ, Etk. Zaphir), a city of the tribe of Judah, mentioned in Genesis, in the list of the tribes of Israel (Josh. xv. 55). The wilderness of Ziph was a favourite hiding-place of David when concealing himself from the malice of Saul. (1 Sam. xxiii. 14, 26, xxvi. 1; Psalms li. title.) This wilderness of Ziph was contiguous to the wilderness of Maon (1 Sam. xxiii. 25); and this Maon is connected with Carmel in the history of Nahal and Abigail (xxv. 9). The three names are still found a few miles south of Hebron, as Kermel, Ma'an, Ziph. The ruins lie on a low ridge between two small wadys, which commence here and run towards the Dead Sea. "There is here little to be seen except broken walls and foundations, most of them of unknown stones, but indicating solidity, and covering a considerable tract of ground. (Robinson, "Bibl. Res. vol. ii. p. 191.) Ziph is placed by St. Jerome 8 miles E. of Hebron (S. would be more correct), and the desert of Ziph is frequently mentioned in the annals of the reconquest of Palestine, while the site of the town was identified by travelers at least three centuries ago. (Filer, "Israelitum," p. 66.) [G. W.]

SIPHAES or TIBHA (also Taba, Tabha, Tabaia, Tabia, Tibaia, etc.), a town of Bochita, upon the Cornishian gulf, which was said to have derived its name from Tiphys, the pilot of the Argonauts. It is now a village of Panaesian the inhabitants of Siphaes paid an annual festival to Argo, Tiphys, and the other heroes of the expedition. (Pausanias i. 5.) Thucydides (I. c.), Apollodorus i. 27. 3, and Herodotus (iv. 44) tell us that the island of Thespius was dependent on that of Thespie; and it is noted by Müller and Kiepert as Aika. I must call attention to the fact that Panaesian demons aying W. of Thibase, and he thence p. 66. S. of Thibest, near the monastery named Taxarach, where all the remains of an ancient town are preserved. In the possession of the island of Thespius would be made in Siphes, which Leake accounts for by the name of Siphes over all the places in the island of Boceita, which the whole country lying on part of the Corinthian gulf may have been, a common acceptation, being called the Thespius. (Leake, "Greece," pl. ii. p. 318.)

SIPHONIS or SIPHYSSES (S. n. xi., S. d. S. Sipheos Gr., Siphonaste It.). a name of the Aegaean sea, one of the Cyclades, lying S. of Seriphos, and N. of Melos. (Ptol. ii. c. i. § 66) describes it as 28 miles in circuit x. considerably larger. The same writer says, the island was originally called Mesape, but, at the coming of the Siphoenses, was named B. (a. v.). Siphon was estab. from Athens (Herod. viii. 48), where a has been derived its name from Sipheos, as a. Sunnias. (Steph. B. a. v.). In consequence of gold and silver mines, which remain in seen, the Siphenses attained great prosperity. In this respect they are considered, in the time of Polyzenus, as the wealthiest of all the islands. The s. of Delphi, in which they deposed the to the production of their mines (Paus. x. 1. 11.) to equal in wealth to the treasures of the most states; and their public buildings were adorned with Parian marble. Their riches, however, came to them to pillage; and a party of pirates plundered the island, as they did a contribution of 100 talents. (Herod. vii. 44.) The Siphenses were among the few islands in the Aegaean who refused tribute to Xerxes and fought with a single ship on the side of the at Salamis. (Herod. viii. 46, 48.) Darsus the Athenian supremacy the Siphenses paid as a tribute of 3600 drachmae. (Plut. rails. x. 3. 4.) Their mines were afterwards very productive; and Pausanias (I. c.) relates as the consequence of the Siphenses neglecting the time of their treasure to Delphi, the in the time of Strabo the Siphenses had become so rich that Χειμώνια Διδύμων from a present to the island. (S. d. S. l. 5.) The moral character of the Siphenses wastv. and hence to act like a Siphenses (Σωληνηθήτω, as a used as a term of reproach. (Steph. B. s. B.) The Siphenses were esteemed in antiquity, as they are in the present age, in potteries. Pliney (xxxvi. xx. 115.) says that the potteries were made. This, according to Pliney, was a species of tale, and is probably invented.)
SIPIA.

Stephanus B. when he speaks of Σιπώνος, WCTH·

Siphnos possessed a city of the same name (Ptol. iii. 15. § 31), and also two other towns, Apollonia and Minoa, mentioned only by Stephanus B. The ancient city occupied the same site as the modern town, called Καστρον or Сарапщт, which lies upon the eastern side of the island. There are some remains of the ancient walls; and fragments of marble are found, with which, as we have already seen, the public buildings in antiquity were decorated. A range of mountains, about 3000 feet in height, runs across Siphnos from SE. to NW.; and on the high ground between this mountain and the eastern side of the island, about 1000 feet above the sea, lie five neat villages, of which Σιφαρι is the principal. These villages contain from 4000 to 5000 inhabitants; and the town of Καστρον about 1000. The climate is healthy, and many of the inhabitants live to a great age. The island is well cultivated, but does not produce sufficient food for its population, and accordingly many Siphnians are obliged to emigrate, and are found in considerable numbers in Athens, Smyrna, and Constantinople. (Tournemont, Voyage, f.c. vol. i. p. 134, seq. transal.; Fiedler, Reise, vol. ii. p. 125, seq.; Ross, Reise auf den Griech. Inseln, vol. i. p. 138, seq.)

COIN OF SIPHNOS.

SIPIA, in Gallia, is placed by the Table on a route from Condate (Remes) to Juliomagus (Angers). The distance from Condate to Sipia is xvi. and this distance brings us to a little river Socie at a place called Vir-socie, the Vi being probably a corruption of Vrs; the name is found, as Vir-socie, from Vr-socie brings us to Cambaristum (Comber) on the road to Angers. But see the article Cambaristum. The Socie is a branch of the Vilaine (D'Avrille, Notice, f.c.).

SIPONTUM, or SIPUNTUM, but in Greek always SIPUS (Σιπόνου -όντος: Ελθ. Σιπόνους, Sipontium: Sia Maria di Siponto), a city of Apulia, situated on the coast of the Adriatic, immediately S. of the great promontory of Garganus, and in the bight of the deep bay formed by that promontory with the prolongation of the coast of Apulia. (Strab. vi. p. 284.) This bay is now called the Gulf of Manfredonia, from the city of that name which is situated within a few miles of the site of SIPONTUM. The Cerblus, or Cerbelus, which was called the Candelaro fall into this bay a short distance S. of SIPONTUM, and form at their mouth an extensive lagune or salt-water pool (σταματώμα, Strab. l.c.), now called the Pantano Salso. Like most places in this part of Apulia the foundation of SIPONTUM was ascribed to Diomed (Strab. l.c.: but with the exception of this vague and uncertain tradition, which possibly means no more than that the city was one of those belonging to the Dorian tribe of Apulians, we have no account of its being a Greek colony. The name is closely analogous in form to others in this part of Italy (Hydruntum, Butrintum, &c.): and its Greek derivation from Όλψιδ, a cattle-fish (Strab. l.c.), is in all probability fictitious. The Greek form SIPUS, is adopted also by the Roman poets. (Sil. Ital. viii. 533; Lucan. v. 377.) The only mention of SIPONTUM in history before the Roman conquest is that of its capture by Alexander, king of Epirus, about b. c. 350. (Liv. viii. 24.) The manner in which it is passed under the yoke of Rome we have no record; but in b. c. 194 a colony of Roman citizens was settled there, at the same time that those of Salernum and Buxantum were established on the other sea. (Liv. xxxiv. 45.) The lands assigned to the colonists are said to have previously belonged to the Aparni, which renders it probable that SIPONTUM itself had been colonized before. The new colony, however, does not seem to have prospered. A few years later (b. c. 184) we are told that it was deserted, probably on account of malaria; but a fresh body of colonists was sent there (Liv. xxxv. 22), and it seems from this time to have become a tolerably flourishing town, and was frequently visited by the emperors, whom never the less the town received great consideration. Its principal trade was in corn. (Strab. vi. p. 284; Mel. ii. 4. § 7; Plin. iii. 11. a 16; Ptol. iii. 1. § 16; Ptol. x. 1.) It is, however, mentioned apparently as a place of some importance, during the Civil Wars, being occupied by M. Antonius in b. c. 40. (Appian, B. C. v. 28.) We learn from inscriptions that it retained its municipal government and magistrates, as well as the title of a colony, under the Roman Empire (Mommsen, Insac. R. N. 927—929); and at a later period Paulus Diaconus mentions it as still one of the "urbes satis opulentas" of Apulia. (P. Diod. Hist. Lang. ii. 21.) Lucan notices its situation immediately at the foot of Mount Siponto ("urbem Sipus montibus," Lucan, v. 377). It was, however, actually situated in the plain and immediately adjoining the marshes at the mouth of the Candelaro, which must always have rendered the site unhealthy; and in the middle ages it fell into decay from this cause, till in 1250 Manfred king of Naples removed all the remaining population to the island, and, about a century after, we find Napoleon N., where he built a new city, to which he gave the name of Manfredonia. No ruins of the ancient city are now extant, but the site is still marked by an ancient church, which bears the name of Sta Maria di Siponto, and is still termed the cathedral, the archbishop of Manfredonia bearing officially the title of Archbishop of Ciponto. (Cary, 1796, see above.)

SIPYLLUS (Σιπύλοις), a mountain of Lydia between the river Hermus and the town of Smyrna; it is a branch of Mount Tmolus, running in a north-western direction along the Hermus. It is a rugged, much torn mountain, which rises in such a form to violent convulsions of the earth. The mountain is mentioned even in the Iliad, and was rich in metal. (Hom. II. xxiv. 615; Strab. i. p. 58, xii. p. 579, xiv. p. 560.) On the eastern slopes of the
mountain, there once existed, according to tradition, an ancient city, called Tantaus, afterwards Sipylos, the capital of the Mazonians, which was believed to have been swallowed up by an earthquake, and replaced by a valley filled by a lake, which bore the name of Sadi or Solot (Strab. i. p. 58, xii. p. 579; Steph. B. s. v.; Plin. v. 31; Paus. vii. 24. § 7). Pliny relates that the spot once occupied by Sipylos was successively occupied by other towns, which he calls Aristopolis, Colpe and Lebadea. Pausanias (v. 13. § 4) calls the lake the marsh of Tantaus, and adds that its tomb was conspicuous near it, and that the throne of Pelops was shown on the summit of the mountain above the temple of (Cybele) Plastane (ιε). The tops of the houses of Sipylos were believed to have been seen under the water for some time after (Paus. vii. 24. § 7); and some modern travellers, mistaking the ruins of old Smyrna for those of Sipylos, imagine that they have seen both the remains of Sipylos and the tomb of Tantaus. Chandler (Travels in Asia Minor, p. 331) thought that a small lake of limpid water at the north-eastern foot of Mount Sipylos, not far from a sepulchre cut in the rock, might be the lake; but Hamilton (Researches, i. p. 49, fol.) has shown that the lake must be sought for in the marshy district of the lower plains on the north-western slope of Masticus.

In speaking of Mount Sipylos, we cannot pass over the story of Niobe, alluded to by the poets, who is said to have been metamorphosed into stone on that mountain in her grief at the loss of her children. (Hom. H. xxiv. 614; Soph. Antig. 892; Ov. Met. vi. 310; Apollod. iii. 5; Paus. viii. 2. § 3.) Pausanias (i. 21. § 5) relates that he himself went to Mount Sipylos, and found a large tumulus formed out of Niobe's bones, on the summit of the natural rock; when viewed close he saw only the rock and precipices, but nothing resembling a woman either weeping or in any other posture; but at a distance you fancied you saw a woman in tears and in an attitude of grief. This phantom of Niobe, says Chandler (p. 331), whose observation has been confirmed by other modern travellers, may be defined as an effect of a certain portion of light and shade on a part of Sipylos, perceptible at a particular point of view. Mount Sipylos now bears the name of Sabaudjii Daph or Sipali Daphg. [L. S.]

SIRACELAE (Itin. Ant. p. 332; Ib. p. 333, Siracella; cf. Hes. p. 605, Sirigoria; Tiss. Post. Synagelos; and in Geog. B. iv. 6, and v. 12, Synacelia), a place in Tarentum, on the road from Tramuntoplis to Callipolis, and on the main road to Constantinople. Its distance from Trajanopolis is variously given in the Itin. Ant., and the readings of the MSS. differ,—one stating the distance to be as much as 58,000 paces, another as little as 50,000. According to Mauvett (vii. p. 209), its site is near the modern "Chousam or Symposam" (P. Lucas (Trive 4a p. 47); but Richard places it near Zeres, and Laizes near Myglena or Mygipoula; the uncertainty of the itinerary above mentioned being probably the cause of this discrepancy. [J. R.]

SIRACINE (Sab. Soc.)

SIRACINE (Jansenius, Ptol. v. 9, §§ 17, 19), a great and mighty people of Asia. Sirenicene, the coast above the Euxinus, beyond the Rhéa and on the Ambrusium, in the district called Strabo (xi. 504) Sireneus. They appear under various names. Thus Strabo (xi. p. 506) and Mela (i. 19) call them Sireni; Tactites (Athen. xii. 15, seq.) Sireni (in Strabo, xi. p. 432, § 463); and in an inscription (Richt, ii. p. 1009) we find the form Sipades.

They were governed by their own kings and gods, and Romans were engaged in a war with them, &c. (Tac. L. C.; Strab. xx. p. 504.) [T. E.]

SIRAB or SIRABAE. [Phrae.]

SIBAYE, in Media. (Strabo, xii. p. 579; Steph. B. s. v.)

SIRANICA (Tscopeus or Tscopeins, Plin. vi. 17, a tribe in the interior of Libya. [T. E.]

SIREBES. [Xanthius.]

SIRBL. [Serbi.]

SIRBITUM, a city of Asaithia, shore between the mountains cease, and at a distance of 15 km. from the town (Plin. vii. 36. p. 23). For some particulars Memont (x. p. 171) is secret as to it, but regards it as the modern Senussi. [T. E.]

SIRBONIS LACUS ( Pc. Labeo or Labeo Maris, Herod. ii. 6; Diodor. i. 30; Poly. i. 3; Ptol. i. 20; Strab. i. p. 50, 65, xvii. 760—768; Flor. B. s. v.; Plin. v. 12, xiv. 14; Schol. Her.). was a vast tract of marshy ground, the course of which formed the Sirbonian lake, lying between the estuary of the Delta, the Lathus of Sirbonis, and the Mediterranean sea. When at its greatest extent it was at one time connected by a natural canal (vrb. Euphrates), running through the (ancient) Phasis and shingle (vrb. Bosphorus), which separates it from the sea. The limits of the Senussi have, however, been much contracted by the invasion of the sea-bords and the cutting of the sands, and the lake is now of inconsiderable extent. The Sirbonian region is celebrated as the theatre for having been the scene of at least the pre-destruction of the Roman army in A.D. 48. Danubius Orcus was leading it, after the return of Sion, to Egypt, in order to restore it to the ifrus (vrb. Senusitae) of the town, (30) as probably exaggerated the serious disaster to the annihilation of the invading host, and Men (p. ii. 293) has adopted the statement of Lev - when he speaks of

"——that Sirbonian bog
Betwixt Damita and Mount Cassius
Where armies whole have sunk."

The same Persian army, however, afterward sent to Pelusium, Babistis, and other cities of the coast. The base of the Delian triclinium of Agys was reckoned by Herodotus (ii. 6) from the sea to the lake Sirbonis. [W. A.]

SIRENUSAE FUSCULAR. [Maurer's Pal- Montforti.]

SIRICAE, a place in Cappadocia, on the road from Comana to Melitene, and 240 miles from Tarsus. (Itin. Ant. p. 210, 211.) Acryaeus; Laizes, near the Bosphorus. [T. B.]

SIRIO, in Gallus, is placed by the Tiss. Post. from Burdigala (Bordeaux) to Agis, (Tosc. 159) and the distance is probably correct, as is also the Tosc. 159 places Sirio x. from Bordeaux; for the true Lat. is xxv. or xxi. Gallic leagues. D'Avail sa Siris (the Pont de Siris) near the point where the river Siris or Cerone joins the Eure or the bank. [C. E.]

SIRIS (Oberon.; Eth. Zapreis, but also Siris. It is a mountain chain or mountainous mass, almost at the mouth of the river of the same name, near to the Tarentine gulf, and now called the same. There is no doubt that Siris was a great cistern, and that at one time it attains to a great cistern of wealth and prosperity; but its history is extinct, obscure and uncertain. Its first origin was sacred, and its use as a Trojan colonists and, as a prof. of the
an ancient statue of Minerva was shown there which claimed to be the true Trojan Palladium (Strab. vi. p. 264; Lycoaphr. Aen. 975—985). Whatever may have been the origin of this legend, there seems no doubt that Siris was originally a city of the Chones, the native Eastern inhabitants of this part of Italy (Strab. l. c.). A legend found in the Elymologion (c. v. Ziprus), according to which the city derived its name from a daughter of Morgan, king of Siris, evidently points in the same direction, as the Morgion also were an Eastern tribe. From these first settlements it was wrested, as we are told, by a body of Itonian colonists from Colophon, who had fled from their native city to avoid the dominion of the Lydians. (Strab. l. c.; Athenaeus xii. p. 523.) The period of this emigration is very uncertain; but it appears probable that it must have taken place not long after the capture of the city by Gyges, king of Lydia, about 700—690 B.C. Archilochus, writing about 660 B.C., alludes to the fertility and beauty of the district on the banks of the Siris; and though the fragment preserved to us by Athenaeus does not expressly notice the existence of the city of that name, yet he uses such expressions as prove that the poet certainly did mention it; and the fact of this colony having been so lately established there was doubtless the cause of its allusion to it (Archil. op. Athen. xii. p. 523). On the other hand, it seems clear from the account of the settlement at Metapontum (Strab. vi. p. 265), that the territory of Siris was at this time still unoccupied by any Greek colonies. It may therefore be probably assigned to the date of the Ionian settlement at Siris between 690 and 650 B.C. We are told that the Ionic colonists gave the city the name of Polis (Πολιεύς, Strab. vi. p. 264; Steph. B. s. v. Ziprus); but the appellation of Siris, which it derived from the river, and which seems to have been often given to the whole district (§ Ziprus, used as equivalent to Σίρις, evidently hypercorrection, and is the only one met with in common use. Of the history of Siris we know literally nothing, except the general fact of its prosperity, and that its citizens indulged in habits of luxury and effeminacy that rivalled those of their neighbours the Sybarites. (Athen. xii. p. 523.) It may be received as an additional proof of their opulence, that Damasus, a celebrated gladiator, is said by Herodotus to have been the suitor for the daughter of Cleisthenes of Sicyon, about 580—560 B.C., on which occasion Siris and Sybaris among the cities of Italy alone furnished claimants. (Herod. vi. 127.) This was probably about the period that Siris was at the height of its prosperity. But an Ionian city, existing as it did in the midst of the powerful Achaean colonies, must naturally have been an object of jealousy to its neighbours; and hence we are told that the Metapontines, Sybarites, and Corinthians formed a league against Siris; and the war that ensued ended in the capture of the city, which appears to have been followed by the expulsion of the inhabitants (Justin. xx. 9). The date of the destruction of Siris cannot be fixed with any approach to certainty: it was probably after 550 B.C., and certainly preceded the fall of its rival Sybaris in B.c. 510. Its ruin appears to have been complete, for we meet with no subsequent mention of the city, and the territory is spoken of as open to colonisation at the time of the Persian War, B.C. 480. (Herod. viii. 62.) Upon the failure of Siris we learn incidentally that the Athenians considered themselves as having a claim of old standing to the vacant district of the Sirites, and even at one time thought of removing thither with their wives and families. (Herod. l. c.) The origin of this claim is unknown; but it seems pretty clear that it was taken up by the Athenian colonists who established themselves at Thurii in B.C. 443, and became the occasion of hostilities between them and the Tarentines. These were at length terminated by a compromise, and it was agreed to found in common a fresh colony in the disputed territory. This appears to have been at first established on the site of the ancient city, but was soon after transferred to a spot 3 miles distant, where the new colony received the name of Heraclea, and soon rose to be a flourishing city. (Strab. vi. p. 264; Diod. xii. 36.) [HERACLEA.] According to Strabo, Siris still continued to exist as the port or naval station of Heraclea; but no other mention of it is found, and it is not clear whether Strabo himself meant to speak of it as still subsisting in his day. No remains of it are extant, and the exact site does not appear to have been determined. But it may be placed on the left bank of the river Siris (now called the Sinno), at or near its mouth; a position which well accords with the distance of 24 miles from Pafili (modern Heraclea), the remains of which are visible at Pafili, near the river Agré, the ancient Aciria. [HERACLEA.] The river Siris is mentioned by Lycoaphron (Aen. 982), as well as by Archilochus in a passage already cited (ep. Athen. xii. p. 523); but the former author calls it Ziprus, and its modern name of Sinno would seem to be derived from an ancient period; for we find mention in the Tabulae Peutingerianae of a station called Zepirus near Heraclea, the name of which is written Semnon, probably a corruption for Ad Sinnum or Sinnam. The Siris and Aciria are mentioned in conjunction by Pliney as well as by Strabo, and are two of the most considerable streams in Lucania. (Plin. ill. i. 15; Strab. vi. p. 264.) The name of the former river is not so much in connection with the first great battle between Pyrrhus and the Romans, B.C. 280, which was fought upon its banks (Plut. Pyrrh. 16). It has been absurdly confounded by Florus and Oro- sius with the Liris in Campania. (Flor. i. 18. § 7; Orso. iv. 1.) The fertile district of the Sirites (§ Ζερπίτες or Ζερπίται) is a portion of the lowest tract of country which lies between the gulf of Taranto from the neighbourhood of Rocco Imperiale to the mouth of the Bradano. This plain stretches inland from the mouth of the Sinno to the foot of the hill on which stands the modern city of Tursi, about 8 miles from the sea. It is a tract of extraordinary natural fertility, but is now greatly neglected, and, in common with all this coast, desolated by malaria. (E. H. B.) SIRIS, SIRAE, SERRHAE (Σίρις, Herod. viii. 115; Sirae, Liv. iv. 4; Σέρις, Hieroc.: Σίρας and Σερράς, Herod. v. 15; Steph. B.: Serrae), a town of Macedonia, standing in the widest part of the great Strymonic plain on the last slopes of the range of mountains which bound it to the NE. Xerxes left a part of his sick there, and on proceeding to the Hellisentia (Herod. l. c.) and P. Aemilius Paulus, after his victory at Pydna, received at this town, which is ascribed to Odomantius, a deputation from Pergaeus, who had retired to Samothrace. (Liv. l. c.) Little is known of Serrae, which was the usual form of the name in the 5th century (though from two inscriptions found at Serrae it appears that Sirrhas, or Sirrha, the was the more ancient orthography, and that which obtained at least until the division of the empire), until the great spread of 3 to 3
SICILIA.

the Servian kingdom. Stephen Dushan in the 14th century seized on this large and flourishing city, and assumed the imperial crown here, where he established a court on the Roman or Byzantine model, with the title of Emperor of Romania, Serbia, and Albania. (Nicop. ii. p. 67.) After his death, a partition of his dominions took place but the Greeks have never since been able to recover their former preponderance in the provinces of the Strymonic valley. Sultan Murad took this town from the Servians, and when Sigismund, king of Hungary, was about to invade the Ottoman dominions, Bayezid (Bajazet Iberim) summoned the Christian princes who were his vassals (to his camp at Serrhis, previous to his victory at Nicopoli, A.D. 1396. (J. von Hammer, Gesch. des Osman. Reiches, vol. i. pp. 193, 246, 600.)

Besides the Macedonian inscriptions of the Roman empire found by Leake (Instor. 1856) and Coulonery, the only other vestige of the ancient town is a piece of granite wall faced with large quadrangular blocks, but composed within of small stones and mortar forming a mass of extreme solidity. Servian remains are more common. (Leake, Northern Greece, vol. iii. pp. 300—310.)

SIRMO (Serimno), a narrow neck or tongue of land, projecting out into the Lake Benacus (Lago di Benaco) from its southern shore. Though a conspicuous and picturesque object in all views of the lake from its southern shores, it is unnoticed by any of the geographers, and its name would probably have been unknown to us, but for the circumstance that Catullus, who was a native of the neighbouring Verona, had a villa on its shores, and has sung the praises of Sirmio in one of the most charming odes in the thirty-first book of the Poet. (Pet. ii. 19; Plin. iii. 1. a. 3.) It lay N. of Cortaia, between the Baiset and the Anza, and was celebrated for its silver mines and veins of cinnaabar. (Strab. loc. cit. VII. 9; Plin. xxxiii. 7. a. 40; Dioscor. v. 109.) The town of Alamiades in the Seire Noresca, with which Siscia is identified, still possesses a rich mine of quicksilver. The mine is apparently inexhaustable, becoming richer in proportion as it is worked. Silver seem also to have been in the Castra. It is very quicksilver occurs also in pyrites and hornstein. "Between 30,000 and 35,000 quintals of mercury are now procured annually." (Ford, Handbook of Spain, p. 61.) After the Lombarb, A. D. 406, it was called "Siscia," (Inst. Ant. p. 127.) This must, however, have been situated at the entrance of the peninsula, probably where a road turned off to it, as it must have been opposite to the island of Catullus, which had been cut off by a large and notable embayment of the sea, and which had replaced the humbler dwelling of the post.

SIRMIUM (Spicino), an important city in the south-eastern part of Lower Pannonia, was an ancient Celtic place of the Taurisci, on the left bank of the Savas, a little below the point where this river is joined by the Bacacius (Plin. iii. 28.) Zosimos (loc. cit.) says that last Sirmium was surrounded on two sides by a tributary of the later. The town was situated in a most favourable position, where several roads met (Inst. Ant. pp. 124, 131; Inst. Hiera. p. 583), and during the wars against the Dacians and other Dacian tribes, it became the chief depot of all field posts. After the battle of Adrianople, it became the chief town of the province of Pannonia. (Herodian, viii. 2.) Whether it ever was made a Roman colony is not quite certain, though an inscription is said to exist containing the words Dec. Colon. Sirmiones. It contained a large manufactury of arms, a spacious forum, an imperial palace, and other public build-

SIBOC (Sibede), a town of Parthy, noticed by Ieronymus. (Stoix. Parth. c. 13, ed. Muller.) It is not clear whether there is any corresponding modern town, but Boccaccio thinks it is represented by the present Sserba. (Geogr. Herod. p. 297.) Ptolemy places it a district which he calls Siracene among the Astabeni, a people who occupied part of Hycransia (v. 9. § 5). It is not impossible that Sirce and Siracene may be thus connected.

SIBAPOND (Zarauz), Strab. iii. p. 142, a considerable town in the province of Zaraz, though it is not expressly mentioned by the ancient writers. (Inst. Ant. p. 19; Plin. iii. 1. a. 3.) It lay N. of Cordavia, between the Baeti and the Anza, and was celebrated for its silver mines and veins of cinnaabar. (Strab. loc. cit. VII. 9; Plin. xxxiii. 7. a. 40; Dioscor. v. 109.) The town of Alamiades in the Seire Noresca, with which Siscia is identified, still possesses a rich mine of quicksilver. (Ford, Handb. Geography, p. 28.) As the name of the town is variously written, it appears on coins as "Siscio" (Sestini, p. 87), whilst others have the correct name. (Flores, Mem. iii. p. 119; Micieni, p. 125, and Suppl. i. p. 114.) The form "Sisalona" (Inst. Ant. (p. 444) is probably corrupt. It appears to be the derivative of the name Siscia. (Ptolemy E. 6. § 59) of whom, however, places it in the territory of the Ostiani, in Hispania Tarraconensis, on which indeed it borders.

SISAR. [T.H.D.]

SISARA (Sisira, Phot. iv. 3. § 17), a lake in Africa Propria, in the neighbourhood of Hippo Diarrhythus, and Remisit or Sisaria. (T. H. D.)

SISARACH (Sissarach, Phot. ii. 19, de Adr. ii. 4), a fortress of Mesopotamia, above Dara, noticed by Procopius. It is not elsewhere mentioned. (V. S.)

SISESTEA, SEGESTA, or SEGESTICA (Sisestena, Sepestena, Sepestine, Sepestana, Sisestana), a great town in the south of Upper Pannonia, on the southern bank of the Savas, on an island formed by that river and two others, the Colapis and Odra, a canal dug by Tiberius completing the island. (Dion Cass. xlix. 37.) It was situated on the great road from Aquincum to Sirmium.
SITACE.

(Plin. iii. 28.) According to Pliny the name Segestica belonged only to the island, and the town was called Siscia; while Strabo (vi. p. 314) says that Siscia was a fort in the neighbourhood of Segestica; but if this was so, it must have been primarily a fort, subsequently the fort and town became united as one place. (Comp. Strab. iv. p. 202, v. p. 214, vii. p. 218; Appian, Illyr. 16, 23, &c.) Siscia was from the first a strongly fortified town; and after its capture by Tiberius, in the reign of Augustus (Appian, Dion Cass., ii. &c.; Vell. Pat. ii. 113), it became one of the most important places in the region. It was situated on two navigable rivers, not only carried on considerable commerce (Strab. v. pp. 207, 214), but became the central point from which Augustus and Tiberius carried on their undertakings against the Pannonians and Illyrians. Tiberius did much to enlarge and embellish the town, which as early as that time seems to have been made a colony, for Pliny mentions it as such; and in the time of Severus it received fresh colonists, whence in inscriptions it is called Col. Septimia Siscia. The town contained an imperial mint, and the treasury for what was at a later time called the province Savia; at the same time it was the station of the small fleet kept on the Savus. Siscia maintained its importance until the beginning of the 4th century, in proportion as Sirmium rose, Siscia sank and declined. (Comp. Zosim. ii. 48; Orelli, Inscr. n. 504, 505, 2703, 3075, 3346, 4993.) The modern town of Sisak, occupying the place of the ancient Siscia, contains many interesting remains of antiquity. (Marzari, Dalmatina, p. 47; Scholzianer, Astaq. Dalmatiae, p. 59, foll.; Muchar, Noricum superior, p. 159.)

SITACE (Zerden), a large town, first noticed by Xenophon (Anab. ii. 4, § 13), situated about 8 parsegs from the Median Wall, and 15 from the Tigris and the month of the Phrygians. The exact situation cannot be now determined, but several travellers have noticed, in this neighbourhood, remains of ancient walls, or in the ancient town, of which the ascents could be made to Passargada in 7 days, is manifestly erroneous. There is no reason to doubt that it is present represented by a stream called Sisla-Rhephid. (Vincent, Voy. of Nearcissus, i. p. 383; D'Anville, Mem. de l'Acad. xxx. p. 185; Ritter, Erbd.lands. vii. p. 763.)

SITIOGOAS. (Strabo, B. G. vii. 123, &c. Steph. Ptol. iv. 2, § 84; Eusebius, Hist. Eccl. iv. 15, § 9; Longus), the central of the three prongs which run out into the Aegean from the great peninsula of Chalcedon, forming a prolongation to the peak called Solon or Kolomos. The Sithonian peninsula, which, though not so hilly as that of Aetia, is not so invadable as Aetia, was the first, it appears, to come over by land. The soil is very fertile, and the town of the same name is given in Chalcedon. (E. B. J.)

SITIA, a place in Hispania Bescica. (Plin. iii. 1. &c.)

SITIPI (Xiph. Ptol. iv. 2, § 84), a town in the interior of Mauretania Cacaerrina, situated in an extensive plain not far from the borders of Numidia, and on the road from Carthage to Cirta. (Plin. ii. pp. 24, 29, 31, &c.; comp. Amm. Marc. xxviii. 6.) At first, under the Numidian kings, it was but an unimportant place; but after the Roman dominion it became the frontier town of the new province of Numidia, and was probably intended to be a colony; so that on the subsequent division of Mauretania Caesar into two smaller provinces it became the capital of Mauretania Sitifensis. Under the dominion of the Vandals, it was the capital of the district Zabdi. (Zabdi, Procop. B. Vandal. ii. 20.) It is still called Sitif, and lies upon a considerable eminence in a low and marshy situation. Some ruins of the ancient town are still to be seen. (Shaw's Travels, p. 49.)

SITILLIA, in Gallia, is placed by the Table on a road from Aquae Borromis (Bourbon l'Archebault) to Pocernium, supposed to be Perigni. Sitilla is xvi. from Aquae Borromis and xiii. from Pocernium. Sitilla is probably a place named Veli. (D'Anville's Notices, &c.)

SITIOGAGUS. [SITACUS.]

SITOMAGUS, a town of the Iceni or Simeni, in the E. part of Britannia Romana. (Itin. iii. p. 480.) Camden (p. 455) identifies it with Thetford in Norfolk, whilst others seek it at Stonemarsh, Southwell, and Saxmundham. In the Tab. Peut. it is erroneously written as Sitelum. (Tac. Germ. 45.) The Sitionian locality is some part of Finland; probably the northern half of the coast of the Gulf of Bothnia.

The statement that they were under a female rule is explained as follows. The name by which the East Bothnish Finlanders designate themselves is Kainu-laiet (in the singular Kainu-lainen). The Swedes call them Quoena (Kwona). The mediaval name for their country is Cajam-la. Now geenus in the Norse language means, being our words geese and geum, and in great ages, and cite the land of the Quoena would be Caena-land; as it actually is, being Cwena-land (Queen-land) in Anglo-Saxon. Hence the statement of Tacitus arises out of information concerning a certain Cwena-land, erroneously considered to be a terra feminarum, instead of a terra Quenorum. The reader who thinks this fanciful should be informed that in ancient Bremen, writing in the 12th century, when the same country comes under notice, the same confusion appears, and that in a stronger form. The Sitionian country is actually terra feminarum. More than this, the femines become Amazonae: "circa haec litora Balici maris ferunt esse Amazones, quod nunc terra feminarum dicitur, quae aqua gaustra et alqui divaricat copias ... Has in adiantes, spernunt consortia vivorum, quo etiam, si advenirent, a se viriliter repulscunt," c. 228. (Zosim, Die Deutschen, &c., s. v. Quenen.)

It is well worth noticing that King Alfred's locality of the Canem is, in respect to their relations to the Swi, exactly that of Tacitus,—Cwena-land succeeding Cwena-land.

The Sitiones seem to have been the ancient representatives of the Fenno of Finland,—the Fenni of the ancients being the Lapps. This is not only what the words Sitiones and Sitione suggest, but the inference from the word Fenni also. To the Finlander, Fin is a strange name. The Swede calls him Quoens.
he calls himself Sounsia-iaemon or Hamalaucus. On the other hand, it is the Lap of Finnmark that is called a Fin, and it is the Norwegian who calls him so. [FINN.]

SITTAC. [SITTAC.] [R. G. L.]

SITTAC (Σηττάκη, Ptol. vi. 1. § 6), a town of ancient Ilyria, at the southern end of this province, on the road between Ariminum and Susa. (Strab. xvi. p. 744.) It is called Sita (Σίτα) by Diodorus (viii. 110). It was the capital of the district of Sittacense, which appears to have been called in later times Apolloniass (Strab. xli. p. 524), and which adjoined the province of Susia (xv. p. 732). Pliny, who was nearly contemporary with Strabo, and more northerly in direction, states that it bore also the names of Arbelis and Palestine (vi. 27. a. 31). It is probably the same country which Curtius calls Satarense (v. 2).

SITTACENSE. [SITTAC.] [V.]

SITTACUSIS (Σιττακοτίς, Arrian, Ind. c. 4), a navigable river, which unites the two declivities of the Geusus. It has been conjectured by Man- nert that it is the same as the present Sina, a tributary of the Jumna, near Ramgar (v. p. 6. v. p. 69).

SIUPH (Σιόφ, Herod. ii. 172), a town of the Saltine name in the Delta of Egypt. It does not appear to be mentioned by any other writer besides Herodotus. [T. E. D.]

SIVA (Σίων), a town in the prefecture of Cilicia in Cappadocia, on the road from Mazaca to Tavium, at a distance of 22 miles from Mazaca. (Ptol. v. 6. § 15. Top. Ptol.) [L. S.]

SMARAGDUS MONS (Σμάραγδος ὄρος, Ptol. iv. § 14), was a portion of the chain of hills which run from the coast of Asia Minor to the Red Sea from the Heropolis gulf to the straits of Bab-el-Mandeb. Between lat. 24° and 25° in this range is the Mount Smaragdus, the modern Dyebel Zobeir, which derived its name from the emeralds found there, and erath attracted by its wealth the Egyptians into that barren region. The principal mine was at Dyebel Zobeir, but at Bender-el-Soghier to N., and at Sekket to S., each a portion of Mount Smaragdus, there are traces of ancient mining operations. Small emeralds of an inferior quality are still found in this district. (Mannert. Geogr. vol. x. p. 21.) Strabo (vii. 8. 185) and Pliny (xxxix. 15. s. 16) mention the wealth obtained from these mines. At Sekket there is a temple of the Phœnician era; but the mines were known and wrought at least as early as the reign of Amunoph III, in the 18th dynasty of the native kings of Egypt. [W. B. D.]

SMENUS. [Lacost. p. 114, b.]

SMILA. [Chrosa.]

SMYRNA (Σμύρνη: Etr. Smyrno, Smyrnaeae: Smyrnia or Ismir), one of the most celebrated and most flourishing cities in Asia Minor, was situated on the east of the mouth of the Hermus, and on the bay which received from the city the name of the Smyrnæus Sinus. It is said to have been a very ancient town founded by an Amnon of the name of Smyrna, who had previously conquered Ephesus. In consequence of this war Smyrna was regarded as a colony of Ephesus. The Ephesian colonists are said afterwards to have been expelled by Aeolians, who then occupied the place, until, aided by the Colophonians, the Ephesian colonists were enabled to re-establish themselves at Smyrna. (Strab. xiv. p. 633; Steph. B. s. e.; Plin. v. 31.) Herodotus, on the other hand (i. 150), states that Smyrna originally belonged to the Aeolians, who admitted into their city some Colophonian exiles; and that these Colophonian afterwards, during a festival which was celebrated outside the town, made themselves masters of the place. From that time Smyrna ceased to be an Aeolian city, and was received into the Ionian confederacy (Comp. Paus. vii. 5. § 1.) So far then as we are guided by authentic history, Smyrna belonged to the Aeolian confederacy until the year a. c. 688, when by an act of treachery on the part of the Colophonians it fell into the hands of the Ionians, and became the 15th city in the Ionian League. (Herod. i. c. 30.) Later, when the Ionians more northerly in direction, states that it bore also the names of Arbela and Palæstina (vi. 27. a. 31). It is probably the same country which Curtius calls Saxia (v. 2).

-SMYRNA. [V.]

SMYRNAEANS (Σμύρναιας, Ptol. iv. § 16), a town of the Saltine name in the Delta of Egypt. It does not appear to be mentioned by any other writer besides Herodotus. [T. E. D.]

SIVA (Σίων), a town in the prefecture of Cilicia in Cappadocia, on the road from Mazaca to Tavium, at a distance of 22 miles from Mazaca. (Ptol. v. 6. § 15; Top. Ptol.) [L. S.]

SMARAGDUS MONS (Σμάραγδος ὄρος, Ptol. iv. § 14), was a portion of the chain of hills which run from the coast of Asia Minor to the Red Sea from the Heropolis gulf to the straits of Bab-el-Mandeb. Between lat. 24° and 25° in this range is the Mount Smaragdus, the modern Dyebel Zobeir, which derived its name from the emeralds found there, and recently attracted by its wealth the Egyptians into that barren region. The principal mine was at Dyebel Zobeir; but at Bender-el-Soghier to N., and at Sekket to S., each a portion of Mount Smaragdus, there are traces of ancient mining operations. Small emeralds of an inferior quality are still found in this district. (Mannert. Geogr. vol. x. p. 21.) Strabo (vii. 8. 185) and Pliny (xxxix. 15. s. 16) mention the wealth obtained from these mines. At Sekket there is a temple of the Phœnician era; but the mines were known and wrought at least as early as the reign of Amunoph III, in the 18th dynasty of the native kings of Egypt. [W. B. D.]

SMENUS. [Lacost. p. 114, b.]

SMILA. [Chrosa.]

SMYRNA (Σμύρνη: Etr. Smyrno, Smyrnaeae: Smyrnia or Ismir), one of the most celebrated and most flourishing cities in Asia Minor, was situated on the east of the mouth of the Hermus, and on the bay which received from the city the name of the Smyrnæus Sinus. It is said to have been a very ancient town founded by an Ammon of the name of Smyrna, who had previously conquered Ephesus. In consequence of this war Smyrna was regarded as a colony of Ephesus. The Ephesian colonists are said afterwards to have been expelled by Aeolians, who then occupied the place, until, aided by the Colophonians, the Ephesian colonists were enabled to re-establish themselves at Smyrna. (Strab. xiv. p. 633; Steph. B. s. e.; Plin. v. 31.) Herodotus, on the other hand (i. 150), states that Smyrna originally belonged to the Aeolians, who admitted into their city some Colophonian exiles; and that these Colophonian afterwards, during a festival which was celebrated outside the town, made themselves masters of the place. From that time Smyrna ceased to be an Aeolian city, and was received into the Ionian confederacy (Comp. Paus. vii. 5. § 1.) So far then as we are guided by authentic history, Smyrna belonged to the Aeolian confederacy until the year a. c. 688, when by an act of treachery on the part of the Colophonians it fell into the hands of the Ionians, and became the 15th city in the Ionian League. (Herod. i. c. 30.) Later, when the Ionians more northerly in direction, states that it bore also the names of Arbela and Palæstina (vi. 27. a. 31). It is probably the same country which Curtius calls Saxia (v. 2).
SOMNAMUS SINUS.

bourhood of their city, on the little river Meles, where the poet was said to have composed his works. Smyrna was at all times not only a great commercial place, but its schools of rhetoric and philosophy also were in great repute. The Christian Church also flourished through the zeal and care of its first bishop Polycarp, who is said to have been put to death in the stadium of Smyrna in A. D. 166 (Iren. iii. p. 176). Under the Byzantine emperors the city experienced great vicissitudes; having been occupied by Tsachas, a Turkish chief, about the close of the 11th century, it was nearly destroyed by a Greek fleet, commanded by John Ducas. It was restored, however, by the emperor Comnenus, but again subjected to severe sufferings during the siege of Ta-
neriana. Not long after it fell into the hands of the Turks, who have retained possession of it ever since. It is now the great mart of the Levant trade. Of Old Smyrna only a few remains now exist on the north-eastern side of the bay of Smyrna; the walls of the acropolis are in the ancient Cyclopean style. The ancient remains of New Smyrna are more numerous, especially of its walls which are of a solid and massive construction; of the stadium between the western gate and the sea, which, how-
ever, is stripped of its marble seats and decorations; and of the theatre on the side of a hill fronting the bay. These and other remains of ancient buildings have been destroyed by the Turks in order to obtain the materials for other buildings; but numerous remains of ancient art have been dug out of the ground at Smyrna. (Chandler's Travels in Asia, pp. 76, 87; Prokesch, Denkwürdigkeiten, i. p. 515, foll.; Hamil-
ton, Researches, i. p. 46, foll.; Sir C. Fellows, Asia Minor, p. 10, foll.)

L. S.

COIN OF SMYRNA.

SOMNAMUS SINUS (Σμυρναῖος κόλπος), also called the bay of Hermus (Ερμύος κόλπος), from the river Hermus, which flows into it, or the bay of Meles (Mελέως κ.), from the little river Meles, is the bay at the head of which Smyrna is situated. From its entrance to the head it is 250 stadia in length, but is divided into a larger and a smaller basin, which have been formed by the deposits of the Hermus, which have at the same time much nar-
rowed the whole. A person sailing into it had on his right the promontory of Celsaena, and on his left the headland of Plocaea; the central part of the bay contained numerous small islands. (Strab. xiv. p. 645; Pomp. Mela, i. 17; Vit. Hom. 2; Steph. B. s.e. Ἱσμυρα.)

L. S.

SOANAS (Σωάνας, Plut. vii. 4. § 3), a small river of Taprobane (Ceylon), which flowed into the sea on the western side of the island. Lassen (in his map) calls it the Kiłuza. On its banks lived a people of the same name, the Soani. (Plut. vii. 4. § 3.)

SOANDA or SOANDUM (Σαόναδα or Σαόνον), a castle of Cappadocia, between Tharros and Sacoena. (Strab. xiv. p. 663; It. Ant. p. 202.) The same place seems to be alluded to by Frontinus (iii. 2. § 9), who calls it Sueda. Hamilton (Researches, ii. p. 286, foll.) identifies it with Soghanis Derso, a place situated on a rock, about 8 miles on the south-west of Karahisar, but other geographers place it in a different locality. [L. S.]

SOAS. [Sonax.]

SOATRA (Σωάτρα), or probably more correctly Saratia (Σαρατία), on the sites of the ancient coins, was an open town in Lycia, in the neighbour-

hood of Apameia Cibotus, on the road from thence to Laodicea. The place was badly provided with water (Strab. xiv. p. 665; Tol. v. 4. § 12; Hieroc. p. 672; Tab. Pest.), whence travellers are inclined to identify its site with the place now called Su Ver-
mez, that is, "there is no water here." [L. S.]

SOATRAE, a town in Lower Messenia (Itin. Ant. p. 229), variously identified with Prasadi and KiopiKeni. In the Tab. Pest. and by the Geogr. Rav. (iv. 6) it is called Scatras.

T. H. D.

SOUBUHA (Σουβουχα), a place on the eastern coast of Hindostan, mentioned in the Peri-
plus (p. 34). It is probably the same as the modern Subras, between Fonducherry and Madura. See Lassen's map.)

V.

SOCAANA or SOCANDA (Σωκανά or Σωκάνα), a small river of Hyrcania, noticed by Ptolemy (vi. 9. § 2). It is probably the present Gurjan. Am-
mianus Marcellinus speaks of a place called Socan-
a, on the shores of the Hyrcanian or Caspian sea (xxxii. 6). [L. S.]

SOCRATIS INSULA (Σωκρατίδος ἤκτος), an island of the Sinus Arabicus (Red Sea), placed by Ptolemy (vi. 7. § 44), who alone mentions it, in long. 70°, lat. 16° 40', and therefore off the N. coast of his Eliaari, the Sabaei of other geographers, 30° east of his Accipitrimum Insula (Topiades) and 29° south of them. They are probably identical with the Farasan islands, of the E. I. Company's Chart, described by commanders Moresby and Elwon, in their Sailing Directions for the Red Sea, as "the largest all along this coast, situated upon the ex-
tensive banks west of Gheesem. They are two in number, but may be considered as forming one island, being connected by a sandy spit of shoal-water, across which the ships frequently pass from one to the other." The westernmost is in Farasan Kebeer (=the greater), 31 miles in length, extend-
ing from lat. 16° 35' long. 42° 13' to lat. 16° 54' long. 41° 47'. Farasan Seggeer (=the smaller) is, on its NE. side, 18 miles in length, and extends to lat. 17° 1½; their whole breadth is only 12 miles. The land is of considerable height, interspersed with some plains and valleys; the lilly parts are coral reefs (pp. 38, 39; C. Müller, Tabulæ in Geog. Graec. Min. tab. viii). In other comparative atlases, adopted by Arrowsmith, the modern name is given as Kotumbul-
Is., considerably to the N. of the Farasan, described by the same writers as lying only 2 miles from the main, a small island about ¼ a mile in length and therefore not likely to have been noticed by those who, obviously mentions only the more important. (Sailing Directions, p. 50.) Mannert identifies the Socratis Insula with Niebuhr's Firan, where the traveller says the inhabitants of Lohia have a pearl fishery. This name does not occur in the "Sailing Directions," but is probably the same as Farasan. (Mannert, Geography of the Arabs, p. 49; Niebuhr, Description de l'Arabie, p. 201.)

G. W.

SOCUNDA. [SOCAANA.]

SODOM (Σῶδομα, Strab. xv. p. 764; Steph. B.
SODOM.

a. v.; Sodom, -orum, Tertul. Apolog. 40; Sodom, -ae, Sever. Sulp. i. 6; Sodal. Carna. i. 105; Sodomum, Solin. 45. § 8; Sodem, Tertull. Carn. de Sodoma. 4), the infamous city of Canaan situated near the Dead Sea in an exceedingly rich and fruitful country, called in early history "the plain of Jordan" and described as "well watered everywhere, before the Lord destroyed Sodom and Gomorrah, even as the garden of the Lord, like the land of Egypt, as thou comest to Zaan." (Gen. xiii. 10-12.) It is also reckoned one of "the cities of the plain" (xiii. 12. xiv. 29), and was probably the capital of the Pentapolis, which consisted of Sodom, Gomorrah, Admah, Zeboim, and Bala, afterwards Zare. (Deut. xxii. 23; Gen. xix. 8, xix. 32), all of which towns, however, had several petty kings, who were confederate together against Chedorlaomer king of Elam and his three allies, Amraphel king of Shinar, Arioch king of Ellasar, and Tidal king of nations. After Chedorlaomer had succeeded in reducing these monarchs to subjection, they served him twelve years; in the thirteenth year they revolted, and in the fourteenth year were again vanquished by their northern enemies, when the conquerors were in their turn defeated by Abraham, whose nephew Lot had been carried captive with all his property. The sacred historian has preserved the names of four of the petty kings who at this time ruled the cities of the plain, viz. Bers of Sodom, Birsha of Gomorrah, Shimeb of Admah, and Shemeber of Zeboim; and the scene of the engagement was "the vale of Siddim, which is the salt sea." (Gen. xix.), an expression which seems clearly to imply that the battle-field, at least, was subsequently submerged; the admission of which fact, however, would not involve the consequence that nowhere had previously existed in the plain; although this too may be probably inferred from the earlier passage already cited, which seems to describe a wide plain watered by the river Jordan, as the plain of Egypt is irrigated by the Nile: and as this vale of Siddim was full of slime-pits (beds of bitumen), its subsidence naturally formed the Asphalt Lake. The catastrophes of the cities, as described in the Bible, do not certainly convey the idea that they were submerged, for fire and not water was the instrument of their destruction (Gen. xix.; S. Jude 7); so that the cities need not necessarily have been situated in the middle of the valley, but on the sloping sides of the hills which confined the plain, from which they would still be appropriately denominated "cities of the plain." (Rudolf, Palaeon., p. 255.) This is remarked in order to remove what has been regarded as a fundamental objection to the hypotheses of a late traveller, who claims to have recovered the sites of all the cities of the Pentapolis, which, as he maintains, are still marked by very considerable ruins of former habitations. Whatever value may be attached to the identification of the other four, there is little doubt that the site of Sodom is correctly fixed near the south-western extremity of the lake, where the modern native name Ushish or Usasom, containing all the radicals of the ancient name, is attached to a plain and a hill (otherwise called Khabsa or Jebel el-Mika, i.e. the salt hill), which consequently has long been regarded as marking the site of that ancient city. This singular ridge has been several times explored and described by modern travellers, whose testimony is collected and confirmed by Dr. Robinson (Bibb. Rev. vol. ii. p. 481-483); but it was reserved for the diligence or imagination of M. de Sanclay to discover the extensive delta of this ancient city, covering the small plain and remains on the north and north-east of its hill, and extending along the bed of the Dead Sea. (Voyage autour de la Mer mort, vi. p. 71-74.) On the other side of the quay of Wichin, on the road to Velde, the latest authority, Synesius and Heliodorus, in 1581 and 1582, pp. 114, 115, says, Lynch, of the American exploring expedition, gives a striking view of this salt mountain, descriptive of his description of the vicinity of Damascus: (79.) addition to the Dead Sea, pp. 306-308.) SOGDIAN (Σωγδήα), a tribe of the north of Asia, and the Gresti in the lower Parthe, according to Diodorus (vii. 108). It was a probably of Indian origin, and may repeat ancient names of the Scythians.

SOGIDI (Σωγδη), one of the smaller tribes where by Arrian (Anab. vi. 13) as encountered by Alexander in the lower Parthe. By their name may appear to represent an immigration from the north.

SOGDIANA (Σωγδία), a widely extensive region of Central Asia, the boundaries of which do not consistently laid down by ancient maps. Generally, it may be stated that Sogdiana is bounded on the east by the Oxus and the Jaxartes, as in the maps, but the former separating it from Armenia, the latter from the modern population of Scythia. (Strab. xi. pp. 511, 514; Ptolemy, v. 1.) To the W. the province was extended to the direction of the Caspian sea, but, in early times at least, not to it; to the E. were the Sacesce Sper. The district comprehended the provinces of the Parthian kingdom, especially Parthia, which begins to this day the name of Sogdiana. The character of the country was very diversified, some part of it being very mountainous, other part, as the valley of Bokhara, very flat and productive. The larger extent would seem to have been, as at present, a great waste. (Arrian, iv. 16; Curt. vii. 10. § 1.) At the time of Strab. it was a country thickly covered with extensive forests, filled with many large game, and surrounded, at least in some parts, with walls, as preserves. Alexander is said to have hunted down 4000 wild beasts. (Curt. vii. § 19.)

The principal mountain chains are these: the Araxes Ozii to the W. (see the range of the mountains), the Caspian (see the range of the Araxes), the Caspian S., and the Manges Sogdiana (the modern range) which is not certain, there being a desolate waste which they comprehend the Behr-per, or the modern range of the mountains, which is not certain, there being a desert waste which they comprehend the.

The two great rivers of the region were those which formed its boundaries, the Oxus (Ganges, Araxes, and Jaxartes, are the Caspian S.), and the Jaxartes (Syr-Darya). There are, also, besides these streams, several smaller ones, feeders of the rivers, as the Diani, Baccata, and the Polten, the latter, doublets, the stream which flows near the town of Sogdiana. The generic name of the inhabitants of Sogdiana is Sogdian or Sogdians (Arab. i. iv. 16, iv. 16; G. vi. 16; Curt. iii. 8, § 4, 4), the name which, as it is stated by Strab. (xi. 317), appears in character at least, to have borne a great resemblance to their neighbours of Bactria. Those Ptolemes and other writers have given a list of other names, those, probably, of local cities.
SOQDI MONTES.

who occupied different parts of the province. Many of these show by the form of their name that if not directly of Indian descent, they are clearly connected with that country. Thus we have the Pasicae, near the Montes Osius; the Thacori (Takara) on the Jaxartes; the Oxrynchos, Dysbactae, and Gandari (Gandhara), under the mountains; the Mardieni (Mardus), Chorasmii (Khorezmians), near the Oxus; and the Girrodas (Kirdaxes) near the same river. (Wilson, [p. 164].)

The historians of Alexander's march leave us to suppose that Sogdiana abounded with large towns; but many of these, as Professor Wilson has remarked (l. c.), were probably little more than forts erected along the lines of the great rivers to defend the country from the incursions of the barbarous tribes to its N. and E. Yet these writers must have had good opportunity of estimating the force of these places, as Alexander appears to have been the best part of three years in this and the adjoining province of Bactria. The principal towns of these names have been handed down to us, were Cyresechta or Cyrapaxis, on the Jaxartes. (Steph. Byz. iii. 6; Chrys. Oss. on Glor. i. 110; Has. in Haukli, p. 270); Alexandria Ultima (Arrian, i. 30; Curt. i. c.; Amm. Marc. xxxii. 6), doubtless in the neighbourhood of, if not on the site of the present Khojend; Alexandria Oxiana (Ptol. vi. 12. § 5; Steph. B. s. v.); Nautaca (Arrian, i. 28, iv. 18), in the neighbourhood of Karak or Nazali; Branchidae (Strab. xii. p. 318), a place traditionally said to have been colonized by a Greek population; and Marysia (Curt. vii. 10. § 15), probably the present Marykhon. (Droysen, Rhem. Mus. 2 Jahr. p. 66; Mannert, iv. p. 452; Burnes, Travels, i. p. 350; Memoirs of Baber, p. 12; De Sacy, Notices et Extraits, iv. p. 354; Thirlwall, Hist. of Greece, vi. p. 284.)

SOGHUNTII, an Alpine people mentioned by Pliny (iii. 30. a. 94). Nothing but resemblance of name gives us any indication of the position of many small mountain tribes, but the names remain frequently very little changed. The position of the Soguntii is conjectured to be shown by the name Saus or Soushes, NE. of Briçonçons in the department of Haute-Alpes. But as it is an own name, and even the orthography of the name Soguntii is not certain.

[Q. L.]

SOLE, a small town in the interior of Hycania, mentioned by Ammianus (xxii. 6). [V.]

SOLEN (Solos), Ptol. vii. 1. §§ 10, 34), a small river of S. India, which has its sources in M. Bettiga, and flows thence into the Sinus Colchicus or Gulf of Manado. It is not certain which of two rivers, the Vaiporas or the Tamraparni, represent it at present: Lassen inclines to the latter. [V.]

SOLENTA. [OLYMPA INSULA.]

SOLENTUM. [SOLEUM.]

SOLEM (Solos), a town of Calabria, situated in the interior of the Iapygian peninsula, about 12 miles of Lupiae (Locae). It is mentioned only by Pliny, in whose time it was deserted ("Solem desertum," Plin. iii. 11. a. 16), but it must have been again inhabited, as it still exists under the ancient name. That the modern town occupies the ancient site is proved by the remains of the ancient walls which were still visible in the days of Galateo, and indicated a town of considerable magnitude (Galateo, de Sit. Fug. p. 181; Romanelli, vol. ii. p. 286). [E. B.]

SOLI (Silos: Eth. Zoilós or Zolos), an im-

SOLL.

important town on the coast of Cilicia, between the mouths of the rivers Lamus and Pyramus, from each of which its distance was about 500 stadia. (Strab. xiv. p. 675; Stadiwm. Mar. Mag. § 170, &c.)

The town was founded by Argives joined by Lindians from Rhodes. (Strab. xiv. p. 671; Pomp. Mela, i. 13; Liv. xxxvii. 56.) It is first mentioned in history by Xenophon (Anab. i. 2. § 24) as a maritime town of Cilicia; it rose to such opulence that Alexander the Great could fine its citizens for their attachment to Persia with 200 talents. (Arrian, Anab. ii. 5. § 5; Curt. iii. 17.) During the Mithridatic War the town of Soli was taken and destroyed by Tigranes, king of Armenia, who probably transplanted most of its inhabitants to Tigranocerta. (Dion Cass. xxxvi. 26; Plut. Pompe. 28; Strab. xii. p. 529.) But the place was revived by Pompey, who peopled it with some of those pirates who had fallen into his hands, and changed its name into Pompeipolis. (Πομπείοπολις, Plut. i. c.; Strab. xiv. p. 671; Appian, Mithr. 105; Ptol. v. 8. § 4; Plin. v. 22; Steph. B. s. v.; Tac. Ann. ii. 58; Hesych. p. 704.) Soli was the birthplace of Chryseippos of Soli, the philosopher, and of distinguished poets, Philomen and Arratus, the latter of whom was believed to be buried on a hill near the town. The Greek inhabitants of Soli are reported to have spoken a very corrupt Greek in consequence of their intercourse with the natives of Cilicia, and hence to have given rise to the term solemic (σολεμικον), which has found its way into all the languages of Europe; other traditions, however, connect the word with the term of the town of Soli, in Cyprus. (Diog. Laer. i. 2. § 4; Eustath. ad Dion. Per. 875; Suët. c. v. Ζάλως.) The locality and the remains of this ancient city have been described by Beaufort (Karamania, p. 261, fol.). "The first object that presented itself to us on landing," says he, "was a beautiful harbour or bay, with walls rising perpendicularly from the sea; it entirely artificial, being formed with surrounding walls or moles, which are 50 feet in thickness and 7 in height. Opposite to the entrance of the harbour a portico rises from the surrounding quay, and opens to a double row of 200 columns, which, crossing the town, communicates with the principal gate towards the country. Of the 200 columns but 42 are now standing; the remainder lie on the spot where they fell, intermixed with a vast assemblage of other ruined buildings which were connected with the colonnade. The theatre is almost entirely destroyed. The city walls, strengthened by numerous towers, entirely surrounded the town. Detached ruins, tombs, and sarcophagi were found scattered to some distance from the walls, on the outside of the town, and it is evident that the whole country was once occupied by a numerous and industrious people." The natives now call the place Menthul. (Comp. Leake, Asia Minor, p. 213, fol.) The little river which passed through Soli was called Leparis, from the oily nature
of its waters. (Vitr. vili. 3; Antig. Caryll. 150; Plin. l. c.) Pliny (xxxi. 2) mentions bituminous springs in the vicinity, which are reported by Beaufort to exist at Sikkekeroy, about six hours' walk to the north-east of Marathon. [L. S.]

SOLI or SOLOS (Ζαλλος, Prot. v. 14, § 4), an important seaport town in the W. part of the N. coast of Cyprus, situated on a small river (Strabo xiv. p. 683.) According to Plutarch (Sol. 26) it was founded by a native prince at the suggestion of Solon and named in honour of that legislator. The seaport of Soli in Cyprus is mentioned by Herodotus (v. 113). Other accounts, however, make it an Athenian settlement, founded under the auspices of Phalerus and Acamas (Strab. l. c.), or of Demophon, the son of Theseus (Plin. iv. 14). We learn from Strabo (l. c.) that it had a temple of Aphrodite and one of Isis; and from Galen (de Simp. Med. iv. 3, 8) that there were mines in its neighbourhood. The inhabitants were called Solinius (Ζαλλοιος), to distinguish them from the citizens of Soli in Cilicia, who were called Ζαλοι (Diog. Laert. viii. 105; Arrian, Ind. c. 4). For the site of the ancient city, see Vgrounds. The valley which surrounded the city is still called Solos; and the ruins of the town itself may be traced in the village of Alipora. (Comp. Asch. Pers. 889; Secy. p. 41; Stadtm. M. Magni, § 295, seq.; Const. Porphyry de Them. i. p. 39, Lips. Hieroc. p. 707, seq.) [T. H. D.]

SOLCAIA ou (Ζαλοκαιος), a town in the Agric Decumates, in South-western Germany, on Mount Parna, where Valentinian in a.d. 369 gained a victory over the Alamanni. (Amm. Marc. xxiv. 10, xxviii. 2, xxx. 7.) A variety of conjectures have been made to identify the site of the town, but there are no positive criteria to arrive at any satisfactory conclusion.

Solimariaca, in Gallia, is placed in the Antonine Itin. on the road from Andomastatunum (Lacunae) to Tullum Leonardum (Toula), and nearly half-way between Mona (Musee) and Tallum. There is a place named Sulaeas, which in name and in position agrees with Solimariaca. The trace of the Roman way is still identifiable in several places by its elevation, but on this side of Sulaeas and beyond it on the road to Toul (D'Anville, Noticia, &c.) (G. L.)

Solimnia, a small island of the Aegean sea, off the coast of Thessaly, near Scopelos. (Plin. iv. 12. 23.)

Solis Insula (Plin. vii. 22. a. 24), an island mentioned by Pliny between the mainland of Asia and Ceylon, in the strait. There can be no doubt that it is the present Rammiers Cor, famous for a temple of Rama. It bore also the name of Kima (Cory.) [V.]

Solis Fons. (Olaus, p. 458.)

Solis Fortis (Greek Lythos, Prot. vii. 4. § 6), a harbour near the SE. corner of Taposan (Ceylon). It has been conjectured by Fisson that it is the present Vemulambas, a name we do not discover on the best maps. Its position, south of the Malea mountains (Adam's Peak), is certain. [V.]

Solis Promontorium (Ispat Hala kapo), "Sacra solis extrema," a promontory of the east coast of Arabia at the south of the Persian gulf, between the mouth of the river Lar and Eghina, in the country of the Nartil. (Plin. vii. 7. § 14.) [Lar: Rhymia.] [G. W.]

Solium (Ζαλλος: Eth. Ζαλληδα), a town on the coast of Caramania, on the Ionian sea. Its exact site is uncertain, but it is probably the neighbourhood of Palaea, which lay between Lanes and Abyzua. (Palaea.) Leake, however, places it S. of Abyzua, at Strakomolosia (i.e. Fort Stravo). Solium was a Corinthian colony, and as such was taken by the Athenians in the first year of the Peloponnesian War (a. c. 431), who gave both the place and river (Strabo x. v. 323) the name of the Palaea. It is again mentioned in n. c. 426, as the place at which Demosthenes landed when he resolved to invade Aetolia. (Thuc. ii. 30. ili. 95, comp. v. 39; Steph. B. a. v.; Leake, Northern Greece, vol. iv. p. 18, seq.)

Solmessius (Ζαλμεσος), a hill near Ephesus, rising above the grove of Leto, where the Curetes, by the loud noise of their arms, prevented her from hearing the cries of Leto when she gave birth to her twins. (Strab. xiv. p. 640.) [L. S.]

Solomatis (Ζαλματριας, Arrian, Ind. c. 4), a river named by Arrian as one of the feeders of the Ganges. There has been much difference of opinion as to what modern stream this name represents. It may be identified with the Jumna (v. pt. i. a. 69); while Benfey, on the other hand, considers it not unlikely that under the name of Solomatis lurks the Indian Saraswi or Sarawati, which, owing to its being lost in the sands, is fabled by the Indias to flow under the earth to the spot where the Ganges and Jumna join, near Allahabad (Benfey, art. Indica, in Erasm, usc. ed., p. 4.) [V.]

Solona (Εθ. Solonas: Κιτις του Σολσα), a town of Gallia Cispadana, mentioned only by Pliny among the municipal towns of the 8th region (Plin. ii. 13. a. 80), but the name of the Solonates is found in an inscription, which confirms its municipal rank (Gruter, Insc. p. 1093. 3). Unfortunately the inscription, which was found at Avignon, affords no clue to the site of Solona: it is placed conjecturally by Claver at a place called Citi de Solsa about 5 miles SW. of Fortil; but this site would seem too close to the important town of Forum Livii. (Claver, Ital. p. 291.) [E. H. B.]

Solonion (Ζαλόνιον), in Gallia Narbonensis, where Pliny places the town of C. (Dio Cass. lxxvi. 48; Liv. Epit. 103), where it is said, "C. Pontinus Prætor Allorbois qui rebellaruerat ad Salomonem (Solonem?) dominat." It has been conjectured that Solonion is Sallonea, is the department of Ais, near the small river Brien; but this is merely a guess. The narrative of Dios is useless, as usual, for determining anything with precision. Other guesses have been made about the position of Solonion; one of which is too absurd to mention. [G. L.]

Solonius Agar (Ζαλονιος, Plat.), was the name given to a district or tract in the plain of Latium, which appears to have bordered on the territories of Ostia, Ardea, and Laurium. But there are so many errors in the work that it is impossible to fix its position or limits. Cicero in a passage in which he speaks of a prophecy that had happened to the infant Boesia, places it "in Solonio, qui est campestris apud Lanuvium" (de Div. i. 36); but there are some reasons to suspect the last words to be an interpolation. On the other hand, Livy speaks of the Antsias as making incursions "in agrum Ostiensis, Ardeanem, et Soloniam" (viii. 19). Plutarch mentions that Marcus, the son of Marcus, retired to a villa that he possessed there, which he was expelled from Rome in n. c. 88; and from thence repaired to Ostia. (Plin. Mar. 35.) But
the most distinct indication of its locality is afforded by a passage of Festus (s. v. Pomonal, p. 250), where he tells us "Pomonal est in agro Solonico, via Ostiensii, ad duodecinum lapidem, diverticulo a miliario octavo." It is hence evident that the "agorae et oppitum," "the outward set that the Via Ostiensis, and probably the whole tract bordering on the territories of Osta, Laurentum, and Ardea, was known by this name. It may therefore have extended to the neighbourhood of Lanuvium also. Cicero tells us that it abounded in snakes. (De Div. ii. 3.) It appears from one of his letters that when he visited Rome in the last years of the Republic, he made some experiments in snakes, to which he talks of retiring in order to avoid contention at Rome (ad Att. ii. 3).

The origin of the name is unknown; it may probably have been derived from some extinct town of the name; but no trace of such is found. Dionysius, indeed, speaks of an Eriusiacum city of Solonum, from whence the Lucumon came to the assistance of Romulus (Dionys. ii. 37); but the name is in all probability corrupt, and, at all events, cannot afford any explanation of the Latin district of the name. [E. H. B.]

SOLONIUS MONS, an offshoot of Mons Argentarius, running to the SW., on the borders of Hisp. Tarracoensis and Basiliae, and connecting Mount Ostiensis with Mount Lupercius (Str. iii. 1. a. 2.) It is probably the same mountain mentioned by Strabo (iii. p. 156) as rich in gold and other mines, and the present Sierra Nevada. [T. H. D.]

SOLUS or SOLUNTUM (Σολούς, Θυκ.: Σωλούς, Diod.: Σωλούριος, Diod., but coins have Σωλούριος; Soluntium: Solonto), a city of Sicily, situated on the N. coast of the island, 12 miles E. of Panormus, and immediately to the E. of the bold promontory called Capo Zafferana. It was a Phoenician colony, and from its proximity to Panormus was one of the few which that people retained when they gave way before the advance of the Greek colonies in Sicily, and withdrew to the NW. corner of the island. (Thuc. vi. 2.) It afterwards passed, together with Panormus and Motya, into the hands of the Carthaginians, or at least became a dependency of that people. It continued steadfast to the Carthaginian alliance even in b. c. 397, when the formidable armament of Dionysius shook the fidelity of most of their allies (Diod. xiv. 48): its territory was in consequence ravaged by Dionysius, but without effect. At a later period of the war (a. c. 396) it was betrayed into the hands of that despot (ib. 78), but probably soon fell again into the power of the Carthaginians. It was certainly one of the cities that usually formed part of their dominions in the island; and in a. c. 307 it was given up by them to the soldiery and mercenaries of Agathocles, who had made peace with the Cartha-
gians. (Diod. xxx. 69.) During the First Punic War we find it still subject to Carthage, and it was not till after the fall of Panormus that Soluntum also opened its gates to the Romans. (Id. xxii. p. 505.) It continued to subsist under the Roman dominion as a municipal town, but apparently one of no great consideration, as its name is only slightly and casually mentioned by Cicero. (Verri. ii. 42, iv. 43.) But it is still noticed both by Pliny and Ptolemy (Plin. iii. 8. s. 14; Ptol. iii. 4. § 3, where the name is corruptly written Σωλούριος), as well as at a later period by the Itineraries, which place it 12 miles from Panormus and 12 from Thermas (Termes).

SONTIA. (Hist. Ant. p. 91; Tab. Peut.) It is probable that its complete destruction dates from the time of the Saracens.

At the present day the site of the ancient city is wholly desolate and uninhabited. It stood on a lofty hill, now called and sometimes by the Romans itself, which is a small cove or port, with a fort, still called the Castello di Solanto, and a station for the tunny fishery. The traces of two ancient roads, paved with large blocks of stone, which led up to the city, may still be followed, and the whole summit of the hill is covered with fragments of ancient walls and foundations of buildings. Among these may be traced the remains of two temples, of which some capitals, portions of friezes, &c. have been discovered; but it is impossible to trace the plan and design of these or any other edifices. They are probably all of them of the period of the Roman dominion. Several cisterns for water also remain, as well as sepultures; and some fragments of sculpture of considerable merit have been discovered on the site. (Fazetti de Rob. Sic. p. 112; Amico, Lex. Top. vol. ii. pp. 192-195; Holore's Class. Tower, vol. ii. p. 234; Serra di Falco, Ant. della Sicilia, vol. v. pp. 60-67.) [E. H. B.]

COIN OF SOLOR.

SOLYEIA, SOLYEIUS. [Corinthus, pp. 684, b. 685, a.]

SOLYMA (Πάνωδος), a high mountain near Phaselis in Lycia. (Strab. xiv. p. 666.) As the mountain is not mentioned by any other writer, it is probably only another name for the Chimaera Mons, the Olympus, or the mountains of the Solymi, mentioned by Homer (Od. vii. 263). In the Stadia- mius it is simply called Πάνωδος: it extends about 70 miles northward from Phaselis, and its highest point, now called Taghatalu, rises immediately above the ruins of Phaselis, which exactly corresponds with the statement of Strabo. (Lekke, Asia Minor, p. 189.) [L. S.]

SOLYMI. [LYCIA.]

SOMENA. [SOMENA.]

SONAUTES, according to Pliny (vi. 1), a river in Pontus; while, according to Apollonius Rhodius (ii. 747), the Acheron in Bithynia was anciently called Sonoutes (Σωνώντης). [L. S.]

SONEIM, a place in Moesia Superior, on the borders of Thrace, at the pass of Mount Scomitus, called Socel. (Ptol. Hieros. p. 567.) Identified with Bona. [T. H. D.]

SONITA, a town in Upper Pannonia, on the road from Poetovium to Siscia. (Geog. Rav. iv. 19; Tab. Peut.; It. Hieros. p. 561, where it is written Suestis.) Its exact site is unknown. [L. S.]

SONTIA (Ed. Sentinelius: Sana), a town of Lucania, known only from Pliny, who estimates the Sontini among the municipal towns of that province (Ptol. iii. 11. s. 15). It is probable that it is the same place now called Santa, situated in the mountains about 12 miles N. of the Gulf of Policastro. [E. H. B.]
SONTITUS (Iassos), one of the most considerable of the rivers of Venetia, which has its source in the Alps, at the foot of the lofty Mt. Terynus, and has from thence a course of about 75 miles to the sea, which it enters at the utmost bight of the Adriatic, between Aquileia and the Apennines. It receives at the present day the waters of the Natisone and Toror, the ancient Natisto and Turus, both of which in ancient times pursued independent courses to the sea under the walls of Aquileia, and from the E. side of the Venetian coast. It is fed in the Tabule, which places a station called Ponte Sonti (Ad Pontem Sonti) 14 miles from Aquileia on the highroad to Armona (Lagobuc). This bridge, which lay on the main entrance into Italy on this side, was a military point of considerable importance. It checked for a time the march of the emperor Maximin when advancing upon Aquileia, in A.D. 238 (Herodian, viii. 4; Capit. Maxim. 39); and at a later period it was here that Odoscer took up his position to oppose the advance of Theodoric, by whom he was, however, defeated in a decisive battle, A.D. 489 (Casiod. Chron. p. 473; Id. Var. i. 18; Jornand. Get. 57). The Sontius is correctly described by Herodian, though he does not mention its name, as a large river flowing in an easterly direction in spring and summer, where it is fed by the melting of the Alpine snows. [E. H. B.]

Sonus (Zever, Ariant, Ind. c. 4; Plin. vi. 18. a. 22), a principal affluent of the Gympus, which flows in a NE. direction to it from the Vestos Mountains. Its modern name is Same. There is no exact place mentioned. It was contrasted from the Sanscrit Shannara, golden. The Sonus (Zever) of Ptolemy (vii. 1 § 30) is certainly the same river. [V.]

SOPH'NE (Zophen, Strab. et xiiii; Zophenber, Dion Cass. xxxvi. 36; Procop. de Aedif. iii. 2; B. Pers. i. 31; Ed. Zophen), a district of Armenia, lying between Antiochus and Mount Masias, separated from the Eubrians from Messenia in Armenia, by a mountain range, Anti-Messenia from Mesopotamia. Its capital was Caracodierta. (Strab. xi. pp. 521, 522, 527.) It formed at one time, with the neighboring districts, a separate west Armenian kingdom, governed by the Sophianen Artanes, but was annexed to the eastern Armenian kingdom by Tigranes. Sophene was taken away from Tigranes by Pompey. (Strab. xi. p. 532; Dion Cass. xxxvi. 36; Plut. Lucull. 34, Pompe. 33.) Nero gave Sophene as a separate kingdom to Sosabenus. (Tac. Ann. xiii. 7.)

Sopia'nae, a town in the central part of Lower Pannonia, on the road from Murua to Sabaria (It. Ant. pp. 231, 232, 264, 267), was according to Ammianus Marcellinus (xxviii. 1) the birthplace of the emperor Arcadius. Its site is occupied by the town of Fuzhircich. [L. S.]

Sora (Σορα, Eid. Sorane; Sora), a city of Latium, situated in the valley of the Liris, on the right bank of that river, about 6 miles to the N. of Arpinum. Though included in Latium in the extended sense of that term, as it was understood under the Roman Empire, Sora was originally a Valerian city (Liv. x. 1), and apparently the most northerly possessed by that people. It was wrested from them by the Romans in B.C. 345, being surprised by a sudden attack by the consuls Fabius Danc and Ser. Sulpicius. (Liv. vii. 28.) It was subsequently occupied by the Romans with a colony; the establishment of this is not mentioned by Livy, but in B.C. 315 he tells us the inhabitants had revolted and joined the Samnites, putting to death the Roman colonists. (Id. ix. 23; Diod. xir. 72.) The city was in consequence besieged by the dictator C. Fabius, who determined the great defeat of the Romans at Lake Trasimene, the siege was continued into the following year, when the city was at length taken by the consul C. Sulpicius and M. Postelius; the citadel, which was in a very strong and inaccessible position, being betrayed into their hands by a deserter. The leaders of the defection were sent to Rome and doomed to execution; the other inhabitants were spared. (Liv. ix. 24.)

Sora was now occupied by a Roman garrison; but notwithstanding this it again fell into the hands of the Samnites in B.C. 306, and it was not recovered by the Romans till the following year. (Id. ix. 43, 44; Diod. xx. 80, 90.) After the close of the Second Samnite War it was one of the points which the Romans determined to secure with a colony, and a body of 4000 colonists was set thither in B.C. 303. (Id. x. 1.) From this time Sora became one of the ordinary "coloniae Latinae" and is mentioned in the Second Punic War among the refractory colonies, which in B.C. 209 refused any further contributions. (Liv. xxvii. 9, xxix. 15.) The story of Sora gives Geras in the first passage, and Sora in the second, but the name is necessarily meant in both passages, and it is probable that Sora is the true reading.) From this time we hear little more of Sora, which lapsed into the condition of an ordinary municipal town. (Cic. pro Piso. 9.) Its rank as a Colony Latina was merged in that of a municipium by the Lex Julia; but it was afterwards restored, in B.C. 296, as we learn from an inscription, of a body of veterans from the 4th legion. (Lib. Colon. p. 237; Plin. iii. 5. a. 9; Orelli. Inscur. 3681.) Juvenal speaks of it as a quiet country town, where horses were cheap (Juv. iii. 233); and it is mentioned by all the geographers among the towns of this part of Italy. (Curt. v. p. 89; Plut. iii. i. § 63; Plin. Nat. Hist. viii. 354; Orelli. Inscur. 3973.) It is thought to be well placed to work the area, the Roman city was within the Roman Empire, but it survived the fall of the Western Empire, and continued throughout the middle ages to be a place of consideration. Sora is still an episcopal see, and must the most important place in this part of Italy, with at least 10,000 inhabitants. The modern town undoubtedly occupies the same site with the ancient one, in the plain or broad valley of the Liris, rising upon a bold and steep hill, crowned by the ruins of a mediaeval castle. The ancient citadel, described by Livy, stood on a hill at the back of this castle, called the Rocca d’S. Angelo, where some remains of the ancient walls, constructed of massive polygonal blocks, still remained. No remains of Real times are preserved, except a few inscriptions and some foundations, supposed to be those of a temple. (Romanelli, vol. iii. pp. 363—366; Hoare’s Classical Tour, vol. i. pp. 299—302.)

Sora (Σορα or Σορα), a town of Pamphylia, noticed only by the latest writers of antiquity, site of unknown site. (Constant. Porph. Them. i. 7; Notiss. xir. 1. Herrod. p. 96; Conon. As. ii. p. 52; Conon. Chalcid. p. 664, where it is called Sura.)

Sora (Σορα, Ptol. vii. 1. § 88), a town is the southern part of India, between M. Bettiga and Adesimathon. It was the capital of a nomadic race.
SORACTE.

called Sorae (Ptol. i. c.), and the royal residence of a king named Arcates. The people are evidently the same as the Surae of Pliny (vi. 20. a. 23). Lassen places them in the mountains above Maddras (see map).

SORACTE (Monte S. Oreste), a mountain of Etruria, situated between Falerii and the Tiber, about 26 miles N. of Rome, from which it forms a conspicuous object. It is detached from the chain of the Apenines, from which it is separated by the intervening valley of the Tiber; yet in a geological sense it belongs to the Apennine range, of which it is an outlying offset, being composed of the hard Apenine limestone, which at once distinguishes it from the Monte Cirnino and the other volcanic hills by which it is surrounded. Though of no great elevation, being only 2420 feet in height, it rises in a bold and abrupt mass above the surrounding plain (or rather table-land), which renders it a striking and picturesque object, and a conspicuous feature in all views of the Campagna. Hence the selection of its name for a well-known ode (Car. i. 9) is peculiarly appropriate. It was consecrated to Apollo, who had a temple on its summit, probably on the same spot now occupied by the monastery of S. Silvestro, and was worshipped there with peculiar religious rites. His priests were supposed to possess the power of passing unharmful through fire, and treading on the hot cinders with their bare feet. ( Virg. Aen. vii. 696, xii. 785—790; Sil. Ital. v. 175—181, v. 662; Plin. vii. 2.) Its rugged and craggy peaks were in the days of Cato still the resort of wild goats. (Varr. R. R. ii. 3. § 3.)

Soracte stands about 6 miles from Cirèna Casteliana, the site of the ancient Falarum, and 3 miles from the Tiber. It derives its modern appellation from the vineyards. (Virg. Aen. vii. 696, xii. 785—790; Sil. Ital. v. 175—181, vi. 662; Plin. vii. 2.) Its rugged and craggy peaks were in the days of Cato still the resort of wild goats. (Varr. R. R. ii. 3. § 3.)

SorACTE.

SOTIATES.

the coast is the regio Sordinum or Sardorum, and in the interior the Consorani; the river Techum, Vermodubrum; towns, Illiberia and Ruscina. These Sordones are the Sordi of Avienus (Or. Marit. 562):—

"Sordus ifide demique
Populus agebat inter avos locos
Ac pertinetes asque ad interius mare,
Qua piniferae stant Pyrenae vertice,
Inter ferrum lustra ducant greges,
Et arva late et gurgitem portis premit;
"

as L. Vossius reads the passage in his edition of Mela. The Sorci then occupied the coast of the Mediterraneus from the Pyrenees northward, and the neighbouring part of the interior at the north foot of the Pyrenees. Potamky, as D'Anville observes, does not mention the Sordones, and he has made the territory of the Volcae Tectosages comprehend Illiberia and Ruscina. The Sorci occupied the whole of the territory called Romanus, and they would be in possession of that part of the Pyrenees and Col de Portes, which is defended by the fort of Bellegarde. They bordered on the Consorani. [CONSORANI]. [G. L.]

SORICARIA, a place in Hispasia, Baetica, mentioned by Hierius (B. Hisp. c. 54), and the same called also "Sorita" by that author (c. 27). Uberti (ii. p. 1. p. 581) seeks it in the neighbourhood of the Finnes Salinas (the Salado), S. of the Baetic, and between Omoio and Antequera. [G. L.]

SORINGI (Zbeygros, Peripl. M. E. p. 84), a people of the southern part of Hecatomest, who apparently dwelt along the banks of the Chaberes (Kàreti). Lassen places them below the Sorae, on the slopes of the hills above Maddras. (V.]

SORITA. [Sorumiana]. [T. H. D.]

SORUMIN, Pict. iii. 8. § 10), a city of Dacia; now Giricis. [T. H. D.]

SOROES (AD), a station in Lusitania, N. of Emerita. (Itin. Ant. p. 433.) Variously identified with Montanche and Alisea. [T. H. D.]

SOSTOMAGUS, in Galil., is placed by the Jerusalem Itin. between Tolosa (Touloune) and Carcaso (Carcasone). It is a small town, 5 miles from Tolosa and 14 from Carcasone. The road is nearly direct, and if the distances are correct, we might perhaps find some name like Sosto in the proper place. Some geographers have found Sostomagus near Castellomadari. [T. H. D.]

SOTERIA, a place in Arian, mentioned by Ammiana (xxiii. 6). It is probably the same as that called by Ptolemy Zèteros (v. 17. § 7). [V.]

SOTIATES or SONTIATES, a people of Aquitania. Schneider (Caesar, B. G. iii. 20) who writes "in Sontiitam fines" has a long note on the various forms of this word. Nicolaus Damianus (quoted by Athanasmus, vi. p. 249) writes the name Sontiatis, but as Caesar was his authority, for whom, for 1300 years, he may have altered the form of the word. In Dion Cassius (xxxii. c. 46) the reading is Aevadras (ed. Reimarus); but there are other variations in the MSS. In Pline (iv. 19) we find among the nations of Aquitania "Aeci, Elusates, Sotiatis, Osquitaces Campestres." Oroclus (vi. 5, ed. Haverkamp) has Sootiates, but one MS. has Sotiates and others have Sotiates.

In b. c. 56 Caesar sent P. Crassus into Aquitania. Crassus came from the north, and after summoning the men of fighting age who were on the muster rolls of Touloune, Carcasone, and Narbonne,
be entered the territory of the Sotiates, the first of the Aquitanian peoples whom he attacked. The Sotiates were the neighbours of the Eusates a name represented by the town of Eusaeus. A line drawn from Acon (Aconium) on the Gera to Bessas in the department of La Gironde, passes near Soo, a town which is on the Genése, and in the Garonna. In the Middle Ages was called Sotium. Ancient remains have been found at Soii. Here we have an instance of the preservation of ancient names in this part of France, and there are many other instances.

D'Anville in determining the position of the Sotiates argues correctly that Crassus having passed through the Santones, a people who had submitted to Caesar (B. G. iii. 30.) had no need for a resistance, entered Aquitania by the north, and the Sotiates who were only seven or eight leagues south of the Garonnese would be the first tribe on whom he fell. He says that he has evidence of a Roman road very direct from Soii to Eusaeus; and he is convinced that this is part of the road described in the Jerusalem Talmud between Vassata and Eusaeus. On this road the name Scitium occurs in the Talmud, and as the distance between Scitium and Eusaeus corresponds very nearly to the distance between Soii and Eusaeus, he conjectures that this word Scitium is written wrong, and that it should be Sotium.

The Sotiates, who were strong in cavalry, attacked the Romans on their march, and a battle took place in which the Romans were defeated. Crassus then advanced their town, which made a stout resistance. He brought up his vines and towers to the walls, but the Sotiates drove mines under them, for as they had copper mines in their country they were very skilful in burrowing in the ground. At last they sent to Crassus to propose terms of surrender (B. G. iii. 31.) and would offer no resistance, entered on one side of the town, Adcantunnaus, who was a king or chief, attempted to rally out on another side with his 600 "soldiarii." The Romans met him there, and after a hard fight Adcantunnaus was driven back into the town; but he still obtained the same easy terms as the rest.

These Soldiarii were a body of men who attacked the chief with whom they enjoyed all the good things without working, so long as the chief lived; but if any violence took off their leader it was their duty to share the same fate or to die by their own hand. This was an Iberian and also a Gallic fashion. The thing is easily understood. A woman or any desperate fellow seized on power with the help of others like himself; lived well, and fed his friends; and when his tyranny came to an end, he and all his crew must kill themselves, if they wished to escape the punishment which they deserved. (Plat. Ser. c. 14; Caesar, B. G. vii. 40; and the passage in Athenaeus.)

The MSS. of Caesar vary in the name of Adcantunnaus. Schneider writes it Adecantunnaus, and Adecantunnaus is "Abderaseau." Schneider mentions a medal of Pellerin, with BEX AALTVNNVS and a lion's head on one side, and on the other SO-TIOTA. Walckenaer (Geogr. ge. i. 284) may be speaking of the same medal, when he describes one which is said to have been found at Toulousus, with a head of Adcanus on one side, and the word Sotium on the other. He thinks it "very suspected," and it may be.

[PLATE]

SOZOPOLEIS (Zeôpolis), a town noticed only by late writers as a place in Pidissa, on the north of Terrassae, in a plain surrounded on all sides by mountains. (Hieroc. p. 672; Evag. Hist. Eccl. iii. 33.) It is possibly the same place which Stephanus B. notices under the name of Sozona. Nicias (Ass. p. 9) mentions that it was taken by the Turks, but recovered from them by John Comnenus. (Comp. Ass. p. 169; Cinnamus, p. 13.) The traces of ancient LOTIOTAS (Soz. Top. i. c. 33) observed some ancient remains at a place now called Sotium, south of Agraunaeae, which probably belong to Sozopolis.

[PLATE]

SOZOPOLIS, a later name of Apollonia in Thrace. (Vol. I. p. 160.)

SPALATHEA (Pliny. iv. 9. a. 16; Σπαλάτης, Sylvac. p. 25; Σπαλάτης, Steph. B. s. e.; Σπαλάτης, John. Tzv. iii. 403; Σπαλάτης, Stephan. E. s. e. Ed. Zonar. λακχούρης), a town of Magnesia, in Thessaly, on the Pagasaeus gulf. It is conjectured that this town is meant by Lycophron (599), who describes Prothous, the leader of the Magnesians in the Iliad, as θ' Σπαλάτης Σπαλάτης (Spalathea). (See Miller, ed. Sey. I. c.)

SPALATUM. [SALONA.]

SPARTA, a place in Messia Superior, probably on the river Ister. (Ita. Erious. p. 567.) By the Geogr. Rat. it is called Spartiades (Spartiades) of it. Geogr. Rat. iv. 7; [T. H. D.]

SPARTA (Σπάρτης, Dor. Σπάρτης; Ed. Σπάρτης; Σπάρτης, Stephan. E. s. e. Ed. Zonar. Λακεδαιμονίας, Lacedaemoni), which was the original name of the country. (See Vol. II. p. 103.) Sparta stood at the upper end of the middle vale of the Eurotas, and upon the right bank of the river. The valley of the Eurotas is divided into two parts by a small island overgrown with the cedars, where the foundations of an ancient bridge are visible. This is the most important point in the topography of the site of Sparta. Opposite to this bridge the range of hills rises upon which the ancient city stood; while a hollow way (Map. f'') leads through them into the plain to Magnesia, a village situated about half-way between Mistra and the island of the Eurotas. Upon emerging from this hollow into the plain, there rises on the left hand a hill, the south-western side of which is occupied by the theatre (Map. A). The centre of the building was excavated out of the hill; two steps of the caves were entirely artificial, being built of enormous masses of stone. A great part of this masonry still remains; but the seats have almost entirely disappeared, because they have for many ages been used as a quarry by the inhabitants of Mistra. The extremities of the two wings are about 480 feet from one another, and the diameter or length of the orchestra is about 170 feet; so that this theatre was probably the largest in Greece, with the exception of those of Athens and Megalopolis. There are traces of a wall around this hill, which also embraces a considerable part of the adjoining plain to the east. Within the
space enclosed by this wall there are two terraces, upon one of which, amidst the ruins of a church, the French Commission discovered traces of an ancient temple. In this space there are also some ancient doors, formed of three stones, two upright with the architrave, buried in the ground; but no conjecture can be formed of the building to which they belonged without excavations.

The site has been described as the largest of all the ancient sites, and is distinguished by the wall which is the foundation of the temple of Apollo, the largest temple of ancient buildings. From its size it is probable that the temple was dedicated to Apollo, and that it was the largest temple in the city.

The site is surrounded by a wall, which is in part still standing, and which was built at the time of the Persian Wars. The site was occupied by a large temple, which was dedicated to Apollo, and which was the largest temple in the city.

great magnificence, and the spoil of the Persian wars were employed in the erection of a beautiful stoa in the Agora, with figures of Persians in white marble upon the columns, among which Pausanias admired the statues of Mardonius and Artemisia (iii. 11. § 3). After the Persian wars Athens became more and more the centre of Greek art; but Sparta continued to possess, even in the time of Pausanias, a larger number of monuments than most other Greek cities.

Sparta continued unaffected during the whole period of autonomous Greek history; and it was first surrounded with walls in the Macedonian period. We learn from Polybius (ix. 31) that its walls were 48 stadia in circumference, and that it was much larger than Megalopolis, which was 50 stadia in circuit. Its superiority to Megalopolis in size must have been owing to its form, which was circular. (Polyb. v. 22.) Leake remarks that, "as the side towards the Eurotas measured about two miles with the windings of the outline, the computation of Polybius sufficiently agrees with actual appearances, though the form of the city seems rather to have been elliptical than circular." (Mores, vol. i. p. 180.) Its limits to the eastward, at the time of the invasion of Philip (n. c. 218), are defined by Polybius, who says (v. 29) that there was a distance of a stadium and a half between the foot of the cliffs of Mt. Messelium and the nearest part of the city. Livy also describes the Eurotas as flowing close to the city, and, in fact, up to the walls of Sparta. Polybius (iv. 39) states that Demetrius Poliorcetes made an attack upon Sparta in n. c. 296, some temporary fortifications were thrown up; and the same was done when Pyrrhus attacked the city in n. c. 272. (Paus. i. 13. § 6, vii. 8. § 5.) But Sparta was first regularly fortified by a wall and ditch by the tyrant Nabis in n. c. 195 (Liv. xxxiv. 27; Paus. vi. 8. § 5), which was built on the site of the old wall, but not over the whole city, but only over the level parts, which were more exposed to an enemy's attack. (Liv. xxxiv. 38.) Livy, in his account of the attack of Sparta by Philopoemen in n. c. 192, alludes to two of the gates, one leading to Pharasa, and the other to Mount Baruthenaeus. (Liv. xxxiv. 30.) After the capture of the city by Philopoemen, the Persians built a fortress on the lower level of these Leucas gates (Paus. vii. 8. § 5); but they were shortly afterwards restored by order of the Romans, when the latter took the Spartans under their protection in opposition to the Achaenans. (Paus. vii. 9. § 5.) Its walls and gates were still standing when Pausanias visited Sparta in the second century of the Christian era, but not a trace of them now remains. When Alaric took Sparta in n. c. 396, it was no longer fortified, nor protected by arms or men (Zosim. v. 6); but it continued to be inhabited in the thirteenth century, as we learn from the "Chronicle of the Morea." It was then always called Lacedaemon, and was confined to the heights around the theatre. The walls which surrounded it at that time may still be traced, and have been mentioned above. It is to the medieval Lacedaemon that the ruins of the churches belong, of which no less than six are noticed by the French Commission. After the conquest of Peloponnesus by the Franks in the thirteenth century, William de Villashardoun built a strong fortress upon the hill of Melekéd, usually pronounced Melekado. This was built two miles west of Sparta, at the foot of Mt. Taygetus. The inhabitants of the medieval Lacedaemon soon abandoned their town and took refuge within the fortress of Melaéd, which long continued to be the chief place in the valley of the Eurotas. The site of Sparta was occupied only by the small villages of Mégia and Psýkhó, till the present Greek government resolved to remove the capital of the district to its ancient seat. The position of New Sparta upon the southern part of the ancient site has been already described.

It has been observed that Sparta resembled Rome in its site, comprising a number of continuous hills of little height or boldness of character. (Mave, Tower in Greece, vol. ii. p. 236.) It also resembled Rome in being formed out of several earlier settlements, which existed before the Doric conquest, and gradually consoled with the later city, which was founded in their midst. These earlier places are the hamlets of orama mentioned by Thucydides (i. 10), four in number, Pitane, Limnae or Lixnasium, Mesos, and Cynoura, which were united by a common sacrifice to Artemis. (Paus. i. 16. § 3.) They are frequently called ψαλατί, or tribes, by the grammarians (Müller, Dorisae, ii. 3. § 7), and were regarded as divisions of the Spartans; but it is clear from the writers that they were not town-plots. We are best informed about Pitane, which is called a ψαλατί by Euripides (Troad. 1112.), and which is also mentioned as a place by Pindar (πόλις Ἡρακλείδα τῶν ἐν Πιτανίᾳ ἔσχε). Here, however, who had been there, calls it a βάσαρι (iii. 55). He also mentions a Ἀδηρώς Ηρακλείδας (iv. 52); and there was a place called Herakleia in the valley of the Eurotas. The names of Mesos and Cynoura, in imitation of antiquity, composed a Ἀδηρώς Ηρακλείδας of Spartans. (Herod. iv. 8.) It appears from the passage of Pindar quoted above, that Pitane was at the ford of the Eurotas, and consequently in the northern part of the city. It was the favourite and fashionable place of residence at Sparta, like Collybys. At Athens and Corinth. (Plut. de Exil. 6. p. 601.) We are also told that Pitane was near the temple and stronghold of Issourion, of which we shall speak presently. (Polyasam. ii. 1. § 14; Plut. Ages. 52.) Limnae was situated upon the Eurotas, having derived its name from the marshy ground which once existed there (Strab. viii. p. 363); and as the Dorians settled in these parts in the course of the 2nd century of the southern extremity, it is probable that Limnae occupied the northern. (Leake, Mores, vol. i. p. 177.) It is probable that Mesos was in the SE. part of the city [see below, p. 1028, b.], and Cynoura was in the SW.

In the midst of these separate quarters stood the Acropolis and the Agora, mentioned in the Doric invaders first planted themselves. Pausanias remarks that the Lacedaemonians had no acropolis, towering above other parts of the city, like the Cadmeia at Thebes and Larisa at Argos, but that they gave this name to the loftiest elevation of the group (i. 17. § 3). This is rather a doubtful description, as the great hill, upon which the theatre stands, and the hill at the northern extremity of that region, are in the same elevation to the eye. Leake places the Acropolis upon the northern hill, which, he observes, was
better adapted for a citadel than any other, as being separated from the rest, and at one angle of the site; but Curtius supposes it to have stood upon the hill of the theatre, as being the only one with a sufficiently large surface on the summit to contain the numerous buildings which stood upon the Acropolis. The latter opinion appears the more probable; and the larger hill, cleared from its surrounding rubbish, surrounded with a wall, and crowned with buildings, would have presented a much more striking appearance than it does at present.

The chief building on the Acropolis was the temple of Athena Chalcioceus, the tutelary goddess of the city. It was said to have been begun by Tyndareus, but was long afterwards completed by Gittias, who was celebrated as an architect, statistic, and poet. He caused the whole building to be covered with plates of bronze or brass, whence the temple was called the Brazen House, and the goddess received the surnames of Chalcioceus. On the bronze plates there were represented in relief the labours of Hercynmus, the Dioscurus, Hephaestion releasing his mother from her chains, the Nymphs arming Perseus for his expedition against Medusa, the birth of Athena, and Amphitrite and Poseidon. Gittias also made a brazen statue of the goddess. (Paus. iii. 17. §§ 2, 3.) The Brazen House stood in a sacred enclosure of considerable extent, surrounded by a stoa or colonnade, and contained with stelae of the Acropolis, on the way to the so-called Alpinum, beyond which was a temple of Amonos, and probably also a temple of Artemis Chagria. (Plint. Lyc. 11; Apollod. Loc. p. 227, b; Paus. iii. 18. § 2.) The Agora may be placed in the great hollow east of the Acropolis (Map, 2). Its position is most clearly marked by Pausanias, who, going westwards from the Agora, arrived immediately at the theatre, passing by the tomb of Braidas (iii. 14. § 1). The site of the theatre, which he describes as a magnificent building of white marble, has been already described.

The principal street, leading out of the Agora, was named Apethias (Ἀπέθανα), the Corso of Sparta (Map, dö), it ran towards the southern wall, through the most elevated part of the city, and passed by the Tomb of Albis and on to the tomb of Talibus, which was a succession of remarkable monuments. First came the house of King Polydorus, named Booneta (Βοώνετα), because the state purchased it from his widow for some oxen. Next came the office of the Bidenti, who originally had the inspection of the race-courses, and opposite was the temple of Athena Celetheia, with a statue of the goddess dedicated as a votive offering by Ulysses, when he ejected the Trojan Cares. This statue was in different places. Lower down the Apethias occurred the heroes of Iop, Amphiaraus, and Lelx, the sanctuary of Poseidon Taenarius, a statue of Athens, dedicated by the Tarentini, the place called Hellenium, because called the Greeks are said to have held council there before the Persian or the Trojan wars. The temple of Talibus, an altar of Apollo Acritas, a place sacred to the earth named Gaspum, a statue of Apollo Malanas, and close to the city walls the temple of Dictyna, and the royal sepulchres of the Euryponents. Pausanias then returns to the Hellenium, probably to the other side of the Apethias, where he mentions a sanctuary of Asklepios on an island in the bay of Castor and Pollux; then a temple of Artemis near the so-called Phruria (Φρυρία), which were perhaps the temporary fortifications thrown up before the completion of the city walls; next the tombs of the Lamias, the Eleusinian prophetesses, sanctuaries of Mesro and Alpheus, who fell at Thermopylae, the temple of Zeus Tropaos, built by the Dorians after conquering the Agyrean inhabitants of Laconia, and especially the Amycleia, the temple

* So called, because ἄντωνας was the Laconian form for ἀντίωνοι, Plint. Lyc. 11.
of the mother of the gods,—and the heroes of Hippolytus and Aeson. The Apateia upon quitting the city joined the great Hymnian road which led to the Amyclaeum. (Paus. iii. 12. §§ 1—9.)

The next most important street leading from the Agora ran in a south-easterly direction. It is said that this street, though Panasias gives it the name only to a building at the beginning of the street, erected by Theordorus of Samos, and which was used even in the time of Pausanias as a place for the assemblies of the people. Near the Scias was a round structure, said to have been built by Epimenides, containing statues of the Olympian Zeus, Apollo, and next to them of the towns of Cy- norias, Castor, Idae, and Lynceus, and a temple of Cere Soteira. The other buildings along this street or in this direction, if there was no street, were the temple of Apollo Carneius, which was worshipped here before the Dorian invasion,—a statue of Apollo Apateas,—a quadrangular place surrounded with colonnades, where small-wares (ἀράμες) were anciently sold. The road to the Eumenie near the Diocuri, all surmamed Ambulii. Opposite was the place called Colona and the temple of Dioneus Colenatas. Near the Colona was the temple of Zeus Eausanios. On a neighbouring hill was the temple of the Argive Hera, and the temple of Hera Hypsheeria, containing an ancient wooden statue of Apollo that stood on Mount Phycis. To the right of this hill was a sanctuary of Hestemocles who had gained the victory in the Olympic games. (Paus. iii. 12. § 10—iii. 13.) Although Panasias does not say that the Colona was a hill, yet there can be no doubt of the fact, as καλανή is the Doric for καλανός, a hill. This height and the one upon which the temple of Hera stood are evidently the highest W. of the towns of Phrygidea, and almost between the Eurotas and the plain to the S. of the theatre (Map, C.).

After describing the streets leading from the Agora to the Σ. and SE. Panasias next mentions a third street, running westward from the Agora. It led past the theatre to the royal sepulchres of the Agiadæ. In front of the theatre were the tombs of Panasias and Leonidas (iii. 14. § 1).

From the theatre Panasias probably went by the hollow way to the Eurotas, for he says that near the sepulchres of the Agiadæ was the Lese of the Crotani, and that the Crotani were a portion of the Pitanataæ. It would appear from a passage in Athenæus (i. p. 31) that Pisane was in the neighborhood of the Eunus, and its proximity to the Eurotas has been already shown. (See above, p. 1026, a.) It is not improbable, as Curtius observes, that Pisane lay partly within and partly without the city, like the Cerameicus at Athens. After proceeding to the tomb of Taurus, and the sanctuaries of Pasion Hippocraeus and the Aegiphanum, Panasias goes on to the rock of Mesogineum which was the temple of Artemis Isia, also called Linceas. Isorium, which is known as a stronghold in the neighborhood of Pisane (Polyæn. ii. 1. § 14; Plut. Ages. 32), is supposed by Curtius to be the hill to the north of the Acropolis (Map, C.). Leake, as we have already seen, regards this hill as the Acropolis itself, and identifies the Isorium with the height above the ruined amphitheatre or circus. Panasias next mentions the temples of Theis, of Demeter Chthonias, of Sarapis, and of the Olympian Zeus. He then reached the Dromus, which was used in his day as a place for running. It extended along the stream southward, and contained gymnas, one of which was dedicated by a certain Euryclus. The Roman amphitheatre and the stadium, of which the remains have been already described, were included in the Dromus. In the Dromus was a statue of Hercules, near which, but outside the Dromus, was the house of Menelæus. The poet of the Dromos, the son of Pithas and Menelæus is called a Pitanast. (Hesych. s. v.) Proceeding from the Dromus occurred the temples of the Diocuri, of the Graces, of Eltheius, of Apollo Carneius, and of Artemis Hegemone; on the right of the Dromus was a statue of Aesculapius Agutias; at the beginning of the Dromus there was the temple of Menelæus (Paus. iii. 12. §§ 1—4; Hesych. s. v.). Further the heroon of Alcon and the temple of Poseidon Donatæ. (Paus. iii. 14. §§ 2—7.)

South of the Dromus was a broader level, which was called Pitanastæ, from the plane-trees with which it was thickly planted. It is described as a round island, formed by streams of running water, and was entered by two bridges, on each of which was a statue of Zeus at Eumene, and of Lycurgus at the other. Two divisions of the Spartans Ephebi were accustomed to cross these bridges and fight with one another in the Pitanastæ; and, though they had no arms, they frequently inflicted severe wounds upon one another. (Paus. iii. 15. § 8. seq.; Lucian, Amasea. 38.; Cic. Tusc. Quast. 7.) Above the ruined temple of Zeus at Eumene were the canals of the Trypitositho, which were fed by several springs in the neighborhood, and flowed into the Eurotas. Outside the city was the district called Phoebæum, where each division of the Ephebi sacrificed the night before the contest. The Phoebæum occupied the narrow corner south of the Pitanastæ formed by the valley of the Eumene, and the Euraxis, which as Panasias describes it as near Therapæ, which was situated upon the Menelæum, or group of hills upon the other side of the Eurotas, mentioned below. The proximity of the Phoebæum to Therapæ is mentioned in another passage of Panasias (iii. 19. § 20), and by Herodotus (vi. 61). The heroon of Clytaemnestra, the first female who conquered in the chariots in the Olympic games, stood close to the Menelæum, which was bordered upon one side by a colonnade. Behind this colonnade there were several heroic monuments, among which were those of Aicinos, Enarephorus, of Dorcæus, with the fountain of the Eunus, and of Serina. Near the latter was the sepulchre of the poet Alcon; this was followed by the sanctuary of Hera and that of Heraclæus, with the monument of Oeonus, whose death he revered by slaying the sons of Hippocoon. The temple of Hercules was close to the city walls. (Paus. iii. 16. §§ 8—15. § 5.) Since the poet Alcon, whose tomb was in this district, is described as a citizen of Mesogia (Dict. of Biogr. art. Alcon), it is probable that his poem was performed to the Dioscuri of Mesogia, the place of which which might indicate a tract lying between tworivers. (Comp. Μεσογε—μετέων νομίζων—Μεσογείας, Steph. B. e. v. Μεσογείας.)

After reaching the SE. extremity of the city, Panasias returns to the Dromus. Here he mentions two ways: the one to the right leading to a temple of Athena Aziophon, and the other to the left to another temple of Athena, founded by Hermes, near which was a temple of Hippotheus, and an ancient wooden statue of Enyalius in feters. He then describes, but without giving any indication of its position, the painted Leche, with its surrounding heroæ of Cadmus, Oeolus, Aeusus, and Amphib-
SPARTA.

chus, and the temple of Hera Aegophaus. He afterwards returned to the theatre, and mentions the different monuments in its neighbourhood; among which were a temple of Poseidon Genethlius, hero of Cheiron and Helius, a temple of Asclepius, near the stadium, which was celebrated in a temple of this god in Sparta, with the heroon of Teleclus on its left; on a height not far distant, an ancient temple of Aphrodite armed, upon an upper story of which was a second temple of Aphrodite Morpho; in its neighbourhood was a temple of Helias and Pheobe, containing their statues, and an ancient temple of Asklepios at the Eutras, the river of Leda. Pausanias next mentions a house, named Chiton, in which was woven the robe for the Amyclaean Apollo; and on the way towards the city gates was the heroon of Chiron and Athenaea. Near the Chiton was the house of Phormion, who hospitably entertained the Dioscuri when they entered the city as strangers (Paus. iii. 15. § 6—16. § 4.) From these indications we may see that the road issued from this gate, and it may therefore be placed in the southern part of the city. In that case the double temple of Aphrodite probably stood upon one of the heights of New Sparta.

Pausanias next mentions a temple of Lycurgus; behind it is the tomb of his son Eucmoons, and an altar of Larhys. By the road covered in 1839 there were the remains of Thesopomus and Eurybiades, and the heroon of Astrabucous. In the place called Limmnnaeus stood the temples of Artemis Orthia and Leto. This temple of Artemis Orthia was, as we have already remarked, the common place of meeting for the four villages of Pithane, Mesos, Cynooura, and Limmnnaeus. The latter was founded by the city and partly in the suburbs. Its position to the N. of the Dromos has been mentioned above; and, if an emendation in a passage of Strabo be correct, it also included a district on the left bank of the Eutras, in the direction of Mt. Thornax (τὸ Ἀμμίανος κατὰ τὸν Ἐδώρων κεῖται τῇ [Ἐδώρων] ἔχειν, Meineke’s emendation instead of [ἔδωρων], Strab. viii. p. 364). The ancient historian, whose information respecting Sparta is contained in the answer of the Delphic oracle to Lycrus, has it directed to have directed the lawgiver to erect temples to Zeus and Athena, and to fix the seat of the senate and kings between the Babycus and Cnasion. (Plut. Lyce. 6.) These names were obsolete in the time of Phlarchus. He says that the Cnasion was the Oenus, now the Kelephina; and he also appears to have considered the Babycus a river, though the text is not clear; in that case the Babycus must be the Tripodikos, which forms the southern boundary of the city. It appears, however, from the same passage of Phlarchus, that Aristotle regarded the Babycus as a bridge, and only the Cnasion as a river, when he would seem to have given the name of Cnasion to the Tripodikos, and that of Babycus to the bridge over the Eutras.

The left, or eastern bank of the Eutras, was not occupied by any part of Sparta. When Epaminondas invaded Laconia in B.C. 370 he marched down the left bank of the Eutras till he reached the foot of the bridge which led through the hollow way into the city. But he did not attempt to force the passage across the bridge; and he saw on the other side a body of armed men drawn up in the temple of Athena Ales. He therefore continued his march along the left bank of the river till he arrived opposite to Amycla, where he crossed the river. (Xen. Hell. vi. 5. § 27.) The account of Xenophon illustrates a passage of Pausanias. The latter writer, in describing (iii. 19. § 7) the road to Therape, mentions a statue of Athena Ales as standing between the city and a temple of Zeus Platus, above the right bank of the Eutras. At this point the river was crossed; and as only one bridge across the Eutras is mentioned by ancient writers, there can be no doubt that the road to Therape crossed the bridge which Xenophon speaks of, and the remains of which are still extant. Therape stood upon the Menelaion or Mount Menelaus, which rose abruptly from the banks of the river; and was situated in the south-eastern extremity of Sparta. (Μενέλαιον, Ptol. v. 22; Μενέλαιον, Steph. B. s. v.; Menelaus Mons, Liv. xxi. 28.) The Menelaion has been compared to the Janiculum of Rome, and rises about 760 feet above the Eutras. It derived its name from a temple of Menelaus, containing the tombs of Menelaus and Helen, whether solemn processions of men and women were so common there as to repair, the men imploring Menelaus to grant them bravery and success in war, the women invoking Helen to bestow beauty upon them and their children. (Paus. iii. 19. § 9; Herod. vi. 61; Isocr. Encycl. Hel. 17; Hesych. s. v. Ελάνυε, Θηραπών-"ινα.) The foundations of this temple were discovered in 1839. By the road covered in 1839 there were the ruins several small figures in clay, representing men in military costume and women in long robes, probably dedicatory offerings made by the poorer classes to Menelaus and Helen. (Ross, Wanderungen in Griechenland, vol. ii. p. 13, seq.) The temple of Menelaus is expressly said to have been situated in the Tawsos, Therape (Therape, Paus. v. 5. a. 8), which was one of the most ancient and venerable places in the middle valley of the Eutras. It was said to have derived its name from a daughter of Lelex (Paus. iii. 19. § 9), and was the Achaeans citadel of the district. It is described by the poets as the lofty well-bordered Therape, surrounded by thick woods (Pind. Isthm. i. 31; Coluth. 220), where the ancients drank wine (Pind. Nem. x. 55.) Here was the fountain of Messai, the water of which the captive women had to carry (Paus. iii. 20. § 1; Hom. H. vi. 457); and it was probably upon this height that the temple of Menelaus stood, which excited the astonishment of Telemachus in the Odyssey. Hence Therape is said to have been in Sparta, or is mentioned as synonymous with Sparta. (Θεραπών, τῆς Ακράκειας, ἡ τῶν Χαράτων σφαιρί, Steph. B. s. v.; ἡ Θεραπών, Schol. ad Apoll. Rhod. ii. 169, Pind. Isthm. i. 31.) It is probable that further excavations upon this spot would bring to light some tombs of the heroic ages. The Phoebomaeum, which has been already described as the open space on the right bank of the Eutras [see p. 1028, b.], contained a temple of the Dioscuri. Not far from this place was the temple of Poseidon, surnamed Gaioeas. (Paus. iii. 20. § 2.) After the power of Sparta was destroyed by the battle of Leuctra, its territory was exposed to invasion and the city to attack. The first time that an enemy appeared before Sparta was when Epaminondas invaded Laconia in B.C. 390, as already related. After crossing the river opposite Amycla, he marched against the city. His cavalry advanced as far as the temple of Poseidon Gaioeas, which we have seen from Pausanias was in the Phoebomaeum. We also learn from Xenophon that the Hippodrome was
in the neighbourhood of the temple of Poseidon, and consequently must not be confounded with the Dromae. The Thebans did not advance further, for they were driven back by a body of picked hoplites, whom Agesilaus had placed in ambush in the sanctuary of the Tyndarids (Dioscuri), which we likewise know from Pausania's was in the Phebeum. (Xen. Hell. vi. § 31, 32.) In n. c. 362 Epaminondas made a daring attempt to surprise Sparta, and actually penetrated into the market-place; but the Spartans having received intelligence of his approach, the city had been put into a state of defense, and Epaminondas again withdrew without venturing upon an assault. (Xen. Hell. vii. § 11—14; Polyb. ix. 8; Diod. xvi. 83.) In n. c. 218 Philip unexpectedly entered Laconia, descended the vale of the Eurotas by the left bank of the river, passing by Sparta, and then laid waste the whole country as far as Tamarus and Malea. Lycurgus, the Spartan king, resolved to intercept him on his return: he occupied the heights of the Menelaum with a body of 2000 men, ordered the remaining forces of Sparta to be ready to take up their position between the city and the western bank of the river, and at the same time, by means of a dam, laid the low ground in that part under water. Philip, however, contrary to the expectations of Lycurgus, stormed the Menelaum, and brought his whole army safely through the pass, and encamped two stadia above the city. (Polyb. v. 17—24.) In n. c. 195 Quinticius Flamininus attacked Sparta, because Nabia, the tyrant of the city, refused obedience to the terms which the Roman general imposed. With an army of 50,000 men Flamininus assaulted the city on its three undefended sides of Phebeum, Dictynneum, and Heptagonae. He forced his way into the city, and after overcoming the resistance which he met with in the narrow ways at the entrance of the city, marched along the broad road (probably the Apbetaia) leading to the citadel and the surrounding heights. Thermenae Nabia set fire to the buildings nearest to the city walls, which compelled the Romans to retreat. But the main object of Flamininus had been answered, for three days afterwards Nabia sent his son-in-law to impose peace. (Liv. xxxiv. 38, 39.) The position of the Phebeum has been already explained. The Dictynneum was so called from the temple of Artemis Dictyna, which Pausanias describes as situated at the end of the Apbetaia, close to the walls of the city (iii. 12. § 6). Leake thinks that the name of the village of Kalagwé may be...
SPARTEMIDOS. 1051

to have been modified. (L. Ingigi, Archæol. Aræa, i. p. 160; St. Martin, Mémoires, i. p. 59.) It is probably the same as the Massarch Axar of Polecey (vi. 2. § 17). Many travellers have visited it in (Tavernier, i. ch. 4; Morier, Soc. Vtg., ii. p. 172.)

SPELAEUUM, a place in Macedonia which Livy says was near Pella (xix. 33).

SPELUNCA (Sperlonga), a place on the coast of Latium (in the more extended sense of that name), situated between Tarquinia and Caetara. The emperor Tiberius had a villa there, which derived its name from a natural cave or grotto in which the emperor used to dine, and where he on occasion very nearly lost his life, by the falling in of the roof of the cavern (Tac. Ann. iv. 59; Suet. Tiber. 89. The villa is not again mentioned, but it would appear that a village had grown up around it, as Pinyo mentions it in describing the coast ("locus, Speleanea", Plin. iii. 8. s. 9 and its memory is still preserved by a village named Sperlonga, on a rocky point about 8 miles W. of Gaeta. Some Roman remains are still visible there, and the cave belonging to the Imperial villa may be identified by some remains of architectural decoration still attached to it (Craven's Journ. vi. p. 76).
